Three soil zones are illustrated for installations in the cable ampacity study. Zone 1 is identified as the native soil which is an area around the trench. Zone 2 is the backfill area above the cable dry-out region and the moisture level is estimated to be 1/2 that of zone 1 because the soil is disturbed in the cable installation process, and we will assume it has less moisture than zone 1 soil. Zone 3 is identified as the cable dry-out region. Figure 2.4.2-1 illustrates the various zones.

Table 3.4.2-1 shows the moisture values for the three zones used in the study model.

Zone	Description	Moisture (%)
1	Native Soil	8.2
2	Trench Backfill	4.1
3	Dry-Out Zone	0.0

Table 3.4.2-1: Soil Moisture Values for Zones

3.3.3 Soil Thermal Resistivity

The Thermal Resistivity dry out curve from the Geotech report is shown in Figure 3.3.3-1.

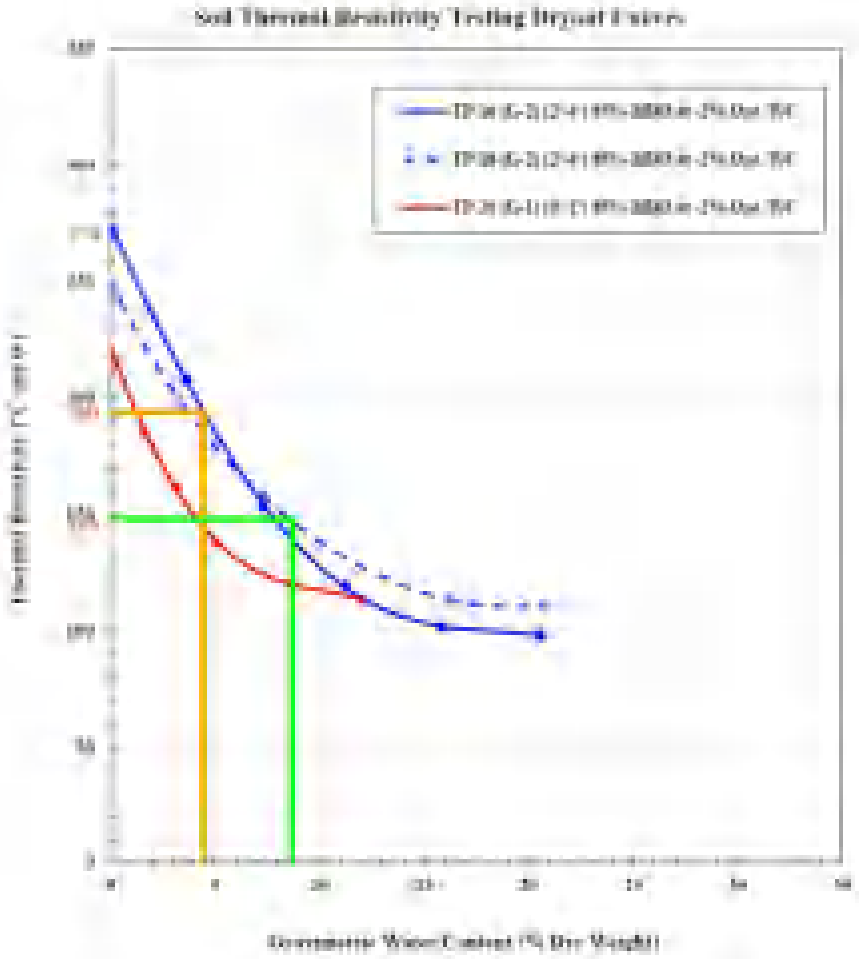

Figure 3.3.3-1; Thermal Resistivity Dry Out Curve

The curve from sample location TP-25 was chosen to represent the site conditions. Since the dry out curve for TP-25 does not extend to 18.4% moisture the maximum moisture value for the curve, 7%, will be used for native soil.

Table 3.3.3-1 shows the RHO values at those moisture levels from the graph in Figure 3.3.3-1.

Zone	Sample	Moisture Content (%)	RHO (cm°C /W)	Soil Compaction (%)
1	Composite of TP 16-& 18	8.8	149	Native
2		4.4	193	85
3		0	276	85

Table 3.3.3-1; RHO Values and Soil Compaction

Refer to Appendix B and the geotechnical report for additional information regarding the dry out curves and boring locations.

3.4 ANALYSIS MODEL

3.4.1 Steady State with Cyclic Load & Transient Analysis

The transient analysis will be used to validate the cyclic cf as described in section 2.5.3.

The PVsyst estimated production data is analyzed per the AIEE-IICEA publication S-135 and P-46-426 to find the day with the highest PVSyst load profile. This PVSyst load profile is only used to identify the day to be used to create the transient load profile. Per the analysis of the 30% PVsyst 8760 data the worst-case daily load profile has been found to be day 157 and that day has been modeled in CYMCAP as shown in Figure 3.4.1-1.

Figure 3.4.1-1; Transient Load Profile

3.5 FEEDER MODELS

3.5.1 Above Ground DC Conductor Sizing

Above ground DC conductor sizing is performed in accordance with NEC conductor sizing requirements. The DC conductor sizes are shown in the electrical design drawing package referenced in Section 3.1 of this study.

3.5.2 Underground DC Conductor Sizing

Installation

The DC combined feeders are located between the load break disconnect (LBD) and the inverter's DC bus bar. DC feeders are run directly buried from the LBD to the inverter. The feeder physical spacing in the ground is identified by case number and detail in the electrical design drawings.

All conductors used in the DC feeder circuit are 2kV DC rated PV-Wire, 90°C based on American Wire Group PV Wire specification. The feeders are evaluated for ampacity at a maximum temperature of 90°C and a LF of 0.71.

Each feeder supports the combined output of all strings connected to a single LBD. The underground conductors must carry the current required by the worst-case scenario found in the electrical design.

Element	Value	Reference
Soil Ambient Temperature (°C)	32.2	Section 3.3.1
Soil Thermal Resistivity (m°C/W)	Zone 1: 1.49	Table 3.3.3-1
	Zone 2: 1.93	
	Zone 3: 2.74	

Table 3.5-2-1: Soil Analysis Parameter Summary

000 MCM and 750 MCM Al cables will be evaluated.

The following worst-case scenario was evaluated wherein it assumed all DC feeders carry the current of 28 strings at 15.19A per string:

- Case DCC1A: DC Feeder homerun co-located in a single trench in a 1X4 installation configuration, 30" below grade, center-to-center spacing of 9"
- Case DCC1B: DC Feeder homerun co-located in a single trench in a 1X4 installation configuration, 30" below grade, center-to-center spacing of 10"

All conductors are equivalent as 2kV PV Wire. The circuits are evaluated for ampacity at a maximum temperature of 90°C and a LF of 0.71 and verified to meet conductor temperature limits by transient study. The maximum allowed ampacity represents the lowest conductor ampacity out of all the conductors in the bundle. The result of the analysis is shown in Table 3.4.2-2.

Circuit	Conductor Size	Max Allowed Ampacity (A)	Design Current (A)	Loading (%)
DCC1A	600 MCM	349.9	315.9	95%
DCC1B	750 MCM	332.5	315.2	95%

Table 3.5-2-2: Analysis Results for DC Combined Feeders

See the CYMCAP analysis reports in Appendix C.

3.5.3 MV AC Cable Sizing

MV AC cables run between the MV inverter transformers and the substation. The transformers are connected in parallel, and each cable may carry the current from more than one inverter transformer. The trench details are in the Trench Details sheet in the design drawings referenced in Section 3.1. The following cases were evaluated:

Case MVC1: Single circuit in individual trench, direct buried, 36" below grade

Case MVC2: Seven circuit in parallel – multi-feeder in individual trenches, 36" below grade, 96" on center spacing, different feeder sizes. Includes a BESS feeder that runs parallel to the PV circuits and is modeled as a 90°C thermal source

Case MVC3A: Six circuits in parallel, 96" separation, multi-feeder in individual trenches, direct buried, 36" below grade, different feeder sizes

Case MVC3B: Four circuits in parallel, 72" separation, multi-feeder in individual trenches, direct buried, 36" below grade, different feeder sizes. For this case the order of the circuits in the trench must be maintained as shown in Table 3.5.3-2 to obtain the required ampacity.

Locations of cases other than Case 1 are shown in Appendix A.

All conductors are modeled with 100% TR-XLPE insulation with concentric neutrals grounded on both ends. At the time of the study an MV cable manufacturer has not been selected; therefore WTEC MV cables are used for the MV cable specification in this study. The circuits are evaluated for ampacity at a maximum conductor of 90°C and a LF of 0.71 and verified in most conductor temperature times by transient study.

Element	Value	Reference
Soil Ambient Temperature (°C)	42.2	Section 3.4.1
Soil Thermal Resistivity (cm°C/W)	Zone 1: 149 Zone 2: 174 Zone 3: 274	Table 3.4.1-1

Table 3.5.3-1: Soil Analysis Parameter Summary

The results of the analysis are shown in Table 3.5.3-2, including each case number, cable size, and the maximum allowable ampacity. The maximum design current comes from the worst-case cable loading for the cable in the design drawings referenced in Section 3.1. CYMCAP analysis reports are in Appendix C.

Case	Circuit	Conductor Size	Concentric Neutral Size	Max Allowed Ampacity (A)	Design Current (A)	Loading (%)
MVC1		4/0 AWG	2/3	226.5	147.3	65%
		500 MCM	1/3	360.5	294.5	81%
		1000 MCM	1/6	509.8	441.8	87%
		1250MCM	1/6	568.6	515.4	91%
MVC2		1000 MCM	1/6	482.3	441.8	92%
		1250 MCM	1/6	536	515.4	96%
MVC3A		500 MCM	1/3	349.4	220.9	63%
		1000 MCM	1/6	485.1	441.8	91%
		1250 MCM	1/6	537.1	515.4	96%
MVC3B	MVT-PCS-203	500 MCM	1/3	343.9	147.3	43%
	MVF-MVSC-502	1000 MCM	1/6	474.7	441.8	93%
	MVF-MVSC-602	1000 MCM	1/6	473.1	441.8	93%
	MVT-MVSC-402	1250 MCM	1/6	541.2	515.4	95%

Table 3.5.3-2; Analysis Results for MV Cables

PRELIMINARY

3.5.4 Special Cases

These scenarios occur for DC feeders crossing or running adjacent to an MV feeder. The worst-case scenarios are evaluated as listed below. Since CYMCAP cannot model multiple crossing conductors the conductors are modeled as running in parallel. This is a more conservative assessment than if modeled as crossing at a 90° angle. The maximum conductor temperature at the design load current was evaluated and the transient study projected the conductor temperatures into the future to verify that they were less than the rated temperature.

Case MVC5: Nine DC circuits in two trenches, five in one and four in the other, 9" separation, direct buried, 30" below grade. Passing underneath them are two MV cables in parallel, 48" separation, multi-feeder in individual trenches, direct buried, 48" below grade. See CYMCAP report in Appendix C for a diagram.

Case	Conductor Size	Concentric Neutral Size	Conductor Temperature (C)	Max Allowed Temperature (C)	Design Current (A)	Loading (%)
MVC5	750 MCM DC		49.3	90	915.8	55%
	500 MCM AC	1/3	48.6	90	147.3	54%
	1000 MCM AC	1/6	75.4	90	441.8	84%

Table 3.5.4-1; Analysis Results for Special Case

4 STUDY RESULTS

The results of the thermal ampacity cable and conductor sizing study demonstrate that the cables and conductors specified are adequately sized based on the information available at the time of this study.

Special Cases

Case MVC5; Nine DC circuits in two trenches, five in one and four in the other, 9" separation, direct buried, 30" below grade. Passing underneath, them are two MV cables in parallel, 48" separation, multi-feeder in individual trenches, direct buried, 48" below grade.

1 INTRODUCTION

1.1 SUMMARY

The results of the short circuit analysis indicate that the MV cable capacity is suitable for the installation. The maximum 3PH fault current at the MV terminals of the PCS equipment of the inverters in the system is less than the rating of the PCS equipment, therefore all inverters are acceptable for use.

The Project is a 176.00 MWac/ 215.47 MWdc with a 147.00 MWac point of interconnection (POI) fixed tilt solar photovoltaic generating facility. The facility consists of the following equipment:

Equipment	Make	Model	Type	Quantity
Module 1	LONGi Solar	Hi-MO 5 / LR5-72HBD-545M	Bifacial	89,545
Module 2	LONGi Solar	Hi-MO 5 / LR5-72HBD-560M	Bifacial	322,833
Module 3	LONGi Solar	Hi-MO 5 / LR5-72HBD-555M	Bifacial	19,602
Inverter	Sungrow	SG4400UD-MV	Central	40

Table 1.1

The facility utilizes a 34.5 kV collector system with direct buried medium voltage (MV) feeders. The medium voltage transformers for each PCS are connected to the high-voltage substation via six 34.5 kV underground distribution circuits. The distribution circuits are connected to the high-voltage substation via six 35 kV circuit breakers.

Applicable electrical code: National Electrical Code (NEC) 2020 Edition.

1.2 BACKGROUND AND SCOPE

The scope of this study is to identify the maximum available fault currents throughout the facility. This includes medium voltage cables, major electrical equipment, auxiliary systems*, and low voltage inverter terminals. This study along with the Cable Ampacity study identify the minimum required MV cable specifications.

The results of this study are used to ensure equipment has been selected to withstand the calculated fault currents and to ensure that the MV cable phase and concentric neutral conductors can withstand these currents. Additionally, these results are correlated with the thermal and ampacity study.

*Auxiliary or other equipment included within a skid or other assembly provided by others (ie Power Conversion Skid, PCS), is excluded from the scope of this study. Ratings for the equipment shall be provided by the manufacturer of the assembly or integrator and compared to the results of this study.

2 METHODOLOGY

This section discusses the inputs required to model the system, the source of the inputs, and how the inputs impact the results. The information in this section is for descriptive purposes only and does not reflect the inputs to the project in this report. Refer to Section 3 for details specific to this project.

2.1 SOFTWARE

The system was modeled in Etap version 24 by Operation Technology, Inc.

2.2 UTILITY FAULT CURRENT CONTRIBUTION

The basis of a short circuit study is the available fault current provided by the utility. This is usually given at the high voltage side of the substation at the utility point of common coupling (PCCC) and can be supplied by the utility or the substation engineer. It is modeled in Etap using the utility component.

2.3 HIGH-VOLTAGE SUBSTATION DESIGN

The HV substation design is by others however, key elements are included in the ETAP system model as the model needs to include all the electrical components up to the utility PCCC.

2.3.1 Fault Protection Clearing Time

The MV cable withstand calculation is based on the fault clearing time of the HV overcurrent protective devices in the substation. This data is provided by the HV substation design engineer. Increasing the fault clearing time will result in lower cable withstand equipments.

2.3.2 Main Power Transformer (MPT)

The substation MPT model is required for the short circuit study model. This data is provided by the HV substation design engineer.

2.3.3 Neutral Ground Reactor (NGR)

An NGR in the MPT neutral to ground bond may be recommended by this analysis or specified by the HV engineer for a project to reduce the ground fault current.

2.4 POWER CONVERSION SYSTEMS (PCS)

2.4.1 Inverter Short Circuit Contribution

The inverter short circuit contribution may be different for the equipment evaluation and for the cable withstand evaluation. The inverter short circuit currents are provided by the manufacturer. The time the inverter requires to reach steady-state short circuit current is typically much faster than the trip time of an OCPD.

The ground fault current contribution to the MV distribution by the inverters also depends on the PCS MV transformer winding and grounding configuration as some topologies do not pass ground fault current.

2.4.2 PCS Medium Voltage Transformer (GSU)

The PCS GSU wiring configuration will determine if it will source ground fault current. The following is a summation of the possible options:

The inverter can contribute to a three-line fault on the MV side with any winding configuration.

2.5 OVERHEAD DISTRIBUTION SYSTEM

If an overhead power distribution system is part of the project the circuits are included in the model to model the fault current flow in the system. The overhead conductors may or may not be evaluated for short circuit capacity depending on the scope of the study.

2.6 MV CABLE WITHSTAND RATING

To evaluate the MV cable withstand rating the following data is required:

- Available fault current to the MV conductor
- Phase conductor and concentric neutral (CN) conductor withstand ratings
- Fault clearing time
- Split factor of the fault current between the CN and trench ground conductor current paths. If trench ground conductor is not used
- Capacity allowance to allow for a future increase in the fault current

The MV cable manufacturer provides the withstand rating values for the phase and CN conductors based on the cable size, CN size, and the fault clearing time.

The split factor is the percentage of the fault current carried by the CN during a line to ground fault. The values typically used are as follows:

- Trench ground conductor absent – 100% of the fault current on the CN
- Trench ground conductor present – 70% of the fault current on the CN, 30% on the trench ground

The capacity factor is used to add a buffer to the fault current capacity of the MV cables in anticipation of future increases in the utility fault contribution. The utility fault contribution includes a 15% growth factor to account for future system upgrades. As a result, the minimum capacity factor applied is 100%.

Etap is used to calculate the three-phase fault and single line-to-ground fault currents at each MV cable in the system. The ratio of the MV cable withstand rating (both phase conductor and CN) to the fault current needs to be equal to or greater than the chosen capacity factor for the cable to pass.

2.7 EQUIPMENT SCCR

Etap can also compute the available fault current at the terminals of equipment in the project. If the SCCR or AIC rating of the equipment is known, then the equipment can be evaluated on a pass/fail basis.

3 STUDY MODEL

3.1 ENGINEERING DESIGN INPUT

The following engineering documents are used as the basis for the Etap model in this study.

Pure Power Engineering electrical design *2025 09 05 Chisme PV Electrical 60% dated 09/05/2025*

Quanta substation design: *Rilea Chisme Solar & Storage – TX PS 2701 345/34.5kV Substation* dated 12/11/2024 and 03/12/2025

Oncor short circuit study, titled *Chisme Solar & Storage Generation Interconnection Short Circuit Study – 24INR0393 & 24INR0881*, dated 02/28/2024

Note: the above referenced substation design represents the latest available version from the substation engineer, however that does not imply that the contents of the report reflect the most current design

3.2 UTILITY CONTRIBUTION

Per information provided by the utility, the following utility contribution information is used at the 345 kV point of interconnection:

- Service voltage: 345 kV
- 3 Phase short-circuit current: 12,795.1 A
- 1 Phase short-circuit current: 9,191.7 A

A growth factor of 15% is applied, resulting in the following adjusted values:

- 3 Phase short-circuit current: 14,714.4 A
- 1 Phase short-circuit current: 10,570.5 A

The X/R ratio values are as follows:

- Positive-sequence impedance X/R: 18.903
- Zero-sequence impedance X/R: 7.937

The utility contribution details shown in Appendix E.

3.3 HIGH VOLTAGE SUBSTATION DESIGN

3.3.1 Fault Protection Clearing Time

Per discussion with the substation engineer, a clearing time of 18 cycles has been assumed for this analysis. Final coordination is pending and subject to confirmation.

3.3.2 Main Power Transformer

Per the HV substation one-line diagram, there will be two 120/160/200 MVA MPTs designated as 'T1' and 'T2'.

Per information provided by the transformer manufacturer, the MPTs are modeled as shown in Figures 3.3.2-1, 3.3.2-2, and 3.3.2-3. Both MPTs are modeled the same.

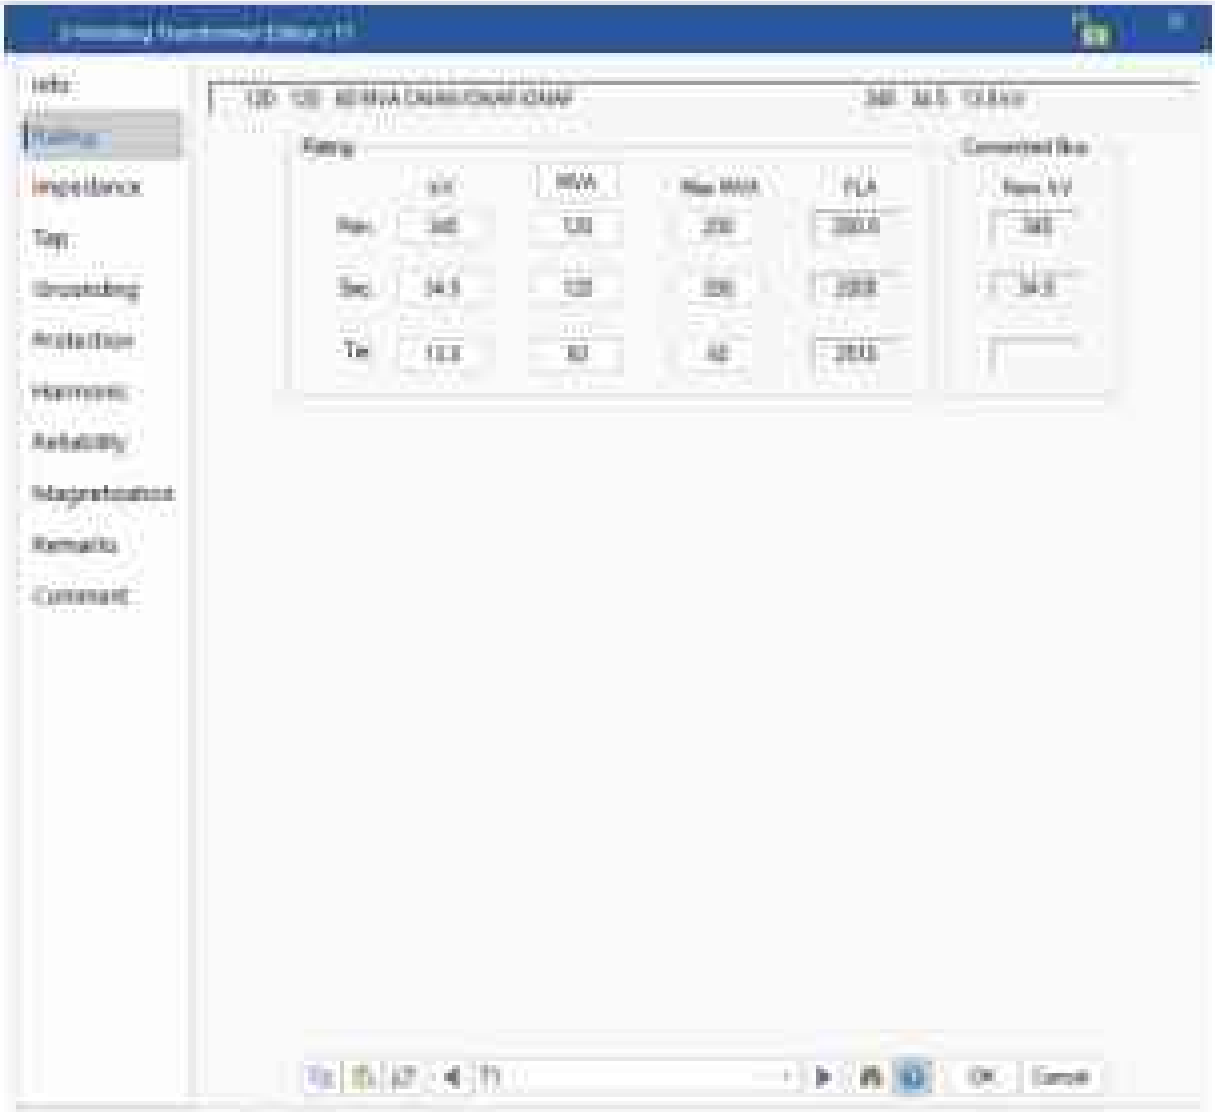

Figure 3.2.2-1: MPT Rating

PRL

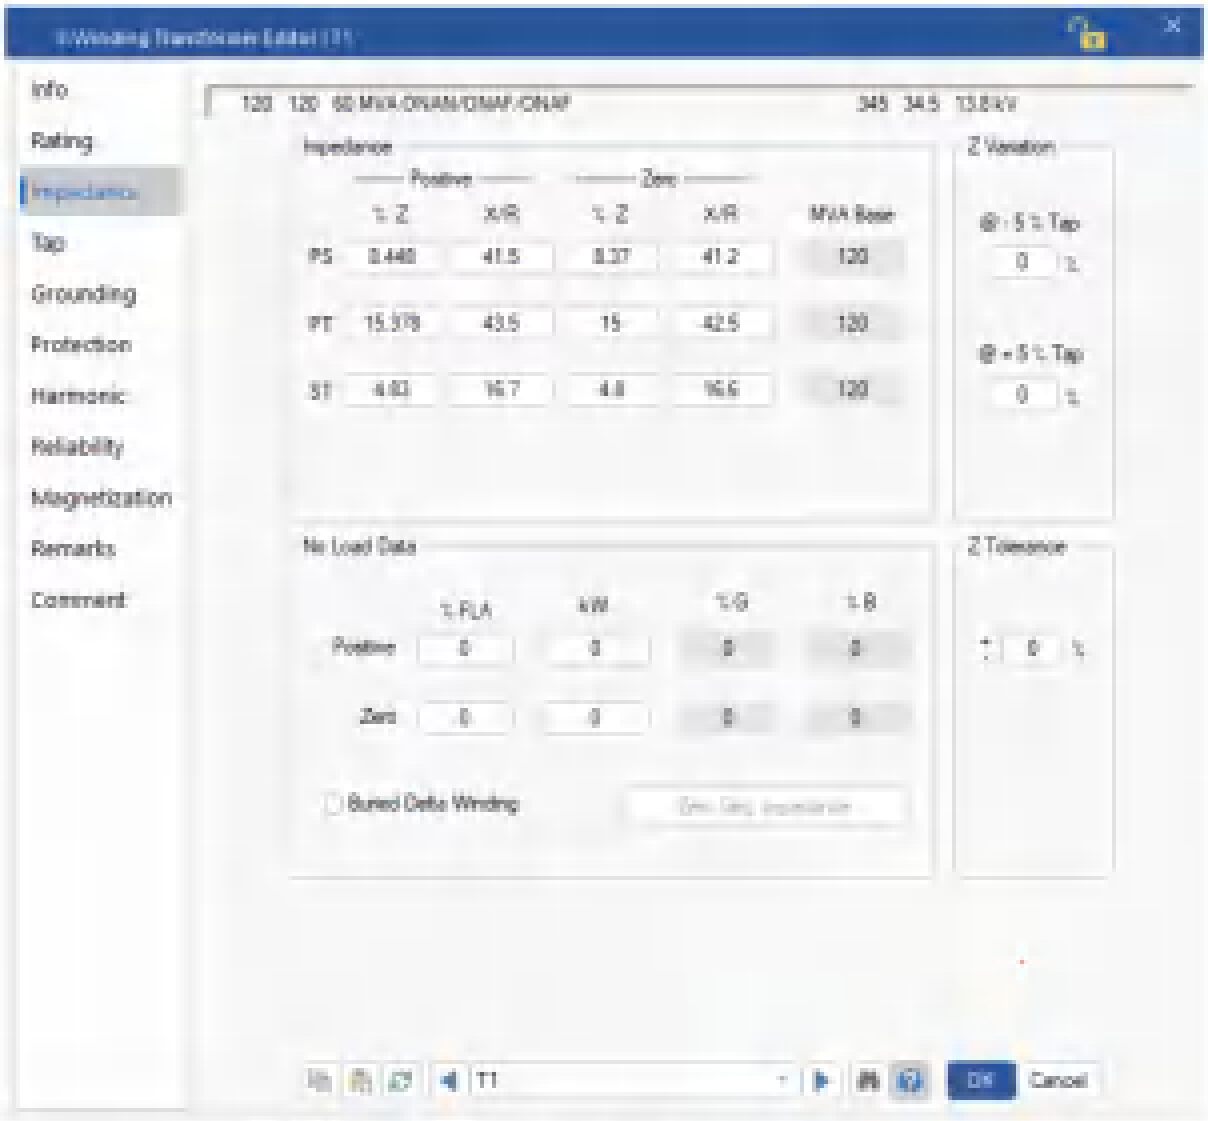

Figure 3.2.2-2: MPT Impedance

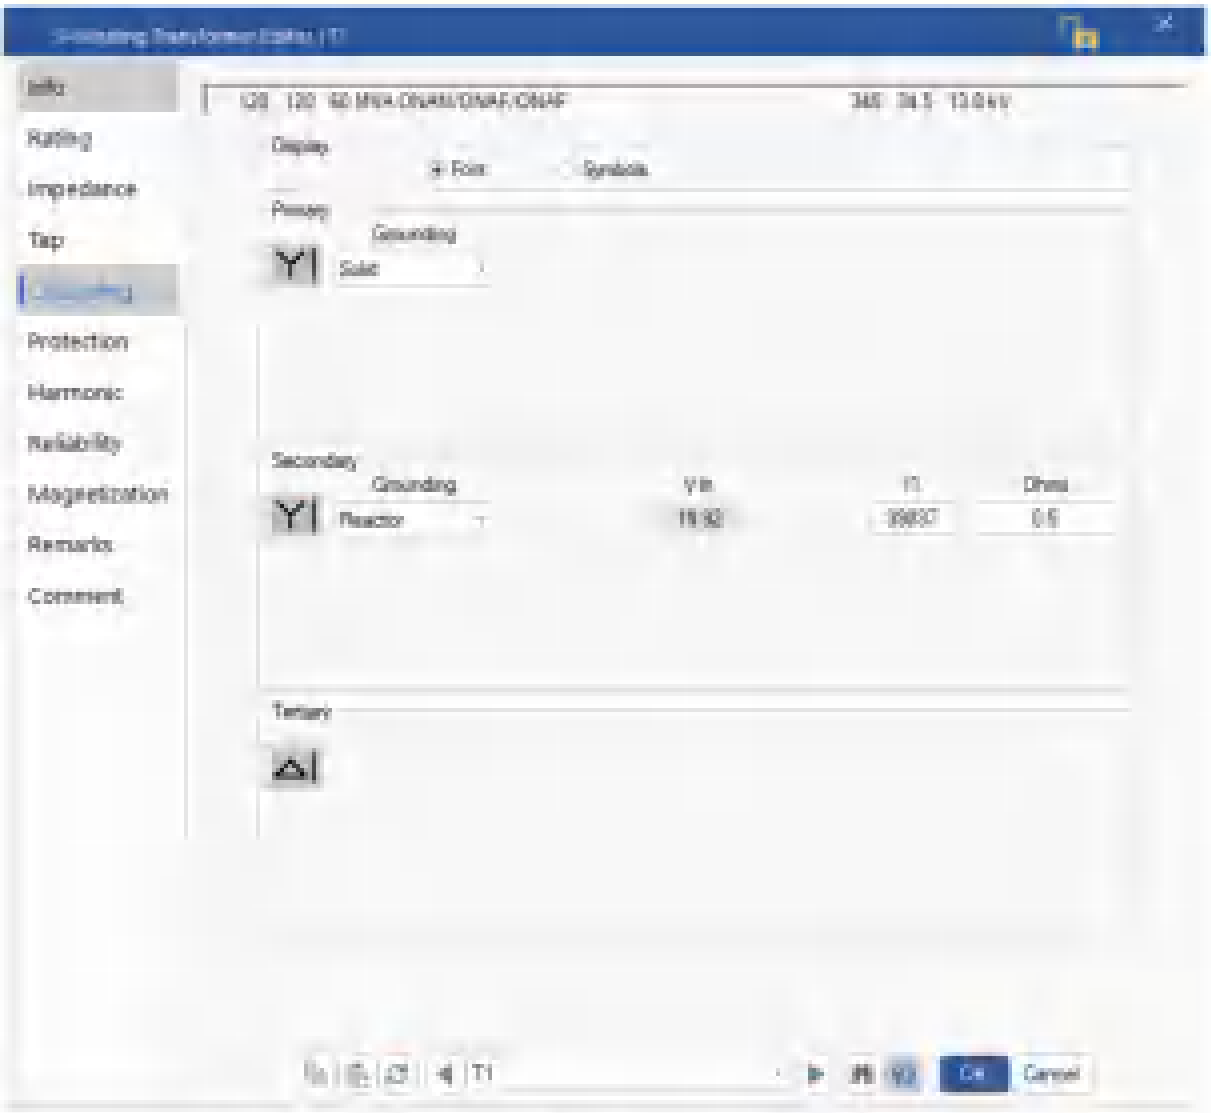

Figure 3.2.2-3: MPT Grounding with NGR

As per the Qualus document titled *34.5 kV Neutral Grounding Reactor Technical Specification 24144-01-ES-NGR*, dated 04/11/2025, a 0.5-ohm NGR is to be installed at each MPT. Therefore, NGRs have been modeled in the system as shown in Figure 3.2.2-3 above. The document also notes that the ratings are to be confirmed. Final coordination is pending and subject to confirmation.

3.4 POWER CONVERSION SYSTEMS

3.4.1 Inverter Short Circuit Contribution

The steady-state fault contribution is used for the cable withstand evaluation, while the peak short-circuit contribution is used for the equipment evaluation. The inverter short-circuit contribution values are based on the *Modeling of SUNGROW SG4400UD PV Inverter for Short Circuit Studies in Aspen OneLiner™* document.

The inverter's three-phase steady-state short-circuit current is approximately 1.06 per unit. The inverter reaches this steady-state fault current in 70 ms. Per PCS, the total modeled short-circuit current input is 4,175 A. This value is used for the inverter cable withstand evaluation, as shown in Figure 3.3.1-1.

The inverter's peak short-circuit current is approximately 2.20 per unit, resulting in a total of approximately 8,665 A for the PCS. This value is used for the inverter equipment evaluation, as shown in Figure 3.3.1-2.

The inverter short circuit modeling document is in Appendix A.

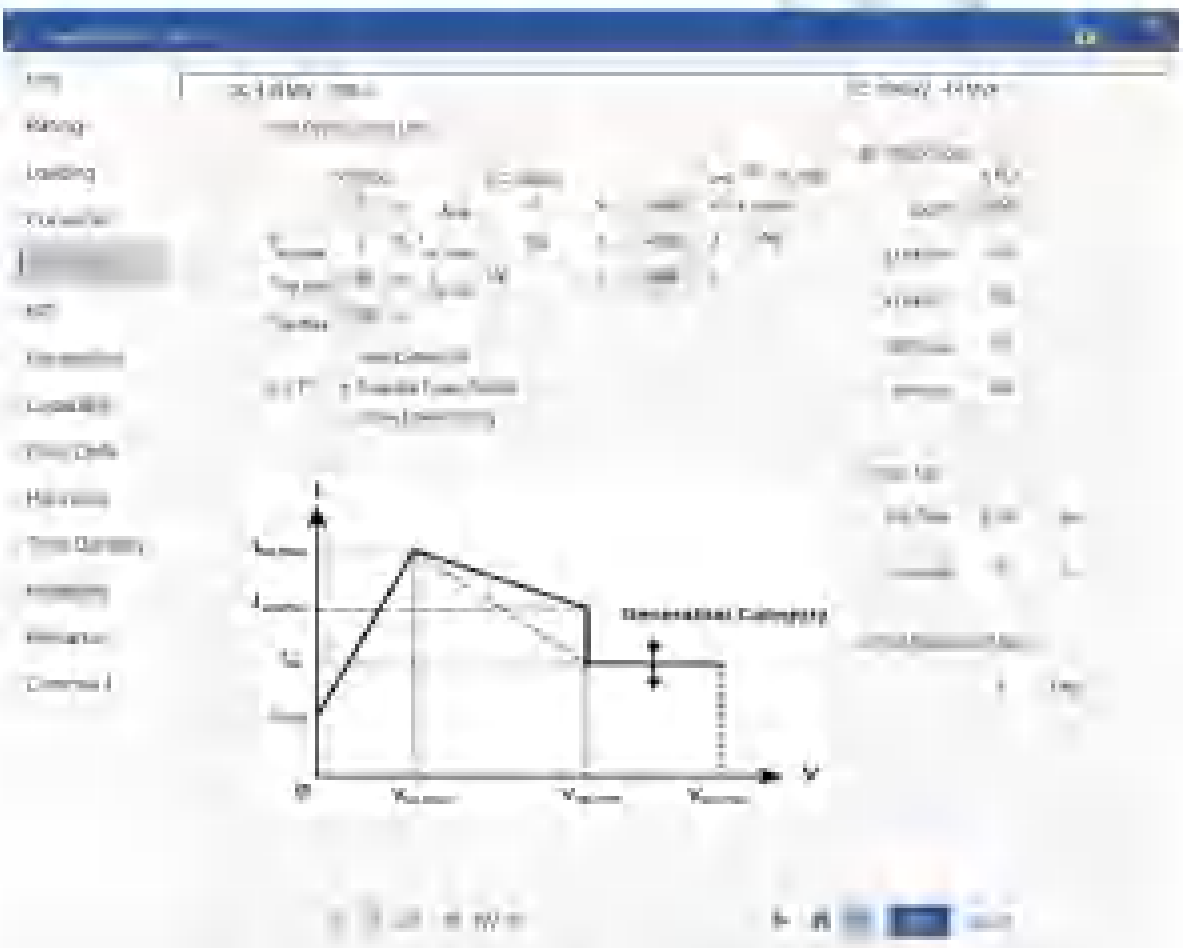

Figure 3.3.1-1: Inverter Short Circuit Model, Steady State

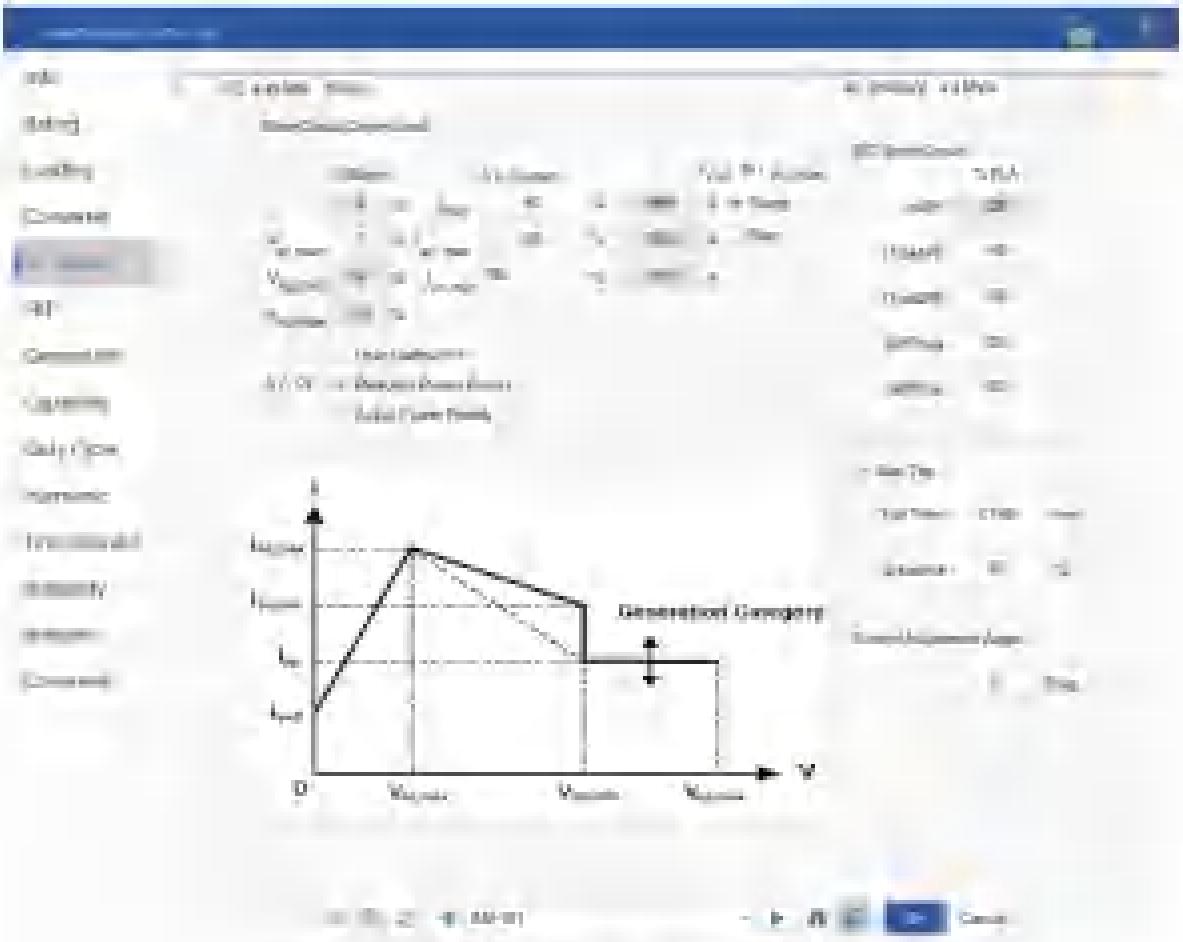

Figure 3.3.1-2: Inverter Short Circuit Model, Peak

3.4.2 PCS Medium Voltage Transformer

The impedance data provided by the inverter manufacturer was used to model all PCS GSU transformers. The positive-sequence impedance was entered directly into the model. While values are also entered for zero-sequence impedance, the transformers are configured as delta-ungrounded wye in Etap, as shown in the Impedance and Grounding tabs (Figures 3.3.2-1 and 3.3.2-2, respectively). For ungrounded transformers, the zero-sequence impedance is considered infinite. As a result, Etap blocks any data entered in the zero-sequence fields, effectively treating the zero-sequence impedance as infinite. This modeling approach is consistent with the configuration specified in the Grounding tab

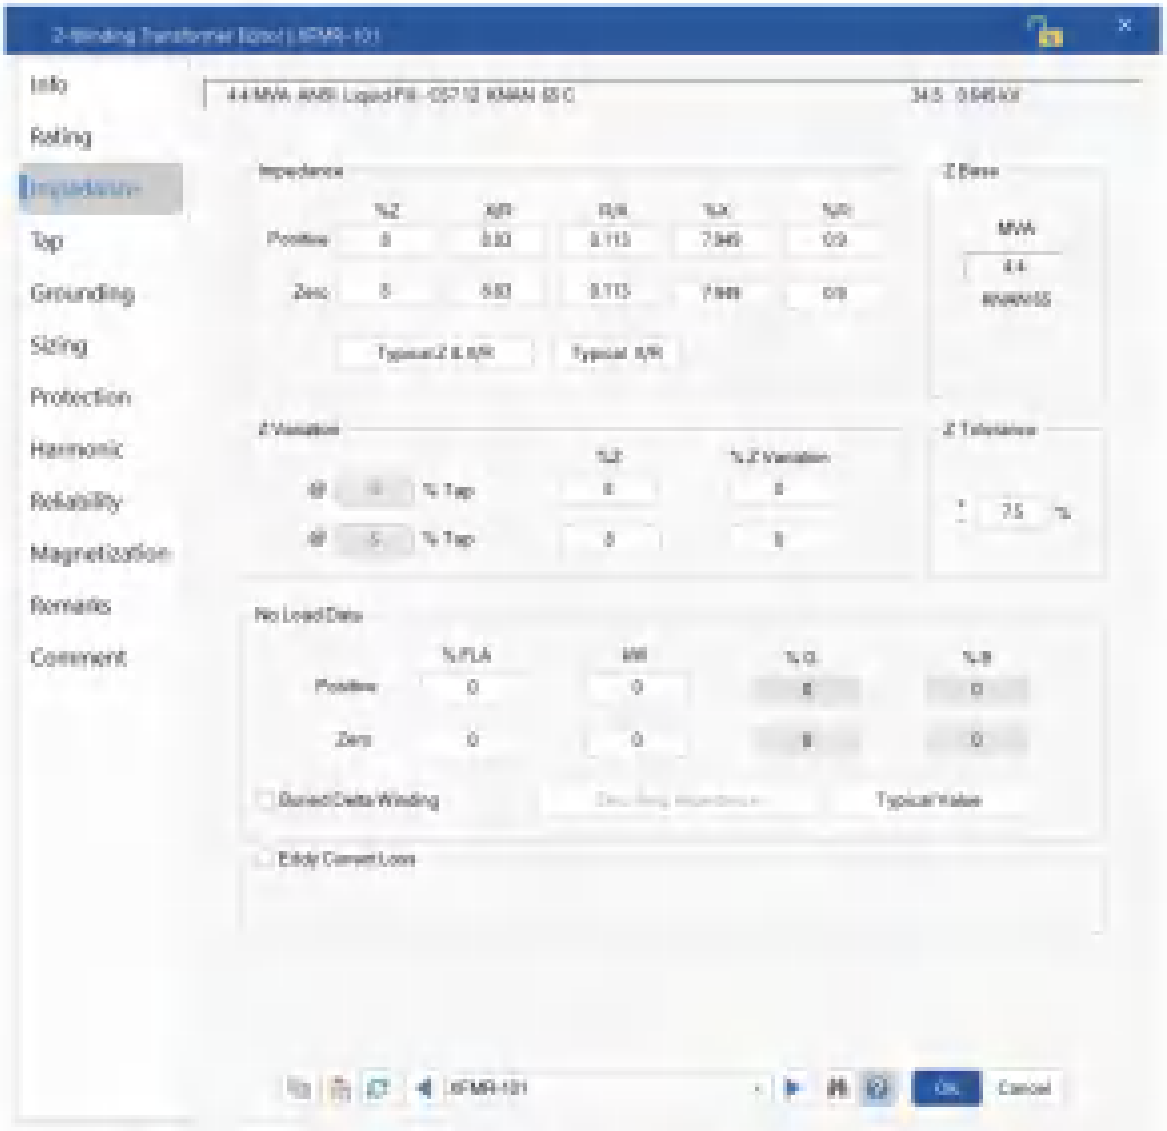

Figure 3.3.2-1: GSU Impedance

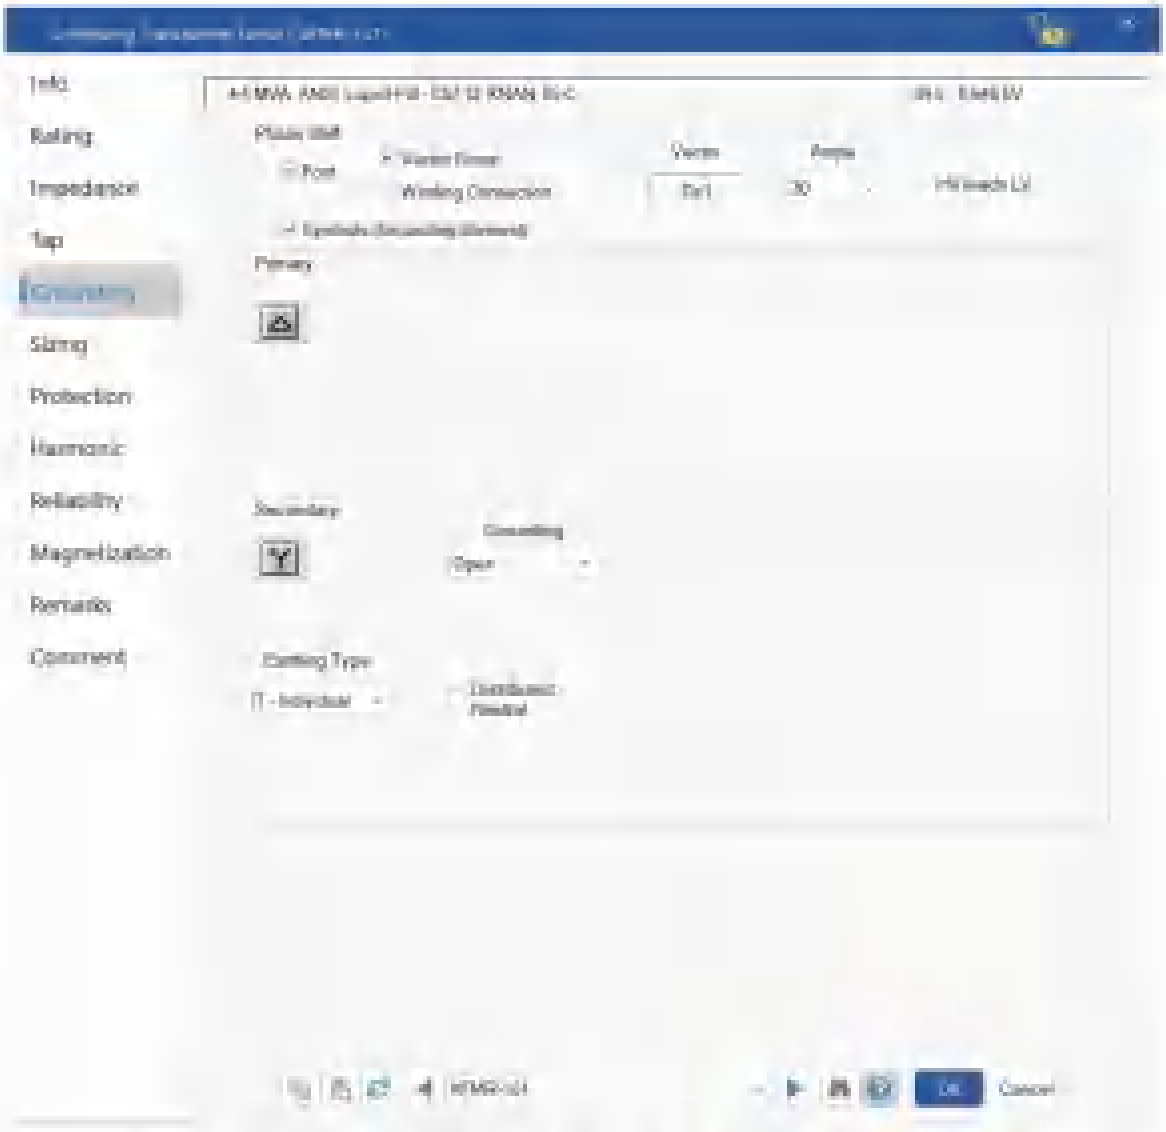

Figure 3.3.2-2: GSU Grounding

3.5 MV CABLE

The MV cable withstand data is provided by the manufacturer and shown in Appendix A. Since the L-G fault current values are in excess of the CN withstand ratings for more than half of the feeders, a trench ground is required.

3.6 EQUIPMENT SCCR

The PCS SCCR data is provided by the manufacturer and shown in Appendix A. Specific data is not available at the time of this study and the following SCCR for the MV sectionalizer cabinets have been assumed to be 25 kA.

4 STUDY RESULTS AND CONCLUSIONS

4.1 MV CABLE WITHSTAND RATING EVALUATION

All the MV cables pass the validation in the study. The results for each MVSC and MV cable are shown in Appendix G.

The final determination of the MV cable vendor for this project has not been made. For the time report, for the report WTEC cables will be utilized. Refer to Appendix A for the cable datasheets.

The worst-case short circuit currents for each cable photo and the corresponding are shown in Table 4.1-1 and 4.1-2.

Cable ID	Cable Size	Concentric Neutral (CN) Size	Total Fault Clearing Time (cycles)	Cable Withstand Rating (A)	3-PH Short Circuit Current (A)
MVF-MVSC-101	1350	1/0	18	109,108	33,425
MVF-MVSC-801	1000	1/0	16	80,887	28,558
MVF-PCS-201	500	1/3	16	48,443	22,088
MVF-PCS-401	4/0	2/3	18	33,176	16,876

Table 4.1-1: Worst-Case Cable 3-Phase Short-Circuit Currents

Cable ID	Cable Size	Concentric Neutral (CN) Size	Total Fault Clearing Time (cycles)	Cable Withstand Rating (A)	L-G Short Circuit Current (A)*
MVF-MVSC-101	1350	1/0	18	94,383	10,534
MVF-MVSC-801	1000	1/0	18	71,631	10,026
MVF-PCS-201	500	1/3	16	43,431	10,683
MVF-PCS-401	4/0	2/3	18	30,338	7,387

Table 4.1-2: Worst-Case Cable L-G Short-Circuit Currents

*L-G Short Circuit Current applies a 70/30 split factor per sections 2.6 and 3.5

4.2 EQUIPMENT SCCR AND AIC EVALUATION

The maximum [illegible] fault current during MV terminal in the PV system is 23,028 kA at 34.5 kV (MVSC-101) which is less than the 35 kA SCCR of both the PCS equipment and the assumed rating for the MV switchgear cabinet. As the maximum peak current is less than the rating provided by the manufacturer, the inverters are acceptable for use.

The maximum current peak current is due to the maximum allowable of 25 kA. The following items will have to be monitored to ensure the fault current at MVSC-101 does not exceed this limit.

- Final MV transformer data will be provided once the EPC has been awarded an EPC for review was available.
- Utility fault current: Per coordination a 15% growth factor is being utilized. Any future increase in fault current from the utility beyond this allowance should be communicated to the owner for evaluation throughout the life of the facility.

- Conductor installation length: Any deviation to the installed MV conductor lengths for the PV system as shown in the drawings shall be submitted to the engineer for review prior to installation.

4.3 CONCLUSION

This study shows that the equipment short circuit current ratings and the cable withstand ratings pass review in this study and are suitable for this project.

Short-Circuit Current

SC210HX-US

V1

1 Introduction

This document describes the short-circuit current of SG210HX-US.

This document is intended to be used by the specific addressees. No part of this document may be reproduced or distributed in any form or by any means without the prior written permission of Sungrow Power Supply Co., Ltd.

2 Brief Description

Single-phase ground short-circuit, two-phase short-circuit, and three-phase symmetrical short-circuit of the power grid will cause the voltage drop of the power grid. Among them, the three-phase symmetrical short-circuit is the most serious one, which causes the grid voltage to drop to 0. Under this condition, the peak value of the PCS output current and the reactive power support current value surpass the values under other fault types.

When the grid voltage drops, the output current of the PCS will change accordingly. During the first 1 to 2 power frequency cycles, the output current changes abruptly due to the voltage drop, resulting in a current that is significantly higher than the rated value. Then, during the ZVRT period of grid connection, it outputs a relatively stable reactive current to support the grid.

Given the technical requirements of grid connection, such as VDE4110/4120, both peak current impact on the grid and stable reactive current support are important indicators for grid connection. Therefore, it is necessary to provide corresponding parameters when performing grid connection simulation analyses.

IEC 60909 specifies the characteristic values of short-circuit current for the PCS when a short circuit occurs on the grid: peak current I_p, initial symmetrical short-circuit current I''_k, and steady-state short-circuit current I_k, where

Peak short-circuit current I_p: the maximum peak value of instantaneous impulse current at the moment of fault.

Initial symmetrical short-circuit current I''_k: within 1 to 2 cycles after the fault, the RMS

value of the short-circuit current during dynamic adjustment.

Steady-state short-circuit current I_k: the steady value of the reactive current output after the fault is stable.

3 Test Result

When a three-phase symmetrical short-circuit occurs in the power grid, the short-circuit current test waveform of SC210HX-US is shown in the figure below.

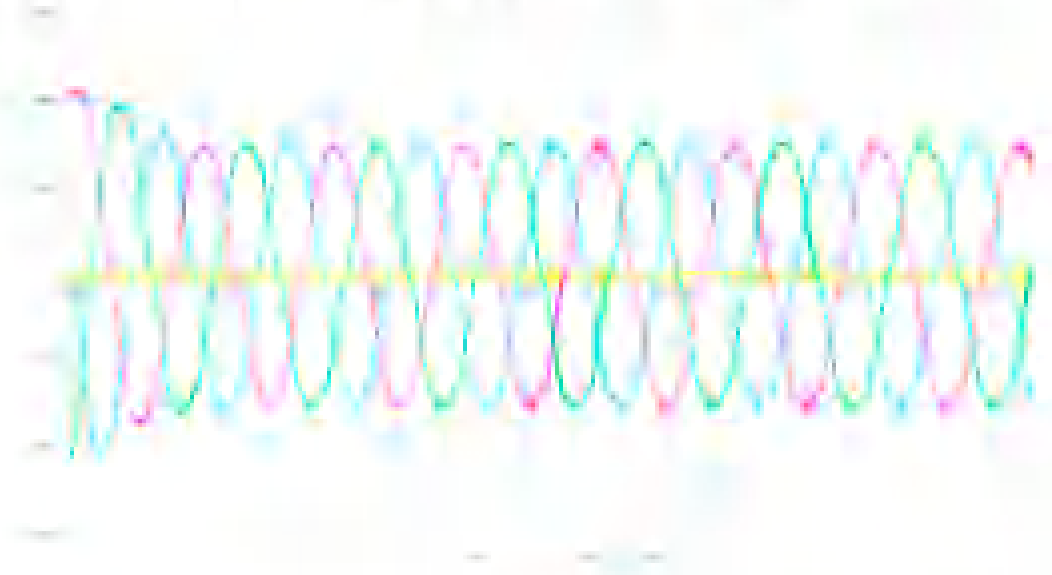

Fig. 1 Short-Circuit Current Waveform

Each characteristic value of the test waveform is shown in the table below.

Fig. 2 Characteristic Values of Short-Circuit Current

Product	Peak Short-circuit Current I_p (A)	Initial Symmetrical Short-Circuit Current I" (A)	Steady-State Short-Circuit Current I_k (A)
SC210HX-US	433A	272A	217A

For ESS composed of several SC210HX-US × 12 such as ST5015UX, each characteristic value can be calculated as N times the characteristic value of SC210HX-US.

PV INVERTER FAULT CONTRIBUTION DATA

Short Circuit Sequence Current Data

The short circuit behavior of the SUNGROW SG440HXUD inverter is analyzed for different types of fault scenarios. Three different types of faults (Line-Line-Line-Ground (3LG), Line-Line (LL) & Line-Ground (LG)) scenarios are simulated to calculate the sequence current and power factor angle values for 1, 3 and 5 cycle periods. In order to replicate the SLG fault behavior, Phase A-to-Ground is considered and for LL fault, Phase A-to-Phase B fault is considered during simulation. The fault scenarios are implemented using the voltage sag method on the SUNGROW SG440HXUD inverter model. Table 1 gives the 1st cycle, 3rd cycle, and 5th cycle short circuit data of the SUNGROW SG440HXUD inverter for the SLG fault. Similarly, Table 2 and Table 3 provide the 1st cycle, 3rd cycle, and 5th cycle short circuit data for the SLG fault and LL fault scenarios respectively.

Short Circuit Parameter Calculation

The Short circuit current parameter calculation is carried out on the SUNGROW SG4400UD inverter model. The PSCAD model that has been validated is representative of the actual inverter software. Data is provided for default inverter settings. The inverter is operating at 100% real power output at the unity power factor. Presented data are based on measurements at inverter terminals.

Ip, Ik'', Ik' & Ik are calculated based on the measured inverter current waveforms of SG4400UD PV inverter for a bolted 3LG fault as per the IEC 60909 standard [1] as shown in Figure 5.

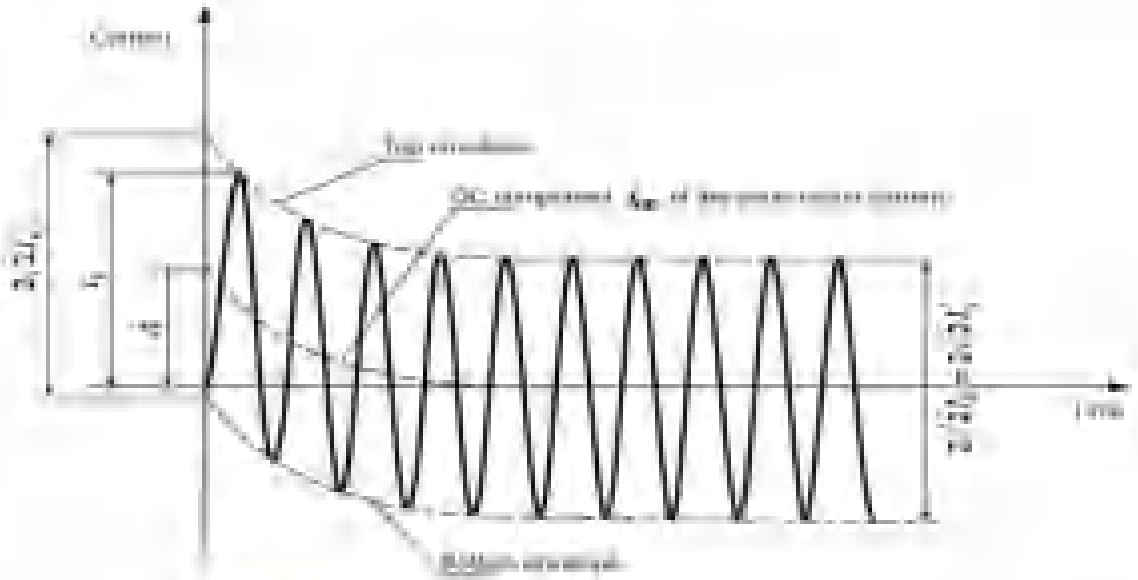

Figure 5: Balanced Current Waveform for Short Circuit Calculation [1]

The per-unit short circuit current parameter and impedance parameters of the SG4400UD PV inverter are listed in Table 7 & Table 8.

Where, Ik'', Initial Symmetrical Short circuit current

Ip, Peak short-circuit current

Ik, Steady-State short-circuit Current

I_{DC}, Decaying d.c. component of short circuit current

A, Initial value of I_{DC}

Table 7: Short Circuit Current Parameters

Short Circuit Current Parameter of SUNGROW SG4400UD PV Inverter				
Current Parameters		Value	Unit	
Ip	First Peak (Ip)	2.7007	p.u.	Peak
Ik''	Subtransient (Ik'')	1.5572	p.u.	RMS
Ik'	Transient (Ik')	1.1085	p.u.	RMS
Ik	Synchronous (Ik)	1.0585	p.u.	RMS
t	Time to reach steady state	70	ms	-

Table 8: Short Circuit Impedance Parameters

Short Circuit Impedance Parameter of SUNGROW SG4400UD Inverter				
Impedance Parameters	**Value (pu based on unit kVA)**			**Unit**
Subtransient	0.000	+j	0.64218	p.u.
Transient	0.000	+j	0.90228	p.u.

Negative Sequence	9999.000	+j	9999.000	p.u.
Zero Sequence	9999.000	+j	9999.000	p.u.

PV INVERTER SHORT-CIRCUIT WITHSTAND CAPABILITY DOCUMENTATION

SUNGROW

Clean power for all

July 15, 2024

Subject: SG3600UD-MV & SG4400UD-MV-US Short Circuit Withstand Capability

To Whom It May Concern

The Short Circuit withstand capability of the SG3600UD-MV and SG4400UD-MV-US units are as follows:

SG3600UD-MV			
	Short Circuit Point Location	**Type of Fault**	**Short Circuit Capability**
MV	Between the MV Bushing and the MV load switch & Between the MV load switch and the MV fuse	**Symmetrical**	15kA/4s 25kA/3s 35kA/0.2s 81.85 kA/93.4ms
		Peak	63kA/0.3s
LV	AC Breaker & LV Bus Between Inv. & XFMR	**Symmetrical (Icu)**	75kA
		Peak	150kA

SG4400UD-MV-US			
	Short Circuit Point Location	**Type of Fault**	**Short Circuit Capability**
MV	Between the MV Bushing and the MV load switch & Between the MV load switch and the MV fuse	**Symmetrical**	15kA/4s 25kA/3s 35kA/0.2s 81.85 kA/93.4ms
		Peak	63kA/0.3s
LV	AC Breaker & LV Bus Between Inv. & XFMR	**Symmetrical (Icu)**	57.6kA
		Peak	115.2kA

APPENDIX D – MV CABLE WITHSTAND CALCULATION

PRELIMINARY

APPENDIX E – UTILITY CONTRIBUTION

PRELIMINARY

** -- Application Rating is available for each circuit breaker depending on the number and timing of automatic reclosures, X/R ratio, CB rating structure (symmetrical or asymmetrical), CB rated interrupting time, and contact parting time; all of which are included in the ASPEN Circuit Breaker Rating Module used for this study.

Short Circuit Data

The following table lists estimated short circuit currents and system equivalent impedances:

Quantity		Fault Location and System Configuration		
		Fault at 345kV Oncor Station with [Blue Heron Solar, LLC- Online]	Fault at 345kV Oncor Station with [Blue Heron Solar, LLC- Offline]	Fault at 345kV Oncor Station with [Blue Heron Solar, LLC- Offline and the 345kV Line to Brown Switch out of service]
Three Phase	Fault Current (A)	13,772.9	12,795.1	8,650.3
	ANSI X/R	19.2372	18.9011	19.7844
Single Phase	Fault Current (A)	11,316.8	9,191.7	5,345.4
	ANSI X/R	20.3731	7.93675	12.3667
Equivalent Impedance (Ohms)	Positive Sequence	0.7598+j13.5449	0.41994+j15.4817	3.13388+j55.1189
	Zero Sequence	3.52635+j23.2861	7.04954+j33.2611	30.7764+j70.2416

Conclusion

Based on this study, there are no Oncor Electric Delivery circuit breakers that will be over-duty as a result of Generation Interconnection Request 24INR0333 & 24INR0331.

SUBSTATION GROUNDING GRID EVALUATION REPORT

ISSUED FOR REVIEW

1.0 Design Background

This report documents the data used, the assumptions made, and the calculations made toward the grounding grid evaluation for the proposed electrical substation located at Red River Clean Energy (RRCE)'s Chisme Substation in Mails County, Texas. The scope of this study is limited to the grounding grid associated with the 345 kV substation. The grounding of the adjacent BESS was not taken into consideration in this design.

The design equations contained herein are made using IEEE 80-2013, the IEEE Guide for Safety in AC Substation Grounding. Version 19.0.19425 of the CDEGS program developed by Safe Engineering Services and Technologies Ltd. were used to develop the design and to check conformance to the allowable step and touch potentials. The modules within CDEGS that were used include RESAP, SoilModelManager and MALZ.

2.0 Soil Resistivity

Soil Resistivity measurements were obtained as part of the Geotechnical Report prepared by Langan Engineering. Results of these measurements can be seen below in Table 1 as well as in Attachment A. For the Substation, FRT-11 was used in the analysis. The results of the worst case RESAP soil model is shown in Table 1 below (Layer Number 1 is air).

Table 1
RESAP Soil Model

Layer Number	Conductivity	
	Resistivity (Ohm)	Thickness (feet)
1	Infinite	Infinite
2	38.98	2.20
3	34.44	4.22
4	32.52	Infinite

3.0 Fault Current and Current Division

Fault data for the 345 kV system was provided by ONCOR[3] short circuit report and is presented in Attachment B. The maximum available Single-Line-to-Ground (SLG) fault current is 11,206.8 Amps with an X/R ratio of 20.4. A 10% growth factor was used in the study to account for future growth of the system. The backup clearing time is assumed to be 0.90 seconds (38 cycles). **Note if the clearing time is greater than assumed, contact the engineer that performed this study for re-validation.**

A "mesh factor" is often used in the design to account for overhead shield wires or neutral conductors that are connected to the substation grounding grid. These wires divert a portion of the ground current away from the substation by providing an alternate return path to the source, thereby lowering the ground potential within the substation grounding grid. The split factor is addressed in IEEE 80-2013 Annex C. Chosen conductor is one (1) transmission line or wall to twelve (12) collector circuits. The split factor is realized as 1.0 to 12 Feeders using Figure C.1 from IEEE 80-2013. Using MALZ the grid resistance is found to be 0.106 Ω. **A split factor was not used in this study.**

4.0 Grid Design

A minimum #4 AWG stranded copper (7 strands) cable may be used for given clearing time and projected fault current according to calculation. 4/0 AWG cable is used in the design study and is recommended for use due to its mechanical strength and better grid performance.

The substation grid pattern consists of 4/0 AWG copper conductors with parallel conductors in a checkerboard pattern "X" diameter by 10'-0" copper-clad rods are positioned at various perimeter and interior conductor intersections. The grid and the top of each rod are located 18 inches below subgrade. See drawing E-501 for the exact layout of the designed grid.

Yard equipment grounding is redundant where allowed by manufacturer design. Ground taps to structures and equipment are the same size as the main grid conductor. Low voltage AC panels and other equipment located within the control building should be tied directly to the grounding grid.

A 4" thick layer of crushed stone surfacing with an average 5,000 ohm-meter resistivity shall be placed on the substation surface.

5.0 Grid Worst Case Condition

Table 2 below presents the summary of tolerable and calculated design values for the soil model which are applicable only for the grid design made herein. The substation system design values are considered adequate since calculated step and touch potentials are within IEEE tolerable limits. 2-D Spot plots are included in Attachment H for reference. Equipment and structures must be securely bonded to ground cables.

Table 2
Design Values

Design Factor	Tolerable	Calculated
Step Potential (Rock)	≤ [illegible] V	[illegible] V
Touch Potential (Rock)	[illegible] V	[illegible] V
Grid Resistance to Remote Earth		[illegible] Ohms
Grid Potential Rise		[illegible] V

Calculated step and touch potentials at the substation are below the tolerable limits as observed on the 2-D spot plots. On the plots shaded with the tolerable voltage set as the threshold, areas within tolerable limits are denoted by the absence of color. Telephone and other communication circuits must be equipped with telephone protectors rated for the grid potential rise (GPR) that is presented.

The grid resistance to remote earth shall be tested in accordance with the fall-of-potential method as described in IEEE Standard 81. If this resistance is found to be greater than the value presented, then contact the Engineer for resolution, which might include installing additional ground rods or ground conductor to lower the grid resistance value.

System of Units .....: British
Soil Type Selected.....: Multi-Layer Horizontal
RMS error between measured and calculated....: 4.69926 in percent
resistivities (Note RMS=SQRT(average(Di**2)).

Layer Number	<--- LAYER CHARACTERISTICS ---> Resistivity (ohm-m)	Thickness (Feet)	Reflection Coefficient (p.u.)	Resistivity Contrast Ratio
1	Infinite	Infinite	0.0	1.0
2	14.44187	10.36297	-1.0000	0.14442E-1E
3	27.99888	Infinite	0.19365	1.2463

WARNING MORE THAN ONE SOIL MODEL CAN PRODUCE SIMILAR APPARENT RESISTIVITY MEASUREMENT CURVES. IF YOU USE THE DEFAULT STEEPEST-DESCENT METHOD, THEN YOU WILL MOST OFTEN OBTAIN DECENT AGREEMENT BETWEEN MEASURED VALUES AND THE COMPUTED CURVE, WITH A REALISTIC SOIL MODEL; HOWEVER, THE FIT MAY OCCASIONALLY BE SUB-OPTIMAL. IN SUCH CASES, THE MARQUARDT METHOD WILL USUALLY YIELD AN EXCELLENT FIT, BUT MAY SOMETIMES SUGGEST EXTREME RESISTIVITY VALUES. NOTE THAT DIFFERENT SOIL MODELS WILL USUALLY YIELD SIMILAR RESULTS FOR YOUR GROUNDING SYSTEM MODELS (I.E., GPR, TOUCH & STEP VOLTAGES), PROVIDED THAT THE GROUNDING SYSTEM IS LOCATED CLOSE TO THE EARTH SURFACE. IF IN DOUBT, CHECK YOUR RESULTS WITH BOTH SOIL MODELS.

A #3 AWG, bare, stranded conductor has a diameter of approx. 0.260 inches.

Stranded Bare Copper

CONSTRUCTION AT A GLANCE

CONDUCTOR TYPE 1
COPPER

APPLICATIONS

- Suitable for use in substations as uninsulated hook ups, jumpers, and grounds

CONSTRUCTION DETAILS

- Bare copper conductor
- Available in soft-drawn (annealed), medium-hard-drawn, or hard-drawn tempers
- Concentric-lay or combination unilay stranded, depending on stranding and temper

SPECIFICATIONS

Southwire's Bare Copper Conductor meets or exceeds applicable ASTM specifications:

- **B 1:** Hard-Drawn Copper Wire
- **B 2:** Medium-Hard-Drawn Copper Wire
- **B 3:** Soft or Annealed Copper Wire
- **B 8:** Concentric-Lay-Stranded Copper Conductor, Hard, Medium-Hard or Soft
- **B 787:** 19 Wire Combination Unilay-Stranded Copper Conductor

OPTIONS

- Solid (1 strand)
- Stranded (7, 19, 37, 61 strands)

0.253" conductor is between #4 and #3.

NOTES:

1. DESIGN BASED ON THE FOLLOWING INCOMING LINE PARAMETERS:
   A. A-B-C PHASING WITH TERMINATION TO MATCH TRANSFORMER H1-H2-H3 BUSHINGS. UTILITY INCOMING PHASING IS A-B-C OCW (ASSUMED) (TBC).
   B. TO MATCH INCOMING PHASING, PHASE ROTATION IN THE RELAYS WILL BE SET ABC.
2. THE MAXIMUM AVAILABLE FAULT CURRENTS FOR THE 345KV SYSTEM ARE 13,773A (THREE PHASE) AND 11,317A (SINGLE PHASE LINE TO GROUND).
3. SYSTEM OPERATING VOLTAGE IS NOMINALLY 345KV IN A NORMAL RANGE OF 0.95-1.05 p.u. (TBC)
4. DESIGN IS BASED ON TRANSFORMER FULL LOAD RATING OF 200MVA AT 65 DEGREE C.
5. WSL METER, CT'S AND PT'S TO BE PROVIDED BY ONCOR (TBC).

PROJECT: CHISME SOLAR AND STORAGE - TX-PS-2701 345/34.5kV SUBSTATION

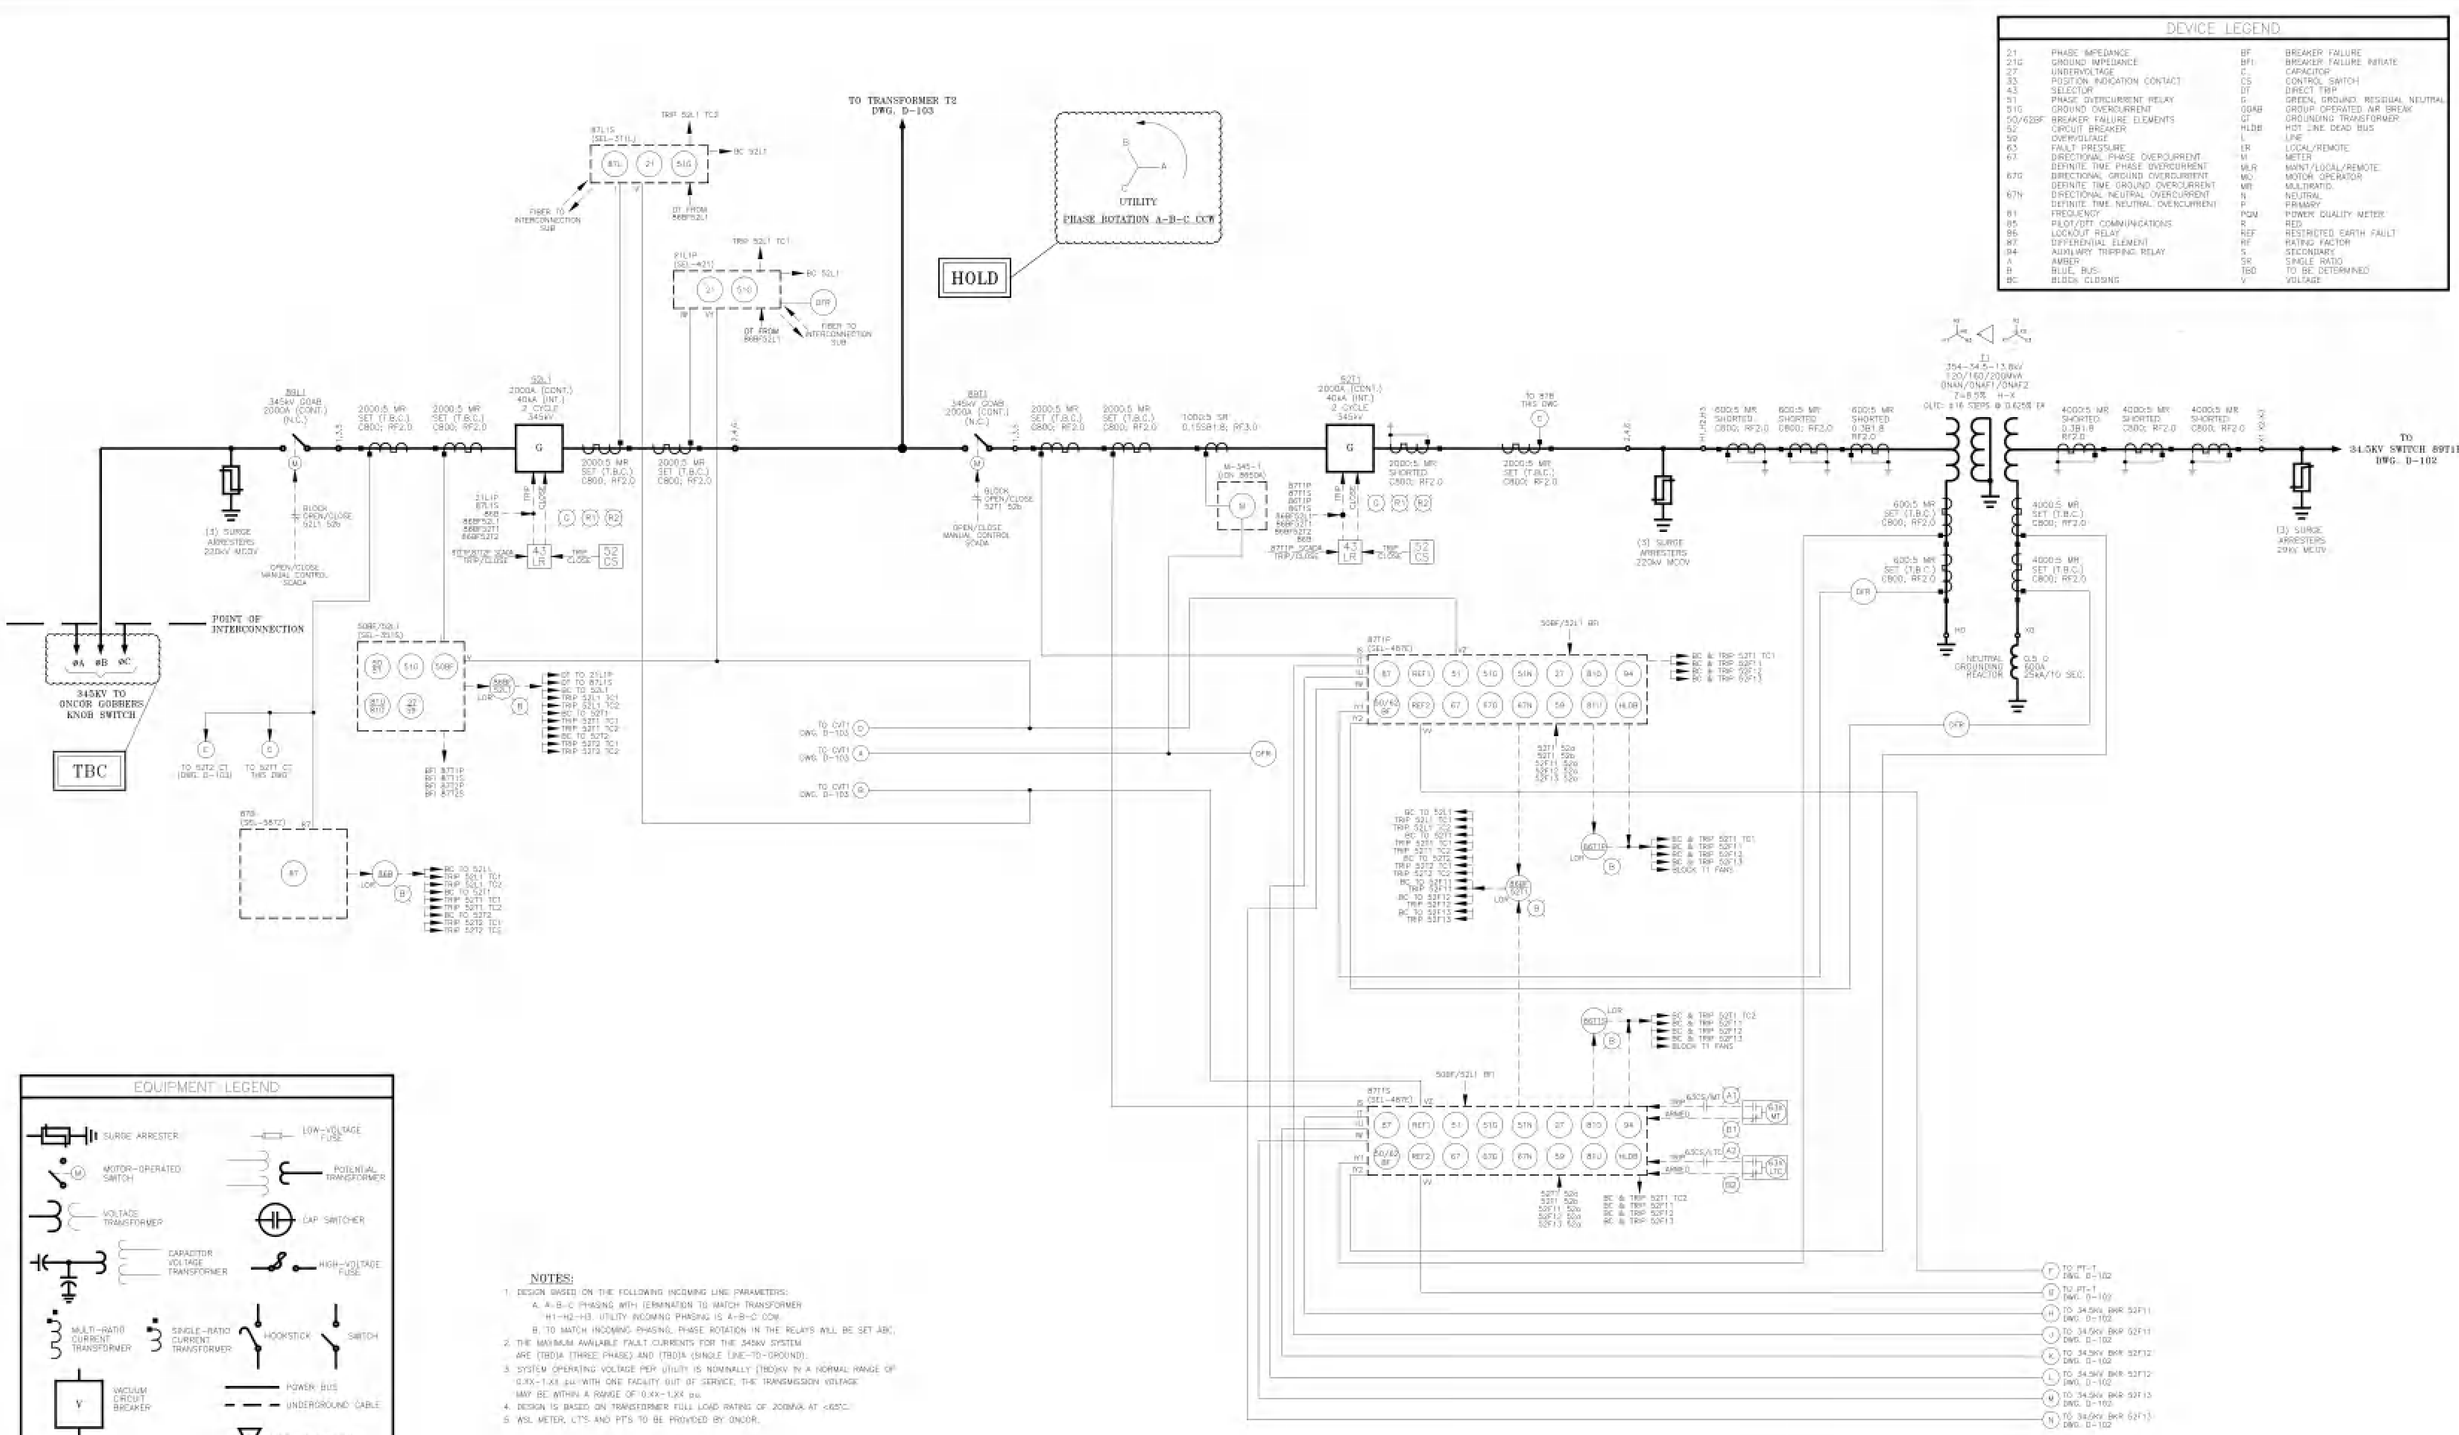
TITLE: POWER ONE LINE - SWITCHING DIAGRAM

LOCATION: 8987 CR 268, BROWN COUNTY, TEXAS

FILE NAME: 24144-01-100

JOB NUMBER: 24144-01

DRAWING NUMBER: 100



NOTES:

1. DESIGN BASED ON THE FOLLOWING INCOMING LINE PARAMETERS:
   A. A-B-C PHASING WITH TERMINATION TO MATCH TRANSFORMER H1-H2-H3. UTILITY INCOMING PHASING IS A-B-C CCW.
   B. TO MATCH INCOMING PHASING, PHASE ROTATION IN THE RELAYS WILL BE SET ABC.
2. THE MAXIMUM AVAILABLE FAULT CURRENTS FOR THE 345kV SYSTEM ARE (TBD)A (THREE-PHASE) AND (TBD)A (SINGLE LINE-TO-GROUND).
3. SYSTEM OPERATING VOLTAGE PER UTILITY IS NOMINALLY (TBD)kV IN A NORMAL RANGE OF 0.XX–1.XX p.u. WITH ONE FACILITY OUT OF SERVICE, THE TRANSMISSION VOLTAGE MAY BE WITHIN A RANGE OF 0.XX–1.XX p.u.
4. DESIGN IS BASED ON TRANSFORMER FULL LOAD RATING OF 200MVA AT <65°C.
5. WSL METER, CT'S AND PT'S TO BE PROVIDED BY ONCOR.

