This **PROCUREMENT AND CONSTRUCTION AGREEMENT** is made and entered into as of October 14, 2025 (the "**Execution Date**"), by and between Blue Heron Solar, LLC, a Delaware limited liability company ("**Owner**"), and NoBull Energy LLC, an Indiana limited liability company ("**Contractor**"). Each of Owner and Contractor is individually referred to herein as a "**Party**" and collectively they are referred to herein as the "**Parties**."

RECITALS

WHEREAS, Owner is developing an electrical generation facility consisting of approximately 147 MW AC of solar-powered electric generating capacity (the "**Solar Facility**"), and a related battery energy storage system with a nominal capacity of approximately 361 MWh (the "**BESS**"), to be procured, constructed, installed, tested and commissioned in accordance with the terms and conditions set forth in this Agreement, including a 345 kV project substation, a 345 kV Gen Tie Line connecting the Project Substation to the point of interconnection, and all other applicable work to interconnect the project located in Brown and Mills Counties, Texas (collectively, the "**Project**");

WHEREAS, Owner desires to engage Contractor to procure, install, construct, test, interconnect, and commission the Project on a turnkey, fixed-price, guaranteed-completion-date basis, and Contractor desires to provide such services, all as further defined by and in accordance with the terms and conditions set forth in this Agreement;

WHEREAS, Contractor guarantees the timely completion and performance of the Project in accordance with the terms and conditions of this Agreement.

NOW, THEREFORE, in consideration of the sums to be paid to Contractor by Owner and of the covenants and agreements set forth herein, the Parties agree as follows:

AGREEMENT

1. DEFINITIONS AND RULES OF INTERPRETATION

1.1 Definitions. For the purposes of this Agreement, except as otherwise expressly provided or unless the context otherwise requires, the following terms shall have the following meanings.

"**AAA**" shall have the meaning set forth in Section 24.1(c).

"**AC**" means alternating current.

"**Affiliate**" shall mean, as to a specified Person, any other Person that directly, or indirectly through one or more intermediaries, controls or is controlled by or is under common control with the Person in question. For the purposes of this definition, the concept of "control," when used with respect to any specified Person, shall signify the possession of the power to direct the management and policies of such Person, directly or indirectly, whether through the ownership of voting securities or partnership or other ownership interests, by contract or otherwise.

"**Agreement**" means this Procurement and Construction Agreement, including all Exhibits hereto, as the same may be modified, amended or supplemented from time to time in accordance with the terms hereof.

"**Applicable Law**" means and includes all laws, codes, ordinances, statutes, rules, regulations, orders, decrees, judgments, injunctions, specified standards or criteria contained in any Applicable Permit

or approval, notices or binding agreements promulgated by, and the official, written judicial interpretations of, any Governmental Authority having jurisdiction over either Party, the Project or a Party's obligations under this Agreement, including the ERCOT Protocols, as the same may be modified, amended or repealed from time to time.

"**Applicable Permit**" means any action, approval, consent, waiver, exemption, variance, franchise, order, permit (including, where applicable, conditional permits), authorization, right or license of or from a Governmental Authority that is required by Applicable Law or necessary for the performance of the Work or the design, development, engineering, procurement, construction, operation or maintenance of the Project.

"**Approved Plan**" shall have the meaning set forth in Section 7.3.

"**Availability Test**" shall have the meaning set forth in Exhibit H-2.

"**Availability Test Procedures**" shall have the meaning set forth in Exhibit H-2.

"**Availability Test Report**" shall have the meaning set forth in Exhibit H-2.

"**BESS**" means the battery energy storage system for the Project, as described in more detail in the Statement of Work.

"**BESS Performance Guaranty**" shall have the meaning set forth in Exhibit H-5.

"**BESS Performance Test**" shall have the meaning set forth in Exhibit H-5.

"**Block**" means a group of modules associated with one PCS, including the applicable mounting structures, interconnecting equipment and other Equipment (including the PVCS), in each case, associated with such group of modules, as further described in the Site Layout.

"**BOP**" means the Equipment and other items that are not part of the BESS or a Block but that are necessary to be completed to permit (a) the BESS or such Block to be Placed in Service or the achievement of Mechanical Completion, as applicable, or (b) the Project to be Placed in Service, or (c) the achievement of Substantial Completion, including, for example (and if applicable), energy management systems equipment, Project roads, fencing and so forth, as further described in Exhibit A.

"**Business Day**" means a day, other than a Saturday or Sunday or a public holiday, on which banks are generally open for business in Austin, Texas.

"**Capacity Guaranty**" means that the results of the Capacity Test performed in accordance with the Capacity Test Procedures for the Project shall demonstrate a Measured Capacity Ratio equal to at least the Guaranteed Capacity.

"**Capacity Test**" shall have the meaning set forth in Exhibit H-3.

"**Capacity Test Cure Period**" shall have the meaning set forth in Section 12.2(a).

"**Capacity Test Procedures**" shall have the meaning set forth in Exhibit H-3.

"**Capacity Test Report**" shall have the meaning set forth in Exhibit H-3.

"**Change In Law**" means the enactment, adoption, promulgation, modification (including a written change in interpretation by a Governmental Authority), suspension or repeal after the Execution Date of any Applicable Law that establishes new requirements or modifies existing requirements including Tariff Increases; provided that no Change In Law pursuant to this Agreement shall arise by reason of (a) any national, federal, state or provincial income Tax law (or any other Tax law based on income), (b) any federal law imposing a custom, duty, levy, impost, fee, royalty or similar charge for which Contractor is responsible hereunder with respect to the importation of Equipment from outside of the United States (other than Tariff Increases), (c) a labor wage law or other Applicable Law that affects Contractor's or its Subcontractor's costs of employment (other than any Prevailing Wage Law that affects the Work on the Site or surrounding area after the Execution Date), (d) a change in law outside of the United States of America, or (e) the final enactment, modification, amendment or repeal of an Applicable Law prior to the Execution Date with an effective date of such action that falls after the Execution Date.

"**Change In Work**" means a change in the Work as defined in Section 13.1.

"**Change Order**" means the form in respect of a Change In Work attached as Exhibit O.

"**Commencement Date**" means the date on which Owner issues the Notice to Proceed in accordance with Section 7.1(a) hereof.

"**Commissioning**" or "**Commissioned**" means the start-up, commissioning and testing activities to be conducted in accordance with the Commissioning Plan.

"**Commissioning Plan**" means the plan for start-up, commissioning and testing of the Project to be mutually agreed by Contractor and Owner in accordance with Section 10.1 and to be attached as Exhibit H-1.

"**Conditional Waiver and Release Upon Progress Payment**" means, as applicable, (a) a lien waiver to be delivered by Contractor pursuant to Section 21.2 in the form of Exhibit F-1 to this Agreement or (b) a lien waiver to be delivered by each Subcontractor and Supplier pursuant to Section 21.2 in a form substantially similar to Exhibit F-1 to this Agreement.

"**Confidential Information**" shall have the meaning set forth in Section 18.1.

"**Contract Price**" shall have the meaning set forth in Section 5.1.1, as the same may be adjusted pursuant to the terms hereof.

"**Contractor**" shall have the meaning set forth in the preamble.

"**Contractor Deliverables**" means all of the deliverables to be provided by Contractor pursuant to the requirements in the Contractor Deliverables Exhibit.

"**Contractor Deliverables Exhibit**" means Exhibit B.

"**Contractor Event of Default**" shall have the meaning set forth in Section 16.1.

"**Contractor Indemnified Party**" shall have the meaning set forth in Section 17.2.

"**Contractor Party**" means each of Contractor and any of its Affiliates.

"**Contractor Permits**" means the Applicable Permits set forth in Part I of Exhibit C, any additional Applicable Permits related to the Work required to be issued in Contractor's name to perform the Work or to transport on a public road any Equipment to the Site, and any other Applicable Permits other than Owner Permits.

"**Contractor's Invoice**" means an invoice from Contractor to Owner prepared by Contractor and in a form attached as Exhibit Q, which form shall also contain a schedule of values and an initial cash flow schedule.

"**Contractor's Manager**" means the construction and commissioning manager (or any replacement thereof) appointed by Contractor in accordance with this Agreement.

"Critical Electric Grid Equipment (CEGE)" shall have the meaning assigned in the ERCOT Protocols.

"Critical Electric Grid Services (CEGS)" shall have the meaning assigned in the ERCOT Protocols.

"**Daily Progress Report**" means a written daily progress report in form and substance to be agreed by the Parties prepared by Contractor in accordance with Section 7.4.

"**Day**" or "day" means a period of twenty-four (24) consecutive hours from 12:00 midnight (prevailing local time), and shall include Saturdays, Sundays, and all holidays except that in the event a time period set forth in this Agreement expires on a Day that is not a Business Day, such period shall be deemed to expire on the next Business Day thereafter.

"**Defect**" or "**Defective**" means (i) any defects in the design, application, engineering materials, installation, construction or workmanship or service of the Equipment or the Work (including the Module Installation Work), or (ii) any Equipment or Work that is not performed consistent with Industry Standards; (iii) any Equipment or Work that could reasonably be expected to materially and adversely affect the mechanical, electrical or structural integrity or the normal operation of the Project under anticipated operating conditions, or (iv) any failure of the Equipment or the Work to comply with the Statement of Work.

"**Defect Warranty**" shall have the meaning set forth in Section 14.1.

"**Defect Warranty Period**" shall have the meaning set forth in Section 14.2, as the same may be extended pursuant to Section 14.3.

"**Defect Warranty Service**" shall have the meaning set forth in Section 14.3.1.

"**Delay Liquidated Damages**" means (a) with respect to the failure to achieve Mechanical Completion by the Guaranteed Mechanical Completion Date, the applicable amount set forth in Exhibit K, and (b) with respect to the failure to achieve Project Substantial Completion by the Guaranteed Project Substantial Completion Date, the applicable amount set forth in Exhibit K.

"**Delay Notice**" shall have the meaning set forth in Section 8.2.

"**Design Plans**" means the designs and engineering drawings and specifications from Owner's Engineer as set forth in Exhibit A-1.

"**Dispute**" shall have the meaning set forth in Section 24.1.

"**Dispute Notice**" shall have the meaning set forth in Section 24.1(a).

"**Dollars**" or "**$**" means the lawful currency of the United States of America.

"**Equipment**" means all materials, supplies, apparatus, devices, equipment, machinery, tools, parts, components, instruments and appliances that are to be incorporated into the Project (including the Major Equipment) whether provided by Contractor, any Subcontractor or any Supplier.

"**ERCOT**" means Electric Reliability Council of Texas, or its successor in function.

"**ERCOT Protocols" or "Protocols**" means the documents and directives adopted by ERCOT from time to time, including any attachments or exhibits referenced therein, that contain the scheduling, registration, operating, planning, reliability and settlement policies, rules, guidelines, procedures and standards implemented and followed by ERCOT. The ERCOT Protocols specifically include the ERCOT Nodal Protocols, and the Nodal Operating and Planning Guides and Other Binding Documents, each as defined by the ERCOT Protocols. The version of the ERCOT Nodal Protocols in effect at the time of performance or non-performance of an action shall govern with respect to that action.

"**Event of Default**" means either a Contractor Event of Default or an Owner Event of Default, as the context may require.

"**Excluded Taxes**" shall have the meaning set forth in Section 5.1.1.

"**Excusable Event**" means, in the case of Contractor, an event that the Parties agree, or in the event the Parties disagree, a neutral third party determines, impacts the critical path of the Work or materially delays, or increases the cost of, Contractor's performance of the Work, to the extent such event is attributable to: (a) the occurrence of a Change In Law; (b) the occurrence of an Owner-Caused Delay; (c) any FERC, NERC, ERCOT, or PUCT requirement applicable to the Project that becomes effective after the Execution Date; provided that the final enactment, modification, amendment or repeal of such requirement prior to the Execution Date with an effective date of such action that falls after the Execution Date shall not be a change in such requirements pursuant to this definition; provided, further, that any such requirements do not result from a Non-Excusable Event; (d) the occurrence of any Force Majeure Event; (e) an Unforeseeable Site Condition (f) any material inaccuracy in the Owner Provided Information (including the geotechnical report), to the extent such inaccuracy has a material adverse impact on the timing or cost of the Work for Contractor, or (g) any change, amendment, supplement or modification to the PPA or Interconnection Agreement or any other material agreements for the Project which have been provided to the Contractor prior to the Execution Date to the extent such change, amendment, supplement, or modification has a material adverse impact on the timing or cost of the Work for Contractor.

"**Execution Date**" shall have the meaning set forth in the preamble.

"**Exemption Certificate**" means any certificate establishing a deduction, exception or exemption from Sales Taxes for project materials or any municipal approval exempting the Project from property taxes.

"**FERC**" means the Federal Energy Regulatory Commission or its successor.

"**Final Capacity Test**" means the last Capacity Test of the Project that has been Successfully Run prior to the expiration of the Capacity Test Cure Period or earlier termination thereof as designated by Notice from Contractor to Owner, which test shall be completed no later than the last day of the Capacity Test Cure Period.

"**Final Completion**" means satisfaction by Contractor or waiver by Owner of all of the conditions for Final Completion set forth in Section 11.7.

"**Final Completion Date**" shall have the meaning set forth in Section 11.8.

"**Final Completion Payment**" shall have the meaning set forth in Section 6.1.3.

"**Final Contractor's Invoice**" shall have the meaning set forth in Section 6.1.3.

"**Financial Closing Date**" means the date on which the Financing Documents providing for a financing solution sufficient to fund the total investment cost of the Project have been closed and a drawdown of initial funding pursuant to the Financing Documents has occurred.

"**Financing Documents**" means any and all loan agreements, leasing agreements, notes, indentures, security agreements, mortgages, guarantee documents, intercreditor agreements, subordination agreements, subscription agreements, partnership agreements, equity contribution agreements, interest rate contracts, and any foreign currency exchange swaps, commitment letters and other documents relating to the financing or refinancing of the development, engineering, design, construction, operation, ownership or maintenance of the Project, including long-term debt and leases and any agreements relating to any equity or any subordinated debt.

"**First Portion**" shall have the meaning set forth in Section 11.3.1.

"**First Portion Mechanical Completion Certificate**" shall have the meaning set forth in Section 11.3.1.

"**Force Majeure Event**" means an event beyond the reasonable control of the affected Party, which event such Party could not reasonably have foreseen or prevented utilizing all reasonable efforts under the circumstances and which was not due to the fault or negligence of the affected Party and with respect to which the affected Party has taken all reasonable precautions, care and alternative measures to avoid and mitigate the effects thereof in accordance with Applicable Law and Industry Standards, including (to the extent the foregoing requirements are met): an act of God such as a flood, hurricane, tornado or earthquake; Labor Disputes (but excluding strikes or other labor actions specific to the Project, Contractor, any Subcontractor or any Supplier); acts of declared or undeclared war; rebellion or sabotage (other than as provided below); insurrection; fire; riot; or explosion. Force Majeure Events shall not include the failure or inability of a Subcontractor or Supplier to furnish sufficient labor, services, materials or equipment in accordance with its contractual obligations, except, and only to the extent such failure or inability is itself due to a Force Majeure Event. Force Majeure Events shall not include (a) a Party's financial inability to perform under this Agreement; (b) reasonably foreseeable weather conditions taking into account the location of the Project and the climate patterns applicable thereto; (c) sabotage by employees or Subcontractors of the Party claiming the Force Majeure Event or (d) delays in delivery or breakage or failure of Equipment or other materials (except to the extent any such delay, breakage or failure is itself due to a Force Majeure Event).

"**Gen-Tie Line**" means the 345 kV transmission line, including fiber optic communications cables, as further described in Exhibits A, E, and H-1.

"**Governmental Authority**" means any federal, state, county, local, municipal or other governmental, regulatory, administrative, judicial, public or statutory instrumentality, utility, court or governmental tribunal, agency, commission, authority, body or entity, or any political subdivision thereof, having legal, administrative, executive, legislative, police, regulatory or taxing power or jurisdiction over the matter or Person in question.

"**Guaranteed Capacity**" shall have the meaning set forth in Exhibit H-3.

"**Guaranteed Dates**" means the Guaranteed Project Substation Completion Date, Guaranteed Mechanical Completion Date and the Guaranteed Project Substantial Completion Date, as such dates may be extended pursuant to any Change Order duly executed pursuant hereto.

"**Guaranteed Milestones**" means the Project Substation Completion Date, Mechanical Completion Date and Project Substantial Completion Date.

"**Guaranteed Mechanical Completion Date**" is the date upon which the Project shall have achieved Mechanical Completion and shall be as set forth in the Milestone Completion Schedule attached as Exhibit W, as such date may be extended pursuant to any Change Order duly executed pursuant hereto.

"**Guaranteed Performance Index**" shall have the meaning set forth in Exhibit H-4.

"**Guaranteed Project Substantial Completion Date**" is the date upon which the Project shall have achieved Substantial Completion and shall be as set forth in the Milestone Completion Schedule attached as Exhibit W, as such date may be extended pursuant to any Change Order duly executed pursuant hereto.

"**Guaranteed Project Substation Completion Date**" is the date upon which the Project shall have achieved Project Substation Completion and shall be as set forth in the Milestone Completion Schedule attached as Exhibit W, as such date may be extended pursuant to any Change Order duly executed pursuant hereto.

"**Hazardous Materials**" means any chemical, constituent, contaminant, pollutant, waste and any other carcinogenic, corrosive, ignitable, radioactive, reactive, toxic or otherwise hazardous substance, mixtures, or materials (whether solids, liquids, gasses) or material regulated or governed by any Applicable Permit or Applicable Law as, or any substance, emission or material now or hereafter deemed by any Governmental Authority to be, a "regulated substance," "hazardous material," "hazardous waste," "hazardous constituent," "hazardous substance," "toxic substance," "radioactive substance," "contaminant," "pollutant," "toxic pollutant" or "pesticide" or words of similar meaning and regulatory effect under Applicable Law including those laws, regulations and policies relating to the discharge, emission, spill, release, or threatened release into the environment or relating to the disposal, distribution, manufacture, processing, storage, transport, treatment, or other use of such substances.

"**HS&E Plan**" means a Site-specific health, safety and environmental plan for the performance of the Work developed by the Parties pursuant to Section 3.23.

"**Indemnified Party**" shall have the meaning set forth in Section 17.4.

"**Indemnifying Party**" shall have the meaning set forth in Section 17.4.

"**Independent Engineer**" means any independent engineer or engineering firm designated under Section 25.18.

"**Industry Standards**" means those construction, workmanship, operation, care and diligence practices, methods and standards specified in Exhibit A; provided that if the relevant practice, method or standard is not so specified or is ambiguous therein, then "Industry Standards" shall mean those standards of construction, workmanship, operation, care and diligence and those standards, practices, methods and acts that would be implemented and normally practiced or followed by ordinarily prudent construction firms in the procurement, installation, construction, testing, commissioning and interconnection of utility-scale PV and BESS facilities in Texas and which standards, practices, methods and acts, in the exercise of prudent and responsible professional judgment by those experienced in the industry in light of the facts known (or that reasonably should have been known) at the time the decision was made, could reasonably have been expected to accomplish the desired result consistent with good business practices, reliability, safety, Applicable Law, Applicable Permits and codes and other standards established for such work. Industry Standards are not necessarily limited to the optimum standard, practice, method or act, but rather is intended to be a spectrum of generally accepted standards, practices, methods or acts generally accepted in Texas. Solely with respect to Section 14.4(d), "Industry Standards" shall mean those standards of care and diligence normally practiced by entities that operate and maintain PV power plants.

"**Initial Capacity Test**" means a Capacity Test of the Project as designated by Notice from Contractor to Owner that has been Successfully Run prior to Project Substantial Completion.

"**Intellectual Property Rights**" means all licenses, trade secrets, copyrights, know-how, patents, trademarks, proprietary information or other intellectual property rights of any kind necessary for the design, construction, ownership, use, operation, maintenance, repair, alteration, commissioning, interconnection, de-commissioning, removal and disposal of the Project.

"**Interconnection Agreement**" means that certain Standard Large Generator Interconnection Agreement, dated as of October 31, 2024, by and between the Participating TO and Owner, as set forth in Exhibit I, as amended, supplemented, restated or otherwise modified from time to time.

"**Interconnection Facilities**" means the Project Substation, the Gen-Tie Line, the revenue meter and the other facilities and equipment that are located between the Project Substation and the Point of Interconnection necessary to physically and electrically interconnect the Project and the Interconnection Facilities to the Point of Interconnection, as further described in Exhibit A.

"**KWh**" means kilowatt hours.

"**Labor Dispute**" means work stoppages, slowdowns, strikes, disputes, disruptions, boycotts, walkouts and other labor difficulties or shortages.

"**Lien**" means, with respect to any property or asset, any mortgage, deed of trust, lien, pledge, charge, security interest, restrictive covenant or easement or encumbrance of any kind in respect of such asset, whether or not filed, recorded or otherwise perfected or effective under Applicable Law, or any preference, priority or preferential arrangement of any kind or nature whatsoever as well as the interest of a vendor or lessor under any conditional sale agreement, capital lease or other title retention agreement relating to such asset.

"**Limited Notice to Proceed**" or "**LNTP**" has the meaning set forth in Section 7.1(b).

"**LNTP Work**" shall have the meaning set forth in Section 7.1(b).

"**Lone Star Infrastructure Protection Act (LSIPA) Affiliate**" shall have the meaning assigned in the ERCOT Protocols.

"**Lone Star Infrastructure Protection Act (LSIPA) Designated Company**" shall have the meaning assigned in the ERCOT Protocols.

"**Lone Star Infrastructure Protection Act (LSIPA) Designated Country**" shall have the meaning assigned in the ERCOT Protocols.

"**Long Term Energy Test**" shall have the meaning set forth in Exhibit H-4.

"**Long Term Energy Test Measurement Period**" has the meaning set forth in Exhibit H-4.

"**Long Term Energy Test Procedures**" shall have the meaning set forth in Exhibit H-4.

"**Long Term Energy Test Report**" shall have the meaning set forth in Exhibit H-4.

"Losses" means any and all claims, liabilities, losses, damages, causes of action, orders of Governmental Authorities, fines, penalties, litigation, lawsuits, administrative proceedings, arbitration, mediation, administrative investigations, costs, and expenses, including, without limitation, reasonable attorneys' fees, court costs, and other reasonable costs of suit arbitration, dispute resolution or other similar proceedings.

"**Major Equipment**" means the Equipment related to the power transformer and modules, distribution transformers, step-up transformers, inverters, PVCS, battery modules, switchgear, racks, battery connection panels, integrated battery cabinets, storage inverters and converters, fire suppression system, HVACs, the Owner Provided Materials in accordance with the scope of Work hereunder, and the PCSs for the Project.

"**Major Subcontractor**" means any Subcontractor or Supplier which receives more than Two Hundred and Fifty Thousand Dollars ($250,000) for work or materials on the Project, except the Supplier of the Owner Provided Materials. An initial list of approved Major Subcontractors is set out in Exhibit J.

"**Measured Capacity Ratio**" has the meaning set forth in Exhibit H-3.

"**Mechanical Completion**" means with respect to the BESS and all Blocks, as applicable, the following conditions have been satisfied: (a) the BESS or such Block is mechanically completed, assembled, erected and installed (and ready for backfeed) in accordance with the Block installation specifications contained in Exhibit A and otherwise in accordance with this Agreement (other than Punchlist items) and is free from detectable and patent defects and deficiencies in installation, including any free of any defects that would prevent the safe, normal, and reliable operation of the BESS or Block, (b) Contractor has completed the relevant mechanical quality control inspections for the BESS or such Block and has provided such documentation to Owner, (c) Contractor has assisted Owner in attempting to obtain or obtaining any permits, certificates and approvals otherwise necessary to commence commissioning and (d) a Notice of Mechanical Completion has been executed by Owner and delivered to Contractor pursuant to Section 11.3; provided that with respect to the First Portion to achieve Mechanical Completion, it shall be an additional condition to Mechanical Completion that (1) no Block has generated any electricity that has been dispatched across the Point of Interconnection, (2) no module shall have received any backfeed power, (3) no Block shall have been interconnected to its respective breaker in the Project Substation, (4) no electric power shall have been transmitted from any module through the Project Substation to the Gen-Tie Line, (5) the synchronization of the Project or any part thereof with the transmission system as provided in Section 11.4(e) shall not have begun, (6) one hundred percent (100%) of the posts, trackers and inverters have been installed for the Project and (7) modules have been installed for at least thirty-two (32) Blocks in addition to the First Portion.

"**Mechanical Completion Date**" shall have the meaning set forth in Section 11.3.

"**Meteorological Stations**" means the meteorological stations to be installed at the Site, which shall meet the specifications set forth in Exhibit A.

"**Milestone Completion Schedule**" shall mean that schedule of milestones set forth in Exhibit W, as adjusted pursuant to this Agreement.

"**Minimum Guaranteed Capacity**" shall have the meaning set forth in Exhibit H-3.

"**Module Installation Work**" means that portion of the Work relating to (i) the storage of the modules which are provided by Owner in accordance with the scope of Work pending installation thereof or storage as spare modules, (ii) the procurement of the racking system and trackers and installation of the modules and the connection of the modules to the DC collection system circuit, and (iii) the procurement, installation and connection of the branch wiring, combiner boxes and DC feeders from the modules to the inverters, all in accordance with the module installation manual, the Site Layout and the Requirements.

"**Monthly Progress Report**" means a written monthly progress report prepared by Contractor setting forth the detail required in Exhibit G.

"**MW**" means 1,000,000 watts of electric power (expressed as AC).

"**NERC**" means the North American Electric Reliability Corporation or a successor organization that is responsible for establishing reliability criteria and protocols.

"**Non-Critical Deficiencies**" means each item of Work that (a) Owner or Contractor identifies as requiring completion or containing defects, (b) does not impede the continuous operation of the Project or any portion thereof in accordance with Industry Standards and, in any case, manufacturers' warranties, (c) does not materially affect the capacity, efficiency, reliability, operability or mechanical or electrical integrity of the Project and (d) does not create a safety risk for any Person.

"**Non-Excusable Event**" means (a) the negligence or willful misconduct of any Contractor Party or any Subcontractor; (b) the failure of any Contractor Party or any Subcontractor to comply with any of its obligations, or a breach, under this Agreement; and (c) any defect in the design, materials or workmanship of the Work or other matter that could result in a Contractor (or Subcontractor) Warranty obligation pursuant to Article 14.

"**Notice**" or "**Notification**" means a written communication between authorized representatives of the Parties required or permitted by this Agreement and conforming to the requirements of Section 22.1.

"**Notice of Final Completion**" means a Notice from Contractor to Owner stating that Contractor has satisfied the requirements for Final Completion under Section 11.7, substantially in the form attached hereto as Exhibit P-5, as approved by Owner in accordance with Section 11.8.

"**Notice of Mechanical Completion**" means a Notice from Contractor to Owner stating that Contractor has satisfied the conditions precedent for Mechanical Completion under Section 11.3, substantially in the form attached hereto as Exhibit P-2, as approved by Owner in accordance with Section 11.3.

"**Notice of Placed in Service**" means a Notice from Contractor to Owner stating that Contractor has satisfied the conditions precedent for Placed in Service for a Block or the Project (as applicable) under

Section 11.4, substantially in the form attached hereto as Exhibit P-3, as approved by Owner in accordance with Section 11.4.1.

"**Notice of Project Substantial Completion**" means a Notice from Contractor to Owner stating that Contractor has satisfied the conditions precedent for Project Substantial Completion under Section 11.5, substantially in the form attached hereto as Exhibit P-4, as approved by Owner in accordance with Section 11.6.

"Notice of Project Substation Completion" means a Notice from Contractor to Owner stating that Contractor has satisfied the conditions precedent for Project Substation Completion under Section 11.2, substantially in the form attached hereto as Exhibit P-1, as approved by Owner in accordance with Section 11.2.1.

"**Notice to Energize**" means a written notice from Owner authorizing Contractor to proceed with the Work to energize and interconnect the Project or portion thereof to the electric grid.

"**Notice to Proceed**" means a written notice, substantially in the form attached hereto as Exhibit L, releasing Contractor to fully proceed with all Work under this Agreement.

"**Notify**" means to provide a Notice or Notification.

"**Owner**" shall have the meaning set forth in the preamble.

"**Owner-Caused Delay**" means (a) a failure by Owner to perform any of its material obligations under this Agreement, which failure causes a material delay in Contractor's performance of the Work and which failure is not otherwise excused and for so long as such failure or breach has not otherwise been remedied, in each case, in accordance herewith, or (b) Owner's material interference with Contractor's performance of the Work or the critical path of the Work, without the right to do so under this Agreement; provided, that failure or interference by Owner under clauses (a) or (b) above shall not constitute an Owner-Cause Delay to the extent it is attributable to a Non-Excusable Event or the failure of Contractor or any Subcontractor to perform its obligations in accordance with this Agreement; provided, further, that any acts or omissions of Owner, Owner's agents, contractors (other than Contractor and its Suppliers and Subcontractors), or representatives or Owner Financing Parties that are taken under and in accordance with the terms of this Agreement shall not constitute Owner-Caused Delays.

"**Owner Event of Default**" shall have the meaning set forth in Section 16.3.

"**Owner Financing Party**" means (a) any and all Persons, or the agents or trustees representing them, providing senior or subordinated debt, lease or equity financing (including tax equity financing to Owner or an Affiliate thereof) or refinancing to Owner or an Affiliate thereof or (b) any Person providing letters of credit, guarantees, insurance or other credit support, or title insurance to Owner or an Affiliate thereof, in each case, in connection with the Project or a portfolio of projects that includes the Project. The term "Owner Financing Party" includes, for the avoidance of doubt, any Person or Persons that own the Project and lease the Project to Owner or an Affiliate of Owner, as applicable, under a lease, sale leaseback or synthetic lease structure.

"**Owner Indemnified Party**" shall have the meaning set forth in Section 17.1.

"**Owner-Instituted Change**" shall have the meaning set forth in Section 13.2.

"**Owner Permits**" means those Applicable Permits required for the performance of the Work or the design, development, engineering, procurement, construction, operation or maintenance of the Project (a) set forth in Part II of Exhibit C or (b) that Contractor Notifies Owner are required to be obtained by Owner in Owner's name pursuant to Applicable Law.

"Owner Provided Information" means the Design Plans and the reports, surveys, studies, specifications, drawings, and other information with respect to the Site provided by Owner to Contractor, as set forth in Exhibit V.

"Owner Provided Materials" means the main power transformers, 345 kV circuit breakers, PV modules, PV inverters and BESS which are provided by Owner for the Project as described in Exhibit A in accordance with the requirements of the Agreement.

"**Owner Representative**" means Owner's representative designated by Owner pursuant to Section 2.1.

"**Owner's Engineer**" means any engineering firm or firms or other engineer or engineers selected and designated by Owner.

"**Participating TO**" shall mean Transmission Operator identified in the Interconnection Agreement.

"**Participating TO's Interconnection Facilities**" means the facilities and equipment defined as "Transmission Provider's Interconnection Facilities" in the Interconnection Agreement.

"**Party**" and "**Parties**" shall have the meanings set forth in the preamble.

"**Payment Bond**" shall have the meaning set forth in Section 3.16.2.

"**PCS**" means the power conversion station(s) which consists of the static power inverters, inverter step up transformers, cabling and grounding systems, as further described in Exhibit A.

"**Performance Bond**" shall have the meaning set forth in Section 3.16.2.

"**Performance Guarantee**" means that the Performance Index for the Project shall not be less than the Guaranteed Performance Index, all as determined by the Long Term Energy Test performed in accordance with the Long Term Energy Test Procedures and Exhibit H-4.

"**Performance Index**" shall have the meaning set forth in Exhibit H-4.

"**Performance Security**" shall have the meaning set forth in Section 3.16.2.

"**Permit Expenses**" means the actual costs payable to a Governmental Authority and all other reasonable and documented third-party costs and expenses incurred in connection with the application for and issuance of an Applicable Permit.

"**Person**" means any individual, corporation, company, voluntary association, partnership, incorporated organization, trust, limited liability company, or any other entity or organization, including any Governmental Authority. A Person shall include any officer, director, member, manager, employee or agent of such Person.

"**Placed in Service**" means, with respect to the BESS, a Block or the Project, the satisfaction of all of the conditions set forth in Section 11.4.

"**Placed in Service Date**" shall have the meaning set forth in Section 11.4.1.