24114-01 Chisme Solar, 345 - 34.5kV
Brown County, TX

Date: 07/09/25
Revision: B
Project #24114-01

ITEM NO.	QTY	UNIT	ITEM DESCRIPTION	SPEC # / DWG	MANUFACTURER/VENDOR	CATALOG/MODEL#
MAJOR EQUIPMENT						
M1	2	EA	POWER TRANSFORMER, 345-34.5-13.8kV, 120/160/200 MVA, 65 DEG C RISE/55 DEG C RISE, H-X: 8.5% Z, WITH HV OLTC +16 STEPS @ 0.625%		CHINT	
M2	1	EA	SF6 CIRCUIT BREAKER, 345kV, 2000 A, 40 KA FURNISHED WITH BCTS PER SPEC		TBD	TBD
M3	6	EA	VACUUM CIRCUIT BREAKER, 38 kV, 1200 A, 40KA FURNISHED WITH BCTS PER SPEC		TBD	TBD
M4	3	EA	VERTICAL BREAK 69kV SWITCH, 3 POLE, 345KV, 2000 A, 1300 KV BIL, ALUMINUM LIVE PARTS, FURNISHED WITH STATION POST INSULATORS, MOTOR OPERATED		TBD	TBD
M5	3	EA	VERTICAL BREAK 69kV SWITCH, 1 POLE, 34.5 KV, 4000 A, 200 KV BIL, ALUMINUM LIVE PARTS, FURNISHED WITH STATION POST INSULATORS, 125VDC MOTOR OPERATOR AND 120VAC SPACE HEATER AND RECEPT.		TBD	TBD
M7	54	EA	HOOKSTICK SWITCH, 38 kV, 1200 A, 200 KV BIL, COPPER FURNISHED WITH STATION POST INSULATORS		TBD	TBD
M8	6	EA	PT, 20125/34500GY-115/67, 175/200:1:1 RATIO, 0.6WXY, WITH TWO SECONDARY WINDINGS		RITZ	VET35-101
M9	3	EA	CVT, 20 X/300-115/67V, 1800/5000:1:1 RATIO, 0.15WXYZ, 1600VA, WITH TWO SECONDARY WINDINGS		TBD	TBD
M10	72 (TBD)	EA	STATION POST INSULATOR, 1300 KV BIL, TR 326, STANDARD STRENGTH, 5" BOLT CIRCLE, GRAY PORCELAIN, 306" HEIGHT (QTY. INCLUDES ONE SPARE)		LAPP	315324-70
M11	63 (TBD)	EA	STATION POST INSULATOR, 200 KV BIL, TR 210, STANDARD STRENGTH, 3" BOLT CIRCLE, GRAY PORCELAIN, 186" HEIGHT (QTY. INCLUDES ONE SPARE)		LAPP	315210-70
M12	1	EA	STATION SERVICE TRANSFORMER, POLE MOUNT, OIL FILLED CPT RATED, 75 KVA, 19,920-240/120V, 1PH/3W		TBD	TBD
M13	3	EA	SURGE ARRESTER, 276kV RATED, 220kV MCOV, POLYMER, STATION CLASS, USED FOR DEAD END		GE	CAT # 9L11HNM2765
M14	36	EA	SURGE ARRESTER, 36 KV RATED, 29kV MCOV, POLYMER, STATION CLASS, WITH NEMA 6 HOLE PAD, USED FOR FEEDER/COLLECTOR FEEDER CIRCUITS		GE	CAT: 9L11J8P40865
M15	6	EA	CT, 34.5kV DRY TYPE, 200kV BIL, 3000:5A, 0.15HT, 8, 1 PHASE, FURNISHED BY ONCOR.		TBD	BY ONCOR
M16	3	EA	POWER FUSE, 1 POLE, 34.5 KV, 200 KV BIL, STATION RIGHT ANGLE, EPOXY, WITH NEMA 2 HOLE PADS		S&C	TYPE SMD-2D, P/N 192284R3-E-S
M17	2	EA	FUSE UNIT FOR SS1, 3 POLE, 34.5 KV, 10E, STANDARD SPEED (QTY. INCLUDES ONE SPARE)		S&C	TYPE SMU-20, P/N 614010
M18	2	EA	FUSE UNIT FOR PT, 35 KV, 3A, STANDARD SPEED (QTY. INCLUDES ONE SPARE)		S&C	TYPE SMU-20, P/N 704003
M19	440	FT	TUBING, AL., 2" IPS, SCHEDULE 40, 6063-T6, (~1312 A) PROVIDE 22 PCS @ 20'		TBD	
M20	720	FT	TUBING, AL., 3" IPS, SCHEDULE 40, 6063-T6, (~2436 A) PROVIDE 36 PCS @ 20'		TBD	
M21	440	FT	TUBING, AL., 4" IPS, SCHEDULE 40, 6063-T6, (~3719 A) PROVIDE 23 PCS @ 20'		TBD	
M22	2000	FT	CABLE, 1590MCM, AAC, 37 STRAND, "CORE@PSS", USED FOR HV & LV CONDUCTOR		SOUTHWIRE	
M23	540	FT	CABLE, 636MCM, AAC, 37 STRAND "ORCHID", USED FOR DAMPENING CABLE		SOUTHWIRE	
M24	100	FT	CABLE, #2 AWG, SOLID CU. CABLE, USED FOR PT AND STATION SERVICE CPT		SOUTHWIRE	
STRUCTURES						
S1	7	EA	BUS SUPPORT STAND, LOW			
S2	11	EA	BUS SUPPORT STAND, HIGH			
S3	3	EA	SURGE ARRESTER STAND, 25'-6" HEIGHT			
S4	3	EA	SWITCH STAND, 345kV, 3 PHASE			
S5	1	EA	STATION SERVICE TRANSFORMER/PT/BUS SUPPORT STAND			
S6	1	EA	CT/PT SUPPORT STAND, 18'-10" HEIGHT			
S7	1	EA	TIE BUS STRUCTURE			
S8	1	EA	TIE BUS STRUCTURE			
S9	6	EA	FEEDER STAND			
S10	2	EA	STATIC MAST, 80'-0" OVERALL HEIGHT, LIGHTING PROVISIONS AT 55'-0", STATIC WIRE PLA@ OFF AT 75'-0"			
S11	3	EA	CVT STAND, 22'-6" HEIGHT			
S12	24	EA	GRD LINDING MAT, GALVANIZED, BAR GRATING, 4'-0" X 8'-0", WITH NEMA 2-HOLE PATTERN ON OPPOSITE CORNERS			

			YARD LIGHTING			
L1	5	EA	OUTDOOR FLOODLIGHT, LED, MULTI-VOLT (120-TH RU 277V) 55K LUMENS, NEMA 6X5 BEAM SPREAD, WITH VERTICAL TENON TYPE MOUNTING, AND SHORTING CAP.		HOLDRITE	CAT: RMGLED-PS-40K-MVOLT-FT-LT-VTORSED-SH
			FITTINGS			
F1	39	EA	TERMINAL, ALUMINUM, HV, 4" 6-HOLE PAD, BOLTED, FOR (1) 1590 MCM AAC, "COREOPSIS", STRAIGHT		SEPCOR	AFHDHV-61-48-HS
F3	6	EA	TERMINAL, ALUMINUM, HV, 4" 6-HOLE PAD, WELDED, FOR 4" SPS SCH. 40 TUBE, EXPANSION		SEPCOR	WFHDHV-61-48
F4A	6	EA	TERMINAL, ALUMINUM, 4" 6-HOLE PAD, BOLTED, FOR (3) 1590MCM AAC, "COREOPSIS", 90 DEGREE		SEPCOR	AFHDS-90-63-48
F4B	6	EA	TERMINAL, ALUMINUM, 6" 6-HOLE PAD, BOLTED, FOR (3) 1590MCM AAC, "COREOPSIS", 90 DEGREE		SEPCOR	AFHDS-90-63-68
F5	78	EA	TERMINAL, ALUMINUM, 4" 4-HOLE PAD, BOLTED, FOR (1) 1590 MCM AAC, "COREOPSIS", STRAIGHT		SEPCOR	AFHC-63-48
F6	150	EA	TERMINAL, ALUMINUM, 3" 4-HOLE PAD, BOLTED, FOR (1) 1590MCM AAC, "COREOPSIS", STRAIGHT		SEPCOR	AFHC-63-4A
F7	1	EA	TERMINAL, ALUMINUM, HV, 4" 6-HOLE PAD, BOLTED, FOR (1) 1590 MCM AAC, "COREOPSIS", 90 DEGREE, USED AT CVTs		SEPCOR	AFHDHV-90-63-48
F8	42	EA	TERMINAL, ALUMINUM, 4" 6-HOLE PAD, BOLTED, FOR (3) 1590 MCM AAC, "COREOPSIS", STRAIGHT		SEPCOR	AFHDS-63-48
F9	86	EA	TERMINAL, ALUMINUM, 4" 6-HOLE PAD, BOLTED, FOR (3) 1590 MCM AAC, "COREOPSIS", 45 DEGREE		SEPCOR	AFHC-45-63-48
F10	6	EA	TERMINAL, ALUMINUM, 6" 6-HOLE PAD, BOLTED, FOR 6" SPS SCH. 40 TUBE, 90 DEGREE		SEPCOR	AFHTSD-09-68
F11	6	EA	TERMINAL, ALUMINUM, 6" 6-HOLE PAD, BOLTED, FOR 6" SPS SCH. 40 TUBE, STRAIGHT		SEPCOR	AFHTC-63-68
F12	12	EA	TERMINAL, ALUMINUM, 4" 4-HOLE PAD, BOLTED, FOR 4" SPS SCH. 40 TUBE, STRAIGHT		SEPCOR	AFHC-HV-49-48
F13	12	EA	TERMINAL, ALUMINUM, 6" 6-HOLE PAD, BOLTED, FOR (3) 1590 MCM AAC, "COREOPSIS", STRAIGHT		EEFCOR	AFHCS-63-68
F14	20	EA	TERMINAL, BRONZE, FOR #2 SOLID COPPER WIRE, BOLTED, 1.63" WIDE, 2-HOLE NEMA PAD, STRAIGHT		HUBBELL	GT4541AH
F15	24	EA	TEE, ALUMINUM, BOLTED, FOR 6" SPS SCH. 40 TUBE, 4" 4-HOLE PAD		SEPCOR	ATF-69-48
F16	54	EA	TEE, ALUMINUM, BOLTED, FOR 2" SPS SCH. 40 TUBE, 4" 4-HOLE PAD		SEPCOR	ATFHX58-48
F17	6	EA	TEE, ALUMINUM, BOLTED, FOR (1) 1590 MCM AAC, "COREOPSIS", 4" 4-HOLE PAD		SEPCOR	ATF-63-48
F18	6	EA	TEE, ALUMINUM, BOLTED, FOR (3) 1590 MCM AAC, "COREOPSIS", 4" 4-HOLE PAD		SEPCOR	ASPC-41-48B
F19	6	EA	TEE, ALUMINUM, BOLTED, FOR 6" SPS SCH. 40 TUBE TO 6" SPS SCH. 40 TUBE		SEPCOR	ATTT-6969
F20	6	EA	TEE, ALUMINUM, WELDED, FOR 4" SPS SCH. 40 TO 4" SPS SCH. 40, USED AT TOP OF A-FRAME		SEPCOR	WFVT15-6464
F21	24	EA	TEE, ALUMINUM, WELDED, FOR 4" SPS SCH. 40 TO 4" SPS SCH. 40, USED AT BOTTOM AND MIDDLE OF A-FRAME		SEPCOR	WFFT15-6464
F22	30	EA	STRAIN, ALUMINUM, BOLTED, FOR (1) 1590MCM AAC, USED AT PT CONNECTIONS		SEPCOR	ANLSC-45
F26	18	EA	BUS SUPPORT CLAMP, ALUMINUM, BOLTED, FOR (1) 1590MCM AAC, "COREOPSIS", 3" BOLT CIRCLE		SEPCOR	AVCA-43-1
F27	1	EA	BUS SUPPORT CLAMP, ALUMINUM, BOLTED, FOR 4" SPS, SCHEDULE 40, 5" BOLT CIRCLE, EXPANSION		SEPCOR	WVECTD-64-5
F28	19	EA	BUS SUPPORT CLAMP, ALUMINUM, HOOK TYPE, FOR 4" SPS, SCHEDULE 40, 5" BOLT CIRCLE		SEPCOR	ASWH-64-5
F29	24	EA	BUS SUPPORT CLAMP, ALUMINUM, HOOK TYPE, FOR 6" SPS, SCHEDULE 40, 6" BOLT CIRCLE		SEPCOR	ASWH-69-6-SE
F30	18	EA	BUS SUPPORT CLAMP, ALUMINUM, HOOK TYPE, FOR 2" SPS, SCHEDULE 40, 3" BOLT CIRCLE		SEPCOR	ASWH-58-3-SE
F31	18	EA	BUS SUPPORT CLAMP, ALUMINUM, BOLTED, VERTICAL, FOR 2" SPS, SCHEDULE 40, 3" BOLT CIRCLE		SEPCOR	AVTI-58-3
F35	28	EA	COUPLER, ALUMINUM, BOLTED, HV, 4" SPS SCH 40 TUBE TO 4" SPS SCH 40 TUBE, STRAIGHT		SEPCOR	ASCTHV-6464
F36	18	EA	COUPLER, ALUMINUM, BOLTED, HV, 6" SPS SCH 40 TUBE TO 6" SPS SCH 40 TUBE, STRAIGHT		SEPCOR	ASCT-6969
F37	6	EA	COUPLER, ALUMINUM, BOLTED, HV, 6" SPS SCH 40 TUBE TO 6" SPS SCH 40 TUBE, 90 DEGREE		TRAMS	18-462-96
F38	12	EA	COUPLER, ALUMINUM, WELDED, SPHERE		SEPCOR	WUBUM-8
F40	6	EA	SPACER, ALUMINUM, BOLTED, FOR (3) 1590 MCM "COREOPSIS", 2" SPACING		SEPCOR	ASPC3-63-2
F45	6	EA	CAP, ALUMINUM, WELDED, BALL TYPE, FOR 4" SPS, SCHEDULE 40		SEPCOR	WBPC-64-B
F46	6	EA	CAP, ALUMINUM, DRIVE-ON, FOR 6" SPS, SCHEDULE 40		SEPCOR	DPS-69-AL
F47	12	EA	CAP, ALUMINUM, DRIVE-ON, FOR 4" SPS, SCHEDULE 40		SEPCOR	DPS-64-AL
F48	18	EA	CAP, ALUMINUM, DRIVE-ON, FOR 2" SPS, SCHEDULE 40		SEPCOR	DPS-58-AL
F50	20	EA	HARDWARE SHIELD, 4"X4", 4-HOLE NEMA PATTERN		SEPCOR	64-2084
F51	9	EA	CLAMP, HOT LINE, ALUMINUM, TIN PLATED, FOR PT CONNECTIONS		HUBBELL	5153DWGP

			GROUNDING MATERIAL			
G1	8100	FT	4/0 AWG BARE COPPER CABLE, SOFT DRAWN, 19-STRAND (CLASS B). QUANTITY DOES NOT INCLUDE ABOVE GROUND PIGTAILS			
G2	200	FT	#2 AWG, SOLID, TINNED, BARE COPPER WIRE			
G3	6	EA	GROUND STRAP, 24" FLEXIBLE BRAID		SEPCOR	XBG76-D-24
G4	75	EA	GROUND ROD, COPPER-BONDED, 5/8" DIA. X 10'-0", POINTED		ERICO	613400
G5	10	EA	DRIVE SLEEVE FOR 5/8" DIA. GROUND ROD, POINTED		ERICO	613733
G6	14	EA	WELD METAL, TYPE XB, CROSS, #4/0 AWG TO #4/0 AWG, PACKAGED IN BOXES OF 10, 127 REQUIRED		ERICO	250
G7	1	EA	MOLD FOR ITEM G6, PROVIDE WITH WEAR PLATES		ERICO	XBM-2020
G8	19	EA	WELD METAL, TYPE TA, TEE, #4/0 AWG TO #4/0 AWG, PACKAGED IN BOXES OF 10, 172 REQUIRED		ERICO	150
G9	1	EA	MOLD FOR ITEM G8, PROVIDE WITH WEAR PLATES		ERICO	TAC-2020
G10	4	EA	WELD METAL, TYPE GTE, ROD, #4/0 AWG TO 3/4" DIA. ROD, PACKAGED IN BOXES OF 10, 35 REQUIRED		ERICO	115
G11	2	EA	MOLD FOR ITEM G10, ROD, PROVIDE WITH WEAR PLATES		ERICO	GTC-182G
G12	310	EA	DISKS FOR #150 TO #600 WELD (3 1/2" DIA.)		ERICO	61170
G13	40	EA	TERMINAL, COMPRESSION TYPE, FOR #4/0 AWG CU TO FLAT (NEMA 2-HOLE)		BURNDY	YGA26-2N
G14	36	EA	SINGLE GROOVE GROUND CLAMP, FOR #4/0 AWG CU CABLE TO FLAT SURFACE, 1/2" STUD		SEPCOR	GTC-14B
G15	25	EA	DOUBLE GROOVE GROUND CLAMP, FOR (2) #4/0 AWG CU CABLES TO FLAT SURFACE, 1/2" STUD		SEPCOR	GTC2-14B
G16	10	EA	SPLIT BOLT CONNECTOR, FOR #4 AWG SOLID CU (#10-#2 RANGE) FOR CABINET GROUND		BURNDY	KB2C3B1
G17	115	EA	SPLIT BOLT CONNECTOR, FOR #2 SOLID CU TO BARBED WIRE		BURNDY	SBS10
G18	85	EA	GROUND CLAMP, 1 1/4" S.P.S., TOP RAIL TO #4 AWG CU (#4-#2/0 AWG RANGE)		SEPCOR	GU1-4929
G19	4	EA	GROUND CLAMP, 2" S.P.S., DRIVE GATE FRAME TO #4 AWG CU (#4-#2/0 AWG RANGE)		SEPCOR	GU1-5869
G20	2	EA	GROUND CLAMP, 1 1/2" S.P.S., MAN GATE FRAME TO #2 AWG CU (#4-#2/0 AWG RANGE)		SEPCOR	GU1-5429
G21	20	EA	GROUND CLAMP, 1 1/2" S.P.S., LINE POST TO #4/0 AWG CU (#2 AWG-250 MCM RANGE)		SEPCOR	GU1-5412
G22	10	EA	GROUND CLAMP, 2 1/2" S.P.S., CORNER POST TO #4/0 AWG CU (#2 AWG-250 MCM RANGE)		SEPCOR	GU1-6012
G23	6	EA	GROUND CLAMP, 3 1/2" S.P.S., GATE POST TO #4/0 AWG CU (#4 AWG-250 MCM RANGE)		SEPCOR	GU1-6312
G24	2	EA	CABLE CLEANING BRUSH		ERICO	TB14
G25	2	EA	CABLE CLAMP ASSEMBLY		ERICO	8265
G26	5	EA	FLINT IGNITOR		ERICO	TA20
G27	2	EA	MOLD CLEANING BRUSH		ERICO	TB94
G28	2	EA	SLAG REMOVAL SPADES FOR WELD METAL 90 AND ABOVE		ERICO	BE36R
G29	2	EA	TORCH HEAD		ERICO	TA11
G37	1	EA	CLAMP, GROUND ROD, U-BOLT TO 3/4" ROD, FOR (3) 4/0 AWG BARE COPPER CABLE		ERICO	GC065TH
G38	1	EA	GROUND ACCESS WELL, 15" DIA. 12" LONG		ERICO	PB36R
STATIC LINE MATERIAL						
T1	111	EA	ANCHOR SHACKLE, RATED 35 KIPS, LONG SHANK		HUBBELL	4675L
T2	4	EA	COMPRESSION STATIC DEADEND, 7/16" EHS, WITH HORIZONTAL EYE AND ARMA 2 HOLE PAD.		HUBBELL	861630SH
T3	4	EA	CONNECTOR, EYE BOLT GROUND, (2) STUD, FOR 4/0 AWG 19 STRAND, TIN PLATED		SEPCOR	LWA-4539T-SND
T4	475	FT	CABLE, 7/16" EHS SHIELD WIRE

GROUNDING PLAN VIEW

DESIGN NOTES

1. REFERENCE DOCUMENT 24144-01 CHISME GROUND GRID ANALYSIS.
2. STATION GROUNDING IS BASED ON THE FOLLOWING DESIGN CRITERIA.
   - A. UTILITY GRID DESIGN EARTH CURRENT ——— 11,316 AMPS
     ADDITIONAL FUTURE CONTRIBUTION ——— 2,263 AMPS
   - B. FAULT CLEARING TIME ——— 0.50 SECONDS (TBC)
   - C. SPLIT FACTOR ——— NOT USED
   - D. GRID BURIAL DEPTH (BELOW SUBGRADE) ——— 18 IN. MINIMUM
   - E. SELECTED SOIL MODEL FOR GROUND RESISTIVITY:

LAYER NUMBER	RESISTIVITY (OHM-M)	THICKNESS (FEET)
1	INFINITE	INFINITE
2	18.94	2.20
3	14.44	4.22
4	18.52	INFINITE

3. DESIGN RESULTS

DESIGN FACTOR	TOLERABLE	CALCULATED
STEP POTENTIAL	2,168 V	1.50 V
TOUCH POTENTIAL	658 V	< 558 V
GRID RESISTANCE		0.104 OHMS
GRID POTENTIAL RISE		1,288 V

GENERAL NOTES

1. THIS DESIGN IS DEPENDANT UPON PLACEMENT OF A MINIMUM OF (4) INCHES OF CRUSHED LIMESTONE ROCK WITH A NOMINAL RESISTIVITY OF (3000) OHM-METERS. ROCK SURFACING SHALL EXTEND OUTSIDE THE SUBSTATION FENCE A MINIMUM OF THREE FEET.
2. THE TESTING SUBCONTRACTOR SHALL TEST THE GROUND GRID PRIOR TO CONNECTING ANY EXTERNAL GROUND/SHIELD WIRES TO CONFIRM THAT THE RESISTANCE TO THE REMOTE EARTH IS EQUAL TO OR LOWER THAN THE DESIGN VALUE.
3. GROUNDING FOR ALL JUNCTION BOXES TO BE PROVIDED BY THE CONTRACTOR.
4. STATION PERIMETER FENCE SHALL BE GROUNDED IN ACCORDANCE WITH LOCAL PRACTICES AND THESE DRAWINGS. ALL FENCE GROUNDING SHALL BE INSTALLED ON THE INSIDE OF THE FENCE.
5. GROUND RODS SHALL BE INSTALLED AT THE LOCATIONS SHOWN ON THIS DRAWING.
6. THE CONTRACTOR SHALL PROVIDE SUFFICIENT SLACK FOR EQUIPMENT AND STRUCTURE GROUND LEADS TO REACH GROUNDING PADS.
7. THE CONTRACTOR SHALL CONNECT (1) 4/0 AWG COPPER CABLE FROM THE GROUND GRID THRU THE CABLE TRENCH AS SHOWN, SECURING IT WITH GROUND CLIPS TO THE TRENCH SIDEWALL. THE CABLE TRENCH GROUND SHALL CONNECT TO THE MAIN GROUND GRID IN (3) LOCATIONS AS SHOWN. THE 4/0 AWG COPPER CABLE SHALL BE RUN CONTINUOUSLY FROM THE CABLE TRENCH THROUGHOUT THE BUILDING CABLE TRAY AND BONDED EVERY 10' MINIMUM.
8. TRANSFORMER GROUND PIGTAILS SHALL BE INSTALLED IN 1" PVC CONDUIT EMBEDDED IN FOUNDATION. SEE CONDUIT PLAN DRAWING 450.

LEGEND

- —DETAIL NUMBER
  —DRAWING NO.
- ±8500 FT 4/0 AWG 19 STRAND (CLASS B) CU., MEDIUM HARD DRAWN, BELOW GRADE CABLE SHALL BE INSTALLED A MINIMUM OF 18" BELOW SUBGRADE (SOIL).
- (28) 3/4" x 10'-0" LONG COPPERWELD GROUND RODS
- ±(127) EXOTHERMIC CONNECTION (CROSS) LOCATIONS
- ±(177) EXOTHERMIC CONNECTION (TEE) LOCATIONS
- ±(36) TWO HOLE BRONZE BOLTED TERMINALS
- ±(49) SINGLE GROOVE BRONZE CONNECTORS
- ±(22) DOUBLE GROOVE BRONZE CONNECTORS

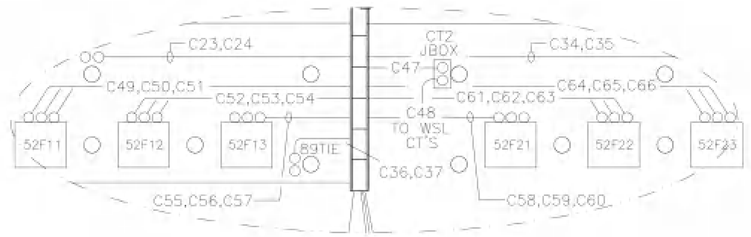
CONDUIT & CABLE TRENCH PLAN VIEW



ENLARGED VIEW

CONDUIT NOTES:

1. ALL CONDUIT INSTALLATIONS SHALL BE IN ACCORDANCE WITH THE 2020 NATIONAL ELECTRIC CODE, NESC, AND OTHER APPLICABLE STANDARDS.
2. THE CONDUIT LAYOUT SHOWN IN THESE PLANS IS CONCEPTUAL ONLY. THE CONTRACTOR SHALL ROUTE AND LOCATE THE CONDUITS TO SUIT SITE CONDITIONS. CONTRACTOR SHALL COORDINATE ALL CHANGES IN WIRING AND CONDUIT WITH THE ENGINEER.
3. WHEN FIELD CUTTING IS REQUIRED, THE CONDUIT SHALL BE CUT SQUARE AND DEBURRED.
4. ALL CONDUITS SHALL BE FREE OF ANY OBSTRUCTIONS AND PROPERLY SECURED BEFORE THE CABLE IS PULLED. CONTRACTOR SHALL APPLY CABLE PULLING LUBRICANT BEFORE PULLING CABLE.
5. ALL BELOW GRADE CONDUIT, INCLUDING BENDS, SHALL BE PVC SCHEDULE 40 WITHOUT CONCRETE ENCASEMENT, UNLESS NOTED OTHERWISE. ALL ABOVE GRADE CONDUIT SHALL BE GALVANIZED RIGGID STEEL (GRS). ALL TURN-UP ELBOWS SHALL BE PVC COATED GRS EXTENDING TO A MINIMUM HEIGHT OF 6" ABOVE FINISHED GRADE.
6. THE TOP OF CONDUIT SHALL BE INSTALLED A MINIMUM OF 30" BELOW FINISHED GRADE (TOP OF GRAVEL), UNLESS SHOWN OR NOTED OTHERWISE.
7. THERE SHALL BE NO MORE THAN FOUR 90 DEGREE BENDS BETWEEN PULL LOCATIONS SUCH AS CONDUIT BODIES AND PULL BOXES.
8. PRIOR TO CABLE PULLING, A MANDREL NO LESS THAN 1/4" SMALLER IN DIAMETER THAN THE CONDUITS NOMINAL INSIDE DIAMETER, SHALL BE PULLED THROUGH ALL COMPLETED CONDUITS.
9. ALL SPARE CONDUITS TERMINATING AT EQUIPMENT SHALL HAVE A PULL ROPE INSTALLED AND LEFT IN ALL CONDUITS.
10. ALL CONDUIT FITTINGS ARE TO BE SUPPORTED WITHIN A MAXIMUM OF 3'-0" OF EACH HUB.
11. ALL PVC CONDUITS TERMINATING INTO PULL BOXES AND VAULTS SHALL BE PROVIDED WITH END BELL FITTINGS. PVC CONDUITS SHALL ENTER BOTTOM OF CABLE TRENCH AND USE 45 DEGREE FITTINGS WITH END BELLS.
12. CONTRACTOR SHALL CONFIRM STUB-UP LOCATIONS WITH THE EQUIPMENT DRAWINGS.
13. PVC CONDUIT AND FITTINGS SHALL BE JOINED TOGETHER AND MADE LEAK PROOF USING THE PVC CLEANER AND FAST DRYING SOLVENT CEMENT.
14. CABLE TRENCH SHALL BE INSTALLED PER MANUFACTURE RECOMMENDATIONS. A #4/0 AWG BARE COPPER GROUND CABLE SHALL BE INSTALLED INSIDE TRENCH AND BONDED TO THE GROUND GRID IN AT LEAST (3) PLACES. SEE GROUNDING PLAN DRAWING 400.
15. SEE DRAWING 451 FOR CONDUIT SCHEDULE. SEE DRAWING 452 FOR CONDUIT DETAILS.
16. CONDUITS C71-C74 SHALL BE EXTENDED 5' BEYOND FENCELINE AND CAPPED OFF FOR ONCOR USE. EXACT LOCATION TO BE DETERMINED (LATER).

TECHNICAL REPORT

PROJECT: Red River Clean Energy – Owens
JOB NUMBER: 29184.01

SUBJECT:	Site Lighting Study	**CALC NO:**	29184
		SHEET NO:	1 OF 5
BY:	Qualus	**DATE:**	09/26/25
		REV:	0

1.0 Purpose and Scope

The Purpose of this Site Lighting Study is to determine the lighting levels within the Red River Clean Energy 345/34.5 kV Substation, which is in Brown County, Texas.

The Scope of this Study includes determining **general lighting levels**, fixtures, lamps, etc. for the areas directly associated with the substation yard which includes the control building's exterior lights, as detailed on the design drawings. The study does not account for light from existing sources.

2.0 Design Requirements

Lighting levels are established in general accordance with the NESC/IEEE standards and with good engineering practice. NESC Foot-candle Recommendations are presented in Attachment C "Table 111-1 – Illumination levels". Lighting levels range from 0.2 foot-candles (fc) for general orientation in remote areas, to 2 fc for general exterior.

For the ranges of foot-candle values presented, the lower end value manipulates the Light Loss Factor (LLF) as described in Section 3.3 below and represents the minimum target maintained level. Values are horizontal values measured at the walking surface.

3.0 Design Methodology

3.1 Computer Software

Lighting calculations are determined using Visual 2020 (Version 2.1.0394) computer software by Acuity Brands Lighting, Inc. This software allows the user to import a CAD file of the facility, locate lighting fixtures in plan, assign fixture/lamp properties, and set the mounting height and orientation (direction and tilt angle) of the fixtures. The software also allows the user to assign a Light Loss Factor (LLF), which is described further in this section.

3.2 Fixtures and Mounting

Two different types of fixtures are used throughout the facility: AEC® Field Adjustable Area Lights. Lighting fixture information in the form of catalog cut sheets is included in Attachment A.

3.0 Light Loss Factor

A Light Loss Factor (LLF) is used to compensate for the physical conditions of the design. A LLF value of 1.00 indicates that there are no "real world" losses or gains compared to the design. Values less than or greater than 1.00 indicate "real world" losses or gains compared to the design. The LLF is the product of several loss factors, including the following:

- Lamp Lumen Depreciation (LLD), which accounts for the diminished light output (lumens) as the lamp ages. This value is largely dependent on the lamp type (mercury vapor, metal halide, etc.).
- Luminaire Dirt Depreciation (LDD), which accounts for dirt accumulation on lamps and fixtures. A LDD factor of 0.80 is used for outdoor, which reflects cleaning every two years in a "Dirty" environment.
- Voltage Effects (VE), which accounts for the variation of light output (lumens) due to the variation in supply voltage. A VE factor of 0.95 is used for outdoor lighting.

The resulting LLF = LLD * LDD * VE is calculated to be 0.861 for LED fixtures.

3.4 Design Conditions

The following design assumptions and limitations are noted:

1. Outdoor lighting designs consider direct lighting only and do not consider reflectance.
2. The mounting angle of the lights are at a fixed angle of 0°.
3. RAB Field-Adjustable lights are at a height of 37'.

4.0 Design Results

Design Results are presented in Attachment B in the form of a plan view, which shows spot lighting levels (and in some cases combined lighting levels) plotted at the walking surface. A summary of the results with design recommendations follows.

4.1 General Yard Lighting

Results of the lighting study are shown on the overall plan view in Attachment B, with combined lighting levels shown at 0.1, 0.2 and 2 fc. The minimum target lighting level of 0.2 fc for remote areas is well maintained. While the lighting level for working areas is around 2 fc, it is assumed that the transformers and breakers have internal lights for work.

4.2 Other Considerations

1. LED lamps are rated for many thousands of hours and should not need to be replaced for several years. The lead time for lamps is expected to be relatively short, perhaps stock to two weeks. It is recommended that new lamps be ordered at the time of the first failure, and that all lamps be replaced at one time for preventive maintenance. Stocking of spare lamps is at the Customer's discretion.
2. It is recommended that fixtures be cleaned as part of a regularly scheduled maintenance plan.

Technical Specifications

Field Adjustability

Field Adjustable:

Field Adjustable Light Output:
140W/210W (Factory default: 180W)
Color temperature selectable by 4000K and 5000K

Compliance

UL Listed:

Suitable for wet locations. Suitable for mounting within 0 ft (0 m) of the ground.

IP Rating

Ingress protection rating of dust, debris and water

IESNA LM-79 & LM-80 Testing

RAB's LED luminaires and LED components have been tested by an independent laboratory in accordance with IESNA LM-79 and LM-80.

Trade Agreements Act Compliant

This product is a product of a designated country ("designated country" means any of the following: a World Trade Organization Government Procurement Agreement country, or a United States free trade agreement country, or a least developed country) that complies with the Trade Agreements Act.

DLC Listed

This product is listed by Design Lights Consortium® (DLC) as an energy efficient premium product that qualifies for the highest tier of rebates from DLC Member Utilities. Designed to meet DLC 5.1 requirements.

DLC Product Code: 5-C-202956

LED Characteristics

LEDs:

Long life, high-efficacy, phosphor, surface mount LEDs

Color Consistency:

7-step MacAdam Ellipse binning to achieve consistent color quality

Color Stability:

LED color temperature is consistent and not affected by dimming. Color temperature remains constant throughout the lifetime of the luminaire.

Color Uniformity:

Within a single luminaire, color temperature does not vary more than the qualification of the American National Standard for Solid-State Lighting (ANSI/NEMA/ASSIST 2017).

Electrical

Driver:

120V: Constant Current, Class 2, 120-277V, 50/60 Hz, 1.03A, 124W, 1.68A, 202W, 1.28A, 154W, 1.15A, 277V, 0.77A

208V: Constant Current, Class 2, 120-277V, 50/60 Hz, 1.03A, 214W, 1.67A, 347W, 1.28A, 266W, 1.15A, 239W, 0.77A

Dimming Driver:

Driver includes dimming control wiring for 0-10V dimming systems. Requires separate 0-10V DC dimming control. Dims down to 10%.

THD:

<10% at 120V, 5.7% at 277V

Power Factor:

>97% at 120V, 90.2% at 277V

Surge Protection:

4kV

Performance

Lifespan:

100,000 hours. LED lumen maintenance data calculated per IESNA TM-21 calculations.

Wattage Equivalency:

Comparable to 1000W Metal Halide

Optical

NEMA Type:

NEMA Distribution: Horizontal

Construction

Cold Weather Starting:

The minimum starting temperature is -40°C (-40°F).

Ambient Temperature:

Non-Power Twist Rated: 40°C (104°F)
Low Power Twist Rated: 45°C (113°F)

5H5W available for M & L

OTHER

Warranty
RAB backlight, total cut-off products will be free from defects in materials and workmanship for a period of ten (10) years from the date of delivery to the first user, including coverage of light output, color stability, driver performance and fixture finish. RAB's warranty is subject to all terms and conditions found at rablight.com/warranty.
To be made RAB compliant.

Lifespan
60,000 hour LED lifespan based on IES LM-80 results & L-70 calculations

DIMENSIONS

FXLEDXST - 4W/6W/8W/10W

FXLEDXST - 16W/21W/27W/32W

g. Receptacles in damp or wet locations

All 120 V ac permanent receptacles shall be provided with one or more of the following:

1. Ground-fault circuit interrupter (GFCI) protection.
2. Be on a grounded circuit that is tested at such intervals as experience has shown to be necessary.
3. Be applied in conjunction with a GFCI device between the receptacle and the load.

1.0 Purpose and Scope

Qualus has conducted a comprehensive Lightning Protection Study for Red River Clean Energy's 345/34.5 kV Chisme Substation, which is in Brown County, Texas. This study focuses on ensuring the reliability and resilience of the substation infrastructure against direct lightning strikes, which are a critical consideration for facilities operating in open and exposed environments. The goal of the study is to determine the substation's shielding requirements and calculate its lightning protection design in compliance with IEEE Std. 998-2012, (IEEE Guide for Direct Lightning Stroke Shielding of Substations).

2.0 Design Methodology

2.1 Rolling Sphere

The lightning protection design utilizes the rolling sphere method prescribed by IEEE Std. 998-2012, a widely recognized standard for determining zones of protection in substations. This method evaluates the ability of static wires and masts to provide comprehensive shielding against lightning strikes. The calculations verify that the proposed design meets the protection requirements. Detailed calculations are provided in Attachment A.

The Rolling Sphere Method models the interaction of a lightning stroke with substation equipment and structures. The approach calculates a specific striking distance, determined by the energy and voltage of the lightning, which is visualized as the radius of an imaginary sphere. The sphere is then "rolled" over and around substation components to identify areas vulnerable to direct lightning strikes.

Equipment or structures that remain below the curved surface of the sphere are considered protected, as they fall within the shielded zone created by shielding electrodes (e.g., lightning masts, shield wires). Conversely, equipment that comes into contact with or penetrates the sphere is deemed unprotected.

One of the rolling sphere method involves rolling an imaginary sphere of radius r over the surface of a substation. The sphere rolls up and over (and is supported by) lightning masts, shield wires, substation fences, and other grounded metallic objects that can provide lightning shielding. A piece of equipment is said to be protected from a direct stroke if a sphere of radius r cannot touch the exposed surface of the sphere by virtue of the sphere being supported by shield wires or other devices. Equipment that touches the sphere or protrudes its surface is not protected. The basic concept is illustrated in Figure 24.

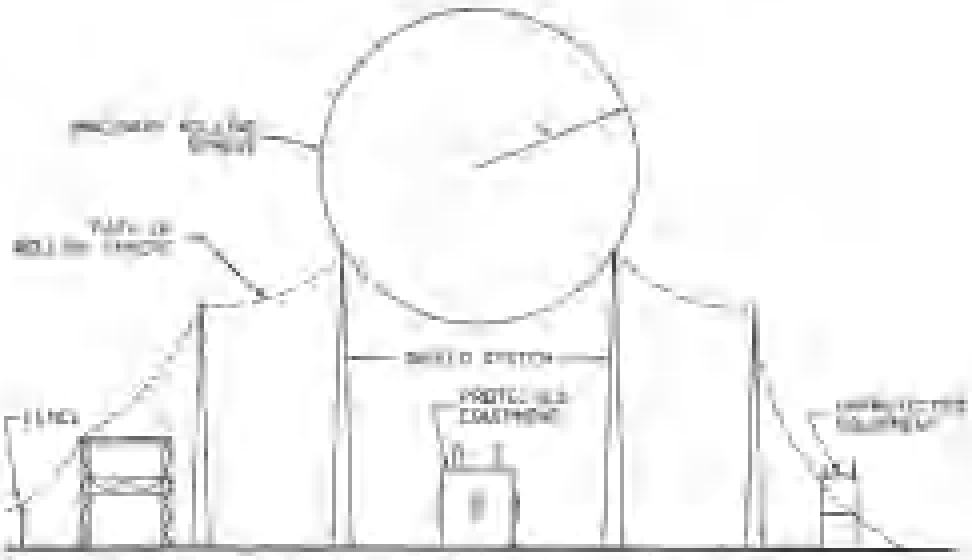

Figure 24—Principle of rolling sphere with multiple shielding electrodes

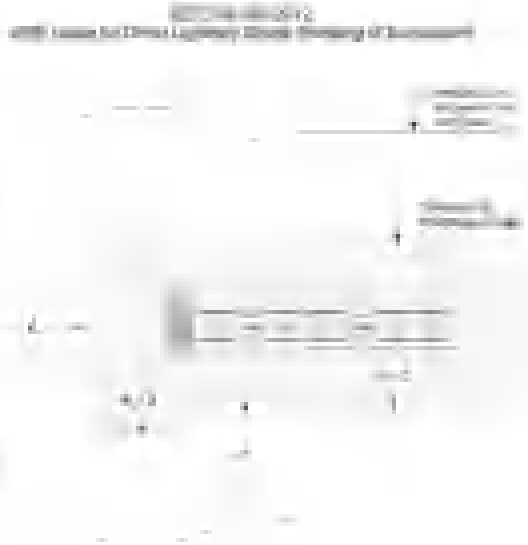
Illustrations from IEEE Std 998-2012

1. **Elevation View (Figure 24)**
   - **Description**: This view illustrates the principle of the Rolling Sphere Method with an elevation perspective.
   - **Key Features**:
     - The imaginary rolling sphere of radius is shown interacting with shielding systems and substation equipment.
     - The shield system, which consists of lightning masts, wires, and grounded metallic objects, prevents the sphere from touching the protected equipment.
     - Unprotected equipment is clearly identified as being exposed to potential lightning strikes.



2. **Plan View**

   - **Description**: This illustration provides a horizontal, plan-level perspective of the Rolling Sphere Method.
   - **Key Features**:
     - The protected zone at both ground level and equipment height is demonstrated.
     - The configuration ensures that shielding components are adequately spaced to provide comprehensive protection across the substation.

3.0 Design Results

Detailed calculations are presented in Attachment A, and design results are presented in Attachment B in the form of a plan view and elevation drawings. A brief table showing the calculation results are below.

Table 1 – Rolling Sphere Radius

Voltage – Bus Height	BIL	Sphere Radius
345 kV – 36 ft	1300 kV	152.74 ft
34.5 kV – 34 ft	200 kV	140.71 ft

Calculations for Aluminium Wire

Eq: (C-1) $R_t = \ln(2*h/R_c) - K_s/\mu_r + 0$

Calculated Rt Value $R_t =$ [illegible] h

Eq: (C-3) $Z_s = 60 * \sqrt{\ln(2*h/R_c)^2 + \ln(2*h/r)^2}$

Bus surge impedance: $Z_s =$ [illegible]

Eq: (5-16) $I_s = (2.2*BIL) / Z_s$

Allowable Stroke Current: $I_s =$ [illegible] kA

[Minimum Stroke Current allowed is 5kA] "If I_s less than 5kA, use 5kA at minimum" Probability of stroke greater than Is (Figure 4 in IEEE 998)

Engineer judgement deems below value as acceptable

Eq: (5-18) $h = 26.26 * s * I_s^{0.65}$ $I_s =$ [illegible] kA [illegible]%

Sphere radius: $h =$ [illegible] ft

$S_r = h * .8$

$S_r =$ [illegible] ft

Calculations for Switch 2:

Eq: (C-1) $R_t = \ln(2*h/R_c) - K_s/\mu_r + 0$

Calculated Rt Value: $R_t =$ [illegible] ft

Eq: (C-3) $Z_s = 60 * \sqrt{\ln(2*h/R_c)^2 + \ln(2*h/r)^2}$

Bus surge impedance: $Z_s =$ [illegible] Ω

Eq: (5-16) $I_s = (2.2*BIL) / Z_s$

Allowable Stroke Current: $I_s =$ [illegible] kA

[Minimum Stroke Current allowed is 5kA] "If I_s less than 5kA, use 5kA at minimum" Probability of stroke greater than Is (Figure 4 in IEEE 998)

Engineer judgement deems below value as acceptable

Eq: (5-18) $h = 26.26 * s * I_s^{0.65}$ $I_s =$ [illegible] kA [illegible]%

Sphere radius: $h =$ [illegible] ft

$S_r = h * .8$

S_c = 1.35 kV/ft

Calculation for Section 2:

Eq (C.1) $R_c = \rho_1 (2^*h)/(R_c) \cdot K_s K_t \rho_2 = R$

Calculated Rc Value: R_c = 0.08 Ω

Eq (C.3) $A_g = \pi R^2 + \pi\rho(1/\pi) (2^*h)/(R_c)) + 1/\pi (2^*h)/(r))$

Rod-to-ogd Impedance: Z_c = 180 Ω

Eq (5-2M) $I_f = (3.2^*S_f)/Z_c$

Allowable Strobe Current: I_f = 1.13 kA

(Minimum Strobe Current allowed is .5kA)

"If I_f less than 3kA, use 3kA as minimum". **Probability of strobe greater than is (figure 8 in IEEE 2001**
Engineer judgement deems below value as acceptable

I_f = 10 kA 95%

Eq (5-1B) $S = 20.25 * t * I_f^{-1.47}$

Turbine Inertia: S = 140.71 A

$S_m = S * R$

S_m = 126.63 R

GENERAL NOTES:

1. FOUNDATION DESIGN BASED ON GEOTECHNICAL ENGINEERING REPORT FOR CHISME SOLAR AND STORAGE (LANGAN PROJECT No. 820102301) DATED: JULY 03, 2025
2. THE CONTRACTOR SHALL CORRELATE ALL DIMENSIONS BETWEEN THE ELECTRICAL, CIVIL, STRUCTURAL, AND FOUNDATION PLANS BEFORE CONSTRUCTION AND NOTIFY THE ENGINEER OF ANY DISCREPANCIES OR INCONSISTENCIES BEFORE PROCEEDING WITH THE WORK.
3. CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE LOCAL, STATE, AND FEDERAL STANDARDS. THE CONTRACTOR SHALL ALSO COMPLY WITH ALL OWNER SAFETY STANDARDS.
4. CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ADJACENT STRUCTURES, UTILITY LINES, FIXTURES, EQUIPMENT, PROCESSES, STREETS, AND SIDEWALKS DURING EXCAVATION AND CONSTRUCTION.
5. CONTACT 811 NO LESS THAN 2 FULL BUSINESS DAYS PRIOR TO EXCAVATION OR DEMOLITION TO HAVE UNDERGROUND FACILITIES MARKED.
6. IF GROUNDWATER IS ENCOUNTERED, IT SHALL BE CONTROLLED USING STANDARD DRAINAGE TECHNIQUES, SUCH AS DIVERSION, DITCHES, PUMPING, OR BY INSTALLING SUBSURFACE DRAINS.
7. FOUNDATION EXCAVATIONS SHALL NOT REMAIN OPEN OVERNIGHT UNLESS SPECIAL PROVISIONS ARE APPROVED BY THE ENGINEER.
8. DEBRIS IN THE BOTTOM OF THE EXCAVATION SHALL BE REMOVED PRIOR TO STEEL PLACEMENT. WATER SHALL NOT BE ALLOWED TO INFILTRATE THE FOUNDATION EXCAVATIONS.
9. TO REDUCE THE POTENTIAL FOR GROUNDWATER SEEPAGE INTO THE EXCAVATION AND TO MINIMIZE DISTURBANCES TO THE BEARING AREA, STEEL AND CONCRETE SHALL BE PLACED AS SOON AS POSSIBLE AFTER THE EXCAVATION IS COMPLETED AND PROPERLY CLEANED.
10. ALL EXCAVATIONS SHALL BE SLOPED OR SHORED IN COMPLIANCE WITH APPLICABLE LOCAL, STATE, AND FEDERAL REGULATIONS INCLUDING CURRENT OSHA EXCAVATION AND TRENCH SAFETY STANDARDS.

DESIGN CRITERIA

1. CODES:
   2021 INTERNATIONAL BUILDING CODE

   ASCE 7-16 - MINIMUM DESIGN LOADS FOR BUILDINGS AND OTHER STRUCTURES.

   AISC 14th EDITION STEEL CONSTRUCTION MANUAL

   ACI 318-19 - BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE & COMMENTARY
2. LOADS:
   WIND SPEED: 113 MPH, EXPOSE CATEGORY C, RISK CATEGORY II

   SOIL PARAMETERS:
   BEARING CAPACITY: 2500 PSF (NET)
   COEFFICIENT OF FRICTION: 0.36
   WATER TABLE ELEVATION: NOT ENCOUNTERED

   SEISMIC PARAMETERS:
   SITE CLASS: C
   RISK CATEGORY: II
   PGAm: 0.074g
   SDC: A
   Ss: 0.056g
   S1: 0.035g

CONCRETE NOTES:

1. ALL CONCRETE MATERIALS AND WORKMANSHIP SHALL BE IN ACCORDANCE WITH THE LATEST EDITIONS OF ACI 318 AND ACI 301.
2. CONCRETE TESTING FOR QUALITY CONTROL IS THE RESPONSIBILITY OF THE CONTRACTOR AND THE FREQUENCY AND TYPES OF TESTING SHALL BE DETERMINED BY THE OWNER.
3. ALL CONCRETE SHALL BE:

   A. 4,000 PSI MIN. COMPRESSIVE STRENGTH @ 28 DAYS
   B. MAXIMUM SIZE AGGREGATE 3/4" UNLESS OTHERWISE NOTED
   C. CEMENT SHALL BE ASTM C150, TYPE II UNLESS OTHERWISE NOTED.
   D. ACI APPROVED ADMIXTURES MAY BE USED FOR CONCRETE CURING.
   E. DO NOT USE ADMIXTURES WITH CHLORINE SALTS IN THE CONCRETE.
   F. SLUMP SHALL BE A MINIMUM OF 5".
4. ALL CONCRETE SHALL BE 4% MAX AIR ENTRAINMENT AND HAVE A WATER-CEMENT RATION OF 0.45.
5. PROVIDE 3/4" CHAMFER ON ALL EXPOSED EDGES.
6. ALL REINFORCING SHALL BE:
   GRADE 60 DEFORMED BARS CONFORMING TO ASTM SPECIFICATION A615.
7. ALL CONCRETE REINFORCEMENT SHALL BE DETAILED, FABRICATED, LABELED, SUPPORTED AND SPACED IN FORMS AND SECURED IN PLACE IN ACCORDANCE WITH THE PROCEDURES AND REQUIREMENTS OUTLINED IN THE LATEST EDITION OF THE "BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE" ACI 318 AND THE "MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES", ACI 315. SUBMIT SHOP DRAWINGS FOR REVIEW PRIOR TO FABRICATION.
8. THE FOLLOWING MINIMUM CONCRETE COVER SHALL BE PROVIDED FOR REINFORCEMENT:

   A. CONCRETE CAST AND PERMANENTLY EXPOSED TO EARTH 3"
   B. CONCRETE EXPOSED TO EARTH AND WEATHER 2"
9. HOOKS NOT DIMENSIONED SHALL BE STANDARD ACI HOOKS.
10. SPREAD REINFORCEMENT AS REQUIRED TO CLEAR EMBEDDED PARTS AND ANCHOR BOLTS.
11. ALL CONCRETE POURS MADE WHEN TEMPERATURES RANGE BETWEEN 50 AND 80F, CAN BE MADE WITHOUT ANY SPECIAL PROVISIONS.
12. DURING COLD WEATHER (TEMPERATURES BELOW 50F), CONCRETE MIXING, PLACING, AND CURING OPERATIONS SHALL BE IN ACCORDANCE WITH ACI 306R, "COLD WEATHER CONCRETING".
13. DURING HOT WEATHER (TEMPERATURES ABOVE 90F), CONCRETE MIXING, PLACING, AND CURING OPERATIONS SHALL BE IN ACCORDANCE WITH ACI 305R, "HOT WEATHER CONCRETING".
14. CONCRETE SHALL NOT BE PLACE DURING RAIN, SLEET OR SNOW. RAIN WATER SHOULD NOT BE ALLOWED TO INCREASE MIXING WATER NOR TO DAMAGE SURFACE FINISH.
15. ALL EXTERIOR OR EXPOSED CONCRETE SHALL BE CONSOLIDATED BY INTERNAL VIBRATION IN ACCORDANCE WITH ACI 309, "RECOMMENDED PRACTICE FOR CONSOLIDATION OF CONCRETE".
16. LAP REINFORCING BARS IN ACCORDANCE WITH CLASS B SPLICE PER ACI 318 FOR ALL SPLICES SHALL HAVE MATCHING CORNER BARS AT ALL CORNERS OF CONCRETE WALLS.
17. HONEYCOMBED, SPALLED, OR OTHERWISE DAMAGED CONCRETE SHALL BE REPAIRED AND PATCHED; NOTIFY STRUCTURAL ENGINEER OF DEFECTS AND SUBMIT REMEDIAL PROCEDURES IN WRITING FOR REVIEW PRIOR TO BEGINNING WORK.
18. ALL DETAILING, FABRICATION, PLACING AND SUPPORTING OF REINFORCEMENT SHALL BE IN ACCORDANCE WITH ACI 318 AND CRSI (CURRENT EDITION).
19. ALL REINFORCING ANCHOR RODS SHALL BE RIGIDLY SECURED IN POSITION PRIOR TO THE PLACING OF CONCRETE.
20. ALL REINFORCEMENT AND WELDED WIRE FABRIC SHALL BE FREE OF RUST, DIRT, OIL, AND MILL SCALE PRIOR TO PLACING OF CONCRETE.
21. ALL ANCHOR RODS SHALL BE SET WITH THE AID OF AN ANCHOR ROD SETTING TEMPLATE. ALL ANCHOR ROD SETTING TEMPLATES SHALL BE ASTM A-36 AND SHALL BE LEFT UNFINISHED (BLACK).

INTERNATIONAL BUILDING CODE, 2021 (IBC 2021) – TABLE 1705.3 REQUIRED SPECIAL INSPECTIONS AND TESTS OF CONCRETE CONSTRUCTION

VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC	REFERENCED STANDARD
1. INSPECT REINFORCEMENT, INCLUDING PRESTRESSING TENDONS AND VERIFY PLACEMENT.	–	X	ACI 318: CH. 20, 25.2, 25.3, 26.6.1 – 26.6.3
2. REINFORCING BAR WELDING:			
A. VERIFY WELDABILITY OF REINFORCING BARS OTHER THAN ASTM A706;	–	X	AWS D1.4
B. INSPECT SINGLE-PASS FILLET WELDS, MAXIMUM 5/16"; AND	–	X	ACI 318: 26.6.4
C. INSPECT ALL OTHER WELDS	X	–	
3. INSPECT ANCHORS CAST IN CONCRETE.	–	X	ACI 318: 17.8.2
4. INSPECT ANCHORS POST-INSTALLED IN HARDENED CONCRETE MEMBERS:			
A. ADHESIVE ANCHORS INSTALLED IN HORIZONTALLY OR UPWARDLY INCLINED ORIENTATIONS TO RESIST SUSTAINED TENSION LOADS	X	–	ACI 318: 17.6.2.4
B. MECHANICAL ANCHORS AND ADHESIVE ANCHORS NOT DEFINED IN 4.A.	–	X	ACI 318: 17.8.2
5. VERIFY USE OF REQUIRED DESIGN MIX.	–	X	ACI 318: CH. 19, 26.4.3, 26.4.4
6. PRIOR TO CONCRETE PLACEMENT, FABRICATE SPECIMENS FOR STRENGHT TESTS, PERFORM SLUMP AND AIR CONTENT TESTS, AND DETERMINE THE TEMPERATURE OF THE CONCRETE.	X	–	ASTM C 172, ASTM C 31; ACI 318: 26.5, 26.12
7. INSPECT CONCRETE AND SHOTCRETE PLACEMENT FOR PROPER APPLICATION TECHNIQUES.	X	–	ACI 318: 26.5
8. VERIFY MAINTENANCE OF SPECIFIED CURING TEMPERATURE AND TECHNIQUES.	–	X	ACI 318: 26.5.3 – 26.5.5
9. INSPECT PRESTRESSED CONCRETE FOR:			
A. APPLICATION OF PRESTRESSING FORCES; AND	X	–	ACI 318: 26.10
B. GROUTING OF BONDED PRESTRESSING TENDONS.	X	–	
10. INSPECT ERECTION OF PRECAST CONCRETE MEMBERS.	–	X	ACI 318: 26.9
11. VERIFY IN-SITU CONCRETE STRENGTH, PRIOR TO STRESSING OF TENDONS IN POST-TENSIONED CONCRETE AND PRIOR TO REMOVAL OF SHORES AND FORMS FROM BEAMS AND STRUCTURAL SLABS.	–	X	ACI 318: 26.11.2
12. INSPECT FORMWORK FOR SHAPE, LOCATION AND DIMENSIONS OF THE CONCRETE MEMBER BEING FORMED, SHORING AND RESHORING.	–	X	ACI 318: 26.11.2(b)

REBAR DEVELOPMENT LENGTH SCHEDULE (f'c=4,000 psi)

BAR SIZE	MIN. BAR SPACING	SPLICE LENGTH (LS)		DEVELOPMENT LENGTH (LD)		HOOKED BAR DEVELOPMENT (LDH)	
		TOP BARS	OTHER	TOP BARS	OTHER	TOP BARS	OTHER
#3	1.375	25	19	19	15	–	8
#4	1.500	33	25	25	19	–	10
#5	1.625	41	31	31	24	–	12
#6	1.750	49	37	37	29	–	15
#7	1.875	71	54	54	42	–	17
#8	2.000	81	62	62	48	–	19
#9	2.375	91	70	70	54	–	22

NOTES:
1. TOP BARS INDICATE HORIZONTAL BARS WITH MORE THAN 12" OF CONCRETE CAST BENEATH.
2. "CLEAR COVER" - PROVIDE PER DETAILS OR AS PER NOTE 21 (THIS SHEET).
3. WHERE BARS OF DIFFERENT SIZES ARE SPLICED IN TENSION THE LAP STRENGTH SHALL BE THE LAP SPLICE STRENGTH OF THE SMALLER BAR.
4. WHERE ACTUAL CONDITIONS DIFFER FROM THE PROVIDED SCHEDULE AND OR NOTES, LENGTHS SHALL BE ADJUSTED ONLY WITH THE APPROVAL OF THE STRUCTURAL ENGINEER.
5. DEVELOPMENT VALUES ASSUME NON-COATED BARS.
6. NORMAL WEIGHT CONCRETE fy=60 KSI

SPECIAL INSPECTION AGENCIES	FIRM	ADDRESS, TELEPHONE, EMAIL
1. SPECIAL INSPECTION COORDINATOR		
2. INSPECTOR		
3. INSPECTOR		
4. TESTING AGENCY		
5. TESTING AGENCY		
6. OTHER		

INTERNATIONAL BUILDING CODE, 2021 (IBC 2021) – TABLE 1705.6 REQUIRED SPECIAL INSPECTION AND TESTS OF SOILS

VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC
1. VERIFY MATERIAL BELOW SHALLOW FOUNDATIONS ARE ADEQUATE TO ACHIEVE THE DESIGN BEARING CAPACITY.		X
2. VERIFY EXCAVATIONS ARE EXTENDED TO PROPER DEPTH AND HAVE REACHED PROPER MATERIAL.		X
3. PERFORM CLASSIFICATION AND TESTING OF COMPACTED FILL MATERIALS.		X
4. VERIFY USE OF PROPER MATERIALS, DENSITIES, AND LIFT THICKNESSES DURING PLACEMENT AND COMPACTION OF COMPACTED FILL.	X	
5. PRIOR TO PLACEMENT OF COMPACTED FILL, INSPECT SUB GRADE AND VERIFY THAT SITE HAS BEEN PREPARED PROPERLY.		X

SCHEDULE OF SPECIAL INSPECTIONS

PROJECT: CHISME SOLAR & STORAGE — OWNER:
LOCATION: BROWN COUNTY, TEXAS
DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE: SEAN R. HARBIN, PE

THIS STATEMENT OF SPECIAL INSPECTIONS IS SUBMITTED AS A CONDITION FOR PERMIT ISSUANCE IN ACCORDANCE WITH THE SPECIAL INSPECTION AND TESTING REQUIREMENTS SECTION OF THE ADOPTED INTERNATIONAL BUILDING CODE. THIS PROJECT SHALL COMPLY WITH THE SPECIAL INSPECTION AND TESTING REQUIREMENTS OF THE INTERNATIONAL BUILDING CODE AS THE OWNER OR THE OWNER'S REPRESENTATIVE DEEMS APPROPRIATE. IT INCLUDES A SCHEDULE OF SPECIAL INSPECTION SERVICES APPLICABLE TO THIS PROJECT AS WELL AS THE NAME OF THE SPECIAL INSPECTION COORDINATOR AND THE IDENTITY OF OTHER APPROVED AGENCIES TO BE RETAINED FOR CONDUCTING THESE INSPECTIONS AND TESTS. THIS STATEMENT OF SPECIAL INSPECTIONS ENCOMPASS THE FOLLOWING DISCIPLINES:

☐ STRUCTURAL ☐ ELECTRICAL
☐ OTHER: _____

THE SPECIAL INSPECTION COORDINATOR SHALL KEEP RECORDS OF ALL INSPECTIONS AND SHALL FURNISH INSPECTION REPORTS TO THE OWNER OR THE OWNER'S REPRESENTATIVE AND THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE IF REQUESTED. DISCOVERED DISCREPANCIES SHALL BE BROUGHT TO THE IMMEDIATE ATTENTION OF THE CONTRACTOR FOR CORRECTION. IF SUCH DISCREPANCIES ARE NOT CORRECTED, THE DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE. THE SPECIAL INSPECTION PROGRAM DOES NOT RELIEVE THE CONTRACTOR OF HIS OR HER RESPONSIBILITIES.

INTERIM REPORTS SHALL BE SUBMITTED TO THE OWNER OR THE OWNER'S REPRESENTATIVE AND THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE WHEN REQUESTED.

A FINAL REPORT OF SPECIAL INSPECTIONS DOCUMENTING COMPLETION OF ALL REQUIRED SPECIAL INSPECTIONS, TESTING AND CORRECTION OF ANY DISCREPANCIES NOTED IN THE INSPECTIONS SHALL BE SUBMITTED AT THE COMPLETION OF THE PROJECT.

JOB SITE SAFETY AND MEANS AND METHODS OF CONSTRUCTION ARE SOLELY THE RESPONSIBILITY OF THE CONTRACTOR.

SCHEDULE OF INSPECTION AND TESTING AGENCIES

THIS STATEMENT OF SPECIAL INSPECTIONS / QUALITY ASSURANCE PLAN INCLUDES THE FOLLOWING BUILDING SYSTEMS:

☒ SOILS AND FOUNDATIONS
☒ CAST-IN-PLACE CONCRETE
☐ PRECAST CONCRETE
☐ MASONRY
☐ STRUCTURAL STEEL
☐ COLD-FORMED STEEL FRAMING
☐ SPRAY FIRE RESISTANT MATERIAL
☐ WOOD CONSTRUCTION
☐ EXTERIOR INSULATION AND FINISH SYSTEM
☐ MECHANICAL & ELECTRICAL SYSTEMS
☐ ARCHITECTURAL SYSTEMS
☐ SPECIAL CASES

QUALIFICATION AND CERTIFICATIONS

QUALIFICATIONS OF ALL PERSONNEL PERFORMING SPECIAL INSPECTION AND TESTING ACTIVITIES ARE SUBJECT TO THE APPROVAL OF THE OWNER OR THE OWNER'S REPRESENTATIVE. THE CREDENTIALS OF ALL INSPECTORS AND TESTING TECHNICIANS SHALL BE PROVIDED IF REQUESTED.

KEY FOR MINIMUM QUALIFICATIONS OF INSPECTION AGENTS:

WHEN THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE DEEMS IT APPROPRIATE THAT THE INDIVIDUAL PERFORMING THE STIPULATED TEST OR INSPECTION HAVE A SPECIFIC CERTIFICATION OR LICENSE AS INDICATED BELOW, SUCH DESIGNATION SHALL APPEAR BELOW THE AGENCY NUMBER ON THE SCHEDULE.

PE — PROFESSIONAL ENGINEER – A LICENSED PE SPECIALIZING IN THE DESIGN OF BUILDING STRUCTURES
PE/GE — GEOTECHNICAL ENGINEER – A LICENSED PE SPECIALIZING IN SOIL MECHANICS AND FOUNDATIONS

AMERICAN CONCRETE INSTITUTE (ACI) CERTIFICATION
- ACI-CFTT — CONCRETE FIELD TESTING TECHNICIAN – GRADE 1
- ACI-CCI — CONCRETE CONSTRUCTION INSPECTOR
- ACI-LTT — LABORATORY TESTING TECHNICIAN – GRADE 1 & 2
- ACI-STT — STRENGTH TESTING TECHNICIAN

AMERICAN SOCIETY OF NON-DESTRUCTIVE TESTING (ASNT) CERTIFICATION
- ASNT — NON-DESTRUCTIVE TESTING TECHNICIAN – LEVEL II OR III.

AMERICAN WELDING SOCIETY (AWS) CERTIFICATION
- AWS-CWI — CERTIFIED WELDING INSPECTOR
- AWS-ASC-SSI — CERTIFIED STRUCTURAL STEEL INSPECTOR

INTERNATIONAL CODE COUNCIL (ICC) CERTIFICATION
- ICC-SMS — STRUCTURAL MASONRY SPECIAL INSPECTOR
- ICC-SWS — STRUCTURAL STEEL AND WELDING SPECIAL INSPECTOR
- ICC-SFSI — SPRAY-APPLIED FIREPROOFING SPECIAL INSPECTOR
- ICC-PCSI — PRESTRESSED CONCRETE SPECIAL INSPECTOR
- ICC-RSCI — REINFORCED CONCRETE SPECIAL INSPECTOR

NATIONAL INSTITUTE FOR CERTIFICATION IN ENGINEERING TECHNOLOGIES (NICET)
- NICET-CT — CONCRETE TECHNICIAN – LEVELS I, II, III, & IV
- NICET-ST — SOILS TECHNICIAN – LEVELS I, II, III, & IV
- NICET-GET — GEOTECHNICAL ENGINEERING TECHNICIAN – LEVELS I, II, III, & IV

NOTES:

1. REFER TO RELAY PANEL SPECIFICATION FOR INTERNAL AND EXTERNAL FINISRH COLOR.
2. NAMEPLATES TO BE FURNISRHED FOR EACH DEVICE INTERNAL TO THE PANEL.
3. TWO PANEL NAMEPLATES SRHALL BE FURNISRHED WITH EACH PANEL, ONE MOUNTED ON THE FRONT AND ONE MOUNTED ON THE BACK.
4. PANEL SUPPLIER SRHALL VERIFY MANUFACTURER STYLE NUMBERS.
5. NAMEPLATES ARE TO BE BLACK WITH WHITE LETTERING AND ADHESIVE BACKING. TEXT SRHALL BE CENTERED ON EACH LINE.
6. TEST SWITCH NAMEPLATES SRHALL BE MOUNTED 1/4" FROM THE TOP OF THE TEST SWITCH ASSEMBLY.
7. TERMINAL & FUSE BLOCKS SRHALL BE PROVIDED AS NECESSARY AND ACCESSIBLY MOUNTED.

LOAD CONTROL PANEL NOTES:

1. ALL WIRING SHALL BE HIGH STRAND TINNED CU NO. 18 AWG SIS INSULATED WIRE.
2. TERMINATE ALL WIRES USING APPROPRIATE THOMAS & BETTS FERRULES THOMAS & BETTER PART NO. FZ023 OR EQUIVALENT.
3. ALL SCREW OR STUD TERMINATIONS SHALL BE MADE USING THOMAS & BETTER RING LUG TERMINALS.
4. MAINTAIN 1" CLEAR VERTICAL AREA ALONG RIGHT AND LEFT EDGES.

NOTES:

1. REFER TO RELAY PANEL SPECIFICATION FOR INTERNAL AND EXTERNAL FINISRH COLOR.
2. NAMEPLATES TO BE FURNISRHED FOR EACH DEVICE INTERNAL TO THE PANEL.
3. TWO PANEL NAMEPLATES SRHALL BE FURNISRHED WITH EACH PANEL, ONE MOUNTED ON THE FRONT AND ONE MOUNTED ON THE BACK.
4. PANEL SUPPLIER SRHALL VERIFY MANUFACTURER STYLE NUMBERS.
5. NAMEPLATES ARE TO BE BLACK WITH WHITE LETTERING AND ADHESIVE BACKING. TEXT SRHALL BE CENTERED ON EACH LINE.
6. TEST SWITCH NAMEPLATES SRHALL BE MOUNTED 1/4" FROM THE TOP OF THE TEST SWITCH ASSEMBLY.
7. TERMINAL & FUSE BLOCKS SRHALL BE PROVIDED AS NECESSARY AND ACCESSIBLY MOUNTED.

EXHIBIT B

CONTRACTOR DELIVERABLES

A. Overview

Contractor shall prepare and provide the Owner with the project documents described herein during the performance of the Agreement. Any documents required under or provided in connection with the performance of any LNTPs shall be considered a Contractor Deliverable and shall be managed in accordance with this Exhibit B.

All documents prepared by Contractor shall be in English and shall be provided in (i) one of Excel, Word, or PDF formats as agreed with Owner, and (ii) drawings shall also be provided in both PDF and DWG (or similar) file formats as agreed with Owner.

All documents shall bear the Project name and contain a title and/or short description that clearly identifies the contents of such document.

Standard ANSI sizes shall be used for drawings. Drawings shall be prepared such that when reduced to 11 x 17, they are still legible without the use of any visual aids.

Measurements shall be made in the US customary measurement system.

B. Document Registry

Contractor shall prepare and submit to Owner for its review and approval, the documents outlined in the Agreement. Once approved by Owner, such finalized document shall be uploaded by Contractor into the Owner's file-sharing system ("Sharepoint"). Contractor and Owner shall jointly review the documents uploaded onto Sharepoint at least every month (as part of the monthly meeting or otherwise), to verify all documents have been submitted in a timely manner in accordance with the provisions of the Agreement, and that such documents are correct and complete and otherwise meet the requirements therefor as set forth herein. The monthly reports shall serve as a submittal log for all reporting, accounting, drawing, specifications, quality documentation, testing, commissioning, turnover and closeout. Contractor shall be responsible for keeping the monthly reports up-to-date to reflect documents that have been finalized and updated to Sharepoint.

C. Document Storage

Owner has created a project specific file structure on Sharepoint for the storage of all final versions of the project documents. Contractor shall be responsible for transmitting the documents to the designated Owner representatives for review and uploading to the proper Sharepoint location. Contractor shall be responsible to provide the document required in a timely manner. For drawings, data sheets and other Equipment and Technology submittals, Contractor shall provide the documents prior to starting construction and installation of the respective scopes and equipment. Commissioning and Testing documentation shall be provided timely following the completion of the work as required in the Agreement.

D. Functional and Completion Testing

Contractor shall prepare and submit to Owner all Long-Term Energy, Capacity, and Availability Test Plans and Results in accordance with the Agreement.

Exhibit C

Applicable Permits

Part I: Contractor Responsible Permits

Agencies	**Permit/Authorization**
Federal:	
State: Texas	
TCEQ	SWPPP & SPCC
Texas Department of Transportation (TXDOT)	Not required
Local: Mills/Brown County	
AHJ – Fire Depts.	Notify before any controlled fire
Utility (Electric Company)	Utility coordination for power

Part II – Owner Responsible Permits/Consultations

Agency	**Permit/Consultations**
Federal:	No Federal permits required
State:	
Local:	
CUP	Not required

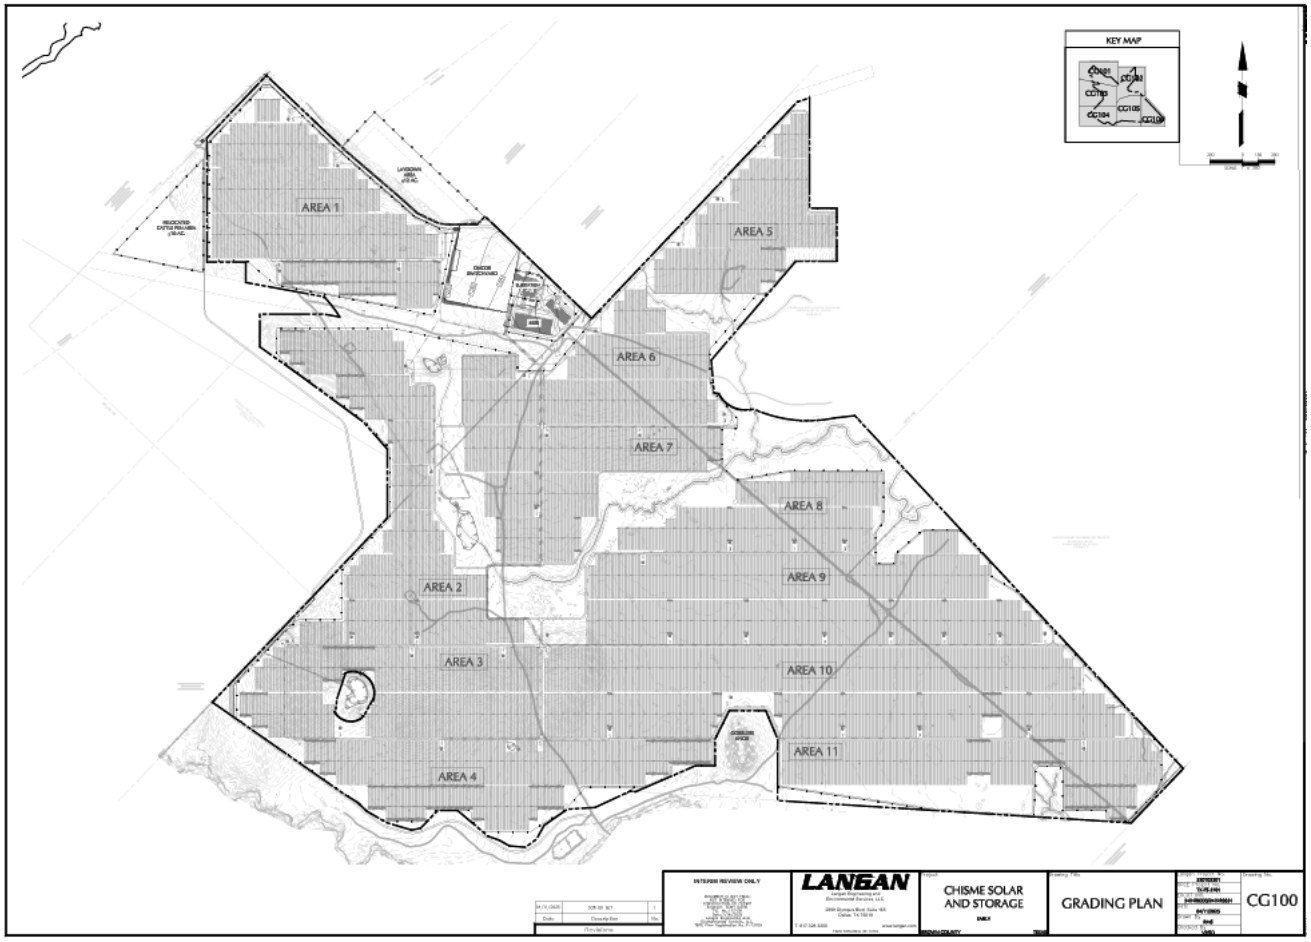
PROJECT INFORMATION

Address

Chisme Solar and Storage
8987 CR 268
Brown County Texas 76802

Site Entrance Coordinates – **31.5798450 N ,-98.8355070 W**



Communication will be maintained via verbal communication, cell phones, and hand signals if needed. Contact information for key project members will be posted onsite.