"**Point of Interconnection**" means the point identified as the "Point of Interconnection" in the Interconnection Agreement.

"**Power Purchaser**" means the party purchasing power under a PPA.

"**PPA**" means a power purchase agreement or other offtake agreement, in each case as included in Exhibit U, as the context may require, and together they are referred to herein as the "PPAs".

"**Pre-Existing Hazardous Material**" shall have the meaning set forth in Section 3.11.1.

"**Prevailing Wage and Apprenticeship Requirements**" means the requirements of Contractor and its Subcontractor related to paying prevailing wages and utilizing qualified apprentices in connection with the Work, as set forth in Exhibit X.

"**Prime Rate**" means the prime rate as published in the "The Money Rates" Section of *The Wall Street Journal* (U.S. Edition); provided that, if the *Wall Street Journal* (U.S. Edition) is discontinued, the parties shall use a comparable rate published by a reputable financial periodical selected by Owner.

"**Product**" means electricity, capacity, renewable energy credits, and other products and service being generated, sold or made available to each respective Power Purchaser as applicable under each respective PPA, as the context may require, and together, the "**Products**".

"**Project**" shall have the meaning set forth in the recitals.

"**Project Manager**" shall have the meaning set forth in Section 3.26.

"**Project Schedule**" means the schedule for the performance of all Work to be performed under this Agreement attached hereto as Exhibit S (including achievement of the Guaranteed Dates).

"**Project Substantial Completion**" means the satisfaction of all of the conditions set forth in Section 11.5.

"**Project Substantial Completion Date**" shall have the meaning set forth in Section 11.6.

"**Project Substation**" means the project interconnection substation (including any required upgrades and the step-up transformers) for the Project, as further described in Exhibit A.

"Project Substation Completion" means with respect to Project Substation, the satisfaction of all of the conditions set forth in Section 11.2.

"Project Substation Completion Date" shall have the meaning set forth in Section 11.2.1.

"**Property Taxes**" means any real or personal property Taxes related to the Site, the Project, the Equipment or any material, equipment or other property that will be incorporated into the Project.

"**Proposed Punchlist**" shall have the meaning set forth in Section 11.1.1.

"**PUCT**" means the Public Utility Commission of Texas, or its successor in function.

"**Punchlist**" shall have the meaning set forth in Section 11.1.1.

"**Punchlist Amount**" shall have the meaning set forth in Section 11.1.1.

"**Punchlist Holdback**" means an amount equal to two hundred percent (200%) of the Punchlist Amount for each Punchlist item.

"**PV**" means photovoltaic.

"**PVCS**" means the PV combining switchgear which collects the generated power from the power conversion station (which consists of the static power inverters, inverter step up transformers, cabling and grounding systems) and then serves the Interconnection Facilities.

"**Release**" means the release, discharge, deposit, injection, dumping, spilling, leaking or placing of any Hazardous Material into the environment so that such Hazardous Material or any constituent thereof may enter the environment, or be emitted into the air or discharged into any waters, including ground waters under Applicable Law.

"**Required Manuals**" means the operating data and manuals, Equipment and parts manuals, operation and maintenance manuals and instructions which are reasonably necessary to safely and efficiently operate, maintain and shut down the Project, in each case, to be provided in accordance with Exhibit B.

"**Requirements**" shall have the meaning set forth in Section 3.2.

"**Retainage**" shall have the meaning set forth in Section 6.7.1.

"**Sales Taxes**" shall have the meaning set forth in Section 5.1.3.

"**Selected Subcontractors**" shall have the meaning set forth in Section 14.6.

"**Separate Contractors**" shall have the meaning set forth in Section 3.21.1.

"**Serial Failure**" shall have the meaning set forth in Section 14.5.1.

"**Serial Failure Warranty Work**" shall have the meaning set forth in Section 14.5.2.

"**Serial Failure Warranty Work Completion Date**" shall have the meaning set forth in Section 14.5.2.

"**Serial Failure Warranty Work Start Date**" shall have the meaning set forth in Section 14.5.2.

"**Site**" means the Project site, as more particularly described in Exhibit N.

"**Site Conditions**" shall have the meaning set forth in Section 3.19.

"**Site Layout**" means the layout of the Project set forth in Exhibit E.

"**Statement of Work**" means, collectively, the requirements regarding the Work set forth in Exhibit A.

"**Subcontract**" means any contract for performance of any portion of the Work entered into with a Subcontractor, including supply of any Equipment by a Supplier.

"**Subcontractor**" means any Person, directly or indirectly, and of any tier (other than Contractor, but including any Affiliate of Contractor), including any Supplier, that performs any portion of the Work on behalf of Contractor in furtherance of Contractor's obligations under this Agreement.

"**Substation**" means the Project Substation.

"**Successfully Run**" means, with respect to any of the Availability Test, the Capacity Test or the Long Term Energy Tests, that (i) the most recent attempt at such test was completed in accordance with the procedures, conditions and requirements for the proper performance of such tests set forth in the Availability Test Procedures, Capacity Test Procedures or Long Term Energy Test Procedures, (as applicable) and Exhibits H-1, H-2, H-3, H-4 or H-5 (as applicable), and the other provisions of this Agreement applicable to such tests and (ii) the results from such test demonstrate that the Project has successfully achieved the results, conditions and/or requirements thereof being confirmed by such test, in each case in accordance with the PPAs and the Interconnection Agreement.

"**Supplier**" means a Person that supplies Equipment directly to Contractor in connection with the performance of the Work (including any Affiliate of Contractor).

"**Tariff Increases**" means after the Execution Date a change under Applicable Law imposing a custom, duty, levy, impost, fee, royalty or similar charge with respect to the importation of equipment (other than Owner Provided Materials) or raw materials or components thereof, into the United States of America, which may include antidumping and countervailing duty laws or similar laws that authorize remedial tariffs for which Contractor is responsible hereunder, as well as proven reactionary domestic pricing related to such changes, but excluding changes relating to taxation of net income for which Contractor is responsible under Section 5.1.3.

"**Taxes**" means any and all forms of taxation, charges, duties, imposts, levies and rates whenever imposed by any Governmental Authority, including transaction privileges, sales tax, use tax, gross receipts tax, transaction privilege tax, property tax, income tax, withholding taxes, corporation tax, franchise taxes, capital gains tax, capital tax, capital transfer tax, inheritance tax, value added tax, goods and services tax, customs duties, capital duty, excise duties, betterment levy, stamp duty, stamp duty reserve tax, national insurance, social security or other similar contributions, and generally any tax, duty, impost, levy, rate or other similar amount and any interest, penalty, fine or other amount due in connection therewith, excluding in all cases Permit Expenses.

"**Testing Laboratory**" means an independent testing laboratory as the Parties may agree in writing.

"**Unforeseeable Site Conditions**" means the presence or the discovery of (a) subsurface latent physical conditions at the Site differing materially from those indicated in the Owner Provided information provided by Owner to Contractor in Exhibit V or (b) previously unknown physical conditions at the Site of an unusual nature (including previously unknown and unexpected archaeological or religious sites, places, monuments or areas) that require means and methods that differ materially from the findings and/or recommendations of those engineering and geotechnical surveys, reports and other documents provided by Owner to Contractor with respect to the Site and were not identified by any Contractor Party during its inspection of the Site.

"**Waiver and Release Upon Final Payment**" means, as applicable, (a) a lien waiver to be delivered by Contractor pursuant to Section 21.2 in the form of Exhibit F-2 to this Agreement, or (b) a lien waiver to

be delivered by each Subcontractor and Supplier pursuant to Section 21.2 in a form substantially similar to Exhibit F-2 to this Agreement.

"**Warranties**" means the Defect Warranty.

"**Warranty Work**" means remedial Work undertaken to cause the Project to conform to the Defect Warranty, including any Defect Warranty Service and any Serial Failure Warranty Work.

"**Work**" means all of Contractor's obligations under this Agreement to procure, manufacture, construct and erect, install, equip, start-up, test, commission and complete the Project, set forth in or reasonably inferred from this Agreement (including the Statement of Work), including any of the foregoing obligations performed (i) pursuant to an LNTP or (ii) pursuant to a Change Order, all of which shall be deemed to be Work performed by Contractor under this Agreement. Work does not include the supply of the Owner Provided Materials.

1.2 Exhibits. This Agreement includes the Exhibits annexed hereto and any reference in this Agreement to an "Exhibit" by letter designation or title shall mean one of the Exhibits identified in the table of contents and such reference shall indicate such Exhibit herein. Each Exhibit attached hereto is incorporated herein in its entirety by this reference.

1.3 Interpretation. As used in this Agreement, unless otherwise indicated, the terms "herein", herewith" and "hereof" are references to this Agreement as a whole including the Exhibits, and the term "includes" or "including" shall mean "including without limitation"; the singular includes the plural and the plural the singular; words importing any gender include the other gender; references to statutes or regulations are to be construed as including all statutory or regulatory provisions consolidating, amending or replacing the statute or regulation referred to; references to agreements and other contractual instruments shall be deemed to include all subsequent amendments, restatements, supplements, extensions and other modifications to such instruments (without, however, limiting any restrictions to such amendments, restatements, supplements, extension and other modifications imposed by this Agreement); and a reference to a Person shall include its successors and permitted assigns.

1.4 Headings. All headings or captions contained in this Agreement are for convenience of reference only, do not form a part of this Agreement and shall not affect in any way the meaning or interpretation of this Agreement.

1.5 Conflicts in Documentation. This Agreement, including the Exhibits hereto shall be taken as mutually explanatory. If either Party becomes aware of an express conflict between the provisions of this Agreement or any Exhibit hereto, such Party shall promptly Notify the other Party of such conflict. In the event of a conflict between any provision within the body of this Agreement and any Exhibit hereto, the terms and provisions of the body of this Agreement shall take precedence over the Exhibits; and in the event of a conflict between any provisions within the Exhibits, Exhibit A, Exhibit A-1, Exhibits H-1 through H-5, Exhibit I, and Exhibit U shall take precedence over the remaining Exhibits unless expressly stated otherwise in this Agreement. In the event of a conflict between any provision or requirement of the body of this Agreement or any Exhibit, the stricter provision or requirement shall prevail.

2. RESPONSIBILITIES OF OWNER

Owner shall, at Owner's cost and expense:

2.1 Owner Representative. Designate an Owner Representative, who shall act as the single point of contact on behalf of Owner with respect to the prosecution and scheduling of the Work and any issues

relating to this Agreement. Owner may designate a new Owner Representative from time to time by a Notice delivered to Contractor.

2.2 Back Feed Power and Parallel Operation. Use commercially reasonable efforts to cause the Participating TO to commence testing of the Participating TO's Interconnection Facilities by no later than the applicable milestone date set forth in the Interconnection Agreement and to complete the testing of Participating TO's Interconnection Facilities by no later than the applicable milestone date set forth in the Interconnection Agreement to enable Contractor to obtain backfeed power from the Participating TO's Interconnection Facilities, commence trial operation or testing (as required by the Interconnection Agreement) and carry out testing of the Project as provided under this Agreement; provided that the failure of Owner to cause the Participating TO to comply with such dates shall be considered an Owner-Caused Delay (except where such failure results from (a) a Force Majeure Event or (b) a Non-Excusable Event), but shall be deemed not to be an Owner Event of Default.

2.3 Access to Site. Concurrently with the issuance of the Notice to Proceed (or, if applicable, pursuant to an LNTP), provide Contractor rights of ingress and egress to and use of the Site for Contractor and its Subcontractors as may be reasonably necessary for the performance of the Work, subject to any applicable restrictions set forth in any contract or agreement in respect of Owner's rights to the Site, which contract or agreement has been provided, to the extent possible, to Contractor prior to the Execution Date.

2.4 Cooperation. Cooperate with Contractor and the Subcontractors in coordinating the work of Owner's contractors who may be working at or near the Site with the Work being performed by Contractor and the Subcontractors. Owner shall not allow its, or its Affiliates', operations and activities on the Site to materially interfere with the performance of the Work by Contractor. At Contractor's written request, Owner shall provide reasonably requested assistance to Contractor with respect to Contractor's obtaining any Contractor Permits and complying with any Applicable Permits; provided that Contractor shall reimburse Owner for any out-of-pocket costs that Owner incurs in providing such assistance.

2.5 Owner Permits. Subject to Contractor's obligations to provide reasonably requested assistance to Owner in obtaining any Owner Permit (at no cost to Owner) in accordance with Section 3.14, obtain and maintain all Owner Permits.

2.6 Insurance. Obtain and maintain insurance required in accordance with Exhibit R.

2.7 Owner Force Majeure and Non-Excusable Events. Owner shall not be deemed to be in breach or default of its obligations under this Agreement to the extent that the performance of such obligations is delayed, limited or prohibited as a result of any Force Majeure Event, any Non-Excusable Event, any Change In Law or any FERC, NERC, ERCOT or PUCT requirement applicable to the Project that becomes effective after the Execution Date.

2.8 Site and Technical Information. Owner shall provide to, or has provided, Contractor the Owner Provided Information specified in Exhibit V. Contractor shall be entitled to rely on such Owner Provided Information furnished by Owner pursuant to this Section 2.8 provided that such reliance is reasonable in accordance with Industry Standards. To the extent that Contractor suspects there may be errors or omissions in any of the Owner Provided Information provided pursuant to this Section 2.8, Contractor shall promptly notify Owner of the same.

2.9 Owner Provided Materials. Owner shall provide Contractor reasonable notice of anticipated delivery dates of the Owner Provided Materials. Owner shall coordinate with Contractor when delivery will be made for the purposes of minimizing the impact on Contractor's performance of the Work

and limiting the need for storage of Owner Provided Materials by Contractor to that necessary for the efficient performance of the Work.

3. RESPONSIBILITIES OF CONTRACTOR

Contractor shall:

3.1 General. In accordance with and subject to the terms of this Agreement, (a) diligently, duly and properly perform and complete the Work and all of its other obligations set forth in this Agreement, (b) procure, provide and pay for all materials, equipment, machinery, tools, labor, transportation, administration and other items and services necessary for the proper execution and completion of the Project, whether temporary or permanent and whether or not incorporated or to be incorporated into the Work, including all procurement, installation and construction services, all administration, management, training and coordination, all commissioning and verification services, and all labor, Equipment, licenses, inspections, storage and transportation, temporary construction power, and all other items, goods, facilities and services necessary to perform the Work, (c) complete the construction and installation of the Project pursuant to this Agreement, including providing all control equipment necessary for the construction, interconnection and operation of the Project, all interconnections set forth in the Statement of Work, and all equipment not specifically described in the Statement of Work that is necessary to meet the requirements of the Statement of Work or complete the Project, (d) deliver the Equipment to Owner at the Site free of any Lien, (e) receive, offload, inspect and accept Owner Provided Materials (except when such is explicitly included in applicable Owner Provided Materials Purchase Order) and (f) achieve Project Substantial Completion and Final Completion. Contractor acknowledges and agrees that it is obligated to perform the Work on a "turnkey basis" which constitutes a fixed-price (subject to the terms hereof) obligation to procure, construct, test and commission the Project in accordance with the terms and conditions of this Agreement. Where this Agreement describes a portion of the Work in general, but not in complete detail, the Parties acknowledge and agree that the Work includes any incidental work reasonably inferred or required to complete the Work in accordance with this Agreement. Contractor is obligated to supply all of the material, equipment, Equipment, labor and design services and to supply and perform all of the Work as may reasonably be required or necessary (whether or not specifically set forth in this Agreement) to complete the Work in accordance with and subject to the terms and conditions of this Agreement, including the guarantees of performance (and the remedies applicable thereto) as set forth herein, all for the Contract Price.

3.2 Standard of Performance. Contractor shall perform, or cause to be performed, the Work in a workmanlike manner, using new material, and in compliance, in all material respects, with Applicable Law (including applicable FERC, NERC, ERCOT, or PUCT requirements), Applicable Permits, Industry Standards, the standards and requirements under each respective PPA, the Interconnection Agreement and any other contract or agreement entered into in connection with the Project by Owner (or an Affiliate of Owner) and provided to Contractor, all technical specifications set forth in this Agreement (including any Exhibits), the requirements of any contract for any Major Equipment (including the Warranty provisions thereof), the requirements of any insurance policies held pursuant hereto, and any other applicable requirements of this Agreement (the "**Requirements**"). If the standards or requirements derived from the foregoing are inconsistent and cannot be resolved by the order of precedence set forth in Section 1.5, Contractor shall perform, or cause to be performed, the Work in accordance with the most stringent rule, standard, criteria or guideline.

3.3 Construction of the Project.

3.3.1 Construction Obligation. In accordance with and subject to the terms of this Agreement, procure (other than Owner Provided Materials), construct, install, test, commission, maintain and interconnect the Project (including the Interconnection Facilities), so that it meets the Requirements

and any other standards of performance set forth in this Agreement, and is capable of operation in accordance with the Design Plans and design criteria specified in the Statement of Work and the guarantees of performance (subject to the remedies applicable thereto) as set forth in this Agreement, the PPA and the Interconnection Agreement. In addition to its obligations under Section 3.18, all drawings, plans and specifications provided as part of Contractor Deliverables shall be kept by Contractor in an orderly and catalogued fashion for reference by Owner during the performance by Contractor of the Work.

3.3.2 Record-Keeping. Maintain at the Site at least one (1) copy of all Contractor Deliverables, Change Orders and other modifications in good order and marked to record all changes made during performance of the Work, including, without limitation, all field deviations from the construction drawings.

3.3.3 Design and Engineering Review. Review and provide feedback on Project Design Plans and regularly attend in person or virtual meetings with Owner and Owner's Engineer. Contractor acknowledges that the Design Plans have been performed by certain third-party engineering firms (such third-party engineering firms, collectively "Engineers" or "Owner's Engineers" and each an "Engineer" or "**Owner's Engineer**") Contractor acknowledges, agrees and covenants that: (i) it has carefully and thoroughly reviewed, analyzed, compared and familiarized itself with the Design Plans, (ii) it has satisfied itself that such Design Plans are, or upon completion will be, in accordance with all Requirements and contains, or upon completion of such design and engineering work will contain, all data and information necessary to complete the portion of the Work to which it relates. Contractor represents and warrants to Owner that, to the best of Contractor's knowledge, the Design Plans do not contain any errors, omissions, mistakes, discrepancies or defects. Contractor shall promptly notify Owner and the Owner's Engineer upon Contractor's discovery of any purported errors, omissions, mistakes, discrepancies or defects in the Design Plans, regardless of when such discovery occurs. Contractor shall not be entitled to a Change Order based on a purported error, omission, mistake, discrepancy or defect in the Design Plans unless Contractor (i) demonstrates that such error, omission, mistake, discrepancy or defect in the Design Plans were not apparent or readily discoverable prior to the Execution Date and (ii) further demonstrates that such error, omission, mistake, discrepancy or defect in the Design Plans will result in a delay to the Project Schedule or increase the cost of Contractor's performance of the Work. Contractor agrees that it shall be responsible for and participate in any further design and engineering processes necessary or to be undertaken by the Engineers; provided that Contractor shall not modify or deviate from any specifications and designs set forth in, nor duplicate any Work or design or engineering services performed as part of, the Design Plans, and Contractor shall ensure conformance with specifications and designs set forth therein as if set forth in the Scope of Work or other Specifications.

3.3.4 Cost Savings Sharing. The Parties acknowledge that Contractor may propose modifications to the Design Plan specifications of the Work, which proposals are intended to reduce the Contract Price and which, if implemented, would still otherwise satisfy, in all material respects, the requirements of this Agreement (each, a "cost saving proposal"). Each such cost saving proposal shall be made in writing, shall describe the proposed modification to the applicable Design Plan specification in detail, and the anticipated Contract Price reduction involved in implementing the proposed modification to the specification. Contractor shall not be entitled to propose any modifications to any specifications provided by a Major Equipment provider without the approval of both Owner and such supplier (to be granted in their sole discretion). Owner agrees to consider in good faith the cost saving proposals of Contractor. If Owner accepts any cost saving proposal from Contractor (in Owner's sole discretion), it shall notify Contractor in writing and the Parties shall promptly prepare and execute a Change Order in respect thereof, which also shall include that (a) Owner will pay to Contractor twenty five percent (25%) of the Contract Price reduction resulting from the cost saving proposal as compared to the Contract Price (excluding price reductions resulting from the completion of design work from the 60% design to IFC (for which unit rates will apply) or any other items specified on Exhibit EE), and (b) Owner's payment shall be

due within thirty (30) days after the earlier of receipt of a Contractor's Invoice therefor and Final Completion.

3.4 Electrical Interconnection. Procure (other than Owner Provided Materials), construct, test, commission and interconnect the Interconnection Facilities.

3.5 Progress Reports. Provide Monthly Progress Reports and Daily Progress Reports in accordance with Section 7.4. In addition, Owner or any Affiliate of Owner shall be entitled to attend the daily meeting convened by Contractor on the Site to review progress with Subcontractors performing Work on the Site and, during such meeting, Owner or such Affiliate shall have a reasonable opportunity to ask questions of Contractor and such Subcontractors concerning progress of the Work. If Owner requests that Contractor cause any Subcontractor to attend any such meeting, Contractor shall use its reasonable efforts to cause such Subcontractor to attend either in-person or via telephone.

3.6 Insurance. Obtain and maintain insurance required in accordance with Exhibit R.

3.7 Inspection. Perform all inspection and other like services required for performance of the Work, including inspecting all Equipment and performing all inspections required or contemplated under the Statement of Work.

3.8 Organization. Maintain sufficient staff that are dedicated to the completion of the Work, and that have the technical and managerial expertise to control and execute the Work in accordance with the requirements of this Agreement.

3.9 Utilities and Services. Install, connect and maintain at its own expense all utilities (including temporary construction power) facilities and services required for the performance of the Work. Pay when due all utility usage charges and arrange with local authorities and utility companies having jurisdiction over the Site for the provision of utilities involving the Work, and perform all work and pay all costs for road upgrade and repair as specified in Exhibit A.

3.10 Interconnection Approvals and Agreement. Except as otherwise provided herein, at Contractor's sole cost and expense, Contractor shall (a) obtain all interconnection approvals and agreements necessary for testing and operation of the Interconnection Facilities in accordance with Industry Standards, Applicable Law and the Interconnection Agreement and (b) otherwise perform all other obligations under or with respect to the Interconnection Facilities that are set forth in the Statement of Work, in each case on or before the date required in the Project Schedule (as such date may be extended pursuant to and in accordance with this Agreement

3.11 Hazardous Materials.

3.11.1 Contractor shall not Release or dispose of, or permit any Subcontractor or any Person acting on its or their behalf or under its or their control to Release, or dispose of, Hazardous Materials, or exacerbate the condition of any Pre-Existing Hazardous Materials, on or about the Site other than as required by Contractor in connection with the performance of the Work and in accordance with Applicable Law and Applicable Permits and shall, if any such Hazardous Materials are so Released, generated or discharged, or the condition of any Pre-Existing Hazardous Materials exacerbated, prevent the spread of such Hazardous Materials. In the event Contractor encounters material reasonably believed to be a Hazardous Material on the Site, Contractor shall immediately stop work in the affected area and notify Owner of the condition. If Contractor or any Subcontractor has brought such Hazardous Materials onto the Site or generated such Hazardous Materials, or exacerbated the condition of Pre-Existing Hazardous Materials, Contractor shall promptly submit a plan for Owner's approval for remediating such Hazardous

Materials. Upon approval of such plan by Owner, Contractor shall remediate such Hazardous Material in accordance with the approved plan and shall thereafter resume Work in the affected area. If Contractor or any Subcontractor has brought such Hazardous Materials onto the Site or generated such Hazardous Materials or exacerbated the condition of any Pre-Existing Hazardous Materials, Contractor shall not be entitled to an adjustment to the Contract Price and/or Project Schedule and/or Milestone Completion Schedule, including the Guaranteed Dates. If the Hazardous Materials were Pre-Existing Hazardous Materials and represent an Unforeseeable Site Condition, then to the extent that Contractor or anyone under its control has not exacerbated the condition thereof, Contractor shall be entitled to an equitable adjustment to the Contract Price and/or Project Schedule and/or and Milestone Completion Schedule, including the Guaranteed Dates, so long as such release or discharge was not due to a Non-Excusable Event. As used herein, "**Pre-Existing Hazardous Material**" means any Hazardous Material existing at the Project Site prior to the commencement of the Work, regardless of whether such Hazardous Material is identified in this Agreement (including any Exhibits hereto), or any Hazardous Material introduced on the Project Site by a party in Owner's control.

3.11.2 Contractor shall indemnify, defend and hold harmless the Owner Indemnified Parties from and against all liabilities arising out of or relating to any violations by Contractor or any Subcontractor of any Applicable Law or Applicable Permits, including (i) the Release or deposit at, on, above, below or near the Site by Contractor or any Subcontractor of any Hazardous Materials that were brought onto the Site by Contractor or any Subcontractor or (ii) the Release or exacerbation of the condition of any Pre-Existing Hazardous Materials on the Site that Contractor knows or reasonably should have known were on the Site of and caused such Release due to its negligence or disregard for Owner's instructions; provided, however, that in no event shall Contractor be obligated under this Section 3.11.2 to the extent such liabilities arise due to the negligence or willful misconduct of Owner or any third party that is not under Contractor's or any Subcontractor's control. Owner shall indemnify, defend and hold harmless the Contractor Indemnified Parties from and against all liabilities arising out of or relating to any unknown Hazardous Materials that existed at the Site prior to the Execution Date; provided, however, that in no event shall Owner be obligated under this Section 3.11.2 to the extent such liabilities arise due to (x) a Non-Excusable Event or (y) exacerbation of Pre-Existing Hazardous Materials, by Contractor, any Subcontractor or any third party that is under Contractor's or any Subcontractor's control that the applicable Person knows or should have reasonably known were on the Site and the applicable Person caused such Release due to its negligence or disregard for Owner's instructions.

3.12 Access; Site Security. Contractor shall provide security measures as necessary to protect the Site and all materials and supplies stored thereon in accordance with the Contractor security procedures set forth in the HS&E Plan during the term of this Agreement, but shall provide access to the Site (and any other location where the Work is being performed) as reasonably necessary to Owner, the Owner Financing Parties, the Participating TO, Power Purchasers, PUCT, and their respective representatives, agents and, to inspect and review the Work being performed by Contractor; provided that, while on the Site, such Persons shall (a) observe Contractor's reasonable security and safety measures; and (b) not unreasonably interfere with Contractor's performance of the Work. Contractor shall keep the Site reasonably clean and presentable at all times. The scope and extent of Contractor's obligations to provide security measures is limited to the description of same as set forth in the HS&E Plan.

3.13 Handling, Shipping and Importation. Arrange for complete handling, shipping and importation, as necessary, of all Equipment, and construction equipment, including quality assurance, shipping, loading, unloading, customs clearance (and payment of any customs duties in connection therewith), receiving, and any required storage and claims. Contractor shall carry out the Work so as not to interfere unreasonably, unnecessarily or improperly with access to or use of private roads, footpaths or of properties of Owner or of any other Person. Contractor shall liaise with the landowners of the Site and Governmental Authorities, and comply with requirements of landowners of the Site and Governmental

Authorities in relation to vehicular access to and egress from the Site. Contractor shall select routes, choose and use vehicles, and restrict and distribute loads in compliance with Applicable Laws whenever Contractor uses public roads.

3.14 Applicable Law; Permits.

3.14.1 Applicable Law. Throughout the performance of all aspects of the Work, comply with, and shall ensure that each Subcontractor complies with, all Applicable Law.

3.14.2 Prevailing Wages and Apprenticeship Requirements. In performing the Work, Contractor agrees to comply with, and shall cause each of its applicable Subcontractors to comply with, the Prevailing Wage and Apprenticeship Requirements set forth in Exhibit X.

3.14.3 Permits. Obtain and maintain all Contractor Permits and pay all Permit Expenses in connection with such Contractor Permits.

3.14.4 Communications with Governmental Authorities. Contractor agrees to keep Owner updated on any material communications between Contractor and any Governmental Authority, including the PUCT, relating to the Project. Contractor shall provide Owner the opportunity to attend any material meetings and conference calls between Contractor and any Governmental Authority relating to the Work or the Project.

3.14.5 Cooperation. Provide reasonably requested assistance to Owner with respect to obtaining, and complying with, any Owner Permits; provided that, except in the case of building and construction permits and other permits that are similar in nature to those listed in Part I to Exhibit C and required under Applicable Law to be obtained in Owner's name, Owner shall reimburse Contractor for any reasonable and documented out-of-pocket costs that Contractor incurs in providing such assistance. Contractor shall provide Owner with sufficient advance notice (upon learning of such Owner Permit) to allow Owner to obtain such Owner Permit in accordance with Applicable Law in the reasonable course of its business and the exercise of reasonable care.

3.15 Commissioning Personnel. Provide, or cause to be provided, appropriate installation and commissioning representatives, as necessary supervising personnel, all equipment, tools, construction and temporary material and all other labor necessary for all of the Work to complete commissioning in accordance with Exhibit H-1.

3.16 Performance Security.

3.16.1 RESERVED.

3.16.2 Performance Security. Contractor shall obtain and deliver to Owner within sixty (60) days of the Execution Date, but in no event later than within five (5) days of the Commencement Date (i) a properly completed performance bond in the form attached hereto as Exhibit DD (a "**Performance Bond**") and (ii) a properly completed payment bond in the form attached hereto as Exhibit DD (a "**Payment Bond**"), in each case issued by an issuer reasonably acceptable to Owner and having a long-term, senior unsecured credit rating of at least A- (Standard & Poor's) or A3 (Moody's). The Performance Bond and Payment Bond shall be collectively referred to as the "**Performance Security**." The amount of (a) the Performance Bond shall be equal to the Contract Price and (b) the Payment Bond shall be equal to the Contract Price. Upon any increase in the Contract Price, Owner may request, and Contractor shall within ten (10) Business Days thereafter provide, an increase in the amount of the Performance Bond and the

Payment Bond such that each remains at a value not less than the Contract Price. All costs associated with providing and maintaining the Performance Bond and the Payment Bond shall be borne by Contractor.

3.16.3 Owner shall have the right to apply the Payment Bond and Performance Bond to satisfy any payment obligation of Contractor in connection with this Contract that is not paid when due hereunder. Each of the Payment Bond and Performance Bond shall permit Owner to make demand thereunder to satisfy any payment obligation of Contractor in connection with this Agreement that is not paid when due hereunder, after the expiration of any applicable grace period for such payment obligation. Owner shall deliver a copy of any demand made under each of the Payment Bond and Performance Bond to Contractor contemporaneously with the demand presented to the applicable issuer; provided, however, that failure to so deliver such demand shall not create a right of objection to any payment to be made under either the Payment Bond or Performance Bond. Demands under the Payment Bond and Performance Bond shall include identification of the provision of this Agreement entitling Owner to demand thereunder.

3.16.4 On the Final Completion Date, Owner shall return the Performance Bond and the Payment Bond. Upon return of the Performance Bond and the Payment Bond, the Performance Bond and Payment Bond shall be deemed fully exonerated.

3.17 Existing Improvements and Facilities. During the performance of the Work, Contractor shall take reasonable care to protect existing improvements, facilities and equipment at the Site and any adjacent properties, as well as the roadways and other infrastructure utilized by Contractor in the performance of the Work, unless they are to be altered or removed as a part of the Work. Contractor shall also make reasonable provisions to confine its activities so as to avoid and minimize any damage or compaction to any existing fences, crops or ground. To the extent that Contractor fails to comply with the requirements of the foregoing sentence and such failure causes Owner to become liable for damages to the owners of the Site or others that have a possessory interest in the Site, or any adjacent properties, roadways or other infrastructure utilized by Contractor in the performance of the Work, Contractor shall reimburse Owner in respect of its actual out-of-pocket expenses and damages. Contractor shall perform at its cost any improvements or alterations to roadways or other infrastructure utilized by Contractor in the performance of the Work in accordance with the requirements hereunder.

3.18 Contractor Deliverables. Deliver to Owner all Contractor Deliverables as and when required as set forth in the Contractor Deliverables Exhibit and as otherwise required under the terms of this Agreement. Contractor shall timely deliver each final version of any Contractor Deliverable (as approved by Owner to the extent required hereunder) in the file formats and to the locations in Owner's electronic data room as set forth in in the Contractor Deliverables Exhibit, and shall keep organized and up to date the Contractor's Deliverables located in any file folders within Owner's electronic data room designated as the Contractor's responsibility as set forth in the Contractor Deliverables Exhibit.

3.19 Site Conditions. Contractor (a) has visually inspected the Site, and has reasonably satisfied itself, through those documents provided to it by Owner in Exhibit V, as to all matters regarding the condition thereof, including those matters related to the environment, availability and quality of air and water, physical conditions at the Site, topography and ground surface conditions (including any flood zones or retention basins), sound attenuation conditions, subsurface geology and geotechnical conditions, nature and quality of surface and subsurface materials to be encountered (including Pre-Existing Hazardous Materials), transportation and access (including the availability and quality of roads), waste disposal, handling and storage of materials, the availability and quality of electric power, the location of underground utilities, obstructions, and equipment and facilities, climatic conditions and seasons, any religious, historical or archeological resources, existing Liens and encumbrances, and the presence of endangered or threatened species on the Site (collectively, "**Site Conditions**"), and shall be responsible for all necessary works in

relation to, or because of, such Site Conditions both below and above ground on the Site and (b) shall be solely responsible for performing any preliminary Work on the Site necessary for the commencement of construction to occur, including removal of all physical impediments to performing Work on the Site, above and below ground. Contractor specifically acknowledges and accepts the Site Conditions and agrees that subject to Section 13.1, no claims by Contractor for additional payment or extensions of time shall be permitted on the ground of any misunderstanding or misapprehension of the matters referred to in this Section 3.19. Contractor acknowledges that none of Owner, any of its Affiliates or any of its agents or representatives have made, nor shall they make, any express or implied warranty to Contractor as to Site Conditions.

3.20 Labor. Contractor shall have the discretion to make staffing and labor decisions in performing the Work, including, but not limited to, hiring employees, selecting Subcontractors, and determining whether to use union labor; provided that throughout the performance of all aspects of the Work, Contractor shall comply with, and shall ensure that each Subcontractor complies with, all Requirements. No Contractor decision regarding staffing or the use of union or non-union labor shall affect or excuse Contractor's performance of its obligations under this Agreement. Contractor shall adopt policies and practices designed to avoid Labor Disputes, and to minimize the risk of labor-related delays or disruption of the progress of the Work. Contractor shall advise Owner promptly, in writing, of any actual or threatened Labor Dispute of which Contractor has knowledge that might materially affect the performance of the Work by Contractor or by any of the Subcontractors. Notwithstanding the foregoing, the settlement of Labor Disputes shall be at the discretion of the Party having the difficulty. Contractor shall ensure that at the time of hiring, all its personnel and personnel of any Subcontractors performing the Work on the Site are (a) in possession of all such documents as may be required by any and all Applicable Laws (b) qualified for performing the Work in accordance with Industry Standards.

3.21 Additional Duties and Responsibilities. Contractor shall have the following duties and responsibilities under and pursuant to this Agreement related to the Work:

3.21.1 Cooperation of Contractor. Contractor shall reasonably cooperate with Owner in connection with Owner's efforts to obtain the approvals, certificates, and/or Applicable Permits which are Owner's responsibility to obtain pursuant to this Agreement, if any. Contractor acknowledges that concurrently with the performance of the Work under this Agreement as indicated on the Project Schedule or otherwise by Owner, other contractors, vendors, suppliers and consultants may be providing services in respect to other aspects of the Project on behalf of Owner pursuant to their respective separate contracts (the **"Separate Contractors"**). Contractor shall use commercially reasonable efforts to cooperate and cause its Subcontractors to cooperate with such Separate Contractors and shall cooperate in the performance of its Work to minimize any interference with the work of the Separate Contractors, but not to the extent of disrupting Contractor's schedule or sequence of Work, and Owner shall coordinate the performance of the Separate Contractors and their work with Contractor to minimize any interference with Contractor's performance of its Work. Scheduled daily meetings will occur with all Subcontractors, Separate Contractors (if any) and Owner to allow for proper coordination of that day's work. Contractor agrees to permit, without charge, reasonable access to, and use of, the Site and the Work, by the Separate Contractors or by Owner, whether such Work is partially or entirely complete, when such access and use does not interfere with the Work and such access or use is necessary for the timely performance and completion of the work of the Separate Contractors. Owner shall cause the work of any Separate Contractor to be properly coordinated and completed in accordance with the applicable schedules and the times of completion required by this Agreement.

3.21.2 Storage and Maintenance of Equipment and Other Items. Once any Equipment or Owner Provided Materials is delivered to the Site, Contractor shall receive, unload, inspect, clean, store and maintain the Equipment and Owner Provided Materials, as applicable, with reasonable care (including

ensuring that any original equipment manufacturer warranties are not voided as a result of any of the foregoing) and shall maintain or assume the care, custody and control thereof. To the extent the Owner Provided Materials are delivered during normal business hours, and Owner provides Contractor prior notice of the same pursuant to Section 3.9, Contractor shall not leave any Owner Provided Materials exposed, unsecured or unguarded without the written consent of Owner.

3.21.3 Testing of the Work. Contractor shall perform, or cause to be performed, all tests, approvals and inspections of the Work required by any Governmental Authority or elsewhere in this Agreement for construction work, or as otherwise necessary, appropriate or customary to assure the proper performance and operation thereof, in accordance with the Requirements. These tests, inspections and approvals shall be scheduled by Contractor so as not to delay the progress of the Work.

3.21.4 Tariff Risk Sharing. With respect to Contractor's and the Major Subcontractor's procurement of Equipment and materials, Contractor shall use commercially reasonable efforts to include risk sharing provisions in its procurement agreements to mitigate Tariff Increases.

3.22 Information Technology Framework; NERC Standards. Not later than thirty (30) days after the date of Notice to Proceed, Contractor will coordinate with Owner to implement the most current version of Owner's information technology protocols as it relates to Contractor's Work under this Agreement. The current version Owner's information technology protocols is set forth on Exhibit AA, which may be updated from time to time by Owner and in which case the most current version shall be provided to Contractor and shall be appended to this Agreement as Exhibit AA. With respect to each of the documents listed on Exhibit BB to be provided by the high voltage contractor, Contractor shall provide to Owner the final versions of each such document by no later than the Project Substantial Completion Date (or such later date as indicated in Exhibit BB), and Contractor shall provide to Owner a draft of each such document at least thirty (30) days prior to the relevant deadline for submission of such document for review and approval by Owner.

3.23 HS&E Plan. Contractor shall take necessary safety and other precautions to protect property and persons from damage, injury or illness arising out of the performance of the Work, and be responsible for the compliance by all of its agents, employees and Subcontractors with all Applicable Laws governing health and safety, including applicable Occupational Safety and Health Administration (OSHA) requirements. In addition, no less than sixty (60) days prior to the date of the Notice to Proceed, Contractor shall provide Owner with its draft of the HS&E Plan for review and approval by Owner. Contractor shall incorporate all of Owner's reasonable comments into the final HS&E Plan. Once approved by Owner, the HS&E Plan shall be attached to this Agreement as Exhibit D-1. During performance of the Work, Contractor shall publish work safety rules for the Site in compliance with the HS&E Plan, which safety rules shall apply to any and all visitors to the Site and Owner, Owner Financing Parties, other separate contractors of Owner and their subcontractors and suppliers. Contractor agrees to implement and follow such HS&E Plan during execution of the Work, employ good safety practices, and conduct regular, frequent safety meetings. Contractor shall be responsible for health and safety planning and implementation at the Site; provided, however, that Owner shall be responsible for ensuring that during any visit to the Site, each of Owner, Owner Financing Parties, agents and employees of Owner, other separate contractors of Owner and Owner's subcontractors and suppliers (other than, for the avoidance of doubt, Contractor and any Subcontractor hereunder), shall each comply with such onsite health and safety plans implemented by Contractor. Contractor further agrees to take corrective action immediately upon receipt of a safety citation, or any written notice of a safety violation. Contractor and Owner will notify the other immediately of any unsafe working condition encountered on the Site. Contractor shall designate an onsite supervisor who will be responsible for Contractor's compliance with all federal, state and local rules and ordinances concerning workplace safety and coordination and compliance with the HS&E Plan. Contractor is responsible for recording and reporting any safety incident to the necessary Governmental Authorities and in compliance with Applicable Law. Contractor shall immediately notify Owner of any incident involving injury to persons or damage to property

which arises or is alleged to have arisen on account of any work done by Contractor under this Contract or any firm or individual to whom Contractor may have contracted work.

(a) Upon becoming aware of any unsafe or hazardous (or potentially unsafe or hazardous condition) in or around the Site, Contractor shall immediately take any and all actions reasonably necessary to eliminate such condition and render the Site and surrounding areas safe.

(b) Contractor shall, in accordance with Industry Standards, take all reasonable precautions for safety of, and shall provide all reasonable protection to prevent damage, injury or loss resulting from the performance of the Work to persons, including members of the public and the employees, agents, contractors, consultants and representatives of Owner, Contractors, its Subcontractors, Owner's contractors and their subcontractors and suppliers, the Owner Financing Parties and others in the vicinity of the Site (including members of the public or people in and around buildings and areas adjacent to the Site) and other persons who may be affected thereby.

(c) Contractor shall furnish and maintain all necessary safety equipment such as barriers, signs, warning lights and guards as required, providing adequate protection to persons and property in connection with its performance of the Work at the Site.

(d) Contractor shall give reasonable notice to Owner in the event that any public or private property or utilities are susceptible to injury or damage through the performance of the Work and shall make all necessary arrangements with Owner relative to the removal and replacement or protection of such property or utilities.

3.24 Quality Assurance.

(a) Contractor shall use effective quality assurance programs throughout the performance of the Work. Within no less than thirty (30) days prior to the date of the Notice to Proceed, Contractor shall provide Owner with a copy of its proposed quality assurance and quality control program for review and approval by Owner. Contractor shall incorporate all of Owner's reasonable comments into the final quality assurance and quality control program. Once approved by Owner, such quality assurance and quality control program shall be attached to this Agreement as Exhibit D-2. Work shall be managed in accordance with such quality assurance and quality control program as approved by Owner. Quality assurance and quality control testing shall be documented by a representative of Contractor qualified to perform such quality assurance and quality control Work. Owner may observe and witness quality assurance and quality control actions taken by Contractor as desired. All completed quality assurance and quality control documents will be provided to Owner during the performance of the Work as reasonably requested by Owner.

(b) Contractor shall give prompt notice to Owner of any defects, deficiencies or non-conformity in or poor quality or condition of design, workmanship, equipment, components or parts of the Work that it detects and shall promptly remedy same. No such notice shall be deemed to cause a waiver or release of any of the Contractor's duties or obligations under this Agreement or of Owner's rights and

remedies thereunder. Contractor shall not be excused, released or relieved of liability for any such defect in the Work or for failing to perform the Work in accordance with the Milestone Completion Schedule on account of providing such notice to Owner and remedying the defect.

(c) Prior to Project Substantial Completion, Contractor shall, at its sole cost and expense, (i) promptly correct, repair or replace any damage or loss to the Site and any other property to the extent caused in whole or in part by Contractor, a Subcontractor or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable, and (ii) except if such Defect is a Non-Critical Deficiency, in which case it shall be included on the Punchlist (a) correct, repair or replace any part of the Work that is Defective, or ceases to perform the operation or function for which it was designed, regardless of the stage of its completion or the time or place of discovery of such Defect and regardless of whether Owner has previously inspected or accepted such Work through oversight or otherwise, or (b) remove such Defective work from the Site and replace it with Work that is operable and functioning and not Defective. The foregoing obligations of Contractor are in addition to the Contractor's indemnity obligations under Article 17.

3.25 Business Practices. Contractor covenants that it will not make any payment or give anything of value to any government official (including any officer or employee of any Governmental Authority) to influence his, her or its decision or to gain any other advantage for Owner or Contractor in connection with the Work to be performed hereunder.

3.26 Project Manager. Contractor shall appoint a single representative, which appointment shall be subject to the prior written approval of Owner which shall not be unreasonably withheld, to act as its manager and coordinator of the Agreement on the Contractor's behalf who shall not be replaced without written notice to Owner, except in the instance where that representative leaves Contractor's employ or become incapacitated ("**Project Manager**"). The Project Manager shall be replaced at the request of Owner if Owner objects to such manager for reasonable cause. The Project Manager (i) shall normally be present at the Site during the performance of the Work, except for scheduled personal rotations home or vacations or as otherwise agreed by the Parties, (ii) shall act as the liaison for the Contractor's communications with Owner, (iii) shall be responsible for providing all reports due under this Agreement, and (iv) shall have authority to act on behalf of Contractor. All written communications given to or received from the Project Manager shall be deemed given to or received from Contractor. The Project Manager shall coordinate all activities of Contractor and its Subcontractors, including planning, scheduling, reporting activities, communication activities, insurance procurement and administration, as applicable.

3.27 Spare Parts. Owner may request Contractor to purchase Spare Parts, which shall be considered a Change Order.

3.28 Permanent Contracts. With respect to its obligations under Section 3.9, to the extent that the applicable utilities, facilities and services are meant to be utilized by Owner after Project Substantial Completion, the contracts therefor shall be entered into in the name of Owner, and Contractor shall only be required to bear the cost of such utilities or other services for the period prior to Project Substantial Completion.

4. COVENANTS, WARRANTIES AND REPRESENTATIONS

4.1 Contractor. Contractor represents and warrants, as of the Execution Date and the Commencement Date, as follows:

4.1.1 Organization, Standing and Qualification. Contractor is a limited liability company duly formed, validly existing and in good standing under the laws of the State of Indiana, and has full power and authority to execute, deliver and perform its obligations hereunder and to engage in the business it presently conducts and contemplates conducting, and is and will be duly licensed or qualified to do business and in good standing under the laws of each other jurisdiction wherein the nature of the business transacted by it makes such licensing or qualification necessary and where the failure to be licensed or qualified would have a material adverse effect on its ability to perform its obligations hereunder.

4.1.2 Due Authorization; Enforceability. This Agreement has been duly authorized, executed and delivered by or on behalf of Contractor and is, upon execution and delivery by each of the Parties hereto, the legal, valid and binding obligation of Contractor, enforceable against Contractor in accordance with its terms, except as such enforceability may be limited by applicable bankruptcy, insolvency or similar laws affecting creditors' rights generally and by general equitable principles.

4.1.3 No Conflict. The execution, delivery and performance by Contractor of this Agreement (a) will not conflict with or cause any default under: (i) its organizational documents; (ii) any indenture, mortgage, chattel mortgage, deed of trust, lease, conditional sales contract, loan or credit arrangement or other agreement or instrument to which Contractor is a party or by which it or its properties may be bound or affected; or (iii) any Applicable Law; and (b) will not subject the Project or any component part thereof or the Site or any portion thereof to any Lien other than as contemplated or permitted by this Agreement.

4.1.4 Government Approvals. Neither the execution nor delivery by Contractor of this Agreement requires the consent or approval of, or the giving of notice to or registration with, or the taking of any other action in respect of, any Governmental Authority. Contractor represents and warrants that all Contractor Permits and other Applicable Permits required to be in Contractor's name either have been obtained by Contractor and are in full force and effect or will be obtained and will be in full force and effect on or prior to the date on which they are required under this Agreement and Applicable Law, so as to permit Contractor to commence and prosecute the Work to completion in accordance with the terms and conditions of this Agreement.

4.1.5 No Suits, Proceedings. There are no actions, suits, proceedings, patent or license infringements, or investigations pending or, to Contractor's knowledge after due inquiry, threatened in writing against it at law or in equity before any court or before any Governmental Authority (whether or not covered by insurance) that individually or in the aggregate could result in any materially adverse effect on Contractor's ability to perform its obligations under this Agreement. Contractor has no knowledge of any violation or default with respect to any order, writ, injunction or decree of any court or any Governmental Authority that may result in any such materially adverse effect or such impairment.

4.1.6 Business Practices. Neither Contractor nor its representatives have made any payment or given anything of value to any government official (including any officer or employee of any Governmental Authority) to influence his, her or its decision or to gain any other advantage for Owner or Contractor in connection with the Work to be performed hereunder.

4.1.7 Licenses. All Persons who will perform any portion of the Work have and will have all business and professional certifications and licenses if and as required by the terms and conditions of this Agreement, Applicable Law and Applicable Permits to perform such portion of the Work under this Agreement.

4.1.8 Financial Condition and Adequate Resources. Contractor is financially solvent, able to pay its debts as they mature, and possessed of sufficient working capital to complete its obligations under this Agreement. Contractor has or will procure adequate resources and is qualified, in each case directly or through its Subcontractors, to perform the Work in accordance with the terms and conditions of this Agreement.

4.1.9 Patents. Contractor owns or has the right to use, or will be able to secure from its Subcontractors the right to use, all Intellectual Property Rights necessary to perform the Work without conflict with the rights of others and to enable Owner to exercise its rights hereunder to operate the Project without infringement thereof.

4.1.10 Lone Star Infrastructure Protection Act. To the extent that any equipment or services provided under this Agreement constitute Critical Electric Grid Equipment (CEGE) or Critical Electric Grid Services (CEGS), provision of such CEGE or CEGS will not result in direct or remote access to or control of CEGE by a Lone Star Infrastructure Protection Act (LSIPA) Designated Company or an LSIPA Designated Country, including access or control by Contractor except for access specifically allowed by Owner for product warranty and support purposes. This includes, but is not limited to, access to or control of CEGE by an LSIPA Affiliate of the Contractor.

4.2 Owner. Owner represents and warrants, as of the Execution Date and the Commencement Date, as follows:

4.2.1 Organization, Standing and Qualification. Owner is a limited liability company duly formed, validly existing, and in good standing under the laws of the State of Delaware, and has full limited liability company power and authority to execute, deliver and perform its obligations hereunder and to engage in the business Owner presently conducts and contemplates conducting, and is and will be duly licensed or qualified to do business and in good standing in each jurisdiction wherein the nature of the business transacted by it makes such licensing or qualification necessary and where the failure to be licensed or qualified would have a material adverse effect on its ability to perform its obligations hereunder.

4.2.2 Due Authorization; Enforceability. This Agreement has been duly authorized, executed and delivered by or on behalf of Owner and is, upon execution and delivery by each of the Parties hereto, the legal, valid, and binding obligation of Owner, enforceable against Owner in accordance with its terms, except as such enforceability may be limited by applicable bankruptcy, insolvency or similar laws affecting creditors' rights generally and by general equitable principles.

4.2.3 No Conflict. The execution, delivery and performance by Owner of this Agreement will not conflict with or cause any default under: (a) its organizational documents; (b) any indenture, mortgage, chattel mortgage, deed of trust, lease, conditional sales contract, loan or credit arrangement or other agreement or instrument to which it is a Party or by which it or its properties may be bound or affected; or (c) any Applicable Law.

5. COST OF WORK

5.1 Contract Price.

5.1.1 Contract Price. Contractor hereby agrees to accept as compensation for the performance of the Work and its other obligations hereunder One-Hundred Fourteen Million, Four-Hundred Sixty-Nine Thousand and Thirteen Dollars ($114,469,013) (as the same may be adjusted pursuant to the terms of this Agreement, the "**Contract Price**"). For the avoidance of doubt and subject to this Section 5.1.1, the Contract Price shall include all portions of the Work comprising the Project. Neither shall

the Contract Price be changed nor shall Contractor be entitled to any other compensation, reimbursement of expenses or additional payment of any kind without prior written authorization of Owner or as otherwise specifically set forth in Article 13 or Section 3.3.4 of this Agreement. Payments shall be made at the times and in the manner provided in Article 6. For the avoidance of doubt, the Contract Price excludes (a) Property Taxes and (b) any Taxes imposed on Owner by any Governmental Authority under Applicable Law, including but not limited to those imposed on Owner Provided Materials (the Taxes set forth in clauses (a) and (b), "**Excluded Taxes**"), in all cases which shall be payable by Owner.

5.1.2 RESERVED.

5.1.3 Taxes Included in Contract Price. The Contract Price includes any and all Taxes imposed under Applicable Law on Contractor, the Subcontractors, the Work, the construction or sale of Equipment to Owner or installation of the Project, including any sales, use, gross receipts, privilege transfer, documentary transfer, excise, similar or other tax levied by any state, county or local government with respect to the purchase, sale, lease or use of any property or services that are part of the Work, without regard to whether the person required by law to report collect or pay such Tax was Contractor, any Subcontractor, a person selling to either of them, or any other person, including any transaction privilege taxes, vehicle use tax and sales taxes imposed on the Work by any Governmental Authority (collectively, "**Sales Taxes**"), but excludes any Excluded Taxes or Taxes that constitute Tariff Increases. Contractor shall, in accordance with Applicable Law, timely administer and timely pay all Taxes that are included in the Contract Price and timely furnish to the appropriate taxing authorities all required information and reports in connection with such Taxes and furnish copies of such information and reports (other than information specifically pertaining to Contractor's income and profit) to Owner as reasonably requested by Owner. Contractor shall reasonably cooperate with Owner to minimize the Tax liability of Owner to the extent legally permissible, including supplying resale and Exemption Certificates with each invoice, if applicable, and other information as reasonably requested in all cases by taxing authorities. In addition, to the extent any other exemptions, abatements, credits against or deferrals of any Taxes may be available to Owner under Applicable Law, including property tax exemptions, the Parties shall reasonably cooperate in order to secure any such exemptions, abatements, credits against, or deferrals of, such Taxes, however Contractor assumes no liability if not granted, provided Contractor has made commercially reasonable efforts to secure all available exemptions. Each Contractor's Invoice shall be consistent with the provisions of this Section 5.1.3. For a period of six (6) years after the Project Substantial Completion Date, and within thirty (30) Days of a request therefor, Contractor shall provide Owner with any information regarding quantities and descriptions of property installed at the Project Site that Owner shall reasonably request in connection with the preparation of its Tax returns.

6. TERMS OF PAYMENT

6.1 Contractor Payments. The Contract Price shall be paid to Contractor on a monthly basis for its percent completion of each subcategory of the Work enumerated in the applicable Contractor's Invoice and verified as complete by Owner. Each payment to Contractor under this Section 6.1 shall be due and payable only to the extent it is supported, to Owner's reasonable satisfaction, by the completion of the applicable portion of the Work set forth in the Contractor's Invoice for such payment, and receipt of other supporting documentation for the Contractor's Invoice, including each Conditional Waiver and Release Upon Progress Payment and each Waiver and Release Upon Final Payment required under Section 21.2.

6.1.1 Payment Assessment. Contractor and Owner shall periodically, and in any event at least once each month, review the Work completed and assess the progress of on-Site Work completed. Included in Exhibit Q hereto as part of the form of Contractor's Invoice is the Contractor's "Schedule of Values," allocating the entire Contract Price, excluding any down payment, among the various portions of

the Work. The schedule of values shall be used as a basis for reviewing and approving the Contractor's Invoices.

6.1.2 Contractor's Invoices. Contractor shall electronically deliver to Owner a Contractor's Invoice no later than the fifth (5th) Business Day of each month for each payment owing to Contractor under this Article 6 and under any other provision of this Agreement for Work performed prior to such month. Contractor shall provide delivery schedules, purchase orders (which may be redacted for pricing), and/or invoices for Major Equipment as required by Owner. Each Contractor's Invoice shall be reasonably detailed and shall be accompanied by reasonable supporting documentation evidencing the achievement of the portion of the Work for which the payment is being requested (including invoices from any Major Subcontractor and any required documents related to Sales Taxes) and shall be accompanied by a Conditional Waiver and Release Upon Progress Payment from Contractor and each Subcontractor for the work being invoiced, as required to be delivered therewith as set forth below. A Contractor's Invoice will be deemed received only when all supporting documentation required herein has been satisfactorily submitted to Owner. Within five (5) Business Days after the receipt of each Contractor's Invoice (including for the avoidance of doubt the Final Contractor's Invoice), Owner shall review the Contractor's Invoice to verify (a) completion of the Work for which payment is sought; (b) that the Work conforms to the requirements of this Agreement; (c) that the Contractor's Invoice and supporting documentation have been properly submitted and that Owner has received each Conditional Waiver and Release Upon Progress Payment required to be delivered; and (d) that the invoiced amount reflects the percent of each subcategory of the Work completed in the applicable timeframe. Upon such verification, Owner shall approve the Contractor's Invoice or shall advise Contractor if all or any portion of the application is not certified. Owner shall provide all specific reasons in writing for any disapproval of a Contractor's Invoice or a portion thereof. If Owner cannot certify a portion of a Contractor's Invoice, Owner shall nonetheless certify payment of the remaining portion of the Contractor's Invoice for Work performed in accordance with this Agreement.

6.1.3 Final Completion Payment. On or after the date on which Contractor delivers to Owner a Notice of Final Completion accepted by Owner pursuant to Section 11.8, Contractor shall submit a final Contractor's Invoice (a "**Final Contractor's Invoice**") which shall set forth all amounts due to Contractor that remain unpaid as of the date of such invoice (including (a) any remaining Punchlist Holdback that has not been released to Contractor in accordance with Section 6.7.2, (b) any remaining Excluded Taxes for which Owner is liable to indemnify Contractor under this Agreement and (c) any other amount due to Contractor hereunder) and shall be accompanied by each Waiver and Release Upon Final Payment required to be delivered therewith pursuant hereto. Owner shall pay to Contractor the amount due under such Final Contractor's Invoice (the "**Final Completion Payment**") in accordance with Section 6.4. Notwithstanding the foregoing, the Final Completion Payment shall only become due and payable to Contractor if and only if all of the requirements of Final Completion set forth in Section 11.7 have been met. No later than ten (10) Business Days after the payment by Owner to Contractor of the Final Completion Payment, Contractor shall deliver to Owner a Waiver and Release Upon Final Payment in respect of Contractor and all Subcontractors (to the extent it has not yet been delivered at such time).

6.2 Warranty Work. Any Warranty Work performed by Contractor pursuant to this Agreement shall be at the sole expense of Contractor.

6.3 Undisputed Payments. Each Party shall pay any undisputed portion of any amount owed to other Party pursuant to this Agreement within thirty (30) days after receipt of the applicable invoice or demand for payment (meeting the relevant requirements therefor as set forth herein) from the Party seeking payment. Any undisputed payments not paid when due shall bear interest at a rate equal to the Prime Rate then in effect *plus* three percent (3%) per annum. This Section 6.3 shall also be applied to those sums, if any, disputed by Owner and resolved in Contractor's favor under Article 24.

6.4 Disputed Payments. If a Dispute arises regarding the payments to be made to Contractor or Owner hereunder, Owner or Contractor, as applicable, shall pay all undisputed amounts, and Owner and Contractor shall resolve the Dispute in accordance with the Dispute resolution provisions of Article 24.

6.5 Form and Manner of Payments. All payments made pursuant to this Agreement shall be made by check or wire transfer of immediately available funds to a bank account to be designated by the Party receiving such payment. Either Party may designate from time to time a different bank or account by notice to the other Party given not less than ten (10) Business Days prior to the payment date to which such payment instructions are to apply. If the date for any payment called for under this Agreement should fall on a day that is not a Business Day at the location designated for receipt of such payment, then such payment may be made on the next succeeding Business Day in such location with the same effect as if made on the date due.

6.6 Effect of Payment. Payment of the Contract Price, approval of any Contractor Invoice and/or execution of any completion certificates shall not constitute (i) Owner's acceptance or approval of any portion of the Work, (ii) Owner's acceptance of Work that has been or subsequently is determined to be defective or deficient or not to be completed or performed in accordance with the requirements hereunder, (iii) a waiver of any claim or right Owner may have at that time or thereafter, including claims regarding unsettled Liens, warranty rights and indemnification obligations of Contractor. No payment made by Owner shall be considered or deemed to represent that Owner has inspected the Work or checked the quality or quantity of the Work or Owner knows or has ascertained how or for what purpose Contractor has used sums previously paid. All payments of the Contract Price shall be subject to correction or adjustment in subsequent progress reviews and payments and as otherwise provided in this Agreement.

6.7 Retainage; Release of Punchlist Amounts.

6.7.1 Retainage. Owner shall retain an amount equal to five percent (5%) of the amount of each monthly Contractor's Invoice hereunder (less any Punchlist Holdback withheld concurrently with such monthly payment) made pursuant to a Contractor's Invoice (the "**Retainage**"), as performance security for Contractor's obligation to complete the items on the Punchlist and to achieve Final Completion. Retainage shall be released only as described in Section 6.7.2.

6.7.2 Release of Retainage. Owner shall release the Retainage as follows: (a) within thirty (30) days after the Project Substantial Completion Date, Owner shall pay Contractor an amount equal to the entire remaining amount of the Retainage withheld *less* an amount equal to the Punchlist Holdback of the Punchlist Amount for all of the Punchlist items that have not been completed at such time pursuant to the terms hereof; (b) after Final Completion, Owner shall release the remaining funds in the Retainage. Except as may be specifically required pursuant to Applicable Law, any interest accruing on the Retainage shall accrue for the account of the Contractor and Subcontractors, as applicable, provided that the Contractor shall be responsible to distribute any such interest to the Subcontractors in accordance with Applicable Law. If Contractor fails to perform any Punchlist item within thirty (30) days after the Project Substantial Completion Date, Owner may elect by written notice to Contractor to retain the Punchlist Holdback applicable to such Punchlist item and complete such Punchlist item itself. Upon Owner making such election, Contractor's obligation to perform such Punchlist item shall be deemed satisfied.

6.8 Withholding Payment. Notwithstanding any other provision to the contrary contained herein, Owner may withhold payments to Contractor hereunder, and Owner may decide not to certify payment or may nullify the whole or a part of a certification for payment made pursuant to a previous Contractor's Invoice to such extent as may be necessary to protect Owner from loss because of: (a) third party claims filed (or reasonable evidence indicating probable filing of such claims) for which Contractor is responsible (including Liens) against the Work, the Project or the Site, so long as payment therefor was previously made by Owner; (b) the unexcused failure of Contractor to make payments when due to Subcontractors or Suppliers; (c)

damage to Owner or another contractor, for which Contractor is liable, including damage to the property of Owner or any of its Affiliates; (d) Contractor's failure to carry out the scope of Work in accordance with this Agreement (including Work not having progressed to the point indicated in Contractor's Invoice or the quality of the Work not being in accordance with this Agreement); (e) the occurrence of a Contractor Event of Default; (f) Contractor's failure to achieve any Guaranteed Milestone by the applicable Guaranteed Date; (g) reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Price; or (h) repeated failure to carry out the Work in accordance with this Agreement. If Owner is unable to certify payment in the amount of the Contractor's Invoice, Owner will notify Contractor. If Contractor and Owner cannot agree on a revised amount, Owner will promptly notify Contractor of the amount that Owner deems to be due and owing. Contractor shall not have any rights of termination or suspension under this Agreement as a result of Owner's exercise of its rights under this Section 6.8, nor shall Contractor be entitled to claim a breach by Owner of this Agreement or any Owner-Caused Delay in connection therewith. Owner shall release payments or portions of payment withheld pursuant to this Section 6.8, to the extent not utilized by Owner in accordance with Section 16.2(c), within five (5) days from the date when the circumstance for which payment or the portion of payment has been withheld is resolved or the amount withheld is otherwise no longer needed to protect Owner.

6.9 Payments to Subcontractors. Contractor shall promptly pay each Subcontractor, upon receipt of payment from Owner, out of the amount paid to Contractor on account of such Subcontractor's portion of the Work, the amount to which said Subcontractor is entitled, reflecting percentages actually retained from payments to Contractor on account of such Subcontractor's portion of the Work, subject to the Contractor's rights under its Subcontracts. Contractor shall, by appropriate agreement with each Subcontractor, require each Subcontractor to make payments to its Subcontractors in a similar manner. The Subcontractors are not intended to be third party beneficiaries of this provision, and this provision shall not be deemed to create any trust fund or fiduciary duty or other duty on the part of Contractor or Owner in favor of Subcontractors. Owner shall not have an obligation to pay or to see to the payment of money to any Subcontractor. No Contractor's Invoice shall include a request for payment of amounts payable under a Subcontract which Contractor does not then intend to pay a Subcontractor or Supplier or that it intends to use as a credit against amounts owed to Contractor by a Subcontractor or Supplier.

7. COMMENCEMENT AND SCHEDULING OF THE WORK

7.1 Effectiveness of Agreement.

(a) Contractor's obligations to fully perform the Work (other than that portion of the Work set forth in one or more LNTPs) shall commence upon Owner's issuance of the Notice to Proceed.