Work Scope

Activities include:

- Land clearing, grubbing, and grading
- Pile installation
- Racking and module installation
- Electrical wiring and commissioning
- Energization of plant systems

PREFACE

The health and safety of employees and others on NoBuII Energy LLC property are of critical concern to NoBuII Energy LLC. NoBuII Energy LLC intends to comply with all health and safety laws applicable to our business. To this end, we must rely upon employees to ensure that work areas are kept safe and free of hazardous conditions. Employees are required to be conscientious about workplace safety, including proper operating methods, and recognize dangerous conditions or hazards. Any unsafe conditions or potential hazards should be reported to management immediately, even if the problem appears to be corrected. Any suspicion of a concealed danger present on NoBull Energy LLC's premises, or in a product, facility, piece of equipment, process, or business practice for which NoBuII Energy LLC is responsible should be brought to the attention of management immediately.

Periodically, NoBull Energy LLC may issue rules and guidelines governing workplace safety and health. NoBull Energy LLC may also issue rules and guidelines regarding the handling and disposal of hazardous substances and waste. All employees should familiarize themselves with these rules and guidelines, as strict compliance will be expected.

Any workplace injury, accident, or illness must be reported to the employee’s supervisor as soon as possible, regardless of the severity of the injury or accident.

INTRODUCTION

This document provides safety information specific to the **Chisme Energy Project**. It applies to all NBE employees, subcontractors, suppliers, and visitors. All personnel must read, understand, and sign an acknowledgment of this Safety Plan.

Project-specific safety information will also be delivered via:

- Specific Task Training
- Task-Specific Job Hazard Analyses (JHAs)
- Daily Toolbox Meetings
- OSHA Training

Welcome to the NoBull Energy team

SOLAR INTRODUCTION

This introduction to solar construction safety provides information to help develop safe work practices for typical solar construction projects including PV (Photo Voltaic), CPV (Concentrated Photo Voltaic) and CSP (Concentrating Solar Power) installations.

A typical construction safety plan will generally cover most issues that could potentially be encountered on a solar project. However, a few issues may arise that are unique to a specific branch of the solar industry.

This manual is intended to be useful to seasoned and new employees alike.

It is our intention that employees who work safely and efficiently are more valuable to NoBull Energy. This manual and the associated training will help ensure employees learn the basics of solar construction safety, while also being exposed to NoBull's Safety Culture.

This is an essential step for all employees new to the project and it should be followed up with the appropriate solar best practice training.

Solar Construction Safety

Solar construction safety, like general construction safety, requires more than knowledge of safety rules; it requires the ability to evaluate unique situations and to actively engage in safe work practices. The safety plan highlights many common conditions found in typical solar work and should be used as initial steps toward developing a culture of safety on the project.

Solar construction crews face many of the same conditions found in typical construction trades with notable exceptions that underscore the nature of solar electricity. Exposure to sunlight creates stored energy that is not present in other general construction trades. Managing this energy safely is an important aspect of solar construction.

ROLES AND RESPONSIBILITIES

Project Manager & Executive Leadership Hierarchy

- **David Watts Project Executive / Partner**
- **Rob Hague Director of Project Management**
- **Bestami Ortac Project Manager**
- **Robert Johnson Site Manager**
- **Mark Helmbrecht HSE Manager**

Site Safety Manager

- Full-time safety oversight
- OSHA recordkeeping
- Site audits
- Frequent site evaluations with site leadership
- Daily site reviews
- Incident investigations
- Training coordination
- Daily and weekly safety reporting

Construction Management

- Communicate and enforce safety requirements
- Conduct pre-activity meetings
- Ensure compliance and continuous improvement

Project Superintendent

- Oversee daily operations for safety compliance
- Enforce corrective actions for unsafe acts
- Coordinate subcontractor safety
- Incident reporting and investigations

All Workers

- Follow all site safety rules
- Report hazards and unsafe behaviors
- Attend required safety meetings
- Know evacuation procedures

Safety Personnel

- Engage employees in safety discussions
- Review incidents and near misses
- Provide recommendations for site safety improvements

SAFETY STAFFING REQUIREMENTS

NoBull Energy will:

- Assign a full-time Site Safety Manager.
- Increase safety staffing levels in accordance with project activities.
- Require subcontractors involved in high-risk activities to provide a Competent Person.
- Follow Blue Ridge Power staffing requirements for consistent, proactive safety coverage.

Safety Program Overview

1. **Mission Statement**
   To develop and manage the industry's safest worksites through cohesive and strategic partnerships with our project teams, clients, and public stakeholders utilizing all aspects of leadership throughout our organization.

2. **Company Strategic Safety Goal**
   "Safe place to work, everyone matters"

3. **NoBull Energy LLC Safety Statement**
   NoBull is committed to providing safe work environments for our employees. The companies' "*NoBull Way*" outlines our concern by saying "Safety Then Schedule and Budget" as our number one way. Safety is our highest priority in our line of business.

Safety Program Accountability

Management

1. The project manager must verify that all hand and power tools, equipment, trailers, etc. That are delivered to the jobsite are in a safe condition.
2. The project manager will confirm that current power tools, equipment, trailers, etc. have safety and operating manuals available to workers.
3. The project manager must verify that workers are trained and qualified to operate the tools they will use on the jobsite.
4. Project management will monitor site operations for compliance with requirements of this procedure, manufacturers' requirements, suppliers' requirements, and owner requirements.

Supervisors

1. Verify that this procedure and legislative jurisdictional requirements are readily available to the workers.
2. Validate that workers understand and are following: this procedure; manufacturers' specifications and recommendations; and company and site-specific requirements.
3. Verify that only workers trained and competent to operate hand and power tools are assigned duties that require little or no supervision.

4. Assist in verifying that the workers' level of competency is maintained through ongoing monitoring, mentoring, and/or periodic evaluation.
5. Project supervisors will monitor site operations for compliance with requirements of this procedure, manufacturers' requirements, suppliers' requirements, and owner requirements.

HSE Staff

1. Must maintain awareness of the condition of hand and power tools.
2. Will verify that workers using hand and power tools are properly trained.
3. Provide hand and power tools and equipment training as necessary.
4. HSE staff will monitor worker activities and conduct periodic reviews of this procedure to verify ongoing compliance with the following: this procedure; manufacturers' specifications and recommendations; company and site-specific requirements; legislative requirements and regulatory requirements.

Craft and Operators

1. Must understand and follow the requirements in this procedure.
2. Must always notify supervision if they do not believe that they have the necessary training to use the tool safely.
3. Must report defective/broken tools and verify replacement before continuing work.
4. Will adhere to manufacturers' specifications and recommendations.
5. Must comply with company and site-specific requirements, legislative requirements, and regulatory requirements.

Subcontractors

1. Follow the same accountability that is outlined in this plan. Please refer to the appropriate position for each employee.
2. The subcontractor has signed an agreement to follow NoBull Energy's Safety Policy as defined throughout this document

TRAINING REQUIREMENTS

NoBull Energy is committed to ensuring that all personnel receive the necessary safety training before beginning work onsite.

Training requirements include:

- Site-specific orientation for all employees, subcontractors, and visitors.
- OSHA 10-Hour or 30-Hour Construction Safety Training as appropriate.
- Fall Protection Training for any employee working at heights.
- Lockout/Tagout (LOTO) Training for authorized personnel.
- Hot Work Training for employees performing welding, cutting, or grinding.
- Equipment operator training and certifications for cranes, forklifts, aerial lifts, and heavy machinery.
- Daily Toolbox Talks covering job-specific hazards.
- Task-specific safety meetings before beginning new operations.

Records of completed training will be maintained onsite and verified during safety audits.

Job Site Safety Rules

1. Hard hats, ANSI Z87 Safety Glass, Safety Footwear, and Reflective Vests or T-Shirts are mandatory and must be worn at all times when on-site unless inside an office environment or entering/leaving the project site.
2. Appropriate work clothing consisting of long trousers and shirts with at least 4" sleeves shall be worn by all persons engaged in work on the project.
3. Additional personal protective equipment must be worn when the job task or conditions require. Examples including hearing protection around the pile driving job task.
4. All safety, fall protection, lifting/rigging equipment, and power tools must be inspected daily prior to the job task starting. Defective equipment shall be removed from field use and replace immediately.
5. Follow posted speed limits.
6. Seat belts must be worn at all times when traveling in vehicles.
7. Smoking on the project shall be in designated areas to reduce smoking in the field. Cigarette butts must be placed in an appropriate container.
8. Possession and/or use of illegal drugs, drug paraphernalia, alcohol, explosives, and firearms (including ammunition) are expressly prohibited.
9. All employees must be properly trained before operating machinery or equipment.
10. All accidents, injuries, and near misses must be reported to the NoBull Energy LLC. Site Safety Representative or Supervisor onsite.
11. All personnel onsite must attend site safety meetings conducted by NoBull Energy LLC.
12. All personnel must know the correct emergency procedure to be followed in the event of an accident or emergency.
13. All personnel must familiarize themselves with the location of fire extinguishers in the surrounding work areas.
14. No horseplay, fighting or careless acts will be tolerated on the project site.
15. NoBull Energy LLC. must orient all employees and subcontractors prior to working on the project site.
16. All employees, vendors and subcontractors working or located on the project are bound by these site safety rules as a condition of being onsite.
17. Meta-tarsal guards will be worn by pile driver rigging employees.
18. Lightening stand downs will be at 10 miles. Lightening alerts will begin at 30 miles out.
    - Designation in the event lightning continues?

RULES OF CONDUCT

NoBull Energy personnel and subcontractors working on the Chisme Energy Project shall comply with the following Rules of Conduct, based on Blue Ridge Power standards:

- Smoking permitted only in designated safe areas.
- Firearms, explosives, or weapons prohibited onsite unless approved by Owner.
- Be aware of hunting seasons and associated hazards.
- Illegal drug activity is strictly prohibited.
- Possession or influence of alcohol or impairing substances prohibited onsite.
- Maintain a clean, organized worksite at all times.
- Store materials and equipment properly to prevent nuisance and damage.
- Handle and store equipment per manufacturer's requirements.
- Drivers must hold a valid driver's license and report changes within 5 business days.
- Maintain up-to-date personnel records.
- Proper work attire required: shirts with sleeves, long pants, closed-toe shoes.
- Proper PPE required at all times outside administrative areas.
- Remove jewelry when working on energized equipment.
- Inspect climbing and lifting equipment daily.
- Adhere to posted speed limits; reduce speed to 5 mph near workers.
- Yield to farm vehicles and school buses.
- Stay on established roads; avoid parking where exhaust may ignite vegetation.
- Seat belts required for all vehicle occupants.
- Ride only in designated passenger areas of vehicles/equipment.
- No aggressive behavior, roughhousing, or horseplay.
- Do not harass or harm wildlife.
- Report findings of Cultural and Biological Conditions immediately.
- Respect protected areas and signage.
- Equipment operators must be trained and certified.
- Use high-visibility traffic controls when necessary.
- Obtain hot work permits before performing hot work.
- Properly contain all site waste and cover dumpsters.
- Report all incidents and near misses immediately.
- Report unsafe conditions to supervision.
- Minimize noise; no loud music onsite.
- Minimize dust, smoke, and emissions.
- Theft or unauthorized removal of property is prohibited.
- Do not tamper with safety devices.
- Manage waste and used chemicals properly.
- Maintain onsite roads used for construction in good condition.
- Obtain approval before moving crawler equipment onto public roads.

Failure to comply with these rules may result in removal from the site and further disciplinary action.

Orientation Information

Instruction and Training:

Instruction and training of employees are an OSHA/MSHA requirement and will be required on this project. Examples of such training to be provided:

	Training
Equipment	Forklift
	Pile Driver
	Skid Steer

Orientation:

All project personnel shall be instructed on the safety rules, policies, and practices required by their work assignments. Employees also need to understand the site-specific safety information as well. All daily work assignments will include specific attention to safety. The Job Hazard Analysis (JHA) process will be utilized each morning and prior to a new task being performed. Each employee will sign for each task, daily and records will be kept in the field office.

Daily Work Assignment:

All daily work assignments will include specific attention to safety. The Job Hazard Analysis (JHA) process will be utilized each morning and prior to a new task being performed. Each employee will sign for each task, daily and records will be kept in the field office.

Safety Meeting:

As warranted, safety meetings for specific topics, owner compliance, or special circumstances will be conducted. Attendance will be taken and filed.

Specific Instructions:

OSHA/MSHA requires that employees who perform specific tasks or operate specific equipment be trained in its usage. Only those personnel qualified by training or experience shall be permitted to perform specific functions or operate machinery. These qualifications need to be documented and kept on file at each project office.

Listing of Safety Topics

1. ## Accident Reporting:

Each occupational illness, injury or near miss shall be reported immediately to your supervisor. For emergency cases, ambulance services will be contacted immediately by the quickest means available (dial 911).

If it is determined that medical attention is necessary, the employee will be taken to a medical facility.

A daily record shall be kept on all employees requiring first aid treatment.

If medical treatment is required, NoBull Energy LLC. will provide transportation of the injured to a hospital or physician. A NoBull Management Employee shall accompany the injured employee and remain at the facility until the employee is ready to return. All reports from the

physician concerning treatment, diagnosis, return to work status and restrictions shall be brought back to the project and a copy forwarded to the owner's safety manager. A copy shall be maintained in the company's workers compensation case file.

i. Record Keeping

NoBull Energy LLC. will maintain all records required by Federal, State, Local Safety and Environmental Standards, Worker Compensation Insurance, or similar regulations. This includes the maintenance of an accident log, OSHA 300 report, annual summary, and posting of regulatory posters (OSHA 300 report and annual summary are maintained in the Corporate Office).

If you require specific forms for reporting contact the Project Manager.

ii. When to Call OSHA

Within 8 hours after the death of any employee from a work-related incident or the in- patient hospitalization of three or more employees as a result of a work-related incident, you must orally report the fatality/multiple hospitalization by telephone or in person to the Area Office of the Occupational Safety and Health Administration (OSHA), S.S. Department of Labor, that is nearest to the site of the incident. You may also use the OSHA toll-free central telephone number, 1-800-321-OSHA (1-800-321-6742).

iii. Record Keeping

NoBull Energy LLC. will maintain all records required by Federal, State, Local Safety and Environmental Standards, Worker Compensation Insurance, or similar regulations. This includes the maintenance of an accident log, OSHA 300 report, annual summary, and posting of regulatory posters (OSHA 300 report and annual summary are maintained in the Corporate Office).

If you require specific forms for reporting, contact the Project Manager.

iv. When to Call OSHA

Within 8 hours after the death of any employee from a work-related incident or the in- patient hospitalization of three or more employees as a result of a work-related incident, you must orally report the fatality/multiple hospitalization by telephone or in person to the Area Office of the Occupational Safety and Health Administration (OSHA), S.S. Department of Labor, that is nearest to the site of the incident. You may also use the OSHA toll-free central telephone number, 1-800-321-OSHA (1-800-321-6742).

v. Record Keeping

NoBull Energy LLC. will maintain all records required by Federal, State, Local Safety and Environmental Standards, Worker Compensation Insurance, or similar regulations. This includes the maintenance of an accident log, OSHA 300 report, annual summary, and posting of regulatory posters (OSHA 300 report and annual summary are maintained in the Corporate Office).

If you require specific forms for reporting contact the Project Manager.

vi. When to Call OSHA

Within 8 hours after the death of any employee from a work-related incident or the in- patient hospitalization of three or more employees as a result of a work-related incident, you must orally report the fatality/multiple hospitalization by telephone or in person to the Area Office of the Occupational Safety and Health Administration (OSHA), S.S. Department of Labor, that is nearest to the site of the incident. You may also use the OSHA toll-free central telephone number, 1-800-321-OSHA (1-800-321-6742).

2. Blood Born Pathogens

This policy has been implemented to safeguard employees against health and safety effects associated with occupational exposure to blood borne pathogens. It is not always possible to know when an employee may have a blood- or body-fluid-borne illness and/or pathogen; therefore, infection control is the best way to restrict or reduce the possibility of transmission of such diseases. This plan applies to all employees who have a primary responsibility to render medical first aid and/or CPR.

Everyone who is designated as first aid and/or CPR trained, or who is experienced with emergency medical procedures, must comply with this plan. Exposure determination shall be made without regard to the use of personal protective equipment.

Persons administering first aid and/or CPR shall be responsible for cleanup and proper disposal of biohazardous waste accumulated during medical emergencies.

3. Clothing Requirements and PPE

i. Clothing Requirements

- Shirts with at least a 4-inch over the shoulder sleeve shall be worn at all times. Tank tops are not permitted
- Long pants are required.
- Sandals, tennis shoes, or any other street type shoe will not be permitted.
- Loose fitting clothes or jewelry shall not be worn around moving machinery, grinding operations, welding operations, etc.

ii. Personal Protective Equipment (PPE)

- Job site Personal Protective Equipment Requirements are posted on signs upon entering the job site and are reviewed at orientation.

iii. Hard Hats

- All areas of this jobsite are hardhat areas. This includes while operating open cab equipment.
- NoBull Energy uses a color-coding system to quickly identify management, foremen/leads, and craft.
    - White Hard Hats – Management
    - Blue Hard Hats – Foremen/Leads
    - Yellow – Craft/Operators
    - Striped hardhats to identify new employees for a duration of a week or two?

iv. Eye Protection

- ANSI Z87.1 Safety glasses are always required in the construction areas.
- Face shields will be required to be properly worn at all times when in the area of operations, such as when welding, burning, grinding, chipping, chemical handling, corrosive liquids or molten materials, drilling, sawing, driving nails, power actuated tools, and gas fueled hand operated equipment (i.e. chainsaws).
- This section will also apply to those employees of Contractor who are assisting any worker as an apprentice or helper.
- Prescription glasses must meet ANSI Z87.1 approved, or safety goggles must be worn over the prescription glasses.

v. Hearing Protection

- OSHA approved hearing and respiratory equipment shall be worn when required.
- Shall meet the selection, fitting, and maintenance requirements of Federal, State, Local Safety and Environmental Standards.

vi. Seatbelts

- All employees operating any motor vehicle or equipment shall wear seat belts.

vii. Work Boots

- As a measure of safety awareness and personal protective equipment, NoBull Energy is requiring all employees and subcontractors working on NoBull Energy projects to utilize work boots.
- This also applies to both field and home office supervisors visiting projects.
- For the purposes of this policy, work boots are defined as eight (8) inch high leather boots in functional condition that are designed for an outdoor work environment.
- Safety shoes shall be composite or safety toe reinforced

viii. Reflective Vests and/or T-shirts

- All employees shall wear approved reflective vests and/or reflective T-shirts or other suitable garments marked with or made of reflectorized or high-visibility material.
- Reflective vests and/or Reflective T-shirts are required to be always worn to ensure that employees and reflective materials are visible.

ix. Work Gloves

- Work gloves: The specific glove for the specific process is required to be worn

for all manual material handling jobs and were identified in JHAs (Job Hazard Analysis).

4. Hand Tools and General Safety

General

- Before using any tool, whether powered or not, complete a Pre-Job Safety Instruction (PSI) with specific reference to usage, hazards, and hazard controls regarding specific risks related to use of the tool.
- Workers will inspect tools for safe condition before each daily use.
- Management and supervision will inspect tools during formal and informal inspections.
- Tools found to be unsafe, broken, or in disrepair shall be tagged “Do Not Use” or with a similar notice advising that the tool must be repaired or discarded.
- Use good body positioning to avoid pulling a tool toward your face and body.
- Always maintain proper footing and a stable body position.
- Wear close-fitting clothing that will not become entangled in moving parts.
- When using a safety knife, always cut away from yourself.
- Adhere to the manufacturer’s requirements for maintenance and operating limitations of tools.
- Keep a 20-pound fire extinguisher readily available in the work area if the operation of a tool produces sparks.
- Workers must be trained and experienced in the use of the tool they select for any task, or a mentor or foreman must be present to provide appropriate coaching and training.
- Keep floors clean. Remove grit, metal shavings, sawdust, and pieces of material and wood from floor surfaces to reduce/eliminate slip and trip hazards.
- Do not use conductive tools around live electrical circuits unless the tool is insulated and then only with the permission of your supervisor.
- Always use attachments and replacement components that come from the manufacturer of the tool.
- Tool service and repair must be completed by qualified repair personnel.
- Only trained and qualified workers are permitted to use or operate tools of any type.
- The operator of power tools is responsible for reading, understanding, and following the instructions in the manufacturers’ manual before using the equipment.
- The operator must read and follow all the manufacturers’ danger, warning, and caution labels or placards for that machine.
- The operator must perform a pre-use inspection as per the manufacturers’ manual and operation training.
- If any controls malfunction or do not operate or function as specified, do not use the tool. Remove the tool from service and report the malfunction or deficiencies to your supervisor.
- Verify that the design, installation, operation and maintenance, and safeguards for all tools and equipment meet the applicable regulatory requirements.
- Check tools frequently when they are in use, for wear, damage, cracks, and other defects.
- Never use a hand tool for any purpose other than that for which it is intended or designed for.
- Hand tools must be carried in tool pouches or tool bags.
- Tools must not be carried in pockets, as a fall by the worker onto these tools could cause a puncture wound and worsen other injuries.
- Tools can easily fall out of a pocket to a lower level and injure a coworker.

- Do not use metal tubing, pipe, or another wrench over a wrench or tool to gain more leverage.
- Use the correct hammer wrench, pneumatic impact, or nut splitter to remove rusted or seized nuts.
- Remove from service tools (e.g., chisels, hammer wrenches) whose ends have become deformed or mushroomed from being struck by a hammer.
- When these tools become mushroomed, they must be dressed to prevent fragments from flying off when the tool is struck.
- Hand tools must not be modified or altered from the original manufacturer's design, unless the modification or alteration is reviewed and approved by supervision, management, and a professional engineer.
- Once the task for which the tool was modified is complete, the tool must be destroyed, or it must be clearly stated on the tool what the tool was altered or modified for, and that it can be used for that purpose only.
- Job-built tools must not be made or used unless the design and use are reviewed and approved by supervision, management, and a professional engineer. The purpose of the tool must be clearly identified on the tool, and it must be stated that the tool is to be used for that purpose only.
- Before purchasing a new hand tool, complete a hazard review to assess any risks that might arise from the use of the new tool. All new tools must be approved by management, supervision, and safety. When new equipment arrives on-site, the trade that will be using it must do a thorough review of the manufacturer's safe-use instructions.
- Where there is a potential for hand tools to create a fall-from-height hazard or a hazard around a rotating/moving component, secure tools using tool lanyards.
- When working on ladders, ensure you always have 3 points of contact as well as level ground for the ladder to be placed on.

a. Electric Powered Tools & Cords

- Verify that all electrical tools and cords have the current monthly color code tape.
- Do not allow electrical cords to be exposed to standing water.
- All power tools will be inspected then Identified with Quarterly/monthly inspection tape by the toolroom attendant.
- When working outdoors, use extension cords rated for outdoor use.
    - Labeled "W-A" or "W"
- Replace worn and cracked electrical cords and plugs.
- Do not touch bare wire on tooling or cords, unplug immediately and remove from service.

b. Pneumatic & Hydraulic Tools

- Ensure all body parts are away from pinch points.
- Keep a tight grip on pneumatic tools as the potential to wrist injury is there due to torquing.

c. Grinding/Cutoff Tools

- Before performing an inspection or changing blades or abrasive wheels on a tool, verify that it is unplugged, or the battery is removed.
- Never remove guards that are designed to be in place during operation of the tool and verify that the guard is operable.
- Handles on hand tools must be kept in good repair. Loose handles can cause injury if the striking or cutting attachment comes free.
- Hands should always be located behind the cutting tool.

- Ensure proper PPE is worn and eyes are protected from flying debris.
- Do not use cutting wheels that are damaged as they have the risk of “exploding.”

d. Saws & Drills

- Do not operate saws in rainy conditions, wet or damp locations, or standing water.
- Verify that cutting tools such as drills and saws have sharp edges. Replace dull blades and bits immediately.
- Ensure that all body parts, hair, and baggy clothing is away from rotating parts.

5. Flammable Liquid

Storage & Handling

Definitions

1. Boiling Point: The boiling point of a liquid at a pressure of 14.7 pounds per square inch absolute
2. (p.s.i.a.) (760 mmHg).
3. Category 1 Flammable Liquid: Liquids having flashpoints below 73.4 °F (23 °C) and having a boiling point at or below 95 °F (35 °C).
4. Category 2 Flammable Liquid: Liquids having flashpoints below 73.4 °F (23 °C) and having a boiling point above 95 °F
5. (35 °C).
6. Category 3 Flammable Liquid: Liquids having flashpoints at or above 73.4 °F (23 °C) and at or below 140 °F (60 °C).
7. Category 4 Flammable Liquid: Liquids having flashpoints above 140 °F (60 °C) and at or below 199.4 °F (93 °C).
8. Double Walled Tank: A tank that has an inner and outer wall with an interstitial space (annulus) between the walls and that has a means for monitoring the interstitial space for a leak.
9. Flash Point: The minimum temperature of a liquid at which sufficient vapor is given off to form an ignitable mixture with the air, near the surface of the liquid or within the vessel used, as determined by the appropriate test procedure.
10. Occupancy: The purpose for which a building or portion thereof is used or intended to be used.
11. Portable Tank: Any vessel having a liquid capacity under 60 gal. (227 L) intended for storing liquids and not intended for fixed installation.
12. Storage Cabinet: An approved metal storage cabinet labeled conspicuously with the words "Flammable-Keep Away from Open Flames”. Or a wooden storage cabinet constructed using exterior grade plywood at least 1-inch (2.54 cm) thick, which shall not break down or delaminate under standard fire test conditions. All joints shall be rabbeted and shall be fastened in two directions with flathead wood screws. When more than one door is used, there shall be a rabbeted overlap of not less than 1 inch (2.54 cm). Steel hinges shall be mounted in such a manner as to not lose their holding capacity due to loosening or burning out of the screws when subjected to fire. Such cabinets shall be painted inside and out with fire retardant paint and labeled conspicuously with the words "Flammable-Keep Away from Open Flames”.

Hazard Controls

- All flammable liquid storage, handling, and dispensing operations will be in accordance with current jurisdictional legislation unless the guidance in this procedure is determined to be more stringent.
- Fuel, oil, solvent, and other flammable liquid spills will be cleaned up immediately using the site-specific spill procedures and safeguarding the cleanup materials from fire and explosion.
- Dispense or use/apply flammable liquids only where there are no open flames or other sources of ignition, such as grinding area, within 50 feet (16.7 m) of the operation, unless conditions warrant greater distance.
- Fuel and solvent dispensing must cease, and all workers take shelter when lightning detection devices or other methods indicate that lightning is within 6 miles (10 km) of a project and/or the bang of a lightning strike is within 30 seconds or less of the flash. Wait for 30 minutes before returning to work. If detection devices show that the strikes are still within 6 miles and/or other flash-bangs under 30seconds occur during that wait period, a further 30-minute wait in shelter and suspension of fuel and solvent dispensing will be enforced.
- All flammable/combustible liquids must have the appropriate SDS/Hazcom on-site and available to workers.
- Category 1, 2 or 3 flammable liquids shall be kept in closed containers when not actually in use.
- When flammable liquids are stored inside any structure, a 20-pound ABC fire extinguisher will be available within 10 feet (3 meters) of the storage.
- Unless legislative jurisdictional or client requirements are more stringent, no more than 25 gal. (96 L) of flammable liquids will be stored in a room outside of an approved storage cabinet.
- Unless legislative jurisdictional or client requirements are more stringent, no more than 60 gal. (227 L) of category 1, 2, or 3 flammable liquids or 120 gal. (454 L) of category 4 flammable liquids will be stored in any one storage cabinet.
- Do not store flammable liquids in areas used for exits or stairways, or areas normally used for the safe passage of personnel.
- Unless legislative jurisdictional or client requirements are more stringent, the storage of spray-paint cans and other flammables in ventilated tool trailers and tool rooms must never exceed 20 gallons (76 L), which is approximately one hundred and sixty 16-ounce (473 ml) cans of solvent or spray paint. When feasible, flammables must be stored outside the trailer in an approved flammable storage cabinet.
- Flammable liquids must not be stored in non-vented tool trailers or tool rooms and/or structures.
- Locate all flammables stored in tool trailers and tool rooms at the rear of the trailer or room, at the furthermost point from the exit(s).
- Only containers and portable tanks approved by legislative jurisdictional authority can be used for storage and handling of flammable and combustible liquids, and they must be labeled as to content.
- Unventilated Sea-Can (Conex) or Truck Trailer Storage
    - Owing to the risk of flammable vapor accumulation and explosion, gasoline or diesel storage cans or containers that are not integral to portable equipment are not

permitted to be stored in a Sea-Can (Conex) or a truck trailer or other unventilated storage structure(s).
    - When motorized equipment with gasoline in a tank is kept in an unventilated Sea-Can (Conex) or truck trailer, do daily inspections for leakage, and placard the outside walls on all four sides with standard Flammable—Keep Fire Away signage.
    - Do not store any motorized equipment that has gasoline in a tank in a Sea-Can (Conex) or unventilated truck trailer which has electrical service, owing to the risk of fire and explosion. Such storage is only permitted if the electrical components meet the requirements of NFPA 30, Flammable and Combustible Liquids Code, for classified flammable storage and/or local electrical code requirements.
    - Only containers and portable tanks approved by legislative jurisdictional authority can be used for storage and handling of flammable and they must be labeled as to content according to HSEOP-6 Hazcom and WHMIS or local legislative requirements whichever is more stringent.
    - Storage of category 1, 2, or 4 flammable liquids shall not exceed 60 gal. (227L) within 50 feet (15 m) of a structure.
    - Maintain a minimum distance of 20 feet (6 m) between containers greater than 5 gal. (19 L) capacity and any building.
    - All skid tanks containing flammable liquids will be properly grounded.
    - Outside storage and dispensing locations will have a 20-pound ABC or larger fire extinguisher hung no closer than 25 feet (7.62 m) and not farther than 75 feet (22.86 m) from the tanks.
    - Storage tanks will have signs and placards identifying the flammable material according to legislative jurisdictional requirements.
    - Storage areas must have a manufactured containment or earthen berm to contain leaks or spills.
- Category 1, 2, and 3 flammable liquids shall be kept in approved safety containers.
- Hand carried or held containers will: not exceed 2 gallons (7.6 L) in capacity for Category 1 flammable liquids; not exceed 5 gallons (19 L) in capacity for Category 2, 3, or 4 flammable liquids be labeled as to what they contain per legislative jurisdictional requirements; and be, in the US, an approved safety can having a flash arresting screen, spring-closing lid, and spout cover so designed that it will safely relieve internal pressure is required on NBE projects must be in compliance with local jurisdictional requirements.
- Outside storage and dispensing locations will have a 20-pound ABC or larger fire extinguisher hung no closer than 25 feet (7.62 m) and not farther than 75 feet (22.86 m) from the tanks.
- Smoking is not permitted within 25 feet (7.62 m) of flammable storage tanks or dispensing operations.
- Transfer of category 1, 2, or 3 flammable liquids from one container to another shall be done only when containers are electrically interconnected (bonded). Bonding and grounding will be in accordance with legislative jurisdictional requirements.
- The dispensing nozzle shall be an approved automatic-closing type that does not include a latch-open device.
- When refueling, the nozzle shall be attended to at all times to make sure no overflow or spillage occurs.

- A spill kit shall be immediately available.
- The motors of all equipment being fueled shall be shut off during the fueling operation.
- An emergency power cutoff shall be clearly identified and easily accessible.
- Store all solvents in approved containers and mark them according to legislative jurisdictional requirements.
- Keep solvents for use in shops and fabrication areas outside a flammable storage cabinet in no greater quantity than would reasonably be expected for a day's use.
- Store flammable and combustible solvents in flammable storage cabinets according to legislative jurisdictional requirements.
- Do not purchase, store, or use carbon tetrachloride, or any solvent that is a confirmed or suspected carcinogen.
- Never use gasoline as a solvent.
- Any liquid spills must be contained with absorbent materials and subsequently removed from the site according to the contract and legislative jurisdictional requirements.
- Contaminated soil and absorbent materials must be placed in a metal container with a tight-fitting lid and disposed of according to legislative jurisdictional requirements.
- Workers tasked to contain or clean up a spill must have training according to legislative jurisdictional requirements.

6. Construction

Equipment

General

- Workers will inspect all equipment before daily use and fill out an Equipment Inspection Form to turn in daily to the Field Engineer for review.
    - Note: Any damage, defects, or maintenance is to be reported on the Equipment Inspection Form.
- Adhere to manufacturers' recommendations for service and maintenance of equipment.
- Verify that all protective covers/guards are in place and secured, and not damaged.
- Do not modify or alter the machine safety devices, controls, guards, structure, or configuration in any way.
- Equipment found to be unsafe, broken, or in disrepair shall be tagged "Do Not Operate."
- When working near pile drivers, ensure proper hearing protection is worn when in operation.
    - 100ft. Radius – single hearing protection
    - 50ft. Radius – double hearing protection
- Ensure spotter is competent and qualified to aid in any equipment scenario that requires a spotter.
- When moving equipment on a trailer, ensure the load is secured and plan your route.
- Verify that equipment will be clear of any overhead lines before passing under.
    - Refer to OSHA Standard Number 1926.1411 for minimum clearance distance.
- All equipment must be equipped with a fire extinguisher.
- If any leaks occur under equipment, ensure it is reported and a spill kit is used to properly dispose of the contaminated soil.

EMERGENCY ACTION PLAN

Emergency Contacts

- Emergency Services: 911
- ????????? County Fire Department
- ????????? Police Department
- Hendrick Medical Center Brownwood. 1501 Burnett Rd. Brownwood, TX 76801 PH:325-646-8541

Muster Points

Primary muster point at main construction trailers. Additional muster points added as needed.

Emergency Response Team

Key personnel assigned roles for incident communication, evacuation coordination, and logistics.

Please add detailed information no later than 10days after execution of the assigned response team and no less than five days prior to mobilization.

Emergency Scenarios

- Fire: Evacuate and notify emergency services
- Severe Weather: Lightning stand-down at 10 miles
- Tornado: Evacuate to safe shelter or secure vehicles
- Workplace Violence: Follow "Run, Hide, Fight" principles

First Aid

Primary first aid location at site office. AED located in safety office. SDS sheets stored in Safety trailer.

MEDICAL EMERGENCY PLAN

In the event of a medical emergency onsite:

First Response:

- Provide immediate assistance using basic first aid techniques.
- Ensure scene safety before intervening.

Emergency Medical Services (EMS):

- Call 911 immediately.
- Provide clear location information (Address Chisme Energy Red River Project).

Internal Notification:

- Notify Site Management and Safety Staff immediately after 911 call.

First Aid Kits and AEDs:

- Located at the site trailer and designated muster areas.

Incident Documentation:

- Complete an Incident Report Form immediately following the event.

Fire Department:

Police Department:

Hospital (Emergency Room):
Hendrick Medical Center Brownwood, TX
76801
(325) 646-8541

Occupational Clinic

Ambulance Service

Other

INCIDENT REPORTING AND INVESTIGATION

All incidents, including near misses, property damage, and injuries, must be reported immediately to Site Management.

Incident response process:

- Ensure the immediate safety of all personnel.
- Call emergency services if needed.
- Notify Site Management and the Site Safety Manager.
- Secure the scene of the incident.
- Complete an initial Incident Report Form within 24 hours.
- Conduct a Root Cause Analysis if required.
- Implement corrective actions to prevent recurrence.

All incident records will be documented and maintained according to OSHA recordkeeping requirements.

FALL PROTECTION PLAN

All fall protection activities on site must comply with OSHA 1926 Subpart M standards and Blue Ridge Power requirements:

- 100% fall protection is required at heights of 6 feet or greater.
- All workers exposed to fall hazards must wear an approved full-body harness with a lanyard or self-retracting lifeline (SRL).
- Leading edge and unprotected sides must be guarded or protected with warning lines, guardrails, or personal fall arrest systems.
- Fall Rescue Plans must be established prior to any elevated work.
- Equipment inspections must be conducted before each use.
- Only trained and authorized personnel may work at heights.

Stop Work Authority applies if fall protection is not properly used.

HOT WORK PROGRAM

Hot work includes welding, cutting, grinding, and any activity that produces sparks or open flames:

- Hot Work Permits are required prior to starting hot work operations.
- A fire watch must be assigned during all hot work and remain for 30 minutes after work is completed.
- All combustible materials must be removed or protected with fire-resistant blankets or shields.
- Fire extinguishers must be readily available within 25 feet of the work area.
- Proper PPE must be worn, including welding shields, gloves, fire-retardant clothing, and hearing protection as needed.

Unauthorized hot work activities are prohibited.

LIGHTNING SAFETY ACTION PLAN

To manage lightning hazards onsite, NoBull Energy will implement the following actions based on lightning distance, in accordance with Blue Ridge Power standards:

- Refer to previous comment: In the event of a shutdown due to lightning? What is the protocol?
- **30 Miles:**
  - Weather monitoring initiated.
  - Supervisors notified of approaching storm.
  - Preparations begin for possible evacuation or shutdown.
- **15 Miles:**
  - All elevated work (above 6 feet) suspended.
  - No crane or aerial lift operations.
  - Crews begin securing tools, materials, and equipment.
- **10 Miles:**
  - All field activities suspended.
  - Site evacuations initiated to designated muster points or safe shelters.
  - All personnel must be sheltered in safe areas (trailers, vehicles, equipment, school busses, etc.).
  - No outdoor activities permitted until All Clear is issued.
- **All Clear:**
  - Issued only after 30 minutes have passed without lightning within 30 miles.
  - Resumption of normal activities authorized by Site Management.

CONFINED SPACE ENTRY

NoBull Energy will manage confined space operations in strict accordance with Blue Ridge Power specifications and OSHA 29 CFR 1926 Subpart AA standards. The following requirements will apply to all confined space activities onsite:

- All confined spaces will be identified, assessed, and labeled appropriately.
- A written Confined Space Entry Permit Program will be implemented before any entry.
- Only authorized and trained personnel will be permitted to enter confined spaces.
- Atmospheric testing must be conducted before entry and continuously monitored during occupancy.
- Appropriate ventilation, retrieval equipment, and rescue procedures must be in place.
- Confined Space Entry Permits must be completed and posted at the point of entry.
- An Attendant will be posted outside each confined space at all times during entry operations.
- Communication must be maintained between entrants and attendants at all times.
- Rescue services will be coordinated in advance and documented within the site Emergency Response Plan.

Unauthorized entry into a confined space is strictly prohibited. All workers must follow the established permit system to ensure safe entry and exit procedures.

ENERGY CONTROL PROGRAM (LOCKOUT/TAGOUT)

To protect workers from the unexpected energization or release of stored energy:

- All energy sources must be isolated, locked, and tagged out before work begins.
- Only authorized and trained personnel may perform Lockout/Tagout (LOTO) procedures.
- Group LOTO procedures will be used when multiple crews are involved.
- LOTO devices must be durable, standardized, and clearly labeled.
- Verification of energy isolation must be performed prior to starting work.

Compliance with LOTO is mandatory to prevent serious injuries.

SUBSTANCE ABUSE POLICY

NoBull Energy maintains a Zero Tolerance Policy regarding substance abuse.

Requirements include:

- Pre-employment drug.
- Random, post-incident, and reasonable suspicion drug and alcohol testing will be conducted.
- Possession, distribution, or use of alcohol, illegal drugs, or unauthorized prescription drugs onsite is prohibited.
- Employees who violate this policy will be immediately removed from the project site and are subject to disciplinary action, up to and including termination.

SPECIAL AND HIGH-RISK OPERATIONS

Special and high-risk operations will be managed in accordance with the Owner's specifications and industry best practices. These will be reviewed with the Owner 10 days prior to the activity or in coordination with the Owner as needed. These activities include, but are not limited to:

- Energized electrical work.
- Confined space entry.
- Crane and heavy equipment operations.
- Hot work (welding, cutting, grinding).
- Excavation and trenching.
- Lifting operations.

Prior to performing any special or high-risk work:

- Complete a detailed Job Hazard Analysis (JHA) and review it with all affected personnel.
- Develop a Pre-Task Plan (PTP) and obtain appropriate permits before beginning work.
- Assign a Competent Person to oversee activities involving significant risk.
- Maintain direct oversight by site safety staff during high-risk tasks.
- Implement additional control measures such as barricading, spotters, fall protection systems, fire watches, and standby rescue services as required by the task.

- Empower all workers with Stop Work Authority to immediately halt unsafe operations.

HEAT AND COLD STRESS PLAN

Heat/Cold Stress & Work/Rest

NoBull Energy is committed to protecting workers from environmental exposures to heat and cold stress.

Heat Stress:

- Provide shaded rest areas and cooling stations.
- Encourage regular hydration with water and electrolyte beverages.
- Schedule heavy work during cooler parts of the day when possible.
- Allow frequent breaks to prevent heat exhaustion or heat stroke.
- Train employees to recognize symptoms of heat illness.

- **Heat Index Below 91°F:** Normal activities. Monitor for symptoms.
- **Heat Index 91°F - 103°F:**
    - Drink water frequently.
    - Take 10-minute breaks every 2 hours.
    - Monitor high-risk employees closely.
- **Heat Index 103°F - 115°F:**
    - Drink water every 15 to 20 minutes.
    - Take 10-minute breaks every hour.
    - Rotate employees through shaded or cooled areas.
- **Heat Index Above 115°F:**
    - Limit outdoor work to essential tasks only.
    - Mandatory breaks of 15 minutes per hour.
    - Provide immediate access to cooling stations.

Cold Stress:

- Provide heated break areas or warming stations.
- Require appropriate cold-weather clothing (layers, gloves, hats).
- Monitor employees for signs of hypothermia or frostbite.
- Allow scheduled warm-up breaks in heated shelters.
- Educate workers on cold-related health risks.

- **Wind Chill Above 30°F:** Normal activities. Minimal risk.
- **Wind Chill 10°F to 30°F:**
    - Schedule frequent breaks in warm areas.
    - Ensure workers are properly dressed in layers.
- **Wind Chill -10°F to 10°F:**
    - Limit outdoor exposure time.
    - Warm-up breaks every 2 hours.
    - Monitor employees for cold stress symptoms.
- **Wind Chill Below -10°F:**
    - Cease non-essential outdoor work.

- Provide warm-up breaks every hour.
- Use buddy system for cold stress monitoring.
- Supervisors will monitor environmental conditions daily and adjust work practices as needed to protect worker health.

PERMITS AND DOCUMENTS REQUIRED

Throughout the Chisme Energy Project, the following permits and documentation, including but not limited to, will be required to ensure compliance with NoBull Energy and Blue Ridge Power standards:

- Site-Specific Health and Safety Plan (SSSP)
- Confined Space Entry Permits
- Hot Work Permits
- Lockout/Tagout (LOTO) Procedures and Permits
- Job Hazard Analyses (JHAs) for all tasks
- Incident Report Forms
- Near Miss Report Forms
- First Aid and Medical Emergency Documentation
- Safety Data Sheets (SDS) for all hazardous materials
- Training Records (Orientation, OSHA, Equipment Certifications)
- Emergency Action Plan (EAP) with Muster Points Map
- Weekly Safety Inspection Checklists
- Equipment Inspection Checklists
- Subcontractor Safety Agreements
- Equipment Operator Licenses/Certifications
- Visitor Orientation and Sign-in Logs

All permits and documents must be maintained onsite and available for inspection upon request by Site Management, Blue Ridge Power, or regulatory agencies.

NoBull Energy Quality Control Manual

1 Introduction

This manual outlines the basic Quality Control/Quality Assurance guidelines and procedures established and executed by NoBull Energy. These procedures should be used in conjunction with specific Project Quality Programs required by our clients. They have been developed in a format that allows the incorporation of specific client Quality Control requirements on a project-by-project basis. This will allow us to demonstrate to our clients NoBull Energy total commitment towards quality and customer satisfaction through written guidelines and procedures.

Aim and Scope

The aim of this Quality Control Manual is to establish written guidelines to assure compliance with material, fabrication, inspection, and testing specifications, drawings, and codes, and establish a process for organizational roles once a bid becomes a project.

This Quality Manual is provided to ensure that the quality requirements established by our clients, design engineering, and project management are maintained uninterrupted throughout the construction phase of the project.

NoBull Energy quality model moves the responsibility of quality to the front lines, promoting the discovery of issues and the prevention of repetitive errors.

This manual shall set the baseline quality requirements for all construction projects. This manual, the Construction Execution Plan, Inspection and Test Plans, Best Practices, kick-off meetings, standards, and the specific requirements of the construction contract define and govern all behaviors and related practices related to quality in the workplace. All members of the project management team, contractors, and visitors participating in construction and operations must adhere to these practices.

It is intended that all levels of NoBull Energy field supervision participate and be responsible for the overall quality of the work. Primary areas of construction that require quality supervised planning and quality control inspection are:

- Validation of the design and specification process of each task.
- Validation of the compliance of materials ordered as part of the project.
- Confirmation that materials are received with no defect and check related logistics for storage and distribution on the site.

- Confirmation that the construction contractors' labor force knows the best practices and that they are applied to ensure the proper performance of their duties. Validate the Project scope and construction contract specifications by identifying and communicating clearly and confirming that they will be met by the contractor and its subcontractors.
- Confirmation that Execution Procedures governed by regulatory bodies or external standards are executed, inspected, and properly documented.
- Confirmation that the test phase is carried out in accordance with the Execution Procedures and approved equipment.
- Providing documentation relating to the identification of materials and non-compliant products, as well as the correction of non-compliant procedures.
- Confirmation that the documents related to production activities are updated, revised, and certified to meet the conditions and specifications required by the scope of the Project and the construction contract.
- Receiving inspection, material storage, and issue control
- Civil survey, concrete, and structural
- Welding material control, welder qualification, and production welding control
- Electrical and instrumentation
- Final system inspection, pre-commissioning, and turnover

Acronyms and Definitions

The following table lists the acronyms and definitions used throughout this manual.

Table 1 Terminology and Definitions

Terminology	Definition
ANSI	American National Standards Institute
EOR	Engineer of Record
ITP	Inspection and Test Plan
MRB	Material Review Board
NETA	International Electrical Testing Association
QA/QC	Quality Assurance / Quality Control
RFI	Request for Information
SOW	Scope of Work

2 Manual Control

NoBull Energy Quality Control Manual is considered a controlled document and subject to review and revisions by NoBull Energy management and will be maintained by NoBull Energy document control team. Copies of this manual are considered uncontrolled, and revision control is not maintained on distributed copies.

3 Roles and Responsibilities

Job Title	Responsibility and Definition
Director of Construction	The responsibilities include the following: • Subject Matter Expert for field construction activities. • Leader of best practices development and implementation. • Reports to the Vice President.

Project Manager	The Project Manager reports to the Director of Project Management and is responsible for: • Responsible for planning the Project tasks, organizing the master schedule, proceeding with the work estimate, controlling costs, managing the project, and supervising staff. • Provides the necessary support to Project members in the implementation of the QA/QC Plan. • The total safety, quality, and productivity of the project. • Implementing this procedure on construction projects. • Reviewing construction progress and productivity assessments. • The Project Manager is responsible for reviewing the Monthly Cost Report in order to determine adverse trends and maintain control over the budget and implement corrective/ preventative actions before cost overruns become detrimental.
Site Manager	The Site Manager reports to the Project Manager and is responsible for the implementation of the site-specific QA/QC Plan. All the roles and responsibilities must align with the NoBull Energy site roles and responsibilities. • Ensure that those responsible for the quality inspections at work do their job and make the necessary inspections as required. • Supports the project members in the implementation of the QA/QC Plan. • Required to assist with the implementation of this QA/QC Plan. • Contractor Company representative on site. • Identifies issues and monitors corrective actions. • The total safety, quality, and productivity of the project. • Implementing this procedure on construction projects.

Project Engineer	The Project Engineer responsibilities include the following: • Ensure document control procedures.

	• Manages the general data and technical information related to the project and ensures they are compliant. • Supports the Project Manager for insurance claims. • Takes part in the resolution of non-compliance, and the control of corrective measures to implement. • Is responsible for the delivery and use of drawings issued for construction. • Oversees all changes to the as built drawings. • Monitors the design with consulting engineers in collaboration with the trade field engineer. • Assigned to specific projects and acts as a liaison between engineering, owner, and the project.
Quality Manager	The Quality Manager responsibilities include the following: • Performs periodic field audits to assure compliance with the quality control system requirements. • Results of the audits will be utilized to determine the effectiveness of quality functions, implemented procedures, personnel performance, and overall project quality.
Quality Control	The Quality Control responsibilities include the following: • Ensures the validity of documents related to the quality and monitors them. • Supports the project members in the implementation of the QA/QC Plan. • Acts as an intermediary between the contractor and the subcontractor, regarding the work quality of the trade in question. • Reports administratively to the NoBull Energy QC Manager and functionally to the NoBull Energy Site Manager. • Audit the activity of all craft disciplines to assure and report that construction meets code and accepts quality levels of workmanship and safety. • Responsible for managing the QA/QC functions for the project and has the organizational freedom to identify and seek resolution to deficiencies related to the quality function.

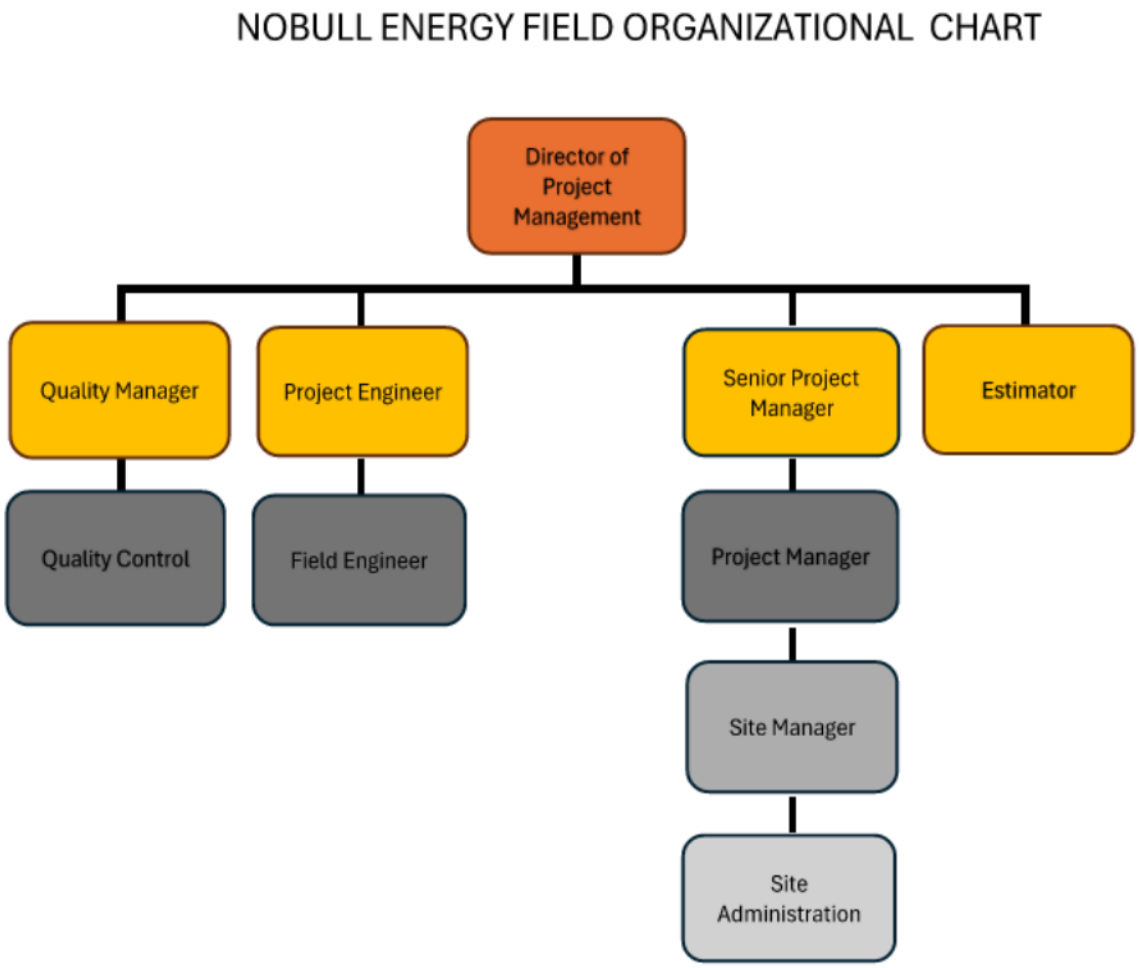
	• If preliminary ITP has not already been created, create ITP and gets approval from NoBull Energy QA/QC Manager prior to the start of construction. • Shall assure the quality standards, processes, and practices are communicated, implemented, and trained across the project team. • Shall be responsible for and be the unbiased quality representative independent of influences of production goals. • Shall follow the project audit schedule and assure that the site Construction Management Team are implementing the Company and client PQPs. • Coordinate with site project Construction Management to ensure that Company, Subcontractors, and suppliers follow the project PQP and ITP requirements. • Ensure all completed inspection forms are signed off for each Block by construction and field inspection staff. • Perform a sampling inspection per Block to validate compliance with drawing specifications and client requirements. See ITP for frequency of sampling per activity. • Review NCR and Observation logs to ensure corrective actions are completed and preventative actions are defined.

Quality Tech	• Audits and Inspections • Punch List Creation • Maintain accurate and organized documentation records. • Work with production teams to identify and address quality issues and maintain detailed inspection reports for management.
Superintendents	The Superintendents' responsibilities include the following: • Monitor projects from planning to completion, including tasks such as budgeting and scheduling, safety, quality, and productivity of the project. • Manages the nature of preventive and corrective actions necessary to correct NON-CONFORMITIES. • Supervises the implementation of the Execution Procedures.

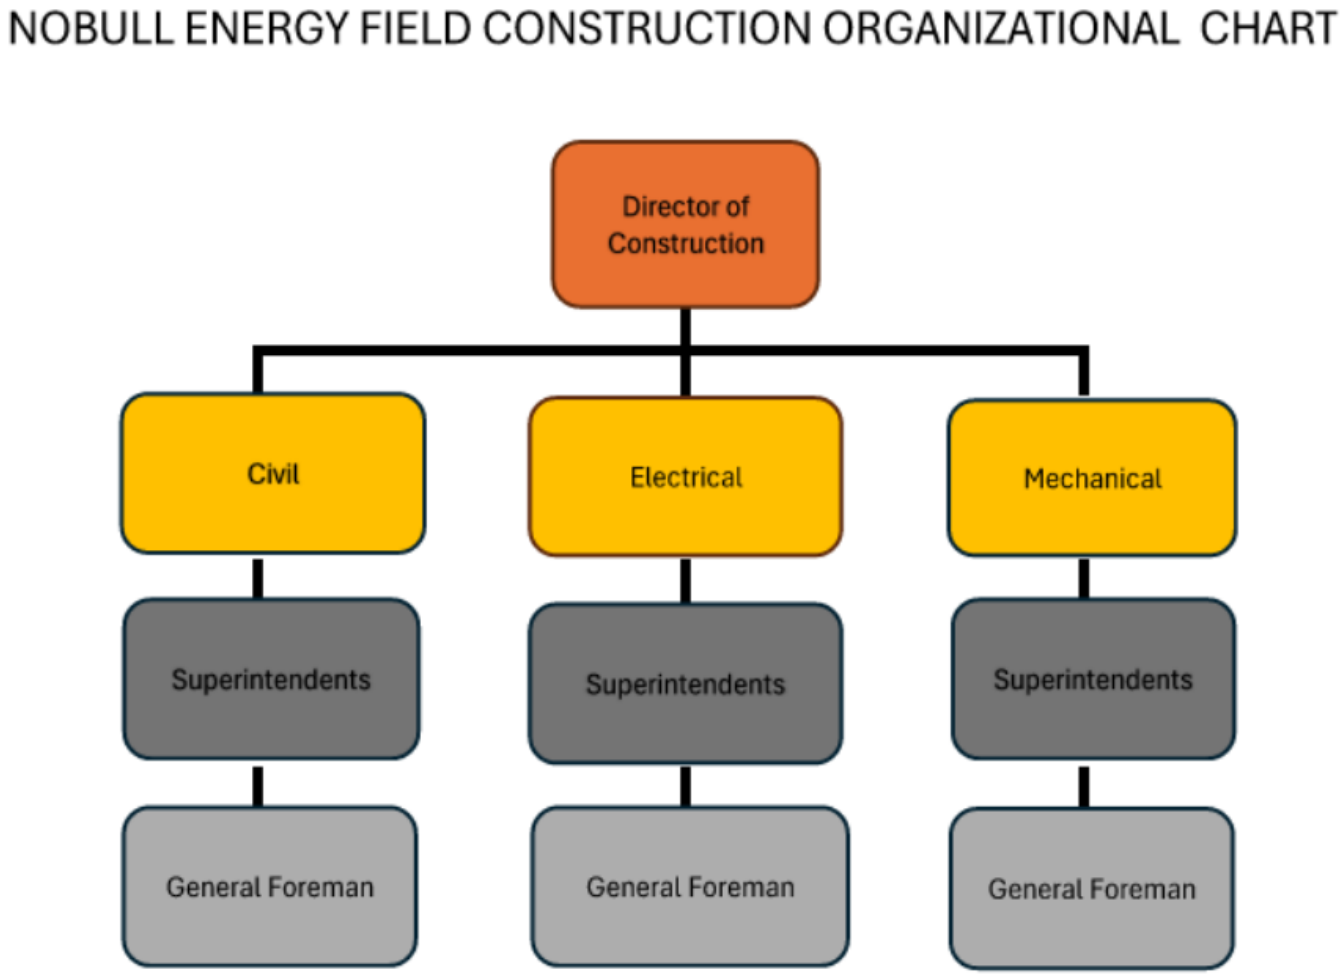
	• Ensures the completion of the work by the laborers and/or subcontractors in his/her field of activity. • Ensure the as-built drawings are marked. • Supervises inspections performed by field foremen, subcontractors, and any external participant. • Ensure that those responsible for the quality inspections of subcontractor's work do their job and make the necessary inspections as required. • Reviewing the inspection forms, which were created by the General Foremen and Foremen, and performs spot checks in the field. • Reviews and spot-checks the inspection check list/test forms and work, then signs off on the inspection in Procore. • Any project-specific forms shall be completed at the time of inspection, and originals shall be turned into Quality Control.
General Foreman	The General Foreman's responsibilities include the following: • The total safety, quality, and productivity of the project. • The work and services provided by each person in their respective fields are of high quality. • The Execution Procedures necessary for the tasks are adequate and updated if necessary. • Execution Procedures are approved, adopted, and used at all levels. • The appropriate people are assigned to tasks they are qualified for. • Staff are familiar with the Execution Procedures of the Project, and they have access to the documentation required. • Best practices are used; and the writing of required reports is completed (forms, internal report and/or inspection report). • Perform inspections of at least 10% of all work under their direction. This includes spot checking torques with a calibrated wrench.

Foreman	The Foreman responsibilities include the following: • The total safety, quality, and productivity of the project. • Coordinates the work of the crew he/she oversees and ensures the quality of production while respecting the construction requirements, QA/QC Plan, and safety standards. • Supervise the process of solving a problem until it is completely resolved. • Supports the project members in the implementation of the QA/QC Plan. • Ensure that all materials used in the work he/she oversees are deemed compliant by an independent laboratory or subcontractors' quality inspectors, as needed. • Identifies issues and monitors corrective actions. • Implementing this procedure on construction projects. • Responsible for being the point of contact between the construction workers and supervisors. • Perform a visual inspection of 100% of the work performed by their crew daily. • Inspections must be performed in accordance with the ITP and documented in Procore using the required inspection and checklist indicated in the ITP.

Field Organizational Chart



Field Construction Organizational Chart



4 Components

Quality Control Manual

This Quality Control Manual is provided to ensure that the quality requirements established by our clients, design engineering, and project management, are maintained uninterrupted throughout the construction phase of the project.

The NoBull Energy quality model moves the responsibility of quality to the front lines, promoting the discovery of issues and the prevention of repetitive errors.

This manual shall set the baseline quality requirements for all NoBull Energy construction projects.

Project Quality Plan

The Project Quality Plan aims to effectively implement the NoBull Energy Quality System, in conjunction with surveillance and inspection activities, to ensure compliance with standards, industry codes, and Engineering/Client specifications related to field construction.

The primary objectives of this document are to ensure that project activities are organized, controlled, and effectively implemented.

Inspection Test Plan

ITPs are established for each major phase of the work scope and/or discipline. If there is a unique scope of work item with special requirements that differ substantially from the rest of the discipline scope, then a specific ITP may be necessary. They are intended to be a comprehensive summary of all technical and inspection requirements, with inspection/hold points established as required by our Quality Management System and client specifications.

FAIs/Inspection Forms

A FAI (First Article Inspection) is a documented, first example of installed work that is approved and used as a template for future installations.

Inspection forms are a set of forms used to ensure that a particular task has been inspected. The person conducting the inspection is to verify that each component of the task has been inspected and is in correct working order (e.g., audits, check sheets, and final signoffs are some forms completed during and at the completion of each task).

Audits

Audits offer risk management and evaluate the effectiveness of the quality control, processes, and procedures implemented on the job site by the company to ensure the integrity of construction.

5 Program Methods

Jobsite Plan

This Quality Control Manual is issued for use by all NoBull Energy Project/Team Participants and

Subcontractors. All inspections, tests, and verifications will be conducted in accordance with Design Engineering, Project Specifications, and applicable codes. This plan outlines the systematic methods that will be employed to ensure a high-quality constructed project that meets the Design Engineers intent.

1. NoBull Energy is proactive in implementing its quality program and fosters a culture of high quality throughout the company. Our commitment to quality and continuous improvement in performance begins at the top management level and is communicated to and endorsed by all members of the project team.
2. The intent of QA/QC is the function of cooperation. It is not the responsibility of the QA/QC staff to police the job but to provide technical assistance and support. In addition to inspections of field operations (including subcontractors), it enables those involved to achieve a quality product. The goal is to be proactive in approach, anticipating problems and taking preventive actions before corrective actions become necessary.
3. Quality Control operates independently of field operations and is responsible for ensuring conformance to project specifications. Working with field operations instead of for them enables effective planning and decision-making, helping to prevent construction problems before they occur, and enhancing our ability to achieve our common quality goal of complying with the client's specification requirements.
4. Quality Control performs regular work process observations and surveillances in addition to supplementary inspections and testing required by the specifications and applicable code of construction.
5. Quality Control should have an open line of communication with the client's quality personnel on quality issues. The project Quality Control has the authority and organizational freedom to identify and evaluate quality problems. If a quality issue arises that cannot be resolved between the project Quality Control and the Site Manager, the issue shall be brought to the attention of the Quality Control Manager. The Quality Control Manager shall resolve the issue, taking into consideration applicable code requirements, job specifications, and contractual requirements.
6. The application of quality extends to all areas of a project, including management, subcontractors, field personnel, support personnel, vendors, and all other individuals who affect the quality of the products and services delivered. High-quality, effective communication within the NoBull Energy organization is a key element and must be practiced by all personnel.

1. Receiving inspections will be performed on all major equipment and selected bulk materials upon receipt by NoBull Energy at the jobsite.
2. Quality Control will continuously audit the welder qualification and testing.

Inspection Requirements

Foremen shall ensure the correct installation of work. Foremen shall conduct a daily visual inspection of 100% of the work performed by their crews.

General Foremen are required to perform random inspections of at least 10% of all work under their direction.

Superintendents are responsible for reviewing the inspection forms created by the General Foremen and Foremen, as well as conducting spot checks in the field.

Observations, NCRs, and Escalations

A primary function of any quality program is the control of nonconforming material, assemblies, or construction methods. This plan of action will be utilized by our field construction team when any condition does not comply with drawings, specifications, codes, or good construction practices. The nonconformity must be closed before final acceptance.

All deficient materials, assemblies, or construction methods will be assigned to one of three categories: Nonconformance, Deficiency, or Rework.

- **Nonconformance (NCR)** Any material or assembly completed or incomplete, which does not meet the owners' specifications, drawings, or requirements once turned over.
- **Deficiency** Any work activity or procedure that can lead to completed work that does not meet the owners' specifications, drawings, or requirements.
- **Rework (Failed Inspection)** Any work, completed or incomplete, that has been constructed out of tolerance of specifications, drawings, or applicable codes and requirements. This work has not been turned over and has failed inspection, resulting in rework.

Quality Control shall document all identified deficiencies using Observations or NCRs. Any item categorized as Non-conformance shall be documented on an NCR, and the appropriate red line drawings shall be created. Any items categorized as Deficiencies or Rework shall be reported on an Observation.

- The Quality Control will deliver Observations and NCRs to the relevant discipline Superintendent for immediate corrective actions and work with the Site Manager to adhere to the escalation policy.
- Quality Control shall compile all observations and NCRs into their respective logs and submit these logs to the Site Manager and discipline Superintendents. These logs shall be periodically reviewed, and adjustments to procedures shall be implemented as required. If Quality Control notices any trends in the deficiencies discovered, a Corrective Action Report shall be initiated to research and implement corrective actions to prevent further issues.
- Company, subcontractors, and suppliers shall correct all documented deficiencies and notify the Quality Control of the corrections in accordance with the escalation policy.
- The Quality Control and Site Manager, or appropriate Superintendent, shall validate completion of all corrective actions. Quality Control will close all observations and NCRs that have been fully validated.

- All documentation shall be kept in the file and stored for review.
- The Observation Log shall be updated on a weekly basis by Quality Control to ensure that all identified construction defects are corrected and documented, including both open and closed items.
- Any open observations at project substantial completion will be transferred to the Final Punch List for the Company, sub-contractor, and suppliers' corrective actions.
- Escalation: More than four (4) Observations of the same defect will automatically generate a Corrective Action Request for said defect.

Non-conformance reports submitted to the Company, sub-contractor, or supplier require:

- Corrective action to be determined either by restoring to the designed condition, or RFI for acceptable correction, or acceptance of the as-built condition.
- All Non-Conformance Reports shall be on record and provided to the Company and the client. All nonconformance-related corrective actions shall be completed prior to the next similar process being done to avoid repeating the same mistakes.
- The Non-Conformance Report Log is to be updated continuously by Quality Control and distributed to the project team as needed.
- Escalation: Two (2) Non-conformance Reports of the same issue will automatically generate a Corrective Action Request for said issue.

A Corrective Action Request must be initiated by Quality Control and completed by the Site Manager in coordination with the discipline Superintendent overseeing the work. The completed Corrective Action Request will be reviewed by Quality Control for compliance and closure.

Audits

Quality Control will create an audit schedule to audit the following items:

- **Required inspections by the Foremen, General Foremen, and Superintendent daily**. Any deficiencies found in the inspection frequency or inspection activity shall be reported to the Site Manager. Follow-up Audits shall be conducted by Quality Control to ensure any deficiencies found have been addressed. Items not addressed will be reported to the Quality Control Manager in the Quality Control weekly report.
- **Documents available in the field and in Procore**. Random audits will be conducted by the Field Engineers of their drawings according to the audit schedule, and Quality Control will be informed when the audit is complete. Quality Control will then conduct a random check of field drawings. If

issues are found, Quality Control will organize the field engineers to conduct a full audit and replace all out-of-date or voided documentation.

- Subcontractor and vendor PQP compliance and documentation.

The audit schedule/log and findings shall be periodically (once a month) transmitted to the Site Manager and Quality Control Manager to confirm compliance. Audits will be stored both on-site and in the electronic library within Procore.

The NoBull Energy QC Manager will create a Corporate Audit Schedule for each project. Audits shall be performed on-site by the NoBull Energy QC Manager to ensure that the requirements of this PQP and the NoBull Energy Quality Management Program are being implemented and followed.

Calibration and Test Equipment

All equipment used for inspection, measuring, and testing is properly calibrated and traceable to a known national standard in accordance with applicable codes, standards, manufacturers recommendations, and the subcontractors approved Quality Program.

Calibration stickers shall be affixed in plain sight on all inspection, measuring, and test equipment requiring calibration. The calibration sticker, at a minimum, shall include the identifying serial number, the date of calibration, and the required recalibration date.

Calibration Control

The company and subcontractors shall maintain adequate control and a log of all calibrated inspection, measuring, and test equipment to ensure proper calibration and condition prior to use.

All calibrated inspection, measuring, and test equipment shall be stored and used in a manner to prevent damage.

Where the accuracy of calibration is suspected for any reason (for example, being dropped, struck, or otherwise mishandled), the Quality Control shall ensure proper recalibration.

Where the calibration is found to be inaccurate, the Quality Control shall ensure re-inspection, remeasuring, or re-testing of all work performed since the last known date of accurate calibration.

All calibrated inspection, measuring, and test equipment shall be stored and used in a manner to prevent damage.

Calibration Records

The company and its subcontractors must maintain current calibration records at the project site throughout the duration of the contract.

Copies of all subcontractors' calibration records shall be submitted to the Quality Control for review and verification of compliance with this Quality Control Manual.

6 Document Control

Document Updates and Revisions

Periodically, documents will be revised and updated to reflect feedback, process improvements, and innovation. New documents or changes to existing documents will be updated in the NoBull Energy Document Library, as well as in all Procore project document sections. The document is to be distributed to all departments to which it pertains so that most current revisions are available for field use. The Quality Control shall be informed of any changes and revisions to documents.

The period of record retention depends on their usefulness to the NoBull Energy retention schedule.

Responsibilities

The Project Engineer is responsible for controlling and distributing internal and vendor project documents in accordance with this procedure. The Project Engineer will then distribute documents to the Field Engineers.

Documents include standards, drawings, specifications, engineering guides, and other technical documents that provide direction for the construction of the project.

The project field engineer or their designee is responsible for receiving, copying, filing, record keeping, and distribution. They shall determine the required distribution of documents to the job site personnel.

The Site Manager shall be responsible for distributing documents to the crafts.

As-Built Information

All as-built information will be marked up on the master as-built, which will need to be transcribed and published in the Procore drawings module by the field engineers of their respective disciplines. Upon completion of the project, the original as-builts shall be transmitted to the client, and a copy shall be retained by the field office.

Request for Information

Request for Information (RFI): A contractor/subcontractor initiated a technical question. An RFI is initiated if the contractor/subcontractor:

- Is unable to understand the technical documents (scope, specs, drawings, or data).
- Discovers or perceives a conflict, error, or omission in or among the technical documents.
- Has an alternate/substitute material or method to propose that will not affect cost or schedule.

7 Record Maintenance, Retention, and Distribution

- Quality records and documentation will be maintained to substantiate conformance to the specified requirements.
- All quality records and documentation should be legible and clearly identify the area of the work to which they pertain.
- Documentation shall be complete with all required data filled in. Any corrections or changes made to original documents shall have a single line through with the initials of the individual who made the correction/change and the date the correction/change was made. White Out correction is not allowed for making corrections or changes.
- Upon completion of each project, the above completed documentation will be forwarded to NoBull Energy document control team for retention. Documents will be transmitted to the Client representative, and NoBull Energy shall retain a copy of the records in accordance with the NoBull Energy document retention schedule.

8 Procurement of Material and Equipment

All materials shall conform to the specific requirements of the owner, as well as the applicable engineering technical specifications, codes, and standards.

Materials and equipment shall be purchased from qualified and approved vendors and/or manufacturers. If applicable, vendor and manufacturer selection shall be as directed by the owner/engineers approved vendor/manufacturer list.

Documentation for equipment shall include installation, maintenance, and operating instructions. Additional applicable information shall also be supplied, including short- and long-term storage and maintenance requirements and procedures, MSDS information bulletins, and any other safety or OSHA-required information.

9 Receiving and Inspection

Receiving and Inspection

All equipment, components, and bulk material received in the field require inspection. Inspection will vary in terms of equipment type, material quantities, and client requirements. All items received will be

inspected to ensure they conform to the purchase order, size, type, labeling, and shipping documents. Any damaged material will be documented, with photos taken, and submitted to the appropriate person daily. Materials shall be stored using a neat and organized method. Specific methods are up to the Site Manager and Materials Manager.

Responsibility

The receiving and inspection responsibility depends on the type of equipment, components, and materials subject to inspection and the extent to which inspection was performed at the source.

- Material tracker pulls the BOM and compares it to what's on the load.
- The material tracker ensures the correct module wattages are on the truck.
- Material Tracker ensures the correct quantities are being offloaded by the staging area.
- All BOMs and an MRF filled out by the material tracker are returned to the Material Manager, allowing the material tracker to be updated and tracked, so we know what has been delivered to the site.

Field Material Inspection

1. Provide facilities and personnel necessary to receive, inspect, and ensure the proper handling and storage of materials, component parts, and bulk commodities at the jobsite.
2. Assure proper identification of all items listed on the receiving report prior to signing the receiving documents.
3. Identify and record shipping damage at the time of delivery. Have the driver sign the receiving report, if possible, and notify the carrier.
4. Generate and maintain Over, Short, or Damage Reports, Shipping Records, and Receiving Reports, and tabulate them on the appropriate register form.

10 Storage, Preservation, and Maintenance

When required, a Damage Material Inspection must be prepared and transmitted to the vendor for correction or disposition.

In addition to manufacturer requirements, these minimum storage requirements must be met:

- All materials must be stored in a proper manner.
- A minimum ground clearance must be maintained to facilitate forklift access.
- A larger clearance is required for areas prone to flooding during weather events.

- Packaging specifically designed for storage in contact with the ground is exempt from this requirement.

Civil:

Piles:

- Piles must be staged by size and location per the pile plan.
- Piles need to be painted different colors on the ends, based on their size and length.
- Be sure the correct piles are staged in the correct locations.

Mechanical:

The module shall be offloaded on level ground. Look at every panel box for damage and wattages. Ensure module boxes are staged in the correct orientation for module installation. Ensure that the correct wattages are staged in the correct location in the field.

All bolts should be stored off the ground and checked periodically for signs of oxidation; proper action should be taken to prevent further damage.

Electrical:

Electrical equipment shall be stored under the roof and inside a protected area, unless the equipment is specifically designed to withstand exposure to the weather. Equipment not stored in a protected area must be adequately protected in accordance with the manufacturer's storage instructions.

Cable must be staged on flat, level ground. Cable spools must be set on dunnage to keep them elevated, preventing damage from reels sinking and cables meeting the ground.

When storing the cable spooler, blocks must be used to protect hydraulic fittings. Make sure the cable spooler is stored on dunnage and handled with care.

Sectionalizers: Ensure that sectionalizers are not located in an area that will be flooded during heavy rain.

11 Final Inspection/Turnover Books

Turnover Package

A Turnover Package is a consolidation of all contractually required documentation (including as-built drawings, installation, testing records, etc.) for a specific scope of work, verifying the components have been installed in accordance with the project specifications, drawings, applicable codes, and standards as required by the contract documents.

Turnover Documentation

Turnover documentation consists of all official records of the startup and commissioning efforts.

Documents are collected before the startup and commissioning process activities. They compile into block turnover packages and organize the job books. Completed System Turnover Packages are submitted to the owner as required to document the physical turnover.

Some startup and commissioning documents may be turned over separately from a system turnover package when a grouping of common documents is more logical than splitting them up by system.

Physical Turnover

The most common method of turnover is on a system-by-system basis, as each system is completed and the system turnover packages are handed over.

Turnover involves the transfer of substantial quantities of documentation and physical assets. Transfers shall be documented with detailed, itemized, signed manifests and receipts.

This includes the delivery of spare parts and/or special tools as required by contract for final acceptance.

Turnover shall include the transfer of physical care, custody, and control of the equipment and systems to the owner. Project-specific contract requirements will dictate the manner and timing of physical turnover and how to coordinate it with contractual matters such as the formal client acceptance.

Supplier/Vendor Information

Project personnel assemble supplier documentation on the project equipment and forward this information to the owner. Typically, these are O&M manuals and shop drawings. The personnel responsible for these activities are in Engineering and Procurement.

12 Work Disciplines

Civil:

Grading

Deviations from the grading plan shall be reviewed and approved by the Engineer of Record.

Stabilization of soils after grading shall be installed in accordance with the requirements of the SWPPP.

Trenching

Trenching shall be in accordance with all the civil and electrical drawings.

Deviations from the depth of trench shall be approved by the Engineer of Record.

Survey as-builts of the cable trenches shall be made prior to backfilling the trench. These as-builts shall be submitted to the project engineer on a weekly basis.

Compaction

Compaction testing must be performed by a third-party testing laboratory.

Compaction test reports must be of sufficient detail to describe the location and depth at which the test was taken.

Areas that did not pass compaction testing must be reworked and retested. The test report must indicate that the test is for a previously failed test.

Mechanical:

Pile Driving

Pile driving shall be done in accordance with the approved engineering drawings.

Pile alignment must be in accordance with the Manufacturer's specifications. Deviations from tolerances must be approved by the Manufacturer and/or structural engineer, as is appropriate.

Tracker Assembly

Alignment of piles and tracker components shall be in accordance with the manufacturer’s instructions.

Torquing of bolts is only required when the manufacturer's instructions specify a specific torque.

Wrench-tight or turn-of-nut methods should be employed whenever possible for steel-to-steel connections. The use of these methods in lieu of torquing must be approved by the manufacturer prior to implementation.

Motor and Driveline Installation

Motors and drivelines shall be installed in accordance with the manufacturer’s instructions.

Torquing the motor to the attachment plate is required. Use of a calibrated torque device is mandatory.

The driveline installation order must be considered to minimize potential damage to the driveline from equipment during construction activities.

Electrical:

MV Cables

MV Cables shall always be stored with caps on the ends.

Caps on MV cables may be temporary caps, provided they are replaced with acceptable cold or hot shrink caps, or other suitable means that assure there will be no moisture ingress. Replacement of the temporary cap must occur within 48 hours or before a weather event, whichever is soonest.

Use of tape only is not an acceptable temporary cap. Temporary caps must fully cover the ends of the cable and may be held in place using tape. Temporary caps must be of sufficient durability to withstand moderate abrasion, impact, or snag-induced damage.

MV cables shall be insulation resistance (Megger) tested in accordance with ANSI/NETA ATS-Table 100.1. A point-to-point test shall be performed prior to insulation resistance testing. Tests shall be performed after installation and partial backfill of the cable is complete. At the discretion of the Site Manager or Electrical Superintendent, a reel test of the spool may be performed between the inner conductor and the concentric neutral before installation.

An insulation resistance test shall be done between the core conductor and the concentric neutrals. If there are no concentric neutrals, then test between the core conductor and earth.

When testing cables with concentric neutrals, do not test the concentric neutral to earth unless the manufacturer has approved and provided a test procedure. If testing of the concentric neutrals to earth is required, use a test procedure recommended by the manufacturer.

MV cables shall be identified by phase and labeled on both ends after installation. The identification method must be sufficient to maintain the markings until terminations are made.

After installation, protect exposed MV cables from damage from construction activities. The method of protection may vary throughout the site, but it must be sufficient at each location.