(b) Prior to the issuance of the Notice to Proceed, Owner shall have the right to issue one or more Notices (each, a "**Limited Notice to Proceed**" or "**LNTP**") directing Contractor to commence and complete any portion of the Work specified in any such Limited Notice to Proceed ("**LNTP Work**"). Any LNTP Work shall constitute portions of the Work and be subject to the terms of this Agreement and Contractor shall commence such LNTP Work after the date specified in relevant LNTP and thereafter diligently pursue the LNTP Work. Any payment by Owner with respect to such LNTP Work shall be as set forth in the relevant LNTP and paid in accordance with Article 6.

(c) Owner shall not be deemed, as a result of Owner's execution and delivery of this Agreement, or the issuance of the Notice to Proceed, to have (i) waived any deficiencies in any LNTP Work performed prior to the issuance of Notice to

Proceed, (ii) ratified any action by Contractor or any other Person in connection with such LNTP Work, or (iii) accepted such LNTP Work.

7.1.1 Owner Approval Condition Precedent. Other than as provided in this Section 7.1.1, the obligations of the Parties under this Agreement are subject to the condition precedent that Owner has received all approvals of the management and board of directors (or equivalent governing body) and all approvals of the shareholders of Owner and its Affiliates, including, if applicable, the approval of the shareholders of Concord New Energy Group Limited, as Owner determines in its sole discretion are required under its and their respective constituting documents for the performance by Owner of its obligations under this Agreement ("**Owner Approval**"). If Owner has not received the Owner Approval within one hundred (100) days of the Execution Date (the "**Owner Approval Deadline**"), then Owner may elect to terminate this Agreement by providing written notice of termination to Contractor within ten (10) Business Days after the Owner Approval Deadline. Other than amounts due to Contractor under any LNTP, neither Party will have any liability to the other Party in connection with the termination of the Agreement pursuant to this Section 7.1.1. Contractor acknowledges and agrees that, in connection with the Owner Approval process described in this Section 7.1.1., and notwithstanding the obligations of confidentiality set forth in Section 18, Owner or Owner's Affiliates are permitted to disclose that the Parties have entered into this Agreement and may disclose a summary of the material terms hereof as may be required for obtaining such approval.

In the event the Contract Price is changed as set forth in Article 13 or Section 3.3.4 of this Agreement by a cumulative increase of the Contract Price by greater than or equal to 20% (a "**Major Change Order Event**"), Owner shall seek Owner Approval for the Major Change Order Event. If Owner has not received the Owner Approval within one hundred (100) days of the Major Change Order Event (the "**Major Change Order Event Owner Approval Deadline**"), then Owner may elect to terminate this Agreement by providing written notice of termination to Contractor within ten (10) Business Days after the Major Change Order Event Owner Approval Deadline. Prior to Owner Approval for a Major Change Order Event, Owner may not direct Contractor to perform work subject to Section 13.4.

7.2 Scheduling of the Work.

(a) Contractor shall plan, supervise, control and coordinate the performance of the Work in accordance with the Project Schedule and Milestone Completion Schedule, including the Guaranteed Dates. Contractor shall regularly (and no less frequently than once per week with respect to the Work performed by any Major Subcontractor) obtain from Subcontractors information and data about the planning for and progress of the Work and the delivery of Equipment, shall coordinate and integrate such information and data into any updates to the status of the Work, and shall monitor the progress of the Work and the delivery of Equipment. Contractor shall act as the expeditor of its own forces and those forces of Subcontractors to prevent potential and actual delays, interruptions, hindrances or disruptions.

(b) Within thirty (30) days of Notice to Proceed, the Contractor shall submit to Owner the Level 3 Project Schedule, together with a written narrative describing the major work activities, activities on the critical path, and major constraints underlying the sequence and logic of the Project Schedule. The Level 3 Project Schedule shall depict all activities necessary to complete the Work, including, as applicable, all

submittal and submittal review activities, all procurement activities, and all field activities, including mobilization, construction, testing, commissioning, and punchlist. Activities shall be sufficiently detailed and limited in duration to enable proper planning and coordination of the Work, effective evaluation of the reasonableness and realism of the Project Schedule, accurate monitoring of progress, and reliable analysis of schedule impacts.

(c) Neither Owner's acceptance of, nor comments about, any schedule shall transfer responsibility for any schedule to Owner, nor imply Owner's agreement with (i) any assumption upon which such schedule is based or (ii) any matter underlying or contained in such schedule. Failure of Owner to discover errors or omissions in schedules that it has reviewed, to inform Contractor that Subcontractors or others are behind schedule, or to direct or enforce procedures for complying with the Project Schedule and Milestone Completion Schedule shall not relieve Contractor from its sole responsibility to perform and complete the Work to achieve each Guaranteed Milestone by the applicable Guaranteed Date, and shall not be a cause for an adjustment of the Contract Price or any Guaranteed Date.

7.3 Acceleration of the Work. Contractor shall keep the Project Schedule and narrative up to date, taking into account the actual progress of the Work, and such information shall be included with progress reports submitted to Owner hereunder. Subject to Article 8, if Contractor is not timely in the performance of the Work such that any critical path dates for the completion of an applicable Guaranteed Milestone are missed, or become reasonably likely to be missed, Contractor shall take all actions necessary, including working overtime, weekends, or holidays or adding additional personnel, equipment or work crews, and providing an Approved Plan as further described below, all at no cost to Owner, accelerate performance of the Work, meet the critical path dates and assure achievement of the Guaranteed Milestones by the corresponding dates therefor in the Milestone Completion Schedule. If, at any time (a) the actual progress of the Work against the Milestone Completion Schedule or Project Schedule shall be delayed by more than six (6) days, or (b) any milestone has not been achieved on or before the corresponding milestone date, other than as a result of an Excusable Event, then Owner may instruct Contractor to submit a plan to accelerate the performance of the Work that reasonably demonstrates that the Guaranteed Milestones will be achieved by the applicable Guaranteed Dates. Upon receipt of such plan, Owner shall promptly review the plan and notify Contractor of (i) Owner's acceptance of such plan (in which event such accepted plan shall constitute an "**Approved Plan**") or (ii) proposed revisions to or perceived deficiencies with such plan. Upon receipt of any such notice from Owner under clause (ii) of the preceding sentence, Contractor shall promptly revise the plan in accordance with the comments received from Owner or in accordance with such other changes as Contractor reasonably determines are appropriate, and submit the revised plan to Owner. The foregoing procedure shall be repeated until the Parties have agreed on an Approved Plan, at which time Contractor shall immediately and fully execute the Approved Plan. For the avoidance of doubt, nothing in this Section 7.3 shall entitle Contractor to an extension of time for, or to payment of the cost incurred (or to any other revision to, or relief from, any provision of this Agreement) in connection with any plan, Approved Plan or acceleration of the Work.

7.4 Progress Reporting. From and after the Commencement Date or the issuance of any LNTP (whichever is earlier) and until the Project Substantial Completion Date, Contractor shall prepare and provide (a) a Daily Progress Report, which shall be submitted to Owner no later than the beginning of the next Business Day by electronic mail to recipients to be notified by Owner to Contractor, and (b) a Monthly Progress Report, which shall be submitted to Owner no later than five (5) Business Days after the close of each calendar month. Contractor and Owner shall, during the period from Commencement Date until the Project Substantial Completion Date, hold weekly progress meeting on the last day of each week during such period (or as otherwise agreed by the Parties) to update Owner on the progress of the performance of the

Work during that week. If requested by Owner, Contractor's manager (or his designee) shall attend meetings with representatives of Owner to review such Daily or Monthly Progress Reports and discuss construction progress. Contractor shall schedule and hold a regular monthly meeting with Owner to discuss the Monthly Progress Report, including any delays or changes to the Project Schedule and Milestone Completion Schedule and Contractor's planned work for the next month.

8. EXCUSABLE EVENT

8.1 Certain Events. No failure or omission to carry out or observe any of the terms, provisions or conditions of this Agreement shall give rise to any claim against Contractor, or be deemed to be a breach or an Event of Default under this Agreement, if such failure or omission shall be caused by or arise out of an Excusable Event; provided that Contractor complies with the provisions of this Article 8. Notwithstanding anything to the contrary in the foregoing, the obligation to pay money in a timely manner in accordance with the terms hereof shall not be subject to the Excusable Event provisions hereof.

8.2 Notice of Excusable Event. If Contractor's ability to perform its obligations under this Agreement is affected by an Excusable Event, Contractor shall within five (5) Business Days of having knowledge of the Excusable Event provide Owner with written notice of the Excusable Event (a "**Delay Notice**") describing in reasonable detail the particulars of the occurrence giving rise to the claim, including what date Contractor became aware of the occurrence of such Excusable Event and an estimate of the event's anticipated duration and effect upon the performance of its obligations, and any action being taken to avoid or minimize its effect. Contractor shall have a continuing obligation to deliver to Owner regular updated reports and any additional documentation and analysis supporting its claim regarding an Excusable Event (other than an Owner-Caused Delay) promptly after such information becomes available to Contractor. If Contractor fails to timely provide Owner with a Delay Notice as provided in this Section 8.2 with respect to an Excusable Event that prevents Contractor from achieving a Guaranteed Date, Contractor shall receive no relief with respect to such period prior to delivering the Delay Notice. Contractor's failure to timely deliver a Delay Notice to Owner of an Excusable Event, shall not constitute a waiver of Contractor's right to relief due to such Excusable Event except to the extent Owner is actually prejudiced by such failure.

8.3 Excusable Event Conditions. Upon the occurrence of an Excusable Event:

(a) Contractor will have the burden of proof for the Excusable Event;

(b) the suspension of, or impact on, performance due to such Excusable Event shall be of no greater scope and no longer duration than is required by such Excusable Event (taking into account the obligations affected thereby);

(c) Contractor shall use its commercially reasonable efforts:

(i) to mitigate or limit the duration of, and costs arising from, any suspension or delay in, or other impact to, the performance of its obligations under this Agreement (including any impact to the schedule for the performance thereof);

(ii) to continue to perform its obligations hereunder not affected by such Excusable Event; and

(iii) to correct or cure the effect of such Excusable Event; and

(d) when Contractor is able to resume performance of its affected obligations under this Agreement, Contractor shall give Owner Notice to that effect and promptly resume performance of all of its obligations under this Agreement.

8.4 Contractor's Remedies.

(a) As Contractor's remedy for the occurrence of an Excusable Event, and provided that Contractor has otherwise materially complied with the applicable provisions of Section 8.2 and Section 8.3, if an Excusable Event occurs, and to the extent such Excusable Event has an actual and demonstrable adverse impact on Contractor's ability to perform its obligations hereunder so as to achieve a Guaranteed Date: (i) such Guaranteed Date shall be correspondingly extended on a day-for-day basis by the period of time (if any) that Contractor's achievement of the applicable Guaranteed Date is actually and demonstrably delayed as a result of the impact of such an Excusable Event, provided, that Contractor shall not under any circumstances be allowed to "double dip" and obtain multiple schedule adjustments for the same day; and (ii) for any Excusable Event, if Contractor's costs increase despite Contractor's commercially reasonable efforts to mitigate any such increases pursuant to Section 8.3(c), the Contract Price shall be increased by an amount equal to the actual and reasonably substantiated costs (including Sales Taxes) incurred by Contractor (including any costs incurred by Contractor in connection with the mitigation measures implemented by Contractor pursuant to Section 8.3(c) and any demobilization and re-mobilization costs) plus a five percent (5%) markup of such costs (provided that in no event will any markup be applied in respect to any Tariff Increases).

(b) Upon the occurrence of an event that entitles Contractor to relief under this Article 8, and subject to Contractor's compliance with the applicable provisions of this Article 8 and Article 13 in all material respects, Contractor and Owner shall prepare a Change Order in accordance with Article 13.

(c) Notwithstanding the occurrence of an Excusable Event, Contractor shall not be entitled to an adjustment to the Guaranteed Dates or Contract Price in relation to such Excusable Event to the extent that the performance of the Work affected by such Excusable Event would have otherwise been suspended, delayed or interrupted by any other cause that does not constitute an Excusable Event, including the fault or negligence of Contractor, its Subcontractors or any other Person for whom they may be liable.

9. SUBCONTRACTORS

9.1 Use of Subcontractors. The Parties acknowledge and agree that Contractor shall be entitled to engage Subcontractors in respect of the performance of the Work or any portion thereof; provided that neither the use by Contractor of any Subcontractor nor the review or failure to object by Owner of any Subcontractor under this Article 9 or any Major Subcontractor under Exhibit J shall (a) constitute any Owner approval of the Work undertaken by any such Person, (b) relieve Contractor of its duties, responsibilities, obligations or liabilities hereunder, (c) relieve Contractor of its responsibility for the performance of any Work rendered by any such Subcontractor, or (d) create any relationship between Owner, on the one hand, and any Subcontractor, on the other hand, or cause Owner to have any responsibility for the actions or payment of such Person. As between Owner and Contractor, Contractor shall be solely responsible for the acts, omissions or defaults of its Subcontractors and any other Persons for which Contractor or any such

Subcontractor is responsible (with the acts, omissions and defaults of its Subcontractors being attributable to it). In no event shall any act or omission by any Subcontractor constitute an Excusable Event except to the extent caused by an event or circumstance that itself constituted an Excusable Event. Notwithstanding the foregoing, Owner shall be a third party beneficiary of all Major Subcontracts and Contractor shall include a provision in each Major Subcontract specifically providing that Owner is a third party beneficiary to each such Major Subcontract; provided, however, that Owner may only pursue recourse under a Major Subcontract pursuant to this sentence if Contractor is in default under this Agreement. No Subcontractor is intended to be nor shall be deemed a third party beneficiary of this Agreement. Contractor shall notify each of its Subcontractors of the substance of this Section 9.1 with regard to the primary relationship between Owner and Contractor under this Agreement. In the event Contractor is in a dispute with a Subcontractor which has the potential to materially impact the Project Schedule and/or the Milestone Completion Schedule, Contractor shall timely notify Owner of such dispute.

9.2 Owner Consent. Set forth in Exhibit J is a schedule of the Major Subcontractors who, notwithstanding anything to the contrary herein, Contractor shall be entitled to engage in furtherance of Contractor's obligations under this Agreement without the consent of Owner, but only to the extent of the Work for such Subcontractor as described in Exhibit J. Contractor shall Notify Owner of any additional Suppliers or Subcontractors with whom Contractor anticipates engaging that, if engaged, would be deemed a Major Subcontractor, or if any Major Subcontractor listed in Exhibit J is engaged to perform Work for which it is not already approved as set forth in Exhibit J. Owner shall have the right to review and approve such engagement along with the Major Subcontract therefor. Following such Owner approval, Exhibit J shall be deemed to be amended to reflect such additional approved Major Subcontractor (which thereafter shall be deemed a Major Subcontractor, as applicable) or additional Work to be performed by such existing Major Subcontractor. Contractor shall ensure that each Subcontract with a Major Subcontractor is in writing and includes provisions which enable Contractor to discharge Contractor's liabilities and obligations to Owner under the terms of this Agreement in respect of the subcontracted work, including (a) an indemnification provision in favor of the Owner Indemnified Parties at least as favorable to the Owner Indemnified Parties as those indemnities set forth in Article 17, (b) confidentiality requirements substantively in accordance with those contained in Article 18, (c) provisions providing Owner with (i) ownership and use of any Contractor Deliverables pursuant to Section 19.3 and (ii) a license to Intellectual Property Rights to Owner consistent with Sections 19.1 and 19.2, (d) termination for convenience consistent with Section 16.6, and (e) those set forth in this Article 9. Owner shall have the right, upon written request, to receive promptly from Contractor a copy of any Major Subcontract, as well as a copy of all shop and field performance test reports, and vendor field representative reports, with respect to Work performed by Major Subcontractors.

9.3 Assignment. No Subcontract or purchase order shall bind or purport to bind Owner, but each Subcontract and purchase order with a Major Subcontractor shall provide for assignment of such Subcontract or purchase order to Owner or, at Owner's request, to the Owner Financing Parties upon the termination of this Agreement (a) due to a Contractor Event of Default, (b) for Owner's convenience in accordance with Section 16.6 or (c) for an extended Force Majeure Event in accordance with Section 16.7. Contractor hereby assigns to Owner all its interest in all Subcontracts and purchase orders now existing or hereafter entered into by Contractor for performance of any part of the Work, which assignment will be effective only upon acceptance by Owner in writing, and only after the earlier to occur of Substantial Completion or termination of this Agreement, and only as to those Subcontracts and purchase orders that Owner designates in said writing. Such assignment may not be withdrawn by Contractor, and Owner may accept said assignment at any time during the course of construction, throughout the Defect Warranty Period and throughout the term of such Subcontract or purchase order, if longer. Upon such acceptance of assignment by Owner: (i) Contractor shall promptly furnish to Owner the originals or copies of the designated unredacted Subcontracts and purchase orders, and (ii) Owner shall only be required to compensate the designated Subcontractor(s) for compensation accruing to same for Work done or materials delivered from and after the date as of which Owner accepts assignment of the Subcontract (s) or purchase order(s) in writing. All sums due and owing by

Contractor to the designated Subcontractor(s) for Work performed or material supplied prior to the date as of which Owner accepts in writing the assignment of such Subcontracts(s) or purchase order(s), and all other obligations of Contractor accruing prior to Owner's written acceptance of such assignment, shall constitute an obligation solely between such Subcontractor(s) and Contractor, and Owner shall have no liability with respect to such sums or any other obligations of Contractor, to the extent that Owner has paid Contractor all amounts payable to Contractor under this Agreement, with respect to such obligations prior to the date on which Owner accepts assignment. If Owner elects so to assume by notice of acceptance of assignment any such Subcontract or purchase order with a Major Subcontractor as described in this Section 9.3, or to have any such Subcontract or purchase order assigned to an Owner Financing Party, then, at the written request of Owner, Contractor shall enter into reasonable assignment documentation requested by Owner confirming the effectiveness of such assignment as between the Parties.

9.4 Information; Access. Contractor shall furnish Owner with (a) reports received from the Subcontractors or Contractor relating to recall notices, defect notices or other similar product communications and (b) such information and access to the Major Subcontractors, in each case, as Owner may reasonably request.

10. COMMISSIONING AND TESTING

10.1 Commissioning Plan. Contractor shall develop a Commissioning Plan for the Project, which shall at a minimum be consistent with the testing required under Exhibits H-2, H-3, H-4 and H-5 and shall provide the Commissioning Plan for Owner's review and approval as soon as reasonably practicable (but in no event more than ninety (90) Days) after the date of the Notice to Proceed. Owner shall have ten (10) Business Days from the date it receives the Commissioning Plan to review and provide comments to Contractor. Contractor shall incorporate all of Owner's reasonable comments into the final Commissioning Plan, and resubmit the same for Owner's review and approval (such approval not to be unreasonably withheld, conditioned or delayed; provided, that it shall be unreasonable for Owner to withhold such approval to the extent Contractor has incorporated all of Owner's reasonable comments into the final Commissioning Plan). The final Commissioning Plan approved by Owner shall be attached hereto as Exhibit H-1. Contractor shall perform its commissioning activities in accordance with the final approved Commissioning Plan.

10.2 Test Procedures. Contractor shall develop the Availability Test Procedures, the Capacity Test Procedures, the Long Term Energy Test Procedures and the BESS Performance Test procedures for the Project in accordance with the relevant requirements set forth in Exhibits H-2, H-3, H-4 and H-5 and shall provide such test procedures for Owner's review and approval in accordance with the relevant procedures set forth in Exhibits H-2, H-3, H-4 and H-5.

10.3 Test Schedules. Contractor shall agree with Owner on a testing schedule (including a weekly testing schedule to be provided to the Participating TO) for the Project and shall give advance Notice to Owner of each test (including any re-performance thereof) at least five (5) Business Days prior to commencing any such test. Notwithstanding the foregoing, Contractor shall provide Owner with twenty (20) Business Days' prior written notice of the initial energizing and start-up testing of the Project, and in any event Contractor shall not, and shall not permit any Subcontractor or any Person acting on its or their behalf or under its or their control to, enable (i) any Block to generate any electricity that will be dispatched across the Point of Interconnection, (ii) any module to receive any backfeed power from the Participating TO's Interconnection Facilities or (iii) the synchronization of the Project or any part thereof with the transmission system, prior to having received express written notice from Owner in substantially the form of Exhibit Z, and Contractor shall use reasonable efforts to ensure that safety procedures are put in place to prevent such actions from occurring prior to Owner having issued such notice, including isolating applicable equipment and ensuring that adequate lock out and tag out procedures are put in place at applicable points at the Site.

Contractor shall keep Owner Representative continuously apprised of the schedule for all testing and changes in the schedule, and the commencement and performance of any tests.

10.4 Testing of Project.

10.4.1 Availability Test. Contractor shall conduct the Availability Test for the Project in accordance with the Availability Test Procedures and the relevant requirements therefor in Exhibit H-2. Contractor must submit the Availability Test Report for the Availability Test in accordance with the Availability Test Procedures and the relevant requirements therefor in Exhibit H-2.

10.4.2 Capacity Test. Contractor shall conduct the Capacity Test for the Project in accordance with the Capacity Test Procedures and the relevant requirements therefor in Exhibit H-3. Contractor must submit the Capacity Test Report for the Capacity Test in accordance with the Capacity Test Procedures and the relevant requirements therefor in Exhibit H-3.

10.4.3 Long Term Energy Test. Contractor shall conduct the Long Term Energy Test for the Project in accordance with the Long Term Energy Test Procedures and the relevant requirements therefor in Exhibit H-4. Contractor must submit the Long Term Energy Test Report for the Long Term Energy Test in accordance with the Long Term Energy Test Procedures and the relevant requirements therefor in Exhibit H-4.

10.4.4 BESS Performance Test. Contractor shall conduct the BESS Performance Test for the Project in accordance with BESS Test Procedures and the relevant requirements therefor in Exhibit H-5. Contractor must submit the report for the BESS Performance Test in accordance with the relevant requirements therefor in Exhibit H-5.

10.4.5 Observation of Testing. Each of the Parties and its representatives (including Owner's Engineer and the Independent Engineer) shall have the right to be present during, and Owner shall have the right to invite any Owner Financing Party or representative or agent thereof, Power Purchasers and/or Participating TO, in each case, to observe, any of the tests conducted under this Article 10.

10.5 Non-Conforming Work. If, as a result of any inspection, examination or testing in accordance with this Agreement, any defective Work not in compliance with the requirements of this Agreement is identified, and regardless of whether payment has been made therefor, Owner may reject such portion of the Work prior to the Project Substantial Completion Date by prompt Notice to Contractor. Such Notice shall describe such defect in reasonable detail. Contractor shall, at its sole cost and expense, promptly correct any such defect (except if such defect is a Non-Critical Deficiency, in which case it shall be included on the Punchlist) and promptly provide Notice to Owner that such corrective measures have been completed. Any Dispute regarding the existence or correction of any such defect shall be resolved pursuant the Dispute resolution provisions hereof.

11. PUNCHLIST; COMPLETION

11.1 Punchlist.

11.1.1 Creation of Punchlist. Once Contractor believes that a finalized punchlist containing only Non-Critical Deficiencies for the Project is ready for Owner review and approval, Contractor and Owner shall jointly walk-down the Project and confer together as to the items which should be included on the finalized punchlist for the Project. Contractor shall then create a new list to reflect the result of such joint walk down and deliver the same to Owner for its review and approval, which submitted list shall be explicitly designated as the "**Proposed Punchlist**" and shall set forth all Work remaining to be

completed after the Project Substantial Completion Date. The Proposed Punchlist may only contain Non-Critical Deficiencies in the Work, and shall include a "**Punchlist Amount**" for the completion or repair of each such Non-Critical Deficiency and Contractor's estimated schedule for completion therefor. If Owner does not approve the Proposed Punchlist or deliver any changes to the Proposed Punchlist to Contractor within ten (10) Business Days after the later to occur of (a) Contractor's submission to Owner of such Proposed Punchlist, and (b) the date of the joint walk-down, then such failure shall constitute an Owner-Caused Delay. The Proposed Punchlist that is ultimately approved by Owner for the Project shall be referred to as the "**Punchlist**".

11.1.2 Completion of Punchlist. Contractor shall proceed promptly to complete and correct all items on the Punchlist. On a weekly basis after the Project Substantial Completion Date, Contractor shall revise and update the Punchlist to include the date(s) that items listed on such Punchlist are completed by Contractor and accepted by Owner. Notwithstanding any of the foregoing, the items listed on such Punchlist shall not be considered complete until Owner shall have inspected such Non-Critical Deficiencies and acknowledged, by notation on the updated Punchlist, that such item of Work is complete. If Owner does not so inspect and deliver such notations on the updated Punchlist to Contractor (or dispute completion of the applicable items of Work if not accepted) within ten (10) Business Days after Contractor submits the updated Punchlist containing such Punchlist item to Owner, and Contractor has actually completed and corrected any such Punchlist item listed on such Punchlist, such failure by Owner shall constitute an Owner-Caused Delay.

11.2 Project Substation Completion. Subject to Section 11.2.1, the following are the conditions precedent for Project Substation Completion:

(a) The Project Substation is mechanically completed, assembled, erected and installed (and ready for energization) in accordance with the Project Substation installation specifications contained in Exhibit A and otherwise in accordance with this Agreement (other than Punchlist items) and is free from detectable and patent defects and deficiencies in installation, including any free of any defects that would prevent the safe, normal, and reliable operation of the Project Substation;

(b) Contractor has completed the relevant mechanical quality control inspections for the Project Substation and has provided such documentation to Owner;

(c) Contractor has assisted Owner in attempting to obtain or obtaining any permits, certificates and approvals otherwise necessary to commence operating the Project Substation;

(d) The plant control system located in the Project Substation and all required protective and control features are installed and tested, and are operational; and

(e) The SCADA and all communication equipment for the Project to be located at the Project Substation have been properly installed and tested and are operational.

11.2.1 When Contractor believes that it has satisfied the conditions to Project Substation Completion set forth in Section 11.2.1, Contractor shall deliver to Owner a Notice of Project Substation Completion substantially in the form of Exhibit P-1, together with reasonable supporting documentation evidencing the satisfaction of the conditions to Project Substation Completion as set forth in Section 11.2. Owner shall, within ten (10) Business Days after receipt of such Notice of Project Substation Completion, deliver its countersignature to such Notice of Project Substation Completion, dated to reflect the Project Substation Completion Date, or if Owner rejects Contractor's Notice, respond in writing, giving its reasons

for such rejection. In the event of such rejection, Contractor shall take the appropriate corrective action. Upon completion of such corrective action, Contractor shall provide to Owner a new Notice of Project Substation Completion for approval. This process shall be repeated on an iterative basis until Owner accepts the Notice of Project Substation Completion, as applicable, and delivers its countersignature to such Notice of Project Substation Completion. The "**Project Substation Completion Date**" shall be the date on which Contractor signed and dated the final Notice of Project Substation Completion which was accepted and agreed by Owner.

11.3 Mechanical Completion. When Contractor believes that it has satisfied the conditions to Mechanical Completion set forth in the definition thereof Contractor shall deliver to Owner a Notice of Mechanical Completion substantially in the form of Exhibit P-2, together with reasonable supporting documentation evidencing the satisfaction of the conditions to Mechanical Completion set forth in the definition thereof. Owner shall, within ten (10) Business Days after receipt of such Notice of Mechanical Completion, deliver its countersignature to such Notice of Mechanical Completion, dated to reflect the applicable Mechanical Completion Date, or if Owner rejects Contractor's Notice, respond in writing, giving its reasons for such rejection. In the event of such rejection, Contractor shall take the appropriate corrective action. Upon completion of such corrective action, Contractor shall provide to Owner a new Notice of Mechanical Completion for approval. This process shall be repeated on an iterative basis until Owner accepts the Notice of Mechanical Completion, as applicable, and delivers its countersignature to such Notice of Mechanical Completion. The "**Mechanical Completion Date**" shall be the date on which Contractor signed and dated the final Notice of Mechanical Completion which was accepted and agreed by Owner.

11.3.1 Mechanical Completion of First Portion. In addition to its obligations under Section 11.3 above, when Contractor believes that it has satisfied each of the conditions set forth in clauses (a) through (d) of the definition of "Mechanical Completion" with respect to the Blocks comprising at least twenty percent (20%) of the Project, including the BOP therefor, to be mechanically completed (the "**First Portion**"), Contractor shall provide a Notice to Owner regarding achievement of such milestone, in the form of a certificate substantially in the form of Exhibit P-2 but solely as it relates to such Blocks and the BOP (such Notice, collectively, the "**First Portion Mechanical Completion Certificate**"). Owner shall, within ten (10) Business Days after receipt of such First Portion Mechanical Completion Certificate, deliver its countersignature to such First Portion Mechanical Completion Certificate, dated to reflect the applicable date on which Contractor satisfied each of the conditions set forth in clauses (a) through (d) of the definition of "Mechanical Completion" with respect to such Blocks and the BOP, or if Owner rejects Contractor's First Portion Mechanical Completion Certificate, respond in writing, giving its reasons for such rejection. In the event of such rejection, Contractor shall take the appropriate corrective action. Upon completion of such corrective action, Contractor shall provide to Owner a new First Portion Mechanical Completion Certificate for approval. This process shall be repeated on an iterative basis until Owner accepts the First Portion Mechanical Completion Certificate, as applicable, and delivers its countersignature to such First Portion Mechanical Completion Certificate.

11.4 Placed in Service. Subject to Section 11.4.1, the following are the conditions precedent for the BESS, a Block or the Project, as applicable, to be Placed in Service (including, in the case of the BESS, or a Block, all BOP):

(a) all Contractor Permits necessary to commence operation of the BESS, the Block or the Project (including on a commercial basis), as applicable, have been obtained and Owner has legal title to the Project pursuant to Section 15.1.4;

(b) Owner has physical and operational control of the BESS, the Block or the Project, as applicable, pursuant to Section 15.1.4;

(c) all critical pre-operation testing has been completed with respect to the BESS, the Block or the Project, as applicable;

(d) regular and daily operations of the BESS, the Block or the Project, as applicable, have commenced; and

(e) the BESS, the Block or the Project, as applicable, has been synchronized with the power grid.

11.4.1 When Contractor believes that it has satisfied the provisions of Section 11.4, with respect to the BESS, a Block or the Project, Contractor shall deliver to Owner a Notice of Placed in Service in the form of a certificate substantially in the form of Exhibit P-3, together with reasonable supporting documentation evidencing the satisfaction of the provisions in Section 11.4 with respect to the BESS, a Block or the Project. Owner shall, within ten (10) Business Days after receipt of such Notice of Placed in Service, deliver its countersignature to such Notice of Placed in Service, dated to reflect the applicable Placed in Service Date for the BESS, such Block or Project, as applicable, or if Owner rejects such Contractor's Notice, respond in writing, giving its reasons for such rejection. In the event of such rejection, Contractor shall take the appropriate corrective action. Upon completion of such corrective action, Contractor shall provide to Owner a new Notice of Placed in Service for the BESS, the Block or Project, as the case may be, for approval. The process in this Section 11.4.1 shall be repeated on an iterative basis until Owner accepts the Notice of Placed in Service or the Block or the Project, as applicable, and delivers its countersignature to such Notice of Placed in Service. The "**Placed in Service Date**" of the BESS, the Block or the Project, as applicable, shall be the date on which Contractor signed and dated the final Notice of Placed in Service which was accepted and agreed by Owner. Notwithstanding the foregoing, achievement of Placed in Service with respect to one or more Blocks shall not be deemed to have waived any of Contractor's rights or remedies hereunder related thereto or to be relieved of its obligations to achieve Placed in Service with respect to the Project.

11.4.2 Notwithstanding any provision in this Agreement to the contrary, Contractor shall not energize or interconnect the Project, or portion thereof with the electric grid (and for such purposes shall maintain an air gap, the actual method for which shall be approved by Owner and shall include the Owner's monitoring of Contractor's lockout/tagout procedure), until (1) Contractor certifies, by the issuance to the Owner a Certificate of Mechanical Completion (and Owner has accepted) that the Project, or portion thereof is complete, ready and safe to operate, and (2) the Owner has issued to Contractor a Notice to Energize, signed by Owner, stating that Contractor may proceed with the Work necessary to energize and interconnect the Project, or portion thereof with the electric grid. THE ENERGIZATION AND INTERCONNECTION OF THE PROJECT WITH THE ELECTRIC GRID BEFORE OWNER'S ISSUANCE OF THE NOTICE TO ENERGIZE MAY RESULT IN SIGNIFICANT ECONOMIC DAMAGE TO OWNER, FOR WHICH OWNER RETAINS ALL RIGHTS FOR RECOVERY AVAILABLE TO IT UNDER LAW AND EQUITY, SUBJECT TO THE LIMITATIONS OF CONTRACTOR'S LIABILITY SET FORTH IN THIS AGREEMENT. If Owner does not issue to Contractor a Notice to Energize within fifteen (15) days following achievement of Mechanical Completion Date, it shall constitute an Owner-Caused Delay.

11.5 Project Substantial Completion. Subject to Section 11.6, the following are the conditions precedent for Project Substantial Completion: the procurement and construction of the Project and every part thereof (other than any Non-Critical Deficiency included on the Punchlist) has been completed;

(b) the connection of all equipment (including each Block) and wiring to the Interconnection Facilities of the Project as required by way of wiring, controls, and safety systems has been completed.

(c) (i) all instruments and relays have been installed and are functional and (ii) all required protective and control features are operational;

(d) the Project is capable of unattended continuous operation in a safe manner without damage to the Project or any sub-system thereof, or any other property on or off the Site, and without injury to any Person in compliance with the Requirements and any other standards of performance set forth herein;

(e) the Project is synchronized with the transmission system and all testing under the PPAs required as a condition to achievement of "Commercial Operation Date" (as defined in the PPA), including testing required by the Power Purchasers to each respective PPA for delivery of electricity, has been satisfactorily completed;

(f) Owner has received all Contractor Deliverables and applicable spare parts in respect of the Project that are required to be delivered by the Project Substantial Completion Date, including all Required Manuals identified therein, in accordance with the requirements in Exhibit B;

(g) the Punchlist for the Project is in final form as provided for in Section 11.1.1;

(h) the following shall have been installed and placed into full operation by Contractor and be capable of unattended operation in a safe manner without damage to the Project or any sub-system thereof, or any other property on or off the Site, and without injury to any Person in compliance with the Requirements and any other standards of performance set forth herein:

(i) the Meteorological Stations for the Project;

(ii) the telemetry system for the Project; and

(iii) the telecommunications system for the Project.

(i) the Commissioning tests, the BESS Performance Test, the Availability Test and the Initial Capacity Test have each been Successfully Run, and the Project is ready to commence commercial operation;

(j) the Interconnection Facilities (and all testing under the Interconnection Agreement required as a condition to commencing parallel operation with the Participating TO's Interconnection Facilities) have been satisfactorily completed by Contractor as required under the Interconnection Agreement in accordance with the requirements thereof;

(k) without limiting the requirement under Section 11.4(i) that the Initial Capacity Test has been Successfully Run, either (i) the results of the Initial Capacity Test reflect achievement of the Capacity Guaranty, or (ii) the results of the Initial Capacity Test reflect achievement of at least the Minimum Guaranteed Capacity, and Contractor has demonstrated to satisfaction of Owner that the shortfall in the Initial Capacity Test is not due to any of the Work:

(l) Contractor has paid to Owner all undisputed amounts due and payable to Owner hereunder, including any undisputed Delay Liquidated Damages accrued up to Substantial Completion;

(m) No Contractor Liens in respect of amounts paid to Contractor hereunder shall be outstanding against the Project (unless bonded over) and Contractor has provided, as applicable, each Conditional Waiver and Release Upon Progress Payment and each Waiver and Release Upon Final Payment, as required pursuant to Section 21.2;

(n) All Subcontractor warranties required to have been assigned to Owner pursuant to Section 14.6 have been so assigned to Owner in accordance with Section 14.6, and copies of all such Subcontractor warranties have been provided to Owner in accordance with Section 14.6; and

(o) Contractor has delivered the Notice of Project Substantial Completion to Owner pursuant to Section 11.6.

11.6 Notice of Substantial Completion. When Contractor believes that it has satisfied the provisions of Section 11.5, Contractor shall deliver to Owner a Notice of Project Substantial Completion substantially in the form of Exhibit P-4, together with reasonable supporting documentation evidencing the satisfaction of the provisions in Section 11.5. Owner shall, within ten (10) Business Days after receipt of such Notice of Project Substantial Completion, deliver its countersignature to such Notice of Project Substantial Completion, dated to reflect the applicable Project Substantial Completion Date, or if Owner rejects Contractor's Notice, respond in writing, giving its reasons for such rejection. In the event of such rejection, Contractor shall take the appropriate corrective action. Upon completion of such corrective action, Contractor shall provide to Owner a new Notice of Project Substantial Completion for approval. The process in this Section 11.6 shall be repeated on an iterative basis until Owner accepts the Notice of Project Substantial Completion, as applicable, and delivers its countersignature to such Notice of Project Substantial Completion. The "**Project Substantial Completion Date**" of the Project shall be the date on which Contractor signed and dated the final Notice of Project Substantial Completion which was accepted and agreed by Owner.

11.7 Final Completion. Subject to Section 11.8, "**Final Completion**" shall occur only if all of the following have occurred:

(p) Project Substantial Completion shall have been achieved;

(q) all items on the Punchlist shall have been completed by Contractor or, pursuant to Section 6.7.2, including all restoration and reclamation as required under this Agreement, Owner has withheld any remaining Punchlist Holdback to complete any items on the Punchlist not completed by Contractor in accordance with the terms hereof;

(r) the Final Capacity Test of the Project (if any) shall have been Successfully Run;

(s) all Contractor's and Subcontractors' personnel shall have left the Site, and all supplies, tools, equipment, machinery, surplus materials, waste materials, rubbish and construction facilities other than those to which Owner holds title shall have been removed from the Site (other than Contractor's personnel, supplies, tools,

machinery, materials and equipment required for the performance of its obligations under any operations and maintenance agreement executed between the Parties, if applicable);

(t) Owner shall have received all Contractor Deliverables in relation to the Project;

(u) Contractor shall have delivered to Owner copies of final as-built and record drawings of the Project in accordance with the requirements set forth in Exhibit B (other than requirements related to timing for delivery for which any failure to comply has been cured) and the other documents and information required under the PPAs and the Interconnection Agreement in accordance with the requirements thereof;

(v) Contractor shall have delivered the Notice of Final Completion to Owner pursuant to Section 11.8;

(w) All amounts due and payable by Contractor to Owner hereunder shall have been paid in full; and

(x) No Contractor Liens in respect of amounts paid to Contractor hereunder shall be outstanding against the Project (unless bonded over) and Contractor shall have provided each Conditional Waiver and Release Upon Progress Payment and each Waiver and Release Upon Final Payment as required under Section 21.2.

11.8 Notice of Final Completion. When Contractor believes that it has satisfied the provisions of Section 11.7, Contractor shall deliver to Owner a Notice of Final Completion substantially in the form of Exhibit P-5, together with reasonable supporting documentation evidencing the satisfaction of the provisions in Section 11.7. Owner shall, within ten (10) Business Days after receipt of such Notice of Final Completion, deliver its countersignature to such Notice of Final Completion, dated to reflect the applicable Final Completion Date, or if Owner rejects Contractor's Notice, respond in writing, giving its reasons for such rejection. In the event of such rejection, Contractor shall take the appropriate corrective action. Upon completion of such corrective action, Contractor shall provide to Owner a new Notice of Final Completion for approval. The process in this Section 11.8 shall be repeated on an iterative basis until Owner accepts the Notice of Final Completion, as applicable, and delivers its countersignature to such Notice of Final Completion. The "**Final Completion Date**" of the Project shall be the date on which Contractor signed and dated the final Notice of Final Completion which was accepted and agreed by Owner.

11.9 Contractor's Access After Project Substantial Completion. Following Project Substantial Completion, Owner shall provide Contractor with reasonable and timely access to the Project to: (a) complete all remaining items on the Punchlist and (b) satisfy the other requirements with respect to the Project for Final Completion. Contractor shall perform any Work after Project Substantial Completion with minimal interference with commercial operation of the Project or any portion thereof and that reductions in and shut-downs of all or part of the Project's operations will be required only when necessary, taking into consideration the length of the proposed reduction or shut-down, and Owner's obligations and liabilities under the PPAs. Notwithstanding the foregoing, should a reduction in or shut-down of all or part of the Project's operations be required to complete any items on the Punchlist, then such reduction or shut-down shall be scheduled at the reasonable discretion of Owner, and Contractor shall complete such Work during such Owner scheduled reduction or shut-down. Contractor acknowledges that Owner may schedule such reduction or shut-down at any time including off-peak hours, nights, weekends and holidays. For the avoidance of doubt, during the Capacity Test Cure Period, if any, Owner shall have the right to operate the Project at its discretion, including the right to maximize the economic benefits of the Project.

11.10 Product and Revenues of the Project. Any Product or revenues generated by the Project at any time, including during the performance of any testing, shall be solely for the benefit of Owner.

12. LIQUIDATED DAMAGES

12.1 Delay Liquidated Damages.

(a) RESERVED

(b) Delay Liquidated Damages. Contractor agrees that if:

(i) Project Substation Completion is not achieved by the Guaranteed Project Substation Completion Date, then Contractor shall pay Delay Liquidated Damages to Owner for each day that Contractor fails to achieve Project Substation Completion after the Guaranteed Project Substation Completion Date;

(ii) Mechanical Completion is not achieved by the Guaranteed Mechanical Completion Date, then Contractor shall pay Delay Liquidated Damages to Owner for each day that Contractor fails to achieve Mechanical Completion after the Guaranteed Mechanical Completion Date; and

(iii) Project Substantial Completion is not achieved by the Guaranteed Project Substantial Completion Date, then Contractor shall pay Delay Liquidated Damages to Owner for each day that Contractor fails to achieve Project Substantial Completion after the Guaranteed Project Substantial Completion Date.

Any Delay Liquidated Damages payable by Contractor pursuant hereto shall be due within fifteen (15) days after the delivery by Owner to Contractor of an invoice for such Delay Liquidated Damages.

12.2 RESERVED.

12.3 RESERVED.

12.4 RESERVED.

12.5 Sole Remedy; Liquidated Damages Not a Penalty. The remedies provided for in this Article 12, shall, in addition to Owner's rights to terminate this Agreement, be the sole and exclusive remedies of Owner for failure of Contractor or the Project to achieve any Guaranteed Milestone by the applicable Guaranteed Date. The Parties agree that Owner’s actual damages in the event of such delays or failures may be extremely difficult or impracticable to determine. After negotiation, the Parties have agreed that the Delay Liquidated Damages, are in the nature of liquidated damages and are a reasonable and appropriate measure of the damages that Owner would incur as a result of such delays or failures, and do not represent a penalty.

12.6 Enforceability. The Parties explicitly agree and intend that the provisions of this Article 12 shall be fully enforceable by any court exercising jurisdiction over any Dispute between the Parties arising under this Agreement. Each Party hereby irrevocably waives any defenses available to it under law or equity relating to the enforceability of the liquidated damages provisions set forth in this Article 12.

13. CHANGES IN THE WORK

13.1 Change In Work. A "**Change In Work**" shall be limited to the following: (a) changes in the Work required by Owner as further described in Section 13.2; (b) the addition to, modification of, or deletion from the Work (performed or yet to be performed) during the performance of the Work mutually agreed to by the Parties in writing; or (c) the occurrence of an Excusable Event (as and only to the extent permitted by Section 8.4).

13.2 By Owner. Subject to Section 13.3, Owner shall have the right to make changes in the Work, within the general scope thereof, whether such changes are modifications, alterations or additions to the Work or accelerations or decelerations of any aspect of the Work (each such change, an "**Owner-Instituted Change**"), including changes in the Design Plans. All Owner-Instituted Changes shall be made in accordance with this Article 13, shall be documented in accordance with Section 13.3 and shall be considered, for all purposes of this Agreement, as part of the Work. Notwithstanding the foregoing, in no event shall Owner have the right to make any Owner-Instituted Changes, whether individually or in the aggregate, that would result in: (a) any portion of the Project being located at a site other than the Site; (b) any adverse effect on any portion of the Project being able to conduct or satisfy any of the tests provided for in this Agreement, including the Availability Test or Capacity Test or any other adverse effect whatsoever on the capacity or potential capacity of any portion of the Project or the ability of Contractor to cure any shortfalls in such capacity; or (c) any adverse effect on Contractor's ability to comply with its Warranty obligations or any of its other obligations under this Agreement or Contractor's ability to enforce any of its rights and remedies hereunder.

13.3 Preparation of Change Order.

13.3.1 Due to Owner-Initiated Change In Work or Change in Work Agreed to by the Parties. Upon the occurrence of any of the events set forth in Section 13.1(a) or Section 13.1(b), Owner or Contractor, as applicable, shall provide the other Party with a Notice of the occurrence of such event, and Contractor shall, as soon as practicable, prepare and submit to Owner a preliminary written estimate relating to the proposed Change In Work, including (a) any projected change in the cost of the performance of the Work and any projected modification of the Contract Price occasioned by such Change In Work, and (b) the effect such Change In Work could be expected to have on the Guaranteed Dates. Contractor's cost of any such Change in Work shall include and identify all elements of cost (without the cost of each such element) and a total lump sum cost calculated as follows: the actual and reasonably substantiated costs incurred by Contractor (including all Taxes other than those based on net income) and a profit margin of eight percent (8%) over any costs incurred; provided that no markup shall be applied in respect to Tariff Increases. Owner shall within fifteen (15) Business Days review and respond to such request, accepting or rejecting the change request or requesting additional information or time for review. During this period or after Owner returns comment to the change request, Contractor may choose to modify or remove the change request. Should Owner desire to request a decrease or increase in the Work or schedule from Contractor, Owner shall assemble and deliver to Contractor in writing the requested change in scope or schedule. Contractor shall within (10) Business Days, return comment to the requested change including the proposed addition or reduction in costs and schedule. Owner shall upon receipt of such information, with an additional (10) days respond to Contractor either accepting the proposal by Contractor or rejecting it. In either situation, both Parties shall work together to resolve any open change requests or modifications to the price and schedule of the Project. If the Parties cannot reach agreement on the matters listed in the Change Order submitted pursuant to this Section 13.3.1, such matter shall be referred to Dispute resolution provisions hereof.

13.3.2 Due to an Excusable Event. If an Excusable Event occurs for which Contractor is entitled to an adjustment to a Guaranteed Date or the Contract Price pursuant to Section 8.4, as applicable,

then Contractor shall, as soon as practicable, prepare and submit to Owner a proposed Change Order, which shall include (a) any projected change in the Contract Price occasioned by such Change In Work and (b) the effect such Change In Work could be expected to have on the relevant Guaranteed Date, as and to the extent provided in Section 8.4 or as otherwise contemplated in Section 13.1 and as set forth in the Change Order accepted by Owner. Owner shall within (15) Business Days review and respond to such request, accepting or rejecting the change request or requesting additional information or time for review. During this period or after Owner returns comment to the change request, Contractor may choose to modify or remove the change request. Should Owner desire to request a decrease or increase in the Work or schedule from Contractor, Owner shall assemble and deliver to Contractor in writing the requested change in scope or schedule. Contractor shall within (10) Business Days, return comment to the requested change including the proposed addition or reduction in costs and schedule. Owner shall upon receipt of such information, with an additional (10) days respond to Contractor either accepting the proposal by Contractor or rejecting it. In either situation, both Parties shall work together to resolve any open change requests or modifications to the price and schedule of the project. If the Parties cannot reach agreement on the matters listed in the Change Order submitted pursuant to this Section 13.3.2, such matter shall be referred to Dispute resolution hereunder.

13.4 Unable to Agree on Change of Work. Notwithstanding anything herein to the contrary, where the Parties are unable to agree on a Change in Work, Owner may direct Contractor to implement a Change in Work that is generally consistent with Contractor's scope of Work hereunder and in compliance with the limitations set forth in Section 13.2, in which event Contractor shall proceed with such Change in Work and Contractor shall be entitled to reimbursement in accordance with the procedures set forth in Section 13.3.1 for any additional costs and expenses incurred in connection with such Change in Work and any other changes if not agreed to by the Parties, subject to the Dispute resolution hereunder.

13.5 No Change Order Necessary for Emergency. Contractor shall not be obligated or required to obtain an executed Change Order if immediate action is reasonably required to address an emergency which endangers human health or property, but only in respect of the costs of such immediate action; provided that Contractor shall promptly Notify Owner of such emergency and shall seek a Change Order in accordance with Article 13 with respect to any costs associated with such emergency after the initial immediate action has been completed.

14. WARRANTIES CONCERNING THE WORK

14.1 Defect Warranty. Contractor warrants (such warranty, the "**Defect Warranty**") that (a) the Work and every component thereof will be performed in accordance with the Requirements and any other standards of performance set forth in this Agreement, and that all equipment, goods and materials furnished by Contractor hereunder (but specifically excluding Owner Provided Materials) will achieve the requirements set forth in the Statement of Work, be new and unused (when installed), be of good quality and good condition (when installed) and free of Defects, including in application, materials, installation, construction and workmanship, and (b) in addition to the warranty set forth in the foregoing clause (a) that is applicable the Major Equipment, each applicable item of Major Equipment shall also conform to the applicable warranty requirement set forth on Exhibit T.

14.2 Warranty Period. The Defect Warranty set forth in Section 14.1 above shall commence on the Execution Date and apply for a period equal to twenty-four (24) months after the Project Substantial Completion Date (or, if applicable, such other period as specified on Exhibit T) (as such period may be extended as provided for below, the "**Defect Warranty Period**"). In the event any portion of the Work is covered by a warranty of a Subcontractor for a period greater than that stated in the preceding sentence, Contractor will assign such warranty to Owner prior to the end of the Defect Warranty Period.

14.3 Remedy.

14.3.1 If, during the Defect Warranty Period, any of the Work is found not to be in compliance with the Defect Warranty set forth in Section 14.1, Contractor shall commence, within two (2) Business Days, at no cost to Owner, to make all necessary alterations, repairs or replacements to fix, correct or make good such non-compliance with the Defect Warranty (the "**Defect Warranty Service**"), and Contractor shall complete such Defect Warranty Service no later than ten (10) days after the earlier of (x) knowledge of the defect or (y) Notice from Owner of the defect. If the Defect cannot be corrected, Contractor shall replace the Work at no cost to Owner. The Defect Warranty Service shall include, at no cost to Owner, all necessary disassembly, transportation, reassembly and retesting, as well as reworking, repair or replacement of such Work, disassembly and reassembly of piping, ducts, machinery, equipment or other Work as necessary to give access to improper, defective or non-conforming Work and correction, removal or repair of any damage to other Work or property that arises from the defect. Whenever Defect Warranty Service is required, Contractor shall bear the risk of physical loss or damage to the Project as a result of Contractor's activities performing Defect Warranty Service, to the extent not covered by Owner's insurance, and in the event of any reimbursement by Owner's insurance for such damage, Contractor shall be responsible for associated deductibles or retention up to the maximum amount of permitted deductible. Any alterations, repairs or replacements made pursuant to this Article 14 shall be further warranted for a period of the longer of (x) twelve (12) months from the date of the reinstallation, alteration, repair or replacement or (y) the end of the Defect Warranty Period (or, if applicable, such other period as specified on Exhibit T); provided that in no event shall the Defect Warranty Period exceed thirty-six (36) months after the Project Substantial Completion Date (or, if applicable, such other period as specified on Exhibit T). For the avoidance of doubt, Contractor's obligations under this Article 14 shall apply to any Work found during the Defect Warranty Period to not to be in compliance with the Defect Warranty, regardless of whether Contractor is able to complete any necessary alterations, repairs or replacements of such non-compliant Work during the Defect Warranty Period.

14.3.2 In the event that Contractor fails to promptly undertake and prosecute reasonable actions to correct defects after written notice from Owner or knowledge of such Defect by Contractor, including reasonable time to prepare a plan to correct such defect, then Owner may correct such defect so that the defective component complies with the requirements of this Agreement, and Contractor shall be liable for all direct costs, charges and expenses reasonably incurred by Owner in connection with such repair or replacement and shall forthwith pay to Owner an amount equal to such costs, charges and expenses upon receipt of invoices with supporting documentation certified by Owner. For the purposes of this Section 14.3.2 "promptly" means a maximum of two (2) Business Days after receipt by Contractor of notice from Owner of a non-compliance with the Defect Warranty, unless the Defect Warranty Service is preventing operation of all or a portion of the Project.

14.4 Conditions of Warranty. The Defect Warranty set forth herein shall be exclusive of (a) normal wear and tear, (b) normal degradation of the Work or the Project, (c) misuse of the Work or the Project by Owner or negligence in its operation or maintenance; (d) cosmetic anomalies that do not impact performance, safety, reliability, or maintainability, (e) operation or maintenance of the Work or the Project not in accordance with applicable operating manuals or written Industry Standards, or (f) Owner Provided Materials unless the damage or defect is caused by Contractor's Work (collectively, "**Warranty Exclusions**").

14.5 Serial Failure.

14.5.1 A "**Serial Failure**" shall have occurred if at any time during the Defect Warranty Period, there are malfunctions from a Defect of, or breach of the Defect Warranty with respect to, ten percent (10%) or more of the total of the same component of the Equipment or of the Work performed; provided, however, that a Defect or failure to comply with the Defect Warranty with respect to the PV

modules or the Module Installation Work that occurs in three percent (3%) or more of the total PV modules in the Project or three percent (3%) or more of the battery modules in included in the BESS, shall constitute a Serial Failure with respect to the battery modules, the PV modules or the Module Installation Work, as applicable. Upon the occurrence of an alleged Serial Failure, Contractor shall, as soon as practicable, investigate the cause of the non-compliance or malfunctions and the affected components and whether or not such non-compliance or malfunctions constitute a Serial Failure, it being understood that Contractor must prove to Owner's reasonable satisfaction that such non-compliance or malfunctions do not constitute a Serial Failure. In the event of an alleged Serial Failure, Contractor shall perform or cause to be performed a root cause analysis with respect to such Serial Failure and, as soon as practicable, but no later than thirty (30) days from the date of delivery of Notice to Contractor of such alleged Serial Failure (unless otherwise agreed upon by the Parties), provide to Owner in writing, for Owner's review and approval, a written report concerning such root cause analysis and the proposed solution for such Serial Failure, including the planned method for redesign and/or repair, replacement or retrofit of the component for which the Serial Failure shall have occurred and the related or affected infrastructure facilities and Work. Owner and Contractor shall negotiate in good faith with a view to reaching an agreed solution for the Serial Failure; provided that, unless Contractor has provided evidence satisfactory to Owner (in its reasonable discretion) identifying the root-cause and demonstrating that such Serial Failure is limited to a part (but not all) of the type of Equipment provided by the relevant Supplier or to specific production run of such type of Equipment, such solution shall be the replacement or repair of all of the type of Equipment supplied by such Supplier. If Contractor shall not perform the root-cause analysis and provide the written report to Owner within the time period contemplated in this Section 14.5 or if Owner and Contractor do not agree as to the occurrence of a Serial Failure or the appropriate proposed solution for a Serial Failure within thirty (30) days after the Notice of the occurrence of the event giving rise to the Serial Failure, each of Contractor and Owner shall have the right to refer the matter for resolution pursuant to Section 14.8.

14.5.2 No later than five (5) Business Days following the determination of the existence of, and a solution for, a Serial Failure, either through agreement of Owner and Contractor or pursuant to Section 14.8 (the "**Serial Failure Warranty Work Start Date**"), Contractor shall commence to undertake such action as is required to give effect to the agreed solution for such Serial Failure, which agreed solution shall (i) be applied to all of the Equipment or the Work that have substantially the same Defect or failure to perform, regardless of whether or not such Equipment or Work has yet to exhibit the adverse consequences of such Defect or other root-cause, (ii) address the cause, and not just the effect, of such Serial Failure and (iii) bring the Equipment and the Work into compliance with the original requirements under this Agreement (the "**Serial Failure Warranty Work**"). Such agreed solution shall specify the period after which the Serial Failure Warranty Work is required to be completed (the "**Serial Failure Warranty Work Completion Date**"). Upon the completion of any redesign proposed to be included as part of the Serial Failure Warranty Work, but prior to any retrofitting required by this Section 14.5 as part of the Serial Failure Warranty Work, Contractor shall request the written approval of Owner, which shall not be unreasonably withheld, conditioned or delayed. For the avoidance of doubt, it is expressly agreed that the provisions of this Section 14.5 shall not change, affect or reduce Contractor's obligations under Section 14.5.

14.5.3 Without limiting any other remedy available to Owner pursuant to this Agreement, in the event Contractor fails to commence the Serial Failure Warranty Work by the Serial Failure Warranty Work Start Date or to complete the Serial Failure Warranty Work on a timely basis but in any event by the Serial Failure Warranty Completion Date, Owner shall, after giving Contractor at least five (5) days prior Notice of Owner's intent to perform or have third parties perform the Serial Failure Warranty Work, have the right to perform the necessary Serial Failure Warranty Work, or have third parties perform the necessary Serial Failure Warranty Work. Contractor shall, within thirty (30) days of receiving Owner's invoice for the costs of Owner in performing or causing to be performed such Serial Failure Warranty Work, reimburse Owner for all reasonable and documented costs and expenses incurred by Owner with respect to such Serial Failure Warranty Work. Notwithstanding the foregoing, If Contractor (or the relevant Subcontractors)

begins to perform the applicable Serial Failure Warranty Work during such five (5) period following Notice of Owner's intent to perform such Serial Failure Warranty Work; provided that such Serial Failure Warranty Work is completed by the Serial Failure Warranty Completion Date), Owner shall not perform, or cause any third party to perform, such Serial Failure Warranty Work.

14.5.4 In the event that Owner provides notice of an alleged breach of the Defect Warranty (including any Serial Failure) with respect to any Equipment under Section 14.1 or this Section 14.5, Contractor disputes such alleged breach, and Owner determines that such dispute may be resolved through testing performed by the Testing Laboratory, at Owner's election, such determination with respect to such alleged breach shall be submitted to the Testing Laboratory. Contractor shall cooperate (and shall cause the Supplier of such Equipment to cooperate) with the Testing Laboratory to conduct such tests as the Testing Laboratory determines are necessary to resolve the dispute within thirty (30) days or as soon as practicable. In the event the Testing Laboratory determines that there is a breach of the Defect Warranty or a Serial Failure with respect to such Equipment, Contractor shall pay the fees and expenses of the Testing Laboratory in determining the dispute. In the event the Testing Laboratory determines that there is no breach of the Defect Warranty and no Serial Failure with respect to such Equipment, then Owner shall pay the fees and expenses of such Testing Laboratory.

14.6 Warranty Administration. Contractor shall obtain customary warranties from all Major Subcontractors, and any other Subcontractors and Suppliers providing the equipment or services set forth in Exhibit Y (the "**Selected Subcontractors**"). Such warranties shall be obtained for the benefit of Owner as well as for Contractor, and shall either (a) be assignable to Owner or Owner's designee upon Owner's request or (b) expressly provide that the warranties are directly enforceable by Owner without the need for an assignment; provided that Owner hereby agrees to allow Contractor to call upon such warranties to the extent necessary to allow Contractor to fulfill its Warranty obligations hereunder. If a Contractor Event of Default exists and this Agreement has been terminated in accordance with Section 16.2, or otherwise at Project Substantial Completion, Contractor shall assign to Owner (unless previously assigned or to the extent that the warranties are directly enforceable by Owner without the need for an assignment) all unexpired and assignable original warranties of each Selected Subcontractor as requested by Owner, subject to the terms and conditions of any such warranties; provided that, notwithstanding such assignment, Contractor shall be entitled to enforce each such warranty to the exclusion of Owner through the earlier of the termination of this Agreement in accordance with Section 16.2 and the end of the Defect Warranty Period. Contractor shall deliver to Owner, at Project Substantial Completion (unless previously provided), copies of unexpired and assignable warranties of each Selected Subcontractor.

14.7 Limitations on Warranties. The provisions of this Article 14 set forth the exclusive remedies for all Warranty claims under Article 14. The foregoing Warranties are exclusive and are in lieu of all other warranties whether written, oral, implied, or statutory. NO IMPLIED OR STATUTORY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE SHALL APPLY.

14.8 Warranty Disputes. Subject to Section 14.5.4, in the event that Owner provides Notice of an alleged breach of the Defect Warranty pursuant to Section 14.1, Contractor's obligations under Section 14.5, or the Performance Guarantee pursuant to Section 14.11, and Contractor disputes such alleged breach, the determination with respect to such alleged breach may, at the election of either Party, be submitted to neutral third party for resolution, which neutral third party shall be acceptable to both parties. In the event neutral third party determines that Contractor has breached such Defect Warranty, Contractor's obligations under Section 14.1, 14.5 or the Performance Guarantee, Contractor shall pay the fees and expenses of neutral third party in determining the dispute. For purposes of determining any such dispute, neutral third party shall, with respect to the appropriate remedy for any breach by Contractor of the Defect Warranty, its obligations under Section 14.1, Performance Guarantee or Section 14.5, take into account the cost (including the ability to mitigate the cost) of implementing, and the feasibility of, any proposed solution.

14.9 End of Warranty Period. During the thirty (30) day period prior to the scheduled end of the Defect Warranty Period, if Owner so requests, Contractor and Owner shall jointly conduct an inspection and test of the Work to determine if any additional warranty items are required to be repaired or replaced pursuant to the Defect Warranty in order to develop a list of such items; provided, however, that such actions by Owner shall not constitute a waiver of any of Owner's rights under this Agreement.

15. TITLE; RISK OF LOSS

15.1 Title.

15.1.1 Condition. Contractor warrants good title, free and clear of all Liens, claims, charges, security interests, and encumbrances whatsoever (other than those created by Owner, any third-party (other than a Subcontractor or Affiliate of Contractor or any of its subcontractors) or that result from Owner Provided Materials or Owner's failure to pay Excluded Taxes hereunder), to all Work, Equipment and other items furnished by Contractor or any of the Subcontractors that become part of the Project or that are to be used for the operation, maintenance or repair thereof, including the Contractor Deliverables.

15.1.2 Transfer. Title to the Equipment and other items that become part of the Project shall pass to Owner upon the earlier of (a) payment (less any Retainage or off-set) for such Equipment or other items and (b) delivery of such Equipment or other items to the Site. Passage of title shall not affect Contractor's right to payment under this Agreement.

15.1.3 Care, Custody and Control During Performance. The transfer of title shall in no way affect Owner's rights as set forth in any other provision of this Agreement. Contractor shall have care, custody and control of all Equipment and other items that become part of the Project and exercise due care with respect thereto until the respective dates set forth in Sections 15.1.4, and 15.1.5.

15.1.4 Transfer of Care, Custody and Control upon Placed in Service.

(a) Notwithstanding anything to the contrary herein, (i) upon Project Substation Completion Date, Contractor shall transfer care, custody, and control of such Substation to Owner, (ii) upon Placed in Service Date for the BESS, Contractor shall transfer care, custody, and control of the BESS to Owner and (iii) upon the earlier of (A) Project Substantial Completion Date or (B) Placed in Service Date with respect to a Block, Contractor shall transfer care, custody, and control of such Block to Owner; provided, however, that Contractor shall be entitled to retain such degree of care, custody and control as may be necessary to enable Contractor to complete the Work; provided, further, that Contractor shall not be deemed to have waived any of its rights or remedies hereunder related thereto or to be relieved of its obligations to achieve Substantial Completion. An act of Owner with respect to any Work (including any Block, the Project or any portion thereof) between the Placed in Service Date for the initial Block and the Substantial Completion Date, taken pursuant to Owner's care, custody and control of the portion of the Project that has been Placed in Service and which adversely affects Contractor's performance of the Work, shall constitute an Owner-Caused Delay.

15.1.5 Transfer of Care, Custody and Control upon Substantial Completion or Early Termination.

(a) On and after the Project Substantial Completion Date, Owner shall take complete possession, care, custody and control and assume responsibility for the daily

ownership, operation and maintenance of the Project. Possession, care, custody and control and assumption of responsibility by Owner of any Spare Parts delivered to the Site following the Substantial Completion Date shall occur upon delivery of the applicable Spare Parts to the Site.

(b) Upon the early termination of this Agreement, Owner shall have care, custody and control of (i) all Equipment and other items that have been installed and paid for as part of the Project, (ii) all Equipment to which Owner has title and (iii) all Equipment located at the Site but not previously installed as part of the Project to the extent Owner has paid for the same in accordance with this Agreement.