Maintain cable bend radius in accordance with NFPA 70/NEC 300.34. A bend radius shall not be less than 12 times the cable diameter.

Cables shall be terminated only by technicians trained to install the approved termination supplies and equipment. All training shall be formal, conducted by a qualified trainer, and documented in a comprehensive manner.

After installation and termination are complete, all MV cables shall be acceptance tested using a VLF method.

DC Feeder Cables

DC Cables shall be stored with caps on the ends at all times.

Caps on DC cables may be temporary caps provided they are replaced with acceptable cold or hot shrink caps, or other suitable means that ensure there will be no moisture ingress within 48 hours, or before a weather event, whichever comes first.

Use of tape only is not an acceptable temporary cap. Temporary caps must fully cover the ends of the cable and may be held in place using tape. Temporary caps must be of sufficient durability to withstand moderate abrasion, impact, or snag-induced damage.

DC cables shall be insulation resistance tested in accordance with ANSI/NETA ATS-Table 100.1. A point-to-point test shall be performed prior to insulation resistance testing. The tests shall be performed after installation and partial backfill of the cable is complete.

DC cables shall be identified by polarity and run on both ends of the cables after installation. The identification method must be sufficient to maintain the markings until terminations are made.

After installation, protect exposed DC cables from damage from construction activities. The method of protection may vary throughout the site, but it must be sufficient at each location.

Maintain cable bend radius in accordance with NFPA 70/NEC 300.34. The bend radius shall not be less than 12 times the cable diameter.

Cables shall be terminated by qualified technicians who are trained in the equipment and supplies used for the terminations.

Fiber Optic and Other Cables

All cables shall have caps at the end.

Depending on the cable type, size, and Owner requirements, insulation resistance testing may be required. If insulation resistance testing is required, testing shall be done in accordance with ANSI/NETA ATS-Table 100.1. Testing shall be performed after installation and partial backfill is complete.

Cables shall be marked on both ends with identifying markings to clearly identify the cable. At a minimum, this is the run, but we must include more information as necessary for clarity.

After installation, protect exposed cables from damage from construction activities. The method of protection may vary throughout the site, but it must be sufficient at each location.

For electrical cables:

For cables exceeding 1000 V, maintain the cable bend radius in accordance with NFPA 70/NEC 300.34; the bend radius shall not be less than 12 times the cable diameter.

For cables with a voltage rating of 1000 V or less, maintain a cable bend radius that will not damage the cable or its insulation. No sharp bends are allowed.

Cables that are part of a manufactured component, for example, PV modules, shall have bend radii that meet the manufacturers' requirements.

Motor power cables shall be insulation resistance tested in accordance with ANSI/NETA ATS 7.3.2.B.2 and Table 100.1. Test cables rated at 300 V and less at 500 V. Test cables rated between 300 V up to and including 600 V at 1000 V.

At the discretion of the Electrical Superintendent, small control cables or small power cables may be point-to-point tested for continuity.

For fiber optic cables:

- Care must be taken in all handling of fiber optic cables to prevent internal damage to the cable's structure.
- Maintain a minimum bending radius as specified by the cable manufacturer. At no time shall the bend radius be less than 10 times the diameter of the cable.
- Cables must be terminated by a certified technician when making fiber optic terminations.
- Cable testing shall be done using calibrated equipment or by a certified testing company capable of performing Power Meter and OTDR tests.

Grounding

Grounding inverters, switchgear, and/or junction boxes shall be tested in accordance with NETA requirements.

Welding

This manual outlines the quality methods to ensure that welding performed by NoBull Energy and subcontractors is carried out in accordance with the contract documents and standards referenced therein.

This procedure may be modified or updated to meet the project's specific requirements.

References

- AWS D1.1 Structural Welding
- Project specifications and drawings

Requirements

Company Quality control shall be responsible for monitoring and verifying the following:

- Welding procedure specifications must comply with the project specifications.
- Welder qualification records are current and are applicable to the referenced codes and scope of work. A welder qualification log shall be maintained. A weld test log will be maintained.

- Welding procedures are being used in compliance with the applicable codes and project specifications.
- Welders are issued an identification letter/number.
- Storage, issuance, and use of filler metals are in accordance with applicable codes and project specifications.

Weld Material Control

Weld filler material will be controlled, stored, and issued per this Quality Control Manual and the rod manufacturers' recommendations.

All weld filler metals shall be SMAW E7018, FCAW NR-232, or other low-hydrogen, all-position wire. Open containers of weld fill material that require oven storage shall be placed into a rod oven immediately after opening the hermetically sealed container.

The welder shall use a stub bucket to contain the waste ends of used weld filler material.

Unused weld filler material shall be returned to a rod oven or at the end of each work shift for proper storage.

Inspection

- Inspections will be performed by qualified individuals as required by the project specifications.
- Welder appropriately qualified
- Correct filler metal
- Initials preheat and maintenance (monitor)
- Incomplete penetration, excessive penetration, incomplete fusion, cracks, undercut, and weld reinforcement

Concrete

This section outlines the methods to ensure that concrete work is performed in accordance with the contract documents.

References

- ACI (See ITP)
- ASTM (See ITP)
- Project Specifications

- Vendor instruction, procedures, drawings

Pre-placement Inspection

Each discipline Superintendent is responsible for ensuring all work in the concrete pour area is completed to specification/drawing requirements.

The Civil Superintendent shall notify Quality Control to perform the final inspection prior to releasing the pour to order concrete.

Mix designs are reviewed for acceptability and submitted for approval as required.

Quality Control shall verify that reinforcement materials are as specified on the approved drawing.

Receiving

Suppliers shall include on their truck tickets the batch weights of all materials and the number of gallons of water that may be added to the site, ensuring that the total does not exceed the design water-to-cement ratio.

Those persons given the authority to accept concrete and add water to the load to adjust the slump, as well as to manage concrete delivery, are assigned by the Civil Superintendent. Water added to a truck on site shall be documented. No water shall be added after 90 minutes from batch time or after concrete has already been placed from that truck.

Placement

Quality Control shall monitor in-progress concrete work, either personally or through a special inspector, including control of concrete trucks, concrete placement techniques, consolidation techniques, formwork stability, testing procedures, and finishing.

Testing

The Quality Control shall verify that all relevant field and laboratory tests (e.g., slump, air, yield, temperature, compressive strength, unit weight, and others) are completed according to the specifications.

The project shall establish with the testing agency the system by which test results will be communicated to Quality Control in a timely manner.

Quality Control shall review test results immediately following completion of testing to confirm that project requirements are being met. A Concrete Pour Log/Strength Report shall be maintained.

Failures shall be reported to the project manager and project engineer for resolution. The Site Manager and Superintendent must be informed of the issue.

Post Placement

Concrete shall be inspected for proper curing, surface defects, correct location, and embed locations.

Documentation

Acceptance of formwork, reinforcement, embeds, and so on, is documented on the Foundation Inspection form.

A summary of all concrete pours is documented on the Concrete Pour Log/Strength Report.

Test data is provided by a third-party subcontractor test form.

Release of Installed Concrete

After verifying that the placed concrete will achieve design strength within the specified time, and has been otherwise accepted, it may be released for the next work sequence if it has reached a strength adequate to support the planned loads.

Commissioning

There shall be a separate Commissioning Plan that details the entire scope and testing to be performed during the commissioning process. This plan must include all tests and checks that the Company determines to be necessary to safely commission the facility. In addition, the commissioning plan must include all client commissioning and testing requirements. The commissioning plan is separate and beyond the scope of this Quality Control Manual.

The information contained in this document is confidential and proprietary to NoBull Energy, LLC and its affiliates. No part of this document may be distributed or disclosed in any form to any third party without the written permission of NoBull Energy, LLC.

Project Quality Plan

Aim of PQP

- Assure Project team has knowledge of NoBull internal and external procedures and policies.
- Assure that the client standards and other requirements are met.
- Assure that federal, state, and local regulatory codes are met.

Scope

- Applies to all NoBull Solar and BESS projects, Subcontractors, and Suppliers depending on SOW.
- Shall be used and followed for the full duration of construction to build Solar and BESS projects.
- QC Manager will audit and monitor processes as well as assist and advise all parties on the required policies and procedures necessary to complete a quality product on time.

Roles and Responsibilities

- Project Manager
- Quality Coordinator
- Site Manager
- Foreman
- General Foreman
- Trade Superintendent

Project Manager

- Ensure PQP is implemented through proper staffing and reporting for the project.
- Audit and assure the project team is implementing PQP.
- Review and approve NoBull, Subcontractor, and supplier PQPs.
- Ensure PQP aligns with NoBull and Client PQPs, requirements, and specifications.
- Ensure RCA is performed, and corrective preventive actions are implemented.

Quality Coordinator

- Coordinate with Site Manager to assure that NoBull, Subcontractors, and suppliers follow the project PQP requirements.
- Create site-specific Inspection & Test Plan (ITP) that aligns with NoBull and client requirements.
- Ensure all inspection sheets are signed off in accordance with client-approved ITP.
- Perform random sampling inspections to validate compliance to requirements.
- Keep records organized in Procore and prepare turnover documentation.
- Create site-specific Quality inspection checklist for each work activity, per each work instruction requirement.

Site Manager

- Ensures that PQP is implemented through proper staffing and reporting for the project.
- Perform site audits and ensure the Supervision team is implementing the PQP.
- Implement client Quality and documentation procedures and requirements are part of the site-specific PQP and are executed during the project.
- Review/Audit QA/QC data.
- Implement proper Root Cause Analysis and corrective preventive actions.

Foreman

- Performs 100% inspection per ITP on work under his supervision in accordance with inspection forms and other related documents per section #3.

General Foreman

- Shall ensure all inspection and Quality checklists are performed daily and reported to the Superintendent and Quality Manager.
- Performs random inspections of at least 10% of all work under his direction and on a daily basis.
- Review/Audit QA/QC data.
- Performs Observations, NCRs, and escalations.

Trade Superintendent

- Shall ensure that PQP is implemented through proper staffing and reporting for the disciplines.
- Perform site audits to ensure foremen are following the PQP and providing feedback.
- Implement client Quality and documentation procedures per the PQP and ensure they are executed during the project.
- Review and collaborate with QC coordinator, Subcontractor, and Supplier PQPs, procedures, implementation alignment with and Client PQP.
- Review/Audit QA/QC data.
- Participates and performs Root Cause Analysis and Corrective Preventive actions.

Requirements

- Audits
- First Article Inspection
- Observations, NCRs, Escalations
- Calibration
- Civil
- Mechanical
- Electrical
- Welding

Audits

- Random audits will be conducted by Superintendents and Field Engineers and provide feedback to Quality coordinator.
- Quality Control/Tech will also conduct random checks of field drawings.
- If issues are found? QC will have General Foreman to perform 100% checks.
- Quality Manager will create an audit schedule for Subcontractor and vendor PQP compliance and documentation.

First Article Inspection

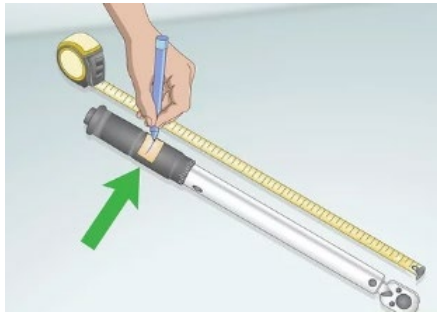
- A FAI for all relevant items that are not detailed on drawings shall be collaboratively documented and performed by the Superintendent, Quality Coordinator, and Field Engineer.
- Shall be reviewed and approved by all key process owners listed in FAI document immediately upon completion of the associated task.

Observation & NCR Definition

- Documented issues identified during inspections but not progressed to the next phase of work and can be easily corrected without requiring approvals or extensive work are called Observation.
- Documented issues to report any product or process that does not meet the agreed specifications, drawings, procedures, work instructions or Quality standards by NoBull or the referenced contract standards are called NCRs (Non-Conformance Reports).

Calibration

- Quality Control shall ensure that all equipment used for inspection, measuring, and testing are properly calibrated and maintain a log given in Section 3, to save all calibration checks.
- Calibration certificates and stickers shall be checked on all applicable equipment.
- Calibration certificate shall include at a minimum Serial #, Date of calibration, standards, by who, and expiration date.



Related Documents

- Civil Scope Inspection
- Fence Grounding Inspection
- DC Cable Trench, Installation and Backfill
- MV Cable & Fiber Optic Installation [Traditional]

Trenching/Backfill

- Trenching shall be in accordance with all the civil and electrical drawings and the DC Cable Trench, Installation, and Backfill for DC cable trenching and MV Cable & Fiber-optic Installation (Traditional).
- Deviations from the depth of trench shall be approved by the Engineer of Record.
- Survey as-builts of the cable trenches shall be made prior to backfilling the trench. These as-builts must be turned in by the Field Engineer to the project engineer or EOR upon completion of the task and then to the Owner with job books turnover.

Compaction

- Compaction testing must be performed by a third-party testing laboratory approved by the Engineer of Record.
- Compaction test reports must be of sufficient detail to describe the location and depth that the test was taken.
- Areas that did not pass compaction testing must be reworked and re-tested. The test report must indicate that the test is for a previously failed test.

Mechanical

Related Documents:

- Pile Installation Inspection Checklist

Piles

- Pile driving shall be done in accordance with:
  - Approved engineering drawings
  - Pile Installation Inspection Checklist for the specific tracker system.
- Pile alignment must be in accordance with manufacturer specifications.
- Deviations from tolerances must be approved by the manufacturer and/or Structural Engineer, as appropriate.

Trackers

Alignment of piles and tracker components shall be in accordance with manufacturer's instructions and the following inspection forms:

- For FTC tracker system: FTC Tracker Inspection
- For tracker system: Tracker Inspection
- Torquing of bolts is only required when the manufacturer instructions specify a specific torque.
- Wrench tight or turn-of-nut methods should be employed whenever possible for structure steel to steel connections, which have a low torque.
- Calibrated devices must have been calibrated within the last 12 months.
- Daily torque logs will be maintained for all calibrated devices using an on-site comparator. Refer to the Tool Calibration Log.
- Correction and recalibration of an out-of-tolerance device must be done at a qualified third-party testing facility that provides calibration certifications.

Tracker parts:

1. Post top
2. Slew drive assembly
3. Slew drive tube cradle
4. U-joint post top
5. Row end post top
6. Torque tube
7. Module clips
8. Row controller

FTC tracker parts:

1. Journal
2. Slew drive assembly
3. Torque tube
4. Damper
5. Module rails
6. Row controller

Modules

- Alignment of modules shall be in accordance with manufacturer's instructions and the Module Installation.
- **Verify torque specifications** in the site-specific tracker/ module drawing sheets and correlate with specifications listed in the installation manual.
- Calibrated devices must have been calibrated within the last 12 months.
- Daily torque logs will be maintained for all calibrated devices using an on-site Torque Tester. Refer to the Tool Calibration Log

Motors and Drive-lines (if applicable)

- Motors and drivelines shall be installed in accordance with the manufacturer’s instructions and the Motor and Driveline Inspection – TBD
- Torquing of the motor to the attachment plate may be required based on manufacturer's specifications. Use of a calibrated torque device is mandatory.

Electrical

- MET Station Inspection
- Sectionalizing Cabinet Install
- Cable Splicing Inspection

MV Cables

MV cables shall be stored with caps on the ends at all times.

Before termination:

- Point-to-point test
- Insulation resistance (Megger) tested – ATS 100.1
- All MV cables shall be identified by phase and run on both ends of cables after installation.
- Maintain cable bend radius (NEC 300.34) shall not be less than 12 x dia of cable.
- Cables shall be terminated only by trained Electricians. All training shall be documented in the Work Instructions training log.

DC Cables

- DC cables shall be stored with caps on the ends at all times.
- For DC Cable Installation, refer to the DC Cable Trench, Installation and Backfill.

Before termination:

- Point-to-point test shall be performed.
- Insulation resistance tested in accordance with ANSI/NETA ATS Table 100.1.
- Maintain cable bend radius in accordance with NFPA 70/NEC 300.34. The bend radius shall not be less than 12 times the cable diameter.
- Cables shall be terminated by qualified Electricians.
- Refer to Combiner box – DC Terminations, Grounding & Landing, and for DC terminations, Grounding, and landing at PCU.
- Refer to PCU – DC terminations, Grounding, and Landing at PCU.

Fiber Optic and Motor Cables

- All cable ends shall be appropriately labeled and sealed.
- Depending on the cable type and size, insulation resistance testing may be required.
- All cables shall be terminated by qualified Electricians.
- Maintain cable bending radius in accordance with NEC requirements.
  - Cables with >1000 V rating - NEC 300.34
  - Fiber optic cable - shall not have < 10 x dia
- Fiber optic cables shall be OTDR tested by a certified testing company.

Grounding

- Ground rings around inverters and Sectionalizer cabinets shall be ground step and touch potential testing during FOP test.
- Use Fall of Potential Ground Test Form.

Welding

NoBull Quality Control shall be responsible for maintaining, monitoring, and verifying the following:

- Welding procedure specifications as approved by client and EOR.
- Welding Qualification records are current and maintained in the weld test log.
- Storage, issuance and use of filler metals.

Testing and Commissioning

- ATI Motor Cable AC Insulation Resistance (Megger) Test
- MV Cable Insulation Resistance (Megger)Test
- Proof Load Testing
- Fall of Potential Ground Test Form
- DC Feeder Insulation Resistance (Megger) Test
- DC Feeder Ground Continuity & Polarity Test Form
- Combiner Box Thermal Imaging
- Inverter – DC Thermal Imaging
- MV Thermal Imaging
- AUX-LV Thermal Imaging
- VOC ISC Test Form
- VOC ISC IRT String Polarity Tests

Procore Inspection Module

- Walk the audience through Procore inspection module.

1.0 PURPOSE

This Construction Quality Plan describes in concise terms the specific means of implementing the No Bull Energy, LLC (NBE) Quality Management System, as described in the No Bull Energy LLC (NBE) Quality Manual, in accordance with the Contract Documents, relative to the *Name of Project*

2.0 SCOPE

This Construction Quality Plan details which procedures and associated resources shall be applied, by whom and when during the *Name of Project*

The Plan is based upon the requirements of ISO 9001: 2015.

3.0 BRIEF DESCRIPTION OF THE PROJECT

3.1 Project Details

Name of Project	Name of Project
Address of Project	Site Address
Client Name	
NBE Project Number	
Project Start Date	
Projected End Date	
Project Type	Solar ☐ Other ☐
If Other, describe	
Generating Capacity	

4.0 ISSUE AND CONTROL

4.1 Issue and Control of Construction Quality Plan

This Construction Quality Plan, prepared by Site Manager (or his/her designee) reflects the major parameters of this Project, and has been prepared in accordance with the NBE Management System procedures, and the project contract between No Bull Energy LLC (NBE) and the General Contractor.

The Site Manager, HSQE Manager, and other senior project personnel shall review this Construction Quality Plan at planned intervals throughout the life of the contract, to assure continued compliance with the contract terms and conditions.

This Construction Quality Plan is a controlled document and shall be issued in accordance with ISO 9001:2015

5.0 CONSTRUCTION QUALITY PLAN REFERENCES

5.1 No Bull Energy, LLC (NBE) Quality Manual

5.2 Contract Documents

5.3 Inspection and Test Plan

6.0 CONTRACT DOCUMENTS

A complete set of the below shall be maintained on site by the Project/Site Manager.

6.1 Contract Documents

6.2 Construction Specifications and Drawings

6.3 Schedule of Project Drawings

6.4 Non-Conformance and Corrective/Preventive Action Log

6.5 Transmittal Log

6.6 RFI Log

6.7 Drawing Log

6.8 Training Log

7.0 KEY PERSONNEL AND RESPONSIBILITIES

7.1 Personnel and Responsibilities

Managing Partner and Site/Construction Manager to assure appropriate application of, and compliance with the No Bull Management Systems.

Responsibilities include:

a) Providing programmatic and administrative management and guidance and support to the project staff for the application and management of the (NBE) Management Systems to the Project.

b) Assuring that No Bull project personnel are suitably trained and qualified for their role on the Project in accordance with (NBE) Management System requirements.

c) Performing Management System audits of the project including the identification and verification of any necessary corrective actions to the project or management systems, and review of any site generated nonconformance.

d) As necessary, providing or assuring the provision of training of (NBE) personnel to company procedures.

7.1.2 Managing Partner-

Responsibilities include:

a) Assisting the Construction Projects in assuring that experienced and qualified No Bull Energy personnel are assigned and briefed to carry out their various roles in an efficient and effective manner.

b) Assuring that the Site/Construction Manager maintains and complies with this Construction Quality Plan.

c) Ensuring the quality of the Contract works, including all necessary Inspections and Tests, are conducted and recorded by the Project Manager or QA/QC personnel in accordance with the ITP.

d) The Managing Partner and Site/Construction Manager shall assure coordination of design information requirements and control of receipt and issue of drawings, specifications and other design/technical information.

e) Maintain specified quality through monitoring progresses against the construction program and Contract requirements to ensure suitable resources are applied to all activities.

f) Reviewing the technical capability and capacity of prospective Subcontractors and Suppliers and assuring that they meet or exceed (NBE) standards.

g) Review of all contract or schedule variations and scope change orders.

7.1.3 Site/ Construction Manager –

Reports to the Managing Partner.

Shall liaise with the Managing Partner and Manager HSQE, as necessary to assure appropriate application of, and compliance with the (NBE) Management Systems.

Responsibilities include:

a) Liaison with the Client to ensure the Quality Plan satisfies all Contract and design requirements.

b) Management and supervision of all on-site activity by (NBE) and its Subcontractors to assure compliance with the Contract requirements and No Bull Management Systems.

c) Implementation and management to this Construction Quality Plan.

d) Development and approval of project specific procedures, work instructions, or method statements.

The quality of all site works assuring all necessary Inspections and Tests are conducted and recorded, and Quality Records are maintained

e) Monitoring of progress at site including preparation and maintenance of the construction program, preparation of weekly progress reports, and producing monthly valuations.

f) Assisting in the selection of Subcontractors and Suppliers to ensure compliance of the Construction Quality Plan.

7.1.4 Onsite Quality Representative –

The Project Quality Representative is the onsite person identified by the Project Manager that is responsible for the day to day functions in managing application of the No Bull Quality Program at the project.

They report administratively (for Quality program guidance and direction) to the Managing Partner

Responsibilities include:

a) Oversight of project inspections and documentation to verify compliance with quality program and contract requirements.

b) As directed inspection of completed works with strict utilization of (NBE) and project inspection forms to assure compliance with this Construction Quality Plan and ITP.

c) Issues nonconforming reports (NCR's) or corrective/preventive action reports (CPAR's) for noncompliance items, as appropriate.

d) Identifying and documenting nonconforming inspections and notifying these to the Construction/ Site Manager, Site Superintendents & or Discipline Managers.

e) Maintaining a NCR/CPAR log nonconforming items, corrective actions implemented, and verification of completed corrective actions.

f) Liaise with the Managing Partner & Construction/Site Manager as necessary to assure that quality issues affecting the Project are addressed.

g) Audit of project documentation and job books assembly for accuracy and completeness.

h) Conduct random audits, including field audits, to verify compliance to quality program and contract requirements.

i) Managing assembly and review of Job Book and other deliverable documentation.

7.1.5 Field Coordinators/Engineers-

Field Engineer(s) are identified No Bull Energy, LLC. or third-party employees responsible for completing all testing and inspection requirements in accordance with the ITP.

Field Engineers will be assigned to specific scopes of work. Inspector will receive training on the design and contract requirements of the applicable scopes of work and associated procedures.

8.0 QUALITY ASSURANCE

8.1 Quality Procedures

8.1.1 No Bull Quality Procedures detail how the overall planning and administration of the quality system activities are managed.

8.1.2 A list of Quality Procedures that are applicable to the Project will be developed by the Project Construction Manager and the Onsite Quality Representative, with support from the Managing Partner.

8.2 Contract Reviews

8.2.1 In order to assure that contract and customer expectations are being met, Contract review meetings (Initial and Final) will be held during Project kickoff and closeout meetings.

8.2.2 Contract kickoff meetings shall also be held with each subcontractor utilizing the same process.

8.3 Request for Information (RFI)

8.3.1 RFIs are used between (NBE) and the Client/GC, Subcontractor, or other entity to request information and approval on any changes that result in changes physically or financially for the receiving party on the project. RFIs will be processed accordingly

8.4 Nonconformance Identification and Control

8.4.1 Materials or product (components, units, parts etc.) identified as nonconforming at any stage shall be controlled in accordance with (NBE) Corrective and Preventive Action and Control of Non-conformance Procedure.

8.5 Audits

8.5.1 The Managing Partner establishes an audit schedule for the project in consultation with the Site /Construction Manager and the Onsite Quality Representative.

8.5.2 Planned audits of project activities shall be undertaken by the Managing Partner, Quality Representative and/or designated auditors who shall be independent of the functions being audited.

8.6 Project Completion/Turnover

8.6.1 The turnover of the completed Project to the Client shall be carried out in accordance with the Project Contract.

9.0 QUALITY CONTROL

9.1 Inspection and Testing Plan Development

9.1.1 An ITP shall be developed upon finalized designs and contracts using a standard (NBE) ITP template. Contract documents, design specifications, and procedure form the basis of the ITP.

9.1.2 The ITP shall list the applicable scope/tasks of the project and the associated inspections, test, and frequencies required for a particular scope/task.

9.1.3 The ITP is a living document, and thus will likely change throughout the project duration due to changes in the Project. Some cause may include changes to scope,

delay of finalized designs, change to contract requirements, and changes to design requirements.

9.1.4 A checklist shall be developed based on applicable scope and requirements of the project. These documents shall be listed in the ITP.

9.1.5 Documents produced from the ITP will be provided in the Project Job Books Electronically.

9.2 Control of Measuring and Testing Equipment

9.2.1 Measuring and testing equipment shall be controlled in order to ensure that equipment conforms to specified requirements.

9.2.2 All such equipment shall be uniquely numbered.

9.2.3 Calibration certificate and calibration logs shall be maintained throughout the Project.

9.3 Project Document and Records Control

9.3.1 Document control shall be conducted in accordance with (NBE) procedures.

9.3.2 A schedule of Project Drawings will be maintained onsite, which will include a mechanism for storage and maintenance of Drawing Issue Record Sheets.

9.3.3 Transmittals, RFIs, and NCR's/CPAR's will be submitted to the Client, Subcontractor, or other entity.

9.3.4 Following completion of the Project, all Job Books documentation shall be submitted to the Client in accordance with Contract requirements.

EXHIBIT F-1

Conditional Waiver and Release on Progress Payment

Project Owner:	Subcontractor:
Project Address / Premises:	Work Performed:
Contractor:	Applicable to Invoice / Payment Application No.____
Job Number:	

On receipt by the signer of this document of a check or an electronic funds transfer from _____ (maker of check) in the sum of $_____ payable to _____ (payee or payees of check) and when the check has been properly endorsed and has been paid by the bank on which it is drawn, this document becomes effective to release any mechanic's lien right, any right arising from a payment bond that complies with a state or federal statute, any common law payment bond right, any claim for payment, and any rights under any similar ordinance, rule, or statute related to claim or payment rights for persons in the signer's position that the signer has on the property of _____ (owner) located at _____ (location) to the following extent: _____ (job description).

This release covers a progress payment for all labor, services, equipment, or materials furnished to the property or to _____ (person with whom signer contracted) as indicated in the attached statement(s) or progress payment request(s), except for unpaid retention, pending modifications and changes, or other items furnished.

Before any recipient of this document relies on this document, the recipient should verify evidence of payment to the signer.

The signer warrants that the signer has already paid or will use the funds received from this progress payment to promptly pay in full all of the signer's laborers, subcontractors, materialmen, and suppliers for all work, materials, equipment, or services provided for or to the above referenced project in regard to the attached statement(s) or progress payment request(s).

IN WITNESS WHEREOF the undersigned has signed this Lien Waiver:

Contractor/ Subcontractor Name:_____

Signature:_____

Name (Printed):_____

Title:_____ Date:_____

STATE OF _____)
) ss.:
COUNTY OF _____)

_____
Notary Public

My Commission Expires:_____

Subscribed and sworn to before me on this date: _____

EXHIBIT F-2
Conditional Waiver and Release on Final Payment

NOTICE:

This document waives rights unconditionally and states that you have been paid for giving up those rights. It is prohibited for a person to require you to sign this document if you have not been paid the payment amount set forth below. If you have not been paid, use a conditional release form.

UNCONDITIONAL WAIVER AND RELEASE ON PROGRESS PAYMENT

Project Owner:	Subcontractor:
Project Address / Premises:	Work Performed:
Contractor:	Final Payment Request
Job Number:	

The signer of this document has been paid and has received a progress payment in the sum of $_____ for all labor, services, equipment, or materials furnished to the property or to _____ (person with whom signer contracted) on the property of _____ (owner) located at _____ (location) to the following extent: _____ (job description). The signer therefore waives and releases any mechanic's lien right, any right arising from a payment bond that complies with a state or federal statute, any common law payment bond right, any claim for payment, and any rights under any similar ordinance, rule, or statute related to claim or payment rights for persons in the signer's position that the signer has on the above referenced project to the following extent:

This release covers a progress payment for all labor, services, equipment, or materials furnished to the property or to _____ (person with whom signer contracted) as indicated in the attached statement(s) or progress payment request(s), except for unpaid retention, pending modifications and changes, or other items furnished.

The signer warrants that the signer has already paid or will use the funds received from this progress payment to promptly pay in full all of the signer's laborers, subcontractors, materialmen, and suppliers for all work, materials, equipment, or services provided for or to the above referenced project in regard to the attached statement(s) or progress payment request(s).

IN WITNESS WHEREOF the undersigned has signed this Lien Waiver:

Contractor/ Subcontractor Name:_____

Signature:_____

Name (Printed):_____

Exhibit H – Commissioning & Testing

This Exhibit H contains the following:

Exhibit H-1(a) – Solar PV Commissioning
Exhibit H-1(b) – HV Commissioning
Exhibit H-1(c) – BESS Commissioning
Exhibit H-2 – Solar PV Availability Test
Exhibit H-3 – Solar PV Capacity Test
Exhibit H-4 – Solar PV Long Term Energy Test
Exhibit H-5 – BESS Performance Test

Exhibit H-1(a)

Solar PV Commissioning Requirements

Table of Contents

1.0 Commissioning Concept 1
2.0 Safety During Commissioning Phase 1
3.0 Lockout/Tagout 1
4.0 Commissioning Execution 2
5.0 Reporting 2
6.0 Procedures 3
7.0 Commissioning Schedule 4
8.0 Commissioning Log and Plan of the Day Meetings 4
9.0 Notification 4
10.0 Energization of Systems 4
11.0 PV Plant Testing 5
12.0 Polarity and Open Voltage Circuit Checks 6
13.0 I-V Curve Trace Testing 6
14.0 Fiber Optic Splicing and OTDR 6
15.0 SCADA Interface Devices 6
16.0 Post Energization Testing 7
17.0 SCADA Commissioning 7
18.0 Inverter Commissioning 8
19.0 Tracker Commissioning 8
20.0 Met Station Commissioning 8
21.0 Voltage and Phase Rotations 8
22.0 Thermal Flyover and Report 8
23.0 Operational/Functional Testing 8
24.0 Performance/Capacity Testing 9
25.0 Turn Over Documentation 9
26.0 Commercial Operation 9
27.0 Turnover to Operations 9

1.0 Commissioning Concept

The Commissioning Program consists of testing activities through the construction phase, equipment supplier testing, and systems energization and startup through final acceptance. Owner is to follow up with the detailed commissioning scope for the substation no later than 10 days after the execution of the Agreement.

1.1 Overarching objectives are as follows:

a. Ensuring personnel and equipment safety during commissioning.

b. Implementation of a formal lockout/tagout (LOTO) program.Adherence to prescribed testing criteria including applicable codes and standards.

c. Demonstration of functionality of the plant equipment and systems including conformance with specifications and guarantees.Creation of appropriate plans and schedules prior to commissioning execution.

d. Clear handoff from construction groups, and interface with construction activities.

e. Maintenance of a daily log which documents significant accomplishments, issues, and resolution.

f. Creation, presentation, and maintenance of evidence of completed testing via test reports and documentation.

Contractor may self-perform or contract third-party testing firm to complete various testing. Third-party testers generally perform the following tests:

a. Fall-of-Potential ground testing.

b. Very Low Frequency (VLF) of Medium Voltage AC cables.

c. International Electrical Testing Association (NETA) required transformer testing of Medium Voltage and Auxiliary Transformers.

d. Fiber Optics Termination and Optical Time Domain Reflectometer (OTDR) Testing.

2.0 Safety During Commissioning Phase

Contractor will ensure that the additional safety considerations surrounding testing and commissioning tasks and activities are captured in the comprehensive Site Safety Plan. The Contractor will submit the safety plan to Owner prior to construction for review and approval. A minimum of 10 days shall be allowed for Owner approval. Any revisions to the Safety Plan shall be submitted to Owner which will trigger a separate 10-day review period in force. Revisions to the Safety Plan may be appropriate prior to the commissioning phase to recognize and incorporate unique hazards created by commissioning activities.

The Contractor will follow its Safety Plan for all Construction, Testing, and Commissioning activities, and will act as the safety guidelines for the project. All personnel associated with construction or commissioning activities shall receive safety orientation and task-specific training consistent with the Contractor’s Site Safety Plan.

The Safety Plan shall address all concerns in the construction, testing, and commissioning phases.
Lockout/Tagout

The Contractor shall compile a site-specific LOTO plan or procedure which shall be submitted for approval 10 days prior to the commissioning phase. The LOTO procedure or plan establishes requirements and a process for the lockout and tagout of energy isolating devices to protect personnel from potentially hazardous energy.

2.1 The LOTO procedure or plan shall include, at a minimum, the following:

a. Pre-planned LOTO Schemes.

b. Description of LOTO Practices.

c. Identification LOTO Authorities.

d. Training Requirements.

e. Signage/Barricading.

3.0 Commissioning Execution

Individuals performing the photovoltaic (PV) system testing shall be qualified per OSHA 10 training at a minimum and trained on the procedures within the Commissioning Program.Conducting electrical testing on any PV system shall be performed by qualified individuals having knowledge and experience with electrical systems measurements, the test equipment used, the equipment or systems being tested, and an awareness of the hazards involved.

3.1 Since working with PV systems involves exposure to energized circuits with high voltages and currents, presenting electrical shock hazards, it is imperative for those installing and testing PV systems to follow all applicable safety standards and guidelines.

3.2 The Contractor’s execution strategy applicable to commissioning, startup, and testing shall, at a minimum, contain the following requirements:

a. Performance of Job Hazard Analysis or Electrical Hazard Analysis before conducting any work at the site.

b. Planning and review all testing, safety, and emergency procedures in advance.

c. Maintenance of an orderly work site and cautious approach.

d. Utilization of appropriate precautions when working on energized equipment is unavoidable.

e. Proper selection and usage of personal protective equipment (PPE).

f. Ensuring NFPA70E compliant arc flash labels are available and properly installed..

g. Mandating the usage of barricading and specialized PPE as necessary.

h. Adherence to manufacturer’s instructions for the safe operation of test instruments.

i. Ensuring that test instruments are inspected, calibrated, and used only for their intended purpose, and within their established limits and ratings.

j. Ensuring that personnel are capable and willing to perform tasks that cause exposure to electrical hazards.

k. Ensuring that all employees potentially impacted by the hazards caused by Commissioning activities are provided training or briefings to ensure that they clearly understand the purpose and function of the LOTO process, as well as their roles and responsibilities when performing potentially hazardous activities. Reporting

Contractor shall perform and document the results of all testing performed in the field. All tests and data collection shall be in accordance with NETA and other accepted industry standards. Prior to submittal, Contractor shall review test data to confirm compliance with the acceptance criteria defined in the approved Commissioning Plan. Any deviations identified within Contractor's scope shall be reviewed, corrected, or re-tested as appropriate. Test results affected by the corrective action shall be repeated.

Tests listed as manufacturer's responsibility shall be conducted and documented by the equipment manufacturer or supplier, under Contractor oversight. The Contractor shall verify that test documentation is completed for each component or system. All testing results and data shall be submitted to the Owner for review.

3.3 Contractor shall develop and utilize written, approved procedures as deemed necessary by the Contractor to safely and effectively perform specified tasks. It is recognized that some tasks are within the skill of the qualified commissioning individual and do not require a procedure.

Testing equipment shall be calibrated as defined by the manufacturer. Testing calibration certificates shall be submitted to the Owner prior to use of testing equipment.

3.4 Test reports shall clearly present data collected during performance of the testing and include the following:

a. Identification of circuits tested, and tests performed.

b. Calibrated tools and equipment used.

c. Data recorded and acceptance criteria.

d. Interpretation and summary of results, and a clear indication of pass/fail.

e. Identification of responsible person(s) and date(s) of tests. Contractor shall troubleshoot and correct all failures discovered during testing at no additional cost to the Owner, unless the failures are a result of a pre-existing defect in Owner-Furnished equipment or design error by the Engineer of Record. Procedures

Detailed procedures shall be provided by Contractor for testing, startup, and commissioning activities. The utilization of procedures will enable the project to be tested and commissioned safely in accordance with the contract. Testing procedures shall be provided to Owner. Procedures shall be provided for the following activities.

a. Commissioning Field Testing.

b. System Energization.

c. Operational/Functional testing.

d. Capacity Testing.

3.5 The following shall be included in each procedure, as applicable:

a. A list of prerequisites, including safety concerns.

b. Purpose of test.

c. Procedural steps that outline actions that are to be followed in the performance of the test and/or data collection.

d. Required Test Equipment.

e. Specific Site Information: This includes specific equipment identification, tagging, conventions, cable numbers and I/O references for testing.

Procedures shall be made available to Owner for review and comment prior to commencing work with such procedures. A minimum of 10 business days shall be allotted to Owner for review and comment before commencement of the test delineated in the procedure.

4.0 Commissioning Schedule

The commissioning schedule shall be integrated into the overall project schedule with emphasis on the construction activities that gate commissioning performance. The commissioning schedule will be submitted to Owner.

5.0 Commissioning Log and Plan of the Day Meetings

Commissioning shall maintain a daily log which describes the following:

a. Work completed.

b. Status of commissioning completion.

c. Significant achievements.

d. Issues identified.

e. Resolution of Issues.

Commissioning shall conduct a daily meeting to discuss wok complete and work forecasted. The Owner shall be invited to these meetings. The Commissioning Log shall be reviewed at Commissioning Plan of the Day meetings.

6.0 Notification

Contractor shall provide written notifications to Owner for significant evolutions. Unless otherwise indicated, 5 business days shall be allocated prior to commencement of specific tests.

6.1 Formal notifications shall be provided at the following times:

a. Completion of testing for a contractual milestone

b. Circuit Mechanical Completion

c. Circuit Substantial Completion

d. Facility Mechanical Completion

e. Energization of Systems

7.0 Energization of Systems

Contractor shall perform the initial switching and energization of electrical equipment including both AC and DC. Written procedures shall be provided to the Owner at least 10 business days prior to energization for review and approval by the Owner. No equipment shall be energized without the Owner's written consent to energization/switching procedures.

Prior to system energization, Contractor shall verify readiness as defined in energization procedures. Energization procedures shall include the following requirements, but not be limited to:

a. All safety equipment in place and functional.

b. Permanent and/or temporary warning notices and barricades in place where required for safety.

c. Permanent guards installed on DC connection cabinet within the inverters. While permissible to remove guards to perform testing, appropriate PPE shall be donned.

d. "Hot Work" permitting and other applicable safety procedures implemented.

e. Access for emergency vehicles not obstructed.

f. All relevant documentation available (calibration sheets, log sheets, process manuals or datasheets).

g. Manufacturer's construction testing checklists complete.

h. Verification of all system protective interlocks and protective devices.

i. Conducting operational and performance tests on all facility systems in accordance with contract agreements.

j. Contractor and equipment suppliers, when required, have performed required tests, checkouts, and commissioning activities.

Initial sync or generation shall not be implemented until written permission from Owner is obtained.

8.0 PV Plant Testing

Contractor shall ensure the following system tests are completed prior to system energization, performed by qualified personnel or third-party testers as defined in the Commissioning Plan.

Test	Equipment	Applicability	Performed By
Construction Acceptance Testing or Pre-Commissioning			
AC Continuity and Insulation Resistance Testing	MV/LV Cable	VLF of MV Cables	Contractor or Third-Party Tester
DC Continuity and Insulation Resistance Testing	PV Combiner Box (DC) Homerun, PV Combiner Boxes, PV Strings	DC Megger of DC Cabling, Strings and Feeders	Contractor
Three-Point Fall of Potential	Ground Grid	Inverter Ground Grids	Contractor or Third-Party Tester
Two Point Grounding Resistance Test	Equipment Grounds	Inverter Skid/Racking/Combiner Boxes, LBD	Contractor
Inverter Medium Voltage Transformer	NETA Testing - Winding Insulation Integrity Test, TTR, DGA (oil filled), Power Factor	On/By Inverter Skid	Inverter Manufacture (Pending Make) Contractor or Third-Party Tester
Auxiliary Transformer(s)	NETA Testing - Winding Insulation Integrity Test, TTR	On/By Inverter Skid	Contractor
Commissioning Pre-Energization Testing			

Test	Equipment	Applicability	Performed By
Polarity and Open Circuit Voltage (VOC)	PV Strings, DC Feeders	By Combiner Box	Contractor
Polarity and Open Circuit Voltage	CAB System, IPCs, DC Feeders	By LBD Circuit	Contractor
IV Curve Testing	PV Strings	By String	Contractor
Fiber Optic Terminations and OTDR	Fiber Optic Cable	By MV Circuit	Specialty Contractor or Third-Party Tester
SCADA Devices	Ethernet switches in Inverters, Trackers, Met Stations	Visibility, Command and Control	SCADA Technician

9.0 Polarity and Open Voltage Circuit Checks

Contractor shall measure the open circuit voltage and verify proper polarity for every PV string. In Combiner Box systems, VOC and polarity shall be measured at the combiner box prior to fusing. In CAB systems, open circuit voltage and polarity shall be measured at harnesses and Insulation Piercing Connectors (IPCs) prior to connecting IPCs to CAB trunk line.

Open circuit voltage and polarity shall also be measured at the DC feeder connection to inverter the inverter DC circuits.

10.0 I-V Curve Trace Testing

PV string voltage and current characteristics shall be measured and verified by I-V curve trace testing of PV stings. Testing shall be conducted in accordance with IEC standards. A minimum of 10% of system strings shall be tested. A proportionate sample of all string configurations shall be represented.

11.0 Fiber Optic Splicing and OTDR

Contractor shall terminate fiber strands using the fusion method and perform an OTDR test after termination is complete. The OTDR tests shall verify the integrity of the fiber optic cable installation by establishing continuity and attenuation losses through the cable, splices, and connectors. Testing shall be in accordance with TIA/EIA standards.

12.0 SCADA Interface Devices

Contractor shall install firmware and establish system control and data acquisition (SCADA) visibility with interfacing devices in Inverters, Trackers, and Met station components.

13.0 Post Energization Testing

Contractor will perform the following system tests after backfeed has been established. System testing is done prior to or in conjunction with initial energization.

Commissioning Testing After Energization (Backfeed)			
Commissioning Task	**System/Equipment**	**Applicability**	**Performed By**
SCADA Commissioning	Inverters Met Stations Trackers	After Backfeed	Contractor SCADA Engineer
Inverter Commissioning	Inverters and all Inverter Subsystems	After Backfeed	Inverter Manufacturer (OEM) with Contractor support
Tracker Commissioning	Trackers and all tracker subsystems	Prior to and after Backfeed	Tracker Manufacturer
Met Station Commissioning	Met Station, Soiling Stations, and Reference Cells	After Backfeed	Met Station Manufacturer SCADA Engineer
Thermal Flyover and Report	All PV Modules per Exhibit E-14	After entire PV plant is placed in service	Specialty Contractor
Operational and/or Functional Testing	Entire Facility	After entire PV plant is placed in service	Contractor
Capacity Test	Entire Facility	After Operational Testing	Contractor Specialty Contractor

14.0 SCADA Commissioning

SCADA system shall be fully inspected, and its operation shall be verified during start-up testing to assure that it is ready to command and control PV plant devices during the functional/operational test and during plant operation. The SCADA system must be capable of accumulating data for the Capacity Test.

The Contractor will support the Owner's SCADA engineer in performing loop checks of devices which are connected to the SCADA system. The loop checks shall verify expected data points from the applicable

equipment as well as providing alarm and fault automatic functions. Contractor shall support SCADA integration with Owner's Remote Operations Center as applicable.

15.0 Inverter Commissioning

Contractor shall coordinate and support inverter hot and cold commissioning by inverter manufacturer. Contractor shall submit all completed commissioning reports provider by inverter manufacturer along with test procedures for on-site commissioning and testing of inverters. Contractor's responsibility is limited to facilitating and documenting OEM commissioning activities; the OEM shall remain responsible for execution, results, and performance verification. Final ("as-left") settings and operating parameters shall be compared to design setpoints, and the results documented and submitted to the Owner for record. Contractor shall not be responsible for OEM control logic or proprietary parameter adjustments..

Initial sync or generation from inverters (pushing power) shall not be implemented until written permission from Owner's obtained.

16.0 Tracker Commissioning

Tracker commissioning is performed by the Tracker System OEM. All individual trackers are placed in service, visibility on the network verified, and SCADA reporting and control established.

17.0 Met Station Commissioning

Met Station commissioning is performed by the Met Station OEM. Met Stations, as well as Reference Cells and Soiling Stations (as applicable) are placed in service, visibility on the network verified, and SCADA reporting established.

18.0 Voltage and Phase Rotations

Voltage and phase rotations shall be verified to match the interconnected existing system. Inverter OEM shall be consulted as inverters may automatically perform this function.

19.0 Thermal Flyover and Report

The services of a specialty contractor shall be procured to conduct a drone flyover and IR scan of the entire PV solar plant. Specialty contractor shall provide a detailed analysis and report to identify areas of the system that are either underperforming or contain other anomalies.

20.0 Operational/Functional Testing

20.1 Once the commissioning of a system is complete, the system can be released for startup and operation of the entire facility as a fully integrated system.

The objective of the Operational Test is to help ensure the Block/PV Power Plant is operating reliably by demonstration of normal and safe operation for a 5-day period.

Contractor shall develop an Operational Test procedure that contains instructions for evaluating the ability of the power plant to operate reliably. Acceptance criteria for trackers and inverters shall be included. The procedure shall be submitted by Contractor to Owner for review and approval at minimum of 10 business days prior to commencement of the Operational Test.

21.0 Performance/Capacity Testing

Performance/Capacity Testing shall be conducted to prove contractual generation obligations. Each of the Performance Tests shall be carried out using contract specified procedures. Capacity Testing is to be conducted in accordance with the Capacity Testing Exhibit.Turn Over Documentation

Contractor shall provide all requisite documentation such as test reports and checklists to Owner for review and acceptance. If required, the Contractor shall upload turnover documents into Owner's Asset Management System.

22.0 Commercial Operation

The generating facility shall be deemed ready for commercial operation after each circuit is commissioned and full capacity is available. Contractor shall assist the Owner in notification to all necessary parties that the facility has achieved commercial operation.

23.0 Turnover to Operations

After successful completion of the startup and operational testing, the system or applicable portion of the system shall be turned over to the Operations team. During the startup and operational testing phases, the Operations team shall work with the Commissioning team to develop familiarization and identify any outstanding items that require completion prior to turnover. These items shall be added to the punch list. Included in the turnover shall be the documentation identified in Exhibit E-9.

EXHIBIT H-1(b)

Interconnection Commissioning & Functional Testing Requirements

1.0 Interconnection - Commissioning and Testing General Requirements

1. Contractor shall provide all labor and Equipment necessary to perform testing of the mechanical and electrical Equipment for the Project. All Work shall meet the applicable requirements of applicable Law, applicable Permit and good Industry Standards.
2. This specification delineates the testing requirements for solar Project Interconnection

substations. The testing will fall into several categories:

A. Mechanical Completion – Interconnection Facilities requirement, including:
    a. Pre and during Construction testing requirement
    b. Post Construction, pre-commissioning testing requirements
    c. Commissioning requirements
B. Substantial Completion – Interconnection Facilities requirements, including:
    a. Energization requirements

3. All Equipment shall be commissioned following all manufacturer recommendations and be conducted such that the warranties or guarantees, etc. of the Equipment shall in no way be affected or voided by these tests.
4. All testing shall meet ANSI/NETA ATS-2013 or later (Acceptance Testing Standards) requirements. Procedures and pass/fail criteria shall be defined.
5. Contractor shall provide written procedures for use by Contractor's commissioning team and Operator for all commissioning procedures.
6. Owner, Operator or Owner may elect to witness any or all pre-commissioning or startup activities. The coordination meeting shall serve as the mechanism for notifying Owner of when activities are taking place.
7. Contractor shall maintain a single integrated punch-list of outstanding activities for the construction, commissioning, startup, and initial operation of the project. Owner shall have the authority to add or delete items from the punch-list. All test reports shall be submitted electronically, unless otherwise specified. The onsite Project Manager shall be responsible for overseeing all commissioning activities. An Interconnection Commissioning Manager shall be on Site for the duration of commissioning; this person shall have no duties other than commission related work and report directly to the Project Manager. From commencement of startup activities, Contractor's startup personnel, under the direction of Contractor's Project Manager and Interconnection Commissioning Manager, will directly coordinate all such activities for energization and operation of Equipment and systems being started up. Contractor's Interconnection Commissioning Manager will initially hold weekly and later, daily startup coordination meetings. Contractor's Project Manager, Commissioning Manager and Owner will mutually agree on the frequency of the meetings. performing work in areas currently being readied for subsystem turnover for operation shall attend, as well as Contractor's Construction Superintendent, appropriate manufacturer's technical representatives, and Owner's representative. The meeting shall include a review of activities since the last meeting and a look ahead at activities planned for the next two weeks. The meeting shall be scheduled to allow all personnel associated with commissioning activities to attend. An Interconnection Commissioning Plan shall be submitted by Contractor for Owner approval at least thirty (30) days prior to Mechanical Completion - Interconnection. The Interconnection Commissioning Plan shall include a commissioning log, which will be developed and issued by Contractor for the tracking of all commissioning issues, observations, and deficiencies. The commissioning log will enable current status and resolution tracking of any open items. The log is to be included in the weekly report and be available upon request.
8. The Interconnection Commissioning Plan shall include the following at a minimum:

    A. A checklist for physical construction completion.
    B. Include associated documentation for code compliance, QA/QC, and design basis.
    C. All post construction testing (i.e. bolt torque, electrical insulation, contact resistance for field assembled electrical connections, and continuity tests, etc.).
    D. Complete cleanup, labeling, painting, insulation and/or punch-list items sufficiently to safely perform the startup testing and initial operation.

E. As the pre-commissioning for each individual item of major equipment, subsystem and major system is completed, it will be documented with a turnover package demonstrating that it is ready for commissioning. The pre-commissioning package shall contain the procedures for executing the above activities, and documentation of their results. This package may be a subset of the commissioning plan.

F. Setup and testing of all relay functions, control, status, alarm, and interlock functions, and metering functional tests, including Owner provided transformers and associated devices.

G. Record any malfunctions noted in the operations and when repairs are completed, repeat the tests and record on the connection drawings the date that the scheme functioned satisfactorily and who conducted the tests.

H. After completion of bench testing and after connection of all external wiring, conduct in-case tests by manually or electronically closing each relay contact to see the proper breaker is tripped and/or annunciator drop actuated.

I. Testing of relays shall include the tests wherein current and voltage are applied to the disconnected leads to relaying at current and potential transformers as well as phase angle and current checks after relays are actually in service and carrying load current.

J. Maintain correct phasing on all circuits and buses. Switching station buses and connections shall conform to the phasing of the existing substation. Make phasing tests on all circuits that can be energized from two (2) or more sources to prevent paralleling of sources out of phase.

K. After initial energization, Contractor shall complete load tests and checks to include current checks on all applicable relays, meters, transducers, etc. Perform voltage checks on all applicable relays, meters, transducers, etc. Perform angle checks on all applicable relays, meters, transducers, etc.

2.0 Mechanical Completion – Interconnection Requirements

2.1 Equipment Electrical Testing Requirements

1. General Testing requirements (Applies to all Equipment as applicable)

A. Control wire connections shall be checked for tightness. Control wire terminations shall be installed with ratcheting, aircraft style, compression tool that matches the requirements of the lug manufacturer. Any termination installed otherwise shall be cut off and replaced.

B. Inspect control wire crimps to ensure that the wire protrudes through the lug barrel.

C. At start of commissioning, ensure that no battery ground is introduced in the battery circuit.
    a. At the beginning and end of each work shift, verify battery has no ground.
    b. After turning on a new circuit, check for a ground on the system.
    c. Any ground shall be found and mitigated prior to continued testing.

D. Testing of all control circuits

a. Verify fusing is appropriate for all the applications.
b. Check phase rotation and phasing on all equipment to assure correctness and to assure transformers can be paralleled without interruption (if applicable).

2. HV/34.5 kV, Generating Step-up

A. The main power transformer installation, as well as dress and test, are usually included in the main power transformer supplier scope of Work. If it is not in the manufacturer's scope of delivery, the Contractor shall insure that the manufacturers installation instructions are followed, and at least the following is performed.

B. Shipping impact recorder shall be checked before offloading, and again after setting into final location on pad. If manufacturer is the owner of the impact recorder, it may be dismounted and returned to manufacturer's representative after having been read.

C. Record all nameplate data and provide nameplate picture to Owner

D. Perform core to tank insulation resistance on the unit (@ 500VDC min. 10 mega ohm)

E. Perform physical inspection of the main power transformer on arrival, and external and internal inspections after unit has been opened. Record all findings on the inspection record.

F. Perform physical inspection of control circuit connections and verify all control cable connections are tight.

G. Ensure bushing oil level is correct prior to installation (as applicable).

H. Perform dielectric oil tests before filling the transformer.

I. Ensure proper oil fill level inside transformer and LTC with respect to the oil temperature. Verify that oil level indicator reads correctly for the oil temperature at installation. Note that a qualitrol (or equivalent) oil level indicator should only read "normal" at the indicated 25° C temperature. Should oil be filled at temperature other than the nominal 25 °C, the oil level must be adjusted higher (when hotter) or lower (when colder) as appropriate.

J. Perform power factor test (Doble) tests on the bushings, windings and lightning arresters.
    a. Physical verification
    b. Perform testing for all the used parameters
    c. Verify potential & current phasing

K. Ensure proper operation of all cooling Equipment (both automatic & manual)

L. Check all the transformer supervisory control Equipment, including online oil monitoring (if included) is set and tested for operation.

M. Ensure all valve positions are per the valve schedule plate.

N. Ensure proper air venting from all the ports provided on the transformer tank. Verify that air is not trapped in radiators during filling.

O. Observe proper standing time after filling/topping up & before energization of the transformer.

P. Perform the following oil tests before energization, but a minimum of twenty-four (24) hours after oil filling.
    a. Dielectric strength
    b. Moisture
    c. Interfacial tension
    d. Power factor
    e. Neutralization number

Q. Verify transformer is set on the service off load-tap position.

3. HV or MV SF6 Circuit Breakers

A. Testing and commissioning shall be performed according to manufacturer's instruction manual.

B. Record nameplate data for circuit breaker & bushing current transformers & verify with specifications / drawings.

C. Perform visual inspection of circuit breaker for
   a. Interrupting tank
   b. Mechanism cabinet
   c. High voltage bushings
   d. SF6 gas leakage

D. Verify the rating of the circuit breaker meets or exceeds the voltage requirements.

E. Verify that circuit breaker control voltage is compatible with station battery voltage requirements.

F. Check the factory wiring.

G. Verify current transformers, nameplate, polarity, ratios & Impedance. Verify that external connections are on the proper tap.

H. Perform contact resistance test on the circuit breaker main contacts.

I. Main terminal connections shall be installed with a torque wrench. After torqueing, connections shall be checked with a micro-ohm meter. All resistance shall be essentially even, any resistance difference of greater twenty-five percent (25%) shall be investigated and corrected.

J. Perform insulation resistance test on the breaker. Pole-to-pole test is necessary if poles are contained in the same compartment, otherwise pole to ground is sufficient. Pole-to-pole insulation resistance test shall be performed at manufacturers recommended values or @ 5000VDC. Typical values will be >10,000 mega ohm.

K. Perform timing test on each phase, if manufacture requires independent timing.

L. If high-speed auxiliary contacts are supplied, time the high-speed auxiliary contacts with the main breaker contacts, if applicable.

M. Perform complete functional tests on the circuit breaker including close and open blocks as required by the scheme.
   a. Anti-pump
   b. Bucking test in case of 2 trip coils
   c. Pole disagreement, if applicable
   d. Low SF6 close/trip block & alarm etc.
   e. Spring charging motor alarm, if applicable.
   f. Trip and Close from relay systems, local, remote control.

N. Check the charging time of the hydraulic operating mechanism from '0' to operating pressure/level, if applicable. Verify within manufacturer specification.

O. Check the hydraulic operating mechanism for any leaks, proper alarms etc. as described by the manufacturer, if applicable.

P. Perform insulation tests (power factor) in accordance with test Equipment manufacturers published data.

4. 34.5 kV Vacuum Circuit Breaker

A. Record nameplate data for circuit breaker & bushing current transformers & verify with specifications / drawings.

B. Perform visual inspection of circuit breaker for
    a. Interrupting vacuum bottles (if accessible)
    b. Mechanism cabinet
    c. High voltage bushings
C. Verify the rating of the circuit breaker meets or exceeds the voltage requirements.
D. Verify that circuit breaker control voltage is compatible with station battery voltage requirements.
E. Check the factory wiring.
F. Verify current transformers, nameplate, polarity, ratios & Impedance. Verify that external connections are on the proper tap.
G. Power factor (Doble) test on bushings if manufacture requires.
H. Perform contact resistance test on the circuit breaker main contacts.
I. Main terminal connections shall be installed with a torque wrench. After torqueing, connections shall be checked with a micro-ohm meter. All resistances shall be essentially even, any resistance difference of greater than fifty percent (<50%) shall be investigated and corrected.
J. Perform insulation resistance test on the breaker. Pole-to-pole test is necessary if poles are contained in the same compartment, otherwise pole to ground is sufficient. Pole-to-pole insulation resistance test shall be performed at manufacturers recommended values or @ 5000VDC. Typical values will be >10,000 mega ohm.
K. Perform circuit breaker main contact timing. (open, close & close, open)
L. Perform time test on each phase if required by manufacturer. The test will include measuring the opening speeds, closing speeds and closing into a pre-existing trip and verify the operating times with the manufacturer's limits.
M. Perform complete functional tests on the circuit breaker including close & open blocks as required by the scheme.
    a. Anti-pump
    b. Spring charging motor alarm, if applicable.
    c. Trip and close from relay systems, local, control and SCADA/RTU.
N. Check the reduced voltage operation of the trip coils if required by the manufacturer.
O. Record the counter reading after first energization.

5. HV & MV Disconnect Switches

A. Record nameplate data for the disconnect switch & verify with specifications / drawings.
B. Perform physical inspections for:
    a. External damage of insulators.
    b. Control cabinet inspection including verification of factory wiring (if applicable).
    c. Auxiliary switches (if applicable).
    d. If stacked aux switch is adjusted, validate that all other switches have not changed or readjust.
    e. Operating mechanism & general appearance.
    f. Check and adjust blade alignment. Tighten all connections, but do not set piercing bolts until all adjustments have been set and verified.
C. Perform insulation resistance on the disconnect switches, phase to phase (if with shared insulators) otherwise phase to ground.
D. Manually Open and Close the disconnect switch.
E. If electrically operated, perform electrical operation:

a. Perform a functional check of the controls. Verify proper open and close functions.
b. Verify auxiliary contact function
c. Verify indicating light, local and remote, on Mimic and/or SCADA/HMI
d. Check for proper blade alignment.
e. Record Operational timing for an Open Command (if applicable).
f. Record Operational timing for a Close Command (if applicable).
g. Motor Current for opening (if applicable).
h. Motor Current for closing (if applicable).
i. Travel stops & proper arc interrupter operation.
j. Verify anti-condensation heaters are on and operating.

F. Verify that the main contacts are lubricated per manufacturer's recommendations.
G. Perform contact resistance test on the disconnect switch main contacts if required by the manufacturer.
H. Perform contact resistance of ground switch, if equipped. Verify ground connections, if required by the manufacturer or if applicable.
I. Verify the operation of auxiliary switches. Verify all interlocks.
J. Check proper remote indications at open/close and during travel (if applicable) positions.

6. HV & MV Lines & Buses

A. Verify the size of conductors / aluminum bus etc. as per the drawings.
B. Inspect and ensure that all the support insulators are in a good physical condition.
C. Verify bolted aluminum connections have been wire brushed and coated with anti-oxidant as per manufacturers recommendations.
D. Check the contact resistance at all the joints. Contact resistance will normally be about 100μOhms. Investigate any connection that measures less than fifty percent (>50%) from the lowest reading of a similarly bolted connection.

7. Station Auxiliary System

A. Battery Bank
   a. Perform all installation tests & checks as required by the battery vendor, including:
      i. Nameplate data.
      ii. Quantity of cells.
      iii. Terminal verification for corrosion.
      iv. Leaks or Damage
   b. Record and verify the data in accordance with the specifications.
   c. Battery charge voltages, float and equalize, must be calculated and set from battery manufacturers data sheet. Battery chargers do not come pre-set from the factory.
   d. Record each cell voltage before connecting the batteries into a bank.
   e. Record the battery electrolyte specific gravity & temperature. (Not applicable for sealed type construction)
   f. Record all intercell resistance.
   g. Check the main DC cable insulation resistance @ 500VDC before connection to battery.
   h. Equalize battery bank per the battery manufacturer's recommendations.

i. Measure cell voltage, specific gravity and temperature tests.
j. Measure and record the battery system voltage from positive and negative to ground. Voltage to ground should be equal magnitude, opposite polarity. If magnitudes are not equal and opposite, this must be investigated and corrected.
k. Perform a load test in accordance with manufacturer's published data or ANSI/IEEE 450.

B. Battery Charger

a. Perform all installations tests and checks as required by the vendor.
b. Record the nameplate data and verifying the data in accordance with the specifications.
c. Set & test alarms
    i. Calculate, set battery charger float & equalize voltages. Calculations should be based on battery manufacturers VPC recommendations.
    ii. Low DC voltage.
    iii. High DC voltage.
    iv. Battery ground detector.
    v. Any other, if applicable
d. Check the battery charger transformer taps & connection before energization.
e. Functionally test the charger control circuit.
f. Functionally test alarms into RTAC system, if applicable.

C. Auxiliary Power Transformer

a. Record and verify the nameplate data.
b. Perform physical inspection of the transformers (bushings, oil leaks etc.)
c. Verify grounding as applicable. This will be a separately derived system as per NEC and must be grounded accordingly.
d. Perform turns/voltage ratio test, on all taps, if taps available. Final check shall be on expected service/operating tap. Leave on Service Tap.
e. Perform insulation resistance test.
f. Perform power-factor/dissipation-factor test on all windings in accordance with test equipment manufacturer's data. Check primary & secondary side terminations. Verify tightening torque for the same.
g. Energize transformer and verify secondary voltages & phasing, if applicable.

D. Panel Boards (AC and DC)

a. Perform visual inspection.
b. Record/verify data per specifications.
c. Perform insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground for one minute.
d. Check the conductor size and connections for correctness as per specifications/drawings.
e. Check tightness of all connections.
f. Exercise all breakers.
g. Check all breakers and fuses for proper ratings as per drawings. Verify that wiring, one-lines, schematics, and breaker designations and marked labels match. Correct as necessary so that all documentation matches.
h. Set adjustable breakers per Engineer of Record setting orders.

i. Test current settings on Main Breakers, if adjustable.

E. Safety Switches

a. Perform visual inspection.
b. Record/verify data per specifications.
c. Measure contact resistance across each switchblade and fuse holder.
d. Perform insulation-resistance tests for one minute on each.
e. Check the conductor size & connections for correctness as per specifications/drawings.
f. Check tightness of all connections.
g. Check all fuses for proper ratings.
h. Verify properly marked labels for each circuit.

8. Grounding Systems

A. Check that the primary conductor /grounding electrode is of proper dimension as per drawing.
B. The electrode depth should be verified in accordance with the grounding specifications.
C. The ground cable connections, if exothermic welds, should be checked for proper fills. (No cold joints or burnouts)
D. All the electrodes should be checked for continuity, point to point test, between each other thereby ensuring continuity of the whole ground grid loop.

9. Surge Arresters

A. Perform physical inspection of insulator and surge counter, if applicable.
B. Record the nameplate data and verify with respective drawings.
C. Perform insulation resistance test.
D. Verify grounding is proper and ground conductor is not excessively long. Lightning is a high frequency event; ground connections shall be as short as possible. Do not leave loops, slack or similar.
E. Verify proper stack mounting in case of multi-stack arresters.
F. Verify the grading ring is properly assembled & fitted.
G. Ensure enough phase and ground clearances as required by the drawings.

10. Power Cables

A. Perform physical inspection.
B. Phase out low side power cables prior to connection.
C. Verify phasing is not crossed between equipment.
D. Verify shield continuity & connections.

11. 34.5 kV Capacitor Banks (if applicable)

A. Record the name plate data and verify the rating as per drawings/specifications. Capacitors are voltage dependent – verify rating and voltage match, otherwise true rating must be calculated.
B. Check for any oil leakage in the capacitor cans.
C. Verify capacitor interconnections as per manufacturer drawings.
D. Ensure the capacitor bank is connected as per the schematic drawings.
E. Measure the capacitance value of each phase. Capacitance should match calculations, if not investigate and correct.
F. Measure values of switching reactor inductance and record on the CR, if

applicable.

G. Verify the ratings of all the surge protection equipment in the circuit are as per drawings.
H. Verify that the capacitor bank switch cannot be reclosed for a minimum of five (5) minutes, if applicable, or as per manufacturer recommendations, after opening.
I. Ensure proper ground connection/grounding switch is available for discharge of capacitors.
J. Ensure zero voltage closing of the circuit breakers or circuit switcher, if applicable.
K. Ensure the neutral PT secondary circuit is closed and correct as per scheme.
L. Check insulation resistance of the capacitor banks at 5000VDC.

A. 12. Neutral Grounding Reactor (if applicable)Verify and record name plate data and compare with the drawings/specifications.
B. Check for oil leakage, corrosion or any mechanical damage.
C. Verify installation including grounding connections, clearances to other equipment.
D. Verify all wiring is correctly done including CT's, PT's or other monitoring devices and ensure correct phase and polarity.
E. Verify all protection and control systems functionality.
F. Perform an insulation and continuity test
G. Verify impedance and reactance.

2.2 Component Testing

1. Current Transformer Testing

A. CT testing (Applicable for all CTs)

a. Record the nameplate data.
b. Perform physical inspection, if possible.
c. Perform insulation resistance test on primary if applicable and on the secondary.
d. Perform ratio test.
e. Perform polarity test.
f. Perform saturation test.
g. Perform DC resistance of the CT secondary.
h. Perform demagnetization of the CT after the above two tests to ensure minimum effect of residual flux.
i. Verify all secondary taps by low voltage tap progression.
j. Verify secondary wiring is connected to the appropriate terminals for the expected ratio.
k. Short and ground all unused CTs. Proper shorting is from end to end (X1 to X5) with X5 wired to a ground bus, on the CT side of the terminals strip.
l. Check the primary connections for proper torque.

B. Current Circuit Testing (Applicable to all current circuits)

a. Perform insulation resistance test.
b. Verify wire size per drawing.
c. Perform continuity test and point-to-point test.
d. Confirm single point ground.

e. Check the CT secondary DC burdens for high Impedance Relaying Application.
f. Verify make-before-break characteristics of all shorting switches & all relay current plugs. If possible, primary current should be used, and secondary monitored and verified at all locations in the secondary circuit.
g. Verify proper polarity of all the elements (relay & metering) in the circuit.
h. Verify phasing & polarity of the test switches & all relaying in the CT secondary circuit is as per the scheme.
i. Verify correct magnitudes of current both at the incoming & outgoing at each device location.

C. CCVT testing.

a. Record the nameplate data.
b. Perform insulation resistance test on high voltage V and on low voltage with respect to tank ground.
c. Perform physical inspection.
d. Check all the capacitances of the transformer.
e. Check the grounding switch, if applicable.
f. Measure power factor and dissipation factor of the unit as recommended by the manufacturer.
g. Perform ratio test.
h. Perform polarity test.
i. Check the primary connections for tightness (using torque wrench).

2. Voltage Circuit Testing (Applicable to all voltage circuits)

a. Perform insulation resistance test.
b. Verify that unused secondaries are open & that only the neutral is grounded.
c. Verify wire size per drawing.
d. Perform continuity test & point-to-point test.
e. Check the PT secondary burdens for high Impedance Relaying Application.
f. Confirm single point ground.
g. Verify proper phasing, polarity continuity and insulation resistance of all the associated potential circuits.
h. Check all fuses with respect to the specifications.
i. After energization verify phasing & magnitude of the secondary voltage with respect to known reference.

3. CT/PT Combo Unit testing.

A. PT Testing

a. Record the nameplate data.
b. Perform insulation resistance test on high voltage & on low voltage with respect to tank ground.
c. Perform physical inspection.
d. Check the grounding switch, if applicable.
e. Measure power factor and dissipation factor of the unit as recommended by the manufacturer.

f. Perform ratio test.
g. Perform polarity test.
h. Check the primary connections for tightness (using torque wrench).

B. Voltage Circuit Testing (Applicable to all voltage circuits)

a. Perform insulation resistance test.
b. Verify that unused secondaries are open & that only the neutral is grounded.
c. Verify wire size per drawing.
d. Perform continuity test & point-to-point test.
e. Check the PT secondary burdens for high Impedance Relaying Application.
f. Confirm single point ground.
g. Verify proper phasing, polarity continuity & insulation resistance of all the associated potential circuits.
h. After energization versify phasing & magnitude of the secondary voltage with respect to known references.

C. CT Testing

a. Record the nameplate data.
b. Perform physical inspection.
c. Perform insulation resistance test on primary if applicable & on the secondary.
d. Perform ratio test.
e. Perform polarity test.
f. Perform saturation test.
g. Perform DC resistance of the CT secondary.
h. Perform demagnetization of the CT after the above two tests to ensure minimum effect of residual flux.

D. Current Circuit Testing (Applicable to all current circuits)

a. Perform insulation resistance test.
b. Verify wire size per drawing.
c. Perform continuity test and point-to-point test.
d. Confirm single point ground.
e. Check the CT secondary DC burdens for high Impedance Relaying Application.
f. Verify make before break characteristics of all shorting switches & all relay current plugs.
g. Verify proper polarity of all the elements (relay & metering) in the circuit.
h. Verify phasing & polarity of the test switches & all relaying in the CT secondary circuit is as per the scheme.
i. Verify correct magnitudes of current both at the incoming & outgoing at each device location.

4. Potential Transformer Testing.

A. PT testing (Applicable for all PTs)

a. Record the nameplate data.
b. Perform insulation resistance test using 2500 V on high voltage & 500V on low voltage with respect to tank ground.
c. Perform physical inspection.
d. Perform ratio test.

e. Perform polarity test.

B. Voltage Circuit Testing (Applicable to all voltage circuits)

a. Perform insulation resistance test.
b. Verify that unused secondaries are open and that only the neutral is grounded.
c. Check the PT secondary burdens for high impedance relaying application.
d. Verify wire size per drawing.
e. Perform continuity test and point-to-point test.
f. Confirm single point ground.
f. Verify proper phasing, polarity continuity and insulation resistance of all the associated potential circuits.
g. Check all fuses with respect to the specifications.
h. After energization verify phasing & magnitude of the secondary voltage with respect to known reference.

2.3 Protection and Control

1. The following tests shall be performed on all the protective relaying including lockout relays and associated Equipment:
   A. Perform physical inspection.
   B. Perform acceptance tests (initial checkout) as specified in the manufacturers' manual.
   C. Test relays as per manufacturer instructions.
   D. Set relays as per the electronic relay settings provided.
   E. Perform functional operational checks to verify proper trips/interlocks/alarms per schematics. All the relay outputs must initiate appropriate devices. This will include a trip and close operation of the circuit breaker from the local controls, the station control switches, and the protective relaying.
   F. Functionally assert each applicable element and verify appropriate target actuation.
   G. Each output should operate the end device, at least once.
   H. Verify all relay alarms & outputs with the schematic diagrams.
   I. After completion of testing, print the relay settings for each relay, for numerical relays.
   J. Perform in service voltage & current measurements to verify relay is sensing the proper parameters.
   K. Report should be signed, dated & added to the final report.

2. Tests on Lockout relays:

   A. Perform physical inspection and verify the relay as per specifications/drawings.
   B. Perform a functional test on the lockout relays by electrical operation in accordance with the scheme.
   C. Check all the contacts operated by the operation of the lockout relay as per the scheme including alarm/inputs etc.

3. Meters & Transducers:

   A. Verify physical and mechanical conditions.
   B. Calibrate power factor & energy meters according to manufacturer's data.

C. Verify that current & voltage transformer secondary circuits are intact.
D. Check the mid and full-scale reading of panel meters by using known voltage & currents.

2.4 SCADA Factory Acceptance Test

1. A Factory Acceptance Test (FAT) of the full system shall be performed, with the option for the Owner to be present during the FAT. Owner and all involved Facility Parties and Contractors shall be notified thirty (30) days prior to test. All data points shall be tested (simulated if necessary) to ensure all point maps, scaling factors, etc., are applied correctly.

2. The FAT shall include the following:

   A. Point-by-point verification and exercising of all I/O, to ensure all point maps, scaling factors, etc., are applied correctly;

   B. Point-by-point continuity check of the terminal cabinets (if not checked as part of I/O verification);

   C. Repeated powering up and powering down of all system components;

   D. Demonstration of the proper functioning of all hardware;

   E. Demonstration of single failure responses to detectable failures including proper operation during failover from primary to backup control processor and back again to primary, failure of one channel of each redundant communication system, and power supply failures;

   F. Demonstration of required spare system capacity;

   G. A closed loop checkout of all analog control logic using a simulation of the process;

   H. A closed loop checkout of all discrete control logic using simulation of the field devices;

   I. Demonstration of all operator interface functions;

   J. Functional review of all the Contractor-configured control and information displays;

   K. Demonstration of the proper functioning of the Contractor-supplied software. Included in the software tests shall be procedures to verify the proper operation of the following system software functions: all on-line editing functions; all analog scan conversion and limit checking routines; all digital scan routines; all operator communication routines; all editors, configurators, compilers, and assemblers; all software debug programs; all software diagnostic routines; all display and printing routines; all alarm output routines; and all programming support routines. Included in the software tests shall be procedures to verify the proper operation of the applications programs using simulated I/O, all real-time variable calculations, and all performance calculations;

   L. All prefabricated cables supplied under the Agreement. The prefabricated cables shall be connected for the tests in exactly the same configuration as they will be installed at the Site. Temporary test cables may be used during the test for all cable being supplied in bulk lots without factory installed connectors.

3. Prior to the start of the FAT, the exact FAT testing procedure that is to be used shall be submitted to the Owner with sufficient time for review and comment. Following Owner approval, the Contractor shall submit a final test procedure and schedule.
4. Furnish all power supplies, switch and light panels, meters, signal generators, test cables and jumpers, logic simulators, and emulators required to perform the FAT.
5. Following the FAT, if, in the opinion of the Owner, the system has not been adequately manufactured, tested, or debugged, the FAT shall be rerun. All of the Contractor's costs associated with such retesting the system shall be the responsibility of the Contractor. The SCADA system shall not be shipped without prior approval of the Owner.
6. The FAT results shall be documented and submitted to the Owner.

3.0 Substantial Completion – Interconnection Requirements

3.1 Energizing

1. General: Contractor will perform the energization process, as follows:
    A. A procedure shall be submitted to the Owner by Contractor on proposed energizing.
    B. Updated set of as built prints shall be available at the site before energizing.
    C. All testing and commissioning shall be complete and results satisfactory before energizing.
    D. A pre-energizing walk down shall be done.
    E. All the personnel at the site will be informed about the energization & must be directed to remain in a safe area.
    F. Ensure all protective relays are set in for initial energization.
    G. Ensure all the test switches are in their normal positions.
    H. Ensure all control switches are in their normal positions.
    I. Any bypassed/opened protections will be documented.
    J. All the AFTER-ENERGIZING checks of all the Major Equipment shall be completed as mentioned in the respective Commissioning records.
    K. Soak the transformer on no-load for a minimum of eight (8) hours, or as per manufacturer recommendations. During extreme cold, -20℃/0℉ or colder, transformer shall be allowed twenty-for (24) hours soak at no-load before adding load. Record the temperature of the transformer oil and winding before energization and after soaking period, and before real load is introduced to the system.
    L. Perform electrical testing after initial energization:
        a. Verify voltage phasing at primary against a known source.
        b. Verify voltage phasing at the secondary of the bus potential transformers against a known source, if available.
        c. Perform in-service testing under load recording all voltage, current & phase angles at all available locations (test switches, relay terminals & solid-state relays)

3.2 In- Service Testing

1. General

A. After energizing, verify the phasing of primary and secondary voltages, as applicable.
B. Check voltage of the potential transformer secondary at every switch and relay for magnitude and phase angle with respect to the known reference.
C. Current magnitude, direction and phase angle should be measured at every available location. Relay digital reads are calculations and should not be considered proven until measured and compared.
D. Check the direction of power flow.
E. Verify that check meter readings match with the revenue meter reads (usually located in the utility substation). If values do not match, they must be corrected.
F. Zero (0) current values are expected in neutral and operating coil of differential relays.
G. Directional relays should be verified for proper directionality.
H. All the results should be evaluated and compared with the expected values.
I. All the temporary circuits used to prove proper operations should be documented & the circuit should be returned to normal at the end of the test & all trip circuits restored, if disabled during test.

18.0 Performance/Capacity Testing 7
19.0 Turn Over Documentation 7
20.0 Commercial Operation 7
21.0 Turnover to Operations 8

1.0 Commissioning Concept

The Commissioning Program will be implemented in accordance with the Owner-approved Commissioning Plan and includes testing activities through the construction phase, equipment supplier testing, and system energization and startup through final acceptance.

1.1 Overarching objectives are as follows:

a. Ensuring personnel and equipment safety during commissioning.

b. Implementation of a formal lockout/tagout (LOTO) program.

c. Adherence to prescribed testing criteria including applicable codes and standards as defined in the approved Commissioning Plan and referenced contract documents..

d. Demonstration of functionality of the plant equipment and systems including conformance with specifications and guarantees.

e. Creation of appropriate plans and schedules prior to commissioning execution.

f. Clear handoff from construction groups and interface with construction activities.

g. Maintenance of a daily log which documents significant accomplishments, issues, and resolution for commissioning activities under Contractor's scope.

h. Creation, presentation, and maintenance of evidence of completed testing via test reports and documentation.

Contractor will perform the BESS commissioning activities in coordination with the BESS Manufacturer (OEM) in accordance with the approved Commissioning Plan. Contractor's responsibility is limited to execution, documentation, and functional testing support as defined the OEM documentation. The OEM shall remain responsible for equipment-level and system-level functionality, software and controls validation, and performance guarantees associated with the BESS. Contractor may self-perform or contract third-party testing firm to complete various testing. Third-party testers generally perform the following tests:

a. Fall-of-Potential ground testing.

b. Very Low Frequency (VLF) of Medium Voltage AC cables.

c. International Electrical Testing Association (NETA) required transformer testing of Medium Voltage and Auxiliary Transformers.

d. Fiber Optics Termination and Optical Time Domain Reflectometer (OTDR) Testing.

2.0 Safety During Commissioning Phase

Contractor will ensure that the additional safety considerations surrounding testing and commissioning tasks and activities are captured in the comprehensive Site Safety Plan. The Contractor will submit the safety plan to Owner prior to construction for review and approval. A minimum of 10 days shall be allowed for Owner approval. Any revisions to the Safety Plan shall be submitted to Owner which will trigger a separate 10-day review period in force. Revisions to the Safety Plan may be appropriate prior to the commissioning phase to recognize and incorporate unique hazards created by commissioning activities.

The Contractor will follow its Safety Plan for all Construction, Testing, and Commissioning activities, and will act as the safety guidelines for the project.

All personnel associated with construction and commissioning activities shall receive safety orientation and tas-specific training consistent with the Contractor's Site Safety Plan.

The Safety Plan shall address all concerns in the construction, testing, and commissioning phases.Lockout/Tagout

The Contractor shall compile a site-specific LOTO plan or procedure which shall be submitted for approval 10 days prior to the commissioning phase. The LOTO procedure or plan establishes requirements and a process for the lockout and tagout of energy isolating devices to protect personnel from potentially hazardous energy.

2.1 The LOTO procedure or plan shall include, at a minimum, the following:

a. Pre-planned LOTO Schemes.

b. Description of LOTO Practices.

c. Identification LOTO Authorities.

d. Training Requirements.

e. Signage/Barricading.

3.0 Commissioning Execution

Individuals performing the BESS system testing shall be qualified per OSHA 10 training at a minimum and trained on the procedures within the Commissioning Program.Conducting electrical testing on any BESS or Auxiliary System shall be performed by qualified individuals having knowledge and experience with electrical systems measurements, the test equipment used, the equipment or systems being tested, and an awareness of the hazards involved.

3.1 Since working with BESS systems involves exposure to energized circuits with high voltages and currents, presenting electrical shock hazards, it is imperative for those installing and testing BESS systems to follow all applicable safety standards and guidelines.

3.2 The Contractor's execution strategy applicable to commissioning, startup, and testing shall, at a minimum, contain the following requirements:

a. Performance of Job Hazard Analysis or Electrical Hazard Analysis before conducting any work at the site.

b. Planning and review of all testing, safety, and emergency procedures in advance.

c. Maintenance of an orderly work site and cautious approach.

d. Utilization of appropriate precautions when working on energized equipment is unavoidable.

e. Proper selection and usage of personal protective equipment (PPE).

f. Ensuring NFPA70E compliant arc flash labels are available and properly installed.Mandating the usage of barricading and specialized PPE as necessary.

g. Adherence to manufacturer's instructions for the safe operation of test instruments.

h. Ensuring that test instruments are inspected, calibrated, and used only for their intended purpose, and within their established limits and ratings.

i. Ensuring that personnel are capable and willing to perform tasks that cause exposure to electrical hazards.

j. Ensuring that all employees potentially impacted by the hazards caused by Commissioning activities are provided training or briefings to ensure that they clearly understand the purpose and function of the LOTO process, as well as their roles and responsibilities when performing potentially hazardous activities. Reporting

Contractor shall perform and document the results of testing activities within its defined scope. All tests and data collection shall be in accordance with NETA and other accepted industry standards. Prior to submittal, Contractor shall review test data to confirm compliance with the acceptance criteria defined in the approved Commissioning Plan. Any deviations identified within Contractor's scope shall be reviewed, corrected, or re-tested as appropriate. Test results affected by the corrective action shall be repeated.Tests listed as manufacturer's responsibility shall be conducted and documented by the equipment manufacturer or supplier, under Contractor oversight. The Contractor shall verify that test documentation is completed for each component or system. All testing results and data shall be submitted to the Owner for review.

Contractor shall develop and utilize written, approved procedures as deemed necessary by the Contractor to safely and effectively perform specified tasks. It is recognized that some tasks are within the skill of the qualified commissioning individual and do not require a procedure.

3.3 Testing equipment shall be calibrated as defined by the manufacturer. Testing calibration certificates shall be submitted to the Owner prior to use of testing equipment.

3.4 Test reports shall clearly present data collected during performance of the testing and include the following:

a. Identification of circuits tested, and tests performed.

b. Calibrated tools and equipment used.

c. Data recorded and acceptance criteria.

d. Interpretation and summary of results, and a clear indication of pass/fail.

e. Identification of responsible person(s) and date(s) of tests. Contractor shall troubleshoot and correct all failures discovered during testing at no additional cost to the Owner, unless the failures are a result of a defect in Owner-Furnished equipment or design error by the Engineer of Record Procedures

Detailed procedures shall be provided by Contractor for testing, startup, and commissioning activities. The utilization of procedures will enable the project to be tested and commissioned safely in accordance with the contract. Testing procedures shall be provided to Owner. Procedures shall be provided for the following activities.

a. BESS OEM interface (if necessary).

b. Commissioning Field Testing.

c. System Energization.

d. Operational/Functional Testing.

e. Capacity Testing.

3.5 The following shall be included in each procedure, as applicable:

a. A list of prerequisites, including safety concerns.

b. Purpose of test.

c. Procedural steps that outline actions that are to be followed in the performance of the test and/or data collection.

d. Required Test Equipment.

e. Specific Site Information: This includes specific equipment identification, tagging, conventions, cable numbers, and I/O references for testing.

Procedures shall be made available to Owner for review and comment prior to commencing work with such procedures. A minimum of 10 business days shall be allotted to Owner for review and comment before commencement of the test delineated in the procedure.

4.0 Commissioning Schedule

The commissioning schedule shall be integrated into the overall project schedule with emphasis on the construction activities that gate commissioning performance. The commissioning schedule will be submitted to Owner.

5.0 Commissioning Log and Plan of the Day Meetings

5.1 Commissioning shall maintain a daily log which describes the following:

a. Work completed.

b. Status of commissioning completion.

c. Significant achievements.

d. Issues identified.

e. Resolution of Issues.

Commissioning shall conduct a daily meeting to discuss work complete and work forecasted. The Owner shall be invited to these meetings. The Commissioning Log shall be reviewed at Commissioning Plan of the Day meetings. Notification

Contractor shall provide written notifications to Owner for significant evolutions. Unless otherwise indicated, 5 business days shall be allocated prior to commencement of specific tests.

5.2 Formal notifications shall be provided at the following times:

a. Completion of testing for a contractual milestone

b. Circuit Mechanical Completion

c. Circuit Substantial Completion

d. Facility Mechanical Completion

e. Energization of Systems

6.0 Energization of Systems

Contractor shall perform the initial switching and energization of electrical equipment including both AC and DC. Written procedures shall be provided to the Owner at least 10 business days prior to energization for review and approval by the Owner. No equipment shall be energized without the Owner's written consent to energization/switching procedures.

6.1 Prior to system energization, Contractor shall verify readiness as defined in energization procedures. Energization procedures shall include the following requirements, but not be limited to:

a. All safety equipment in place and functional.

b. Permanent and/or temporary warning notices and barricades in place where required for safety.

c. Permanent guards installed on DC connection cabinet within the inverters. While permissible to remove guards to perform testing, appropriate PPE shall be donned.

d. "Hot Work" permitting and other applicable safety procedures implemented.

e. Access for emergency vehicles not obstructed.

f. All relevant documentation available (calibration sheets, log sheets, process manuals or datasheets).

g. Manufacturer's construction testing checklists complete.

h. Verification of all system protective interlocks and protective devices.

i. Conducting BESS capacity testing in accordance with contract agreements.

j. Contractor and equipment suppliers, when required, have performed required tests, checkouts, and commissioning activities.

10.2 BESS Charge and Discharge shall not be implemented until written permission from Owner is obtained.

7.0 BESS System Testing

Contractor shall ensure the following system tests are completed prior to system energization, performed by qualified personnel or third-party testers as defined in the Commissioning Plan.

Test	Equipment	Applicability	Performed By
Construction Acceptance Testing or Pre-Commissioning			
AC Continuity and Insulation Resistance Testing	MV/LV Cable	VLF of MV Cables	Contractor or Third-Party Tester
DC Continuity and Insulation Resistance Testing	DC Cable	DC Megger of DC Cabling	Contractor
Three-Point Fall of Potential	Ground Grid	BESS System or Inverter Ground Grids	Contractor or Third-Party Tester
Fiber Optic Terminations and OTDR	Fiber Optic Cables	SCADA Equipment Connections	Specialty Contractor or Third-Party Tester
Two-Point Grounding Resistance Test	Equipment Grounds	Inverters, Transformers	Two-Point Grounding Resistance Test

Test	Equipment	Applicability	Performed By
NETA Testing - Winding Insulation Integrity Test, TTR, DGA (oil filled), Power Factor	Inverter Medium Voltage Transformer	On/By Inverter Skids or BESS Containers	Contractor or Third-Party Tester
NETA Testing - Winding Insulation Integrity Test, TTR	Auxiliary Transformer(s)	On/By Inverter Skid	Contractor or Third-Party Tester
BESS OEM Cold Commissioning	BESS Containers	BESS Containers	BESS OEM

8.0 Fiber Optic Splicing and OTDR

Contractor shall terminate fiber strands using the fusion method and perform an OTDR test after termination is complete. The OTDR tests shall verify the integrity of the fiber optic cable installation by establishing continuity and attenuation losses through the cable, splices, and connectors. Testing shall be in accordance with TIA/EIA standards.

9.0 SCADA Interface Devices

Contractor shall install firmware and establish system control and data acquisition (SCADA) visibility with interfacing devices in Inverters, Trackers, and Met station components.

Initial Energization and Capacity Testing			
Test	**Equipment**	**Applicability**	**Performed By**
SCADA Interface	Battery Management System Energy Management System	SCADA/BESS System	Owner Contractor SCADA Contractor
Inverter Commissioning	Inverters and all Inverter Subsystems	After Backfeed	Inverter/BESS Manufacturer with Contractor coordination
BESS Hot Commissioning (Initial Charge/Discharge)	SCADA/BESS System	By BESS Circuit or Entire BESS System	BESS OEM, Contractor
BESS Capacity Testing	SCADA/BESS System	Entire BESS System	Contractor SCADA Contractor

10.0 SCADA Commissioning

10.1 The SCADA system shall be fully inspected, and its operation shall be verified during start-up testing to assure that it is ready to command and control BESS System Charge and Discharge. The SCADA system must be capable of accumulating data for the Capacity Test.

10.2 The Contractor will support the Owner's SCADA engineer in performing loop checks of devices which are connected to the SCADA system. The loop checks shall verify expected data points

from the applicable equipment as well as providing alarm and fault automatic functions. Contractor shall support SCADA integration with Owner's Remote Operations Center as applicable.

11.0 Inverter Commissioning

Contractor shall coordinate and support Inverter hot and cold commissioning by inverter or BESS (packaged systems) manufacturer. Contractor shall submit all completed commissioning reports provider by BESS or inverter manufacturer along with test procedures for on-site commissioning and testing of BESS and inverters. Contractor's responsibility is limited to facilitating and documenting OEM commissioning activities; the OEM shall remain responsible for execution, results, and performance verification. Final ("as-left") settings and operating parameters shall be compared to design setpointsand the results documented and submitted to the Owner for record. Contractor shall not be responsible for OEM control logic or proprietary parameter adjustments.Initial sync or BESS discharge to the grid shall not be implemented until written permission from Owner's obtained.

12.0 Voltage and Phase Rotations

Contractor shall verify voltage and phase rotation for circuits and equipment installed under its scope of work prior to system energization to ensure conformance with the designated interconnection phasing. The Inverter OEM shall confirm correct rotation and phasing internal to its equipment during OEM commissioning. Contractor will coordinate and support such verification as required.Operational/Functional Testing

Once the commissioning of a system is complete, the system can be released for startup and operation of the entire facility as a fully integrated system. Contractor shall ensure initial sync of BESS system discharge with support from BESS Vendor.

The objective of the Operational Test is to help ensure the BESS is operating reliably by demonstration of normal and safe operation for a 5-day period.

Contractor shall develop an Operational Test procedure that contains instructions for evaluating the ability of the power plant to operate reliably. Acceptance criteria for trackers and inverters shall be included. The procedure shall be submitted by Contractor to Owner for review and approval at minimum of 10 business days prior to commencement of the Operational Test.

13.0 Performance/Capacity Testing

Performance Performance/Capacity Testing shall be conducted to prove contractual obligations. Each of the Performance Tests shall be carried out using contract specified procedures. Capacity testing is to be conducted in accordance with the capacity testing Exhibit.Turn Over Documentation

Contractor shall provide all requisite documentation such as test reports and checklists to Owner for review and acceptance. If required Contractor shall upload turnover documents into Owner's Asset Management System.

14.0 Commercial Operation

The generating facility shall be deemed ready for commercial operation after each circuit is commissioned and full capacity is available. Contractor shall assist the Owner in notification to all necessary parties that the facility has achieved commercial operation.

15.0 Turnover to Operations

After successful completion of the startup and operational testing, the system or applicable portion of the system shall be turned over to the Operations team. During the startup and operational testing phases, the Operations team shall work with the Commissioning team to develop familiarization and identify any outstanding items that require completion prior to turnover. These items shall be added to the punch list.

Exhibit H-2

Solar PV Availability Test

Table of Contents

1.0 Availability Test 1-1
1.1 Purpose 1-1
1.2 Definitions 1-1
1.3 Availability Test Procedure 1-1
1.4 Data Sets and Instrumentation 1-2
1.4.1 Data Quality and Instrumentation Requirements 1-2
1.5 Test Procedure 1-2
1.6 Availability Test Report 1-3

1.0 Availability Test

1.1 Purpose

The Availability Test will verify that the inverters are fully commissioned and ready for commercial operation by demonstrating all inverters are able to operate for at least three (3) consecutive days. The Availability Test may run in parallel to other performance related tests, provided the other tests do not negatively impact the inverter or plant operation.

1.2 Definitions

- **Availability Test Measurement Period –** A minimum of three (3) day period during which the Availability Test is conducted to verify inverter operation, extended as permitted in this Exhibit.
- **Availability Test Procedure –** A detailed plan for administering the Availability Test to be provided by Contractor as detailed in Section 1.5 of this Exhibit and include, at a minimum, all points to be monitored and identification of key personnel and parties.
- **Availability Test Report –** A summary report of the Availability Test results, conditions during the test, the Inverter Availability Test Procedures, and calibration certificates of equipment used in the test, which shall meet all the requirements of this Exhibit.
- **Eligible Time Intervals –** Time intervals during the Availability Test Measurement Period where the plane of array irradiance is greater than 100 W/m^2. The selected time interval shall be five (5) minutes unless otherwise agreed to in writing by Owner.

Guaranteed Availability – 99.5%

- **Inverter Operational Time Intervals –** For each inverter, the total number of time intervals when the inverter is producing power during Eligible Time Intervals only.
- **Measured Availability –** A percentage (rounded up or down to the nearest 0.1%), calculated as the sum of all Inverter Operational Time Intervals divided by the total Eligible Time Intervals, multiplied by the number of inverters.
- **Multiple Measurements –** Any measurement device or sensor where multiple devices or sensors measure the same parameter.
- **Operational Inverter –** An inverter reporting non-zero power output that successfully and automatically transitions from quiescent (overnight) states to operational states (daylight power processing) without fault, interruption, or operator intervention.

1.3 Availability Test Procedure

The Availability Test Procedure shall include (at a minimum) the following information:

- This Exhibit.
- Identification of key personnel and parties to be involved in the test.
- Identification of all data points to be monitored during the test.
- The starting and ending dates of the scheduled Availability Test Measurement Period.
- Identification of SCADA nomenclature for data channels and any SCADA calibration parameters (default or custom) for those data channels.

- Identification of SCADA data channels intended for use as auxiliary measurements.

Identification of known data quality concerns, such as time intervals, when inter-row shading or tree shading may be expected to occur.

1.4 Data Sets and Instrumentation

1.4.1 Data Quality and Instrumentation Requirements

1.4.1.1 Plane of array irradiance sensors shall be at a minimum "High Quality" classified pyranometer(s) as defined in ASTM2848-A1.2 (Secondary Standard per ISO 9060). Pyranometers shall include device-specific characterization data that shall, at minimum, include cosine and temperature response.

1.4.1.2 Alternative pyranometers may only be used if approved by the Owner.

1.4.1.3 Pyranometers shall be used only within their valid calibration period and shall be cleaned at the start of the Availability Test Measurement Period.

All measurement devices and sensors shall meet the minimum accuracy requirements and range requirements set forth in Capacity Test Exhibit XH-3

1.4.1.4 Inverter power measurements shall be as reported by the inverters through the Project SCADA.

1.5 Test Procedure

1.5.1 No less than thirty (30) Business Days prior to the first day of the scheduled Availability Test Measurement Period, the Availability Test Procedures shall be submitted to the Owner by the Contractor for Owner's review and comment. Contractor shall incorporate all of Owner's reasonable comments into the final Availability Test Procedures and resubmit the same for Owner's review and approval (such approval not to be unreasonably withheld or delayed).

The Contractor shall give written notice to the Owner five (5) Business Days prior to the start of the Availability Test (including any re-performance thereof).

1.5.2 Contractor may perform the Availability Test in conjunction with other Performance Tests (e.g., the Capacity Test).

1.5.3 Contractor shall perform the Availability Test in accordance with the final approved Availability Test Procedures.

1.5.4 During the Availability Test Measurement Period, the Contractor shall record all inverter power, revenue meter, and plane of array irradiance data.

1.5.5 Measured data are to be made available to the Owner upon request during the Availability Test Measurement Period, for use in evaluating the progress of the Availability Test.

1.5.6 During the Availability Test, the Contractor shall document all inverter or plant-related interruption events, including the identification of the event, the reason for the interruption, the time and duration of the event, and any corrective actions undertaken as applicable. In the event that inverter or plant-related interruptions do occur, the Contractor has the option to restart or extend the Availability Test, provided that Contractor shall notify Owner and provide detailed documentation of identified issues and proposed resolutions.

1.5.7 During the test, the Contractor shall document all interruption events caused by grid operations; force majeure; Owner caused downtime; utility or ISO directive; system outages beyond the control of Contractor, including the identification of the event, the reason for the interruption, and the time and duration of the event; and any corrective actions undertaken. To the extent that such interruption event was not caused by the Project, such events are excusable, and the test shall be extended by the amount of excluded time on a minute-by-minute basis to achieve Guaranteed Availability.

1.5.8 The Measured Availability test result shall be calculated as follows:

$$Measured\ Availability = \frac{\sum O_i}{\sum E_i \times n}$$

1.5.8.1 O_i is the number of operational inverters per eligible interval,

1.5.8.2 E_i is an eligible interval, and

1.5.8.3 n is the number of inverters in the project,

1.5.8.4 with summation over the Test Period.

If the Measured Availability of the Project does not meet or exceed the Guaranteed Availability, the Contractor shall identify and promptly resolve the source of the problem until the Measured Availability of the Project achieves the Guaranteed Availability.

1.6 Availability Test Report

No later than Seven (7) Business Days following the end of the Availability Test Measurement Period for a Successfully Completed Availability Test, a draft Availability Test Report will be submitted to the Owner by the Contractor.

1.6.1 Owner shall have five (5) Business Days to accept or reject the results of the draft Availability Test Report and provide in writing any comments from Owner. In the event that Owner rejects all or any part of the draft Availability Test Report, Contractor shall, within five (5) Business Days thereafter, address any comments of Owner and re-submit the draft Availability Test Report to Owner. This procedure shall continue until Owner accepts the draft Availability Test Report. Any dispute regarding the results of the Availability Test or the Availability Test Report shall constitute a Dispute as described in the Agreement.

1.6.2 The Availability Test Report shall contain the following

- The Availability Test Procedures, including all requirements as outlined herein.
- The actual start and end date/times of the Availability Test Measurement Period.
- Comments on environmental conditions during the Availability Test Measurement Period that affect the results of the test.
- Summary of data quality control results for all data records.
- Summary of test results.

1.6.3 Raw data used as input to the Availability Test, along with QC disposition for each input data record, shall be provided electronically (via .CSV, .XLS, or .XLSX formats) to the Owner with the Availability Test Report.

Table 1-2 Reporting Conditions and Expected Capacity 8

1.0 Capacity Test

1.1 Purpose

The purpose of the Capacity Test is to verify the as-built Project capacity. This document establishes the references, standards, and procedures to be used to calculate the Project capacity. The PV Plant Capacity Test follows a modified version of ASTM-E2848-13, Standard Test Method for Reporting Photovoltaic Non-Concentrator System Performance.

The results of this test will determine if the Project has successfully met the capacity requirements of the design.

1.2 Reference Standards

- ASTM E2848-13, 2018 – Standard Test Method for Reporting Photovoltaic Non-Concentrator System Performance
- ASTM E2939-13, 2018 – Standard Practice for Determining Reporting Conditions and Expected Capacity for Photovoltaic Non-Concentrator Systems
- NREL 73982 – Suggested Modifications for Bifacial Capacity Testing
- Sandia SAND2004-3535 – Photovoltaic Array Performance Model
- IEC 61853-1 – Photovoltaic Module Performance Testing and Energy Rating
- IEC 61724-2 - Photovoltaic System Performance - Part 2: Capacity Evaluation Method

1.3 Definitions

- Auxiliary Parameters – A parameter used to verify the operating condition of the Project. This includes parameters such as inverter operating status, DC voltage, and inverter AC power.
- Capacity Test – A short-term test for the entire Project meeting the requirements of this document to verify the Project is fully commissioned and producing energy as per design.
- Data Record – A set of measurements representing aggregate values during a defined time interval.
- Expected Capacity – Power output expected to be generated by the Project when exposed to Reporting Conditions.
- Guaranteed Capacity – Shall mean ninety-seven percent (97.0%) of Expected Capacity.
- Input Parameter - Effective value used as input to the performance regression.
- Minimum Guaranteed Capacity – Shall mean ninety-five percent (95.0%) of Expected Capacity.
- Measured Capacity – Power output measured by the Project during the PV Plant Capacity Test Measurement Period.
- Measured Capacity Ratio – The Measured Capacity divided by the Expected Capacity rounded to the nearest 0.1%.
- Project Model – The PVsyst model and post-processing calculations/models as provided to Contractor by Owner.

- PV Plant Capacity Test Measurement Period – A period of at least five (5) consecutive days during which the minimum irradiance requirement has been satisfied and over which data will be evaluated to establish whether the Project has met the requirements of the Capacity Test.
- Reporting Conditions – A defined set of measurements of the plane-of-array irradiance, ambient temperature, wind speed, and PV module temperature. One Reporting Condition is defined for each month of the year.
- Revenue Meter – A revenue grade meter, as agreed to by all parties, located at the Point of Interconnection (POI).

1.4 Pre-Test Activities

1.4.1 PV Plant Capacity Test Plan

1.4.1.1 No less than 45 Business Days prior to the first day of the scheduled Capacity Test, a draft Capacity Test Procedure shall be submitted to the Owner for review and approval.

1.4.1.2 The PV Plant Capacity Test Plan shall include the following minimum information:

1.4.1.2.1 This Solar PV Capacity Test Exhibit.

1.4.1.2.2 The as-built Project Model including all PVsyst native files (PAN, OND, SHD, MET, PRJ, and VC).

1.4.1.2.3 For the purposes of this test, the following modifications shall be made to the Project Model:

- Soiling/snow loss shall be set to zero percent (0%).
- Availability shall be set to one hundred percent (100%).

1.4.1.2.4 Identification of all parties involved.

1.4.1.2.5 The estimated starting and ending dates of the PV Plant Capacity Test Measurement Period.

1.4.1.2.6 Project parameters including, at a minimum, manufacturer/model/quantity of PV Modules, array orientation, location, racking type, tracker range of motion, and manufacturer/model/quantity of inverters.

1.4.1.2.7 Identification of all sensors and transducers to be used, including cut sheets, calibration certificates and records, and map locating sensors with sufficient detail to locate.

1.4.1.2.8 Identification of the SCADA System data channels and calibration parameters for each data channel.

1.4.1.2.9 Identification of the sensors intended for Redundant Measurement.

1.4.1.2.10 Identification of multiple measurement formulas and weighting factors.

1.4.1.2.11 Identification of known times or areas of data quality concerns.

1.4.1.2.12 Time stamp convention and data logging averaging method and interval.

1.4.1.2.13 Expected Capacity calculations as described in Section 1.7 and monthly Reporting Conditions.

Written notification must be made to the Owner five (5) business days before starting the PV Plant Capacity Test.

1.4.2 No less than two (2) business days prior to commencement of the PV Plant Capacity Test, a pre-test meeting shall be held. The meeting shall review the PV Plant Capacity Test Plan, instrumentation locations, calibration sheets, safety requirements, and other relevant topics. Meeting minutes shall be recorded and published by the Seller.

1.5 Data Sets and Instrumentation

1.5.1 Data Quality and Instrumentation Requirements

1.5.1.1 Data quality shall be identified as one item from a set of quality categories for each Data Record analyzed. Only data where all Input Parameters are valid and within the specified limits shall be used for computing capacity estimates.

1.5.1.2 Recorded data shall be sampled at no greater than at five (5) second intervals and averaged at no greater than five (5) minute intervals. Data shall be averaged and filtered based on requirements within this Capacity Test Requirements.

1.5.1.3 The PV Plant Capacity Test Measurement Period shall be no less than five (5) consecutive days and contain at a minimum 150 valid data points after filtering, including secondary data exclusions, considering a Five (5) minute data interval. The PV Plant Capacity Test Measurement Period shall be extended for consecutive days until the minimum irradiance requirement and the minimum number of valid data points can be met.

1.5.1.4 If the Test Measurement Period exceeds eight (8) days without reaching the required number of valid data points, Contractor may propose lowering the minimum required number of valid data points or expanding the secondary data exclusion range. In no case shall the number of valid data points be less than one hundred (100) or the secondary data exclusion range exceed 50%.

1.5.1.5 Sensor Requirements

1.5.1.5.1 Irradiance sensors shall be, at a minimum, ISO 9060 Secondary Standard rated pyranometers. Pyranometers shall include device specific characterization data that shall, at a minimum, include cosine and temperature response.

1.5.1.5.2 Pyranometers shall only be used within their valid calibration period and shall be cleared at the start of the Capacity Test of any debris or soiling and daily during the PV Plant Capacity Test Measurement Period. Calibration shall have certificates from the National Institute of Standards and Technology or equivalent.

1.5.1.5.3 Sensors shall have the following minimum range and accuracy:

Table 1-1 Instrument Ranges and Accuracy

Measurement	Instrument Type	Range	Accuracy
Plane of Array Irradiance	Front & Rear Pyranometers	0 to 1600 W/m^2 285 to 2800 nm	±1.8%
Global Horizontal Irradiance	Pyranometer	0 to 1600 W/m^2 285 to 2800 nm	±1.8%

Measurement	Instrument Type	Range	Accuracy
Ambient Air Temperature	Temperature Probe	-40° C to +60° C	±1°C
Back of Module Temperature	Temperature Probe	-40° C to +120° C	±0.5°C
Wind Speed	Sonic Wind Sensor	0 – 60 m/s	±5%
PV Plant Power	PV Power Revenue Meter	0 to PV Power Plant size +20%	ANSI C-12.20
Inverter Power	Inverter Internal Meter	Inverter Specific	Inverter Specific

1.5.1.6 Input Parameters: The following inputs are required for completing the PV Plant Capacity Test:

1.5.1.6.1 Plane-of-Array (POA) Irradiance: An estimate of the average irradiance incident upon each PV array in the Project. Provisions for addressing multiple orientations and geographic diversity are identified through multiple measurements from Multiple Measurement Sets. No provision is allowed for shading. Any significant shading shall be excluded from the Data Record.

1.5.1.6.2 Ambient Temperature: This is the ambient temperature for the location of the Project.

1.5.1.6.3 Back of Module Temperature: This is characteristic of the operating temperature at which the PV Module is producing power, which effects PV Module efficiency.

1.5.1.6.4 Revenue Meter Energy: Energy generation is the sum of actual power output from the Project as recorded by the Revenue Meter during the PV Plant Capacity Test Measurement Period.

1.5.1.6.5 Inverter-Level Energy: AC output data for each inverter shall be provided to identify periods of inverter clipping.

1.5.1.6.6 Wind Speed: Wind velocity.

1.5.1.7 Sensor Redundancy: A Redundant Measurement dataset shall consist of sensors located sufficiently close to each other such that recorded data is expected to be in agreement within the range of the sensor uncertainty.

1.5.1.8 Multiple Measurements: Multiple measurements from Multiple Measurement Sets shall be recorded for all environmental data throughout the Project Site to capture operating conditions for all regions. All measurements, whether from a single sensor or a Redundant Measurement Set identified as part of a Multiple Measurement Set, must be valid for the Data Record to be included for calculations.

POA Irradiance – One sensor shall be installed for each orientation within the Project Site (within +-2 degrees) for up to twenty (20) MWp. Multiple orientations and large arrays shall require multiple measurements from Multiple Measurement Sets as defined in Exhibit A.

Rear Plane of Array (RPOA) irradiance - One sensor shall be installed for each orientation within the Project Site (within ±2 degrees) for up to twenty (20) MWp. Multiple orientations and large arrays shall require multiple measurements from Multiple Measurement Sets as defined in Exhibit A.

Total Plane of Array (TPOA) Irradiance – Calculated based on POA and RPOA.

Back of Module Temperature – A minimum of three (3) temperature sensors shall be installed for every twenty (20) MWp of array or as defined in Exhibit A..

Ambient Temperature – One sensor shall be installed for every twenty (20) MWp or as defined in Exhibit A.

Wind Speed – One wind speed sensor shall be installed for every twenty (20) MWp Or as defined in Exhibit A.

1.5.1.9 Multiple Measurement datasets will be aggregated, and a weighted average shall be calculated. Averaging of multiple quality checked sensors is required.

1.5.2 Primary Data Exclusions

1.5.2.1 All data shall be reviewed and filtered as noted in ASTM 2848. Primary data exclusions shall include the following:

1.5.2.1.1 Missing Data (ASTM E2848-9.1.4). Missing data shall be marked with a non-numeric value. Missing data shall not be included in the analysis but shall be documented.

1.5.2.1.2 Data Acquisition System Equipment Malfunction (ASTM E2848-9.1.5). Data Records with invalid Input Parameters shall also be marked as invalid.

1.5.2.1.3 Below Minimum Irradiance. Prior to the application of the ASTM E2848 9.1.6 irradiance requirements, a minimum irradiance filter must be applied. Any front plane of array irradiance measurements below the minimum irradiance threshold of 400 W/m^2 must be marked as too low and excluded from the analysis.

Unstable Irradiance (ASTM E2848-9.1.7). For each of the irradiance sensors used in computing the irradiance Input Parameter, calculate the mean and standard deviation of all five (5) second interval measurements to be averaged into a five (5) minute interval record. If any of the standard deviations of samples within the aggregation interval exceed the specifications of ASTM E2848-9.1.7.2 of the corresponding irradiance mean value for that aggregation interval, then the record shall be marked as unstable. Any record for which any of the standard deviations of samples for irradiance is missing shall be marked as indeterminate stability, unless Buyer agrees not to mark it. The visual technique option of ASTM E2848-9.1.7.2 may be used.

Inverter not peak power tracking (ASTM E2848-9.1.8). The PV Plant Capacity Test Plan shall indicate how marking Data Records for this condition will be determined. Inverters with power output greater than 98% of rated capacity shall be deemed to be “clipping” and not operating in peak power tracking mode.

Plant output greater than 98% of POI power limit, requiring curtailment of one or more plant inverters, and any periods of inverter curtailment by PPC (power plant controller) action.

1.5.2.1.4 Internal and External array shading (ASTM E2848-9.1.9). A schedule of expected shade periods shall be defined in the PV Plant Capacity Test Plan. Environmental shading, such as snow, shall be noted by onsite observers and documented.

1.5.2.1.5 Radiometer not coplanar with system under test (ASTM E2848-9.1.10). For a fixed array, this condition disqualifies all data acquired while the condition exists. For a tracking array, this condition may occur intermittently so the Project Performance Test portion of the

Commissioning Plan shall identify Auxiliary Parameters (e.g., measured and commanded tracker position) and algorithms for confirming tracking position.

1.5.2.1.6 Wind Speed. Any intervals in which the average wind speed is greater than 15 m/s will be excluded from the dataset.

1.5.3 Secondary Data Exclusions

1.5.3.1 The secondary data exclusion is that front plane of array irradiance values must be within ±20% of the Reporting Condition per ASTM E2848-9.1.6.

1.6 Reporting Conditions

1.6.1 Reporting Conditions are defined as the set of total irradiance, wind speed, and temperature values entered into Table 1-2. The following algorithm shall be used to identify Reporting Conditions.

1.6.1.1 Procure simulated Data Records from the annual energy production simulation (i.e., Project Model).

1.6.1.1.1 The simulated Data Records shall exclude any assumed soiling, snow, curtailment, and availability losses (i.e. set the soiling loss value to 0% and the availability to 100%).

1.6.1.1.2 Simulated Data Records shall not be of intervals longer than one (1) hour.

1.6.1.1.3 Simulated Data Records shall include the following assumed data points:

- POA irradiance (GlobInc).
- Bifacial POA irradiance (GlobBak).
- Bifacial shading loss (BackShd).
- Ambient temperature (T_Amb).
- Back of module temperature (TArray).
- Wind speed input parameters (WindVel).
- Any simulated Auxiliary Parameters necessary for making Data Records according to the primary data exclusion criteria.

1.6.1.2 Apply the primary data exclusion criteria identified in Section 1.5.2 of this document to the simulated Data Records. Secondary data exclusion criteria are not to be applied to the simulated Data Records.

Grouping the remaining simulated Data Records by month, find the 60th percentile value of incident Total POA irradiance, the mean of the ambient air temperature, and the mean of the wind speed. The Reporting Condition for Total POA irradiance shall not be less than 400 W/m^2 unless agreed to by the Owner in writing before the test.

1.6.1.3 Round the monthly Total POA irradiance to the nearest integer (W/m^2), mean temperatures to the nearest degree (°C), and corrected mean wind speed to the nearest 0.1 m/s. Use these values to populate the table shown in Table 1-2 as Reporting Conditions.

1.7 Expected Capacity Calculations

1.7.1 Expected Capacity is a predicted Project power output value measured at the Revenue Meter at the POI as set forth in Table 1-2 that defines the power output the completed Project is expected to produce when exposed to specified Reporting Conditions at an average monthly level. Values for Table 1-2 shall be provided 45 business days prior to commissioning based on as-built information as part of the PV Plant Capacity Test Plan in Section 1.4.1.

1.7.1.1 Reporting Conditions shall be calculated per Section 1.6 and shall be populated in Table 1-2. Test Reporting Conditions and Expected Capacity used for the actual plant Capacity Testing shall be based on 30-day averages centered on the middle of the testing period. For example, if the plant Capacity Testing was centered on June 10, then test Reporting Conditions shall be computed from the annual data for +/- 15 days before and after June 10.

1.7.1.2 Calculate the regression coefficients for each simulation month by performing a least squares regression of $P_{Expected}$ as defined below:

$$E_{total,E} = E_{POA,E} + (E_{Rear,E} + E_{RearLoss,E}) * \varphi$$

$$P_{Expected} = E_{total,E} * (a_{1,E} + a_{2,E} * E_{total,E} + a_{3,E} * T_{a,E} + a_{4,E} * v_E)$$

1.7.1.2.1 $P_{Expected}$ is the expected power value (W).

1.7.1.2.2 $E_{POA,E}$ is the average front side plane of array irradiance (W/m^2).

1.7.1.2.3 $E_{Rear,E}$ is the average rear side irradiance (W/m^2).

1.7.1.2.4 $E_{ReaLossr,E}$ is the rear side shading loss (W/m^2).

1.7.1.2.5 $E_{Total,E}$ is the total front and rear side irradiance as described in the equation above (W/m^2).

1.7.1.2.6 $T_{a,E}$ is the ambient temperature (°C).

1.7.1.2.7 v_E is the wind speed (m/s).

1.7.1.2.8 φ is the bifaciality factor of the PV Module from the datasheet, or from a 3rd party test report, if available.

1.7.1.2.9 $a_{1,E}$, $a_{2,E}$, $a_{3,E}$, *and* $a_{4,E}$ are the Expected Capacity regression coefficients to be solved.

Using the calculated Expected Capacity regression coefficients $a_{1,E}$, $a_{2,E}$, $a_{3,E}$, *and* $a_{4,E}$ from Section 1.7.1.2, calculate the Expected Capacity for each Reporting Condition month using the equation below for $P_{Expected,RC}$.

$$P_{Expected,RC} = E_{total,RC} * (a_{1,E} + a_{2,E} * E_{total,RC} + a_{3,E} * T_{a,RC} + a_{4,E} * v_{RC})$$

1.7.1.2.10 $P_{Expected,RC}$ is the expected power value for the Reporting Condition Month (W).

1.7.1.2.11 $E_{Total,RC}$ is the total irradiance for the Reporting Condition Month (W/m^2).

1.7.1.2.12 $T_{a,RC}$ is the ambient temperature at the Reporting Condition Month (°C).

1.7.1.2.13 $v_{,RC}$ is the wind speed of the Reporting Condition Month (m/s).

$a_{1,E}$, $a_{2,E}$, $a_{3,E}$, *and* $a_{4,E}$ are the Expected Capacity regression coefficients calculated in Section 1.7.1.2.

1.7.1.2.14 The R^2 value of the linear regression analysis must be greater than 0.90.

1.7.1.3 The expected power output values shall be rounded to four (4) significant figures. If Capacity Test period spans multiple months, Reporting Conditions and Expected Capacity shall be based on the weighted average of the months covered during the test.

Table 1-2 Reporting Conditions and Expected Capacity

1.8 Measured Capacity Identification

1.8.1 The following procedure shall be used to identify the Measured Capacity value for the Project.

1.8.1.1 Use measured Data Records acquired in accordance with the PV Plant Capacity Test Plan.

1.8.1.2 Apply the primary data exclusion criteria identified in Section 1.5.2 of this document.

1.8.1.3 Apply the secondary data exclusion criteria identified in Section 1.5.3 of this document.

1.8.1.4 The PV Plant Capacity Test Measurement Period is to be extended until sufficient data is collected but shall not be less than five (5) consecutive days. Measured Capacity shall be measured at the Revenue Meter without any adjustments to account for losses in components of the Project prior to the POI.

1.8.1.5 Calculate the Measured Capacity regression coefficients by performing a least squares regression of $P_{Measured}$ as defined below.

$$E_{total,M} = E_{POA,M} + E_{Rear,M} * \varphi$$

$$P_{Measured} = E_{total,M} * (a_{1,M} + a_{2,M} * E_{total,M} + a_{3,M} * T_{a,M} + a_{4,M} * v_M)$$

1.8.1.5.1 $P_{Measured}$ is the measured power value (W).

1.8.1.5.2 $T_{a,M}$ is the measured ambient temperature (°C).

1.8.1.5.3 E_{POA} is the front side plane of array irradiance (W/m^2).

1.8.1.5.4 E_{Rear} is the rear side irradiance (W/m^2).

1.8.1.5.5 $E_{total,M}$ is the total plane of array irradiance (W/m^2).

1.8.1.5.6 φ is the bifaciality factor of the PV Module from the datasheet.

1.8.1.5.7 v_m is the measured wind speed at the site (m/s)

1.8.1.5.8 $a_{1,M}$, $a_{2,M}$, $a_{3,M}$, *and* $a_{4,M}$ are the Measured Capacity regression coefficients to be solved.

1.8.1.6 Using the Measured Capacity regression coefficients $a_{1,M}$, $a_{2,M}$, $a_{3,M}$, *and* $a_{4,M}$, along with the Reporting Condition from Table 2, or as calculated in this section, as applicable, corresponding to the month of the PV Plant Capacity Test Period.

$$Measured\ Capacity = E_{total,RC} * (a_{1,M} + a_{2,M} * E_{total,RC} + a_{3,M} * T_{a,RC} + a_{4,M} * v_{RC})$$

1.8.1.6.1 Measured Capacity is the calculated power value based on Reporting Conditions using Measured Capacity regression coefficients (W).

1.8.1.6.2 $T_{a,RC}$ is the ambient temperature at the Reporting Condition (°C).

1.8.1.6.3 $E_{total,RC}$ is the total plane of array irradiance at the Reporting Condition (W/m^2).

1.8.1.6.4 $v_{m,RC}$ is the wind speed at the Reporting Condition (m/s).

1.8.1.6.5 $a_{1,M}$, $a_{2,M}$, $a_{3,M}$, *and* $a_{4,M}$ are the Measured Capacity regression coefficients calculated in Section 1.8.1.6.

1.8.1.6.6 The R^2 value of the linear regression analysis must be greater than 0.90.

1.8.2 All measured data shall be made available to the Owner upon request during the PV Plant Capacity Test Measurement Period

1.9 Test Reporting

1.9.1 PV Plant Capacity Test Report

No more than seven (7) business days following the end of the PV Plant Capacity Test Measurement Period, a draft PV Plant Capacity Test Report shall be submitted to the Owner. The Owner shall review

and accept or reject the results of the draft PV Plant Capacity Test report within ten (10) business days. The Owner shall submit all comments and reasoning for rejecting such report.

1.9.1.1 The PV Plant Capacity Test Report shall contain:

1.9.1.1.1 The portions of the Commissioning Plan applicable to the Project Performance Test to determine PV Plant Capacity.

1.9.1.1.2 The actual start and end dates/times of the PV Plant Capacity Test Measurement Period.

1.9.1.1.3 General environmental conditions during the PV Plant Capacity Test Measurement Period.

1.9.1.1.4 Summary of quality control results for all Data Records.

1.9.1.1.5 Summary of the test and test results.

1.9.1.1.6 Uncertainty analysis.

1.9.1.1.7 Comparison of test results with the Guaranteed PV Plant Capacity and Minimum PV Plant Capacity.

1.9.1.1.8 Summary of findings if the test results are less than the Guaranteed PV Plant Capacity.

1.9.1.1.9 Raw data of all test points shall be provided to the Buyer electronically (.CSV, .XLS or .XLSX format).

1.9.2 Pass/Failure of PV Plant Capacity Test

1.9.2.1 The Guaranteed Capacity and Minimum Guaranteed Capacity shall be as defined in Section 1.3. The Measured Capacity shall be as calculated in Section 1.8.

1.9.2.2 If the Measured Capacity is equal to or greater than the Guaranteed Capacity, then the Contractor has achieved the Guaranteed Capacity.

$$Measured\ Capacity \geq Guaranteed\ Capacity$$

1.9.2.3 If the Measured Capacity is equal to or greater than the Minimum Guaranteed Capacity and the Measured Capacity is less than the Guaranteed Capacity, then the Contractor has achieved the Minimum Guaranteed Capacity.

$$Measured\ Capacity < Guaranteed\ Capacity$$
$$and$$
$$Measured\ Capacity \geq Minimum\ Guaranteed\ Capacity$$

1.9.2.4 If the Measured Capacity is less than the Minimum Guaranteed Capacity, then the Contractor has not achieved the Minimum Guaranteed Capacity.

$$Measured\ Capacity < Minimum\ Guaranteed\ Capacity$$

1.0 Energy Test

1.1 Purpose

The objective of the Energy Test is to compare measured energy yield to expected energy yield for a defined, limited plant test duration. The Energy Test shall be conducted in accordance with IEC 61724-3, with additional specifications provided herein. In the event of any conflict with IEC 61724-3 and these specifications, the terms of these specifications shall take precedent. The Energy Test period shall be no less than thirty (30) and no longer than 60 days and shall be performed in late spring, summer, or early fall months, as part of Final Acceptance Test Plan certification requirements.

The Contractor shall furnish a detailed Energy Test Plan document to the Owner no later than thirty (30) days before the Energy Test start date.

1.2 Reference Standards

- NREL 73982 – Suggested Modifications for Bifacial Capacity Testing
- IEC 61853-1 – Photovoltaic Module Performance Testing and Energy Rating

1.3 Definitions

- "Ee" means Expected Energy Production (in kWh) calculated using the Base Case PVsyst Model.
- "Em" means Measured Energy Production (in kWh) calculated as the accumulation (sum) of the measured energy from the beginning of the Energy Test through the end of the Energy Test.
- "EP" means Energy Performance calculated as the ratio of Measured Energy Production (Em) and Expected Energy Production (Ee) calculated using the Base Case PVsyst Model.
- "Guaranteed EP" means 97 percent of the ratio of Measured Energy (Em) to Expected Energy (Ee).
- "kWh" means electric energy expressed in kilowatt-hours and measured by multiplying the average value of electric power delivered (measured in kilowatts) by the amount of time over which the electricity was consumed (measured in hours). One (1) kilowatt-hour equals one thousand (1000) watt-hours.
- "Minimum EP" means 95 percent of the ratio of Measured Energy (Em) to Expected Energy (Ee).
- "Plane of Array" or "POA" means the plane in which the modules are configured.
- Project Model – The PVsyst model and post-processing calculations/models.
- Revenue Meter – A revenue grade meter, as agreed to by all parties, located at the Point of Interconnection.
- Test Period means a period of thirty (30) days during which the Energy Test requirements have been satisfied, and over which data will be evaluated to establish whether the Project has met the requirements of the Energy Test.

1.4 Facility Requirements

1. Site averaged 1-minute measurements of the following parameters that are to be recorded during the Energy Test:
    - Global Horizontal Irradiance.
    - Plane of Array Irradiance [POAI].

- Rear POAI (for bifacial modules only).
- Ambient air temperature.
- Wind speed.
- Energy production from project revenue meter.
- Ground Albedo values measured from 11 AM – 1 PM local solar time for monthly average values (for bifacial modules only).
- Soiling loss (averaged from on-site measurements over the testing period).

2. All measurement devices and sensors shall meet the minimum accuracy requirements and range requirements set forth in Capacity Test Exhibit H-3.
3. Energy Solar Facility availability shall be no less than 100%. All the long-term failures of major equipment (inverters, AC cables/switchgear, and/or substation equipment) during the test shall cause data collection to cease. Once failure root cause(s) have been remedied to Owner's approval, Energy Test shall be resumed. A minimum of thirty (30) days of test data shall be recorded after accounting for site availability losses.
4. The Energy Test shall continue during extreme weather, save for the following specific cases: snow or ice accumulation on PV modules, or terms of Force Majeure as described in the Agreement. In the event of either of these conditions, data collection shall cease, and energy testing shall re-start or resume accordingly when the extreme weather conditions clear.
5. If grid disturbances beyond the Point of Interconnection impede the project's performance, Contractor shall document such conditions for Owner's review, including precise date(s) and time(s) when the issues occurred. The Contractor and Owner shall decide whether the Energy Test may be resumed with some data exclusions upon restoration of expected grid conditions, or if the test needs to be restarted with a request to restart the test by the Contractor.
6. Should issues with the project SCADA system prevent complete and accurate data collection, Contractor shall document such conditions for Owner's review, including precise date(s) and time(s) when the issues occurred. Contractor and Owner will discuss to decide whether the Energy Test may be resumed upon restoration of the SCADA System, or if the test needs to be restarted.

1.5 Expected Energy Production

Expected Energy Production, Ee (kWh), shall be calculated using the Project Model. The Project Model shall have the following considerations:

1. Solar facility availability shall be set to 100% (as per conditions stated in Point 2 of Section 1.4, "Facility requirements"). Long-term module degradation/aging losses shall be set to 0.5%.
2. Soiling losses shall remain the same as defined and agreed to in the Project Model Configuration Assumptions (PVsyst) table. Alternatively, on-site soiling measurements may be utilized during the Energy Test period to determine the representative value of soiling losses. If electing the soiling measurement option, Contractor shall develop and submit the methodology for Owner approval as part of the Energy Test Plan documentation.
3. The Project Model shall be updated for as-built conditions, including the as-installed module bin-class distribution, AC and DC losses, and MVT and MPT transformer losses per their respective FAT reports.The Expected Energy (Ee) Production shall be computed by inputting the Measured Level Met Data into the Project Model adapted for the Energy Test. The Measured Data shall be

averaged to 1-hour intervals and be made compatible to be incorporated into the PVsyst with required formatting. The Project Model run shall be based on the agreed upon Project Model Configuration Assumptions (PVsyst) table.

4. Only the hours corresponding to the Test Period will be used to calculate the Expected Energy Production from the adapted Project Model, and corresponding time periods that have missing values in the measured data shall be removed from the data.Measured Energy Production

The Measured Energy Production, "Em" (kWh) shall be calculated as follows:

1. The accumulation (sum) of the Measured Energy from the beginning of the Energy Test through the end of the Energy Test.
2. Excluding any energy produced during any hours where there was any excluded data during the Energy Test period.Test Uncertainty Allowance

The Test Uncertainty Allowance shall be 3%.Performance Calculation

Energy Performance (EP) shall be calculated as the ratio of Measured Energy (Em) and Expected Energy (Ee) calculated from base case PVsyst model with actual met data.

$$EP\ \% = \frac{Em}{Ee}\ x\ 100$$

1.6 Test Pass Criteria

The test shall be considered as passed if the resulting EP is greater than or equal to 97%.

1.7 Test Results Reporting

The Contractor shall deliver initial Energy Test results to the Owner within Seven (7) business days after completing the test. A detailed Test Report with results shall be submitted within ten (10) business days after completing the test and shall be supported with raw data and relevant calculations to the Owner for review. The Owner shall review and send comments to the Contractor within ten (10) business days upon receiving the detailed Test Report.

The PV Plant Energy Test Report shall contain the following:

- The portions of the Commissioning Plan applicable to the Energy Test.
- The actual start and end dates/times of the PV Plant Energy Test Measurement Period.
- General environmental conditions during the PV Plant Energy Test Measurement Period.
- Summary of quality control results for all Data Records.
- Summary of the test and test results.
- Uncertainty analysis.
- Comparison of test results with the Guaranteed EP and Minimum EP.
- Summary of findings if the test results are less than the Guaranteed EP.
- Raw data of all test points shall be provided to the Buyer electronically (.CSV, .XLS, or .XLSX format).

1.7.1 Pass/Failure of Energy Test

- If the EP is equal to or greater than the Guaranteed EP, then Contractor has achieved the Guaranteed EP.

If the EP is equal to or greater than the Minimum EP but is less than the Guaranteed EP, then Contractor has achieved the Minimum EP but has failed to achieve the Guaranteed EP.

If the EP is less than the Minimum EP, then Contractor has not achieved the Minimum EP or the Guaranteed EP.

1.0 Performance Tests

1.1 Purpose

The purpose of the Capacity Test is to verify the as-built Project capacity. This document establishes the references, standards, and procedures to be used to calculate the Project capacity. The battery energy storage system (BESS) Capacity Test follows a adapted version of the IEC 62933-2-1 unit parameters and testing methods of BESS. The results of this test will determine if the Project has successfully met the capacity requirements of the design.Reference Standards

- IEEE Std 2030.3 – Standard Test Procedures for Electric Energy Storage Equipment and Systems for Electric Power Systems Applications.
- IEEE Std 1881 – IEEE Standard Glossary of Stationary Battery Terminology.
- IEEE Std 2962 – IEEE Draft Recommended Practice for the Installation, Operation, Maintenance, Testing, and Replacement of Lithium-ion Batteries for Stationary Applications.
- IEC 62933-2 – Electrical energy storage (EES) systems – Part 2-1: Unit parameters and testing methods – General specification.

1.2 Definitions

- BESS – Battery Energy Storage System
- EES – Electrical Energy Storage
- BOL – Beginning of Life
- PCS – Power Conversion System
- POI – Point of Interconnection
- Revenue Meter – A revenue grade meter, as agreed to by all parties, located at the Point of Interconnection and any other locations as required.
- RTE – Round Trip Efficiency

1.3 Pre-Test Activity

The following lists detail the prerequisite tasks required prior to the initiation of the BESS Capacity Plan. These include both the site prerequisite tasks and parameters, and the Capacity Test specific requirements.

1.3.1 Site Prerequisites

- All Contractor-supplied systems within Contractor's Scope of Work shall be complete and ready for energization. All Owner-furnished systems shall be completed and commissioned by the Owner (or OEM, where applicable) prior to commencement of Capacity Testing.Visual inspection of all equipment.
- BESS thermal systems fully operational and commissioned.
- Any fire alarm systems fully operational and commissioned.
- BMS fully operational and commissioned.
- EMS fully operational and commissioned.

- Grounding tests completed.
- Conductor tests including insulation resistance, and continuity tests.
- Protection system tests completed.
- Equipment factory tests, UL9540A, UL1741, etc.
- All equipment functional tests as required.

1.3.2 BESS Capacity Plan

- The as-built Project Model from the BESS supplier showing identification of all parties involved.
- The estimated starting and ending dates of the BESS Capacity Test Measurement Period.
- Project parameters including, at a minimum, manufacturer/model/quantity of BESS modules, containers, manufacturer/model/quantity of inverters.
- Identification of all sensors and transducers to be used including cut sheets, calibration certificates and records, map locating sensors with sufficient detail to locate.
- Identification of the SCADA System data channels and calibration parameters for each data channel.
- Identification of the sensors intended for Redundant Measurement.
- Identification of multiple measurement formulas and weighting factors.
- Identification of known times or areas of data quality concerns.
- Time stamp convention and data logging averaging method and interval.
- Expected Capacity calculations as described in Section 1.7 and monthly Reporting Conditions.
- Written notification must be made to the Owner 5 business days before starting the BESS Capacity Test.
- No less than 2 business days prior to commencement of the BESS Capacity Test, a pre-test meeting shall be held. The meeting shall review the BESS Capacity Test Plan, instrumentation locations, calibration sheets, safety requirements, and other relevant topics. Meeting minutes shall be recorded and published by the Contractor.

1.4 Combined BESS Capacity Test

1.4.1 Expected Energy Capacity

The energy Capacity Test verifies that the available energy (the energy that can be output at the point of connection by operating at rated power) is in accordance with the Project requirements. The expected energy capacity value per the procurement plan is rated for AC power at the point of interconnection (POI) for 2 hours. This includes a 3-year minimum overbuild and is inclusive of the auxiliary power (which shall be measured based on atmospheric conditions). Additional requirements and restrictions from the BESS supplier like throughput limits, rest periods, etc., must be considered as well. A table of values to be utilized and compared against for testing is demonstrated below. The energy Capacity Test values shall be inclusive of overbuild to address full installed capacity not just the rated capacity.

	Beginning of Life (BOL) (Year Zero)

Installed Energy Capacity (DC Nominal), (MWh)	361
Installed Energy Capacity (AC Usable), (MW)	185

Coordination with the grid operator per the Agreement will be necessary to perform the charging and discharging tests. Adequate time must be reserved and scheduled with the operator such that any outages required are coordinated. This will avoid any delay of testing due to grid operator scheduling.

The points of connection that a meter will be placed at to measure the rated power values are:

Location	Equipment
AC Bus	Power Meter
POI	Power Meter
Auxiliary Feed	Power Meter

Note that the Auxiliary feed location and use is dependent on project specific Aux requirements.

The table of values required to be measured at the POC to calculate the energy capacity is shown below.

Po_i	Active Power Output at Time i (W)	XXX
Δt	Sampling time of measurement (h)	XXX
E_{aux_o}	Energy consumption of the aux system measured (if included) (Wh)	XXX
n	Discharge time in (h)	XXX

1.4.2 Measured Energy Capacity

The energy Capacity Test shall perform two full cycles of charging and discharging. The procedure is as follows:

A. Verify the BESS system is charged to full capacity.

B. The BESS system shall be discharged at rated power. Once at the minimum value, it should be confirmed that continuous discharge is available. Calibrated meters shall measure the values during discharge and confirm that it matches the expected capacity.

C. The system shall be charged to full power once more.

D. The system shall be discharged and measured again as described in Step A.

E. The average of the results shall be used.

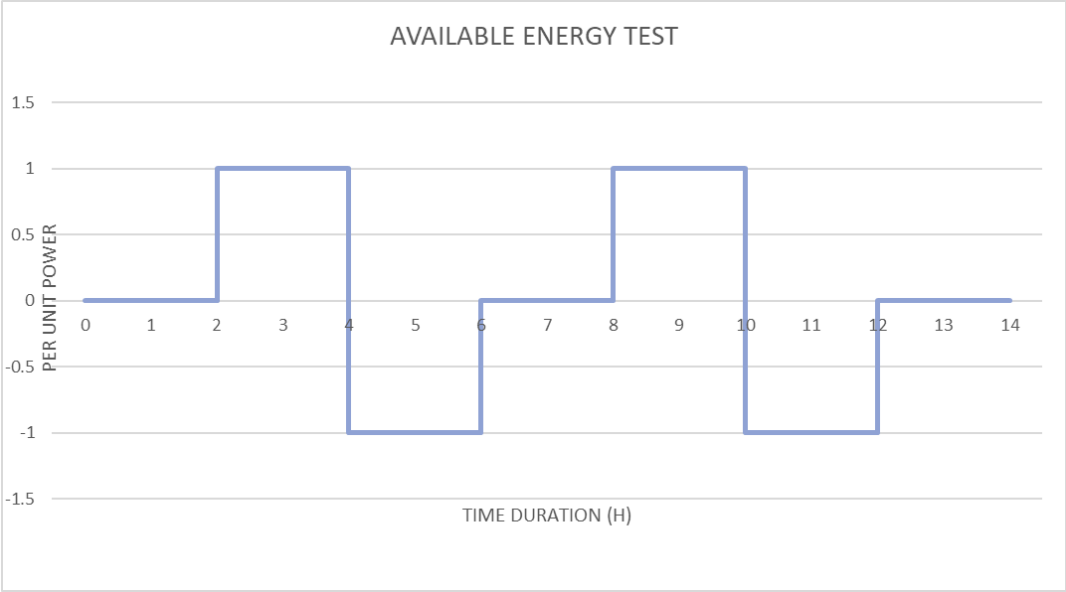

Figure 1 Energy Capacity Test Duty Cycle

The operating conditions for the test above must be in accordance with the following:

- Daily average temperature of 23° C.
- Instantaneous variation of temperature within the enclosure better than +/- 5° C.
- String Uniformity less than 5° C (maximum and minimum string temperature difference, daily average).
- Ambient Humidity: < 80% (non-condensing)
- Storage Temperature: 5 to 28° C (0° C to 40° C for BCU).
- Temperature in Outage Mode: 5° C to 28° C (0° C to 40° C for BCU).

1.5 Test Uncertainty Allowance

The Test Uncertainty Allowance shall be ±0.5%.

1.6 Performance Calculation

The average values calculated per the two cycle measurements shall be used.

Energy Performance (EP) shall be calculated as the ratio of Measured Energy (Em) and Expected Energy (Ee) calculated from the average values of the two tests (E_{test1} and E_{test2}) determined per the two cycle measurements in the Capacity Test.

$$Em = \frac{E_{test1} + E_{test2}}{2}$$

$$EP\ \% = \frac{Em}{Ee}\ x\ 100$$

1.6.1 Excluded Energy

Energy is discharged during ramping when output power is less than rated power. This is not included in the performance calculation due to its small contribution.

1.7 Power Calculation

Power shall be calculated for both charging and discharging in accordance with IEC 62933-2-1 Section 6.2.2.2.

Charging power test:

It shall be confirmed that BESS can absorb (or be charged at) constant power for a specified duration at the POI in accordance with the following procedures. The rated input active power of the BESS shall be applied as the constant power value in this test.

1. In Step B of the actual energy Capacity Test in 6.2.1, the rated power is input to the BESS Control system.
2. The input power and the charging duration shall be measured.
3. The measured values of the input active power and the charging time duration shall be compared to the specified unit parameters.

Discharging power test:

It shall be confirmed that the BESS can output constant power for a specified duration at the POC in accordance with the following procedures. The rated output active power of the BESS shall be applied as the constant power value in this test.

1. In Step C of the actual energy Capacity Test in 6.2.1, the rated power is the output from the EES system at constant power.
2. The output power and the discharge time shall be measured.
3. The measured values of the output power and the discharge time duration shall be compared to the specified unit parameters.

If time interval between test case a) and b) is needed, it shall be measured and recorded.

Power Performance shall be calculated as the ratio of Measured Power (Pm) and Expected Power (Pe) calculated from the average values determined per the two cycle measurements in the Capacity Test.

$$Pm = \frac{P_{test1} + P_{test2}}{2}$$

$$PP\ \% = \frac{Pm}{Pe} x\ 100$$

1.8 Round Trip Efficiency (RTE) Calculation

This test shall be performed using the energy Capacity Test routine and the cycle performed shall deliver the total amount of energy at the POC which equals the energy capacity of the system. The formula for round trip efficiency is shown below.

$$\eta_{rt} = \frac{E_O - E_{aux-O}}{E_I - E_{aux-I}}$$

The roundtrip efficiency shall be reported as shown in the table below for the two tests.

	E_O (Wh)	E_I (Wh)	E_{aux_I} (Wh)	E_{aux_O} (Wh)	Roundtrip Efficiency ηrt (%)
Test 1					
Test 2					
Average					

1.9 Test Pass Criteria

The test shall be considered as passed if values are greater than or equal to the following:

EP%	95%
PP%	97%
ηrt (%)	90%

1.10 Test Results Reporting

The contractor shall deliver initial Energy Test results to the Owner within 5 business days after completing the test.

A detailed test report with results shall be submitted within 10 business days after completing the test and shall be supported with raw data and relevant calculations to the Owner for review. The Owner shall review and send comments to the Contractor within 10 business days upon receiving the detailed test report.

The BESS Energy Test Report shall contain:

- The portions of the Commissioning Plan applicable to the Energy Test.
- The actual start and end dates/times of the BESS Energy Test Measurement Period.
- General environmental conditions during the BESS Energy Test Measurement Period.
- Summary of quality control results for all Data Records.
- Summary of the test and test results.
- Uncertainty analysis.
- Comparison of test results with the Guaranteed EP and Minimum EP.

- Summary of findings if the test results are less than the Guaranteed EP.
- Raw data of all test points shall be provided to the Owner electronically (CSV, .XLS or .XLSX format).

1.10.1 Pass/Failure of Energy Test

- If the EP is equal to or greater than the Guaranteed EP, then Contractor has achieved the Guaranteed EP.
- If the EP is equal to or greater than the Minimum EP but is less than the Guaranteed EP, then Contractor has achieved the Minimum EP but has failed to achieve the Guaranteed EP.
- If the EP is less than the Minimum EP, then Contractor has not achieved the Minimum EP or the Guaranteed EP.

1.11 Exclusions

Various tests listed in the 2023 ERPI Commissioning Guide can provide a thorough detailed analysis of a BESS installation. They may be referenced for informational purposes but not required for full test procedures or parameters.

Certain specific project use cases, specific grid interconnection, or some AHJs may have unique requirements for testing which are not broadly applicable to all projects except for where these are explicitly required in other places. The following are to be excluded from the BESS Capacity Testing.

1.11.1 Excluded Tests

- Reactive Power Test – Where required by the interconnecting utility or independent system operator (ISO), this can be performed. Requirements and scheduling are provided by the utility or ISO.
- Harmonics – Where the engineering studies calculate probable harmonic issues, a site-specific measurement programming would be set up to validate any suspected harmonic issues and inform the design of proposed remediations.
- Ramp Rates – When the ISO or interconnect agreement have specific limitations to the ramp rates for the PCS, those will be provided and tested as a part of other grid integration tests.
- Black Start – When the project is required to have black start capability, site specific testing shall be developed to validate this capability.
- Self-discharge – When desired, this test may be performed according to the IEC methods.
- Noise tests – Far field noise tests shall be performed if required by the authority having jurisdiction and in accordance with their provisions and industry best practices.
- Grid Integration tests such as:
    - Frequency and voltage ride through – Where required by the interconnecting utility or independent system operator (ISO), this can be performed. Requirements and scheduling are provided by the utility or ISO.
    - Model Quality Testing – PCS model quality verification is performed under a separate specification and exhibit.

- Other NERC testing – NERC specific testing is performed under a separate specification and exhibit.

ERCOT STANDARD GENERATION INTERCONNECTION AGREEMENT

This Standard Generation Interconnection Agreement is made and entered into this **31** day of October 2024, between Oncor Electric Delivery TSP LLC, a Delaware limited liability TSP ("Transmission Service Provider") and **Blue Heron Solar, LLC** ("Generator"), hereinafter individually referred to as "Party," and collectively referred to as "Parties". In consideration of the mutual covenants and agreements herein contained, the Parties hereto agree as follows:

Transmission Service Provider represents that it is a public utility that owns and operates facilities for the transmission and distribution of electricity. Generator represents that it will own and operate the Plant. Pursuant to the terms and conditions of this Agreement, Transmission Service Provider shall interconnect Generator's Plant with Transmission Service Provider's System consistent with the Facilities Study Agreement executed between the Parties on **April 28, 2023**.

This Agreement applies only to the Plant and the Parties' interconnection facilities as identified in Exhibit "C".

This Agreement shall become effective upon execution, subject to Governmental Authority approval, if required, and shall continue in full force and effect until terminated in accordance with Exhibit "A".

This Agreement will be subject to the following, all of which are incorporated herein:

A. The "Terms and Conditions of the ERCOT Standard Generation Interconnection Agreement" attached hereto as Exhibit "A";

B. The ERCOT Requirements (unless expressly stated herein, where the ERCOT Requirements are in conflict with this Agreement, the ERCOT Requirements shall prevail);

C. The PUCT Rules (where the PUCT Rules are in conflict with this Agreement, the PUCT Rules shall prevail);

D. The Time Schedule attached hereto as Exhibit "B";

E. The Interconnection Details attached hereto as Exhibit "C";

F. The notice requirements attached hereto as Exhibit "D"; and

G. The Security Arrangement Details attached hereto as Exhibit "E"

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

IN WITNESS WHEREOF, the Parties have executed this Agreement in duplicate originals, each of which shall constitute and be an original effective Agreement between the Parties.

Exhibit "A"

Terms and Conditions of the ERCOT

Standard Generation Interconnection Agreement

ARTICLE 1. DEFINITIONS

Capitalized terms shall have the meanings as set forth below, except as otherwise specified in the Agreement:

1.1 "CCN" shall mean a Certificate of Convenience and Necessity issued by the PUCT.

1.2 "Commercial Operation" shall mean the date on which Generator declares that the construction of the Plant has been substantially completed, Trial Operation of the Plant has been completed, and the Plant is ready for dispatch.

1.3 "Control Area" shall have the meaning ascribed thereto in PUCT Rule 25.5(19) or its successor.

1.4 "ERCOT" shall mean the Electric Reliability Council of Texas, Inc.

1.5 "ERCOT Requirements" means the ERCOT Operating Guides, ERCOT Generation Interconnection Procedures as well as any other documents adopted by ERCOT relating to the interconnection and operation of generators and transmission systems in ERCOT as amended from time to time, and any successors thereto. Any requirement in the foregoing documents imposed upon generation entities or generation facilities shall become the responsibility of the Generator, and any requirements imposed on transmission providers or transmission facilities shall become the responsibility of the TSP.

1.6 "Facilities Study" shall have the meaning as described in PUCT Rule 25.198(d) or its successor.

1.7 "Facilities Study Agreement" shall mean an agreement executed by the Parties relating to the performance of the Facilities Study.

1.8 "GIF" shall mean Generator's interconnection facilities as described in Exhibit "C".

1.9 "Good Utility Practice" shall have the meaning described in PUCT Rule 25.5(56) or its successor.

1.10 "Governmental Authority(ies)" shall mean any federal, state, local or municipal body having jurisdiction over a Party.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

1.11 "In-Service Date" shall be the date, as reflected in Exhibit "B", that the TIF will be ready to connect to the GIF.

1.12 "Plant" shall mean the electric generation facility owned and operated by the Generator, as specified in Exhibit "C".

1.13 "Point of Interconnection" shall mean the location(s) where the GIF connects to the TIF as negotiated and defined by the Parties and as shown on Exhibit "C" of this Agreement.

1.14 "PUCT" shall mean the Public Utility Commission of Texas.

1.15 "PUCT Rules" shall mean the Substantive Rules of the PUCT.

1.16 "Reasonable Efforts" shall mean the use of Good Utility Practice and the exercise of due diligence (pursuant to PUCT Rule 25.191(d)(3)).

1.17 "System Protection Equipment" shall mean those facilities located within the TIF and the GIF as described in Section 5.6 and Exhibit "C".

1.18 "System Security Study" shall have the meaning as described in PUCT Rule 25.198(c) or its successor.

1.19 "TCOS" shall mean the TSP's transmission cost of service as allowed by the applicable Governmental Authority.

1.20 "TIF" shall mean the TSP's interconnection facilities as described in Exhibit "C" to this Agreement.

1.21 "Trial Operation" shall mean the process by which the Generator is engaged in on-site test operations and commissioning of the Plant prior to Commercial Operation.

1.22 "TSP" shall mean the Transmission Service Provider.

1.23 "TSP System" shall mean the electric transmission facilities, including the TIF, and all associated equipment and facilities owned and/or operated by the TSP.

ARTICLE 2. TERMINATION

2.1 Termination Procedures. This Agreement may be terminated as follows:

A. the Generator may terminate this Agreement after giving the TSP thirty (30) days advance written notice; or

B. the TSP may terminate this Agreement (subject to Governmental Authority approval, if required) on written notice to the Generator if the Generator's Plant has not achieved Commercial Operation within one year after the scheduled Commercial Operation date reflected in Exhibit "B"; or

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

C. either Party may terminate this Agreement in accordance with Section 10.6.

2.2 Termination Costs. If a Party elects to terminate the Agreement pursuant to Section 2.1 above, the Generator shall pay all costs incurred (or committed to be incurred) by TSP, as of the date of the other Party's receipt of such notice of termination, that are the responsibility of the Generator under this Agreement. In the event of termination by either Party, both Parties shall use commercially reasonable efforts to mitigate the damages and charges that they may incur as a consequence of termination. The provisions of the Sections 2.2 and 2.3 shall survive termination of the Agreement.

2.3 Disconnection. Upon termination of this Agreement, the Parties will disconnect the GIF from the TIF.

ARTICLE 3. REGULATORY FILINGS

3.1 Filing. The TSP shall file this executed Agreement with the appropriate Governmental Authority, if required. Any portions of this Agreement asserted by Generator to contain competitively sensitive commercial or financial information shall be filed by the TSP identified as "confidential" under seal stating, for the TSP's showing of good cause, that Generator asserts such information is confidential information and has requested such filing under seal. If requested by the TSP, Generator shall provide the TSP, in writing, with the Generator's basis for asserting that the information referred to in this Section 3.1 is competitively sensitive information, and the TSP may disclose such writing to the appropriate Governmental Authority.

3.2 Regulatory Approvals. Unless exempt, the TSP shall timely request ERCOT and all regulatory approvals necessary for it to carry out its responsibilities under this Agreement. Such approvals shall include any CCN required for the construction of the TIF.

ARTICLE 4. INTERCONNECTION FACILITIES ENGINEERING, PROCUREMENT, AND CONSTRUCTION

4.1 Options. The Generator shall select one of the following options (subsection A or subsection B) and include the selected option in Exhibit "B" for completion of the TIF:

A. The TSP shall design, procure, and construct the TIF, using Reasonable Efforts to complete the TIF by the In-Service Date reflected in Exhibit "B". The TSP will utilize its own resources and will contract for additional resources, as reasonably necessary, to meet the In-Service Date. Such resources shall include, as the TSP believes is reasonable, use of other contractors, other equipment suppliers, other material suppliers, additional contract personnel,

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

additional payments to contractors for expedited work, and premiums paid to equipment and material suppliers for expedited delivery. The TSP shall not be required to undertake any initiative which is inconsistent with its standard safety practices, its material and equipment specifications, its design criteria and construction procedures, its labor agreements, applicable laws and regulations, and ERCOT Requirements. In the event the TSP reasonably expects that it will not be able to complete the TIF by the In-Service Date, the TSP will promptly provide written notice to the Generator and will undertake Reasonable Efforts to meet the earliest date thereafter.

B. (i) The TSP shall design, procure, and construct the TIF by the In-Service Date reflected in Exhibit "B". The Parties acknowledge that the In-Service Date was either agreed upon through good faith negotiations or designated by the Generator upon failure of the Parties to agree. In the process of negotiating the In-Service Date, Generator will request a date upon which it reasonably expects it will be ready to begin use of the TIF and upon which it reasonably expects to begin doing so. Any date designated by the Generator shall in no event be less than fifteen months from the date that all conditions of Sections 4.2 and 4.3 have been satisfied. The designated In-Service Date will be extended day for day for each day that the ERCOT refuses to grant clearances to install equipment. If the TSP fails to complete the TIF by the In-Service Date reflected in Exhibit "B", the TSP shall pay the Generator liquidated damages in accordance with this Section 4.1.B.

(ii) The Parties agree that actual damages to the Generator, in the event the TIF are not completed by the In-Service Date, may include Generator's fixed operation and maintenance costs and lost opportunity costs. Such actual damages are uncertain and impossible to determine at this time. The Parties agree that, because of such uncertainty, any liquidated damages paid by the TSP to the Generator shall be an amount equal to ½ of 1% of the actual cost of the TIF, per day. However, in no event shall the total liquidated damages exceed 20% of the actual cost of the TIF. The Parties agree that such liquidated damages are less than the Generator's actual damages. The Parties agree that the foregoing payments will be made by the TSP to the Generator as just compensation for the damages caused to the Generator, which actual damages are uncertain and impossible to determine at this time, and as reasonable liquidated damages, but not as a penalty or a method to secure performance of this Agreement.

(iii) The TSP shall apply to have the full costs of the TIF included in TCOS. If the PUCT issues a final, appealable order excluding from TCOS any portion of the TIF costs,

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

including higher contractor and vendor costs due to liquidated damage provisions in those contracts and insurance costs to cover liquidated damages, which costs may have been reasonably incurred but which the PUCT finds should not be recovered through TCOS, the Generator shall reimburse the TSP for such costs in an amount not to exceed the difference between the TSP's estimate of the cost of the TIF under section 4.1.A and the TSP's estimate of the cost of the TIF under Section 4.1.B as reflected in Exhibit "C". Such costs shall be estimated using Good Utility Practice.

(iv) No liquidated damages shall be paid to Generator if the Generator is not ready to commence use of the TIF for the delivery of power to the Plant for Trial Operation or export of power from the Plant on the In-Service Date, unless the Generator would have been able to commence use of the TIF for the delivery of power to the Plant for Trial Operation or export of power from the Plant but for TSP's delay.

(v) If the In-Service Date has been designated by the Generator upon a failure of the Parties to agree on the In-Service Date, the TSP may, at its option, require the Generator to subcontract with the TSP for all or part of the design, procurement and construction of the TIF in accordance with the TSP's standard subcontractor agreements. In such event, the TSP shall be subject to the payment of liquidated damages to the Generator only if the In-Service Date is not met solely due to the TSP's failure to complete the portion of the TIF for which the TSP has retained responsibility. It is the intent of this subsection to give the TSP full control of the contents and quality of the TIF. To the extent the Generator acts as a subcontractor to the TSP, the following will apply: 1) The Generator shall engineer, procure equipment, and construct the TIF (or portions thereof) using Good Utility Practice and using standards and specifications provided in advance by the TSP; 2) In its engineering, procurement and construction of the TIF, the Generator shall comply with all requirements of law to which the TSP would be subject in the engineering, procurement or construction of the TIF; 3) The TSP shall review and approve the engineering design, acceptance tests of equipment, and the construction of the TIF; 4) The TSP shall have the right to approve and accept for operation the TIF in accordance with the standards and specifications provided in advance by the TSP, such approval and acceptance shall not be unreasonably withheld, conditioned, or delayed; 5) Should any phase of the engineering, equipment procurement, or construction of the TIF, including selection of subcontractors, not meet the standards and specifications provided by the TSP, and therefore be deemed unacceptable, then

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

the Generator shall be obligated to remedy that portion of the TIF or selection of subcontractors that is deemed unacceptable, the TSP's approval of the Generator's selection of subcontractors will not be unreasonably withheld, conditioned or delayed; and 6) Once the TIF is accepted for operation by the TSP, then the TSP shall reimburse the Generator for the reasonable and necessary costs incurred by the Generator to complete the TIF, not to exceed the amount specified in the subcontract. Such reimbursement shall be made within thirty days after receipt of the invoice, unless otherwise agreed to by the Parties.

4.2 Equipment Procurement. If responsibility for construction of the TIF is borne by the TSP, then the TSP shall commence design of the TIF and procure necessary equipment within a reasonable time after all of the following conditions are satisfied:

A. The TSP has completed the Facilities Study pursuant to the Facilities Study Agreement;

B. The TSP has received written authorization to proceed with design and procurement from the Generator by the date specified in Exhibit "B"; and

C. The Generator has provided security to the TSP in accordance with Section 8.3 by the dates specified in Exhibit "B".

4.3 Construction Commencement. The TSP shall commence construction of the TIF as soon as practicable after the following additional conditions are satisfied:

A. Approval of the appropriate Governmental Authority has been obtained for any facilities requiring regulatory approval;

B. Necessary real property rights, if any, have been obtained;

C. The TSP has received written authorization to proceed with construction from the Generator by the date specified in Exhibit "B"; and

D. The Generator has provided security to the TSP in accordance with Section 8.3 by the dates specified in Exhibit "B".

4.4 Work Progress. The Parties will keep each other advised periodically as to the progress of their respective design, procurement and construction efforts. If, at any time, the Generator becomes aware that the completion of the TIF will not be required until after the specified In-Service Date, the Generator will promptly provide written notice to the TSP of a new, later In-Service Date.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

4.5 Conditions Precedent Delay. To the extent this Agreement incorporates a specified In-Service Date and the Generator fails to satisfy conditions precedent under Sections 4.2 and 4.3 so that the TSP may meet the In-Service Date, the Parties will negotiate in good faith to establish a new schedule for completion of the TIF.

ARTICLE 5. FACILITIES AND EQUIPMENT

5.1 Information Exchange. The Parties shall exchange information and mutually agree upon the design and compatibility of the Parties' interconnection facilities. The Parties shall work diligently and in good faith to make any necessary design changes to ensure compatibility of the GIF to the TSP System.

5.2 GIF Construction. Generator agrees to cause the GIF to be designed and constructed in accordance with Good Utility Practice, ERCOT Requirements and the National Electrical Safety Code in effect at the time of construction. Within one-hundred and twenty (120) days after Commercial Operation, unless the Parties agree on another mutually acceptable deadline, the Generator shall deliver to the TSP the following "as-built" drawings, information and documents for the GIF: a one-line diagram, a site plan showing the Plant and the GIF, plan and elevation drawings showing the layout of the GIF, a relay functional diagram, relaying AC and DC schematic wiring diagrams and relay settings for all facilities associated with the Generator's main-power transformers, the facilities connecting the Generator to the main power transformers and the GIF, and the impedances (determined by factory tests) for the associated main power transformers and the generators.

5.3 TIF Construction. The TSP agrees to cause the TIF to be designed and constructed in accordance with Good Utility Practice, ERCOT Requirements and the National Electrical Safety Code in effect at the time of construction.

5.4 Equipment Changes. For facilities not described in Exhibit "C", if either Party makes equipment changes to the Plant, the GIF, the TIF or the TSP System which it knows will affect the operation or performance of the other Party's interconnection facilities, the Parties agree to notify the other Party, in writing, of such changes. Such changes shall be made in accordance with ERCOT Requirements and coordinated between the Parties.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

5.5 Metering, Telemetry and Communications Requirements.

A. Metering and telemetry of data will be accomplished in accordance with ERCOT Requirements. The specific metering, telemetry and communications equipment to be installed and data to be telemetered are described in Exhibit "C".

B. At the Point of Interconnection, the metering and telemetry equipment shall be owned by the TSP. However, the TSP shall provide the Generator with metering and telemetry values in accordance with ERCOT Requirements.

C. A minimum set of inputs to the telemetry equipment are specified in Exhibit "C". Additional sets of inputs may be subsequently mutually agreed upon.

D. The TSP will notify the Generator at least five (5) working days in advance of any planned maintenance, inspection, testing, or calibration of the metering equipment, unless otherwise agreed to in writing. The Generator, or its designated representative, shall have the right to be present for these activities and to receive copies of any documents related to the procedures and results.