15.2 Risk of Loss.

15.2.1 Risk of Loss Before Placed in Service Date. Without limiting Contractor's obligations under Section 2.6, risk of loss with respect to each Block shall pass to Owner when such Block is Placed in Service. Except with respect to any Block that is Placed in Service prior to the Substantial Completion Date, and except as set forth in Section 15.2.2, until the Substantial Completion Date, Contractor assumes risk of loss, and, without limitation of its right to relief pursuant to Article 8, full responsibility for the cost of replacing or repairing any damage to the Work, Project or any portion thereof (including Equipment).

15.2.2 Risk of Loss After Placed in Service Date or Termination. Risk of loss to the Project shall pass to Owner from and after the Project Substantial Completion Date (or the earlier termination of this Agreement), unless such loss or damage (a) is caused by Contractor, a Subcontractor or a party over whom Contractor has control or any Affiliate of Contractor or (b) is caused by any work performed by Contractor with respect to the Defect Warranty or as otherwise provided pursuant to Article 14.

16. DEFAULTS AND REMEDIES

16.1 Contractor Events of Default. Contractor shall be in default of its obligations pursuant to this Agreement upon the occurrence of any one or more events of default set forth below (each, a "**Contractor Event of Default**"):

(a) Contractor becomes insolvent, generally does not pay its debts as they become due, admits in writing its inability to pay its debts, or makes a general assignment for the benefit of creditors, or Contractor commences any case, proceeding or other action seeking reorganization or receivership, or adopts an arrangement with creditors, under any bankruptcy, insolvency, reorganization or similar law of the United States or any state thereof for the relief of creditors or affecting the rights or remedies of creditors generally;

(b) insolvency, receivership, reorganization, or bankruptcy or similar proceedings are commenced against Contractor and such proceeding shall remain undismissed or unstayed for a period of thirty (30) days;

(c) any representation or warranty made by Contractor in Section 4.1 was materially false or misleading when made and if capable of remedy, Contractor fails to remedy such materially false or misleading representation or warranty within ten (10) days after Contractor receives a Notice from Owner with respect thereto, except such ten (10) day limit shall be extended if: (i) such failure is reasonably

capable of cure and curing such failure reasonably requires more than ten (10) days; and (ii) Contractor commences such cure within such ten (10) day period and diligently prosecutes and completes such cure within thirty (30) days thereafter, in each case, after the date on which Contractor becomes aware of such false or misleading representation;

(d) Contractor assigns or transfers this Agreement or any right or interest herein except in accordance with Article 20;

(e) Contractor fails to maintain any insurance coverages required of it hereunder, and Contractor fails to remedy such breach within five (5) Business Days after the date on which Contractor becomes aware of such failure;

(f) Contractor fails to perform any provision of this Agreement providing for the payment of money to Owner (except for any amounts disputed by Contractor in good faith) and such failure continues for twenty (20) Business Days after Contractor has received a Notice of such payment default from Owner;

(g) Contractor fails to perform any material provision of this Agreement not otherwise addressed in this Section 16.1 and such failure continues for thirty (30) days after Notice from Owner, except such thirty (30) day limit shall be extended if: (i) curing such failure reasonably requires more than thirty (30) days; and (ii) Contractor commences such cure within such thirty (30) day period and diligently prosecutes and completes such cure within sixty (60) days, in each case after the date on which Contractor becomes aware of such failure;

(h) Contractor fails to achieve (i) Project Substantial Completion within forty five (45) days after the Guaranteed Project Substantial Completion Date (as the same may be extended in accordance with this Agreement); or

(i) Contractor incurs liability hereunder in excess of the limitation on liability set forth in Section 23.2.1.

16.2 Owner's Rights and Remedies. If a Contractor Event of Default occurs, Owner shall have the following rights and remedies and may elect to pursue any or all of them, in addition to any other rights and remedies that may be available to Owner at law or in equity, and Contractor shall have the following obligations:

(a) Owner may terminate this Agreement, either in whole or in part, by giving Notice of such termination to Contractor and, upon such termination, Contractor shall withdraw from the Site, shall assign (to the extent such Subcontract may be assigned) to Owner (without recourse to Contractor) such of Contractor's Subcontracts as Owner may request, and shall license, in the manner provided herein, to Owner all Intellectual Property Rights (to the extent not previously licensed in accordance with the terms hereof) of Contractor related to the Work reasonably necessary to permit Owner to complete or cause the completion of the Work, and in connection therewith Contractor authorizes Owner and its respective agents to use such information in completing the Work (and otherwise in connection with the Project), shall remove such materials, equipment, tools, and instruments used by and any debris or waste materials generated by Contractor in the performance of the Work as Owner may direct, and Owner may take possession

of any or all Contractor Deliverables necessary for completion of the Work (whether or not such Contractor Deliverables are complete);

(b) Owner may, without prejudice to any other right or remedy, take possession of the Project Site and of all materials, equipment, tools and machinery thereon, and may finish the Work by whatever method Owner may deem expedient; and if the unpaid balance of the Contract Price exceeds the direct cost of finishing the Work, then Contractor shall be paid for all Work properly performed by Contractor to the date of termination (which amount shall in no event exceed the difference between the unpaid portion of the Contract Price and Owner's cost of completing the Work); provided, however, if the direct cost of finishing the Work exceeds the unpaid balance of the Contract Price, Contractor shall immediately pay the difference to Owner; provided, further, that the cost to Owner of completing the Work shall include the cost of any additional design, engineering, managerial and administrative services required thereby, attorneys' fees and expenses, and any other costs, expenses or damages Owner may incur in order to complete the Work;

(c) Owner may proceed against the Retainage, the Punchlist Holdback and/or amounts withheld pursuant to Section 6.8, in accordance with the terms hereto;

(d) Owner may make such payments, acting reasonably, that Contractor is failing to pay in connection with the relevant Contractor Event of Default and either offset the cost of such payment against payments otherwise due to Contractor under this Agreement or Contractor shall be otherwise liable to pay and reimburse such amounts to Owner;

(e) Owner may require Contractor to assign any and all warranties set forth on Exhibit T to Owner to the extent such warranties have not already been assigned to Owner and to require Contractor to provide evidence reasonably acceptable to Owner that Contractor has assigned such warranties to Owner; and

(f) Owner may pursue the dispute resolution procedures set forth in Article 24 to enforce the provisions of this Agreement and seek damages from Contractor.

16.3 Owner Event of Default. Owner shall be in default of its obligations pursuant to this Agreement upon the occurrence of any one or more events of default set forth below (each, an "**Owner Event of Default**"):

(a) Owner becomes insolvent, generally does not pay its debts as they become due, admits in writing its inability to pay its debts, or makes a general assignment for the benefit of creditors, or Owner commences any case, proceeding or other action seeking reorganization or receivership, or adopts an arrangement with creditors, under any bankruptcy, insolvency, reorganization or similar law of the United States or any state thereof for the relief of creditors or affecting the rights or remedies of creditors generally;

(b) insolvency, receivership, reorganization, or bankruptcy or similar proceedings are commenced against Owner and such proceeding shall remain undismissed or unstayed for a period of thirty (30) days;

(c) Owner assigns or transfers this Agreement or any right or interest herein, except in accordance with Article 20;

(d) Owner fails to perform any provision of this Agreement providing for the payment of money to Contractor (except for any amounts disputed by Owner in good faith) and such failure continues for twenty (20) Business Days after Owner has received a Notice of such payment default from Contractor; or

(e) Owner fails to maintain any other insurance coverages required of it hereunder and Owner fails to remedy such breach within thirty (30) days after the date on which Owner becomes aware of such failure.

16.4 Contractor's Rights and Remedies. If an Owner Event of Default occurs, Contractor shall have the following rights and remedies and may elect to pursue any or all of them, in addition to any other rights and remedies that may be available to Contractor hereunder:

(a) Subject to the terms of any consent to collateral assignment then in effect in accordance with Section 25.19, Contractor may terminate this Agreement after having given ten (10) Business Days prior written Notice of such termination to Owner (in which case Contractor shall be compensated in the manner set forth in Section 16.6);

(b) Contractor may pursue the dispute resolution procedures set forth in Article 24 to enforce the provisions of this Agreement; and

(c) Subject to the terms of any consent to collateral assignment then in effect in accordance with Section 25.19, Contractor may suspend the Work after having given five (5) Business Days prior written Notice of such suspension to Owner, which suspension may last until the earlier of the termination of this Agreement and the date on which the relevant Owner Event of Default has been cured by Owner or waived by Contractor.

Within thirty (30) days of any termination by Contractor in accordance with Section 16.4(a), Contractor shall invoice Owner for such amounts payable pursuant to Section 16.4(a); provided, that Contractor shall take reasonable steps to mitigate costs of effecting the termination, including without duplication demobilization costs and contract cancellation charges.

16.5 Suspension. Owner may, in its sole discretion, order Contractor to suspend the Work, in whole or in part, for a period of time as Owner may determine. The suspension shall commence on the day specified in Owner's Notice which shall be at least five (5) days after Owner Notifies Contractor concerning such suspension, unless such suspension is due to (a) a Contractor Event of Default or (b) an imminent threat of material injury or damage to Persons or property or is the result of a material injury or damage to Persons or property or as otherwise required by Applicable Law, in which case such suspension shall be immediate upon receipt of Notice by Contractor. Upon the commencement of the suspension, Contractor shall stop the performance of the suspended Work except as may be necessary to carry out the suspension and protect and preserve the Work completed prior to the suspension. The provisions of this Agreement related to Excusable Events attributable to Owner-Caused Delays shall be applicable to any suspension by Owner pursuant to this Section 16.5, unless such suspension has been commenced due to (1) a Contractor Event of Default or (2) an imminent threat of material injury or damage to Persons or property or is the result of a material injury or damage to Persons or property caused by Contractor or any of its Subcontractors, in which case Contractor

shall bear all impacts of such suspension. Contractor shall promptly initiate (and Contractor shall be entitled a Change Order adjusting the Project Schedule, Guaranteed Dates and Contract Price, as applicable) the resumption of any suspended Work within five (5) Business Days after Owner gives Contractor Notice to do so (or, in the case the suspension was due to an imminent threat of material injury or damage to Persons or property or is the result of a material injury or damage to Persons or property caused by Contractor or any of its Subcontractors, at such time that the injury or damage to Persons or property (or the threat thereof) was adequately addressed) and shall thereafter resume the Work fully.

16.6 Termination For Convenience. Owner may at any time suspend or terminate this Agreement without cause upon ten (10) calendar days' written notice to Contractor and payment to Contractor of (a) amounts due for all Work performed, (b) all reasonable and documented direct costs of effecting the termination, including without duplication demobilization costs and contract cancellation charges and (c) if such termination for convenience occurs after the issuance of the Notice to Proceed, five percent (5%) of the unpaid Contract Price, as of the day written notice of the termination is received by Contractor; provided that Contractor shall take reasonable steps to mitigate all such costs and charges. Contractor shall submit an invoice to Owner for such termination payment with supporting information and documentation of any fees or costs claimed by Contractor pursuant to this Section 16.6. Upon review and agreement that such invoice is proper, Owner shall pay such invoice within thirty (30) Days after its receipt of same unless in writing Owner disputes in good faith certain elements thereof, in which event only the undisputed portion of such termination payment need be made within such thirty (30) day period. Any amount of any down payment made by Owner to Contractor that is not yet earned at the time of termination shall be deducted from the amounts owing to Contractor pursuant to this Section 16.6. Contractor agrees that if this Agreement is terminated pursuant to this Section 16.6 prior to the issuance of Notice to Proceed, any amount payable to Contractor pursuant to this Section 16.6 as a result of such termination shall be limited to such amounts payable under any LNTP to the extent such amount has been earned by Contractor but remains unpaid as of the date of termination. If, at the date of termination under this Section 16.6, Contractor has properly performed services or purchased, prepared or fabricated off the Site any materials or equipment for subsequent incorporation at the Site, Owner shall have the option of having such materials or equipment or that portion of the Work prepared or fabricated by Contractor delivered to the Site or to such other place as Owner shall reasonably direct at Owner's expense. Payment of the amounts due under this Section 16.6 shall be the sole and exclusive liability of Owner relating to termination without cause, and the sole and exclusive remedy of Contractor relating to termination without cause, and in such event Owner shall have no further liability to Contractor notwithstanding the actual amount of damages that Contractor may have sustained in connection with such termination. Further, following any such termination for convenience, upon Owner's request, Contractor shall terminate, or send an appropriate notice of termination, for all Contractor Permits.

16.7 Termination for Extended Force Majeure Event. If a Force Majeure Event has occurred and continues for a period exceeding twelve (12) consecutive months, notwithstanding that Contractor may by reason thereof have been granted an extension of time pursuant to a Change Order, either Owner or Contractor shall be entitled to serve upon the other thirty (30) days' notice to terminate this Agreement. If at the expiry of the thirty (30) Days' Notice period, the Force Majeure Event shall still be continuing, this Agreement shall terminate, and neither Party shall have further liability to the other Party, except that Owner shall pay Contractor, within fifteen (15) Business Days after Owner's receipt of such invoice from Contractor, (a) amounts due for all Work performed, and (2) all reasonable and documented direct costs of effecting the termination, including without duplication demobilization costs and contract cancellation charges; provided that Contractor shall take reasonable steps to mitigate all such costs and charges; and provided further, that Contractor shall not be entitled to any profit, mark-up or G&A in respect of the amounts described in clause (2). Further, following any such termination for extended Force Majeure Event, upon Owner's request, Contractor shall terminate, or send an appropriate notice of termination, for all Contractor Permits.

16.8 Owner's Right to Elect to Assume Obligations with Subcontractors and Other Rights. Upon a termination of this Agreement, Owner shall have the right, at its option, to give notice of its acceptance of the assignment of, or assume, any subcontract or purchase order that Contractor has entered into with a Subcontractor in connection with the Work. If Owner elects to accept the assignment of, or assume, any such subcontract or purchase order as described in this Section 16.8, then (a) for the avoidance of doubt, the amounts payable by Owner, if any, pursuant to Section 16.4, Section 16.6 or Section 16.7 shall not include or reflect the amount of such obligations and commitments so assumed by Owner (unless they relate to termination or demobilization costs or to payments due for Work already completed for which Contractor remains obligated to pay); (b) the Parties shall comply with Sections 9.3 and 14.6 to give effect to the assignment of such subcontracts or purchase orders contemplated thereunder and Contractor shall execute all documents and take all other reasonable steps requested by Owner in order to give effect to the provisions of Sections 9.3 and 14.6; (c) with respect to any assignment of a subcontract or purchase order to be assumed by Owner under this Section 16.8 but not already effected pursuant to Sections 9.3 and 14.6, Contractor shall execute all assignments or other documents and take all other reasonable steps requested by Owner which may be required to vest in Owner all rights, set offs, benefits, and titles necessary to give effect to such assumption by Owner; (d) Owner shall in such assignment documentation, subject to any right of set off, simultaneously agree to indemnify Contractor against liabilities arising under such assumed subcontract or purchase order as a result of Work performed or actions taken by Owner after such assignment, and (e) Contractor shall in such assignment documentation simultaneously agree to indemnify Owner against liability arising under such assumed subcontract or purchase order with respect to Work performed or actions taken by Contractor or its Affiliates prior to such assignment.

17. INDEMNIFICATION

17.1 By Contractor. Contractor shall indemnify, defend, and hold harmless Owner, its Affiliates, the Owner Financing Parties, and the agents, officers, directors, employees, subcontractors and representatives of each of the foregoing (each, an "**Owner Indemnified Party**") from and against any and all Losses (including property damage to the Project) to the extent arising or resulting from, or occasioned by (i) any violation of Applicable Law or Permit by Contractor, an Affiliate of Contractor performing Work, a Subcontractor or anyone directly or indirectly employed by them, (ii) the negligence or willful misconduct of Contractor, an Affiliate of Contractor performing Work, a Subcontractor or anyone directly or indirectly employed by them, (iii) any breach, default, violation or nonperformance by Contractor of any term, covenant, condition, duty or obligation provided in this Agreement, (iv) Liens imposed on the Work, the Equipment, the Site or any portion thereof by Contractor, an Affiliate of Contractor performing Work, a Subcontractor or anyone directly or indirectly employed by them, except to the extent the same results from the unexcused failure of Owner to make payments of amounts owed to Contractor for the Work, and/or (v) Taxes for which Contractor is responsible hereunder.

17.2 By Owner. Owner shall indemnify, defend, and hold harmless Contractor, its Affiliates and the agents, officers, directors, employees, subcontractors and representatives of each of the foregoing (each, an "**Contractor Indemnified Party**") from and against any and all Losses to the extent arising or resulting from, or occasioned by (i) any violation of Applicable Law or Permit by Owner, an Affiliate of Owner or anyone directly or indirectly employed by Owner, (ii) the negligence or willful misconduct of Owner, an Affiliate of Owner or anyone directly or indirectly employed by Owner, (iii) any breach, default, violation or nonperformance by Owner of any term, covenant, condition, duty or obligation provided in this Contract, and/or (iv) Taxes for which Owner is responsible hereunder.

17.3 Intellectual Property Indemnity. Contractor shall defend, indemnify and hold harmless each Owner Indemnified Party from and against any and all Losses to the extent arising or resulting from, or occasioned by Contractor Indemnified Party's infringement of patents, misappropriation or improper use of other Intellectual Property Rights which occur in connection with Contractor's performance of the Work or

the ownership or use of any portion of the Work including any Contractor's Deliverables, excepting only those intellectual property rights related to Owner Provided Materials, which shall be obtained and maintained by Owner. Owner's acceptance of Contractor's design and/or proposed or supplied materials or equipment shall not be construed to relieve Contractor of any obligation hereunder. Contractor shall have the sole authority for the control of the defense of any and all such claims or suits brought thereon, and Owner shall render such assistance as Contractor shall reasonably require in connection therewith; provided that in any suit brought on such claim, the applicable Owner Indemnified Party shall have the right to be represented by counsel of its own choice at its own expense. Should any such claim materially impair Contractor's performance of the Work in accordance with the Project Schedule or Owner's continued use of the Work, then Contractor shall, at its own expense, timely procure the right to continue its performance of the Work so as not to materially impair the Project Schedule or Owner's continued use of the Work, or timely procure the right to continue use of the Work, and Contractor shall not settle any such claim in a manner that reasonably might be expected to interfere with its performance of the Work or the operation of the Project.

17.4 Indemnification Procedure. When a Party hereunder (the "**Indemnifying Party**") is required to indemnify any Person (the "**Indemnified Party**") in accordance with this Article 17, the Indemnifying Party shall assume on behalf of such Indemnified Party, and conduct with due diligence and in good faith, the defense of any claim against such Person, whether or not the Indemnifying Party shall be joined therein, and the Indemnified Party shall cooperate with the Indemnifying Party in such defense. The Indemnifying Party shall be in charge of the defense and settlement of such claim; provided that without relieving the Indemnifying Party of its obligations hereunder or impairing the Indemnifying Party's right to control the defense or settlement thereof, the Indemnified Party may elect to participate through separate counsel in the defense of any such claim, but the fees and expenses of such counsel shall be at the expense of such Indemnified Party, except in the event that (a) the Indemnified Party shall have reasonably concluded, acting in good faith and on the advice of counsel, that there exists a material conflict of interest between the Indemnifying Party and the Indemnified Party in the conduct of the defense of such claim (in which case the Indemnifying Party shall not have the right to control the defense or settlement of such claim, on behalf of such Indemnified Party), or (b) the Indemnifying Party shall not have employed counsel to assume the defense of such claim within a reasonable time after notice of the commencement of an action thereon, then, in each of cases (a) and (b), the fees and expenses of counsel shall be paid by the Indemnifying Party. The Indemnifying Party shall not, without the Indemnified Party's prior written consent, settle or compromise any claim, suit or cause of action asserted against the Indemnified Party, or consent to entry of a judgment in respect thereof, which imposes any future obligation on the Indemnified Party or which does not include, as an unconditional term thereof, the giving of a release in favor of the Indemnified Party from all liability in respect of such claim, suit or cause of action. An Indemnified Party shall provide Notice to the Indemnifying Party within thirty (30) days after receiving Notice of the commencement of any legal action or of any claims or threatened claims against such Indemnified Party in respect of which indemnification may be sought pursuant to this Article 17. The amount of any indemnity payment made under this Article 17 shall be reduced by the amount of all insurance proceeds received by the Indemnified Party with respect to the event giving rise to the right of indemnity under Sections 17.1 and 17.2.

17.5 Comparative Fault. Notwithstanding anything to the contrary herein, it is the intent of the Parties that where fault is determined to have been joint or contributory, principles of Texas comparative fault law will be followed and each Party shall bear the proportionate cost of any loss, damage, expense and liability attributable to such Party's fault.

17.6 Survival. The indemnities set forth in this Article 17 (other than the indemnity set forth in Section 17.3) shall survive the Final Completion Date or the earlier termination of this Agreement for a period expiring five (5) years following the Final Completion Date or said termination, whichever first occurs. All notices for a claim on any indemnity hereunder must be delivered, if at all, to the applicable Party prior to the expiration of such five (5) year period. The indemnifying period with respect to all claims identified in such

notice (and the indemnity obligation of the Parties hereunder with respect to such claim) shall extend through the final, non-appealable resolution of such claims. The indemnities set forth in Section 17.3 shall survive the Final Completion Date or earlier termination of this Agreement and shall survive for a period expiring six (6) years following the Final Completion Date or said termination, whichever first occurs. For purposes of clarification hereunder, without limiting the other rights granted hereunder to either Party, a Party may enforce the indemnity provisions hereunder without having to declare an Owner Event of Default or a Contractor Event of Default, as applicable.

18. CONFIDENTIAL INFORMATION

18.1 Confidential Information. Each Party shall hold in confidence any technical data or designs, engineering, sales or marketing data, business procedures or information concerning the affairs of the other Party or the Project designated as confidential by the disclosing Party (the "**Confidential Information**"), and shall not disclose, publish or make use of such Confidential Information unless (a) the disclosing Party (the "**Discloser**") agrees in writing to the release of such Confidential Information, (b) to the extent that non-disclosing Party (the "**Recipient**") can establish that the Confidential Information was generally available in the public domain at the time of such disclosure or was developed independently by the Recipient, (c) such Confidential Information is required by Applicable Law to be disclosed, or (d) Owner may disclose a copy of this Agreement to any actual or prospective Owner Financing Parties, insurers and/or in connection with an actual or prospective merger or acquisition or similar transaction where the party receiving the Confidential Information is bound by confidentiality obligations; provided that such disclosure shall be made only to the extent required by Applicable Law and only after providing the Discloser with prior notice and providing the Discloser with the opportunity to seek a protective order or other appropriate remedy, and the Recipient shall reasonably cooperate with the Discloser in connection with its efforts to seek such order or remedy or otherwise limit the scope of Confidential Information disclosed; provided, further that the Recipient shall have the burden of establishing the applicability of any of the exceptions set forth in clauses (a) through (c) above. The Parties shall use Confidential Information solely for the purpose of performing its obligations under this Agreement and not in any way detrimental to the Discloser or its Affiliates. To maintain the confidentiality of the Confidential Information, the Parties shall employ reasonable measures no less restrictive than the procedures used by the Party to protect its own confidential information and trade secrets, but no less than a reasonable degree of care, to prevent its unauthorized use, dissemination or publication. Notwithstanding the generality of the foregoing, the Discloser agrees that the Recipient may disclose such Confidential Information to its officers, directors, employees, agents, representatives and Subcontractors, on an as-needed basis; provided, that such recipient is subject to confidentiality requirements as stringent as those set forth in this Section 18.1; provided, further, that the Recipient remains liable to the Discloser for any breach of its confidentiality obligations hereunder by any such recipient. Upon any termination of this Agreement for any reason, each Party shall promptly return to the other Party all of the other Party's Confidential Information in that Party's possession (or in the possession of any other Person permitted hereby to possess such information) at such time, unless otherwise directed by the other Party. Each Party shall also, upon the other Party's request and specification, return to the other Party any Confidential Information as specified by the other Party in that Party's possession (or in the possession of any other Person permitted hereby to possess such information).

18.2 Ownership of Confidential Information. All rights and title to, and interest in, a Party's Confidential Information shall remain with such Party. All Confidential Information obtained, developed or created by or for Contractor exclusively for the Project, including copies thereof, is the exclusive property of Owner.

18.2 Confidential Information Remedy. The Parties acknowledge that the Confidential Information is valuable and unique, and that damages would be an inadequate remedy for breach of this Article 18 and the obligations of each Party under this Article 18 are specifically enforceable. Accordingly,

the Parties agree that a breach or threatened breach of this Article 18 by a Party shall entitle the other Party to seek an injunction preventing such breach, without the necessity of proving damages or posting any bond. Any such relief shall be in addition to, and not in lieu of, monetary damages or any other legal or equitable remedy available to such Party or its Affiliates. Notwithstanding anything to the contrary herein (and without any effect on the survival of any Warranty hereunder), the confidentiality provisions of this Agreement shall remain in full force and effect until the date that is three (3) years after the earlier of (a) the Final Completion Date or (b) the termination of this Agreement.

19. LICENSES

19.1 License. All Intellectual Property Rights contained within, accompanying or arising from the Work are and shall be solely owned by Contractor and are not being sold to Owner, but rather are being licensed in accordance with the terms and conditions of this Agreement. Contractor hereby grants to Owner, effective as of the date hereof and for the life of the Project, a paid-up, perpetual, irrevocable, non-exclusive, royalty-free right and license (with a right to sub-license or transfer such license to subsequent owner(s) of the Project on the same terms) under all Intellectual Property Rights of Contractor that are incorporated in or cover all or any part of the Work or that are embodied in any items or materials being provided by Contractor to enable use of the Work to use and exploit the Work, all Contractor Deliverables and all such items and materials provided by Contractor solely for Owner's operation, maintenance, use, modification, repair, disposal, removal or alteration of the Project or components thereof solely in connection with the Project, such use and exploitation, including the right to reproduce, and distribute such Contractor Deliverables and such items and materials provided by Contractor. Contractor shall, prior to engaging any Subcontractor to produce any design or engineering work or perform any services or Work in connection with the Project, obtain a valid license (sublicensable to Owner) of any Intellectual Property Rights from such Subcontractor on terms substantially similar to those that obligate Contractor to Owner as set forth in this Article 19. Owner shall bear all responsibility for its use of the Intellectual Property Rights other than as specified in the foregoing sentences of this Section 19.1, and shall indemnify and defend Contractor and its Subcontractors, and their respective successors, permitted assigns, officers, directors and employees against all claims, costs, and damages arising from Owner's use of the Intellectual Property Rights in any manner not specified in the foregoing sentence.

19.2 Assignment. The grant of licenses in Section 19.1 and this Section 19.2 shall be assignable to other Persons that succeed in interest to all or any portion of the Project or are otherwise assigned by Owner pursuant to Section 20.1. Contractor shall, prior to directing any Subcontractor to produce any design or engineering work in connection with the Project, obtain a valid license of any such Intellectual Property Rights from such Subcontractor in terms substantially similar to those that obligate Contractor to Owner as expressed in Section 19.1. Except as specifically stated in Section 19.1, no other license in such Intellectual Property Rights is granted pursuant to this Agreement.

19.3 Contractor Deliverables. The Contractor Deliverables accumulated or developed in respect of the Project, and transferred by Contractor, its employees or any Subcontractors and delivered to Owner, shall become the property of Owner upon delivery without any further consideration to be provided therefor.

20. ASSIGNMENT

20.1 Assignment to Other Persons. Except as otherwise provided in this Section 20.1, neither Party may assign or otherwise transfer this Agreement to any third party, whether by operation of law or otherwise, without the prior written consent of the other Party. Notwithstanding the foregoing: Owner may, without consent of Contractor, (i) collaterally assign its rights, title and interest under this Agreement (including any LNTPs) to any Owner Financing Party, who, subject to any consent entered into by Contractor with the Owner Financing Parties pursuant to Section 25.19, may further assign such rights, title and interest

under this Agreement upon exercise of remedies by an Owner Financing Party following a default by Owner under the Financing Documents entered into between Owner and the Owner Financing Parties, (ii) assign its rights, title and interest under this Agreement to an entity purchasing, in whole or in part, Owner or Owner's interests in, or the assets of, the Project or (iii) to any Affiliate of Owner. Any Party assigning this Agreement as set forth in this Section 20.1 shall promptly deliver notice of such assignment to the other Party; provided, that Contractor's execution of a consent to an assignment as described in subclause (i) of this Section 20.1 shall be deemed to constitute notice to Contractor of the underlying assignment. Any authorized assignment of this Agreement by either Party shall relieve such Party of its obligations hereunder at such time as the authorized successor agrees in writing to be bound in full by such assigning Party's obligations hereunder. Any purported assignment of this Agreement in violation of this Section 20.1 shall be null and void and shall be ineffective to relieve either Party of its obligations hereunder.

21. NON-PAYMENT CLAIMS

21.1 Liens. Except to the extent of any unexcused non-payment by Owner to Contractor of the Contract Price for Work performed hereunder, Contractor shall pay all labor, Subcontractors, equipment vendors, and providers of services of any kind, in compliance with any supply or service contract. Except to the extent of any unexcused non-payment by Owner to Contractor of the Contract Price for Work performed hereunder, Contractor shall not directly or indirectly assume, create, incur or suffer to be created by any employee, Subcontractor, laborer, materialman, equipment vendor, supplier of goods or provider of services any Lien on the Work, the Site, the Project, or any portion thereof resulting from Contractor's failure to make a payment to such Person when due and shall, at Contractor's sole expense discharge and cause to be released, whether by payment or posting of appropriate security, any Lien placed on the Project or the Site by any such Person, unless such Person is placing the Lien on the Project or the Site due to a failure of Contractor to pay such Person solely caused by Owner's unexcused failure to make payments as required hereunder. Such removal or bonding shall be accomplished within five (5) Business Days after receipt of written demand from Owner as to a Lien. Except to the extent of any unexcused non-payment by Owner to Contractor of the Contract Price for Work performed hereunder, any such bond shall survive the termination or expiration of this Agreement so long as such lien remains outstanding. If Contractor fails to remove or bond-over such Lien within five (5) Business Days, Owner may, but shall not be required to, effect such removal or substitute a bond at Contractor's expense, and Contractor shall fully indemnify, hold harmless and release Owner for its direct costs and expenses incurred in connection with such removal or substitution, including attorneys' fees, and Owner may withhold other amounts due or to become due to Contractor in satisfaction of such direct costs, expenses and fees. Except in the case of Owner's failure to comply with its payment obligations hereunder, Contractor shall not file a Lien until seven (7) days before the expiration of the statutory period for Liens. This Section 21.1 shall not apply to Liens that are the result of good faith disputes between Owner and Contractor.

21.2 Lien Waivers. Contractor shall deliver, together with (a) each Contractor's Invoice to be paid as a progress payment, (1) a Conditional Waiver and Release Upon Progress Payment from Contractor and each Subcontractor and Supplier, in each case in respect of work performed on, or equipment delivered to, the Site (or such other delivery point as is specified in any applicable Subcontract) during the period and for the amounts covered by such Contractor's Invoice, and (2) a Waiver and Release Upon Final Payment in respect of each Subcontractors that received its final payment under the relevant Subcontract with the amounts paid under the Contractor's Invoice for the prior month and (b) its application for the Final Completion Payment. No later than ten Business Days following Contractor's receipt of the Final Payment, Contractor shall deliver a Waiver and Release Upon Final Payment from Contractor and each Subcontractor and Supplier, except to the extent such Waiver and Release Upon Final Payment has already been delivered to Owner.

22. NOTICES AND COMMUNICATIONS

22.1 Requirements. Any Notice made pursuant to the terms and conditions of this Agreement shall be in writing and be: (a) delivered personally; (b) sent by certified mail, return receipt requested; (c) sent by a recognized overnight mail or courier service, with delivery receipt requested; or (d) sent by electronic mail or confirmed facsimile transmission, followed by confirmation in one of the other accepted methods in parts (a), (b), or (c) of this Section 22.1 to the following addresses:

If to Contractor:

NoBull Energy LLC

E-mail: FARICYR@ballardspahr.com

22.2 Representatives. Any technical or other communications pertaining to the Work shall be with the Parties' designated representative. Each Party shall provide Notice to the other in writing of the name of such representatives promptly after the Execution Date. The Contractor's Manager and the Owner Representative each shall have knowledge of the Work and be available at all reasonable times for consultation. Each Party's representative shall be authorized on behalf of such Party to administer this Agreement, agree upon procedures for coordinating the efforts of the Parties, and, when appropriate, to furnish information to or receive information from the other Party in matters concerning the Work.