E. Prior to the connection of the GIF to the TIF, acceptance tests will be performed by the owning Party to ensure the proper functioning of all metering, telemetry and communications equipment associated with the Point of Interconnection and both Parties' interconnection facilities, and to verify the accuracy of data being received by the TSP, the Control Area(s) in which the Plant and the TSP are located and the Generator. All acceptance tests will be performed consistent with ERCOT Requirements.

F. The TSP shall, in accordance with Good Utility Practice and ERCOT Requirements, specify communications facilities, including those necessary to transmit data from the metering equipment to the TSP, that are necessary for the effective operation of the Plant and the GIF with the TSP System. Such communication facilities shall be included in Exhibit "C". The Generator shall make arrangements to procure and bear the cost of such facilities.

G. Any changes to the meters, telemetry equipment, voltage transformers, current transformers, and associated panels, hardware, conduit and cable, which will affect the data being received by the other Party must be mutually agreed to by the Parties.

H. Each Party will promptly advise the other Party if it detects or otherwise learns of any metering, telemetry or communications equipment errors or malfunctions that require the

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

attention and/or correction by the other Party. The Party owning such equipment shall correct such error or malfunction as soon as reasonably feasible in accordance with ERCOT Requirements.

5.6 System Protection and Other Controls Requirements.

A. Each Party's facilities shall be designed to isolate any fault, or to correct or isolate any abnormality, that would negatively affect the other Party's system or other entities connected to the TSP System.

B. The Generator shall be responsible for protection of its facilities consistent with ERCOT Requirements.

C. Each Party's protective relay design shall incorporate the necessary test switches to perform the tests required in Section 5.6.F. The required test switches will be placed such that they allow operation of lockout relays while preventing breaker failure schemes from operating and causing unnecessary breaker operations and tripping the Generator's units.

D. Recording equipment shall be installed to analyze all system disturbances in accordance with ERCOT Requirements.

E. Each Party will test, operate and maintain System Protection Equipment in accordance with ERCOT Requirements. Each Party will provide reasonable notice to the other Party of any testing of its System Protection Equipment allowing such other Party the opportunity to have representatives present during testing of its System Protection Equipment.

F. Prior to the In-Service Date, and again prior to Commercial Operation, each Party or its agent shall perform a complete calibration test and functional trip test of the System Protection Equipment. At intervals suggested by Good Utility Practice or at intervals described in the ERCOT Requirements if so defined therein, and following any apparent malfunction of the System Protection Equipment, each Party shall perform both calibration and functional trip tests of its System Protection Equipment. These tests do not require the tripping of any in-service generation unit. These tests do, however, require that all protective relays and lockout contacts be activated.

5.7 No Annexation. Any and all equipment placed on the premises of a Party shall be and remain the property of the Party providing such equipment regardless of the mode and manner of annexation or attachment to real property, unless otherwise mutually agreed by the Parties.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

ARTICLE 6. OPERATION AND MAINTENANCE

6.1 Operation and Maintenance of Interconnection Facilities. The Parties agree to operate and maintain their systems in accordance with Good Utility Practice, National Electrical Safety Code, the ERCOT Requirements, PUCT Rules and all applicable laws and regulations. Subject to any necessary ERCOT approval, each Party shall provide necessary equipment outages to allow the other Party to perform periodic maintenance, repair or replacement of its facilities. Such outages shall be scheduled at mutually agreeable times, unless conditions exist which a Party believes, in accordance with Good Utility Practice, may endanger persons or property. No changes will be made in the normal operation of the Point of Interconnection without the mutual agreement of the Parties except as otherwise provided herein. All testing of the Plant that affects the operation of the Point of Interconnection shall be coordinated between the TSP, the Control Area(s) in which the Plant and the TSP are located, and the Generator and will be conducted in accordance with ERCOT Requirements.

6.2 Control Area Notification. The Control Area within ERCOT is a single Control Area with ERCOT assuming authority as the Control Area operator in accordance with the ERCOT Protocols.

6.3 Land Rights and Easements. Terms and conditions addressing the rights of the TSP and the Generator regarding any facilities located on the other Party's property shall be addressed in a separate, duly executed and recorded easement agreement between the Parties. Prior to Commercial Operation, the Parties will mutually agree upon procedures to govern access to each other's property as necessary for the Parties to fulfill their obligations hereunder.

6.4 Service Interruption. The Parties recognize that the interruption of service provisions of the PUCT Rules give TSP the right to disconnect the TSP System from the Plant under the conditions specified therein. The Generator will promptly disconnect the Plant from the TSP System when required by and in accordance with the PUCT Rules and ERCOT Requirements.

6.5 Switching and Clearance.

A. Any switching or clearances needed on the TIF or the GIF will be done in accordance with ERCOT Requirements.

B. Any switching and clearance procedure necessary to comply with Good Utility Practice or ERCOT Requirements that may have specific application to the Plant shall be addressed in Exhibit "C".

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

6.6 Start-Up and Synchronization. Consistent with ERCOT Requirements and the Parties' mutually acceptable procedure, the Generator is responsible for the proper synchronization of the Plant to the TSP System.

6.7 Routine Operational Communications. On a timely basis, the Parties shall exchange all information necessary to comply with ERCOT Requirements.

6.8 Blackstart Operations. If the Plant is capable of blackstart operations, Generator will coordinate individual Plant start-up procedures consistent with ERCOT Requirements. Any blackstart operations shall be conducted in accordance with the blackstart criteria included in the ERCOT Requirements and the TSP Blackstart Plan on file with the ERCOT. Notwithstanding this section, the Generator is not required to have blackstart capability by virtue of this Agreement. If the Generator will have blackstart capability, then Generator shall provide and maintain an emergency communication system that will interface with the TSP during a blackstart condition.

6.9 Power System Stabilizers. The Generator shall procure, install, maintain and operate power system stabilizers if required to meet ERCOT Requirements and as described in Exhibit "C".

ARTICLE 7. DATA REQUIREMENTS

7.1 Data Acquisition. The acquisition of data to realistically simulate the electrical behavior of system components is a fundamental requirement for the development of a reliable interconnected transmission system. Therefore, the TSP and the Generator shall be required to submit specific information regarding the electrical characteristics of their respective facilities to each other as described below in accordance with ERCOT Requirements.

7.2 Initial Data Submission by TSP. The initial data submission by the TSP shall occur no later than 120 days prior to Trial Operation and shall include transmission system data necessary to allow the Generator to select equipment and meet any system protection and stability requirements.

7.3 Initial Data Submission by Generator. The initial data submission by the Generator, including manufacturer data, shall occur no later than 90 days prior to the Trial Operation and shall include a completed copy of the following forms contained in the ERCOT's Generation Interconnection Procedure: (1) Plant Description/Data and (2) Generation Stability Data. It shall also include any additional data provided to the ERCOT for the System Security Study. Data in the initial submissions shall be the most current Plant design or expected performance data. Data

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

submitted for stability models shall be compatible with the ERCOT standard models. If there is no compatible model, the Generator will work with an ERCOT designated consultant to develop and supply a standard model and associated data.

7.4 Data Supplementation. Prior to Commercial Operation, the Parties shall supplement their initial data submissions with any and all "as-built" Plant data or "as-tested" performance data which differs from the initial submissions or, alternatively, written confirmation that no such differences exist. Subsequent to Commercial Operation, the Generator shall provide the TSP any data changes due to equipment replacement, repair, or adjustment. The TSP shall provide the Generator any data changes due to equipment replacement, repair, or adjustment in the directly connected substation or any adjacent TSP-owned substation that may affect the GIF equipment ratings, protection or operating requirements. The Parties shall provide such data no later than 30 days after the date of the actual change in equipment characteristics. Also, the Parties shall provide to each other a copy of any additional data later required by the ERCOT concerning these facilities.

7.5 Data Exchange. Each Party shall furnish to the other Party real-time and forecasted data as required by ERCOT Requirements. The Parties will cooperate with one another in the analysis of disturbances to either the Plant or the TSP's System by gathering and providing access to any information relating to any disturbance, including information from oscillography, protective relay targets, breaker operations and sequence of events records**.**

ARTICLE 8. PERFORMANCE OBLIGATION

8.1 Generator's Cost Responsibility. The Generator will acquire, construct, operate, test, maintain and own the Plant and the GIF at its sole expense. In addition, the Generator may be required to make a contribution in aid of construction in the amount set out in and for the facilities described in Exhibit "C", if any, in accordance with PUCT Rules.

8.2 TSP's Cost Responsibility. The TSP will acquire, own, operate, test, and maintain the TIF at its sole expense, subject to the provisions of Section 4.1.B and the contribution in aid of construction provisions of Section 8.1 of this Agreement.

8.3 Financial Security Arrangements. The TSP may require the Generator to pay a reasonable deposit or provide another means of security, to cover the costs of planning, licensing, procuring equipment and materials, and constructing the TIF. The required security arrangements shall be specified in Exhibit "E". Within five business days after the Plant achieves Commercial Operation, the TSP shall return the deposit or security to the Generator. However, the TSP may

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

retain an amount to cover the incremental difference between the TSP's actual out of pocket costs associated with the choice of Section 4.1.B over Section 4.1.A, pending a final PUCT Order as contemplated in Section 4.1.B(iii). If the Plant has not achieved Commercial Operation within one year after the scheduled Commercial Operation date identified in Exhibit "B" or if the Generator terminates this Agreement in accordance with Section 2.1 and the TIF are not required, the TSP may, subject to the provisions of Section 2.2, retain as much of the deposit or security as is required to cover the costs it incurred in planning, licensing, procuring equipment and materials, and constructing the TIF. If a cash deposit is made pursuant to Exhibit "E", any repayment of such cash deposit shall include interest at a rate applicable to Generator deposits as established from time to time by the PUCT or other Governmental Authority.

ARTICLE 9. INSURANCE

9.1 Each Party shall, at its own expense, maintain in force throughout the period of this Agreement and until released by the other Party the following minimum insurance coverages, with insurers authorized to do business in Texas:

A. Employers Liability and Worker's Compensation Insurance providing statutory benefits in accordance with the laws and regulations of the State of Texas. The minimum limits for the Employer's Liability insurance shall be One Million Dollars ($1,000,000) each accident bodily injury by accident, One Million Dollars ($1,000,000) each employee bodily injury by disease, and One Million Dollars ($1,000,000) policy limit bodily injury by disease.

B. Commercial General Liability Insurance including premises and operations, personal injury, broad form property damage, broad form blanket contractual liability coverage (including coverage for the contractual indemnification) products and completed operations coverage, coverage for explosion, collapse and underground hazards, independent contractors coverage, coverage for pollution to the extent normally available and punitive damages to the extent normally available and a cross liability endorsement, with minimum limits of One Million Dollars ($1,000,000) per occurrence/One Million Dollars ($1,000,000) aggregate combined single limit for personal injury, bodily injury, including death and property damage.

C. Comprehensive Automobile Liability Insurance for coverage of owned, non-owned and hired vehicles, trailers or semi-trailers designed for travel on public roads, with a minimum combined single limit of One Million Dollars ($1,000,000) per occurrence for bodily injury, including death, and property damage.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

D. Excess Public Liability Insurance over and above the Employer's Liability, Commercial General Liability and Comprehensive Automobile Liability Insurance coverage, with a minimum combined single limit of Twenty Million Dollars ($20,000,000) per occurrence/Twenty Million Dollars ($20,000,000) aggregate.

E. The Commercial General Liability Insurance, Comprehensive Automobile Liability Insurance, and Excess Public Liability Insurance policies shall name the other Party, its parent, associated and affiliated companies and their respective directors, officers, agents, servants and employees ("Other Party Group") as additional insured. All policies shall contain provisions whereby the insurers waive all rights of subrogation in accordance with the provisions of this Agreement against the Other Party Group and provide thirty (30) days advance written notice to Other Party Group prior to anniversary date of cancellation or any material change in coverage or condition.

F. The Commercial General Liability Insurance, Comprehensive Automobile Liability Insurance and Excess Public Liability Insurance policies shall contain provisions that specify that the policies are primary and shall apply to such extent without consideration for other policies separately carried and shall state that each insured is provided coverage as though a separate policy had been issued to each, except the insurer's liability shall not be increased beyond the amount for which the insurer would have been liable had only one insured been covered. Each Party shall be responsible for its respective deductibles or retentions.

G. The Commercial General Liability Insurance, Comprehensive Automobile Liability Insurance and Excess Public Liability Insurance policies, if written on a Claims First Made basis, shall be maintained in full force and effect for two (2) years after termination of this Agreement, which coverage may be in the form of tail coverage or extended reporting period coverage if agreed by the Parties.

H. The requirements contained herein as to the types and limits of all insurance to be maintained by the Parties are not intended to and shall not in any manner, limit or qualify the liabilities and obligations assumed by the Parties under this Agreement.

I. Within ten (10) days following execution of this Agreement, and as soon as practicable after the end of each fiscal year or at the renewal of the insurance policy and in any event within ninety (90) days thereafter, each Party shall provide certification of all insurance

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

required in this Agreement, executed by each insurer or by an authorized representative of each insurer.

J. Notwithstanding the foregoing, each Party may self-insure to the extent it maintains a self-insurance program; provided that, such Party's senior long term debt is rated at investment grade, or better, by Standard & Poor's or Moody's Investor's Service. For any period of time that a Party's senior long term debt is unrated by Standard & Poor's and Moody's Investor's Service or is rated at less than investment grade by Standard & Poor's and Moody's Investor's Service, such Party shall comply with the insurance requirements applicable to it under Sections 9.1.A through 9.1.I. In the event that a Party is permitted to self-insure pursuant to this Section 9.1.J, it shall not be required to comply with the insurance requirements applicable to it under Sections 9.1.A through 9.1.I.

K. The Parties agree to report to each other in writing as soon as practical all accidents or occurrences resulting in injuries to any person, including death, and any property damage arising out of this Agreement.

ARTICLE 10. MISCELLANEOUS

10.1 Governing Law and Applicable Tariffs.

A. This Agreement for all purposes shall be construed in accordance with and governed by the laws of the State of Texas, excluding conflicts of law principles that would refer to the laws of another jurisdiction. The Parties submit to the jurisdiction of the federal and state courts in the State of Texas.

B. This Agreement is subject to all valid, applicable rules, regulations and orders of, and tariffs approved by, duly constituted Governmental Authorities.

C. Each Party expressly reserves the right to seek changes in, appeal, or otherwise contest any laws, orders, rules, or regulations of a Governmental Authority.

10.2 No Other Services. This Agreement is applicable only to the interconnection of the Plant to the TSP System at the Point of Interconnection and does not obligate either Party to provide, or entitle either Party to receive, any service not expressly provided for herein. Each Party is responsible for making the arrangements necessary for it to receive any other service that it may desire from the other Party or any third party. This Agreement does not address the sale or purchase of any electric energy, transmission service or ancillary services by either Party, either before or after Commercial Operation.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

10.3 Entire Agreement. This Agreement, including all Exhibits, Attachments and Schedules attached hereto, constitutes the entire agreement between the Parties with reference to the subject matter hereof, and supersedes all prior and contemporaneous understandings or agreements, oral or written, between the Parties with respect to the subject matter of this Agreement. There are no other agreements, representations, warranties, or covenants which constitute any part of the consideration for, or any condition to, either Party's compliance with its obligations under this Agreement. Notwithstanding the other provisions of this Section, the Facilities Study Agreement, if any, is unaffected by this Agreement.

10.4 Notices. Except as otherwise provided in Exhibit "D", any formal notice, demand or request provided for in this Agreement shall be in writing and shall be deemed properly served, given or made if delivered in person, or sent by either registered or certified mail, postage prepaid, overnight mail or fax to the address or number identified on Exhibit "D" attached to this Agreement. Either Party may change the notice information on Exhibit "D" by giving five business days written notice prior to the effective date of the change.

10.5 Force Majeure.

A. The term "Force Majeure" as used herein shall mean any cause beyond the reasonable control of the Party claiming Force Majeure, and without the fault or negligence of such Party, which materially prevents or impairs the performance of such Party's obligations hereunder, including but not limited to, storm, flood, lightning, earthquake, fire, explosion, failure or imminent threat of failure of facilities, civil disturbance, strike or other labor disturbance, sabotage, war, national emergency, or restraint by any Governmental Authority.

B. Neither Party shall be considered to be in Default (as hereinafter defined) with respect to any obligation hereunder (including obligations under Article 4), other than the obligation to pay money when due, if prevented from fulfilling such obligation by Force Majeure. A Party unable to fulfill any obligation hereunder (other than an obligation to pay money when due) by reason of Force Majeure shall give notice and the full particulars of such Force Majeure to the other Party in writing or by telephone as soon as reasonably possible after the occurrence of the cause relied upon. Telephone notices given pursuant to this Section shall be confirmed in writing as soon as reasonably possible and shall specifically state full particulars of the Force Majeure, the time and date when the Force Majeure occurred and when the Force Majeure is reasonably expected to cease. The Party affected shall exercise due diligence to remove such

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

disability with reasonable dispatch, but shall not be required to accede or agree to any provision not satisfactory to it in order to settle and terminate a strike or other labor disturbance.

10.6 Default

A. The term "Default" shall mean the failure of either Party to perform any obligation in the time or manner provided in this Agreement. No Default shall exist where such failure to discharge an obligation (other than the payment of money) is the result of Force Majeure as defined in this Agreement or the result of an act or omission of the other Party. Upon a Default, the non-defaulting Party shall give written notice of such Default to the defaulting Party. Except as provided in Section 10.6.B, the defaulting Party shall have thirty (30) days from receipt of the Default notice within which to cure such Default; provided however, if such Default is not capable of cure within 30 days, the defaulting Party shall commence such cure within 30 days after notice and continuously and diligently complete such cure within 90 days from receipt of the Default notice; and, if cured within such time, the Default specified in such notice shall cease to exist.

B. If a Default is not cured as provided in this Section, or if a Default is not capable of being cured within the period provided for herein, the non-defaulting Party shall have the right to terminate this Agreement by written notice at any time until cure occurs, and be relieved of any further obligation hereunder and, whether or not that Party terminates this Agreement, to recover from the defaulting Party all amounts due hereunder, plus all other damages and remedies to which it is entitled at law or in equity. The provisions of this Section will survive termination of this Agreement.

10.7 Intrastate Operation. The operation of the Plant by Generator shall not cause there to be a synchronous or an asynchronous interconnection between ERCOT and any other transmission facilities operated outside of ERCOT unless ordered by the Federal Energy Regulatory Commission under Section 210 of the Federal Power Act. The Parties recognize and agree that any such interconnection will constitute an adverse condition giving the TSP the right to immediately disconnect the TIF from the GIF, until such interconnection has been disconnected. The Generator will not be prohibited by this Section from interconnecting the Plant with facilities operated by the Comisión Federal de Electricidad of Mexico, unless such interconnection would cause ERCOT utilities that are not "public utilities" under the Federal Power Act to become subject to the plenary jurisdiction of the Federal Energy Regulatory Commission.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

10.8 No Third Party Beneficiaries. This Agreement is not intended to and does not create rights, remedies, or benefits of any character whatsoever in favor of any persons, corporations, associations, or entities other than the Parties, and the obligations herein assumed are solely for the use and benefit of the Parties, their successors in interest and, where permitted, their assigns.

10.9 No Waiver. The failure of a Party to this Agreement to insist, on any occasion, upon strict performance of any provision of this Agreement will not be considered a waiver of obligations, rights, or duties imposed upon the Parties. Termination or Default of this Agreement for any reason by the Generator shall not constitute a waiver of the Generator's legal rights to obtain an interconnection from the TSP under a new interconnection agreement.

10.10 Headings. The descriptive headings of the various articles and sections of this Agreement have been inserted for convenience of reference only and are of no significance in the interpretation or construction of this Agreement.

10.11 Multiple Counterparts. This Agreement may be executed in two or more counterparts, each of which is deemed an original but all constitute one and the same instrument.

10.12 Amendment. This Agreement may be amended only upon mutual agreement of the Parties, which amendment will not be effective until reduced to writing and executed by the Parties.

10.13 No Partnership. This Agreement shall not be interpreted or construed to create an association, joint venture, agency relationship, or partnership between the Parties or to impose any partnership obligation or liability upon either Party. Neither Party shall have any right, power or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as or be an agent or representative of, or to otherwise bind, the other Party.

10.14 Further Assurances. The Parties agree to (i) furnish upon request to each other such further information, (ii) execute and deliver to each other such other documents, and (iii) do such other acts and things, all as the other Party may reasonably request for the purpose of carrying out the intent of this Agreement and the documents referred to in this Agreement. Without limiting the generality of the foregoing, the TSP shall, at the Generator's expense, when reasonably requested to do so by the Generator at any time after the execution of this Agreement, prepare and provide such information in connection with this Agreement (including, if available, resolutions, certificates, opinions of counsel or other documents relating to the TSP's corporate authorization to enter into this Agreement and to undertake the obligations set out herein) as may be reasonably required by any potential lender to the Generator under a proposed loan agreement. The TSP will

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

use commercially reasonable efforts to obtain any opinion of counsel reasonably requested by Generator, but the TSP shall not be in Default of any obligation under this Agreement if the TSP is unable to provide an opinion of counsel that will satisfy any potential lender to the Generator. Specifically, upon the written request of one Party, the other Party shall provide the requesting Party with a letter stating whether or not, up to the date of the letter, that Party is satisfied with the performance of the requesting Party under this Agreement.

10.15 Indemnification and Liability. The indemnification and liability provisions of the PUCT Rule 25.202(b)(2) or its successor shall govern this Agreement.

10.16 Consequential Damages. OTHER THAN THE LIQUIDATED DAMAGES HERETOFORE DESCRIBED, IN NO EVENT SHALL EITHER PARTY BE LIABLE UNDER ANY PROVISION OF THIS AGREEMENT FOR ANY LOSSES, DAMAGES, COSTS OR EXPENSES FOR ANY SPECIAL, INDIRECT, INCIDENTAL, CONSEQUENTIAL, OR PUNITIVE DAMAGES, INCLUDING BUT NOT LIMITED TO LOSS OF PROFIT OR REVENUE, LOSS OF THE USE OF EQUIPMENT, COST OF CAPITAL, COST OF TEMPORARY EQUIPMENT OR SERVICES, WHETHER BASED IN WHOLE OR IN PART IN CONTRACT, IN TORT, INCLUDING NEGLIGENCE, STRICT LIABILITY, OR ANY OTHER THEORY OF LIABILITY; PROVIDED, HOWEVER, THAT DAMAGES FOR WHICH A PARTY MAY BE LIABLE TO THE OTHER PARTY UNDER ANOTHER AGREEMENT WILL NOT BE CONSIDERED TO BE SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES HEREUNDER.

10.17 Assignment. This Agreement may be assigned by either Party only with the written consent of the other; provided that either Party may assign this Agreement without the consent of the other Party to any affiliate of the assigning Party with an equal or greater credit rating and with the legal authority and operational ability to satisfy the obligations of the assigning Party under this Agreement; and provided further that the Generator shall have the right to assign this Agreement, without the consent of the TSP, for collateral security purposes to aid in providing financing for the Plant, provided that the Generator will require any secured party, trustee or mortgagee to notify the TSP of any such assignment. Any financing arrangement entered into by the Generator pursuant to this Section will provide that prior to or upon the exercise of the secured party's, trustee's or mortgagee's assignment rights pursuant to said arrangement, the secured creditor, the trustee or mortgagee will notify the TSP of the date and particulars of any such exercise of

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

assignment right(s). Any attempted assignment that violates this Section is void and ineffective. Any assignment under this Agreement shall not relieve a Party of its obligations, nor shall a Party's obligations be enlarged, in whole or in part, by reason thereof. Where required, consent to assignment will not be unreasonably withheld, conditioned or delayed.

10.18 Severability. If any provision in this Agreement is finally determined to be invalid, void or unenforceable by any court having jurisdiction, such determination shall not invalidate, void or make unenforceable any other provision, agreement or covenant of this Agreement; provided that if the Generator (or any third-party, but only if such third-party is not acting at the direction of the TSP) seeks and obtains such a final determination with respect to any provision of Section 4.1.B, then none of the provisions of Section 4.1.B. shall thereafter have any force or effect and the Parties' rights and obligations shall be governed solely by Section 4.1.A.

10.19 Comparability. The Parties will comply with all applicable comparability and code of conduct laws, rules and regulations, as amended from time to time.

10.20 Invoicing and Payment. Unless the Parties otherwise agree (in a manner permitted by applicable PUCT Rules and as specified in writing in an Exhibit "E" attached hereto), invoicing and payment rights and obligations under this Agreement shall be governed by PUCT Rules or applicable Governmental Authority. Invoices shall be rendered to the paying Party at the address specified on, and payments shall be made in accordance with the requirements of, Exhibit "D".

10.21 Confidentiality.

A. Subject to the exception in Section 10.21.B, any information that a Party claims is competitively sensitive, commercial or financial information under this Agreement ("Confidential Information") shall not be disclosed by the other Party to any person not employed or retained by the other Party, except to the extent disclosure is (i) required by law; (ii) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (iii) otherwise permitted by consent of the other Party, such consent not to be unreasonably withheld; or (iv) necessary to fulfill its obligations under this Agreement or as a transmission service provider or a Control Area operator including disclosing the Confidential Information to the ERCOT. The Party asserting confidentiality shall notify the other Party in writing of the information it claims is confidential. Prior to any disclosures of the other Party's Confidential Information under this subsection, or if any third party or Governmental Authority makes any request or demand for any of the information described in this

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

subsection, the disclosing Party agrees to promptly notify the other Party in writing and agrees to assert confidentiality and cooperate with the other Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order or other reasonable measures.

B. This provision shall not apply to any information that was or is hereafter in the public domain (except as a result of a breach of this provision).

10.22 Representations and Restrictions on Certain Foreign Ownership and Affiliation. Generator represents and warrants that it does not meet any of the ownership, control, or headquarters criteria listed in Lone Star Infrastructure Protection Act, Chapter 117 of the Texas Business & Commerce Code (relating to China, Iran, North Korea, Russia, and any other country designated by the Texas governor as a threat to critical infrastructure).

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

Exhibit "B"
Time Schedule

Interconnection Option chosen by Generator (check one): __X__ Section 4.1.A. or ____ Section 4.1.B

If Section 4.1.B is chosen by Generator, the In-Service Date(s) was determined by (check one): (1) ____ good faith negotiations, or (2) _____ Designated by Generator upon failure to agree.

Date by which Generator must provide notice to proceed with design, procurement, and construction, and provide security, as specified in Sections 4.2 and 4.3, so that TSP may maintain schedule to meet the In-Service Date: **December 6, 2024**

In - Service Date(s): **December 3, 2026**

Scheduled Trial Operation Date: **December 13, 2026**

Scheduled Commercial Operation Date: **April 13, 2027**

Date by which TSP will submit the Metering Design Proposal to ERCOT: **June 3, 2026**

Date by which Generator will provide one-line drawings and Information required for sizing the EPS Metering CT's: **September 3, 2025**

Date by which Generator will provide one line drawings and Information required for sizing the Wholesale Storage Load ("WSL") EPS Metering CT's and PT's, including if Neutral Grounding Resistors/Reactors (NGR's) are to be utilized on the "Main Power Transformer": **October 3, 2025**

Date by which TSP will provide to Generator information for the WSL EPS Metering typical layout and installation details including CT and PT outlines: **November, 3 2025**

Date by which Generator will provide to TSP complete One Line Diagrams to show in detail the BESS System from the Point of Interconnection and EPS WSL Metering Point through the batteries to ground: **February 3, 2026**

Date by which Generator will provide drawings showing in detail the proposed location and installation of TSP's WSL EPS Metering equipment: **March 3, 2026**

Date by which TSP will provide the Generator the WSL EPS Metering instrument transformers for installation in Generator Collector Station: **September 3, 2026**

Date by which Generator will complete the installation of WSL EPS Metering instrument transformers for TSP termination and testing: **October 2, 2026**

Date by which Generator will make contact with TSP to communicate land conveyance type and provide a contact for TSP Right of Way coordination: **July 28, 2025**

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

Date by which Generator will provide its proposed protection system design to TSP in accordance with Attachment 3 to Exhibit "C": **June 3, 2026**

Date by which Generator will provide its proposed protection system device settings and other information to TSP in accordance with Attachment 3 to Exhibit "C": **September 3, 2026**

Date by which Generator will provide its proposed names of its equipment, as referenced in Exhibit "C", to TSP: **April 3, 2026**

Date by which TSP must take ownership or possession of the deed or easement(s), in accordance with Exhibit "C", for property for the TIF, so that TSP may maintain schedule to meet the In-Service Date: **April 17, 2026**

Date by which Generator must have removed or relocated any existing Generator or third party underground and aboveground facilities from the property where the Gobbers Knob Switch will be constructed to a location acceptable to TSP and have caused any existing Generator or third-party easements on such property to be terminated, as referenced in Exhibit "C": **March 20, 2026**

Date by which Generator will provide to TSP site drawings showing the proposed routes and locations of all generating units, transmission lines, distribution lines, and roads planned to be constructed by Generator: **February 3, 2026**

Date by which Generator will provide to TSP the Latitude and Longitude and a kmz of all solar panel and BESS generating units: **June 3, 2026**

Date by which Generator will have in place the communication facilities specified in Exhibit C: **October 22, 2026**

Date by which Generator must provide an all-weather road acceptable to TSP for TSP's ingress and egress to and from the TIF site, so that TSP may maintain schedule to meet the In-Service Date: **March 20, 2026**

Date by which Generator will provide its design of the facilities and operating scheme to comply with the reactive power requirements specified in Exhibit C, when the plant is not generating real power into the ERCOT grid: **June 3, 2026**

Date by which Generator will provide its design of the facilities to comply with the unit reactive power requirements specified in Exhibit C, when the plant is generating real power into the ERCOT grid: **June 3, 2026**

Date by which Generator will submit the grading and drainage design for Gobbers Knob Switch and entrance drives, and the All-Weather Road to TSP for review and approval pursuant to Exhibit C: **November 28, 2025**

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

Date by which Generator will complete the grading and drainage design for Gobbers Knob Switch and entrance drives and the All-Weather Road pursuant to Exhibit C, so that TSP may maintain schedule to meet the In-Service Date: **January 23, 2026**

Generator to notify TSP 4 weeks before beginning grading installation

Date by which Generator will complete the Gobbers Knob Switch and entrance drives grading, and the All-Weather Road, and provide access for Oncor inspection, pursuant to Exhibit C: **March 20, 2026**

Date by which Generator will provide preliminary survey exhibits for the deeds/easements for Gobbers Knob Switch and entrance drive, and the All-Weather Road, pursuant to Exhibit C, so that TSP may maintain schedule to meet the In-Service Date: **November 28, 2025**

Date by which Generator will provide final survey exhibits for the deeds/easements for Gobbers Knob Switch and entrance drive, the All-Weather Road, pursuant to Exhibit C, so that TSP may maintain schedule to meet the In-Service Date: **January 23, 2026**

Date by which TSP will provide preliminary survey exhibits for the deeds/rights of way for Gobbers Knob Switch associated transmission lines, pursuant to Exhibit C, so that TSP may maintain schedule to meet the In-Service Date: **November 28, 2025**

Date by which TSP will provide final survey exhibits for the deeds/rights of way for Gobbers Knob Switch associated transmission lines, pursuant to Exhibit C, so that TSP may maintain schedule to meet the In-Service Date: **January 23, 2026**

Date by which Generator will have the 4-hole pads installed at the Point of Interconnection for TSP's jumper terminations: **October 8, 2026**

Date by which the Generator will have the Generator breaker(s), system protective equipment (including fiber termination and testing), and any equipment necessary for station to station relaying and SCADA communications installed and ready for acceptance and functional trip testing with TSP to ensure proper functioning: **November 5, 2026**

Due to the nature of the subject of this Agreement, the Parties may mutually agree to change the dates and times of this Exhibit "B".

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

Exhibit "C"
Interconnection Details

1. Name: **Blue Heron Solar, LLC**

2. Point of Interconnection location: The Point of Interconnection is located in Brown County, Texas, at the proposed Gobbers Knob Switch in TSP's 345 kV Brown Switch to Buckhorn Switch transmission line. Specifically, the Point of Interconnection shall be defined as the points where TSP's jumpers connected to TSP's 4-hole pad bus connections, connect to Generator owned 4-hole pad bus connections located near the common fence separating TSP's Gobbers Knob Switch from Generators Collector Station. Gobbers Knob Switch will be located approximately 13.3 miles southeast of Brownwood, Tx and approximately 0.78 miles southeast from County Road 268. (See attached one-line diagram.)

3. Delivery Voltage: **345 kV**

4. Number and size of Generating Units:

   Chisme Solar 24INR0333: thirty-nine (39) Sungrow SG4400-UD Solar inverters resulting in 148.9410 MW gross real power at the inverter terminal (147 MW measured at the 34.5 kV Collector)

   Chisme Storage: sixty-eight (68) Sungrow SC210HX-US x 12 Storage inverters resulting in 147.56 MW gross real power at the inverter terminal (146 MW measured at the 34.5 kV Collector)

   The Parties will amend this Exhibit "C" as necessary to reflect any changes Generator makes to the number and size of generating units.

5. Type of Generating Unit:
   Chisme Solar 24INR0333: Sungrow SG4400-UD Solar Inverters
   Chisme Storage 24INR0331: Sungrow SX210HX-US x 12 Storage Inverters

   The Parties will amend this Exhibit "C" as necessary to reflect any changes Generator makes to the manufacturer, model, or type of generating units.

6. Metering and Telemetry Equipment: Metering (voltage, location, losses adjustment due to metering location, and other), telemetry, and communications requirements shall be as follows:

   a. TSP shall, in accordance with ERCOT Requirements and Good Utility Practice, install, own, operate, inspect, test, calibrate, and maintain **345 kV** metering accuracy potential and current transformers and associated metering and telemetry equipment (including an RTU) located in the TIF. A one-line diagram showing TSP's ERCOT-polled settlement ("EPS") metering location is attached to this Exhibit "C" as Attachment 1. TSP will connect its EPS primary meter(s) to its RTU

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

via a communication link. Primary EPS metering data may be made available to Generator via a Generator-owned communication link connected to TSP's RTU, using TSP's available RTU protocol. Such data, if provided to Generator, will be for Generator's informational purposes only. Generator shall not rely on such data, as the primary source, for the metering data addressed in item 6b. below, or for any other scheduling or operational purposes. TSP makes no guarantee of the quality or availability of such data. The provisions of Exhibit "A", Section 5.5G., shall not apply to TSP's RTU.

b. Generator shall, in accordance with Good Utility Practice, install, own, operate, inspect, test, calibrate, and maintain the necessary metering potential and current transformers and associated metering and telemetry equipment in the GIF and/or Plant to satisfy the ERCOT Requirements for the provision of metering data by Generator's "Qualified Scheduling Entity".

c. Generator shall, in accordance with ERCOT Requirements and Good Utility Practice, install, own, operate, inspect, test, calibrate, and maintain the metering and telemetry equipment (including an RTU or other equipment acceptable to TSP) to supply all electrical parameters of the Plant and GIF, as specified in the SCADA Table in Attachment 2 to this Exhibit "C", to TSP at a location designated by TSP.

d. Generator shall, in accordance with ERCOT Requirements and Good Utility Practice, provide communications facilities that are, or may in the future be, necessary for effective interconnected operation of the Generator's Plant with the transmission system. Generator will directly make arrangements to procure and will bear the procurement, installation and ongoing costs of items (i) and (ii) below. The communications facilities will include (see Attachment 2A to Exhibit "C"):

   (i) one private line voice circuit (an off-premise extension of TSP's PBX) in the Control Center referenced in Section 12(b) below, as shown on Exhibit D. The telephone handset for this voice line will be located in the Control Center such that personnel responsible for controlling voltage of the Plant will have continuous, ready access to the handset to receive calls from TSP's control center.

   (ii) one communication path, acceptable to TSP, that will deliver the Generator switchyard data specified in Attachment 2 to Exhibit "C" from Generator's RTU (using an RS-232 output) to TSP's control center. Generator shall use DNP 3.0 protocol (or other protocol acceptable to TSP). The communication path shall avoid the use of the public internet. TSP will provide rack space at a location designated by TSP for Generator's communication interface equipment.

e. Prior to the In-Service Date, acceptance tests will be performed by TSP and Generator to ensure the proper functioning of all metering, telemetry, and communications equipment, and to verify the accuracy of data being received by TSP.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

f. Following the Commercial Operation date, each Party shall test its metering, telemetry, and communications equipment in accordance with ERCOT Requirements and Good Utility Practice. Each Party shall give the other Party reasonable advance notice of such testing. Each Party shall have the right to observe testing performed by the other Party.

g. Any changes to Generator's metering, telemetry, and communication equipment, including meters, voltage transformers, current transformers, and associated RTU, panels, hardware, conduit and cable, that will affect the data being received by TSP hereunder must be mutually agreed to by the Parties.

h. Each Party will promptly advise the other Party if it detects or otherwise learns of any metering, telemetry, or communications equipment or related situation that requires attention and/or correction by the other Party.

7. Generator Interconnection Facilities: The GIF shall include the following facilities. (See the attached one-line diagram)

Generator Switchyard Facilities

Generator Provided Equipment for Generator 345 kV Substation.

(1 ea.) Circuit breaker, 345 kV with two sets of 3000/5, C800 multi-ratio CT's with a TRF = 2.0 for line current differential relaying

(1 lot) Switches, air break, 345 kV, gang operated, 3 phase, with provisions for TSP pad lock

(1 lot) PT or CCVT, 345 kV, dual secondary windings as required for Generator metering and relaying.

(1 lot) Protective relaying equipment necessary to interface with TSP relaying equipment for protection of the 345 kV Gobbers Knob Switch to Generator bus connection, and related breaker failure protection schemes.

(1 ea.) Supervisory equipment, SCADA RTU, complete with Generator-provided dedicated data communication circuit back to TSP's Central Control Center

(1 ea.) Fault Recording equipment (as required by ERCOT)

(1 ea.) Phasor Measurement Unit (PMU) (as required by ERCOT)

(1 ea.) Multi-fiber, fiber optic cable with 1300nm single-mode fibers, 48 fibers minimum (24 fibers per tube), to be used for primary and redundant line relaying and optional SCADA communications for EPS metering information to Generator.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

Generator will route its fiber optic cable in underground conduit to a TSP owned splice box on the TSP side of the common fence between Gobbers Knob Switch and the Generator 345 kV Plant Switchyard. Generator will terminate its fiber optic cable at a TSP owned fiber patch panel and be responsible for testing of Generator fibers. TSP will be responsible for providing the fiber patch cables.

(1 lot) Associated structures, bus work, conductor, connectors, grounding, conduit, control cable, fiber, foundation work, perimeter fencing, grading/dirt work and any appurtenances necessary for construction and operation of the Generator 345 kV Plant Switchyard.

(1 lot) Ground connections to Oncor Switchyard ground grid

All-Weather Road – Generator will construct and maintain an all-weather road acceptable to TSP for TSP's ingress and egress to and from Gobbers Knob Switch from County Road 268 ("All-Weather Road").

TSP Provided Equipment for EPS Metering of the Chisme Solar and Storage Wholesale Storage Load (WSL)

The following list of metering equipment will be provided by TSP and installed by Generator for the Generator 345 kV Substation.

(3 ea.) Metering PT's, 34.5 kV

(3 ea.) Metering CT's, 34.5 kV

Generator Provided Equipment and Structures for EPS Metering of the Chisme Solar and Storage WSL

The following list of metering equipment will be provided and installed by Generator for the Generator 34.5 kV Substation.

(1 ea.) Metering stand for Oncor Supplied Metering PT's, and Metering CT's. Stand to include Generator supplied fused cutouts for protection of Oncor provided Metering PT's.

(1 ea.) Junction Box. Box to be lockable type and include two (2) CT shorting blocks and one

(1) PT fuse block. Junction box to be locked with TSP lock. Location and requirements of junction box to be finalized during detailed design and provided by TSP to Generator.

(1 lot) Wiring and conduit for the metering stand to include:
(1) 4 conductor shielded # 10 from CT's to Junction Box. Terminated by TSP

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

(1) 4 conductor shielded # 10 from PT's to Junction Box. Terminated by TSP

(1 lot) Wiring and PVC conduit from the metering junction box to the TSP Metering Cabinet to include:
(1) 2" PVC conduit
(1) 4 conductor shielded # 10 for CT's. Terminated by TSP
(1) 4 conductor shielded # 10 for PT's. Terminated by TSP

(1 lot) Wiring and PVC conduit from dedicated Generator 125 VDC source to the TSP Metering Cabinet to include:
(1) 2 conductor shielded # 10 for power supply to meters. Terminated by TSP

The above list is not intended to be a complete list of all facilities that are part of the GIF.

8. Transmission Service Provider Interconnection Facilities: The TIF shall include the following facilities. (See the attached one-line diagram)

TSP Gobbers Knob Switch

TSP has evaluated the general switchyard requirements for Gobbers Knob Switch. These switchyard facilities are considered TSP's "through flow" transmission system and shall be owned, operated, and maintained by TSP. The switchyard facilities shall consist of two 345 kV sources and provide Generator with one interconnection point from a 345 kV three breaker, ring bus arrangement. Please note that the total property required for Gobbers Knob Switch will be dependent upon TSP's and Generator's final contours and grading design and will include additional area around the entire station fence perimeter for transmission line terminations, future expansion, grounding, and grading work ("Gobbers Knob Switch Property") and is subject to change during the project detailed design. Generator will either acquire, or have an option to acquire, or have a perpetual easement, or an option for a perpetual easement (in a form acceptable to TSP) for the Gobbers Knob Switch Property, entrance drives, All Weather Road and transmission line Rights of Way, with non-restricted right of ingress and egress, and will transfer such land in fee or land rights to TSP. The easement for the Gobbers Knob Switch Property shall be an exclusive perpetual easement.

Generator shall connect at a delivery voltage of 345 kV with the change of ownership of facilities to be designated at the points where TSP's jumpers connected to TSP's 4-hole pad bus connections, connect to the Generator-owned 4-hole pad bus connections located near the common fence separating TSP's Gobbers Knob Switch from the Generator's Substation. TSP will install and own the jumpers from TSP's 4-hole pad connections to the Generator-owned 4-hole pad connections.

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

The estimate also includes the installation of ADSS fiber-optic cable with 1300 nm single-mode fibers, 48 fibers minimum (24 fibers per tube), to be used for primary and redundant line relaying and optional supervisory control and data acquisition ("SCADA") communications for ERCOT Polled Settlement ("EPS") metering information to the Generator in underground conduit between the TSP control house in Gobbers Knob Switch and a TSP owned splice box on the TSP side of the common fence between Gobbers Knob Switch and the Generator Substation. TSP will route its fiber optic cable to the splice box and terminate at a TSP owned fiber patch panel. TSP will be responsible for providing the fiber patch cables and the testing of Oncor fibers.

TSP Switchyard Facilities

The following list of major switchyard equipment will be necessary for Gobbers Knob Switch.

(3 ea.) Circuit breaker, 362 kV, 5000 A, 63 kA

(7 ea.) Switch, air break, 362 kV, 5500 A, gang operated, 3 phase

(2 ea.) Switch, air break, 362 kV, 5500 A, gang operated, 3 phase, with grounding switch

(1 ea.) Switch, air break, 362 kV, 3200 A, gang operated, 3 phase, with grounding switch

(3 ea.) Metering Current Transformers, 362 kV

(3 ea.) CCVT's, 362 kV, dual secondary windings for metering and relaying

(6 ea.) CCVT's, 362 kV, dual secondary windings for relaying

(2 ea.) Line trap, 345 kV, 5000 A

(2 ea.) Line tuner

(2 ea.) SSVT, 345 kV, for station service

(9 ea.) Surge arresters, 276 kV

(1 lot) All galvanized steel structures, including dead ends, switch stands, metering structures, surge arrester supports, CCVT supports, static mast, and bus supports necessary for construction and operation of the TSP switchyard facilities

(1 ea.) Supervisory equipment, SCADA RTU

(1 ea.) Digital Fault Recorder (DFR)

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

(1 ea.) Control house w/2-125 VDC battery sets and associated indoor accessories

(1 lot) Emergency switchyard generator and associated propane storage facilities

(1 lot) Associated buswork, conductor, connectors, grounding, conduit, control cable, foundation work, perimeter fencing, grading/dirt work and any appurtenances necessary for construction and operation of the TSP switchyard facilities

(1 lot) Ground connections to Generator Substation ground grid

(1 ea.) Metering cabinet mounting structure, for WSL Metering, to be located on the TSP side of the common fence between Gobbers Knob Switch and the Generator 345 kV Substation

(1 ea.) Metering cabinet with meters for WSL Metering.

(1 lot) Multi-fiber fiber optic cabling from the TSP Metering Cabinet to the Gobbers Knob Switch control house.

Relaying Equipment

The following relay panels will be necessary for Gobbers Knob Switch.

(1 ea.) Buckhorn Switch line, ring bus, line current differential (LCD) with directional comparison blocking (DCB) over carrier relay panel

(1 ea.) Brown Switch line, ring bus, line current differential LCD) with directional comparison blocking (DCB) over carrier relay panel

(1 ea.) Generator Line, ring bus line current differential (LCD) relay panel

(1 ea.) Metering panel with totalizing equipment

(1 ea.) Carrier tester and communications panel

The above lists are not intended to be complete lists of all facilities that are part of the TIF.

9. Communications Facilities: See Item 6 above.
10. System Protection Equipment: See Section 5.6 of Exhibit "A" and Attachment 3 to this Exhibit "C".
11. Inputs to Telemetry Equipment: See Attachment 2 to this Exhibit "C".

12. Supplemental Terms and Conditions:

For additional supplemental terms and conditions, see Attachments 1, 2, and 3 to this Exhibit "C".

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

a. Generator Control Center - Generator will establish a control center that shall be staffed 24 hours per day, 7 days per week, by personnel capable of making operating decisions and possessing the ability and authority to directly control voltage at the Plant, including the control of all devices at the Plant (such as generators, reactors and capacitors) associated with controlling such voltage ("Generator Control Center"). In the event that the Generator Control Center is not located at the Plant, the voltage control described in the preceding sentence will be accomplished directly by Generator Control Center personnel via a supervisory control and data acquisition (SCADA) system directly asserting control over all voltage control equipment at the Plant. Prior to TSP completing the TIF and placing such facilities in service, the Parties will revise Exhibit D to incorporate any missing telephone numbers for the Generator in Section (a).

b. If Generator Owns Land - If Generator will own the land in fee upon which TSP will construct the TIF or upon which Generator will construct the All Weather Road, or portion thereof, Generator will provide to TSP, at no cost to TSP, a deed and/or easement(s) in perpetuity, in form and substance satisfactory to TSP, for such land or land rights as are needed for the TIF and TSP's use of the All Weather Road on any land owned in fee by Generator. Generator will provide such deed and/or easement(s) to TSP by the date(s) specified in Exhibit "B". The easement for the Gobbers Knob Switch property shall be an exclusive perpetual easement.

c. If Generator Does Not Own Land – The following provisions will apply if Generator will not own the land in fee upon which TSP will construct the TIF or upon which Generator will construct the All Weather Road

   a. TSP's completion of the TIF by the date specified in Exhibit "B" is contingent upon the land owner(s) granting to TSP either a deed or easement(s) in perpetuity, in form and substance satisfactory to TSP, for such land or land rights needed for the by the date specified in Exhibit "B". The easement for the Gobbers Knob Switch property shall be an exclusive perpetual easement.
   b. If the Generator has obtained certain land rights from the fee owner of the land upon which the TIF will be constructed, Generator will (i) enter into good faith negotiations with the fee owner of such land to assist TSP in obtaining, at no cost to TSP, either a deed or easement(s) in perpetuity, in form and substance satisfactory to TSP, for such land or land rights needed for the TIF by the date(s) specified in Exhibit "B" and (ii) cooperate with TSP and the fee owner of such land in the development of legal documentation, satisfactory to TSP, which specifies that the land rights to be granted to TSP by the fee owner of such land will control in the event of conflict between such land rights and the aforementioned land rights held by Generator.

d. Names and Device Numbers – Generator and TSP will collaborate and reach mutual agreement on the establishment of: i) unique name(s) for the Generator's substations, unit main transformers, and switching station(s) connected at

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

transmission voltage), ii) device numbers for all transmission voltage level switches and breakers which will be owned by Generator, and iii) unique names for Generator's generating units, in accordance with ERCOT Requirements. Generator will submit to TSP, its proposed name(s) as referenced in this paragraph, to the TSP by the date specified in Exhibit "B". Generator will register the name(s) of the facilities specified in this paragraph and Generator-owned device numbers at ERCOT, in accordance with ERCOT Requirements, and such names and device numbers will be consistent with the names and numbers mutually agreed upon pursuant to this paragraph. Generator will not change any of the names or device numbers, established pursuant to this paragraph, without written approval of TSP. Generator will label the devices, referenced in item (ii) above, with the numbers assigned to such devices.

e. Encroachments – If Generator desires to conduct any of the following activities within any portion of TSP's right of way associated with TSP's transmission or distribution lines: i) construct transmission lines, distribution lines, communication facilities, roads, water lines, sewer lines, gas pipelines, or any other facilities, ii) store any equipment or materials, or iii) change the grade, elevation, or contour of the land, Generator must submit its request to TSP using a form of request acceptable to TSP and obtain written authorization from TSP for such encroachment prior to Generator installing such facilities or conducting such activities. **TSP RESERVES THE RIGHT TO DELAY THE ENERGIZATION OF THE POINT OF INTERCONNECTION UNTIL GENERATOR OBTAINS ALL REQUIRED WRITTEN AUTHORIZATIONS FROM TSP FOR SUCH ENCROACHMENTS, IF ANY**. The Generator will be responsible for the cost of all modifications needed on facilities owned by TSP which are the result of such encroachment. The provision of overall site plans by Generator shall not relieve Generator from the obligation to submit all encroachment requests in accordance with this subsection (f).

f. Site Plan - Generator will provide to TSP, by the date specified in Exhibit "B", a site plan in sufficient detail to reflect the proposed routes and locations of Generator's generating units, transmission lines, distribution lines, substations, transformers, and roads.

g. Location of Solar Panels and BESS units – Generator will provide to TSP, by the date specified in Exhibit "B", the Latitude and Longitude and a kmz of each solar panel and BESS unit to enable the identification of the PUCT certificated service area in which each turbine is located.

h. Additional Studies – If it is necessary for TSP to perform any additional generation interconnection studies associated with the Plant in accordance with ERCOT Requirements ("Additional Studies"), the Parties will enter an agreement to perform the Additional Studies and Generator shall pay TSP for the Additional Studies pursuant to that agreement. The completion of such Study may reveal that additional TSP facilities will be required to be installed in conjunction with the interconnection of the Plant. If TSP determines, as a result of the Additional

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

Studies, that this Agreement needs to be amended to include additional facilities, the Parties will amend this Agreement to include (i) such additional facilities identified in the Additional Studies, and (ii) additional security requirements. Generator will provide an additional level of security in accordance with this Agreement to reflect any such additional facilities.

i. Federal Income Tax – To the extent that a payment made by Generator to TSP pursuant to Sections 2.2 and 8.3 of Exhibit A is taxable income for federal income tax purposes, as determined by TSP, such payment shall be increased by an adder, as determined by TSP in accordance with its normal practices, to cover the effects of Generator's payment on TSP's tax liability.

j. Reactive Power (Plant neither charging or discharging) – Generator will install, operate, and maintain Plant and/or GIF facilities and implement an automatic operating scheme, as necessary, to establish and maintain reactive power within a range of +/- 5 Mvar, as measured at the Point of Interconnection Bus (as defined in the ERCOT Nodal Protocols), at all times when the Plant is neither charging nor discharging. Generator may utilize any available static reactive devices to hold the real-time voltage set point provided by TSP, even if this results in reactive power at the Point of Interconnection Bus outside the +/-5 MVAR range specified above. Such facilities and automatic operating scheme will be installed and functional prior to the Trial Operation of the Plant. Generator will provide, for review and comments, written documentation to TSP specifying the design details of all equipment (including size, number, and location of any capacitors and/or reactors and controls) and automatic operating scheme which it will install to meet these requirements by the date specified in Exhibit "B". Notwithstanding TSP's obligations in the remainder of this Agreement, TSP shall have no obligation to establish an electrical interconnection with the GIF until Generator completes the installation of the reactive power facilities and automatic operating scheme specified in this paragraph.

k. Reactive Power (Plant charging or discharging) – Generator will install, operate, and maintain Plant and GIF reactive power facilities, as necessary, to comply with the unit reactive power capability requirements at all times when the Plant is charging or discharging, in accordance with ERCOT Requirements. Such facilities will be installed and functional prior to the Trial Operation of the Plant. Generator will provide, for review and comments, written documentation to TSP specifying the design details of all equipment (including size, number, and location of any capacitors and/or reactors and controls) which it will install to meet these requirements by the date specified in Exhibit "B". Notwithstanding TSP's obligations in the remainder of this Agreement, TSP shall have no obligation to establish an electrical interconnection with the GIF until Generator completes the installation of the reactive power facilities specified in this paragraph

l. Switching Procedures – To address the safety of field operations personnel of both Parties, the Parties will conduct the switching of transmission voltage devices owned by the TSP at the Point of Interconnection and all transmission voltage

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

devices owned by Generator in accordance with TSP's procedures. TSP will provide a copy of such procedures to Generator upon request.

m. Facility Connection Requirements – Generator will construct its facilities in accordance with the version of Oncor Standard 520-108 that is in effect at the time the Generator gives its notice to proceed with design and procurement, as referenced in Exhibit "B".

n. Relocation of Facilities - Unless otherwise agreed to in writing by TSP, Generator will (i) remove or relocate any existing Generator or third party underground and aboveground facilities from the property where the Gobbers Knob Switch will be constructed to a location acceptable to TSP and (ii) cause any existing Generator or third-party easements on such property to be terminated by the date specified in Exhibit "B".

o. Grading and Drainage – Since Gobbers Knob Switch will be located adjacent to the Generator Switchyard on property being developed for the Generator facility, and in order to ensure that the Gobbers Knob Switch grading and drainage design is consistent with Generator's overall grading and drainage design, Generator will be responsible for, in coordination with TSP, the design of the grading and drainage of TSP's Gobbers Knob Switch site and associated All-Weather Road and entrance drives in accordance with TSP design specifications and requirements. Upon TSP approval of the grading designs, Generator will, at its cost, be responsible for grading of the TSP Gobbers Knob Switch site and associated All-Weather Road and entrance drives from **County Road 268** to Gobbers Knob Switch. Station site grading will be to top of Station subgrade elevations as identified in TSP's notes and details "the subgrade elevations" as shown on the grading design drawings prepared by Generator and approved by TSP. TSP will install the final 6" of compacted flex base and 2" of topping rock surfacing to the station site at the end of construction. Generator will be responsible for complete installation of the All-Weather Road and entrance drives including the base material (no topping rock) in accordance with TSP design specifications. TSP shall have the option to test and inspect the material and installation. Generator will also be responsible for any required drainage improvements necessary to protect the Gobbers Knob Switch site and All-Weather Road and entrance drives against possible erosion.

Grading and Drainage design associated with the TSP Gobbers Knob Switch site and associated All-Weather Road and entrance drives shall be performed in accordance with TSP specification number 500-051 - Site Preparation, and other site-specific design criteria, which will be provided by the TSP to the Generator. TSP shall review and approve the grading and drainage design for Gobbers Knob Switch with the associated All-Weather Road and entrance drives prior to construction. TSP reserves the right to provide an on-site inspector during site preparation construction to confirm site construction follows TSP requirements. The grading and drainage design for the Gobbers Knob Switch site

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

and associated All-Weather Road and access drives shall be submitted to TSP for review and approval and shall be completed by the dates specified in Exhibit "B".

In addition, Generator will be responsible for continuing maintenance of site drainage beyond the Gobbers Knob Switch site and associated All-Weather Road and entrance drives property/easement as it affects the station site and associated All-Weather Road and entrance drives integrity.

13. The difference between the estimated cost of the TIF under 4.1.A ($____) and the estimated cost of the TIF under 4.1.B ($_____) is: _____ , if applicable.

Attachment 2 to Exhibit "C"

SCADA TABLE
INFORMATION REQUIRED BY TSP FROM GENERATOR

GIF DEVICE/BUS	DATA REQUIRED
Each 345 kV Breaker	Status indication, three phase megawatts, and three phase megavars (Dry type breaker "A" contacts required for indication and 0 - 1 milliamp analog signal required for megawatt and megavar information)
Each 345 kV Bus	A, B and C Phase voltages (0 – 1 milliamp analog signal required for voltage information)
Each Reactive Device Breaker	Status indication, three phase megawatts, and three phase megavars (Dry type breaker "A" contacts required for indication and 0 - 1 milliamp analog signal required for megawatt and megavar information)
Each 345 kV Switch Each Reactive Device Switch	Status indication (Dry type "A" contacts required for indication)

Note: The SCADA Table above does not include real-time operational metering data or other data required by ERCOT from the Generator or its Qualified Scheduling Entity.

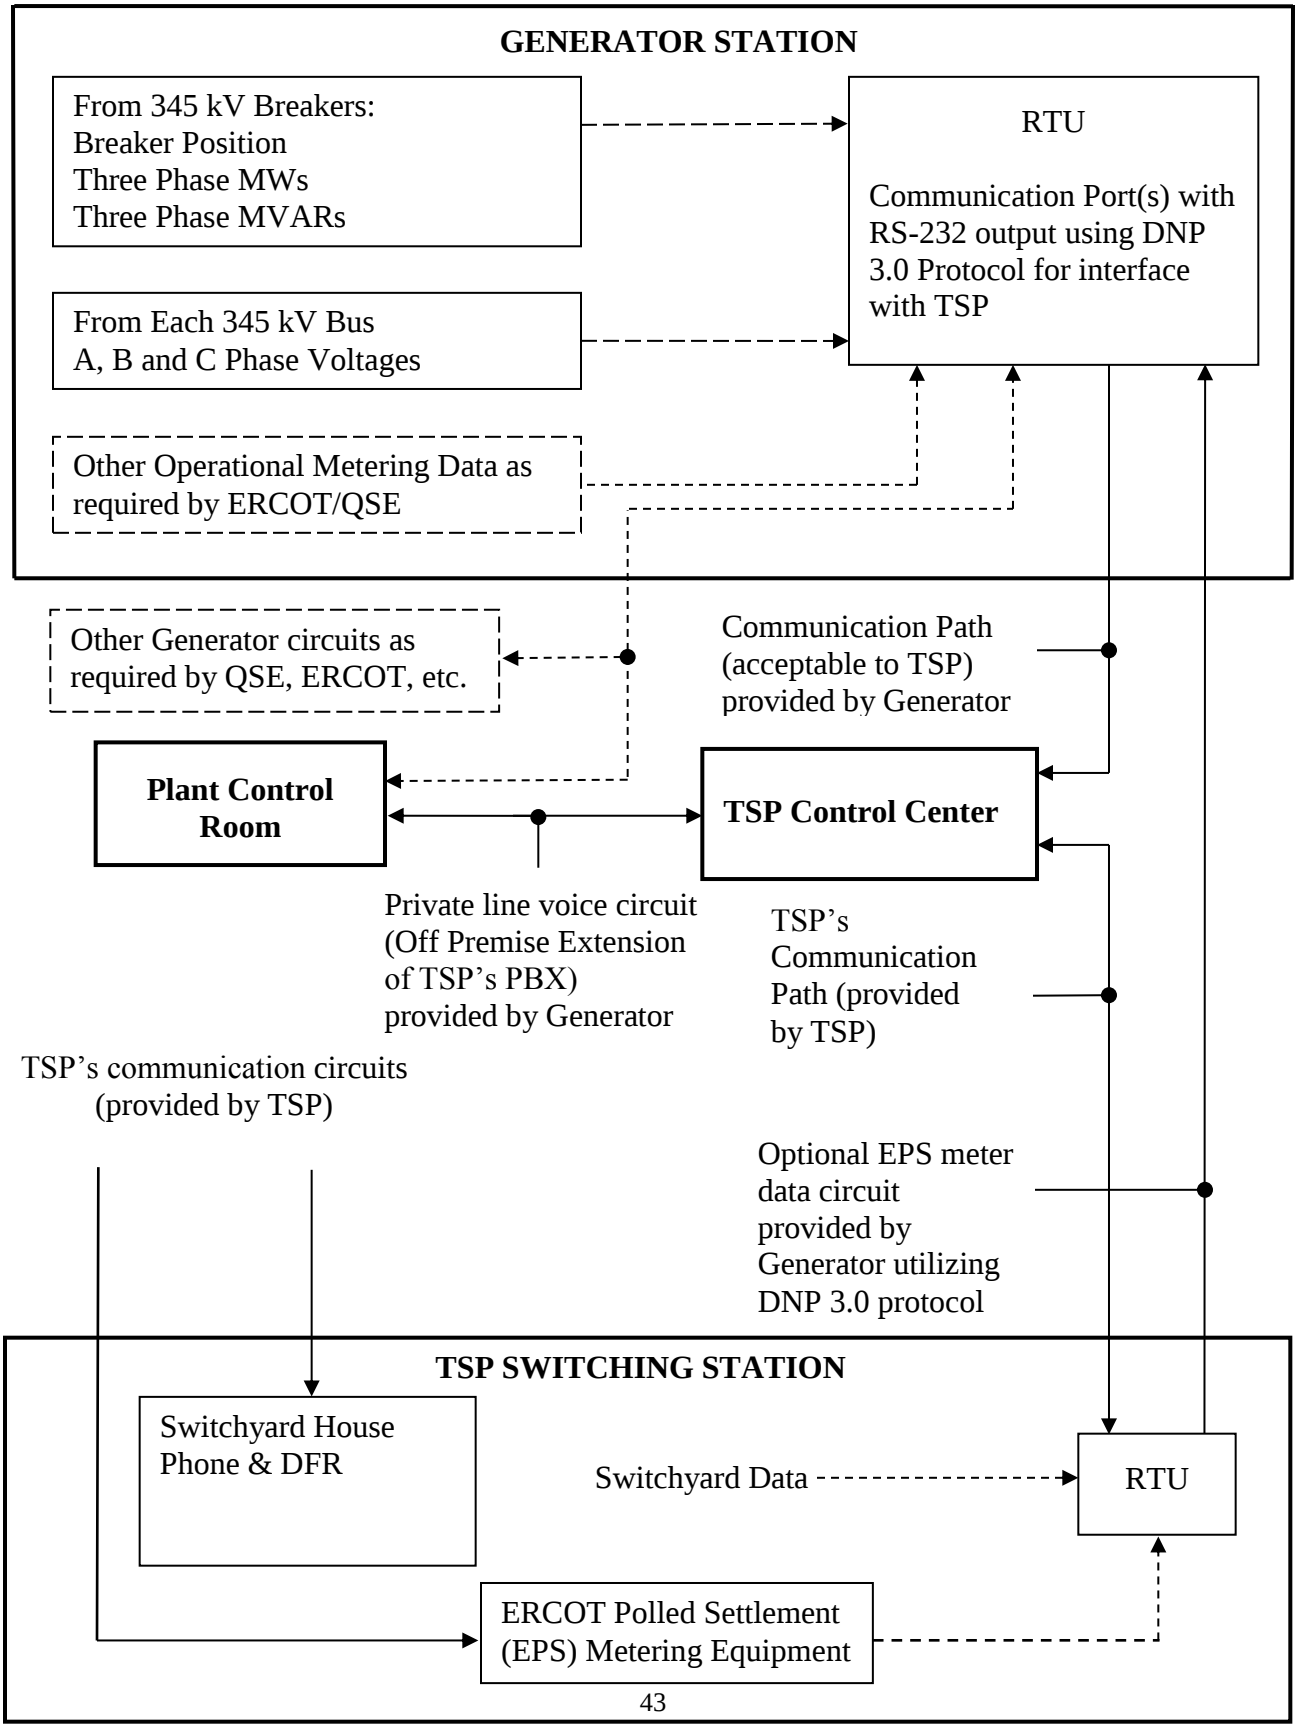
COMMUNICATION GUIDELINE



Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

Attachment 3 to Exhibit "C"
SYSTEM PROTECTION REQUIREMENTS

In addition to the provisions of Sections 5.6 and 6.1 of this Agreement, the following provisions shall apply with respect to system protection issues. To the extent there is a conflict between Sections 5.6 or 6.1 of this Agreement and this Attachment 3 to Exhibit "C", the provisions of this Attachment 3 to Exhibit "C" shall apply.

Generator and TSP shall design, install, operate, maintain, and test system protection equipment consistent with the applicable criteria as described in the ERCOT Requirements and any applicable requirements of Governmental Authorities, including NERC Reliability Standards. To the extent necessary to comply with the testing provisions of these requirements, including the time intervals of such requirements, the circuit breakers in the TIF will be tripped during the required testing, and thus may require an outage or reduction of generation at the Plant. Generator shall, at its expense, provide modifications or additions to its control and protective equipment required to comply with changes in ERCOT Requirements or requirements of Governmental Authorities, including complying with NERC Reliability Standards.

Generator, using Good Utility Practice, shall install sufficient digital fault recording equipment to thoroughly analyze all system disturbances occurring on the GIF and the Plant and to thoroughly analyze the Plant and GIF performance during system disturbances on the ERCOT system. This equipment shall monitor the voltages at major nodes, current at major branches, breaker and switch positions, and dc logic in the relay control scheme.

Generator will provide to the TSP its proposed system protection design, device settings, and other information, as referenced below ("Generator System Protection Components") for review by TSP, by the date specified on Exhibit "B". Generator shall not modify its Generator System Protection Components, at any time during the term of this Agreement, without first submitting such planned modifications to TSP for review. Such review by TSP will be for the limited purpose of determining if Generator's System Protection Equipment is compatible with TSP's System Protection Equipment. The Generator System Protection Components submitted by Generator shall include, but shall not necessarily be limited to:

Docusign Envelope ID: D33AEB47-E4F0-4222-8F3A-56DE425E1E21

1) Design components: scheme types, one line diagram, relay functional, type of protective relays and associated communication equipment, and trip circuit diagrams for the interconnection breakers.

2) Device settings and other information: device settings, CT and VT/CCVT information, transformer connection configuration, transformer tap position(s) and associated positive and zero sequence impedances, transmission line positive and zero sequence impedances, and generator impedances, including the saturated sub-transient impedance, when appropriate.

TSP shall specify system protection and control schemes for the Point of Interconnection. Generator shall have the right to review and comment on such schemes and TSP shall consider Generator's comments when determining such schemes. Generator will install and maintain System Protection Equipment that is compatible with TSP's System Protection Equipment. TSP will work with the Generator to coordinate the establishment of the relay settings for System Protection Equipment owned by both Generator and TSP associated with the Point of Interconnection.

If the GIF facilitates the interconnection of generators to the Southwest Power Pool (or any other reliability council other than ERCOT), Generator will utilize open circuit breakers and air-break switches (which provide visible open indication) as a means of isolating such generators from ERCOT prior to switching them to such other reliability council.

Generator will design, construct, and operate its electrical facilities such that all unit auxiliary power sources will come from the same reliability council to which the unit output is connected.

DELAY LIQUIDATED DAMAGES CALCULATIONS

Guaranteed Substation Completion Date:

Delay Liquidated Damages shall be, with respect to the failure to achieve Project Substation Completion by the Guaranteed Project Substation Completion Date, an amount equal to:

Length of Delay	Damages
1-30 days	$10,000 per day
≥ 31 days	$300,000 plus $50,000 per day of delay greater than 30 days

Guaranteed Mechanical Completion Date:

Delay Liquidated Damages shall be, with respect to the failure to achieve the Mechanical Completion by the Guaranteed Mechanical Completion Date, an amount equal to Fifty-Five Thousand Dollars ($55,000) per day, capped at 15% of the Contract Price.

Guaranteed Project Substantial Completion Date:

Delay Liquidated Damages shall be, with respect to the failure to achieve Project Substantial Completion by the Guaranteed Project Substantial Completion Date, an amount equal to:

Length of Delay	Damages
1-30 days	$75,000 per day
31-60 days	$2,250,000 plus $175,000 per day of delay greater than 30 days
≥ 61 days	$7,500,000 plus $400,000 per day of delay greater than 60 days

For the avoidance of doubt, the aggregate cap for all Liquidated Damages is 15% of the Contract Price.

No-Harm, No-Foul. If Project Substantial Completion is achieved prior to the date that is twenty (20) days after the Guaranteed Project Substantial Completion Date, Delay Liquidated Damages incurred shall be waived if and to the extent that such Delay Liquidated Damages exceed Owner's actual damages, which damages shall be demonstrable to Contactor and including but not limited to:

a) lost revenues associated with not being able to generate energy resulting from such delay, beginning on the Guaranteed Project Substantial Completion Date,
b) any penalties or liquidated damages assessed to Owner for Owner's failure to comply with its own obligations under the PPA or Interconnection Agreement, due to Contractor's failure to achieve Guaranteed Substation Completion Date, Guaranteed Mechanical Completion Date or Guaranteed Substantial Completion Date,
c) increased cost of insurance, borrowing, etc.

For the avoidance of doubt, if Project Substantial Completion is not achieved on or prior to the date that is twenty (20) days after the Guaranteed Project Substantial Completion Date, Owner shall be entitled to all Delay Liquidated Damages accrued.

RED RIVER CLEAN ENERGY

Chisme Solar & Storage Project
Specs valid as of 8/9/2024

Project Location:
31.583027°
-98.839109°

Project Specs:
PV DC Capacity – Approx. 207 MW
PV AC Capacity – 147 MWac
BESS AC Capacity – 146 MWac
BESS Storage – Approx. 300 MWh

General PV System Topology:
- Single Axis Tracker – 1500 VDC System
- Approx. 3-4 MW INV blocks
- MV Accumulation
- New Substation
- System interconnection at existing 345 kV transmission line on property (Transmission operator is Oncor)

General BESS System Topology:
- AC-coupled containerized system, output at MV, located adjacent to Substation

Project Timeline:
- IA submittal/Study Kickoff – September 2022
- SGIA execution/NTP/Security – October 2024
- Estimated COD – April 2027

GROUND LEASE AND EASEMENT AGREEMENT

This GROUND LEASE AND EASEMENT AGREEMENT (this "**Agreement**") dated as of the _____ day of _____, 20__ (the "**Effective Date**"), is entered into by and between **Charles Grady Childress, Sr. and wife, Alice Elaine Childress,** whose address is P.O. Box 869, Blanco, TX 78606 ("**Owner**"), and **Blue Heron Solar, LLC**, a Delaware limited liability company, whose address is 107 Spring St., Seattle, WA 98104 ("**Tenant,**" whether one or more). Owner and Tenant are sometimes referred to herein individually as a "**Party**" and together as the "**Parties**."

RECITALS:

A. Owner owns certain real property located in Brown and Mills Counties, Texas, as more particularly described on Exhibit A-1 hereto (the "**Land**") which is suitable for development of a utility-scale solar energy system (the "**Project**").

B. Tenant desires to lease that portion of the Land described on Exhibit A-2 (the "**Property**") and obtain from Owner fully paid-up easements and rights, in each case for the Term (as defined below), in the airspace above the Property and on, over, under and across the Property for the purposes of development, erection, installation, construction, improvement, reconstruction, enlargement, removal, relocation, replacement, operation and maintenance of energy generation, collection, storage, conversion, distribution and transmission systems and improvements for Solar Energy Facilities (as defined below).

AGREEMENT:

In consideration of the covenants and agreements contained herein, and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties agree as follows:

1. **LEASE AND EASEMENTS**.

1.1 **Grant of Lease**. Owner hereby leases, lets and demises exclusively to Tenant, and Tenant leases, lets and demises from Owner, the Property (the "**Lease**"). The Lease is solely and exclusively for the development, erection, installation, construction, improvement, reconstruction, enlargement, removal, relocation, replacement, operation and maintenance of energy generation, collection, storage, conversion, distribution and transmission systems and improvements, for Solar Energy Facilities and not for any other purpose, and Tenant shall have the exclusive right to develop and use the Property to accomplish the such purposes, to undertake the following activities and to derive all profits therefrom, in each case in Tenant's sole discretion (collectively, "**Operations**"):

(a) Conducting studies of soils, species, habitat, and other meteorological, geotechnical and biological data and determining the feasibility of energy generation, collection, storage, conversion, distribution and transmission on the Property, including taking photographs, showing the property to consultants, project advisors, potential partners or lenders and extracting soil samples;

(b) Investigating, developing, constructing, installing, using, replacing, relocating, reconstructing, improving and removing from time to time, and monitoring, maintaining, repairing and operating the following for the benefit of one or more Projects (i) energy storage systems, which use mechanical, chemical, thermal or other processes to store energy generated at one time for use at a later time, including without limitation, battery storage, (ii) solar panels or other solar renewable energy generation equipment (including the foundations, racking equipment and any other associated equipment or structures); (ii) inverters, underground and/or overhead electrical distribution, collection, transmission and communications lines, wires, poles, towers, electric transformers, electric substations, interconnection and switching facilities, electricity converters, electricity and energy storage equipment and facilities, telecommunications equipment, and power generation facilities; (iii) related foundations, pads and footings, access roads, operation and maintenance facilities; (iv) meteorological towers and measurement equipment; (v) entrance gates in existing fences on the Property to allow Tenant access to the Property and security devices such as fencing or other security safeguards; and (vi) control buildings, maintenance yards, and related facilities and equipment (all of the above, collectively, the "**Solar Energy Facilities**");

(c) Removing, trimming, pruning, topping or otherwise controlling the growth of any tree, shrub, plant or other vegetation; dismantling, demolishing, and removing any improvement, structure, embankment, impediment, berm, wall, fence or other object, on the Property that could obstruct, interfere with or impair the Solar Energy Facilities or the use of the Property intended by Tenant hereunder; and excavating, grading, leveling and otherwise modifying the land, all in Tenant's sole discretion as Tenant may deem desirable or necessary in connection with Tenant's intended use of the Property under this Agreement;

(d) Undertaking the foregoing activities and any other lawful activities, whether accomplished by Tenant or a third party authorized by Tenant (including any utility or transmission provider) that relate to the collection, storage, transmission, distribution, and sale of electric power or that Tenant reasonably determines are necessary, useful or appropriate to accomplish any of the foregoing; and

(e) For the benefit of the Project, exercising the right of ingress to and egress from such Project over and across the Property by means of roads and lanes thereon, if existing, later constructed, or otherwise by such route or routes as Tenant may construct from time to time.

1.2 **Grant of Easements**. In addition to the leasehold interests and other rights granted to Tenant pursuant to Section 1.2 above, Owner hereby grants and conveys to Tenant the following easements (collectively, the "**Easements**"):

(a) The non-exclusive easement on, about, over, under, through and across the portions of the Land, outside of the Property, as identified on Exhibit A-3 attached hereto (such portions collectively herein, the "**Access Areas**") for the construction, installation, operation, use, maintenance, repair, replacement, and enlargement, as Tenant determines necessary or desirable, of the Solar Energy Facilities and any other improvements, fixtures,

facilities, appliances, machinery and equipment (whether temporary or permanent) related to or associated with any of the Energy Facilities.

(b) The right of subjacent and lateral support for the Solar Energy Facilities to whatever extent is necessary for the safe construction, operation and maintenance of the Solar Energy Facilities. In connection with the foregoing, Owner expressly covenants that Owner shall not excavate, nor permit others to excavate, so near to any Solar Energy Facilities as to affect their stability.

(c) The sole and exclusive right to convert all solar energy resources on, about or at the Property, and to conduct the Operations (including, without limitation, the installation or placement of the Solar Energy Facilities) on, about or at the Land.

(d) The non-exclusive easement to permit the Solar Energy Facilities located on the Property or on any Access Areas to: (i) impact view or visual effects from the Land; and (ii) cause or emit noise, vibration, and electromagnetic and frequency interference to any portion of the Land. In connection with the foregoing, Owner hereby acknowledges and agrees that (1) if any component of the Solar Energy Facilities to be installed or constructed on the Property is limited or restricted by any private leases, licenses, restrictions or other agreements or by any law, rule or regulation, Owner hereby waives such limitations and restrictions, and (2) Owner shall cooperate with any efforts by Tenant to obtain similar waivers and rights of encroachment from the owners of properties adjoining the Property.

(e) The non-exclusive easement for vehicular and pedestrian access, ingress and egress to, from and over the Access Areas, at such locations as Tenant shall reasonably determine, for purposes related to or associated with the Solar Energy Facilities installed or to be installed on the Property, the Access Areas, on adjacent property or elsewhere in connection with the Solar Energy Facilities or any other project operated by Tenant; provided, however, Owner's consent (which shall not be unreasonably withheld, conditioned or delayed) shall be required if such easement is used to access property not belonging to Owner or its affiliate, if Solar Energy Facilities or access roads relating to the Solar Energy Facilities are not located on or about such property. Without limiting the generality of the foregoing, this easement shall grant Tenant the non-exclusive right to: (i) construct, use and improve any existing and future roads, bridges and access routes as Tenant reasonably deems necessary or desirable (x) from time to time located on or providing access to the Property, (y) across any other property owned by Owner, and (z) across any access routes over which Owner has the right to travel; (ii) construct, use and maintain erosion control facilities related to the Energy Facilities; (iii) construct, use and maintain signs, fences, gates (whether locked or unlocked) and other safety and protection facilities on, about or at the Energy Facilities (including, without limitation, the transmission facilities); and (iv) utilize portions of the Land for staging and laydown areas in connection with the rights of development, erection, installation, construction, improvement, reconstruction, enlargement, removal, relocation or replacement of the Solar Energy Facilities and/or any other use of the Easements granted to Tenant in this Agreement. To the extent reasonably practicable, Tenant will use existing roads or field roads for ingress and egress. Tenant may construct and maintain new roads on the Property

reasonably necessary for its operations. So long as Tenant uses a particular road for hauling heavy equipment or material, Tenant shall properly surface and/or improve that road prior to using the same for hauling heavy equipment or material and shall thereafter maintain each road, so long as Tenant uses same, including bridges and culverts, in good condition. Tenant shall be responsible for any damage caused by it or its agents or invitees to any existing or newly constructed roads and shall promptly repair any such damages, and maintain such roads in good condition.

(f) The non-exclusive easement to enter the Land to remove, trim, prune, top or otherwise control the growth of any tree, shrub, plant or other vegetation; dismantle, demolish, and remove any improvement, structure, embankment, impediment, berm, wall, fence or other object, on or that intrudes (or upon maturity could intrude) into the Property and/or the Access Areas, or could obstruct, interfere with or impair the Operations, any component of the Solar Energy Facilities or any other intended uses of the Property and Access Areas by Tenant under this Agreement.

(g) Tenant shall have the right to cut existing fences as necessary to exercise its rights hereunder. Temporary fence gaps and gates will be kept closed at all times, except when being used for the passage of equipment or personnel. Tenant shall not cut nor create any opening in any fence or fences on Owner's property without first adequately bracing same. All openings in fences shall be braced with dead-man bracing utilizing all new materials prior to the fence being cut. Tenant agrees after making such cut to promptly install and maintain a cattle guard or gate (of a type and design reasonably satisfactory to Owner), and such gates shall become the property of Owner upon the final termination of this lease. To the extent any gates installed by Tenant are locked, duplicate keys shall be provided to Owner or its representatives. Tenant agrees to promptly close, and at all times to keep locked, all gates on the perimeter of the Property which Tenant, or any agents, servants, employees and/or representatives of Tenant, may use in Tenant's operations on the Property in order to prevent the passage of livestock through any open gates and to prevent any unauthorized persons from coming onto the Property. Tenant shall reimburse Owner for its loss or the loss of its tenants occasioned by Tenant's failure to close or lock any gate, such reimbursement amount shall be the fair market value of the loss. Unless otherwise mutually agreed by the Parties, all fence corners and braces shall be constructed as follows: An 'H' push brace type system will be used for bracing the fence at each end of all openings. These braces shall be installed prior to cutting the fence allowing adequate time for concrete to set prior to tying the fence wire to the braces. When tying wire to brace it should be stretched so that the wire is as tight or tighter than before the fence was cut, thus preventing sagging or leaning of the fence. Care will be taken to assure that the fence braces are in line with the existing fence so that the fence remains straight. Braces or corners for fencing will be constructed to a minimum of the following: Posts shall be four inches (4") O.D. with 3/16" wall eight feet (8') long structural pipe. Post shall be buried three feet (3') in the ground with concrete poured from top to bottom so that no soil will touch pipe at any time (this includes at the surface). A second post shall be placed eight feet (8') from the first. A horizontal pipe four inches (4") O.D. with 3/16" wall will be welded between these two posts within one foot from the top. A 3rd post will be placed eight feet (8') from the 2nd post with a push brace made of a minimum of four inches (4") O.D. with 3/16" wall pipe welded from within the top one foot (1') of the 2nd post to the

bottom six inches (6") (above ground) of the 3rd post. All posts will be capped with a metal cap. Tenant shall promptly repair any fences cut by Tenant after completion of its applicable work. All pits, well and wellhead equipment, tanks, compressors, separators, and all other surface installations and equipment of Tenant shall be fenced to prevent the exposure of livestock to any hazardous conditions, and such fences shall be maintained by Tenant in good condition and repair. All pits dug in cultivated farmland shall be sealed or lined, and constructed and maintained so as to prevent the escape of substances and fluids by leakage, seepage, or overflow, and no fluids, salt water, or other substances will be drained or otherwise escape onto lands of Owner.

1.3 **Exclusive Use; No Hunting, Farming, or Mineral Exploration**. Owner recognizes, acknowledges and agrees that: (i) Tenant shall have the exclusive occupancy of the Property and Owner shall not grant any easements, licenses or other rights in the Property to third parties without obtaining Tenant's prior written consent; and (ii) Tenant at its sole expense may clear, grade and maintain as barren ground all of the ground within the area occupied by the Solar Energy Facilities in accordance with applicable laws and regulations governing soil disturbance. Tenant shall cause all areas of soil distribution to be actively controlled by all reasonable methods to stop soil erosion and specifically prevent soil, sand, rocks, silt and clay from migrating from the disturbed area into any waterway, stream or river. Owner agrees to provide Tenant with current information concerning the status and location of all current and pending oil and gas exploration and production activities on the Property, if any, to the extent the Owner also owns the mineral rights or otherwise possesses such information. Any renewals or extensions of existing oil and gas leases, options to lease, seismic permits or any other agreements made by Owner with a third party in search of oil, gas or other minerals at any portion of the Land or its subsurface shall be subject to the prior written consent of Tenant. Under no circumstances shall Owner or Tenant (or any of their respective invitees) hunt or farm on the Property or utilize the surface or any portion of the subsurface of the Property lying within five hundred feet (500') below the surface thereof, for the exploration or the development of oil, gas or other minerals. Methods for development of oil, gas and minerals may be used by the Owner, his heirs or assigns that do not interfere with the Solar Energy Facilities upon the surface, or the first five hundred feet (500') below the surface, of the Property. Tenant shall not be responsible to pay Owner any losses of income, rent, business opportunities, profits or other losses arising out of Owner's inability to grow crops, graze livestock, or otherwise use the Property.

1.4 **Data**. Any and all data collected by or on behalf of Tenant in connection with the Operations shall be the sole property of Tenant.

1.5 **No Obligation to Develop**. Notwithstanding the exclusive nature of the Lease and certain of the Easements, nothing expressly stated or implied in this Agreement or represented to Owner shall be construed as requiring Tenant to: (a) undertake construction, installation or operation of any Solar Energy Facilities on the Property or elsewhere; (b) generate, store, charge, discharge or sell any minimum or maximum amount of energy from the Property; (c) continue operations of any component of the Solar Energy Facilities from time to time located on the Property or elsewhere; or (d) prohibit Tenant from removing any component of the Solar Energy Facilities from the Property.

1.6 **Site Rules**. Tenant and all Tenant personnel, and all personnel of third parties authorized to enter the Property by Tenant, shall follow the following rules while on the Property. Owner may bar further access to the Property as to any individual who commits repeated violations of these rules. In addition, any individual violating rules (c)(i), (iv), (v), or (vi) once, shall be immediately expelled from the Property and will be banned from the Property thereafter. The rules are:

(a) All exterior access gates shall remain padlocked at all times, with keys to each lock provided to Owner for each gate (to the extent such gate is installed by Tenant). Except during construction with a gate monitor, all access gates, as well as all interior gates, shall remain closed at all times, other than to enter or exit such gate.

(b) Smoking is prohibited except in designated construction areas and in vehicles. Tenant will employ prudent precautions to prevent fires, including avoiding the build-up of plant materials under vehicles. In the event a grass fire is started, Tenant shall be promptly notified. Tenant agrees to pay to Owner a reasonable fee per acre for fire damage but not less than $15.00 per acre for fire damage to pasture land (whether located on the property or adjacent lands owned by Owner) that is caused by Tenant, its employees, contractors, agents, or any individuals allowed onto the Property by Tenant. Such payment shall be due and payable within sixty (60) days of such fire. Such payment shall in no way limit or waive Owner's right to obtain payment for fire damage to animals, structures, equipment or other things located on the Property, or lands adjacent to the Property.

(c) Tenant shall at all times maintain the Property in a neat, clean and presentable condition. Tenant shall not willfully or negligently damage or destroy the Property and shall keep the Property clean and free of debris created by Tenant, its contractors, or others brought on to the Property by Tenant. Tenant shall not use the Property for storage, except for materials, construction equipment and vehicles directly associated with its construction, operation and maintenance activities on the Property or adjacent properties that are part of the Solar Power Generation Facility. At no time shall any employees of Tenant, or any third parties authorized to enter the Property by Tenant bring any of the following onto the Property:

(i) weapons of any type, including but not limited to, guns, bows and arrows, or sling shots;
(ii) animal calling devices;
(iii) fishing equipment or nets;
(iv) dogs, cats or any other animals;
(v) alcoholic beverages;
(vi) illegal drugs or related paraphernalia.

(d) Company, its employees, contractors, agents and any individual allowed onto the Property by Company will confine their activities on the Property to the designated access routes and to the areas upon which operations are then being conducted..

(e) No wood, plants, animals (dead or alive), antlers, artifacts, military equipment or artifacts, Native American or manmade artifacts or any other item that was

not originally brought onto the Property by Tenant's personnel shall be removed from the Property, except that Tenant can burn and clear brush on the Property.

(f) A speed limit of 25 miles per hour (15 miles per hour at night) shall be strictly observed while using roads on the Property.

(g) This Agreement does not cover or include any right or privilege of hunting or fishing on the Property, all such rights being expressly reserved to Owner.

2. **EASEMENTS RUNNING WITH THE LAND; USE OF WATER**.

2.1 **Covenants Running With the Land**. The Easements and other related rights granted by Owner in this Agreement to Tenant are easements in gross for the benefit of Tenant as owner of the rights created by the Easements. The burdens of the Lease and Easements and all other rights granted to Tenant in this Agreement shall run with and against the Property and shall be a charge and burden on the Property and shall be binding upon and against Owner and its successors, assigns, permittees, licensees, Tenants, employees and agents.

2.2 **Sale of Water**. Subject to the terms and conditions of this Agreement, Owner hereby agrees to sell to Tenant water produced from under the Property which Tenant shall utilize in the construction, operation or maintenance of the Solar Energy Facilities. Tenant shall have the exclusive right to purchase or otherwise utilize water from water wells located or to be located on the Property which Tenant, in the exercise of its sole discretion, desires to purchase. Tenant may draw an unlimited number of barrels of water per day from the Lands. For the purposes of this agreement, a barrel shall be the equivalent of a 42-gallon U.S. fluid barrel. Tenant shall have the right to produce, transport, and deliver such water from existing water wells or wells drilled upon said Property for use only in the construction, operation or maintenance of the Solar Energy Facilities as agreed upon in this Agreement. Owner reserves the right to use water produced from the Water Well(s) for its farm and ranch operations on Owner's Lands so long as it does not unreasonably interfere with the rights granted to Tenant hereunder. Tenant agrees to deliver notice to Owner of Tenant's intent to use water, no later than fifteen (15) days prior to the date of usage.

2.3 **Additional Water Wells**. Owner grants the Tenant the right, at its sole risk and expense, to drill water well(s) on the Property ("**Wells**") which are necessary for the production of water to be used by the Tenant. Such Wells shall be completed pursuant to all state and federal regulations and meet any underground water conservation requirements of any local water district. Upon the expiration or termination of this Agreement, subject to the immediately succeeding sentence, Tenant shall convey on an "AS-IS," "WHERE-IS," "WITH ALL FAULTS BASIS," to Owner, all of Tenant's right, title, and interest in and to any and all additional water meters or metering equipment, pumps, motors, panel boxes, wiring, casing and associated equipment used on the Property by the Tenant, excluding all storage tanks on the Property by or for Tenant. Tenant shall provide Owner with written notice of Tenant's intent to cease operations on the Property. For a period of one hundred-eighty (180) days following Owner's receipt of such notice, Owner shall have the option to takeover, free of cost to the Owner, all Wells, including all pumps, panel boxes, wiring and pipe by providing Tenant written notice of its election to do so. If Owner chooses to take such Wells the Tenant shall surrender such Wells to Owner in an "as is" condition. Upon assignment to Owner from Tenant , Owner shall assume all future cost, expense and liability with

regard to the assigned Wells, including the plugging and abandonment of said Wells. If Owner chooses not to take over the operations of the Wells, Tenant agrees to plug the Wells in accordance with the rules, regulations, and specifications of the Texas Railroad Commission or any Underground Water Conservation District within nine (9) months after the termination of this Agreement. In the event Tenant fails to properly plug and abandon the Wells within nine (9) months after the termination of this Agreement, Tenant shall pay to the Owner a sum of Two Hundred Fifty Dollars ($250.00) per Well per month until such time as the Wells are properly plugged in accordance with the rules, regulations, and specifications of the Texas Railroad Commission or any Underground Water Conservation District.

2.4 **Metering; Payments for Water Volumes Purchased by Purchaser**. Tenant agrees to meter the volume of all water pumped, taken, or used by Tenant from water wells or wells now or hereafter located on the Property at the wellhead prior to entry of water into any pipe storage or transportation equipment. Tenant shall install and maintain at all times during the term of this Agreement, a meter at each water well now or hereafter located on the Property and which is used or pumped by or for Tenant. Owner may at its own cost install and own check meters on all water wells. Tenant shall measure and report, for each calendar month in which Tenant uses water from a well on the Property, the volume of water used by Tenant by written record reflecting the volume shown by the meter. At such time after Tenant has recovered its actual out-of-pocket costs associated with the drilling of a water well and the equipping of such water well, only then shall Tenant pay to Owner the sum of TWENTY-FIVE CENTS ($.25) per barrel (calculated as forty two (42) gallons) of water removed by Tenant as full and complete consideration for Tenant's retrieval and conveyance of the water located on the Property. Calculation of the payment will be based on the meter reading quantity at the above stated rate. The fee shall be paid monthly by Tenant on or before thirty (30) days after the last day of each month during the Term for water, if any, obtained by Tenant from a well on the Property during the preceding month. The Owner acknowledges that Tenant is not obligated to purchase or retrieve a minimum or maximum amount of water from the Property during the term of this Agreement. Upon completion of any water well on the Property, Tenant shall provide to the Owner a written detail of the cost of drilling and equipping each well, evidenced by copies of receipts for any cost incurred, that shall be recouped by Tenant.

2.5 **Surface Tanks.** Tenant shall have the right to install and equip one or more free-standing surface tanks on the Property for the purposes of storing water to be utilized in Tenant's operations and activities, along with a truck turnaround area. Upon abandonment of any surface tank by Tenant, Tenant shall remediate the area used and remove all caliche and rock and contaminated soil, and the land will be filled, leveled, and contoured to as near its original condition as is reasonably practical with like kind of topsoil to the surrounding area. Owner shall have the option to retain any surface tank upon the termination of this Agreement. Tenant shall also have the right to construct one or more earthen surface tanks on the Property for the purpose of catching and storing water to be utilized in Tenant's operations and activities pursuant to the same conditions set forth above in this Section with respect to standing surface tanks. Upon abandonment of any earthen surface tank, such tank shall be left as is for the future use of the Owner.

2.6 **Electrical Services, Pumps and Materials**. During the term Term, Tenant shall furnish all electrical service, pumps, material, and services for delivery of water from all water

wells located on the Property from which Tenant pumps or uses water. Owner shall provide the water well or wells that are in existence at the time of this Agreement in good working order for the Tenant's use. If Tenant and Owner are utilizing the same well, Tenant shall be responsible for furnishing all electrical services, pumps, material, and services for delivery of water, regardless of Owner's use of said well. Tenant, at its own cost and expense, shall keep all equipment for the pumping of water in good working condition during the Term; provided, however, that Tenant shall at all times during the Term exercise reasonable care in using such equipment and reimburse Owner for any damage to such equipment owned by the Owner caused by accident, neglect, or abuse by the Tenant, it's employees, agents, or invitees. At the termination of this Agreement, Tenant shall surrender the equipment to Owner in good working order and condition, reasonable wear and tear resulting from the proper use of the equipment alone excepted.

3. **TERM**. Except as provided in Section 3.5, the term of this Agreement shall commence on the Effective Date and may continue for the following described periods (collectively, the "Term"):

3.1 **Development Term**. The Term shall commence on the Effective Date and continue until the earlier of the following to occur: (a) five (5) years after the Effective Date or (b) the date on which Tenant begins selling electrical energy from the Solar Energy Facilities to a third party power purchaser (excluding start-up and testing of the Solar Energy Facilities) (the "**Development Term**"). During the Development Term, Tenant agrees to use commercially reasonable efforts to investigate and determine the feasibility of obtaining entitlements, utility meters, interconnection points, and other agreements for Tenant's proposed Operations. Within five (5) days following the Effective Date, Owner shall make available to Tenant copies of all environmental, geotechnical and other site assessments, surveys, plans and other such records of Owner to the extent such information exists and relates directly to the proposed Operations and/or the proposed Solar Energy Facilities to the extent that Owner has not already provided such materials to Tenant. Owner shall assist and fully cooperate with Tenant, at Tenant's sole cost and expense, in complying with or obtaining any land use permits and approvals, tax-incentive or tax-abatement program approvals, building permits, environmental impact reviews or any other approvals necessary or deemed desirable by Tenant in connection with the development, financing, construction, installation, replacement, relocation, maintenance, operation or removal of the proposed Energy Facilities and/or the other aspects of Tenant's proposed Operations, including, without limitation, execution of applications for such approvals and delivery of information and documentation related thereto, and execution, if required, of any orders or conditions of approval.

3.2 **Tenant Pre-Operation Termination**. If Tenant determines, in the exercise of Tenant's sole and absolute discretion, that the Property is not adequate for the proposed Operations or that Tenant will not be able to timely obtain the necessary entitlements, utility meters, interconnection points, and other agreements for Tenant's proposed Operations, Tenant may elect to terminate this Agreement by providing written notice ("**Pre-Operation Termination Notice**") to Owner on or prior to the expiration of the Development Term. If Tenant delivers a Pre-Operation Termination Notice to Owner, then (i) Tenant shall pay Owner all amounts owed by Tenant under this Agreement through the effective date of such termination; (ii) Tenant shall deliver to Owner a Release of Lease in recordable form or other termination notice with respect to the Property, and (iii) except for rights and obligations that expressly survive termination as set forth herein, Tenant shall have no further liability under this Agreement.

3.3 **Tenant Pre-Operation Partial Surrender**. Subject to this Section 3.3 but notwithstanding any other provision of this Agreement to the contrary, Tenant may, in the exercise of Tenant's sole and absolute discretion (for any reason or no reason at all), elect to terminate this Agreement as to any portion of the Property at any time during the Development Term by giving Owner written notice ("**Partial Surrender Notice**"). If Tenant delivers a Partial Surrender Notice to Owner, then (i) if the partial surrender results in the Property constituting less than five hundred (500) acres (in the aggregate between this Agreement and that certain Ground Lease Agreement dated on or around the date hereof between Tenant and George Robert Hardberger, Trustee of the Seven Seas Trust dated December 20, 2012), Owner shall have the option to terminate this Agreement by providing written notice of such election to Tenant within thirty (30) days following Tenant's delivery of the Partial Surrender Notice, provided Tenant does not rescind such Partial Surrender Notice within ten (10) Business Days of its receipt of Owner's election to terminate, (ii) Tenant shall pay Owner all amounts owed by Tenant under this Agreement with respect to the portion of the Property so surrendered through the effective date of such surrender and termination; (iii) Tenant shall deliver to Owner a Release of Lease in recordable form designating by a metes and bound legal description of the portion of the Property surrendered, and (iv) except for rights and obligations that expressly survive termination as set forth herein, Tenant shall have no further liability under this Agreement as to such surrendered portion of the Property. Without limiting the foregoing, for any partial termination of the Property, the amount of Rent under this Agreement following the date of such surrender and termination shall be proportionally reduced to reflect the reduced number of acres then comprising the Property.

3.4 **Operational Term**. Provided that Tenant has not fully surrendered or terminated this Agreement, then upon the expiration of the Development Term, the term of this Agreement shall automatically extend for an additional period commencing upon the expiration of the Development Term and continuing (unless sooner terminated pursuant hereto) for a period ending on the date that is twenty-five (25) years thereafter (the "**Operational Term**").

3.5 **Renewal Options**. Tenant shall have two (2) separate, consecutive options (each such option being referred to herein as a "**Renewal Option**", and all options collectively referred to herein as the "**Renewal Options**") to extend the Term of this Agreement for a consecutive period of five (5) years beyond the then applicable expiration of the Term (each such extension a "**Renewal Term**"). Each Renewal Option must be exercised, if at all, by written notice ("**Election Notice**") from Tenant to Owner given not less than sixty (60) days prior to the then applicable expiration of the Term. Owner shall provide Tenant written notice not less than ninety (90) days prior to the then applicable expiration of the Term that the then current Term is expiring and the date for exercising the next applicable Renewal Option. Any such Election Notice given by Tenant to Owner shall be irrevocable. If Tenant fails to exercise any Renewal Option in a timely manner, as provided for above, Owner shall give Tenant written notice that Owner has not received an Election Notice from Tenant pertaining to the next applicable Renewal Term (the "**Non-Receipt Notice**") and that Tenant shall have an additional thirty (30) days from the date of Tenant's receipt of the Non-Receipt Notice (the "**Extension Period**") to exercise an applicable Renewal Option by sending an Election Notice to Owner. If Tenant has not exercised a Renewal Option by sending Owner an Election Notice within the Extension Period, then the Renewal Option shall be deemed not exercised and this Agreement shall terminate at the end of the then applicable expiration of the Term. The Parties recognize that the Renewal Options have significant value to Tenant and that Tenant should not forfeit such Renewal Options for inadvertence in giving notices, but should

affirmatively choose whether to exercise a Renewal Option, and the Parties have accordingly provided for the above notices from Owner so that Renewal Options will not be unintentionally lost. If Tenant validly exercises a Renewal Option in a timely manner, as provided for above, but fails to exercise a subsequent Renewal Option in a timely manner, as provided for above, such subsequent Renewal Options shall be void. Each Renewal Term shall be upon the same terms and conditions as the initial Term.

4. **RENT**.

4.1 **Development Term Rent**. Commencing on the Effective Date and continuing until the date which is the earlier of (i) the day immediately preceding the commencement of the Operational Term, or (ii) the effective date of termination of this Agreement as set forth in a Pre-Operation Termination Notice delivered by Tenant pursuant to Section 3.2 above, Tenant shall pay to Owner annual rent with respect to the Property (and also in consideration of the Access Areas, including the Easements), in an amount equal to Two Hundred and No/100 Dollars ($200.00) per acre of the Property (the "**Development Term Rent**"). Payments of Development Term Rent shall be made in arrears on the last business day of each calendar year. Notwithstanding anything to the contrary herein, no Development Period Payments shall be due or payable with respect to any periods from and after commencement of the Operational Term.

4.2 **Operational Term Rent**. Commencing upon commencement of the Operational Term and continuing thereafter during the remainder of the Term (and any extensions or renewals thereof), Tenant shall pay to Owner annual rent with respect to the Property (and also in consideration of the Access Areas, including the Easements), in an amount equal to Four Hundred Fifty and No/100 Dollars ($450.00) per acre of the Property (the "**Operational Term Rent**" and collectively with the Development Term Rent, the "**Rent**"). Payments shall be made in arrears on the last business day of each calendar quarter. The Operational Term Rent shall increase each year on January 1 (pro-rated for any periods of less than twelve months at the start of the Operational Term) by an amount equal to one percent (1.0%) multiplied by the prior year's Operational Term Rent for the duration of the Operational Term.

4.3 **General Terms**. All Rent due to Owner under this Agreement shall be "gross rent" paid to Owner at the address set forth in Section 14.9, or any other place or places that Owner may designate by written notice to Tenant from time to time. There are no "net" or pass-through charges to Tenant under this Agreement. If either the Effective Date or commencement of the Operational Term occurs on a day other than the first day of a calendar year, then Development Term Rent or Operational Term Rent, as applicable, provided for such partial calendar year shall be prorated and the prorated amount shall be paid on the first day of the calendar year following the Effective Date, or the first day of the calendar year following the commencement of the Operational Term, as applicable, together with any other amounts payable on that day. If the Term terminates on other than the last day of a calendar year, then Development Term Rent or Operational Term Rent, as applicable, provided for such partial calendar year shall be prorated and the prorated installment shall be paid on the expiration date of the Term. If Owner's interest in all or any portion of the Property constitutes anything less than the entire and undivided fee simple estate thereof (whether Owner's interest is herein specified or not), or no interest therein, then the moneys accruing (including, without limitation, the Rent) from any such part constituting less than

such full interest, shall be paid only in the proportion which the interest therein, if any, covered by this Agreement, bears to the whole and undivided fee simple estate therein.

5. **OWNERSHIP OF ENERGY FACILITIES AND OTHER ATTRIBUTES.** Owner agrees that all Solar Energy Facilities installed or placed on any portion of the Property or the Land by Tenant and its successors or assigns, whether real, personal or mixed, shall remain the property of Tenant and shall be removable by Tenant at any time. Owner further acknowledges and agrees that notwithstanding that the Solar Energy Facilities may be fixtures and the manner of installation of the Solar Energy Facilities, the Solar Energy Facilities shall not become a part of the real property comprising the Property, and Owner shall have no ownership interest in the Solar Energy Facilities. Without limiting the generality of the foregoing, Owner hereby waives any statutory or common law lien that it might otherwise have in or to the Solar Energy Facilities or any part thereof and agrees that the Solar Energy Facilities may not be sold, leased, assigned, mortgaged, pledged or otherwise alienated or encumbered by Owner with Owner's interest in the Property. In addition, Owner agrees that, notwithstanding the occurrence of an Event of Default beyond all applicable notice and cure periods (including those granted to Mortgagee), Owner has not and shall not thereafter acquire any interest in the Solar Energy Facilities and Tenant or Mortgagee (or its designee) may remove the Solar Energy Facilities from the Property. Owner hereby acknowledges and agrees that Owner shall have no ownership or other interest in any (and Tenant is the sole and exclusive owner of all) Solar Energy Facilities installed on the Property or any environmental attributes produced therefrom, including, without limitation, any and all federal, state and/or local benefits and credits (including tax credits, investment credits, carbon credits and renewable energy credits (including as defined in 16 Texas Administrative Code § 25.173(c)(13)), rebates, incentives, benefits, emissions reductions, entitlements, reporting rights, deductions, depreciation, offsets and allowances of any kind, howsoever entitled, attributable to the Solar Energy Facilities or the electric energy, generation capacity or other storage-based or generator-based products produced therefrom, whether in effect as of the date of this Agreement or as may come into effect in the future.

6. **TAXES, ASSESSMENTS AND UTILITIES.**

6.1 **Owner's Obligations**. Owner shall pay the taxes, assessments or other fees attributable to any improvements installed by Owner or others (excluding Tenant and its agents) on the Property and to the underlying value of the Property. Tenant shall be liable for any roll-back or similar taxes resulting from change in use of the Property because of Tenant's use of the Property as contemplated by this Agreement and all increases to taxes, assessments attributable thereto. Owners shall be liable for all real property taxes and assessments attributable to the underlying value of the Property itself or resulting from a sale or transfer by Owner of the Property. If Owner shall fail to pay any tax owed by Owner under this Section 6.1 when due, Tenant may, at its option, pay such delinquent taxes and assessments and any accrued interest and penalties, and deduct and set off the amount of its payment from any Rent or any other payment otherwise due to Owner from Tenant.

6.2 **Tenant's Obligations**. During the Term and after the termination of this Agreement until all Solar Energy Facilities have been removed from the Property to the extent required by Section 13.2, Tenant shall pay all taxes that are attributable solely to any increase in Owner's real property taxes attributable to the Energy Facilities and other improvements to the

Property installed by Tenant; *provided* that Owner provides Tenant with copies of the applicable current and past statements of real estate taxes payable for the Property and any related information demonstrating the reasons for the increase in real estate taxes together with the current statement of real estate taxes from the taxing authority in accordance with this Section 6.2. Owner and Tenant agree jointly to use commercially reasonable efforts to cause the relevant tax assessor to issue separate property tax bills to Owner and Tenant. If the relevant tax assessor does not issue separate property tax bills to Owner and Tenant, Owner shall provide a copy of each property tax bill to Tenant within ten (10) days of receipt and Tenant shall have the right to pay its portion of the real property taxes directly to the taxing authority. In all cases where Tenant pays real estate taxes directly to the tax assessor, Tenant shall provide Owner with evidence of such payment promptly thereafter.

6.3 **Right To Contest**. Either Party may contest the validity or amount of any levied taxes, assessments, or other charges for which each is responsible under this Agreement as long as such contest is pursued in good faith and with due diligence and the Party contesting the tax, assessment, or charge has paid the obligation in question or established adequate reserves to pay the obligation in the event of an adverse determination. Upon request by Tenant, Owner shall execute any authorization or other instrument required to give Tenant the legal standing to file and pursue any such contest.

6.4 **Utilities.** Tenant shall pay for all water, electric, telecommunications, and any other utility services used by the Solar Energy Facilities or Tenant on the Property and make all deposits that are required by the companies affording the utilities.

7. INDEMNIFICATION; INSURANCE.

7.1 **Indemnification**. Each Party (the "**Indemnifying Party**") shall defend, indemnify and hold harmless the other Party and such other Party's Related Persons (as defined below) (each, an "**Indemnified Party**" from and against any and all claims, litigation, actions, proceedings, losses, damages, liabilities, obligations, costs and expenses, including reasonable attorneys', investigators' and consulting fees, court costs and litigation expenses (collectively, the "**Claims**") suffered or incurred by such Indemnified Party, arising from (a) physical damage to the Indemnified Party's property (which in Tenant's case, shall include damage to any Solar Energy Facilities), to the extent caused by the Indemnifying Party or any Related Person thereof, (b) physical injuries or death (including by reason of any hunting on the Property by Owner or any party claiming under Owner) to or of the Indemnified Party or a third party, to the extent caused by the Indemnifying Party or any Related Person thereof, (c) any breach of any covenant, and any failure to be true of any representation or warranty, made by the Indemnifying Party under this Agreement, (d) the presence or release of Hazardous Materials (as defined in Section 9.5) in, under, on or about the Property, which are or were brought or permitted to be brought onto the Property by the Indemnifying Party or any Related Person thereof, (e) the violation of any Environmental Law (as defined in Section 9.5) by the Indemnifying Party or any Related Person thereof, (f) Claims by neighboring or area landowners arising from the Indemnifying Party's use of the Property, (g) the failure to be true of any representation or warranty made by the Indemnifying Party in this Agreement, (h) any breach of this Agreement by the Indemnifying Party or (i) any negligence or willful misconduct on the part of the Indemnifying Party; *provided*, however, that in no event shall the Indemnifying Party be responsible for defending, indemnifying

or holding harmless any Indemnified Party to the extent of any Claim caused by, arising from or contributed to by the negligence or willful misconduct of such Indemnified Party. The reference to property damage in this Section 7 above does not include the loss of: (a) timber; (b) rent; (c) business opportunities; (d) profits and the like that may result from Tenant's exercising its rights granted pursuant to this Agreement (it being understood that any such losses will be compensated solely through the provisions of Section 4). The foregoing indemnity shall not extend to a Party's lawful enforcement of its rights under this Agreement. "**Related Person**" shall mean any affiliates, contractors, tenants, grantees, and sub-lessees, and each of their respective, principals, officers, employees, servants, agents, representatives, subcontractors, licensees, invitees, guests, successors and/or assigns of a Party.

7.2 **Insurance**. Upon the date of this Agreement, Tenant shall, at its expense, obtain and maintain, or cause to be maintained, insurance policies having the coverage limits and for the purposes set forth on Exhibit B. Tenant shall name Owner as an additional insured on its comprehensive or commercial general liability insurance policy and shall provide for 30 days' prior written notice to Owner of any cancellation or material change. Certificates of such insurance shall be provided to Owner upon written request. Notwithstanding the provisions of this Section 7.2, Tenant shall have the right, at its sole election but upon not less than thirty (30) days' prior notice to Owner, to self-insure some or all of the risks for which insurance is required to be carried by Tenant pursuant to the terms of this Agreement.

8. **TENANT'S REPRESENTATIONS, WARRANTIES, AND COVENANTS.** Tenant hereby represents, warrants, and covenants to Owner that:

8.1 **Keeping the Property Clean**. Tenant shall use commercially reasonable efforts to maintain its Solar Energy Facilities and keep the same free from debris and waste including weeds. Tenant shall use commercially reasonable efforts to keep the Property in a neat, clean, orderly, and safe condition at all times, and shall remove from the Property all refuse, litter and debris created by Tenant and its invitees, licensees, agents and contractors; *provided,* however, that Tenant shall not be required to remove the remains of any improvements on the Property made by the Owner as of the Effective Date. Tenant must take all actions at its own expense as required by applicable law for the suppression of ambient dust. Tenant shall not use any pesticides or herbicides on the Property other than as may be reasonably required for the maintenance of the Property or development, construction or operation of the Solar Energy Facilities, in compliance with this Agreement and applicable law.

8.2 **Requirements of Governmental Agencies**. Tenant, at its expense, shall comply in all material respects with valid laws, ordinances, statutes, orders, and regulations of any governmental agency applicable to the Solar Energy Facilities; it being understood and acknowledged that Owner shall have no obligations to pay for any improvements or other exactions as may be required to gain final approval of the Solar Energy Facilities by the permitting authorities having jurisdiction. Tenant shall have the right, in its sole discretion and its sole expense, to contest by appropriate legal proceedings, the validity or applicability to the Property or Solar Energy Facilities of any law, ordinance, statute, order, regulation, property assessment, or the like now or hereafter made or issued by any federal, state, county, local or other governmental agency or entity. Any such contest or proceeding shall be controlled and directed, and entirely financed, by Tenant.

8.3 **Construction Liens**. Subject to the following sentence, Tenant shall keep the Property free and clear of all liens and claims of liens for labor and services performed on, and materials, supplies, or equipment furnished to, the Property in connection with Tenant's use of the Property pursuant to this Agreement. Tenant shall be entitled to contest any such lien without posting a bond as long as (and only so long as) no sale date has been established for a sale affecting Owner's interest in the Property. In the event such a sale has been scheduled, Tenant shall, within thirty (30) days after it receives notice thereof, remove or bond over such lien from the Property pursuant to applicable law.

8.4 **Hazardous Materials**. Tenant shall not violate any Environmental Laws (as defined below in this Section) relating to the use, storage, release, discharge, disposal, transportation or presence of any Hazardous Material (as defined in Section 9.5), on or under the Property. Tenant shall defend, indemnify and hold harmless Owner and its Related Persons against any such violation, and shall remediate to the full extent required by Law any Environmental Claim, that is caused by Tenant or Tenant's agents or contractors. "**Environmental Claims**" shall mean all Claims asserted by governmental bodies or other legally permitted third parties for pollution or environmental damage, or for noncompliance with Environmental Laws, arising from or attributable to Tenant's operations on the Property and all cleanup and remediation costs, fines and penalties associated therewith. Environmental Claims shall not include the costs of any remediation undertaken voluntarily by any party, unless such remediation is performed under the imminent threat of a Claim by a governmental body or other third party or to comply with any applicable Environmental Law. "**Environmental Laws**" shall mean any laws, regulations, rules, ordinances, or orders of any governmental authority(ies), which relate to or otherwise impose liability, obligation, or standards with respect to pollution or the protection of the human health, safety or the environment, including but not limited to, the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended (42 U.S.C. §9601 et seq.), the Resource Conservation and Recovery Act of 1976 (42 U.S.C. §§6901 et seq.), the Clean Water Act (33 U.S.C. §§466 et seq.), the Safe Drinking Water Act (14 U.S.C. §§1401 1450), the Hazardous Material Transportation Act (49 U.S.C. §§1801 et seq.), the Clean Air Act, and the Toxic Substances Control Act (15 U.S.C. §§2601 2629) or their state counterparts that are applicable to solar energy operations. The obligation in this Section 8.4 to indemnify and hold harmless Owner shall survive the termination of this Agreement.

8.5 **Tenant's Authority**. Tenant has the full power and authority to execute and deliver this Agreement. Each person signing this Agreement on behalf of Tenant is authorized to do so. When executed and delivered by Tenant, this Agreement constitutes a valid and binding agreement of Tenant enforceable against Tenant in accordance with its terms except as enforceability may be limited by applicable bankruptcy or other similar laws affecting the rights of creditors generally.

9. **OWNER'S REPRESENTATIONS, WARRANTIES, AND COVENANTS**. Owner hereby represents, warrants, and covenants as follows:

9.1 **Owner's Authority**. Owners are the sole owner of the Property and ha the full power and authority to execute and deliver this Agreement. Each person signing this Agreement on behalf of Owner is authorized to do so. When executed and delivered by Owner, this Agreement constitutes a valid and binding agreement of Owner enforceable against Owner in

accordance with its terms except as enforceability may be limited by applicable bankruptcy or other similar laws affecting the rights of creditors generally.

9.2 **No Interference**. Tenant shall have the quiet use and enjoyment of the Property in accordance with the terms of this Agreement without any interference of any kind by Owner or any person claiming through Owner. Without limiting the generality of the foregoing, Owner shall not undertake any activities on the Property during the Term nor grant any rights to any person or entity with respect to the Property other than Mortgagee (as defined below) during the Term, and Owner's activities and any grant of rights Owner makes to any person or entity, located on other property, shall not currently or prospectively, disturb or interfere with: the construction, installation, maintenance, or operation of the Solar Energy Facilities, whether located on the Property or elsewhere; access over the Property to such Solar Energy Facilities; any other Operations; or the undertaking of any other activities permitted hereunder. Without limiting any other rights of Tenant under this Agreement, Owner shall not (a) disturb or interfere with the sunlight or solar energy falling on or available to the Property or any other solar resources of the Property, whether by placing solar panels, wind turbines, telecommunication towers or antennas, planting trees or constructing buildings or other structures, or by engaging in any other activity on the Property or elsewhere that could be reasonably expected to cause a decrease in the output or efficiency of the Solar Energy Facilities, or (ii) disturb the subsurface such that it could be reasonably expected to damage or interfere with the structural integrity of the Energy Facilities.

9.3 **Real Property**.

(a) Owner has good and marketable indefeasible fee simple title in, and the right to possess, the Land, free and clear of all liens other than (a) those matters set forth on Exhibit C of this Agreement and (b) liens for taxes not yet due and payable (collectively, the "**Permitted Liens**").

(b) Other than this Agreement, neither Owner nor any of its affiliates has entered into any assignment, lease, license, sublease, easement, concession, lease option or other agreement (written or oral) granting to any person the right to possess, use or occupy all or any portion of the Land.

(c) Other than this Agreement, there are no outstanding or unrecorded deeds, land contracts, agreements, debts, demands, equity interests, options, rights of first offer or rights of first refusal to purchase the Land or any portion thereof or interest therein, or other instruments which adversely affect title to, or the Owner's right to possess, the Land.

(d) There are no liens or other covenants, conditions, restrictions (private or governmental), reservations (including, without limitation, for minerals, oil and gas), rights of way, easements, exceptions or other title defects affecting the Land that individually or in the aggregate could reasonably be expected to materially and adversely affect the development, building, construction, installation, ownership, use, operation or maintenance of the Project.

(e) Owner has not received any notice of any appropriation, condemnation or like proceeding, or of any violation of any applicable zoning law, regulation or rule or other law, order, regulation, rule or requirement relating to or affecting any of the Land.

(f) To Owner's knowledge, there are no unsatisfied mechanic's or materialman's liens or lien rights pending against the Land.

(g) The Property has direct frontage or deeded rights of access to a dedicated public roadway.

9.4 **Requirements of Governmental Agencies**. Owner shall assist and fully cooperate with Tenant, at no out-of-pocket expense to Owner, in complying with or obtaining any land use permits and approvals, building permits, environmental impact reviews or any other approvals required for the financing, construction, installation, monitoring, replacement relocation, maintenance, operation or removal of the Solar Energy Facilities, including execution of applications for such approvals, and including participating in any appeals or regulatory proceedings (at no Owner expense) respecting the Solar Energy Facilities. Tenant shall reimburse Owner for all reasonable and demonstrable attorney fees actually incurred by Owner in connection with review and revision of any document requiring the signature or agreement of the Owner as requested by Tenant pursuant to this Section 9.4, such amount not to exceed $2,500 in connection with any one (1) document. To the extent permitted by law, Owner hereby waives enforcement of any applicable setback requirements respecting the Solar Energy Facilities to be placed on the Land or any such facilities to be placed upon property adjacent to any other property owned by Owner.

9.5 **Hazardous Materials**. Owner shall not knowingly violate any federal, state or local law, ordinance or regulation relating to the generation, manufacture, production, use, storage, release, discharge, disposal, transportation or presence of any substance, material or waste which is classified as hazardous or toxic, or which is regulated under federal, state or local laws or regulations (each, a "**Hazardous Material**") on or under the Property. Owner shall defend, indemnify and hold harmless Tenant and its Related Persons against any such violation that is caused by: (i) any person and exists as of the Effective Date; or (ii) Owner or Owner's agents and occurs after the Effective Date. Owner shall promptly notify Tenant of any such violation. Without limiting the generality of the foregoing, to Owner's actual knowledge without investigation or inquiry other than review of its internal records, (i) no underground tanks are now located or at any time in the past have been located on the Property or any portion thereof, (ii) no asbestos-containing materials, petroleum, explosives or other substances, materials or waste which are now or hereafter classified or regulated as hazardous or toxic and in regulated quantities under any law, regulation rule, guideline or other legal requirement has been generated, manufactured, transported, produced, used, treated, stored, released, disposed of or otherwise deposited in or on or allowed to emanate from the Property or any portion thereof other than as permitted by all health, safety, environmental and other laws, regulations, rules, guidelines or other legal requirements, including the Comprehensive Environmental Response Compensation and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986 (PL 99-499); the Hazardous Materials Transportation Act, 49 U.S.C. Section 1801, et. seq; the Toxic Substance Control Act, 15 U.S.C. Section 2661, et. seq.; the Resource Conservation and Recovery Act, as amended 42 U.S.C. Section 6961, et. seq.; the Federal Water Pollution Control Act, as

amended. 33 U.S.C. Section 1251, et. seq. and any environmental law promulgated by the State of Texas(each, an "**Environmental Law**") that govern the same or are applicable thereto and (iii) there are no other substances, materials or conditions in, on or emanating from the Property or any portion thereof in regulated quantities which may support a claim or cause of action under any Environmental Law. Owner has not received any notice or other communication from any governmental authority alleging that the Property is in violation of any Environmental Law.

9.6 **Litigation**. No litigation is pending, and, to the best of Owner's knowledge, no actions, claims or other legal, administrative or condemnation proceedings are pending, threatened or anticipated with respect to, or which could affect, the Property. If Owner learns that any such litigation, action, claim or proceeding is threatened or has been instituted, Owner shall promptly deliver notice thereof to Tenant.

9.7 **Owner's Cooperation**. Owner shall cooperate at no out of pocket expense with Tenant in support of Tenant's activities contemplated by this Agreement, including obtaining and maintaining any permits needed for the Solar Energy Facilities. Without limiting the generality of the foregoing, Owner agrees, at Tenant's request, sole cost and expense, to cooperate and to execute all documents including any waivers (including waivers of setbacks and setback requirements), permits, petitions and statements, and attend (if necessary) all meetings and hearings required under the terms of applicable zoning and land use regulations reasonably necessary to obtain all necessary zoning, land use and other approvals for the development, construction and operation of the Solar Energy Facilities on the Property. Owner further agrees to support and not to contest or oppose or support any contest or opposition to, any such approvals. Without limiting the generality of the foregoing, within ten (10) days after receipt of a written request made from time to time by Tenant, Owner shall: (i) execute and deliver to Tenant any Owner's affidavit reasonably requested by any title company or attorney reviewing title to the Property and (ii) join in any grants for rights-of-way, easements and/or leases for electric and other public utilities and facilities and any other electric power purpose (including any power transmission line) as Tenant may deem necessary or desirable for its development and use of the Solar Energy Facilities. Tenant shall reimburse Owner for all reasonable and demonstrable attorney fees actually incurred by Owner in connection with review and revision of any document requiring the signature or agreement of the Owner as requested by Tenant pursuant to this Section 9.7, such amount not to exceed $2,500 in connection with any one (1) document.

10. ASSIGNMENT.

10.1 Assignments.

(a) Tenant shall at all times have the right to sell, assign, encumber, transfer, or grant subordinate rights and interests (including subleases and licenses) in, the Lease, the Easements and/or any or all of its other rights and interests under this Agreement, in each case without Owner's consent; provided, however, that any and all such transfers shall be subject to all of the terms, covenants and conditions of this Agreement. No such sale, assignment, transfer, or grant shall relieve Tenant of its obligations under this Agreement unless Tenant assigns its entire interest under this Agreement and the assignee expressly assumes all obligations under this Agreement, in which event (a) the assigning Tenant shall have no liability hereunder for any obligations that relate to or acts or omissions that occur

after any period following the effective date of such assignment, and (b) from and after the effective date of such assignment, all references to "Tenant" in this Agreement shall be deemed to mean the assignee of such interest. Tenant shall notify Owner in writing of any such assignment. Failure of Tenant to give notice of any such assignment shall not constitute a default under this Agreement and shall not invalidate such assignment. For the avoidance of doubt, the Parties agree and acknowledge that the Property following an assignment of this Agreement as described above shall be used for the same purposes as intended hereunder.

(b) Owner may assign, transfer, or convey the payments, rights to payment or similar interests in this Agreement without Tenant's consent provided that (i) Owner notifies Tenant in writing of the terms of the assignment if those terms require Tenant to make payments to the assignee; (ii) in the case of a collateral assignment by Owner, the assignee acknowledges the validity and superiority of this Agreement and executes a recordable subordination and non-disturbance agreement in form and substance reasonably acceptable to Tenant; (iii) at the time of the assignment, Owner is not in default under the terms of this Agreement; and (iv) Owner shall not be relieved from liability for any of its accrued obligations under this Agreement by virtue of the assignment or conveyance, *provided* that Owner shall be relieved of its un-accrued obligations if the assignment or conveyance occurs in conjunction with a transfer or conveyance of Owner's interests in the Property (including to a trust or like estate planning vehicle or to the estate of any of the persons constituting Owner or to a person in connection with a domestic relations order) and the assignee or transferee assumes the obligations, covenants, and conditions of the Owner under this Agreement in their entirety. Owner may assign, transfer or convey the Property or this Agreement upon the prior written consent of Tenant, which consent shall not be unreasonably withheld, conditioned or delayed.

10.2 **Acquisition of Interest**. For avoidance of doubt and without limiting the generality of Section 10.1(a), the acquisition of all or any portion of Tenant's interest in the Property or the Solar Energy Facilities or this Agreement or the Lease or the Easements by another person or entity shall not require the consent of Owner or constitute a breach of any provision or a default under this Agreement, and Owner shall recognize the person as the Tenant's proper successor.

10.3 **Division into Separate Agreements**. Tenant may divide the Property into two (2) or more separate solar energy projects or phases of development if such division becomes necessary to further the development of the Project. If Tenant elects to divide the Property into two (2) or more solar energy projects or phases of development, then Owner shall, within twenty (20) days after written request from Tenant, and without demanding any additional consideration, bifurcate this Agreement by entering into and delivering to Tenant new stand-alone Agreements (as many as are necessary for each division) (which shall supersede and replace this Agreement) that provide Tenant with separate leasehold estates in different portions of the Property, as designated by Tenant. Each of such new Agreements shall: (i) specify the portion(s) of the Property to be covered thereby (and the term "Property", as used therein, shall refer only to such portion(s)), (ii) contain the same terms and conditions as this Agreement (except for any requirements that have been fulfilled by Tenant, any assignee, or any other person or entity prior to the execution of such new Agreements, and except for any modifications that may be required to ensure that Tenant's and Owner's respective combined obligations under such new

options/leases do not exceed their respective obligations under this Agreement) and be in a form reasonably acceptable to Tenant and Owner; (iii) be for a term equal to the then-remaining term of this Agreement; (iv) contain a grant of access, transmission, communications, utility and other easements for the benefit of the bifurcated option and leasehold estates, covering such portion or portions of the Property as Tenant may designate (but only to the extent permitted in this Agreement); (v) require payment to Owner of only an acreage-proportionate part of the amounts hereof; and (vi) to the extent permitted by law, enjoy the same priority as this Agreement over any lien, encumbrance or other interest against the Property. Tenant shall reimburse Owner for all reasonable and demonstrable attorney fees actually incurred by Owner in connection with review and revision of any document requiring the signature or agreement of the Owner as requested by Tenant pursuant to this Section 9.4, such amount not to exceed $2,500 in connection with any one (1) document.

11. **DEFAULT**.

11.1 **Event of Default**. If a Party (the "**Defaulting Party**") fails to perform an obligation under this Agreement (an "**Event of Default**") such Defaulting Party shall not be in default of the terms of this Agreement if, (a) in the case of the failure to pay when due any amounts payable under this Agreement, including, for the avoidance of doubt, the payment of any taxes in accordance with this Agreement (a "**Monetary Default**"), the Defaulting Party pays the past due amount within fifteen (15) days of receiving notice of the Event of Default (a "**Notice of Default**") from the other Party (the "**Non Defaulting Party**"), and (b) in the case of an Event of Default other than a Monetary Default (a "**Non-Monetary Default**"), the Event of Default is cured within ninety (90) days of receiving the Notice of Default; *provided*, that if the nature of the Non-Monetary Default requires, in the exercise of commercially reasonable diligence, more than ninety (90) days to cure, in such event, then the Defaulting Party shall not be in default as long as it commences performance of the cure within ninety (90) days and thereafter completes such cure with commercially reasonable diligence. Further, the Defaulting Party may cure any Monetary Default by depositing the amount in good faith dispute as to sums owed (not including claimed consequential, special, exemplary or punitive damages, which have been mutually waived pursuant to Section 14.17) in escrow with any reputable third party escrow, or by interpleading the same, which amount shall remain undistributed until final decision by a court of competent jurisdiction or upon agreement by the Parties. No such deposit shall constitute a waiver of the Defaulting Party's right to institute legal action for recovery of such amounts. If Owner prevails, in whole or part by ruling of a court of competent jurisdiction, in pursuit of a monetary judgment against Tenant, Tenant shall pay all sums determined by the court plus interest accruing at ten percent (10%) per annum from the date of default until paid in full (including attorney fees, expert fees, and court cost) to Owner within thirty (30) days.

11.2 **Remedies**.

(a) Except as qualified by Section 12 regarding Mortgagee Protections, should an Event of Default remain uncured by the Defaulting Party, the Non-Defaulting Party shall have and shall be entitled to exercise any and all remedies available to it at law or in equity, all of which remedies (including, without limitation, those expressly set out in this Section 11.2) shall be cumulative; *provided* that, notwithstanding anything in this Agreement to the contrary or any rights or remedies the Owner might have at law or in

equity, if any of Tenant's Solar Energy Facilities are located on the Property, then (a) Owner shall be limited to pursuing a claim for damages in the event Tenant fails to perform its non-monetary obligations hereunder, and (b) Owner shall not commence (and hereby waives its rights to assert) any action to terminate or cancel this Agreement so long as within twenty (20) days of the date that all cure periods hereunder with respect to the Non-Monetary Default have expired, Tenant has delivered a bond or letter of credit issued by a creditworthy bonding company or financial institution, as applicable, or other security reasonably acceptable to Owner, in an amount equal to the lesser of (i) the amount of direct economic damages claimed by Owner or a third party in connection with such Non-Monetary Default and (ii) an amount equal to five (5) times the then-current Rent equal to the sum that would be due for one year; *provided* that the foregoing clause (ii) shall not apply in the event the Non-Monetary Default arose or resulted from a third-party claim against Tenant. Owner hereby acknowledges and agrees that money damages would not be a sufficient remedy for a breach by Owner of this Agreement and that in addition to all other available remedies, Tenant shall be entitled to specific performance and injunctive or other equitable relief as a remedy for any such breach.

(b) Abatement. Notwithstanding any other provision of this Agreement, the Parties agree that Tenant shall be entitled to abate Rent upon the occurrence and during the continuation of any Event of Default by Owner which causes a material interference of Tenant's use of the Property as permitted by this Agreement.

(c) Tenant's Right To Cure. If Owner fails to pay the taxes or any other monetary obligations for which it is responsible hereunder, or otherwise defaults in the performance of any other obligation of Owner under this Agreement, then Tenant shall have the right to pay such taxes and other obligations, and/or remedy any such default, by any appropriate means; and the cost thereof (including attorney fees, expert fees and court costs) plus interest accruing at 10% per annum on a per diem basis from the date of demand until paid in full shall be reimbursed to Tenant by Owner within thirty (30) days. Without limiting the foregoing, if Owner fails to reimburse such costs to Tenant within such thirty (30) day period, then Tenant may offset such cost against any amounts owed to Owner under this Agreement.

12. **MORTGAGEE PROTECTION**. In the event that any mortgage, deed of trust or other security interest in this Agreement, the Lease, the Easements or in any Energy Facilities, or any portion thereof, is entered into by Tenant (a "Mortgage"), then any person or entity who is the mortgagee of a Mortgage (a "Mortgagee") shall, for so long as its Mortgage is in existence and until the lien thereof has been extinguished, be entitled to the protections set forth in this Section 12. Tenant shall send notice to Owner of the name and address of any such Mortgagee. Failure of Tenant to give notice of any such Mortgagee shall not constitute a default under this Agreement and shall not invalidate such Mortgage. No Mortgagee shall have any obligations under this Agreement until such time as it exercises its rights to acquire Tenant's interests subject to the lien of Mortgagee's Mortgage by foreclosure or otherwise assumes the obligations of Tenant directly.

12.1 **Mortgagee's Right to Possession, Right to Acquire and Right to Assign**. A Mortgagee shall have the absolute right: (i) to assign its security interest; (ii) to enforce its lien and

acquire title to the leasehold and/or easement estate by any lawful means; (iii) to take possession of and operate the Energy Facilities or any portion thereof and to perform all obligations to be performed by Tenant hereunder, or to cause a receiver to be appointed to do so; and (iv) to acquire the leasehold and/or easement estate by foreclosure or by an assignment in lieu of foreclosure and thereafter to assign or transfer the leasehold and/or easement estate to a third party. Without limiting the foregoing, Owner's consent shall not be required for the acquisition of the encumbered leasehold, easement or sub-easement estate by a third party who acquires the same by foreclosure or assignment in lieu of foreclosure.

12.2 **Notice of Default: Opportunity to Cure**. As a precondition to exercising any rights or remedies as a result of any Event of Default of Tenant, Owner shall give a Notice of Default to each Mortgagee of which it has notice (including notice of such Mortgagee's name and address), concurrently with delivery of such notice to Tenant and the following provisions shall apply:

(a) The Mortgagee shall have the same period after receipt of the Notice of Default to remedy the default, or cause the same to be remedied, as is given to Tenant, plus, in each instance, the following additional time periods: (i) thirty (30) days (for a total of sixty (60) days) after receipt of the Notice of Default in the event of any Monetary Default; and (ii) sixty (60) days (for a total of one hundred fifty (150) days) after receipt of the Notice of Default in the event of any Non-Monetary Default, *provided* that such 150-day period shall be extended for the time reasonably required to complete such cure, including the time required for the Mortgagee to perfect its right to cure such Non-Monetary Default by obtaining possession of the Property (including possession by a receiver) or by instituting foreclosure proceedings, *provided* that the Mortgagee acts with reasonable diligence, which shall be defined as commencing a trustee's sale or judicial action to foreclose on the collateral within the sixty (60) day period described above. The Mortgagee shall have the absolute right to substitute itself for Tenant and perform the duties of Tenant hereunder for purposes of curing such defaults. Owner expressly consents to such substitution, agrees to accept such performance, and authorizes the Mortgagee (or its employees, agents, representatives or contractors) to enter upon the Property to complete such performance with all the rights, privileges and obligations of the original Tenant hereunder. Owner shall not terminate this Agreement prior to the expiration of the cure periods available to a Mortgagee as set forth above.

(b) During any period of possession of the Property by a Mortgagee (or a receiver requested by such Mortgagee) and during the pendency of any foreclosure proceedings instituted by a Mortgagee, the Mortgagee shall pay or cause to be paid the Rent and all other monetary charges payable by Tenant hereunder which have accrued and are unpaid at the commencement of said period and those which accrue thereafter during said period. Following acquisition of Tenant's leasehold and easement estate by the Mortgagee or its assignee or designee as a result of either foreclosure or acceptance of an assignment in lieu of foreclosure, or by a purchaser at a foreclosure sale, this Agreement shall continue in full force and effect and the Mortgagee or party acquiring title to Tenant's leasehold and/or easement estate shall, as promptly as reasonably possible, commence the cure of all defaults, which are reasonably susceptible of being cured by the Mortgagee or

party acquiring title, hereunder and thereafter diligently process such cure to completion, whereupon such Events of Default shall be deemed waived.

(c) Any Mortgagee or other party who acquires Tenant's leasehold and/or easement interest pursuant to foreclosure or assignment in lieu of foreclosure shall be liable to perform the obligations imposed on Tenant by this Agreement so long as such Mortgagee or other party has ownership of the leasehold and/or easement estate or possession of the Property.

(d) Neither the bankruptcy nor the insolvency of Tenant shall be grounds for terminating this Agreement as long as all material obligations of Tenant under the terms of this Agreement are performed by the Mortgagee in accordance with the terms hereunder.

(e) Nothing herein shall be construed to extend the Agreement beyond the Term or to require a Mortgagee to continue foreclosure proceedings after the Event of Default has been cured. If the Event of Default is cured and the Mortgagee discontinues foreclosure proceedings, the Agreement shall continue in full force and effect.

12.3 **New Agreement to Mortgagee**. If this Agreement terminates because of Tenant's default or if the leasehold and/or easement estate is foreclosed upon, or if the Agreement is rejected or disaffirmed pursuant to bankruptcy law or other law affecting creditors' rights, Owner shall, upon written request from any Mortgagee within ninety (90) days after such event, enter into a new lease and easement agreement for the Property, on the following terms and conditions:

(a) The terms of the new lease and easement agreement shall commence on the date of termination, foreclosure, rejection or disaffirmance and shall continue for the remainder of the Term, at the same rent and subject to the same terms and conditions set forth in this Agreement.

(b) The new lease and easement agreement shall be executed within thirty (30) days after receipt by Owner of written notice of the Mortgagee's election to enter a new lease and easement agreement, *provided* that said Mortgagee: (i) pays to Owner all Rent and other monetary charges payable by Tenant under the terms of the Agreement up to the date of execution of the new lease and easement agreement, as if the Agreement had not been terminated, foreclosed, rejected or disaffirmed; (ii) performs all other obligations of Tenant under the terms of the Agreement, to the extent performance is then due and susceptible of being cured and performed by the Mortgagee; and (iii) agrees in writing to perform, or cause to be performed, all non-monetary obligations which have not been performed by Tenant and that accrued under this Agreement up to the date of commencement of the new lease and easement agreement, except those obligations which constitute noncurable defaults. Any new lease or easement granted to the Mortgagee shall enjoy the same priority as this Agreement over any lien, encumbrances or other interest created by Owner.

(c) At the option of the Mortgagee, the new lease and easement agreement may be executed by a designee of such Mortgagee without the Mortgagee assuming the burdens and obligations of Tenant thereunder.

(d) If more than one Mortgagee makes a written request for a new lease and easement agreement pursuant hereto, the new lease and easement agreement shall be delivered to the Mortgagee requesting such new lease and easement agreement whose Mortgage is superior in lien priority, and the written request of any other Mortgagee whose lien is subordinate shall be void and of no further force or effect.

(e) The provisions of Section 12 shall survive the termination, rejection or disaffirmance of the Agreement and shall continue in full force and effect thereafter to the same extent as if Section 12 were a separate and independent contract made by Owner, Tenant and such Mortgagee, and, from the effective date of such termination, rejection or disaffirmation of the Agreement to the date of execution and delivery of such new lease and easement agreement, such Mortgagee may use and enjoy said Property without hindrance by Owner or any person claiming by, through or under Owner; *provided* that all of the conditions for a new lease and easement agreement as set forth herein are complied with.

12.4 **Mortgagee's Consent to Amendment, Termination or Surrender**. Notwithstanding any provision of this Agreement to the contrary, the Parties agree that so long as there exists an unpaid Mortgage, this Agreement shall not be modified or amended, and Owner shall not accept a surrender of the Property or any part thereof or a cancellation, termination or release of this Agreement from Tenant prior to expiration of the Term without the prior written consent of any Mortgagee of whose existence Owner has been given notice. This provision is for the express benefit of and shall be enforceable by such Mortgagee.

12.5 **No Waiver**. No payment made to Owner by a Mortgagee shall constitute an agreement that such payment was, in fact, due under the terms of the Agreement; and a Mortgagee, having made any payment to Owner in the event of Owner's wrongful, improper or mistaken notice or demand, shall be entitled to the return of any such payment.

12.6 **Assignment Consents, Etc**. Owner shall execute such consents to assignment (whether or not such consent is actually required) and non-disturbance agreements as Tenant, or any Mortgagee may reasonably request from time to time so long as such agreements do not increase Owner's obligations under this Agreement or diminish its rights hereunder.

13. **TERMINATION**.

13.1 **Tenant's Right to Terminate**. In addition to any other rights Tenant has to terminate this Agreement pursuant to the other Sections of this Agreement, Tenant shall also have the right to terminate this Agreement as to all or any part of the Property at any time during the Operational Term or any Renewal Term, effective upon thirty (30) days' notice to Owner from Tenant; provided that Tenant pays an amount equal to the sum of any unpaid accrued Rent plus an amount equal to the then-current Rent that would be due for one year for all of the Property or the portion of the Property so released, as applicable, multiplied by two; it being acknowledged for the avoidance of doubt that Tenant shall be responsible for fulfilling its obligations under Sections 3.6 and 13.2 in connection with any such termination. Tenant shall pay such amount on or before the effective date of such termination, and such payment shall constitute liquidated damages for any claim by Owner arising out of the early termination of this Agreement excluding Tenant's

obligations to remove the Energy Facilities and to restore the Property in accordance with the terms of this Agreement. The Parties acknowledge and agree that the applicable payment amount set forth above is bargained for and a reasonable estimate of the damages Owner will suffer because of a termination of all or a portion of the lease. Notwithstanding anything to the contrary in this Section, Tenant shall not be liable for the payment of the aforementioned sums if Tenant terminates this Agreement as a result of an Event of Default committed by Owner and continuing beyond the applicable cure period.

13.2 **Effect of Termination; Surrender**. Upon termination of this Agreement, the Parties shall be released from all obligations hereunder except for those specified to survive the termination of this Agreement. Tenant shall, as soon as practicable thereafter, but not later than one hundred eighty (180) days after the termination, remove all above-ground and below-ground Solar Energy Facilities from the Property, and Owner hereby grants Tenant the needed license to enter the Property for such removal and restoration purposes. All Property disturbed by Tenant shall be restored to a condition and grade reasonably similar to its original condition as it existed upon the Effective Date including termination of all temporary easements granted to Tenant in the public records, if any. If Tenant fails to remove such Solar Energy Facilities within one hundred eighty (180) days of termination of the Agreement, or such longer period as Owner may provide by extension, Owner may do so. Tenant shall continue to pay amounts equal to the then-current Rent at such times and in accordance with Section 4 hereof during the period of restoration and removal as required by this provision. Tenant's obligations under this provision shall survive the termination or expiration of this Agreement.

13.3 Restoration Security. In the event that: (i) Tenant is not required to post a bond or other undertaking as security for the restoration obligation set forth in Section 13.2 above (the "**Restoration Obligation**") as a condition of approval from any governmental agency with jurisdiction over the Project; or (ii) such a condition is imposed, but is then removed and any bond or other undertaking is actually released, then Tenant shall provide security for payment of the costs of satisfying the Restoration Obligation (the "**Restoration Security**") as follows: no later than the tenth (10th) year of the Operational Term, Tenant shall obtain and deliver to Owner for Owner's benefit a third party bond or letter of credit from an unaffiliated, reputable financial institution approved by Owner in its reasonable discretion, securing Tenant's performance of the Restoration Obligation. Such Restoration Security shall remain in place for the remainder of the Operational Term and any extension thereof. Written verification of such Restoration Security shall be provided to the Owner on an annual basis in a form reasonably satisfactory to the Owner. The Restoration Security shall be in an amount equal to a reasonable determination of the estimated amount by which the cost of removing the Project in accordance with this Agreement (the "**Removal Costs**"). The determination of the Removal Costs shall be supported by analysis from a professional civil engineer licensed in the State of Texas with expertise in environmental matters and decommissioning solar energy and energy storage systems similarly situated to the Project every five (5) years for the remainder of the Agreement, and shall be binding upon the Parties. The determination of the Removal Costs shall be at Tenant's sole cost and expense. If Tenant fails to satisfy the Restoration Obligation in accordance with this Agreement, then Owner may resort to the Restoration Security to recover any reasonable and actual costs of removing the Project and restoring the Property incurred by Owner. The foregoing notwithstanding, the Restoration Security shall meet any minimum requirements of applicable law at the time of removal.

14. **MISCELLANEOUS**.

14.1 **Force Majeure**. If performance of the Agreement or of any obligation hereunder is prevented or substantially restricted or interfered with by reason of an event of Force Majeure (as defined below), the affected Party, upon giving notice to the other Party, shall be excused from such performance to the extent of and for the duration of such prevention, restriction or interference, and the Term or any other time periods herein shall be extended for such period of time. The affected Party shall use its reasonable efforts to avoid or remove such causes of nonperformance and shall continue performance hereunder whenever such causes are removed. "**Force Majeure**" shall mean fire, earthquake, flood, or other casualty or accident; a governmental closure of United States airspace to civilian traffic, strikes or labor disputes; war, civil strife or other violence; any law, order, proclamation, regulation, ordinance, action, demand or requirement of any government agency or utility, including any failure or refusal by an electric transmission company or service provider to accept for transportation electricity generated on the property; or any other act or condition beyond the reasonable control of a Party hereto.

14.2 **Condemnation; Proceeds.** If eminent domain proceedings are commenced against all or any portion of the Property and the taking and proposed use of such property would prevent or adversely affect Tenant's construction, installation, or operation of the Solar Energy Facilities on the Property, the Parties shall either amend this Agreement to reflect any necessary relocation of the Solar Energy Facilities which will preserve the value and benefit of the Lease and the Easements to Tenant, together with any corresponding payments, or, at Tenant's option, this Agreement shall terminate in which event the Parties shall be released from all obligations hereunder except for those specified to survive the termination of this Agreement. In the event of any condemnation or other taking of the Property, or any part thereof, for public use, Tenant shall have the right to any part of the award of damages to Owner for such taking attributable to the existence of this Agreement and the Solar Energy Facilities, other than as attributable to the receipt of the Rent by Owner, and for any award made directly to Tenant by the acquiring authority, including in each instance, without limitation, any award attributable to: (a) any removal and relocation costs associated with the Solar Energy Facilities, (b) any loss of or damage to any property including, without limitation, the Solar Energy Facilities, (c) the loss of use of the Property and the Access Areas by Tenant for the remainder of the Term, and (d) any loss of goodwill and Tenant's lost profits resulting from or arising out of such condemnation, including, without limitation, as a result of interruption in the Operations from the Property and Access Areas and/or any increased costs of relocation and operation from a new site. Owner shall not be liable to Tenant for any damage which Tenant may suffer by reason of such taking, including, but not limited to, the value of the unexpired Term.

14.3 **Confidentiality**. To the full extent allowed by law, Owner shall maintain in the strictest confidence, for the sole benefit of Tenant, all information pertaining to the financial terms of or payments under this Agreement, Tenant's identity, the location of the Solar Energy Facilities, product design, methods of operation, maps and drawings of all Project areas or property provided by Tenant to Owner, methods of construction, power production or availability of the Energy Facilities, and the like, whether disclosed by Tenant or otherwise discovered by Owner, unless such information either (a) is in the public domain by reason of prior publication through no act or omission of Owner or its employees or agents, or (b) was already known to Owner, prior to the time of disclosure and which Owner is free to use or disclose without breach of any obligation to

any person or entity. To the full extent permitted by law, Owner shall not use such information for its own benefit, publish or otherwise disclose it to others, allow media or press representatives to view it or have knowledge of it or permit its use by others for their benefit or to the detriment of Tenant. Notwithstanding the foregoing, Owner may disclose such information to any auditor or to Owner's family members, lenders, attorneys, accountants and other professional advisors; or pursuant to lawful process, subpoena, or court order; *provided* that Owner, in making such disclosure, advises the party receiving the information in writing of the confidentiality of the information and obtains the agreement of said party in writing not to disclose the information, except that such written confirmation shall not be required for communications among family members. The obligations of the Parties under this Section 14.3 shall survive the termination of this Agreement.

14.4 **Successors and Assigns**. All of the provisions of this Agreement shall be binding upon, and inure to the benefit of, the Parties, assignees, and their respective heirs, legal representative, and permitted successors and assigns. References to Tenant in this Agreement shall be deemed to include assignees that hold a direct ownership interest in this Agreement and actually are exercising rights under this Agreement to the extent consistent with such interest.

14.5 **No Third-Party Beneficiaries.** Except for the rights of Mortgagees and the Indemnified Parties, no provision of this Agreement is intended to nor shall it in any way inure to the benefit of any third party so as to constitute any such person a third-party beneficiary under this Agreement, or of any one or more of the terms of this Agreement, or otherwise give rise to any cause of action in any person not a party to this Agreement.

14.6 **No Partnership**. This Agreement is not intended to, and shall not create any partnership, joint venture or other arrangement between Owner and Tenant that would render a Party liable for the action of the other Party. Neither Party shall have any right, power or authority to act or create any duty or obligation, express or implied, on behalf of the other Party, or to hold itself out as a representative or agent of the other Party.

14.7 **No Merger**. There shall be no merger of this Agreement, or of the leasehold or easement estate created by the Agreement, with the fee estate in the Property by reason of the fact that the Agreement or the leasehold estate or the easement estate or any interest therein may be held, directly or indirectly, by or for the account of any person or persons who shall own the fee estate or any interest therein, and no such merger shall occur unless and until all persons at the time having an interest in the fee estate in the Property and all persons (including all Mortgagees) having an interest in the Agreement or in the leasehold estate or in the estate of Owner and Tenant shall join in a written instrument effecting such merger and shall duly record the same.

14.8 **Memorandum of Agreement**. Tenant shall prepare and Owner shall sign a notarized memorandum of this Agreement ("**Memorandum**") contemporaneously with the execution of this Agreement, and deliver the Memorandum to Tenant with the instruction to record the Memorandum with the County recorder contemporaneously with the Effective Date. The Memorandum shall include all material provisions of this Agreement, but shall not make any reference to specific amounts set forth in any payment provisions herein. In the event the recording of such memorandum, or amendments to the memorandum, if applicable, is subject to recording

fees or transfer taxes, the Parties shall share such expense and each Party shall pay one-half (1/2) of the fees and costs due.

14.9 **Notices**. Unless otherwise required by law, all notices required to be given hereunder shall be in writing and shall be conveyed by (i) personal delivery (including by any messenger, courier service or common carrier) or (ii) the United States Postal Service by certified or registered mail, postage prepaid, with return receipt requested, as follows:

If to Owner, to:

Charles Grady Childress, Sr. and wife, Alice Elaine Childress
1213 14th Street
P.O. Box 869
Blanco, TX 78606-0869

If to Tenant, to:

Blue Heron Solar, LLC
107 Spring Street
Seattle, WA 98104

Notice given by personal delivery (other than facsimile) shall be deemed to have been given upon delivery to the appropriate address (or upon refusal of acceptance), notice by facsimile shall be deemed to have been given upon receipt during normal business hours (i.e., 8 a.m. to 5 p.m. recipient's local time Monday through Friday) (a written confirmation of successful transmission from the transmitting facsimile machine being prima facie evidence of such receipt) and notice given by U.S. mail shall be deemed to have been given five (5) days after deposit in the U.S. mail. Each Party may designate from time to time, another address in place of the address hereinabove set forth by notifying the other Parties in the same manner as provided in this Section 14.9.

14.10 **Entire Agreement; Amendments**. This Agreement (including all Exhibits hereto) together with the representations and warranties made by Owner in Section 4.1 of that certain Option Agreement, dated as of the ____ day of August, 2021, between Owner and Tenant, which are hereby incorporated by reference constitute the entire agreement between Owner and Tenant respecting its subject matter, and supersedes any and all oral or written agreements. Any agreement, understanding or representation respecting the Property, or any other matter referenced herein not expressly set forth in this Agreement or a subsequent writing signed by both parties is null and void. This Agreement shall not be modified or amended except in a writing signed by both Parties. No purported modifications or amendments, including without limitation any oral agreement (even if supported by new consideration), course of conduct or absence of a response to a unilateral communication, shall be binding on either Party. Provided that no material default in the performance of Tenant's obligations under this Agreement shall have occurred and remain uncured, Owner shall cooperate with Tenant in amending this Agreement from time to time to include any commercially reasonable provision that may be reasonably requested by Tenant for the purpose (to be restricted to such purposes) of implementing the provisions contained in this Agreement or for the purpose of preserving the security interest of any assignee or Mortgagee. To

the extent an amendment is requested by a Mortgagee, Tenant shall pay Owner's reasonable attorneys' fees incurred in the review of such amendment.

14.11 **Legal Matters**. This Agreement shall be governed by and interpreted in accordance with the laws of the State of Texas without giving effect to the conflict of laws provisions thereof. If the Parties are unable to resolve amicably any dispute arising out of or in connection with this Agreement, each of the Parties hereby submits to the exclusive jurisdiction of federal or state district court sitting in or covering the County where the Real Property is located and for the purposes of all legal proceedings arising out of or relating to this Agreement of the transactions provided for herein. Each of the Parties irrevocably waives, to the fullest extent not prohibited by law, any objection that it may now or hereafter have to the laying of the venue of any such proceeding brought in such a court and any claim that any such proceeding brought in such court has been brought in an inconvenient forum. To the extent that such courts refuse to exercise jurisdiction hereunder, the Parties agree that jurisdiction shall be proper in any court in which jurisdiction may be obtained.

TO THE EXTENT PERMITTED BY LAW, THE PARTIES HEREBY KNOWINGLY AND VOLUNTARILIY WAIVE THEIR RESPECTIVE RIGHT TO TRIAL BY JURY OF ANY CAUSE OF ACTION, CLAIM, COUNTERCLAIM OR CROSS-COMPLAINT IN ANY ACTION, PROCEEDING OR HEARING BROUGHT BY A PARTY HERETO OR ITS SUCCESSORS AND ASSIGNS ON ANY MATTER WHATSOEVER ARISING OUT OF, OR IN ANY WAY CONNECTED WITH, THIS AGREEMENT, THE RELATIONSHIP OF THE PARTIES HERETO, OR THE ENFORCEMENT OF ANY REMEDY UNDER ANY LAW, STATUTE, OR REGULATION, EMERGENCY OR OTHERWISE, NOW OR HEREAFTER IN EFFECT.

14.12 **Partial Invalidity**. Should any provision of this Agreement be held, in a final and unappealable decision by a court of competent jurisdiction, to be either invalid, void or unenforceable, the remaining provisions hereof shall remain in full force and effect, unimpaired by the holding. Notwithstanding any other provision of this Agreement, the Parties agree that in no event shall the term of this Agreement, the Lease or the Easements be longer than, respectively, the longest period permitted by applicable law.

14.13 **No Waiver.** No failure or delay by any Party hereto in exercising any right, power or privilege hereunder and no course of dealing between the Parties shall operate as a waiver of any such right, power or privilege, except as this Agreement may provide otherwise. No waiver of any default or right on any one occasion shall constitute a waiver of any subsequent default of the same or other right on a subsequent occasion. No single or partial exercise of any right, power or privilege shall preclude the further or full exercise thereof. No waiver shall be effective unless it is in writing and is signed by the Party asserted to have granted such waiver.

14.14 **Transaction Costs**. Each Party shall bear its own expenses and costs, including the fees of any attorney retained by it, incurred in connection with the preparation of this Agreement and the consummation of the transactions contemplated hereby except as described in Section 14.10.

14.15 **Further Assurances**. In addition to the obligations specifically required to be performed under this Agreement by Owner and Tenant, Owner and Tenant shall perform, from time to time, such other acts, and shall execute, acknowledge and/or deliver such other instruments, documents and other materials, as may be reasonably required in order to consummate the transactions contemplated by this Agreement.

14.16 **Attorneys' Fees**. If any legal proceeding is brought by either Party with respect to this Agreement, the prevailing Party shall be entitled to recover, in addition to any other relief to which it is entitled, its costs and expenses incurred in connection with such legal proceeding, including reasonable attorneys' fees.

14.17 **Limitation on Damages.** NOTWITHSTANDING ANYTHING TO THE CONTRARY IN THIS AGREEMENT, NEITHER PARTY SHALL BE ENTITLED TO, AND EACH OF OWNER AND TENANT HEREBY WAIVES ANY AND ALL RIGHTS TO RECOVER, CONSEQUENTIAL (EXCEPT WITH RESPECT TO INDEMNITY CLAIMS IN RESPECT OF THIRD PARTIES PURSUANT TO SECTION 7), INCIDENTAL, AND PUNITIVE OR EXEMPLARY DAMAGES, HOWEVER ARISING, WHETHER IN CONTRACT, IN TORT, OR OTHERWISE, UNDER OR WITH RESPECT TO ANY ACTION TAKEN IN CONNECTION WITH THIS AGREEMENT.

14.18 **Rule of Construction**. Owner and Tenant are each sophisticated parties with substantial prior business experience with transactions of the sort contemplated by this Agreement, and each has had the opportunity to have this Agreement reviewed by its own counsel. In the event an ambiguity or question of intent or interpretation of this Agreement arises, this Agreement shall be construed as if jointly drafted by the Parties, and no presumption or burden of proof shall arise favoring or disfavoring a Party as a result of authorship or drafting of any provision of this Agreement.

14.19 **Headings; Plurality and Gender**. The headings used in this Agreement are for reference and convenience only and shall not enter into the interpretation of this Agreement. Wherever in this Agreement the singular number is used, the same shall include the plural, and the masculine gender shall include the feminine and neuter genders, and vice versa, as the context shall require. The words "this Agreement," "herein," "hereof," "hereby," "hereunder" and words of similar import refer to this Agreement as a whole and not to any particular subdivision unless expressly so limited. The phrase "this Section," refers only to the Section hereof in which the phrase occurs. The word "or" is not exclusive, and "including" (and its various derivatives), means "including without limitation." All references to days are to calendar days unless otherwise specifically stated.

14.20 **Estoppel Certificates**. Each Party agrees that it shall, at any time and from time to time during the Term of this Agreement and within (10) days after a written request by the other Party, execute, acknowledge and deliver to the requesting Party a written statement certifying that this Agreement is unmodified and in full force and effect (or modified and stating the modifications), the dates to which the payments and any other charges have been paid, and that there are no defaults existing (or that defaults exist and stating the nature of such defaults), and stating such other facts as the requesting Party may reasonably provide. The failure of a Party to deliver any such certificate within such time shall be conclusive upon such Party that this

Agreement is unmodified and in full force and effect, all payments to such Party are current, there are no defaults existing, and such other facts are true and correct. Each Party shall reimburse the other Party for all reasonable and demonstrable attorney fees actually incurred by the first Party in connection with review and revision of any estoppel requested by the second Party pursuant to this Section 14.20, such amount not to exceed $2,500 in connection with any one (1) estoppel.

14.21 **Counterparts; Telecopied Signatures**. This Agreement may be executed in one or more counterparts, each of which when so executed shall be an original, but all of which together shall constitute one agreement. This Agreement shall become binding when one or more counterparts hereof, individually or taken together, shall bear the signature of all the Parties hereto. This Agreement, and any amendments hereto or, to the extent signed and delivered by means of a facsimile machine or electronic transmission in portable document format (pdf), shall be treated in all manner and respects as an original Agreement and shall be considered to have the same binding legal effects as if it were the original signed version thereof delivered in person. At the request of any Party, each other Party shall re- execute original forms thereof and deliver them to the other Party. No Party shall raise the use of a facsimile machine or electronic transmission in pdf to deliver a signature or the fact that any signature was transmitted or communicated through such means as a defense to the formation of a contract and each Party forever waives any such defense.

14.22 **Brokerage Commissions**. Each of Owner and Tenant represents to the other that such Party has not incurred, directly or indirectly, any liability on behalf of the other Party for the payment by the other Party of any real estate brokerage commission, finder's fee or other compensation to any agent, broker or finder in connection with this Agreement. Owner and Tenant do each hereby agree to indemnify, defend and hold the other Party harmless from and against any claim for any brokerage commissions, finder's fees or other compensation claimed to be due and owing by reason of the indemnifying Party's activities.

14.23 **Tax and Renewable Energy Credits**. If under applicable law, the holder of a leasehold or easement estate becomes ineligible for any tax credit, renewable energy credit (including, without limitation, renewable energy credits as defined in 16 Texas Administrative Code § 25.173(c)(13)), environmental credit or any other benefit or incentive for renewable energy established by any local, state or federal government, then, at Tenant's option, Owner and Tenant shall exercise good faith and negotiate an amendment to this Agreement or replace it with a different instrument so as to convert Tenant's interest in the Property to a substantially similar interest that makes Tenant eligible for such credit, benefit or incentive.

14.24 **No Cost to Landowner.** During the term of this Agreement, Landowner shall not be obligated to incur and Grantee shall reimburse Landowner for any costs, including reasonable attorney's fees, associated with any request by Grantee to execute additional documentation or to undertake any obligation imposed by this Agreement or to the benefit of Grantee, a Lender, or assignee of Grantee.

[REMAINDER OF PAGE INTENTIONALLY LEFT BLANK;
SIGNATURE PAGE FOLLOWS]

This Ground Lease and Easement Agreement is executed and delivered to be effective as of the Effective Date, and the Parties certify that they have read this Agreement and understand and agree to the terms and conditions hereunder.