22.3 Effective Time. Any Notice or Notification given personally, through overnight mail or through certified letter shall be deemed to have been received on delivery, any Notice given by express courier

service shall be deemed to have been received the next Business Day after the same shall have been delivered to the relevant courier, and any Notice given by facsimile transmission shall be deemed to have been received on confirmed dispatch.

23. LIMITATIONS OF LIABILITY AND REMEDIES

23.1 Limitations on Damages. Except (a) for liquidated damages as expressly set forth in this Agreement, (b) for any breach by Contractor of its obligations under Article 18 resulting in consequential damages or (c) to the extent damages (or other amounts) claimed by third parties (other than Owner Indemnified Parties or Contractor Indemnified Parties) for which Contractor or Owner has a duty to indemnify hereunder as expressly provided in Article 17 are shown to be consequential in nature, notwithstanding anything else in this Agreement to the contrary, neither Party (nor that Party's subcontractors) shall be liable to the other Party for any loss, damage or other liability otherwise equivalent to or in the nature of any indirect, incidental, consequential, exemplary, punitive or special damages arising from performing or a failure to perform any obligation under this Agreement, whether such liability arises in contract (including breach, indemnity or warranty), tort (including fault, negligence or strict liability), or otherwise, including for any loss of profits, loss of revenue or loss of use of Equipment, the Project, downtime costs, increased expense of operation or maintenance of the Equipment or the Project; loss of opportunity or goodwill, cost of purchased or replacement power, loss of use of equipment or systems, cost of capital, claims of customers for such damages, or any governmental fines, penalties or sanctions imposed. For the avoidance of doubt, the costs due to termination allowed under Section 16.2 or any liquidated damages payable hereunder shall be deemed to not be consequential or any other type of damages addressed by this Section 23.1.

23.2 Limitations on Liability.

23.2.1 Generally. In no event shall a Party be liable to the other Party for any damages, claims, demands, suits, causes of action, losses, costs, expenses and/or liabilities in excess of an amount equal to one hundred percent (100%) of the Contract Price, as adjusted for Change Orders, regardless of whether such liability arises out of breach of contract, guarantee or warranty, tort, negligence, product liability, indemnity, contribution, misrepresentation, strict liability, equity or any other legal theory; provided, however, the preceding limitation of liability shall not apply to, and no credit shall be issued against such liability for, in the case of Contractor: (i) Contractor's indemnity obligations set forth in Article 17 as to claims by third parties (that are not Owner Indemnified Parties) made against Owner Indemnified Parties; (ii) Contractor's indemnity obligations set forth in Section 3.11; (iii) any other claims resulting from the gross negligence, willful misconduct or fraud of Contractor or (iv) damages for which insurance proceeds are received from insurance required under this Agreement, it being the Parties' specific intent that the limitation of liability shall not relieve the insurers' obligations for such insured risks, and in the case of Owner: (1) Owner's indemnity obligations set forth in Article 17 as to claims by third parties (that are not Contractor Indemnified Parties) made against Contractor Indemnified Parties; (ii) any other claims resulting from the gross negligence, willful misconduct or fraud of Owner or (iii) damages for which insurance proceeds are received from insurance required under this Agreement, it being the Parties' specific intent that the limitation of liability shall not relieve the insurers' obligations for such insured risks. Notwithstanding any of the foregoing, none of the limits on the amount of insurance required to be maintained hereunder shall operate to limit either Party's liability under the Agreement. Without limiting the foregoing, this Section 23.2.1 shall apply if loss or damage, irrespective of cause or origin, results directly or indirectly to persons or property from the negligence, active or otherwise, of Owner, Contractor, Subcontractors and their respective agents and employees, and shall prevail over any conflicting or inconsistent provisions contained in this Agreement, except to the extent such conflicting or inconsistent provisions further restrict either Party's liability.

23.2.2 Liquidated Damages Caps. In no event will Contractor be liable hereunder for Delay Liquidated Damages in the aggregate, in excess of fifteen (15%) percent of the Contract Price.

23.3 Releases, Indemnities and Limitations. The releases, indemnities, waivers, subrogation, assumptions of and limitations on liabilities and limitations on remedies expressed in this Agreement, subject to the terms hereof, shall apply even in the event of fault, negligence, or strict liability of the Party released or indemnified, or whose liability is limited or assumed or against whom rights of subrogation are waived and shall extend to such Party's subcontractors, and in each case to such Party's and its subcontractors' Affiliates, officers, directors, members, managers, employees, licensees, agents and partners.

23.4 Limitation on Remedies. Except as otherwise expressly provided for herein, the rights and remedies of each Party as set forth in this Agreement shall be the exclusive rights and remedies of such Parties.

24. DISPUTES

24.1 Dispute Resolution. Any dispute, controversy or claim between the Parties arising out of or relating to this Agreement or the breach termination or validity thereof (a "**Dispute**") shall be resolved pursuant to the procedures set forth in this Article 24.

(a) either Party shall provide Notice to the other Party of the existence of the Dispute (the "**Dispute Notice**");

(b) a Vice President (or equivalent) of each of the Parties, each with authority to negotiate and resolve the Dispute, shall endeavor to meet, either in person or by telephonic conference, within ten (10) days after the receipt by a Party of the Dispute Notice, to seek to resolve the Dispute through mutual agreement; and

(c) in the event the procedures referenced in clause (b) above do not result for any reason in resolution of the Dispute within twenty (20) days after receipt by a Party of the Dispute Notice, each Party shall have the right to request mediation which shall be administered by the American Arbitration Association ("**AAA**") in accordance with its Commercial Mediation Rules then in effect, within sixty (60) days, unless otherwise agreed to by the Parties; and

(d) in the event the procedures referenced in clause (b) and (c) above do not result for any reason in resolution of the Dispute within 60 days after receipt by a Party of the Dispute Notice, such Dispute shall be settled by arbitration administered by the American Arbitration Association in accordance with its Commercial Arbitration Rules, and judgment on the award rendered by the arbitrators may be entered in any court having jurisdiction thereof

(i) The seat of arbitration shall be Austin, Texas;

(ii) There shall be three (3) arbitrators: (A) claimant shall appoint an arbitrator in its demand for arbitration, (B) respondent shall appoint an arbitrator within twenty (20) days after receipt of a copy of the demand, and (C) within fifteen (15) days after the appointment of the second arbitrator, the two (2) arbitrators appointed by the Parties shall select a third arbitrator who shall serve as chair of the arbitral tribunal. Each such arbitrator shall be an individual who has experience with and is knowledgeable regarding

the PV engineering, procurement and construction industry. Any arbitrator not timely appointed shall be appointed by the AAA using the listing ranking and striking procedures in the Commercial Arbitration Rules, with each Party being given three (3) strikes. When acting as appointing authority under this Article 24, AAA shall endeavor to appoint as each arbitrator (including any chair) an attorney who has experience with and is knowledgeable regarding the PV engineering, procurement and construction industry;

(iii) The Parties agree that any claims or counterclaims brought under this Agreement may be heard in a single arbitration, before the same arbitral tribunal.

(iv) The arbitral tribunal shall have no authority or power to enter an award which is in conflict with governing law. The award shall be in writing and shall contain the reasons on which it is based.

(v) The fees and expenses of the arbitration panel and the AAA shall be borne equally by Owner and Contractor and each Party shall bear its own legal expenses.

(vi) The Parties undertake to keep confidential all awards in their arbitration together with all materials in the proceedings created for the purpose of the arbitration and all other documents produced by another Party in the proceedings not otherwise in the public domain, save and to the extent that disclosure may be required of a Party by legal duty, to protect or pursue a legal right or to enforce or challenge an award in legal proceedings before a court or other judicial authority.

24.2 Third-Party Claims.

(a) Third-Party Claims. Notwithstanding the Parties' agreement to arbitrate disputes arising pursuant to this Agreement, in the event a Party is sued by a third party or sues a third party on claims that concern the other Party's obligations under this Agreement and the allocation of liability and/or damages among all the Parties (including the Party sought to be joined pursuant to this Section 24.2(a) to the suit), then, the Party sued or the Party initiating suit may join the other Party. However, as a condition to such joinder, the Party sued or initiating suit must first request the third party to arbitrate the dispute pursuant to this Article 24. Each Party agrees not to object to such joinder or challenge such proceeding on the grounds that the Parties agreed to arbitrate disputes pursuant to this Article 24.

(b) Stay of Arbitration. In the event the Parties are involved in a pending arbitration pursuant to this Article 24 and both Parties are parties to an action pursuant to Section 24.2(a) that is related to any of the issue(s) or claim(s) raised in the arbitration proceeding, it is agreed that, if the arbitral tribunal in the pending arbitration determines that such a stay would be appropriate, the arbitration proceeding shall be stayed pending the conclusion or settlement of the third-party action. Any conclusion or settlement of such third-party action shall be admissible as evidence (to the extent relevant) for purposes of the arbitration proceedings under this Agreement.

24.3 Pending Dispute: Duty to Continue. Pending the resolution of a Dispute, Contractor shall continue to perform the Work consistent with the applicable provisions of this Agreement, and Owner shall continue to pay all undisputed amounts required in accordance with the applicable provisions of this Agreement.

24.4 Subcontractors. To the extent that any dispute or matter in question between Contractor and Owner arises in connection with Work provided by any Subcontractor, such Subcontractor may be joined in any such dispute at Owner's sole election and, if a Subcontractor is so joined in any such dispute, such dispute shall be resolved in accordance with the dispute resolution procedures set forth in this Agreement and not in the relevant subcontract. Contractor shall incorporate an acknowledgement of this Section 24.5 in all of its Subcontracts with Subcontractors.

24.5 Attorneys' Fees. In any arbitration or litigation to enforce the provisions of this Agreement, the prevailing Party in such action shall be entitled to seek the recovery of its reasonable legal fees and expenses (including reasonable attorneys' fees and legal costs), its corresponding share of the fees of the arbitrator, and costs and expenses such as the prevailing Party's expert witness fees, all as awarded or determined by the arbitrator or court.

25. MISCELLANEOUS

25.1 Severability. The invalidity or unenforceability of any portion or provision of this Agreement shall in no way affect the validity or enforceability of any other portion or provision hereof. Any invalid or unenforceable portion or provision shall be deemed severed from this Agreement and the balance of this Agreement shall be construed and enforced as if this Agreement did not contain such invalid or unenforceable portion or provision. If any such provision of this Agreement is so declared invalid, the Parties shall promptly negotiate in good faith new provisions to eliminate such invalidity and to restore this Agreement as near as possible to its original intent and effect.

25.2 Governing Law; Limited Submission to Jurisdiction. This Agreement shall be governed by the laws of the State of Texas, without regard to any laws regarding conflict of laws thereof that would require the laws of another jurisdiction to apply. The Parties irrevocably accept and submit to the non-exclusive jurisdiction of the state or federal courts located in Austin, Texas, with respect to any suit, action or proceeding in aid of arbitration, including an action for an order of interim, provisional or conservatory measures to maintain the status quo and prevent irreparable harm and for recognition and enforcement of any award rendered by the arbitral tribunal, and the Parties irrevocably waive any objection to the laying of venue or defense that the forum is inconvenient with respect to any such suit, action or proceeding for such purpose. The Parties' right to apply for such judicial relief in aid of arbitration and the commencement of any such suit, action or proceeding in aid of arbitration shall not be deemed incompatible with, or a waiver of, the Parties' agreement to arbitrate. This consent to jurisdiction is being given solely for purposes of this Agreement, and it is not intended to, and shall not, confer consent to jurisdiction with respect to any other Dispute in which a party to this Agreement may become involved. The Parties acknowledge and agree that terms and conditions of this Agreement have been freely, fairly and thoroughly negotiated.

25.3 Waiver of Jury Trial. EACH PARTY HEREBY WAIVES, TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, ANY RIGHT IT MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY PROCEEDING BROUGHT UNDER THIS AGREEMENT. Each Party (a) certifies that no representative of the other Party has represented, expressly or otherwise, that such other Party would not, in the event of litigation, seek to enforce the foregoing waiver and (b) acknowledges that it and the other Party has been induced to enter into this Agreement by, among other things, the mutual waivers and certifications in this Section 25.3.

25.4 Survival of Termination. Contractor shall only be liable to Owner in connection with the non-performance of the Work only for causes of action for acts or omissions prior to Final Completion or, with respect to Warranty claims, prior to the end of the applicable Warranty Period; provided that Owner complies with its Notice obligations under Article 16 with respect to such Warranty claims. The terms of the preceding sentence shall in no way limit Contractor's or Owner's obligations in connection with provisions which by their nature are intended to survive the termination of this Agreement.

25.5 No Oral Modification. No oral amendment or modification of this Agreement by any officer, agent, member, manager or employee of Contractor or Owner, either before or after execution of this Agreement, shall be of any force or effect.

25.6 Amendments; Waiver. Amendments to this Agreement may be made from time to time; provided that no amendment or modification of this Agreement or any provision hereof shall be valid or effective unless in writing and signed by duly authorized representatives of both Parties. No consent to, or waiver, discharge or release of, any provision of or breach under this Agreement shall be valid or effective unless in writing and signed by the Party giving such waiver. No specific waiver shall constitute a waiver with respect to any other provision or breach, whether or not of similar nature, or in any way affect, limit, modify or waive that Party's right thereafter to enforce or compel strict compliance with any other term, covenant, condition or other provision hereof, any course of dealing or custom of the trade notwithstanding. Failure on the part of any Party to insist in any instance upon strict, complete and timely performance by the other Party of any provision of or obligation under this Agreement shall not constitute a waiver by such Party of any of its rights under this Agreement or otherwise.

25.7 Inspection, Review and Approval. Owner and its representatives (including Owner's Engineer), any Owner Financing Party, the Power Purchasers under each respective PPA and the Participating TO shall have the right to observe and inspect the Work at the Site, such observations and inspections to be arranged at reasonable times and with no less than five (5) Business Day's advance Notice to Contractor. Notwithstanding Owner's inspection, review, monitoring, observation, acknowledgement, comment or Owner's approval of any items reviewed, inspected, monitored or observed in accordance with this Agreement, neither Owner nor any of its representatives or agents reviewing such items, including the Owner's Engineer, shall have any liability for, under or in connection with the items such Person reviews or approves, and Contractor shall remain responsible for the quality and performance of the Work in accordance with this Agreement. Owner's or its representative's inspection, review, monitoring, observation, acknowledgement, comment or approval of any items shall not constitute a waiver of any claim or right that Owner may then or thereafter have against Contractor. Unless otherwise expressly provided herein, Owner shall not unreasonably delay its review of any item submitted by Contractor for review or approval for review or approval; provided that the foregoing shall not be used to decrease any express time limitation for such review or approval set forth herein. Any review, inspection, monitoring or observation by Owner or its representatives in accordance with this Agreement shall not constitute any approval of the Work undertaken by such Person, cause Owner to have any responsibility for the actions, the Work or payment of such Person (other than in respect of Owner's obligations to pay Contractor in accordance with Article 6) or to be deemed to be in an employer-employee relationship with Contractor or any Subcontractor, or in any way relieve Contractor of its responsibilities and obligations under this Agreement or be deemed to be acceptance by Owner with respect to such Work.

25.8 Third Party Beneficiaries. The provisions of this Agreement and all rights of the Parties hereunder are intended for the sole benefit of Owner and Contractor and there are no third-party beneficiaries hereof (other than the Owner Financing Parties, the Contractor Indemnified Parties and the Owner Indemnified Parties).

25.9 Further Assurances. Owner and Contractor will each use its reasonable efforts to implement the provisions of this Agreement, and for such purpose each, at the reasonable request of the other, will, without further consideration, promptly execute and deliver or cause to be executed and delivered to the other such assistance, or assignments, consents or other instruments in addition to those required by this Agreement, in form and substance satisfactory to the other, as the other may reasonably deem necessary or desirable to implement any provision of this Agreement.

25.10 Record Retention. Contractor agrees to retain for a period of four (4) years from earlier of the Final Completion Date and the termination of this Agreement all material records relating to its performance of the Work or Contractor's Warranty obligations herein.

25.11 Binding on Successors. Subject to Article 20, this Agreement shall be binding on the Parties and on their respective successors, heirs and permitted assigns.

25.12 Merger of Prior Contracts. This Agreement supersedes any other agreements, whether written or oral, that may have been made or entered into between Owner and Contractor or by any office or officer of such Party relating to the Project or the Work. This Agreement and the Exhibits attached hereto constitute the entire agreement between the Parties with respect to the procurement and construction of the Project, and there are no other agreements or commitments with respect to the Project except as set forth herein and therein.

25.13 Counterparts. This Agreement may be executed in any number of counterparts, and either Party may execute any such counterpart, each of which when executed and delivered shall be deemed to be an original and all of which counterparts taken together shall constitute but one and the same instrument. This Agreement shall become effective when each Party shall have received an executed counterpart of this Agreement, and an executed counterpart delivered by fax, .pdf or other means of electronic communications shall be deemed to be an original and shall be as effective for all purposes as delivery of a manually executed counterpart.

25.14 Set-Off. Either Party may deduct and set-off against any part of the balance due or to become due to the other Party pursuant to this Agreement any amounts that are due from such other Party pursuant to this Agreement.

25.15 Fees and Expenses. Except as specifically set forth herein, each Party shall be responsible for any legal fees and expenses, financial advisory fees, accountant fees and any other fees and expenses incurred by such Party in connection with the negotiation, preparation and enforcement of this Agreement and the transactions contemplated hereby.

25.16 Announcements; Publications. Contractor shall not (either directly or indirectly), issue or make any public release or announcement with respect to or concerning entering into this Agreement or a Party's performance of its obligations under this Agreement, or permit any Subcontractor, Supplier or customer to do the same, without the prior written consent of Owner and affording Owner a reasonable opportunity to provide comments on such proposed release or announcement.

25.17 Independent Contractor. Contractor is an independent contractor, and nothing contained herein shall be construed as constituting any relationship with Owner other than that of owner and independent contractor, except as expressly provided in this Agreement pursuant to which Owner appoints Contractor as Owner's agent, or as creating any relationship whatsoever between Owner and Contractor's employees. Neither Contractor nor any of its employees is or shall be deemed to be an employee of Owner.

25.18 Independent Engineer. Contractor acknowledges that the Independent Engineer will be engaged for the purpose of providing to Owner Financing Parties a neutral, third party overview of the Work. The Independent Engineer shall provide Owner Financing Parties with independent opinions and determinations, arrived at reasonably and in good faith, with respect to: (a) the status of the Work; (b) the performance of the Project and equipment and the Availability Test, Capacity Test and Long Term Energy Tests and the results and procedures related thereto; (c) invoices submitted by Contractor; (d) Contractor's quality control procedures for the Work and major components thereof; and (e) the approval of Changes In Work.

25.19 Financing Matters. In connection with any transaction (including collateral assignment by Owner of its rights, title and interest under this Agreement to any Owner Financing Party in accordance with Section 20.1) among the Owner Financing Parties and Owner or any of its Affiliates, Contractor shall execute and deliver, any usual, reasonable and customary consent document (which shall include acknowledgement of Owner Financing Parties' security interest, assignment as security of Owner's rights under this Agreement, notice of Owner default, step-in/step-out cure rights and other reasonable provisions customary in project financings), or other documents reasonably requested by Owner provided that Contractor shall not be obligated without a Change In Work to accept any undertaking imposed by any Owner Financing Party which Contractor reasonably believes will increase its obligations under the Agreement, whether such increased obligations be technical, economic, schedule related or otherwise. Contractor agrees to make available, or to use commercially reasonable efforts to cause its Subcontractors to make available, to the Owner Financing Parties and the Independent Engineer, subject to an appropriate confidentiality agreement, independent reviewers, feasibility consultants, and other financial institutions or parties involved in the financing process, such information in the control of Contractor, its Affiliates and Subcontractors (including financial information concerning Contractor, its Affiliates and the Subcontractors) as may be reasonably requested by Owner. Contractor acknowledges that the Owner Financing Parties and the Independent Engineer may monitor, inspect and review the Work as permitted by Article 10, Section 12.3 and Section 25.18.

25.20 Financial Statements.

25.20.1 Upon request from Owner Financing Party, Contractor shall deliver to Owner Financing Party as soon as available, but no later than sixty (60) days after the close of the first, second and third quarterly periods of its fiscal year, quarterly (and year-to-date) (consolidated, if applicable) its unaudited consolidated financial statements, including a balance sheet and statements of income and statements of cash flows; and

25.20.2 Upon request from Owner Financing Party, Contractor shall deliver to Owner Financing Party, as soon as available, but no later than one hundred twenty (120) days after the close of each applicable fiscal year, its audited consolidated financial statements, including statements of equity, balance sheets as of the close of such year, and statements of income and cash flows, all prepared in accordance with generally accepted accounting principles in the United States of America consistently applied and certified by a nationally recognized independent certified public accounting firm selected by Contractor and satisfactory to Owner.

[REMAINDER OF PAGE INTENTIONALLY LEFT BLANK]

IN WITNESS WHEREOF, the Parties have caused this Agreement to be executed as of the Execution Date.

EXHIBIT A - STATEMENT OF WORK

PROJECT DESCRIPTION 1

A. Engineering and Quality Control: 4

B. Project Management and General Conditions: 6

C. Permit Compliance: 12

D. Existing Infrastructure – Upgrades, Maintenance and Repair: 14

E. Civil Infrastructure, Site Clearing and Fencing: 15

F. Foundations: 16

G. PV Array Procurement, and Construction: 17

H. BESS Procurement and Construction 19

I. AC Collection System: 21

J. Communication / Supervisory Control and Data Acquisition System (SCADA/DAS): 22

K. Project Interconnection Facilities: 24

L. Spare Parts and Owner Training: 25

M. Weather Stations 25

N. Security System 26

O. Operations & Maintenance Facilities 26

PROJECT DESCRIPTION

An electrical generation facility consisting of approximately 147 MW AC of solar-powered electric generating capacity (the "Solar Facility"), and a related battery energy storage system with a nominal capacity of approximately 361 MWh (the "BESS"), to be procured, constructed, installed, tested and commissioned in accordance with the terms and conditions set forth in this Agreement, including a 345 kV project substation, a 345 kV Gen Tie Line connecting the Project Substation to the point of interconnection, and all other applicable work to interconnect the project located in Brown and Mills Counties, Texas (collectively, the "Project")

Scope of Work

The Project's Scope of Work ("Work") generally consists of all management and control, procurement, construction, installation, quality control and quality assurance, inspections, environmental compliance, safety inspections, report and documentation, supervision, labor, materials, equipment, specialty items, commissioning, interconnection and approval, performance testing, and all other services required for executing the work to deliver and fully integrate the project as described above (the "Project"). The Work shall consist of the following, but not limited to efforts:

- Facility Construction, including site/civil work, Foundation infrastructure, mechanical, electrical, and monitoring/control systems construction.
- Perform all concrete washout off-site.
- Storm water, erosion and sedimentation control implementation.
- Procurement, maintenance, and ultimate close-out of all Contractor Permits.
- Procurement, transport, offloading, staging, preparation, installation, and commissioning of all Photovoltaic generation equipment ("Generation Equipment" or "PV Array") except as below under Provided by Owner.
- Procurement, transport, offloading, staging, preparation, installation, and commissioning of all Battery Energy Storage System equipment ("BESS") except as below under Provided by Owner.
- Procurement, transport, offloading, staging, preparation, installation, and commissioning of AC collection systems, and all facilities up to and including the Utility interconnection as defined as the point of interconnection with the Utility, and in accordance with the utility requirements except as below under Provided by Owner.
- Installation of piles, single-axis tracker system, and solar panels.
- Underground and aboveground DC electrical collection system. All wiring, conduits, and cable management as required.
- Transformation from DC to AC including all inverters, combiners, switchgear, and equipment pads or skids.
- Underground solar field and BESS AC collection system, including the overhead transmission line from the solar site's substation to Point of Interconnection at the Project's designated interconnection voltage
- Installation and coordination with the manufacturer for all inverters commissioning.
- Offloading, staging, preparation, handling, and installation of any Owner-provided equipment for the Project
- Installation, and implementation of SCADA/DAS/Met Stations and communication network to the inverter level, at minimum. All SCADA data shall also be mapped to Owner's PI network.
- Interface and coordination with the Participating Transmission Operator ("Utility") as required.
- Installation of Project fencing per engineered and approved plans.

- Project management, safety, and quality control and quality documentation throughout all phases of installation, commissioning, and final testing and verification.
- All safety equipment, dumpsters, off-hour security, chemical toilets, eye/hand washing stations, and lift equipment.
- Final commissioning, performance testing (other than noted above) and any other testing required under the Agreement and verifications found in Exhibits H – H5.

1. General Requirements

   a. The systems and equipment supplied by Contractor shall be suitable for the environment in which they will be located and shall be designed for a plant life of at least twenty five (25) years.

   b. The specifications provided herein are intended to identify overall system requirements and certain specific hardware requirements, which Owner requires to ensure that the Plant provided by Contractor shall operate reliably and safely during the Plant's design life.

   c. The general system performance criteria are defined in this Scope of Work and the attachments. Contractor is responsible for ensuring that criteria for Contractor Work included in this specification are met.

2. Reliability and Maintainability

   a. Contractor shall provide, as part of the training deliverables, general operations and maintenance information for reference, including sample inspection and preventive maintenance activities recommended by OEMs. Such materials are provided for informational purposes only and shall not constitute a warranty, representation, or guarantee of plant performance beyond the applicable warranty period.

Contractor shall provide familiarization training (which shall not be repeated due to Owner personnel change) for Owner's designated personnel on systems furnished and installed by Contractor. Contractor's obligation is limited to initial familiarization only; Owner is responsible for all subsequent training, certification, and ongoing O&M activities.This Scope of Work sets forth the work provided by Contractor, and provides additional clarification regarding certain items of work being provided by Owner. Unless specifically identified as work by Owner, Contractor shall provide all scope to provide a complete and functional Project.

Provided by Owner

The following are Owner provided items for the Projects:

- Investigation, full surface clearing and targeted subsurface clearing of unexploded ordinance (UXO)
- Vegetation removal and mulching

- Construction access rights and land use rights to construct the Project
- Easement Encroachment Agreement(s)
- Conditional Use Permits or Zoning Permits.
- Environmental studies, reporting and Agency Consultation
- USACE Permitting
- Project Design and Engineering
- Geotechnical Report
- Topographical and property boundary survey data
- Builder's All Risk Insurance
- Interconnection Agreement, including associated fees (see Exhibit I)
- Owner Provided Materials:
    - Main Power Transformers (QTY 2)
    - HV Circuit Breakers (QTY 3)
    - BESS System, including PCS and MV Transformer Skids (QTY 72)
    - PV Modules (QTY 392,040 + approx. 4,000 spares, of which 1,600 are allotted for construction spares)
    - PV Inverters (QTY 40)

The Contractor's Scope of Work includes all other work required to deliver the Project, including, but not limited to, the following:

B. Engineering and Quality Control:

1. Owner is responsible for engineering the Project.

2. Beyond the survey information provided by the Owner, the Contractor shall be responsible for any additional surveying that Contractor deems necessary to complete the Work.

3. A geotechnical assessment has been completed for the Project and provided by the Owner. Contractor shall be responsible for any supplemental geotechnical review that Contractor deems necessary to complete the Work.

4. In coordination with the PPC and SCADA vendor, Contractor shall provide full design and engineering documentation and shall work with Owner's Engineer to incorporate PPC/SCADA design into the Project Design Plans.

5. Contractor shall coordinate all equipment settings to ensure compliance with all relevant governing bodies (including but not limited to NERC, TX PUC, ERCOT, Oncor.)

6. All materials designed for incorporation into the Project shall be UL. ETL or CSA Listed, or listed by an equivalent organization if approved by Owner and the AHJ.

7. Contractor will develop site-specific Project QA/QC plans that clearly outline the management, communication, and overall quality control procedures that will be

employed on the Project. Contractor will develop forms and quality checks to ensure all work is inspected prior to being deemed complete. Contractor shall submit to Owner a final copy of its QA/QC plan for review no later than 45 days after contract execution for Owner review and comment.

8. All QA/QC testing procedures onsite shall be witnessed and documented by a qualified representative of the Contractor. Owner shall observe and witness QA/QC as necessary and at its discretion. A qualified field engineer/QA representative of Contractor shall date and sign documentation indicating completion and acceptance of each onsite QA/QC test procedure.

9. Contractor will keep and maintain organized and thorough as-built and quality documentation ("Job Books") for each Project throughout the course of construction. Quality control documents, submittals, and As-Built Drawings (in pdf and native format) shall be available for review throughout the course of construction and transmitted to the Owner prior to, and as a condition of, Final Completion. Contractor shall ensure that any Contractor procured materials supports the requirement to deliver a structurally sound project designed to operate a minimum of 25 years.

10. Job Books means all purchasing and other information relating to the Work, including:

(a) a drawing index;

(b) a reference index;

(c) copies of Subcontractor's and Sub-subcontractors' Permits;

(d) copies of all contracts and purchase orders for Major Sub-contractor's equipment (non-priced);

(e) Sub-subcontractor information for equipment purchased (as received from Sub-contractors) including instruction and maintenance manuals;

(f) one copy of the As-Built Drawings and documentation;

(g) training manuals;

(h) a cable and raceway schedule;

(i) the Operating Manuals;

(j) electrical one-line diagrams for the Project;

(k) field testing of power and fiber optic cable;

(l) a compilation of final Project safety records; and

(m) a final list and summary of the Work performed by all Sub-subcontractors

C. Project Management and General Conditions:

1. Contractor shall, at minimum, provide and maintain all Owner defined insurance requirements.

2. Contractor will perform quality assurance testing and quality control monitoring in accordance with the design documents, Generation Equipment manufacturers' technical specifications, and prudent industry practices, except as above under Provided by Owner.

3. Contractor will develop a detailed execution plan and Critical Path Method ("CPM") schedule specifically for the Project that will integrate related activities and comply with agreed-upon milestones. Contractor will provide periodic updates of the CPM schedule in accordance with Owner's meeting & reporting requirements.

   a. DEFINITIONS

      (1) Baseline – Project plan (schedule, commodity curves, etc.) upon which the executed contract is based. All Baseline deliverables are to be submitted within the time requirements established within the Agreement, or if no time is so stated then twenty-eight (28) days of the Effective Date of the Agreement (or date approved by Owner) and are required to be reviewed and approved by Owner. All Baseline deliverables will reflect the Contractor's schedule to achieve the Milestone and Guarantee Milestone Dates as reflected in Exhibit S – Project Schedule. The Baseline project schedule is maintained unchanged throughout the contract.

      (2) Target – Project plan (schedule, commodity curves, etc.) upon which the Contractor will execute the work. The Target project plan may vary from the Baseline plan as the Contractor modifies their execution plan.

      (3) Current – Project plan (schedule, commodity curves, etc.) reflective of actual progress to date and forecasted progress to complete the contractual scope of work.

   b. GENERAL PROGRAM REQUIREMENTS

      (1) Provide adequate methods and tools for budget control, scheduling, tracking, trending, and reporting of work in progress for the procurement and construction activities related to the Project.

      (2) Identify Contractor's organization.

c. MILESTONES AND GUARANTEED MILESTONES

(1) Milestones and Guaranteed Milestones have been established by Owner for the construction activities in Exhibit S - Project Schedule. Contractor shall provide Owner proposed dates for each Milestone and Guaranteed Milestone in Exhibit S. Exhibit S shall be approved by Owner at the time of Agreement.

(2) Contractor shall include in the comprehensive project schedule each Milestone and Guaranteed Milestone Date. The Milestones are to be logically tied to the scheduled activities. The Contractor's status against each Milestone and Guaranteed Milestone Date will be updated along with all schedule activities on a weekly basis through indicator updates.

(3) The Milestones and Guaranteed Milestone Dates status shall be reported on in the Monthly Management Review Meeting.

4. Contractor will be responsible for providing construction management, field inspection, oversight/planning, and general coordination of the Work.

5. Contractor will perform all staking, layout and final surveying to support compilation of As-Built Drawings for the Work.

6. Contractor will provide on-site Environmental Health, Security and Safety ("EHSS") coverage to manage the day-to-day EHSS program in accordance with the requirements of the Contract. Contractor will perform EHSS activities in accordance with Exhibit D, industry best practices and as required to facilitate an injury-free workplace. Owner shall cause its consultants, subcontractors, and personnel to wear required PPE and comply with the Contractor's on-site safety program.