PROPOSED SURFACE SITE,
A 520.29 ACRE TRACT OF LAND,
BEING PART OF A THE MARY BIRD SURVEY, ABSTRACT NO. 13,
MILLS COUNTY, TEXAS

SHEET 3 OF 7

LEGAL DESCRIPTION:

BEING A 520.29 ACRE PROPOSED SURFACE SITE BEING PART OF THE MARY BIRD SURVEY, ABSRACT NO. 13, MILLS COUNTY, TEXAS, BEING PART OF A CALLED 1949 ACRE TRACT OF LAND CONVEYED TO CHARLES & ALICE ELAINE CHILDRESS IN INSTRUMENT NO. 1809053 OF THE OFFICIAL PUBLIC RECORDS OF MILLS COUNTY, TEXAS, AND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT A 3" IRON FENCE CORNER POST FOUND ON THE EAST LINE OF SAID 520.29 ACRE SURFACE SITE ALSO BEING A POINT ON THE EAST LINE OF SAID CALLED 1949 ACRE TRACT, SAID 3" IRON FENCE CORNER POST FOUND BEING CALLED THE **POINT OF BEGINNING** AND HAVING A TEXAS COORDINATE SYSTEM OF 1983, TEXAS CENTRAL ZONE (4203), STATE PLANE COORDINATE OF N: 10535145.28 FEET, E: 2771755.29 FEET, FOR REFERENCE;

THENCE FROM SAID POINT OF BEGINNING, N 86°23'42" W, A DISTANCE OF 4696.89 FEET TO A POINT;

THENCE, S 65°06'40" W, A DISTANCE OF 360.50 FEET TO A POINT;

THENCE, S 86°27'09" W, A DISTANCE OF 258.62 FEET TO A POINT;

THENCE, S 55°16'24" W, A DISTANCE OF 263.73 FEET TO A POINT;

THENCE, S 25°16'48" W, A DISTANCE OF 151.02 FEET TO A POINT;

THENCE, S 54°00'26" W, A DISTANCE OF 126.83 FEET TO A POINT;

THENCE, N 84°57'59" W, A DISTANCE OF 151.20 FEET TO A POINT;

THENCE, N 60°14'18" W, A DISTANCE OF 108.46 FEET TO A POINT;

THENCE, N 70°49'00" W, A DISTANCE OF 112.02 FEET TO A POINT;

THENCE, N 49°42'04" W, A DISTANCE OF 378.30 FEET TO A POINT;

THENCE, S 87°21'09" W, A DISTANCE OF 166.35 FEET TO A POINT;

THENCE, S 44°05'16" W, A DISTANCE OF 224.59 FEET TO A POINT;

THENCE, S 78°24'54" W, A DISTANCE OF 86.00 FEET TO A POINT;

THENCE, N 73°27'36" W, A DISTANCE OF 244.00 FEET TO A POINT;

THENCE, N 69°55'00" W, A DISTANCE OF 215.39 FEET TO A POINT;

THENCE, N 46°09'46" W, A DISTANCE OF 115.17 FEET TO A POINT;

THENCE, N 68°33'06" W, A DISTANCE OF 149.09 FEET TO A POINT;

THENCE, N 55°05'51" W, A DISTANCE OF 1504.07 FEET TO A POINT ON THE NORTHERLY LINE OF SAID CALLED 1949 ACRE TRACT;

THENCE, N 43°32'03" E, A DISTANCE OF 2638.74 FEET TO A POINT ON THE NORTHERLY LINE OF SAID CALLED 1949 ACRE TRACT;

THENCE, S 46°24'20" E, A DISTANCE OF 200.00 FEET TO A POINT;

THENCE, N 43°32'03" E, A DISTANCE OF 419.01 FEET TO A POINT;

THENCE, N 46°24'20" W, A DISTANCE OF 200.00 FEET TO A POINT ON THE NORTHERLY LINE OF SAID CALLED 1949 TRACT;

THENCE, N 43°32'03" E, A DISTANCE OF 1668.30 FEET TO A 3" IRON FENCE CORNER POST;

THENCE, S 46°13'54" E, A DISTANCE OF 100.00 FEET TO A POINT;

THENCE, N 43°32'03" E, A DISTANCE OF 1304.17 FEET TO A POINT;

THENCE, S 32°53'36" E, A DISTANCE OF 822.98 FEET TO A POINT;

THENCE, S 17°17'36" W, A DISTANCE OF 468.98 FEET TO A POINT;

THENCE, S 04°46'36" E, A DISTANCE OF 853.10 FEET TO A POINT;

THENCE, S 81°52'12" E, A DISTANCE OF 46.12 FEET TO A POINT FOR THE BEGINNING OF A NON-TANGENT CURVE TO THE LEFT;

THENCE WITH SAID NON-TANGENT CURVE TO THE LEFT HAVING A RADIUS OF 278.07 FEET, ARC LENGTH OF 355.65 FEET, DELTA OF 73°16'53", CHORD BEARING OF S 83°16'48" E AND A CHORD DISTANCE OF 331.90 FEET TO A POINT;

THENCE, N 89°33'12" E, A DISTANCE OF 35.90 FEET TO A POINT FOR THE BEGINNING OF A NON-TANGENT CURVE TO THE LEFT;

THENCE WITH SAID NON-TANGENT CURVE TO THE LEFT HAVING A RADIUS OF 1234.09 FEET, ARC LENGTH OF 764.39 FEET, DELTA OF 35°29'19", CHORD BEARING OF S 83°48'36" E AND A CHORD DISTANCE OF 752.23 FEET TO A POINT;

THENCE, N 83°19'07" E, A DISTANCE OF 192.25 FEET TO A POINT;

THENCE, S 42°57'05" E, A DISTANCE OF 400.55 FEET TO A POINT;

THENCE, S 44°59'58" W, A DISTANCE OF 1139.53 FEET TO A 1/2" IRON ROD WITH A CAP STAMPED "PFINGSTEN 4405" FOUND;

THENCE, S 49°01'23" E, A DISTANCE OF 4132.71 FEET TO THE **POINT OF BEGINNING**, CONTAINING 520.29 ACRES OF LAND, MORE OR LESS.

SAVE & EXCEPT A 2.88 ACRE EXISTING STOCK TANK FURTHER DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT WITHIN SAID CALLED 1949 ACRE TRACT FROM WHICH A 1/2" IRON ROD WITH A CAP STAMPED "DON KING 3696" FOUND BEARS N 10°43'26" W A DISTANCE OF 1111.89 FEET;

THENCE FROM SAID POINT OF BEGINNING, N 06°42'29" E, A DISTANCE OF 133.12 FEET TO A POINT;

THENCE, N 18°22'32" E, A DISTANCE OF 254.43 FEET TO A POINT AT THE BEGINNING OF A NON-TANGENT CURVE TO THE RIGHT;

THENCE WITH SAID NON-TANGENT CURVE TO THE RIGHT HAVING A RADIUS OF 200.96 FEET, ARC LENGTH OF 435.45 FEET, DELTA OF 124°09'15", CHORD BEARING OF S 47°07'53" E AND A CHORD DISTANCE OF 355.12 FEET TO A POINT FROM WHICH A 1/2" IRON ROD WITH A CAP STAMPED "PFINGSTEN 4405" FOUND FOR THE WEST CORNER OF SAID CALLED 360 ACRE TRACT BEARS N 68°41'45" E A DISTANCE OF 4561.98 FEET;

THENCE, S 25°16'34" W, A DISTANCE OF 169.01 FEET TO A POINT AT THE BEGINNING OF A NON-TANGENT CURVE TO THE RIGHT;

THENCE WITH SAID NON-TANGENT CURVE TO THE RIGHT HAVING A RADIUS OF 171.88 FEET, ARC LENGTH OF 303.43 FEET, DELTA OF 101°09'32", CHORD BEARING OF N 82°55'03" W AND A CHORD DISTANCE OF 265.53 FEET TO THE **POINT OF BEGINNING** CONTAINING 2.88 ACRES OR 125,479 SQUARE FEET OF LAND MORE OR LESS.

EXHIBIT A-3
(to Ground Lease and Easement Agreement)

Legal Description of the Access Areas

EXHIBIT B
(to Ground Lease and Easement Agreement)

Tenant Insurance

Tenant agrees to provide the following insurance coverages at its own expense for purposes of personal injuries or accidents that may occur as a direct result of the activities conducted by Tenant (including any activities of Tenant's employees, consultants, contractors or other agents) on the Property pursuant to this Agreement:

a. Comprehensive or Commercial General Liability on an "occurrence" basis, including coverage for Bodily Injury; Personal Injury and Death, Property Damage, Contractual Liability (particularly applicable to the provisions of the Indemnity Article of this Agreement); and Products and Completed Operations with limits as follows:

$1,000,000 each occurrence and $2,000,000 in the annual aggregate.

b. Workers Compensation and Employers Liability, including coverage under United States Longshoremen and Harbor Worker's Act and Jones Act where applicable, and additional insurance as required by law with limits as follows:

Worker's Compensation – Statutory limits

Employer's Liability – $1,000,000 each accident and in the aggregate

c. Business automobile liability insurance which shall include coverage for all owned, non-owned and hired vehicles with the following limit:

$1,000,000 Combined Single Limit Bodily Injury and Property Damage

d. Umbrella/Excess Liability Insurance of not less than $1,000,000 per occurrence and $1,000,000 annual aggregate. Such coverage shall be on a per occurrence basis and over and above coverage provided by the policies described in paragraphs a., b., c. above.

e. Pollution/Environmental Liability Insurance with limits of at least $1,000,000 per occurrence.

EXHIBIT C
(to Ground Lease and Easement Agreement)

Permitted Liens

None.

MEMORANDUM OF FIRST AMENDMENT TO OPTION AGREEMENT

THIS MEMORANDUM OF FIRST AMENDMENT TO OPTION AGREEMENT ("***Memorandum***") is dated February 1, 2023 (the "***Effective Date***"), by and between **Charles Grady Childress, Sr. and wife, Alice Elaine Childress**, whose address is 1213 14th Street, P.O. Box 869, Blanco, TX 78606-0869 ("***Optionor***"), and **Blue Heron Solar, LLC**, a Delaware limited liability company, whose address is 107 Spring St., Seattle, WA 98104 ("***Optionee***").

1. Initial Option and Memoranda. Pursuant to that certain Option Agreement dated as of August 19, 2021 (the "***Existing Option***"), Optionor granted an option to Optionee to lease certain lands more particularly described in **Exhibit A** attached thereto (the "***Existing Property***") upon the terms and conditions of the Initial Option. A memorandum of the Existing Option was recorded as Instrument Number 213959 in the Official Public Records of Mills County, Texas and as Instrument Number 2105910 in the Official Public Records of Brown County, Texas (the "***Existing Memorandum***").

2. First Amendment to Option Agreement. On or around the date hereof, Optionor and Optionee entered into that certain First Amendment to Option Agreement (the "***First Amendment to Option***"), which served to amend the Existing Option. The primary purpose of the First Amendment to Option was to extend the Option Period. As amended, the Option Period commenced on the Effective Date and continues for sixty (60) months thereafter or the earlier termination as provided in the Existing Option, provided that following Optionee's issuance of an Exercise Notice, the Option Period shall be extended until the Closing Date. The Existing Option, as amended by the First Amendment to Option, is collectively referred to herein as the "***Lease Option Agreement***." Optionor has granted and hereby does grant to Optionee, and Optionee has accepted and hereby does accept from Optionor, an option exercisable during the Option Period to lease the Property and to obtain an easement on, over, under and across a certain part of the Property, pursuant to the terms of the Lease Option Agreement.

3. Incorporation of Option. This Memorandum incorporates herein all of the terms and provisions of the Lease Option Agreement as though fully set forth herein.

4. Purpose of Memorandum. The purpose of this Memorandum is to give record notice of the existence of the First Amendment to Option and it shall not be construed to alter, modify, amend or supplement the First Amendment to Option. If there is any inconsistency between the terms of this Memorandum and the terms of the First Amendment to Option, the terms of the First Amendment to Option shall prevail. Except as otherwise stated in this Memorandum, the terms, conditions, and representations made in the Existing Memorandum are hereby ratified.

[Remainder of page intentionally left blank - signature page follows]

IN WITNESS WHEREOF, the Parties have executed this Memorandum of First Amendment to Option Agreement as of the date first above written.

EASEMENT AGREEMENT

THE STATE OF TEXAS ()

COUNTY OF BROWN ()

WHEREAS, John Robert Gilger and wife, Susan Gilger, residents of Brown County, Texas, are the owners of a tract of land containing 99-4/5ths acres of land, more or less, out of the E. D. Prewitt Survey No. 13, Abstract No. 741, in Brown County, Texas, and being Parcel No. Two of Fourth Tract, described in deed from L. L. Gilger and wife, Lucile Gilger, to John Robert Gilger and wife, Susan Gilger, dated the 28th day of February, 1978, and recorded in Volume 727, Page 330, Real Property Records of Brown County, Texas, and in various other deeds from the said L. L.Gilger and wife, Lucille Gilger, to John Robert Gilger and wife, Susan Gilger; and

WHEREAS, 3 Esses I, L.P., a Texas limited partnership is the owner of an 8.96 acre tract of land out of and a part of the E. D. Prewitt Survey No. 13, Abstract No. 74, in Brown County, Texas, conveyed by deed of even date herewith from John Robert Gilger and wife, Susan Gilger, to Lisa Ann Quick Flood, Trustee, and conveyed by deed of even date herewith from Lisa Ann Quick Flood, Trustee, to 3 Esses I, L.P.; and

WHEREAS, a 1.72 acre tract of land lying within a roadway, believed to be a portion of old County Road No. 268, as shown on a plat of record in Volume 93, Page 255, Deed Records of Brown County, Texas, provides access, ingress and egress to and from said 99-4/5ths acre Gilger tract and said 8.96 acre 3 Esses I, L.P., tract AND to a tract of 300 acres of land described in deed from Joyclin Callaway Quick Neefe to P. L. Childress, dated the 23rd day of May, 1983, and recorded in Volume 833, Page 217, Deed Records of Brown County, Texas; and

WHEREAS, a question has arisen as to whether or not said 1.72 acre tract of land does in fact constitute a public roadway, and as to whether or not said 7.72 acre tract of land is, in fact, a part of the County Road No. 268 in Brown County, Texas; and

WHEREAS, John Robert Gilger and wife, Susan Gilger, and 3 Esses I, L.P., desire to memoralize the fact that said road does in fact provide access, ingress and egress to and from a tract of land owned by the said John Robert Gilger and wife, Susan Gilger, and a tract owned by the said 3 Esses I, L.P., and to the aforementioned tract described in Deed to P. L. Childress, and insodoing, by the execution hereof desire to execute cross easements to themselves, and to the said P. L. Childress, his successors and assigns.

NOW, THEREFORE, for and in consideration of the premises and ---TEN AND NO/100--- DOLLARS ($10.00), and other good and valuable consideration, in hand paid

to those executing this easement, the receipt and sufficiency of which is hereby acknowledged, this agreement is made on this the 9th day of October, 2012, at Brownwood, Texas, by and between John Robert Gilger and wife, Susan Gilger, and 3 Esses I, L.P., for the benefit of themselves, and also for the benefit of the said P. L. Childress, his successors and assigns, said agreement being as follows:

1. For the consideration described above, John Robert Gilger and wife, Susan Gilger, , doES hereby grant to 3 Esses I, L.P., its successors and assigns, herein called Grantee, and to P. L. Childress, his successors and assigns, an easement and right of way upon and across the following described tract more fully described on Exhibit "A" attached hereto and made a part hereof for all purposes, and 3 Esses I, L. P., for the consideration described above, sometimes herein called Grantor Two, grants to the said John Robert Gilger and wife, Susan Gilger, and their heirs, successors and assigns, and to P. L. Childress, his successors and assigns, an easement and right of way across the property more fully described on Exhibit "A" attached hereto and made a part hereof for all purposes.

2. This instrument grants an easement appurtenant to the above referenced tracts of land owned by the said John Robert Gilger and wife, Susan Gilger, and 3 Esses I, L. P., and P. L. Childress, his successors and assigns, all as described above.

3. The easement and right of way is located on, over and across the tract of land described in Exhibit "A" attached hereto.

This right of way easement, with its rights and privileges shall be used for the purpose of providing access, ingress and egress, to and from the tracts of land referred to above, and County Road 268, a recognized public roadway in Brown County, Texas.

This easement shall be perpetual.

John Robert Gilger and wife, Susan Gilger, and 3 Esses I, L.P., for and on behalf of themselves, and their respective heirs, successors and assigns, are and shall be bound to warrant and defend the easement and rights conveyed in this instrument and to those who are the beneficiary thereof, by, through or under John Robert Gilger and wife, Susan Gilger, and 3 Esses I, L.P., as to their respective interests in said 1.72 acre tract of land described on Exhibit "A" attached hereto, and to the extent said 1.72 acre tract is not a recognized public roadway, but not further.

The easement, rights and privileges granted by this conveyance are non-exclusive, and John Robert Gilger and wife, Susan Gilger, and 3 Esses I, L.P., retain the right to convey similar rights and easement to such other persons, as they may deem proper, and the right is herewith granted to the said P. L. Childress, his heirs, successors and assigns, to convey similar rights and easements to such persons as the said P. L. Childress and his heirs, successors and assigns may deem proper.

Each party hereto shall hold harmless, defend and indemnify each other party hereto or receiving the benefit hereof, against any suits, liabilities, claims, demands, or damages, including but not limited to personal injuries and attorney's fees, arising from the exercise of the easement rights granted by this instrument.

This agreement contains the entire agreement between the parties hereto relating to its subject matter. Any oral representations or modifications concerning this agreement shall be of no force and effect. Any subsequent amendment or modification must be in writing and agreed to by the parties hereto.

This agreement shall bind and inure to the benefit of the respective parties hereto, and their personal representatives, successors and assigns.

EXECUTED this the 9th day of October, 2012.

King Land Surveying

EXHIBIT "A"

All of that certain 1.72 acre strip of land or parcel of land of which being out of the ED Prewitt Survey No. 13, Abstract No. 74 of Brown County, Texas, and being part of a 99 4/5 acre tract as conveyed by deed from LL Gilger et.ux., to John Robert Gilger et.ux., dated February 28, 1978, being of record in Volume 727, Page 330 of the Real Property Records of Brown County, Texas, said Strip of land is purported to be old County Road No. 268, as shown on a plat being of record in Volume 93, Page 255, of the Deed Records of Mills County, Texas and excepts to in a Deed from the U.S.A., being of record in Volume 371, Page 286, of the Deed Records of Brown County, Texas, and is further described as occupied as follows;

BEGINNING at a steel fence corner post at the south west corner of a concrete bridge of County Road No. 268, being in the Northeasterly line of a 610.10 acre tract from which its North Corner bears N 33° 20' 20" W, 79.61 feet;

THENCE with the southwesterly line of said Roadway, being the Northeasterly lines of said 610.10 acre tract, South 07 degrees 04 minutes 40 seconds East, 192.09 feet to a 2 ½" steel fence corner post, South 21 degrees 32 minutes 23 seconds East, 320.76 feet to a 2 " steel fence gate post, South 22 degrees 05 minutes 47 seconds East, 221.26 feet to a 2 ½" steel fence corner post in concrete, South 60 degrees 11 minutes 48 seconds East, 381.34 feet to a 2 ½" steel fence corner post in concrete, South 62 degrees 00 minutes 57 seconds East, 530.93 feet to a 2 ½" steel fence corner post in concrete, and South 82 degrees 33 minutes 36 seconds East, 91.53 feet to a 2 ½" steel fence corner post in concrete in the northwesterly line of a 300 acre tract as conveyed by deed to Genelle Childress Berry et.al., dated July 31, 1998, being of record in Volume 1300, Page 437, of the Real Property Records of Brown County, Texas, for the Southerly Corner of this;

THENCE North 10 degrees 17 minutes 15 seconds East, crossing said roadway, 21.62 feet to a 3" steel fence corner post in concrete, for the Southerly East Corner of this;

THENCE with the northeasterly line of said occupied roadway, North 75 degrees 28 minutes 14 seconds West, 18.83 feet to a rail road tie, North 61 degrees 49 minutes 06 seconds West, 570.04 feet to a wood fence corner post, North 61 degrees 21 minutes 39 seconds West, 387.06 feet to a 3/8" iron rod found by fence corner post; North 22 degrees 25 minutes 22 seconds West, 223.77 feet to a wood fence post, North 22 degrees 28 minutes 58 seconds West, 305.74 feet to a 3/8" iron pipe found by fence post, North 03 degrees 47 minutes 24 seconds West, 161.47 feet to a 3/8" iron pipe found by fence corner post, and North 54 degrees 25 minutes 31 seconds West, 27.24 feet to a 3" steel fence corner post at the East Corner of said concrete bridge, for the North Corner of this;

THENCE South 83 degrees 51 minutes 16 seconds West, crossing the southerly line of said bridge and roadway, 23.68 feet to the Place of beginning and calculated to contain 1.72 acres within existing roadway.

SURVEYED DESCRIPTION

FIELD NOTES TO THAT CERTAIN 792.19-ACRE TRACT SITUATED IN THE

- ELIJA D. PREWITT SURVEY, ABSTRACT NO. 741, BROWN COUNTY
- ELIJA D. PREWITT SURVEY, ABSTRACT NO. 530, MILLS COUNTY
- ROBERT D. FORSYTHE SURVEY, ABSTRACT NO. 270, MILLS COUNTY
- JC VANN SURVEY, ABSTRACT NO. 697, MILLS COUNTY
- GA RENACCO SURVEY, ABSTRACT NO. 572, MILLS COUNTY,
- AND MARY BIRD SURVEY, ABSTRACT NO. 13, MILLS COUNTY, TEXAS;

SAID TRACT BEING 18.89 ACRES (TWO PORTIONS 3.79 & 15.10 ACRES) OF THE REMAINDER OF THE CALLED 300-ACRE TRACT DESCRIBED IN THE DEED TO CHARLES GRADY CHILDRESS RECORDED IN VOLUME 257, PAGE 494, DEED RECORDS, MILLS COUNTY, TEXAS, A 143.68-ACRE PORTION OF THE CALLED 150.39-ACRE TRACT DESCRIBED IN THE DEED TO GEORGE ROBERT HARDBERGER, TRUSTEE, RECORDED UNDER INSTRUMENT NUMBER 2301188, OFFICIAL PUBLIC RECORDS, MILLS COUNTY, TEXAS (O.P.R.M.C.T.), AND A 629.62-ACRE PORTION (632.50 ACRES, SAVE & EXCEPT 2.88 ACRES) OF THE CALLED 1,949-ACRE TRACT DESCRIBED IN THE DEEDS TO SAID GEORGE ROBERT HARDBERGER, TRUSTEE, RECORDED UNDER INSTRUMENT NUMBERS 2011601 & 2216184, O.P.R.M.C.T.; THE SUBJECT TRACT SURVEYED BY LANGAN ENGINEERING AND ENVIRONMENTAL SERVICES, LLC, IS MORE PARTICULARLY DESCRIBED AS FOLLOWS (BEARINGS ARE BASED ON THE TEXAS COORDINATE SYSTEM OF 1983, CENTRAL ZONE):

BEGINNING AT FENCE POST FOUND IN BROWN COUNTY AT THE MOST NORTHERLY CORNER OF THE SAID 150.39-ACRE TRACT;

THENCE WITH THE PERIMETER OF THE 150.39-ACRE TRACT, THE FOLLOWING CALLS:

1. SOUTH 46°27'16" EAST, A DISTANCE OF 971.43 FEET TO A FOUND 3-INCH DIAMETER POST;
2. NORTH 44°33'33" EAST, A DISTANCE OF 418.76 FEET TO A FOUND 3/8-INCH PIPE;
3. SOUTH 47°55'27" EAST, A DISTANCE OF 1,412.55 FEET TO A FOUND FENCE POST;
4. SOUTH 46°13'46" EAST, A DISTANCE OF 1,280.97 FEET TO A FENCE POST FOUND ON THE NORTHWEST LINE OF THE SAID 1,949-ACRE TRACT AT THE EAST CORNER OF THE 150.39-ACRE TRACT;

THENCE SOUTH 46°08'50" EAST, THROUGH THE INTERIOR OF 1,949-ACRE TRACT, A DISTANCE OF 107.38 FEET TO A 1/2 INCH CAPPED REBAR STAMPED "LANGAN" SET ON THE SOUTHEAST LINE OF THE VARIABLE-WIDTH ONCOR ELECTRIC DELIVERY COMPANY EASEMENT RECORDED UNDER INSTRUMENT NUMBER 1201820, O.P.R.M.C.T.;

THENCE CONTINUING THROUGH THE INTERIOR OF THE 1,949-ACRE TRACT AND WITH THE SAID SOUTHEAST LINE OF THE ONCOR EASEMENT, THE FOLLOWING CALLS:

1. NORTH 39°22'45" EAST, A DISTANCE OF 196.03 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
2. NORTH 43°24'54" EAST, A DISTANCE OF 2,594.54 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
3. NORTH 71°29'56" EAST, A DISTANCE OF 133.46 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN;

THENCE CONTINUING THROUGH THE INTERIOR OF THE 1,949-ACRE TRACT, THE FOLLOWING CALLS:

1. SOUTH 00°00'00" EAST, A DISTANCE OF 1,041.67 FEET;
2. NORTH 90°00'00" EAST, A DISTANCE OF 254.66 FEET;
3. SOUTH 00°00'00" EAST, A DISTANCE OF 497.59 FEET;
4. NORTH 90°00'00" WEST, A DISTANCE OF 384.74 FEET;
5. SOUTH 40°31'04" WEST, A DISTANCE OF 1,215.10 FEET;
6. SOUTH 04°46'36" EAST, A DISTANCE OF 307.55 FEET;
7. SOUTH 81°52'12" EAST, A DISTANCE OF 46.12 FEET, BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE NORTHEAST (CURVE TO THE LEFT) HAVING A RADIUS OF 278.11 FEET;
8. IN A SOUTHEASTERLY DIRECTION, ALONG THE ARC OF THE SAID CURVE, AN ARC LENGTH OF 355.69 FEET (A CHORD BEARING OF SOUTH 63°16'48" EAST, A CHORD DISTANCE OF 331.94 FEET) TO THE END OF THE CURVE;
9. NORTH 86°33'12" EAST, A DISTANCE OF 35.91 FEET, BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE NORTH (CURVE TO THE LEFT) HAVING A RADIUS OF 1,234.24 FEET;
10. IN AN EASTERLY DIRECTION, ALONG THE ARC OF THE SAID CURVE, AN ARC LENGTH OF 764.48 FEET (A CHORD BEARING OF SOUTH 83°46'36" EAST, A CHORD DISTANCE OF 752.32 FEET) TO THE END OF THE CURVE;
11. NORTH 83°19'07" EAST, A DISTANCE OF 192.28 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
12. SOUTH 42°57'05" EAST, A DISTANCE OF 4,510.97 FEET TO A 1/2 INCH CAPPED REBAR STAMPED "LANGAN" SET ON THE SOUTHEAST LINE OF THE 1,949-ACRE TRACT;

THENCE SOUTH 43°45'06" WEST, WITH THE SAID SOUTHEAST LINE OF THE 1,949-ACRE TRACT, A DISTANCE OF 702.45 FEET TO A 1/2 INCH CAPPED REBAR STAMPED "LANGAN" SET AT THE BASE OF A FOUND 2-INCH DIAMETER METAL POST;

THENCE THROUGH THE INTERIOR OF THE 1,949-ACRE TRACT, THE FOLLOWING CALLS:

1. NORTH 86°23'42" WEST, A DISTANCE OF 3,316.73 FEET;
2. NORTH 00°00'00" EAST, A DISTANCE OF 577.63 FEET;
3. NORTH 22°51'10" WEST, A DISTANCE OF 284.84 FEET;
4. NORTH 90°00'00" WEST, A DISTANCE OF 341.52 FEET;
5. SOUTH 26°32'05" WEST, A DISTANCE OF 296.19 FEET;
6. SOUTH 00°00'00" EAST, A DISTANCE OF 248.92 FEET;
7. SOUTH 89°59'35" WEST, A DISTANCE OF 182.59 FEET;
8. SOUTH 66°32'33" WEST, A DISTANCE OF 610.28 FEET;
9. NORTH 86°23'42" WEST, A DISTANCE OF 54.54 FEET;
10. SOUTH 65°06'40" WEST, A DISTANCE OF 360.55 FEET;
11. SOUTH 86°27'09" WEST, A DISTANCE OF 258.66 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
12. SOUTH 55°16'24" WEST, A DISTANCE OF 263.77 FEET;
13. SOUTH 29°16'48" WEST, A DISTANCE OF 151.04 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
14. SOUTH 54°00'26" WEST, A DISTANCE OF 126.84 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
15. NORTH 84°57'59" WEST, A DISTANCE OF 151.32 FEET;
16. NORTH 60°14'18" WEST, A DISTANCE OF 108.50 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
17. NORTH 70°49'00" WEST, A DISTANCE OF 112.04 FEET;
18. NORTH 49°42'04" WEST, A DISTANCE OF 371.01 FEET;
19. NORTH 89°59'33" WEST, A DISTANCE OF 187.05 FEET;
20. SOUTH 44°05'16" WEST, A DISTANCE OF 229.97 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
21. SOUTH 78°24'54" WEST, A DISTANCE OF 86.01 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
22. NORTH 73°27'36" WEST, A DISTANCE OF 244.03 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
23. NORTH 59°55'00" WEST, A DISTANCE OF 215.42 FEET;
24. NORTH 46°09'46" WEST, A DISTANCE OF 115.18 FEET;
25. NORTH 58°33'06" WEST, A DISTANCE OF 149.05 FEET;
26. NORTH 55°05'51" WEST, A DISTANCE OF 1,504.26 FEET TO A 1/2 INCH CAPPED REBAR STAMPED "LANGAN" SET ON THE NORTHWEST LINE OF THE 1,949-ACRE TRACT;

THENCE NORTH 43°32'12" EAST, WITH THE SAID NORTHWEST LINE OF THE 1,949-ACRE TRACT, PASSING AT A DISTANCE OF 1,371.02 FEET A 1/2 INCH REBAR FOUND AT THE SOUTH CORNER OF THE SAID 300-ACRE TRACT, AND CONTINUING WITH THE NORTHWEST LINE OF THE 1,949-ACRE TRACT, IN ALL, A TOTAL DISTANCE OF 2,376.98 FEET TO SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";

THENCE THROUGH THE INTERIOR OF THE REMAINDER OF THE 300-ACRE TRACT, THE FOLLOWING CALLS:

1. NORTH 00°00'00" EAST, A DISTANCE OF 644.82 FEET;
2. NORTH 41°22'40" WEST, A DISTANCE OF 335.70 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
3. NORTH 54°03'13" WEST, A DISTANCE OF 1,199.70 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";
4. NORTH 00°00'00" EAST, A DISTANCE OF 306.63 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";

THENCE NORTH 90°00'00" EAST, CONTINUING THROUGH THE INTERIOR OF THE REMAINDER OF THE 300-ACRE TRACT, PASSING AT A DISTANCE OF 489 FEET THE SOUTHWEST LINE OF THE 150.39-ACRE TRACT, CONTINUING ON SAID COURSE, NOW THROUGH THE INTERIOR OF THE 150.39-ACRE TRACT, IN ALL, A TOTAL DISTANCE OF 572.82 FEET TO THE SOUTHWEST LINE OF THE SAID ONCOR EASEMENT;

THENCE SOUTH 79°51'52" EAST, CONTINUING THROUGH THE INTERIOR OF THE 150.39-ACRE TRACT AND WITH THE SAID SOUTHWEST LINE OF THE ONCOR EASEMENT, A DISTANCE OF 180.14 FEET TO A 1/2 INCH CAPPED REBAR STAMPED "LANGAN" SET AT THE BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE SOUTHWEST (CURVE TO THE LEFT) HAVING A RADIUS OF 1,065.77 FEET;

THENCE IN A NORTHWESTERLY DIRECTION, CONTINUING THROUGH THE INTERIOR OF THE 150.39-ACRE TRACT AND WITH THE ARC OF THE SAID CURVE, AN ARC LENGTH OF 236.87 FEET (A CHORD BEARING OF NORTH 37°15'57" WEST, A CHORD DISTANCE OF 236.39 FEET) TO A 1/2 INCH CAPPED REBAR STAMPED "LANGAN" SET ON THE NORTHEAST LINE OF THE ONCOR EASEMENT AT THE END OF THE CURVE;

THENCE NORTH 79°51'52" WEST, CONTINUING THROUGH THE INTERIOR OF THE 150.39-ACRE TRACT AND WITH THE SAID NORTHEAST LINE OF THE ONCOR EASEMENT, PASSING AT A DISTANCE OF 301.67 FEET THE SOUTHWEST LINE OF THE 150.39-ACRE, CONTINUING ON SAID COURSE, NOW THROUGH THE INTERIOR OF THE REMAINDER OF THE 300-ACRE TRACT, IN ALL, A TOTAL DISTANCE OF 729.23 FEET;

THENCE NORTH 78°14'10" WEST, CONTINUING THROUGH THE INTERIOR OF THE 300-ACRE TRACT AND WITH THE NORTHEAST LINE OF THE ONCOR EASEMENT, A DISTANCE OF 20.24 FEET;

THENCE NORTH 00°00'00" EAST, CONTINUING THROUGH THE INTERIOR OF THE REMAINDER OF THE 300-ACRE TRACT, A DISTANCE OF 197.80 FEET;

THENCE NORTH 90°00'00" WEST, CONTINUING THROUGH THE INTERIOR OF THE REMAINDER OF THE 300-ACRE TRACT, A DISTANCE OF 364.50 FEET;

THENCE NORTH 00°00'00" EAST, CONTINUING THROUGH THE INTERIOR OF THE REMAINDER OF THE 300-ACRE TRACT, PASSING AT A DISTANCE OF 237.18 FEET THE SOUTHWEST LINE OF THE 150.39-ACRE TRACT, CONTINUING ON SAID COURSE, NOW THROUGH THE INTERIOR OF THE 150.39-ACRE TRACT A DISTANCE OF 1,047.12 FEET TO A SET 1/2 INCH CAPPED REBAR STAMPED "LANGAN";

THENCE NORTH 82°42'35" WEST, CONTINUING THROUGH THE INTERIOR OF THE 150.39-ACRE TRACT, A DISTANCE OF 96.53 FEET TO A 1/2 INCH CAPPED REBAR STAMPED "LANGAN" SET ON THE NORTHWEST LINE OF THE 150.39-ACRE TRACT;

THENCE NORTH 43°33'20" EAST, PASSING THE TERMINUS OF THE VARIABLE-WIDTH EASEMENT AGREEMENT FOR ACCESS FROM THE 300-ACRE TRACT TO COUNTY ROAD 268 RECORDED UNDER INSTRUMENT NUMBER 20126716, OFFICIAL PUBLIC RECORDS, BROWN COUNTY, TEXAS, IN ALL, A TOTAL DISTANCE OF 946.48 FEET RETURNING TO THE **POINT OF BEGINNING** AND ENCLOSING 792.19 ACRES.

SAVE & EXCEPT THAT 2.88-PORTION OF THE 1,949-ACRE TRACT BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCING AT A 1/2 INCH REBAR FOUND ON THE NORTHWEST LINE OF THE 1,949-ACRE TRACT, AT THE SOUTH CORNER OF THE 300-ACRE TRACT, FROM WHICH A 1/2 INCH CAPPED REBAR STAMPED "LANGAN" SET ON THE SAID NORTHWEST LINE OF THE 1,949-ACRE TRACT BEARS SOUTH 43°32'02" WEST, A DISTANCE OF 1,371.02 FEET; **THENCE** SOUTH 10°43'28" EAST, A DISTANCE OF 1,111.89 FEET TO THE **POINT OF BEGINNING**;

THENCE NORTH 06°42'23" EAST, A DISTANCE OF 133.12 FEET;

THENCE NORTH 18°22'32" EAST, A DISTANCE OF 254.43 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE SOUTHWEST (CURVE TO THE RIGHT) HAVING A RADIUS OF 200.96 FEET;

THENCE IN AN EASTERLY DIRECTION, ALONG THE ARC OF THE SAID CURVE, AN ARC LENGTH OF 435.45 FEET (A CHORD BEARING OF SOUTH 47°07'53" EAST, A CHORD DISTANCE OF 355.12 FEET) TO THE END OF THE CURVE;

THENCE SOUTH 29°18'34" WEST, A DISTANCE OF 189.01 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE NORTH (CURVE TO THE RIGHT) HAVING A RADIUS OF 171.86 FEET;

THENCE IN A WESTERLY DIRECTION, ALONG THE ARC OF THE SAID CURVE, AN ARC LENGTH OF 303.43 FEET (A CHORD BEARING OF NORTH 82°55'03" WEST, A CHORD DISTANCE OF 265.53 FEET) RETURNING TO THE **POINT OF BEGINNING** AND ENCLOSING 2.88 ACRES.

SURVEYOR'S NOTES

1. SUBJECT PROPERTY'S RECORD DESCRIPTION ERROR OF CLOSURE= 0.00'.
2. THE BENCHMARK IS A MAG NAIL WITH A WASHER STAMPED "LANGAN BENCHMARK" SET ±3,800' SOUTH OF THE NORTH ENTRANCE TO THE LEASE SITE NEAR THE DIRT TRAIL. BENCHMARK ELEVATION =1273.57' (NAVD88). SEE LEASE LOCATION (COVER SHEET) MAP FOR GENERAL LOCATION.
3. COORDINATES AND DISTANCES ARE U.S. SURVEY FEET DISPLAYED IN SURFACE VALUES AND ARE SCALED BY A FACTOR OF 1.0001257377 FROM POINT NUMBER 90,000, SAID POINT HAVING GRID COORDINATES OF N=10,538,413.23', E=2,765,058.59', (TEXAS COORDINATE SYSTEM OF 1983, CENTRAL ZONE)
4. ACCESS IS VIA EASEMENT AGREEMENT RECORDED UNDER VOLUME 63, PAGE 601, DEED RECORDS, BROWN COUNTY, TEXAS (B|2 GRID).
5. THE LOCATION OF NON-CRITICAL IMPROVEMENTS ARE SHOWN VIA A SURVEY-GRADE ORTHOMOSAIC IMAGE, HAVING A RELATIVE POSITION OF 0.2' OR BETTER, OVERLAID ONTO A CAD DRAWING. CRITICAL IMPROVEMENTS (THE BOUNDARY, IMPROVEMENTS TIED TO THE BOUNDARY, AND THOSE DEEMED CRITICAL BY LANGAN) WERE LOCATED WITH GROUND MEASUREMENTS. THE VIEW OF NON-CRITICAL IMPROVEMENTS CAN BE LIMITED BY TREES AND OTHER OBSTRUCTIONS.
6. ADDRESS: CR 268 EARLY, TEXAS 76802 (PID#28342 - BROWN COUNTY APPRAISAL DISTRICT), 750 N CR 531 (PID#R000008464, R000008465 & R000001461 - MILLS COUNTY APPRAISAL DISTRICT), .
7. A PORTION OF THIS PROPERTY LIES WITHIN ZONE(S) X (UNSHADED) OF THE FLOOD INSURANCE RATE MAP FOR BROWN COUNTY, TEXAS AND INCORPORATED AREAS, MAP NO. 48049C0550E , DATED AUGUST 28, 2018, VIA SCALED MAP LOCATION AND GRAPHIC PLOTTING AND/OR THE NATIONAL FLOOD HAZARD LAYER (NFHL) WEB MAP SERVICE (WMS) AT HTTP://HAZARDS.FEMA.GOV. ** (FIRM MAPS FOR MILLS COUNTY ARE UNAVAILABLE)**

TITLE COMMITMENT NOTES

THIS SURVEY WAS PERFORMED WITH THE BENEFIT OF A TITLE COMMITMENT PROVIDED BY AMTRUST TITLE INSURANCE COMPANY, COMMITMENT # FN-61102-TX, EFFECTIVE APRIL 30, 2024, AND ISSUED MAY 16, 2024. COMPLETE COPIES OF THE RECORD DESCRIPTION OF THE PROPERTY, ANY RECORD EASEMENTS BENEFITING THE PROPERTY, THE RECORD EASEMENTS OR SERVITUDES AND COVENANTS AFFECTING THE PROPERTY ("RECORD DOCUMENTS"), DOCUMENTS OF RECORD REFERRED TO IN THE RECORD DOCUMENTS, AND ANY OTHER DOCUMENTS CONTAINING DESIRED APPROPRIATE INFORMATION AFFECTING THE PROPERTY BEING SURVEYED AND TO WHICH THE SURVEY SHALL MAKE REFERENCE WERE NOT PROVIDED TO THIS SURVEYOR FOR NOTATION ON THE SURVEY EXCEPT FOR THOSE ITEMS LISTED WITHIN SCHEDULE B OF SAID COMMITMENT. THEREFORE, EASEMENTS, AGREEMENTS, OR OTHER DOCUMENTS, EITHER RECORDED, OR UNRECORDED MAY EXIST THAT AFFECT THE SUBJECT PROPERTY THAT ARE NOT SHOWN ON THIS SURVEY.
THE FOLLOWING SCHEDULE B ITEMS WERE ADDRESSED ACCORDING TO THE MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/NSPS LAND TITLE SURVEYS SECTION 6(C)II AND IDENTIFIED BY THE TRACT DESIGNATOR LISTED IN THE TITLE COMMITMENT.

		IF MORE THAN ONE TRACT IS BEING ADDRESSED, THE CHART BELOW WILL USE THE TRACT DESIGNATORS USED IN THE TITLE COMMITMENT.

RE: Notice of Project Substation Completion in accordance with Sections 11.2 and 11.2.1 of the Agreement

---

This Notice of Project Substation Completion is delivered to you pursuant to Sections 11.2 and 11.2.1 of the Procurement and Construction Agreement (the "**Agreement**"), dated as of , between Blue Heron Solar, LLC ("**Owner**") and _____ ("**Contractor**").

Capitalized terms used herein and not otherwise defined shall have the meanings specified in the Agreement.

The undersigned, in [his][her] capacity as an officer of Contractor and not in [his][her] personal capacity, and without undertaking any personal liability, certifies that all requirements of Section 11.2 of the Agreement have been satisfied:

(a) The Project Substation is mechanically completed, assembled, erected and installed (and ready for energization) in accordance with the Project Substation installation specifications contained in Exhibit A and otherwise in accordance with this Agreement (other than Punchlist items) and is free from detectable and patent defects and deficiencies in installation, including any free of any defects that would prevent the safe, normal, and reliable operation of the Project Substation;

(b) Contractor has completed the relevant mechanical quality control inspections for the Project Substation and has provided such documentation to Owner,

(c) Contractor has assisted Owner in attempting to obtain or obtaining any permits, certificates and approvals otherwise necessary to commence operating the Project Substation;

(d) The plant control system located in the Project Substation and all required protective and control features are installed and tested, and are operational; and

(e) The SCADA and all communication equipment for the Project to be located at the Project Substation have been properly installed and tested and are operational.

(f) Contractor has delivered this Notice of Project Substation Completion to Owner pursuant to Section 11.2.1 of the Agreement.

In Witness Whereof the undersigned has executed this Notice of Project Substation Completion this day of , 202[_].

By:

Date: _____

In accordance with Section 11.2 of the Agreement, Owner on this day of , 202[_], hereby indicates its acceptance of the achievement of Project Substation Completion.

_____ BESS Mechanical Completion
_____ Block Mechanical Completion for Block Number: _____

The undersigned, in [his][her] capacity as an officer of Contractor and not in [his][her] personal capacity, and without undertaking any personal liability, certifies that all requirements of Section 11.3 of the Agreement have been satisfied:

(a) the BESS or such Block is mechanically completed, assembled, erected and installed (and ready for backfeed) in accordance with the BESS or Block installation specifications contained in Exhibit A and otherwise in accordance with the Agreement (other than Punchlist items) and is free from detectable and patent defects and deficiencies in installation, including any free of any defects that would prevent the safe, normal, and reliable operation of the BESS or Block;

(b) Contractor has completed the relevant mechanical quality control inspections for the BESS or such Block and has provided such documentation to Owner;

(c) Contractor has assisted Owner in attempting to obtain or obtaining any permits, certificates and approvals otherwise necessary to commence commissioning;

[Include only for the First Portion to achieve Mechanical Completion:

(d) (1) no Block has generated any electricity that has been dispatched across the Point of Change of Ownership;

(2) no module shall have received any backfeed power;

(3) no Block shall have been interconnected to its respective breaker in the Project Substation;

(4) no electric power shall have been transmitted from any module through the Project Substation to the Gen-Tie Line;

(5) the synchronization of the Project or any part thereof with the transmission system as provided in Section 11.4(e) shall not have begun;

(6) one hundred percent (100%) of the posts, trackers and inverters have been installed for the Project; and

(7) modules have been installed for at least [___] (____)Blocks in addition to the First Portion.]

(e) Contractor has delivered this Notice of Mechanical Completion to Owner pursuant to Section 11.3 of the Agreement.

In Witness Whereof the undersigned has executed this Notice of Mechanical Completion this day of , 202[_].

By:

Date: _____

In accordance with Section 11.3 of the Agreement, Owner on this day of , 202[_], hereby indicates its acceptance of the achievement of Mechanical Completion.

EXHIBIT P-4

NOTICE OF PROJECT SUBSTANTIAL COMPLETION

TO: Owner

RE: Notice of Project Substantial Completion in accordance with Sections 11.5 and 11.6 of the Agreement

---

This Notice of Project Substantial Completion is delivered to you pursuant to Sections 11.5 and 11.6 of the Procurement and Construction Agreement (the "**Agreement**"), dated as of , between Blue Heron Solar, LLC ("**Owner**") and _____ ("**Contractor**").

Capitalized terms used herein and not otherwise defined shall have the meanings specified in the Agreement.

The undersigned, in [his][her] capacity as an officer of Contractor and not in [his][her] personal capacity, and without undertaking any personal liability, certifies that all requirements of Section 11.5 of the Agreement have been satisfied:

(a) the procurement and construction of the Project and every part thereof (other than any Non-Critical Deficiency included on the Punchlist) has been completed;

(b) the connection of all equipment (including each Block) and wiring to the Interconnection Facilities of the Project as required by way of wiring, controls, and safety systems has been completed.

(c) (i) all instruments and relays have been installed and are functional and (ii) all required protective and control features are operational;

(d) the Project is capable of unattended continuous operation in a safe manner without damage to the Project or any sub-system thereof, or any other property on or off the Site, and without injury to any Person in compliance with the Requirements and any other standards of performance set forth herein;

(e) the Project is synchronized with the transmission system and all testing under the PPAs required as a condition to achievement of "Commercial Operation Date" (as defined in the PPA), including testing required by the Power Purchasers to each respective PPA for delivery of electricity, has been satisfactorily completed;

(f) Owner has received all Contractor Deliverables and applicable spare parts in respect of the Project that are required to be delivered by the Project Substantial Completion Date, including all Required Manuals identified

therein, in accordance with the requirements in Exhibit B of the Agreement;

(g) the Punchlist for the Project is in final form as provided for in Section 11.1.1 of the Agreement;

(h) the following shall have been installed and placed into full operation by Contractor and be capable of unattended operation in a safe manner without damage to the Project or any sub-system thereof, or any other property on or off the Site, and without injury to any Person in compliance with the Requirements and any other standards of performance set forth herein:

(i) the Meteorological Stations for the Project;

(ii) the telemetry system for the Project; and

(iii) the telecommunications system for the Project.

(i) the Commissioning tests, the BESS Performance Test, the Availability Test and the Initial Capacity Test have each been Successfully Run, and the Project is ready to commence commercial operation;

(j) the Interconnection Facilities (and all testing under the Interconnection Agreement required as a condition to commencing parallel operation with the Participating TO's Interconnection Facilities) have been satisfactorily completed by Contractor as required under the Interconnection Agreement in accordance with the requirements thereof;

(k) without limiting the requirement under Section 11.5(i) of the Agreement that the Initial Capacity Test has been Successfully Run, either (i) the results of the Initial Capacity Test reflect achievement of the Capacity Guaranty, or (ii) the results of the Initial Capacity Test reflect achievement of at least the Minimum Guaranteed Capacity, and demonstrated to satisfaction of Owner that the shortfall in the Initial Capacity Test is not due to any of the Work:

(l) Contractor has paid to Owner all undisputed amounts due and payable to Owner hereunder, including any undisputed Delay Liquidated Damages accrued up to Substantial Completion;

(m) No Contractor Liens in respect of amounts paid to Contractor hereunder shall be outstanding against the Project (unless bonded over) and Contractor has provided, as applicable, each Conditional Waiver and Release Upon Progress Payment and each Waiver and Release Upon Final Payment, as required pursuant to Section 21.2 of the Agreement;

(n) All Subcontractor warranties required to have been assigned to Owner pursuant to Section 14.6 of the Agreement have been so assigned to Owner in accordance with Section 14.6, and copies of all such

Subcontractor warranties have been provided to Owner in accordance with Section 14.6; and

(o) Contractor has delivered this Notice of Project Substantial Completion to Owner pursuant to Section 11.6 of the Agreement.

In Witness Whereof the undersigned has executed this Notice of Substantial Completion this day of , 202[_].

By:

Date: _____

In accordance with Section 11.6 of the Agreement, Owner on this day of , 202[_], hereby indicates its acceptance of the achievement of Project Substantial Completion.

EXHIBIT P-5

NOTICE OF FINAL COMPLETION

TO: Owner

RE: Notice of Final Completion in accordance with Sections 11.7 and 11.8 of the Agreement

---

This Notice of Final Completion is delivered to you pursuant to Sections 11.7 and 11.8 of the Procurement and Construction Agreement (the "**Agreement**"), dated as of , between Blue Heron Solar, LLC ("**Owner**") and _____ ("**Contractor**").

Capitalized terms used herein and not otherwise defined shall have the meanings specified in the Agreement.

The undersigned, in [his][her] capacity as an officer of Contractor, and not in [his][her] personal capacity, and without undertaking any personal liability, certifies that all requirements of Section 11.6 of the Agreement have been fulfilled:

(a) Project Substantial Completion shall have been achieved;

(b) all items on the Punchlist shall have been completed by Contractor or, pursuant to Section 6.7.2 of the Agreement, including all restoration and reclamation as required under this Agreement, Owner has withheld any remaining Punchlist Holdback to complete any items on the Punchlist not completed by Contractor in accordance with the terms hereof;

(c) the Final Capacity Test of the Project (if any) shall have been Successfully Run;

(d) all Contractor's and Subcontractors' personnel shall have left the Site, and all supplies, tools, equipment, machinery, surplus materials, waste materials, rubbish and construction facilities other than those to which Owner holds title shall have been removed from the Site (other than Contractor's personnel, supplies, tools, machinery, materials and equipment required for the performance of its obligations under any operations and maintenance agreement executed between the Parties, if applicable);

(e) Owner shall have received all Contractor Deliverables in relation to the Project;

(f) Contractor shall have delivered to Owner copies of final as-built and record drawings of the Project in accordance with the requirements set forth in Exhibit B (other than requirements related to timing for delivery for which any failure to comply has been cured) and the other documents and information required under the PPAs and Interconnection Agreement in accordance with the requirements thereof;

(g) Contractor shall have delivered the Notice of Final Completion to Owner pursuant to Section 11.8 of the Agreement;

(h) All amounts due and payable by Contractor to Owner under the Agreement shall have been paid in full; and

(i) No Contractor Liens in respect of amounts paid to Contractor hereunder shall be outstanding against the Project (unless bonded over) and Contractor shall have provided each Conditional Waiver and Release on Progress Payment, each Unconditional Waiver and Release on Progress Payment, each Conditional Waiver and Release on Final Payment and each Unconditional Waiver and Release on Final Payment as required under Section 21.2 of the Agreement.

In Witness Whereof the undersigned has executed this Notice of Final Completion this day of , 202[_].

By:

Date: _____

In accordance with Section 11.8 of the Agreement, Owner on this day of , 202[_], hereby indicates its acceptance of the achievement of Final Completion.

ARCHITECT'S CERTIFICATE FOR PAYMENT

In accordance with the Contract Documents, based on on-site observations and the data comprising this application, the Architect certifies to the Owner that to the best of the Architect's knowledge, information and belief the Work has progressed as indicated, the quality of the Work is in accordance with the Contract Documents, and the Contractor is entitled to payment of the AMOUNT CERTIFIED.

AMOUNT CERTIFIED

_____

(Attach explanation if amount certified differs from the amount applied for. Initial all figures on this Application and on the Continuation Sheet that are changed to conform to the amount certified.)

ARCHITECT:

By: _____ Date: _____

This Certificate is not negotiable. The AMOUNT CERTIFIED is payable only to the Contractor named herein. Issuance, payment and acceptance of payment are without prejudice to any rights of the Owner or Contractor under this Contract.

EXHIBIT R

INSURANCE REQUIREMENTS

Contractor Requirements

Contractor shall maintain, or cause to be maintained by its Subcontractors, from the Commencement Date until Substantial Completion, the insurance coverage outlined in (a) through (f) below, in the amounts specified and all such other insurance as required by Applicable Law. Within five (5) Business Days after the Commencement Date, and annually thereafter through the warranty period, Contractor shall deliver to Owner certificates of insurance signed by Contractor's insurance broker evidencing the insurance coverage required under the Agreement, accompanied by copies of the endorsements required hereunder. Notwithstanding any deductibles or self-insured retentions in such policies, Contractor shall be responsible for the first dollar of loss. All Insurance Carriers will be rated A-VIII or better by A.M. Best and Company.

(a) Workers' Compensation and Employers' Liability.

(i) Contractor shall obtain workers' compensation and basic employers' liability insurance for all employees in accordance with applicable Law.

(ii) Contractor shall obtain employers' liability insurance with limits of $1,000,000 for injury, $1,000,000 for disease, or $1,000,000 for death occurring as a result of each accident.

(b) Business Auto.

(i) Contractor shall obtain commercial automobile liability insurance with bodily injury, death and property damage combined single limits of $1,000,000 per occurrence covering vehicles any owned (if any), hired or non-owned.

(c) Commercial General Liability.

(i) Contractor shall obtain commercial general liability insurance written on an occurrence basis with a limit of $1,000,000 per occurrence and $2,000,000 in the aggregate, including premises and operations liability, products and completed operations liability, blanket contractual liability to the extent coverage applies, personal injury liability, bodily injury and "broad form" property damage coverage, explosion, collapse and underground hazard coverage. If coverage includes an aggregate limit, that limit should be $2,000,000. Coverage should be provided on a per project/per location basis.

(d) Umbrella/Excess Liability Insurance.

(i) Contractor shall obtain umbrella or excess liability insurance with a limit of $20,000,000 per occurrence and in the aggregate, in excess of the limits of insurance provided above. Coverage shall be "following form" of the underlying general liability policy. Auto and Employers Liability policies shall also be

scheduled on the underlying umbrella policy schedule. Coverage limits may be structured using any combination of underlying, excess, or umbrella policies

(e) Professional Liability Insurance.

(i) Contractor will obtain and maintain, at its sole cost and expense, throughout the term of the agreement, professional liability (errors and omissions) insurance covering loss or damages due to Contractor's acts, errors or omissions in the delivery of Contractor's Work involving design, engineering, architectural or stamped drawings, with a limit of $2,000,000 per occurrence or in the aggregate. If the policy shall be written on a "claims made" basis then the policy shall include 1) a retroactive date that is no later than the construction start date and 2) any time a policy is written on a claims made basis is not renewed or the retroactive date changed the Contractor shall obtain or cause to obtain the broadest "tail" or extended reporting coverage commercially available.

(f) Contractor's Pollution Liability Insurance.

(i) Contractor shall obtain Contractor's Pollution Liability insurance coverage with a limit of $2,000,000 each incident or in the aggregate. If the policy shall be written on a "claims made" basis then the policy shall include 1) a retroactive date that is no later than the construction start date and 2) any time a policy is written on a claims made basis is not renewed or the retroactive date changed the Contractor shall obtain or cause to obtain the broadest "tail" or extended reporting coverage commercially available. This coverage may be obtained in a single policy or included as part of (c) or (d) above.

(g) Additional Insurance Provisions.

(i) Such insurance and to the extent Contractor is found negligent or to have caused a claim, loss or damages shall include (1) provisions or endorsements naming the other Owner and any financing parties as with additional insured status (except as regards Workers Compensation, Employers Liability, and Professional Liability) to the extent losses or claims are caused in whole or in part from the negligence or alleged negligence of Contractor using the customary CG 2010 1219 and CG 2037 1219 endorsements, or equivalent forms for coverages other than Commercial General Liability, to the extent that the loss or claim in question is caused by the Contractor's negligence in its operations in and during the performance of the Work, and to no greater extent than is necessary to provide insurance coverage for the covered indemnity obligations expressly assumed by Contractor under this Agreement, it being the express intent and understanding of the Parties that, up to specified limits, additional insured status is provided hereunder as a support to performance of Contractor's expressly assumed, covered indemnity obligations hereunder; (2) provisions that such insurance is primary insurance with respect to Owner and that any other insurance maintained by the other underwriters is excess and not contributory insurance, to the extent of the indemnity obligations expressly assumed by each party hereunder, each party agrees that all insurance policies

required under this Agreement of such indemnifying party shall be primary to the other party's insurance and the other party's insurance shall likewise be non-contributing; (3) a cross-liability or severability of interest clause; (4) provisions that require 30 days' prior Notice (except 10 days' prior Notice for non-payment of premiums) be given to the Owner prior to the cancellation, non-renewal or reduction of required limits of liability with respect to any such required policies. Contractor shall provide the Owner and any financing parties with certificates of insurance annually through the warranty period evidencing the policies, and required endorsements listed above within 10 days after they have been obtained. As above, to the extent of Contractor's negligence or alleged negligence, the insurance coverage described above in this section shall be primary and not excess to Owner's insurance and shall not be deemed to limit the Contractor's liability under this Agreement, as detailed herein. All insurance required to be maintained by Contractor pursuant to this Exhibit R except for Professional Liability insurance shall provide for a waiver of all rights of subrogation which Contractor's insurance carriers might exercise against Owner Indemnified Parties.Waiver of Subrogation provided where and to the extent permitted by law and to the extent of Contractor's expressly assumed indemnity obligations hereunder, and except to the extent any loss, claim, damage, etc. is caused by the negligence, recklessness or willful misconduct of any party indemnified hereunder by Contractor.

(ii) Contractor shall require all first-tier Subcontractors to comply with the insurance requirements set forth in paragraphs (a) through (c) above. Contractor shall require all Subcontractors to include provisions in all lower-tier Subcontracts requiring such lower-tier Subcontractors to comply with such insurance requirements set forth in paragraphs (a) through (c) above. Contractor shall obtain insurance certificates from each Subcontractor and, upon the written request of Owner, Contractor shall furnish Owner evidence of insurance for its Subcontractors. Contractor will be responsible for any deficiencies in any Subcontractor's insurance coverage.

(iii) Any failure of any certificates delivered pursuant to this Exhibit R to conform to the contractual requirements specified in this Exhibit R shall not result in a waiver by Owner of any rights under this Agreement or Contractor's required insurance and indemnity obligations herein and such obligations shall continue in full force and effect.

(iv) To the extent allowed by Applicable Law, Contractor shall furnish Owner with accident report(s) covering accidents occurring in connection with or as a result of the performance only of the scope of Work defined herein within ten (10) days after the occurrence of such an accident and to the extent such accident involves Owner.

(v) Contractor shall be responsible for any deductibles or self-insured retentions applicable to the insurance provided in compliance with this Exhibit R

(vi) Contractor shall notify Owner when coverages required herein have been reduced as a result of claim payments, expenses or both.

(vii) None of the requirements contained in this Exhibit R as to types, limits or Owner's reasonable approval of insurance coverages to be maintained by Contractor are intended to and shall not in any manner limit, qualify or quantify the liabilities and obligations assumed by Contractor hereunder, in any other agreement with Owner, or as otherwise provided by Applicable Law

(viii) Contractor hereby waives all rights of subrogation against the Owner Indemnified Parties for the policies procured by Contractor, as detailed herein. Failure of Contractor to provide insurance and herein required or failure of Owner to require evidence of insurance or to notify Contractor of any breach by Contractor of the requirements of this Exhibit R shall not be deemed to be a waiver by Owner of any of the terms and conditions of this Agreement, nor shall they be deemed to be a waiver of the obligation of Contractor to indemnify, defend and hold harmless Owner as required in the Agreement to the extent Contractor's negligence or alleged negligence caused in whole or in part from the Work.

Owner Requirements

Owner shall maintain, from the Commencement Date until Substantial Completion, the insurance coverage outlined in (a) through (d) below, in at least the minimum amounts specified and all such other insurance as required by Applicable Law. Within five (5) Business Days after the Commencement Date, and through the warranty period, Owner shall deliver to Contractor certificates of insurance signed by Owner's insurance broker evidencing the insurance coverage required under the Agreement. Notwithstanding any deductibles or self-insured retentions in such policies, Owner shall be responsible for the first dollar of loss, except as otherwise specified herein. All Insurance Carriers will be rated A-VIII or better by A.M. Best and Company.

(a) Workers' Compensation and Employers' Liability.

(i) If applicable, Owner shall obtain workers' compensation and employers' liability insurance for all employees in accordance with applicable Law.

(ii) If applicable, Owner shall obtain employers' liability insurance with limits of at least $1,000,000 for injury, $1,000,000 for disease, or $1,000,000 for death occurring as a result of each accident.

(b) Business Auto.

(i) If applicable, Owner shall obtain comprehensive automobile liability insurance with bodily injury, death and property damage with combined single limits of at least $1,000,000 per occurrence covering vehicles any owned (if any), hired or non-owned.

(c) Commercial General Liability.

(i) Owner shall obtain commercial general liability insurance written on an occurrence basis with a combined single limit of at least $1,000,000 per occurrence and $2,000,000 in the aggregate on a project specific basis, including premises and operations liability, products and completed operations liability, blanket contractual liability, personal injury liability, bodily injury and "broad form" property damage coverage, explosion, collapse, and underground hazard coverage. If coverage includes an aggregate limit, that limit should be at least $2,000,000.

(d) Umbrella/Excess Liability Insurance.

(i) Owner shall obtain umbrella or excess liability insurance with a limit of at least $20,000,000 per occurrence and in the aggregate, in excess of the limits of insurance provided above. Coverage shall be "following form" of the underlying general liability policy. The coverage require of the Owner in (c) and (d) above may be obtained in a single policy or combination or primary and excess policies.

(e) Builder's All Risk insurance / Inland Marine or Installation Floater: Owner shall obtain or cause to be maintained Builder's All Risk insurance insuring all risks of physical loss or damage (including testing and commissioning), lighting, strike, riot, vandalism, theft and malicious mischief. Sublimits for following perils:

- Earthquake and Flood with sublimits and deductibles approved by Owner & any financing parties;
- Severe Convective Storm (hail or tornado) and Named Windstorm with sublimit and deductible approved by Owner & any financing parties;
- All real and personal property of either Loan Party, Contractor or Subcontractor of any tier, whether fixed, in-transit, or off-site which is intended to become a permanent part of the project and has been included in the contract value covered by the policy. This policy does not provide coverage for tools and equipment that are owned, rented or leased by the Contractor or subcontractors of any tier that have been brought to the site for the purpose of the construction project
- Debris removal subject to a customary sublimit;
- Contractor shall be included as an insured, at least the LEG 2 endorsement shall be included, and Contractor shall be provided a copy of the Builder's All Risk (BAR) coverage or at least a summary of the BAR coverage from Owner's insurance broker.

The construction site shall be specifically scheduled on the policy as a Covered Location. Limits of policy will be at least the full replacement value of the completed Project, except for industry standard sublimits for certain perils. Coverage and limits shall be extended to include Materials In Transit and Stored Offsite, Extra and Expediting Expenses, Delay in Start Up (DSU) in an amount equal to 12 months revenues less non continuing expenses. The waiting period shall be for no more than 60 days.

Policy shall provide for claims to be paid based upon Replacement Cost of the damaged property without deduction for depreciation. The policy shall have a deductible of no greater than $250,000 per occurrence, except for certain perils (earthquake, flood, water damage, severe convective storm, named windstorm, wildfire, hot testing) which shall have deductibles no greater than 5% of the values. The policy shall not contain Coinsurance provisions unless Agreed Amount is endorsed. The Contractor and all Subcontractors shall be an Additional Insured on the policy. The policy shall include an endorsement naming any financing parties as Loss Payee and Additional Insured, if applicable.

The Owner shall pay the deductible for such reported losses, except to the extent such loss or damage giving rise to the claim is a result of the actions of Contractor or its Subcontractors, in which case Contractor shall be responsible for no more than $250,000 per occurrence for any loss insured under the Builder's All Risk policy.

The policy shall include a Waiver of Subrogation against Contractor and all Subcontractors for any claims that are paid or should have been paid by this required Builder's All Risk insurance.

ENERGY STORAGE SYSTEMS

NORTH AMERICA STANDARD /EXTENDED PRODUCT WARRANTY

1. DEFINITIONS

1.1. The Warrantor for the limited warranties set forth herein is Sungrow USA Corporation, as well as Sungrow Power Supply Co., Ltd. (collectively referred to as "Sungrow").

1.2. "**Commissioned**" shall mean when the Product is fully installed and/or placed in service, as applicable.

1.3. "**Commissioning**" shall mean cold and hot commissioning tests according to the Product commissioning protocol.

1.4. "**Defect**" shall mean any defect(s) in the design, engineering, materials, manufacturing, production, workmanship or assembly of the Product or Product Components that does not conform to the Product Specifications.

1.5. "**Discontinued**" (or any term deriving from it) shall mean that Sungrow has ceased manufacturing and selling the Product or Product Components.

1.6. "**End-user aka End Client, Client or Customer**" means the party who purchases the Products from Sungrow, or any subsequent owner of the Product with valid assignment of ownership, for which Service, as defined herein, will be performed under the Warranty.

1.7. "**Manual**" shall mean all manuals, guides, or similar documents which are provided in writing by Sungrow to End-users and which relate to the installation, operation, maintenance, or storage of the Products.

1.8. "**Person**" means any individual, entity, corporation, general or limited partnership, limited liability company, joint venture, estate, trust, association or other entity or governmental authority.

1.9. "**Product**" shall mean a complete energy storage system ("**BESS**"), consisting of some or all the following "**Product Components**" as applicable to the Purchase Order:

(a) Power conversion systems ("**PCS**") a device to convert (DC to AC, or AC to DC).

(b) Battery unit ("**Battery Unit**") an outdoor energy storage system engineered to work with the PCS.

(c) A "**Bank**" consisting of a single or multiple series-parallel battery strings (including battery modules ("**Battery Modules**") composed of multiple battery cells ("**Battery Cells**"), tied to string level Battery Control Units ("**BCU**"), and a Battery Management System ("**BMS**").

(d) Enclosure, including battery rack, thermal management system, and Fire Suppression System ("**FSS**") as applicable

(e) Local controller ("**Local Controller**") a controller to receive and distribute commands appropriately to Battery Units connected to a PCS.

1.10. "**Service**" shall mean a site visit, or remote services performed by Sungrow technicians in response to a claim.

1.11. "**Service Cancellation**" Please refer to Exhibit A for detailed information regarding Service Cancellation.

1.12. "**Serial Defect**" Please refer to Exhibit B for detailed information regarding Serial Defects.

1.13. "**Site**" shall mean the location of End-user's Product that is covered under this Warranty.

1.14. "**VPC**" shall mean volts per cell.

1.15. The "**Warranty**" shall mean this limited warranty contract for Sungrow Product, as may be extended by any Extended Warranty purchased by the End-user.

1.16. The "Initial Warranty Commencement Date" shall mean the earlier date between i) The commissioning completion date, or ii) Two (2) months after the date the last Product was delivered to End-user)

1.17. "**Extended Warranty**" means the extended warranty can be purchased from Sungrow at the time of the initial purchase or no later than 12 months before the end of the Product's warranty period (prices may vary). If the warranty has already expired, Sungrow will decide on a case-by-case basis whether to offer extended warranty services.

1.18. "**Warranty Period**" shall mean the Initial Warranty Period or the Extended Warranty Period, as applicable.

1.19. **"Spare Parts Warranty"** Please refer to Exhibit C for detailed information about Spare Parts Warranty.

1.20. **"Out-of-Warranty"** refers to any service or repair required after the Warranty Period or for issues not covered by Sungrow under the warranty terms.

2. OVERVIEW

2.1. The Warranty may be performed by Sungrow's own personnel, or Sungrow may, in its sole discretion, engage third party subcontractors to conduct any of the remedial work outlined hereunder, provided that Sungrow is solely responsible for the actions, omissions and costs of such third-party subcontractors.

© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

2.2. The terms of this Warranty will apply to the extent permitted by Applicable Law.

2.3. This Warranty is offered by Sungrow a standard warranty. Sungrow reserves the right to offer special warranty conditions. In that case, these special conditions will be stated in a separate document in relation to the specific products.

3. LIMITED WARRANTY

3.1. Sungrow warrants that the Products are free from defects in design, material, and workmanship for the Warranty Period.

3.2. If Sungrow accepts a warranty claim submitted by End-user, Sungrow shall, in its sole and absolute discretion, either send replacement Product to the End-user or shall dispatch technicians to the Site to perform on-site repair.

3.3. Sungrow will have sole and absolute discretion for determining whether it will pursue the repair or replacement remedy, but in either case, the costs of performing the remedial work (including, but not limited to, the costs of transporting replacement Products) shall be at Sungrow's expense, subject to a right of recuperation of those costs under the circumstances described in Section 13.3below. In addition, Sungrow may, in its sole and absolute discretion, engage third-party service providers to perform any of the remedial work hereunder, provided that Sungrow shall be solely responsible for the actions, omissions and costs of such third-party service providers.

3.4. If Sungrow sends replacement parts, the defective Products that have been replaced shall become the sole property of Sungrow, and the End-user shall collect and store those defective Products for Sungrow until such time as Sungrow can collect said Products or arrange for shipment back to Sungrow. End-user's obligation to collect and store defective Products shall last for:

(i) Up to one (1) month in, Canada, Contiguous United States;
(ii) Up to one (1) year in the rest of the world.

3.5. Warranty rights could be transferred to subsequent owners during the Warranty Period, including any subsequent authorized operators or lessees at the same location. The new End-User, namely non-purchasers, must sign and submit a warranty transfer agreement to Sungrow. If the installed Product is relocated to another site, the continuation of warranty services will depend on an on-site inspection by Sungrow at the new location before installation, with the final cost borne by the End-User.

3.6. Sungrow and the End-user shall mutually agree upon the conduct of any tests required to determine whether a Product is defective in advance of conducting such tests. Sungrow reserves the right, in its sole and absolute discretion, to supply different Product Components to settle a warranty claim, provided that such Product Components are functionally equivalent to the original Product Components and do not affect the performance of the system to which the Product Components will be installed. Any parts that are replaced may be new or reconditioned.

3.7. In the event of a Serial Defect, Sungrow shall preventively replace, or repair components related to the serial defect in all same Equipment at the Site.

4. Warranty Term Exceptions

4.1. C3 coatings for environments with moderate corrosivity, such as outdoor environments with moderate humidity and low pollution levels have a two (2) year limited warranty when installed within five (5) kilometers of the coast and a one (1) year limited warranty when installed within two (2) kilometers of the coast.

4.2. C4 coatings for environments with high corrosivity, such as coastal environments with high humidity and high pollution levels have a two (2) year limited warranty when installed within two (2) kilometers of the coast and a one (1) year limited warranty when installed within one (1) kilometer of the coast.

4.3. C5 coatings for environments with very high corrosivity, such as coastal or industrial environments with very high humidity, and high pollution levels have a two (2) year limited warranty when installed within five hundred (500) meters of the coast.

4.4. The End User is responsible for ordering an appropriate level of corrosion resistance in accordance with the site location and lifespan requirements.

4.5. The standard warranty for the painting, coating and container will be void in cases: 1) highly corrosive environment (≥250 µg/), 2) highly hot and humid environment (A 67°F/19.5°C or higher wet bulb temperature for 3,000 or more hours during the warmest 6 consecutive months of the year and RH>85%), unless there are special protection measures taken and clearly stated in the agreement between Sungrow and End-User.

5. WARRANTY CLAIM PROCESS

5.1. If the End-user identifies any non-conformity or defect in the Product during the Warranty Period, the End-user will provide notice by email to BESStechsupport@sungrowamericas.com or other established Sungrow contact method within one (1) business days of the date that the End-user identified the non-conformity or defect.

5.2. Upon request by Sungrow, End-user shall provide (i) proof of ownership, including valid assignment of ownership, the Warranty Claimed serial number and/or (ii) evidence of executed regular or corrective maintenance reports on the Products in reference to the Warranty Claim.

5.3. Sungrow will make all commercially reasonable efforts to notify End-user by email within two (2) business day of receiving End-user's Warranty Claim of a Defect under this Warranty, whether Sungrow accepts the Warranty Claim or if more information is required to evaluate the Warranty Claim. If the Warranty Claim is approved, Sungrow will assign the warranty work a service ticket number. If Sungrow denies the Warranty Claim due to one of the exclusions or limitations listed in this Warranty, Sungrow will offer a thorough written justification.

5.4. Sungrow's decision to accept or reject a Warranty Claim is final, although the End-user may dispute it under the applicable dispute terms of a relevant purchase order or purchase agreement for the Products.

5.5. Sungrow shall produce (or ask its service providers to produce) a field service report in respect of any on-Site remediation work performed under the Warranty.

6. PRODUCT DATA REQUIREMENTS FOR WARRANTY CLAIM

(a) **T**hroughout the Warranty Period, End-User shall, when necessary, monitor, collect, and store the Product data as instructed by Sungrow every five (5) seconds as described in the Logging and Archiving Exhibit of the Master Supply Agreement. Upon request from Sungrow, the operating data shall be made available to Supplier for twenty-four (24) hours before and twenty-four (24) hours after the fault that requires investigation.

7. ORIGINAL WARRANTY PERIOD

7.1. The Original Warranty Period is five (5) years for a Product installed in the United States or Canada.

7.2. All spare parts repaired or replaced are covered under this Warranty for the longer of either (i) the Warranty Period for the defective Product or (ii) one (1) year from the date of completion of the repair or replacement.

7.3. All Service work performed by Sungrow is warranted for one (1) year from the day the service was completed.

8. EXTENDED WARRANTY PERIOD

8.1. The Extended Warranty option is sold separately for Products that are currently within warranty.

8.2. An Extended Warranty shall commence provided Sungrow has received payment in full for the initial warranty and extension, or a periodic instalment plan has been memorialized via an executed contract document. Periodic instalment plans will incur additional financing fees.

8.3. It is recommended that the Extended Warranty be purchased together with the Preventative Maintenance Plan to comply with Sungrow standards.

8.4. If purchasing an Extended Warranty, it must be purchased for every Product Component on site.

9. WARRANTY EXCLUSIONS

9.1. The Warranty does not cover defects or damages caused by factors outside Sungrow's control including:

(a) Force Majeure events as defined further herein;
(b) Improper transportation and/or delivery in the event End-user assumes transportation responsibility;
(c) Improper transportation, installation, storage, and handling;
(d) Failure of the End-user to properly store the Product;
  (i) If for any reason the Battery Units are stored prior to installation of the Product for a period longer than four (4) months following the later of
    1. the initial Battery Unit delivery date specified in the BOL and/or
    2. the date the initial Battery Unit was delivered to the designated Project Site or End-user's designated Staging Warehouse.
  (ii) End-user shall inspect and re-charge inventory material, if required, as directed by Supplier.
  (iii) End-user shall share relevant data related to any top-off charge of stored battery to assure compliance with Warranty terms.
  (iv) The cost related to the inspection and recharging process shall be borne by End-user, unless the Supplier is directly responsible for the extended storage of the Battery Units, in which case the Supplier shall bear the cost of one top-off charge.

© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

(v) Failure by End-user to comply with the Product Manual, guidelines, warnings, or instructions provided;

(e) Improper use or misuse of the Products, including accidents and external influences, e.g., third-party EMS or controllers, extended period of shutdown/idle resulting in deep discharge of the battery below its minimal cell voltage level;

(f) Improper maintenance or lack of maintenance, as set forth in the Manual;

(g) Repair, disassembly, or replacement of the Product Components, unless permitted in writing by Sungrow;

(h) External factors include but are not limited to: Extended power failure, surges, storm, lightning, flood, fire, vehicle collision, telecommunication, grid outage or voltage spike.

(i) Conditions exceeding the electrical, wind, snow load specifications, and any other operational specification.

(j) Chemical exposure.

(k) Damage caused by vandalism or animals.

(l) Neglect, abuse, misuse, improper or lack of maintenance and maintenance performed by unqualified personnel.

(m) Flaws that do not adversely affect the proper functioning of the Product. (e.g., cosmetic defects, wear and tear)

(n) Salt, mist, or corrosion levels above design specifications.

9.2. The Warranty does not cover:

(a) Fuses, surge suppressors, filters, cosmetic defects or normal wear and tear;

(b) Costs for End-user's employees and/or any third parties, unless stipulated otherwise in the Warranty;

(c) Regulatory changes or recertifications;

(d) Indirect, incidental, consequential, or special damages of the failure of the Product in Quality Warranty, including but not limited to, loss of use, loss of profits, loss of production, or loss of revenues.

9.3. The Warranty shall be void, if:

(a) Serial number has been tampered with;

(e) Inadequate Site access is provided and Sungrow repeatedly cannot perform service;

(b) Inadequate proof in cases where End User or its agents are responsible for required maintenance.

9.4. Additional Warranty Voiding Conditions – Battery Unit

(a) Low voltage. Allowing any Battery Unit to hold a 0% SOC condition on for more than one hundred and twenty (120) consecutive hours; allowing any cell voltage to be held at or below the minimum cell voltage 2.7VPC ("Minimum Cell Voltage") for more than one hundred and twenty (120) consecutive hours; Allowing cell voltages to reach 2.0VPC ("Cell Protection Voltage") or below; or exceeding battery alarm levels and triggering battery protection mechanisms.

(b) Abnormal Environment. During any power shutdown or maintenance work or consequence of negligence affecting the thermal management system or integrity of the internal environment within the BESS where:

- Humidity causes condensation within the BESS.
- Water enters the BESS.
- Excessive dust or pollutants enter the BESS.
- Temperature(n) <5℃ based on direct physical cell temperature (during cell charging or discharging) or Humidity <5% or Temperature(n) > 60℃ for more than 15 minutes. Temperature(n) below-30℃ for more than 2 hours.

10. DISCONTINUED AND COMPATIBLE PRODUCTS

10.1. If the Product or Product Component that is the subject of a Warranty Claim has required a non-repairable part to be replaced and no such part is available, Sungrow shall affect a repair path for such Warranty Claim using a part of comparable quality, specification, and certification.

10.2. If replacement of the defective part is not possible in connection with any such Warranty Claim, Sungrow must refund End-User in accordance with the calculation:

$$f2: Payment = D \times S \times R_V$$

$$S \text{ is added to the SOH adjustment account}$$

$$f4: R_v = \min\left[(SOH - 65\%) \times \frac{100}{35}, \frac{P_L - Project_{year}}{P_L}\%\right]$$

© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

Where	Description	Units
S	Percentage of lost product, measured in battery racks, taken offline versus on the number of racks in the original contract. Where a PCS is removed from service leaving the racks unusable, the racks behind that PCS shall be counted as offline.	
D	Dollar amount paid	$
SOH_A	SOH adjustment account. SOH_A is an account that keeps track of any additional in accessible SOH that's due to any abnormal activity such as capacity removal from the project.	
R_V	Residual value of the system. A system at 65% SOH is deemed to have 0% R_V	
P_L	The Warranty Period (or shorter if the warranty is no longer in good standing prior to the end of the Warranty Period)	
SOH	State of health as reported by the system BMS	

11. END-USER'S OBLIGATIONS

11.1. End-user is only entitled to the benefits of this warranty if:

(a) The Product is used as intended in compliance with the Manual's specifications and environmental standards;

(b) Best efforts are taken to protect the Product Components against further damage after discovering an issue which is likely to result in further damage;

(c) End User must grant, without delay, access, and all relevant permits to the Site;

(d) End-User must ensure the Site is free from hazards or obstructions;

(e) End-User must ensure site safety rules are in place, communicated and followed.

11.2. End-user is responsible for notifying SUNGROW of any hazards at the Site and ensuring that the site is free of hazards or other conditions that could impede the provision of warranty services.