7. Contractor will conduct EHSS "first-day first-hour" orientation for all personnel, inclusive of all personnel on site whether they are employed by Contractor or others, prior to the person being released to work on the Project site.

8. Contractor will provide regular operating reports to Owner in accordance with Owner's meeting and reporting requirements, as described in Exhibit B of the Agreement. Contractor shall provide comprehensive monthly reports due by the 5th Business Day of each month to be utilized for the monthly meeting agenda and to satisfy reporting requirements from Owner to other third parties. In addition Contractor shall hold weekly update meetings with the Owner to review past week's progress and review 3-week look-ahead schedule, safety updates, and address any critical issues. The minutes are to be submitted to the Owner within 48 hours of the meeting.

9. Contractor will provide copies of all testing results, As-Built Drawings and/or completion documentation for each component of the Work.

10. Contractor will provide security for the Project site during non-working hours through Substantial Completion. During working hours, security may be provided by Contractor's on-site staff. Contractor will provide security services for the project. Scope of security service will be dictated by the progress and extent of work occurring on the sites.

11. Contractor shall be responsible for installing adequate signage on site. All safety signage shall comply with the most recent ANSI Z535 standards. Danger signage, permit required signage, barricades, danger tape, and notices will be posted as required to administer EHSS. Temporary (but clearly legible and durable) signs will be installed at each PV Block designating block number. Temporary (but clearly legible and durable) signs will be installed as needed for overhead power lines, blind corners, dips, and other hazards including trucks entering roadways. Temporary (but clearly legible and durable) signs will be installed at site entry indicating Project name, Owner, Contractor, and entry requirements. Such signage will be approved by Owner prior to fabrication. Temporary signs will be installed during civil construction and maintained up to, and removed as a condition of, Final Completion.

12. Contractor shall implement a zero tolerance policy for employees that leave the work areas, drive on or otherwise disturb property not designated for impact or outside the limits of disturbance, cut "cross-country" versus utilizing designated travel ways, ignore environmental buffers, signage, or restrictions, litter at the Project site, or otherwise conduct themselves in a manner that does not align with the sensitive nature of a project on leased private lands. In addition, Owner will implement the same policy for its employees, consultants, or subcontractors.

13. In support of Contractor's warranty obligations, Contractor shall provide a Project warranty overview summary at the completion of the Project for all provided equipment components, warranty durations, start and end dates, etc.

14. Prior to mobilization, Contractor shall provide a Project execution plan with sufficient detail to develop an understanding of how the Project will be managed and controlled, including but not limited to the following items:

    a. Site management staff, including Safety, Quality control, Project Engineers, etc.

    b. Site trade staff.

    c. Equipment, including earthmoving equipment, forklifts, pile drivers, trucks, etc.

    d. Site traffic control plan.

    e. Training and qualification requirements.

    f. Safety Orientation Materials.

g. Startup and commissioning.

h. Project environmental management.

i. Handling of waste materials.

j. Handling of hazardous materials.

k. Unanticipated discoveries.

15. Contractor shall be responsible for mobilizing all labor, equipment, materials, and temporary facilities necessary to commence construction. This includes establishing laydown areas, construction trailers, temporary communications infrastructure, utilities, and safety signage.

16. Upon completion of the Work, the Contractor shall demobilize its own (including all subcontractors hired by Contractor) personnel, equipment, and temporary facilities, and remove construction debris and waste materials generated solely from its operations. The Contractor shall leave its work areas in a clean and orderly condition consistent with good Industry Practice. The Contractor's responsibilities related to SWPPP completion and submission of Notice of Termination (NOT) are limited to removing or converting temporary Best Management Practices (BMPs) and temporary stabilization measures it installed, in accordance with the applicable portions of the Project's Storm Water Pollution Prevention Plan (SWPPP). After Final Completion, all remaining SWPPP maintenance, stabilization, and related responsibilities will belong to the Owner.

17. Codes, Regulations and Standards

a. Contractor shall build the Plant in accordance with all applicable federal, state and local laws and codes, regulations and standards listed below. The codes and standards utilized shall be the latest editions in effect on the effective date of this Agreement. Where these codes do not govern specific features of the equipment or system, Contractor and Original Equipment Manufacturer (OEM) standards shall be applied. Where local codes or ordinances will have an impact on the design (e.g. building height restrictions) Owner shall address these with the local authorities having jurisdiction (AHJ).

b. Federal Regulations

(1) US Environmental Protection Agency Regulations

(a) Resource Conservation and Recovery Act Regulations

(b) Clean Water Act

(c) Clean Air Act

(d) Oil Pollution Act

(e) Comprehensive Environmental Response, Compensation and Liability Act

(f) Emergency Planning and Right-to-Know Act

(g) Toxic Substances Control Act

(2) National Environmental Policy Act

(3) US Fish and Wildlife Regulations (e.g. Endangered Species Act)

(4) US Army Corps of Engineers Regulations

(5) Occupational Safety and Health Act (OSHA)

(a) 29 CFR 1910 Occupational Safety and Health Standards

(b) 29 CFR 1926 Safety and Health Regulations for Construction

(6) US Department of Transportation Regulations

(7) Code of Federal Regulations

c. Applicable State, County and Local Codes and Regulations

(1) Texas Administrative Code

(2) County Regulations

(3) Department of Transportation Regulations

(4) Local Codes and Ordinances

d. Applicable Industry Codes and Standards from the following list. Alternative standards may be used only upon Owner's acceptance of Contractor's written request, which shall specify the proposed alternative standard, why such change is necessary and how compliance is to be achieved.

(1) Mechanical

(a) ANSI - American National Standards Institute,

(b) PTC - Power Test Codes - Applicable Test Codes

(c) ASNT - American Society for Nondestructive Testing

(d) ASTM - American Society for Testing and Materials

(e) AWS - American Welding Society

(f) SSPC - Steel Structures Painting Council

(g) MSS – Manufacturers Standardization Society

(2) Electrical

(a) ANSI - American National Standards Institute

(b) FM - Factory Mutual

(c) ICEA - Insulated Cable Engineers Association

(d) IEEE - Institute of Electrical and Electronics Engineers

(e) NETA – International Electrical Testing Association

(f) IESNA - Illuminating Engineering Society of North America

(g) ISA - International Society for Measurement and Control

(h) LPC - Lightning Protection Code

(i) NEC - National Electrical Code, latest version adopted by Authority Having Jurisdiction

(j) NEMA - National Electrical Manufacturers Association

(k) NESC - National Electrical Safety Code

(l) UL Underwriters Laboratories

(m) NFPA – National Fire Protection Agency

(n) IEC – International Electric Code

(3) Civil/Structural/Architectural

(a) ACI - American Concrete Institute

(i) ACI 318 - Building Code Requirements for Reinforced Concrete

(ii) ACI Manual of Standard Practice

(iii) ACI 350 – Environmental Engineering Concrete Structures

(b) ASCE 7 – Minimum Design Loads for Buildings and Other Structures

(c) AISC - American Institute of Steel Construction

(d) AISI - American Iron and Steel Institute "Specification for Design of Cold-Formed Steel Structural Members," Parts 1 and 2

(e) AWS - American Welding Society

(f) International Building Code and any State and local amendments and codes

(g) SSPC - Steel Structures Painting Council

D. Permit Compliance:

1. Contractor shall comply with all Owner permit requirements. Permits and Permit Conditions are included as an Exhibit to the Agreement.

2. Storm Water Pollution Prevention Plan ("SWPPP") – Contractor shall implement a SWPPP and obtain coverage under the Construction Stormwater Permit (CGP) and maintain SWPPP and relevant documentation through Final Completion. Contractor shall also be responsible for keeping Texas Commission on Environmental Quality updated with any civil design or erosion control design changes as well as the eventual termination of said permit coverage. For the avoidance of doubt, Owner shall design SWPPP and shall update design as required during duration of the Work.

3. Contractor shall be fully responsible for full-time dust control. In the event Contractor is not reasonably controlling dust, Owner shall have the right (but not the obligation) to supplement dust control efforts at the cost of the Contractor with written notice.

4. Contractor shall support the Owner in obtaining any remaining building permits and independently obtain transportation permits for project work as may be required by the County and the state of Texas.

5. Contractor shall schedule the County, City or State Inspectors, and special inspectors for any required field inspections.

6. Contractor will install Best Management Practices ("BMP's") prior to work in an area, and will maintain erosion control devices throughout the course of the work. Contractor will inspect and maintain BMP's in accordance with the SWPPP and maintain all documentation as required. Contractor shall incorporate a "BMP Map" in the office clearly showing the BMP's installed to date as well as a binder of all inspections dates, findings, and corrective actions taken.

7. Contractor acknowledges that the techniques, locations, and details shown in the SWPPP and associated drawings are performance based and may represent the minimum requirements. Proper erosion and sedimentation control practices on site involve constant monitoring, adaptation and incorporation of all additional means necessary to prevent silt migration and promote a stable worksite. As such, Contractor shall constantly monitor BMP effectiveness and immediately address erosion concerns with appropriate methods, including but not limited to, additional civil drainage details. For signs of scouring or sediment transport, Contractor shall incorporate matting, additional compaction, or other slope stabilization methods. Erosion control measures shall continue to be monitored through Final Completion.

8. Contractor shall mark the limits of disturbance in the field and maintain such markings and ensure that its personnel and subcontractors stay well within the limits for all activities (construction, access, etc.) unless specifically permitted to leave said areas after obtaining approval by Owner in writing.

9. Contractor acknowledges there are adjacent landowners not secured under lease by Owner or designated for disturbance, and will take full responsibility for any error in accessing or disturbing land not leased or scheduled for impact, as shown in Owner provided documents.

10. Contractor shall fully participate in any Owner site protocols for the protection, monitoring and reporting of wildlife that frequent the project area.

11. Contractor shall ensure that all equipment and vehicles are equipped with a shovel, spill kit, and fire extinguisher. Contractor shall provide process plan for refueling of vehicles and equipment on site, spill cleanup, and processing and disposal. All spills, regardless of quantity, shall be cleaned up immediately and Owner shall be notified immediately. A spill log that clearly shows "cradle to grave" shall be maintained. This shall include logs and current manifestations to clearly show source, type of spill, relevant dates, container, and final disposal site documentation.

12. Contractor shall develop and comply with a Project specific Spill Prevention Control & Countermeasure program (SPCC) including all secondary requirements for stored fuel or fueling stations.

13. All refuse that leaves the work area must be retrieved and disposed of promptly.

14. Contractor shall practice good job site housekeeping, promptly dispose of trash and debris, and cause said debris to be transported from the job site to a suitable disposal facility.

15. Contractor shall provide project recycling services and facilities to the extent possible.

16. Contractor shall immediately report any sightings of dead or injured wildlife to Owner.

17.

18. Contractor shall provide and obtain required permits for all necessary temporary facilities and utilities required to support construction activities, including but not limited to potable and non-potable water, septic treatment or disposal, power for tools and trailers, and appropriate disposal of construction and domestic waste in accordance with local, state, and federal requirements.

19. Contractor shall provide copies of drawings/specifications/ vendor manuals or other documents that Owner requires on-site during the project. Contractor shall also provide Owner personnel access to document control for specific information needs.

20. Any temporary trailers and storage facilities shall meet any state, federal, or local requirements.

21. Contractor to provide copy of Contractor obtained permits within 10 business days. Contractor is to CC Owner on all correspondence with AHJ(s).

E. Existing Infrastructure – Upgrades, Maintenance and Repair:

1. Pertaining to existing [County, State, US] roads, Contractor shall comply with the requirements of the Project Conditional Use Permit, as well as any/all additional conditions that may be imposed by the [County, State, US] (i.e. construction traffic speed limits).

2. Contractor shall assume responsibility to provide dust control for the existing [County, State, US] road(s) to be used by Contractor or subcontractors during the times of active construction from mobilization through Final Completion. Repairs made to the road after Final Completion or during construction and as deemed necessary by the [County, State, US] will be paid for by the Owner. Contractor

shall conduct a pre-construction survey to document state of roads prior to construction.

3. Contractor shall create and administer a detailed traffic plan and haul route map outlining this route and any additional Contractor selected routes. This haul route plan shall be reviewed and accepted by the [County, State, US] prior to increased traffic flow due to the project.

4. Contractor shall be responsible to work with County Officials and the Texas Department of Transportation, and shall comply with any requirements or recommendations. Proper notice shall be delivered to the local jurisdictions as required prior to starting any work in a County or State Right-of-Way.

5. Contractor shall perform any required upgrade work to existing private access roads sufficient for use throughout the life-cycle of the project construction. ***[Note: For Chisme Solar and Storage project please refer to Attachment G KMZ files for additional information.]***

F. Civil Infrastructure, Site Clearing and Fencing:

1. Where infrastructure is in close proximity to established limits of disturbance, Contractor shall implement strict protocols to ensure that disturbance does not encroach into areas not designated for improvements.

2. Contractor will construct civil infrastructure in accordance with the stamped IFC drawings. Main access roads will be constructed of material specified (and tested) to conform to the Civil Drawings and Specifications.

3. Contractor shall be responsible to maintain, repair, and provide suitable dust control for all newly constructed roads on site through Final Completion.

4. Contractor will turn over new roads to Owner in acceptable final condition for use during the operations phase.

5. Contractor will install a perimeter security per the civil improvement drawings.

6. Contractor will construct a suitable compacted native soil Project laydown area for temporary storage of the Generation Equipment and for the use in PV Array assembly.

7. Contractor will design and install appropriate erosion channel crossings, culverts, ditches, etc. as displayed on the IFC Civil Drawings or as field conditions dictate, so as to maintain the integrity of the road infrastructure and minimize road material from washing out or scouring other infrastructure.

8. Contractor will manage appropriate utility crossings required for completion of Contractor's Work. Prior to any work on site, Contractor and their subcontractors

are fully responsible to field verify the location of existing utilities or infrastructure.

9. Contractor will provide dust control for the duration of the Project, up to Final Completion. Dust control will consist of water trucks as needed based on current conditions. Chemical suppressants shall not be utilized unless written approval is received from Owner and the AHJ.

10. Contractor shall be responsible for metering, transporting, any temporary storage, etc., that may be necessary. Contractor shall reclaim, re-seed and/or stabilize all disturbed grounds other than those areas that are not intended for plant growth such as roads and retention areas. All temporary areas, enlarged entrances, collection system paths, embankments, fill slopes and any other areas of disturbance not considered "permanent" will be restored, or re-vegetated and monitored per State regulations until termination of coverage under the CGP, through the filing of the Notice of Termination (NOT). Final Completion may be achieved prior to NOT due to timing of stabilization measure establishment and environmental conditions that may prohibit growth. Contractor shall remove all trailers, conexes, and materials from the laydown area(s) and reclaim. Final restoration and shaping of PV Array strings and access roads shall take into account positive drainage to eliminate ponding or other drainage concerns.

11. Initial clearing and grubbing for the site shall be completed by Owner.

12. All non-organic construction related debris and material removed shall become the immediate property of Contractor and shall be removed from the premises and disposed of by Contractor in accordance with permits, Federal, State and local regulations.

13. All signs and barricades shall be provided and maintained by Contractor and shall be in accordance with good practice or jurisdictional regulations for safety and accident prevention. Contractor will post adequate speed limit, traffic control and direction signage on entrance roads and on the site during construction.

14. Contractor shall be responsible for compliance with State and local requirements for fugitive dust emissions. Contractor shall prevent the spread of dust during its operations. Contractor shall moisten all surfaces with water to reduce the risk of dust becoming a nuisance to the public and neighbors. Contractor shall furnish all labor, material and equipment necessary for dust control including tank trucks, hoses, water and commercial dust suppressants.

15. On-site open burning will not be permitted unless approved by appropriate local authorities and Concord New Energy.

G. Foundations:

1. Contractor shall utilize excess sub-soils as general fill for positive grading away from the PV Array, roadway support, or thin-spread across the PV Array areas.

2. Contractor shall install foundations/pilings straight and plumb, and shall correct or replace any racking foundations that are out of tolerance for the designed system as defined in Exhibit A-1.

3. Where Contractor is unable to install pile to specified embedment depth due to soil conditions ("Refusal"), Contractor shall use recommended methods approved by the Geotechnical report and Industry Standards to install piles. Methods may include pre-drill and backfill. Contract Price includes up to 5% pre-drill for pile Refusal. Refusal quantities greater than 5% of the total pile count included in the Work shall be billed according to the rates set out in Exhibit EE.

H. PV Array Procurement, and Construction:

1. Contractor shall procure all necessary equipment and materials, and construct the PV facility as designed, except as above in Provided by Owner.

2. PV Array procurement will include all material required for a complete and functional Project, other than those materials specifically noted as Owner Provided Materials.

3. Reserved.

4. PV Array installation will include, but is not limited to the following:

   a. Offload and QA/QC inspection of each component as it is delivered to site. Receiving and inventory documentation will be provided to Owner and filed in Job Books daily.

   b. Handling of PV Modules. Contractor shall prepare and execute a plan to protect PV modules from damage during unloading, transport and staging, including plans to (a) minimize the number of times pallets of PV modules are moved and (b) guarantee that pallets of PV modules are always placed on flat, stable and level ground. Contractor shall never allow pallets of PV modules to be placed on rough, rocky, muddy or any other ground surface that cannot evenly support 100% of the pallets structure.

   c. Owner shall be solely responsible for reviewing manufacturer flash test data and confirming that modules conform to project specifications and are free from defects. Contractor shall perform visual inspection of delivered modules solely to identify apparent shipping or handling damage. All visible damage must be documented by photographs, and any visible damage to packaging must be supported by a delivery driver's signature or, if applicable, noted in the Delivery Notice that the delivery driver refused to sign. Contractor shall be responsible for coordinating this documentation process but shall not bear the cost of delays or rejections resulting from Owner-furnished modules. Contractor shall not be obligated to discover any hidden or latent defects in the Owner-Provided Materials, including PV modules, and such inspection is not intended to

assure electrical, mechanical, or quality specifications of such provided equipment.

d. Contractor shall provide the specific installation manuals and related documentation to be adopted for this Project, except for those materials provided by Owner.

e. Project may have modules of different wattages. These must be placed in specific arrays per the electrical drawings to facilitate the correct DC inputs to the inverters.

f. Installation of all generation equipment and related infrastructure including, but not limited to, racking, modules, AC & DC wiring, conduits, combiners, re-combiners, inverters, weather station, DAS, pad mount transformer, main power transformers, metering, protection relays, disconnects, foundations, and switchgear/recloser per the approved and permitted engineered drawings and specifications. All of the aforementioned work will be installed in accordance with equipment manufacturer's guidelines and prudent industry practices. Any work not meeting these criteria will be corrected to the satisfaction of Owner and at the Contractor's expense. All torquing required per Generation Equipment manufacturer requirements or PV Array technical instruction is to be included by Contractor. Also to be included are documented 10% QA/QC verifications of all connections.

g. Contractor shall, at a minimum, follow the protocols and procedures as laid out in Exhibit FF (RRCE Hail Stow Protocol) with regards to stow during construction.

h. Contractor shall ensure that all PV module to module or module to home-run connections ("PV Connectors") are of identical make and model. **There is no such thing as "MC4 Compatible" PV connectors!!** Field made PV Connectors shall only be installed by trained and qualified personnel.

i. The Contractor shall coordinate with the Engineer of Record (EOR) and the cable management system supplier to ensure that cable routing, supports, and labeling align with the approved Design Plans. The cable management system design and labeling methodology shall be defined by the EOR and reflected in the Design Plans. The Contractor shall install and implement the approved system in accordance with those documents, applicable NEC requirements, and prudent Industry Standards. The Contractor's responsibility is limited to proper installation and labeling of the cable management components; the Contractor shall not be responsible for design adequacy, future modifications, or Owner operation and maintenance preferences.

j. Prior to final Performance Testing, each module shall be thoroughly cleaned array soiling shall be evaluated, and if Owner deems it necessary, Contractor shall thoroughly clean modules, which shall be considered additional services and reimbursable to Contractor.

k. Upon completion, joint inspections with Owner and Contractor will proceed to certify Substantial Completion. The goal is zero punch list items, but in case any items are identified, they will be corrected in a timely fashion.

l. [10%] torque verification, electrical testing, visual inspections, thorough and concise checklists, and all other quality control and testing will be documented on a daily basis and filed in the Job Books.

m. Contractor shall provide the equipment and tooling required to safely install the PV Array.

n. Contractor shall complete all fiber optical connections. Contractor shall perform fiber and OTDR testing after install and document good test and good connection results.

o. Contractor shall use a "reference block" approach which is designed to gain buy-in from all applicable parties (including tracker manufacturer) that the first module block is installed correctly, and then serve as a model finished product for all future module blocks at the Project.

p. Contractor shall perform all required commissioning services of each module block and the system as a whole. Contractor shall develop and manage a detailed and safe energization plan in conjunction with the Owner and Utility.

q. All wiring shall be clearly labeled, neat, and organized.

r. Contractor will complete punch list items applicable to the Work in a timely fashion.

s. Contractor shall perform a final Performance Test prior to, and as a condition of Final Completion to validate the PV Array's conformance to designed parameters. Performance Test requirements and procedures are contained within Exhibit H to the Agreement.

t. Cable shall be suitable for the intended application. Cables exposed to sunlight shall have ultra-violet resistant jackets and be listed for such use. Cable shall be ozone resistant, fire retardant and suitable for use in wet and dry locations. Cable support systems shall installed in accordance with recommendations from the cable manufacturer.

I. BESS Procurement and Construction

1. Contractor shall procure all necessary equipment and materials, and construct the BESS facility as designed, except as above under Provided by Owner.

2. BESS procurement will include all material required for a complete and functional Project, other than those materials specifically noted as Owner Provided Materials.

3. Contractor shall provide list of recommended spare parts for BESS system, including BESS DC system, BESS PCS and controls and BOS, with particular emphasis on vital items that will compromise the continued operations of the project if inoperable.

4. BESS installation will include, but is not limited to the following:

    a. Offload and QA/QC inspection of each component as it is delivered to site. Receiving and inventory documentation will be provided to Owner and filed in Job Books daily.

    b. Contractor shall review all manufacturer testing data and ensure BESS system components are received free of defects.

    c. Contractor shall provide the specific installation manuals and related documentation to be adopted for this Project.

    d. Installation of all generation equipment and related infrastructure including, but not limited to, BESS containers, PCS units, MV transformer skids, AC & DC wiring, conduits, DAS, pad mount transformer, metering, protection relays, disconnects, foundations, auxiliary transformers, transfer switches and switchgear/recloser per the approved and permitted engineered drawings and specifications. All of the aforementioned work will be in installed in accordance with equipment manufacturer's guidelines and prudent industry practices. Any work not meeting these criteria will be corrected to the satisfaction of Owner and at the Contractor's expense. All torquing required per Generation Equipment manufacturer requirements or BESS technical instruction is to be included by Contractor. Also to be included are documented 10% QA/QC verifications of all connections.

    e. Contractor shall be responsible for implementing a clean and organized cable management program and utilizing a standardized and detailed labeling methodology.

    f. Upon completion, joint inspections with Owner and Contractor will proceed to certify Substantial Completion. The goal is zero punch list items, but in case any items are identified, they will be corrected in a timely fashion.

g. [100%] torque verification, electrical testing, visual inspections, thorough and concise checklists, and all other quality control and testing will be documented on a daily basis and filed in the Job Books.

h. Contractor shall provide the equipment and tooling required to safely install the BESS.

i. Contractor shall complete all fiber optical connections.

j. Contractor shall perform all required commissioning services. Contractor shall develop and manage a detailed and safe energization plan in conjunction with the Owner and Utility.

k. All wiring shall be clearly labeled, neat, and organized.

l. Contractor will complete punch list items applicable to the Work in a timely fashion.

m. Contractor shall perform a final Performance Test prior to, and as a condition of Final Completion to validate the BESS's conformance to designed parameters. Performance Test requirements and procedures are contained within Exhibit H to the Agreement. Damages shall be paid for any performance shortfalls to compensate Owner for all current and future lost revenue caused by such design, installation, and/or performance discrepancies.

J. AC Collection System:

1. Contractor will construct an underground, direct buried electrical collection system. The collection system will generally consist of trenching for collection system cable, equalizer conductor, and fiber optic cable (discussed in more detail below). An equalizer ground wire (system ground) will be installed. Contractor is responsible for the full supply, and installation of all required junction boxes, elbows, arresters, splices and splice kits. Below ground splices shall be a last resort, and above ground junction boxes shall be utilized where feasible. If below ground splices are utilized, GPS locations shall be surveyed and located on the As-Built Drawings and locator balls shall be utilized.

2. Contractor shall be responsible for trenching, excavation, plowing, and related activities necessary to install the underground collection system to required depths and configurations in the design documents. Contractor shall provide proper backfill and compaction in accordance with project specifications and applicable codes. If existing soil is deemed unsuitable for backfill based on geotechnical data or field conditions, screened or select backfill shall be used, subject to Owner direction and equitable adjustment. Contractor shall not be responsible for errors or omissions in the design, electrical studies, or depth calculations provided by the Owner.

3. Contractor shall install cable marking tape in the trench, and "Buried Cable" signs at all access road crossings, if applicable.

4. Contractor shall install and terminate all power and fiber optic cables as required in support of the Work.

5. Contractor will provide and maintain testing documentation for the installed collection system, as per specifications in collection system drawings and QA/QC plan.

6. Contractor will provide adequate slack/service loops at all terminations wherever possible to support maintenance and additional terminations for future use.

7. Contractor shall provide, maintain and have available for review collection system QA/QC job books. Contractor shall keep and maintain accurate As-Built Drawings for the entire collection system.

8. Contractor shall test all conductor and terminations after the work is complete. Testing shall include, at minimum, VLF testing.

9. Contractor shall review manufacturer test results on each transformer prior to energization.

10. Contractor shall produce detailed commissioning and energization plans for review and approval by the Owner and the Utility, as applicable. The Electrical Commissioning Plan and Energization Plan are included as Exhibit H to the Agreement.

11. Contractor shall prepare and submit a "turnover book" for the collection system including all product data and shop drawings, as-built documentation, warranty information, and any other reasonable turnover documentation requested by Owner. Turnover book to be submitted within 30 days after Substantial Completion.

12. All cables are to be allocated a unique identification number (using the cable identification system in Exhibit A-1), which shall be clearly and securely fastened to both ends of the cables as soon as possible after installation.

13. The Contractor shall install MV cable terminations using manufacturer-approved kits, methods and Industry Standards, in accordance with manufacturer recommendations and the Engineer of Record's approved Design Plans.

K. Communication / Supervisory Control and Data Acquisition System (SCADA/DAS):

1. Contractor shall furnish, install, terminate, test, label and commission a complete fiber optic cabling network interconnecting the Contractor's proposed

SCADA/DAS to the inverter/combiner (at minimum), weather station, and OWNER SCADA/DAS (including all patch cables necessary).

2. Contractor shall support all coordination meetings required with Owner, the Utility, and other subcontractors to coordinate a fully functional SCADA/DAS system. The SCADA system shall provide all required control/status/etc. data from the Utility, as well as the Owner.

3. A minimum of 12-strand single-mode fiber will be provided within trench as the AC & DC collection systems where practicable.

4. Contractor shall perform splicing on all in-line fiber optic splices and will supply and perform all terminations.

5. A fully functioning SCADA/DAS system will be an absolute prerequisite to individual module block energization given the need for remote visibility, curtailment, reporting, and metering.

6. Junction and/or splice boxes shall be installed as required, and protected from future damage or vandalism up to Final Completion.

7. Contractor will complete OTDR testing for all fiber installed on site, and file results in the Job Books. Contractor shall replace any fiber runs with 2 or more fibers not fulfilling test requirement(s). Contractor shall keep and maintain accurate As-Built Drawings for turnover at the end of the project.

8. Contractor will provide sufficient slack/service loops to support maintenance and additional terminations for future use.

9. Contractor shall coordinate periodic conference calls, drawing reviews, and coordination meetings to ensure that Owner SCADA/IT requirements are properly documented in the SCADA/DAS design documents and completed in a timely fashion.

10. Contractor shall coordinate with all involved parties to ensure all systems work together, and receive/provide the information needed.

11. Contractor shall provide testing support and coordination with all involved communications and SCADA/DAS parties, to ensure systems work together as intended.

12. Contractor shall provide list of recommended spare parts for communication circuits, with particular emphasis on vital project communication circuits that will compromise the continued operations of the project if inoperable. (Modems, converters, etc.).

13. Contractor shall provide detailed training for the implemented SCADA/DAS platform.

L. Project Interconnection Facilities:

1. Contractor shall fully install the Project substation. This shall generally consist of all civil work, grounding, foundation, structures, electrical equipment, relaying and protections equipment, metering, SCADA, control wiring, fiber, fencing, and all other details as required to provide a complete and functional substation.

2. Contractor shall be responsible for meeting all Utility standards for construction and metering of the Project. The Contractor shall construct the Interconnection Facilities in accordance with the approved design, drawings, and specifications, including the project Interconnection Agreement.

3. Contractor acknowledges and agrees to manage and coordinate all procurement, construction and commissioning efforts, including, but is not limited to, the following:

    a. Participating in design review meetings

    b. Warranty, cost, and material tracking for the substation.

    c. Careful coordination and planning with Utility, including any switching, notification, etc. for outages as required. Coordination and full cooperation with Utility assigned construction administrators to witness installation, commissioning, and Energization.

    d. With the cooperation of Utility, develop a comprehensive substation Energization and switching plan which shall be provided to and approved by Owner.

    e. Preparing and submitting a "turnover book" for the substation including all product data and shop drawings, as-built documentation, warranty information, and any other reasonable turnover documentation requested by Owner. Turnover book to be submitted within 30 days of executing the Substation Completion Certificate.

    f. Preparation of submission materials, population of data needed for and submission of ERCOT 3 Part Checklist process in cooperation with Engineer of Record.

4. Contractor shall participate in all design review efforts with the Utility, and shall make all information available as requested (drawings, part numbers, product submittals, substation SCADA block diagrams and tag lists, etc.).

5. Prior to and during Energization, Contractor shall engage a qualified commissioning agent, to complete all required testing, point-point checks, protection relay testing, etc. Commissioning plan shall be submitted to Owner 60 days prior to Energization and a completed and clean "for record" commissioning plan shall be submitted to Owner no later than 30 days after Energization.

6. Contractor shall recommend spare parts list for Owner owned substation. Risk assessment evaluation (Low probability high impact / high probability low impact) of critical substation items with cost in excess of $15K (Transformer, breakers, CT's, VT's CCVT's, etc.). Provide normal standard expected lead time of all components in excess of $5K.

M. Spare Parts and Owner Training:

1. Owner may request Contractor to purchase Spare Parts, which shall be considered a Change Order.

2. Contractor shall provide Owner training prior to Final Completion for the PV Array, collection system, and interconnect.

   a. Hands on training of any specialty tools included with the site equipment.

   b. Hands on training of operation of the site equipment.

   c. A training course in electronic format to include:

      - Equipment specific training for the inverters, transformers, collection system, switchgear, relays, meters, etc.
      - Instructional training of preventive maintenance requirements for the Contractor supplied equipment.
      - Instructional training on integrated operations of the electrical systems including relaying/metering schemes and Start-up (S/U), Shut-down (S/D), and Normal Operations.
      - Training on SCADA/DAS platform and interfaces.

N. Weather Stations

1. Contractor shall procure and install meteorological and monitoring stations at the site to interact directly with the SCADA/DAS monitoring system. Site electrical design should indicate the best locations for all sensors. The weather stations should include the following equipment, at minimum:

   a. Three (3) Secondary Standard pyranometers with Dome Heater and Case Temp Sensor (Horizontal, Plane-of-Array (POA) and Rear-Plane-of-Array (RPOA)) and one (1) Albedometer

   b. Ambient temperature Sensor with a Gill radiation shield

   c. Anemometer ("wind vane", wind speed and direction)

   d. Hail Sensor

   e. Flood Sensor

f. Three (3) Back of Module Temperature Sensors (non-tubular probes) mounted on adjacent modules

g. Supporting mounting hardware for sensors

h. High quality shielded cables at an adequate length

i. A minimum of two (2) Module Soiling Sensor/Stations shall be provided

O. Security System

1. Contractor to provide a security system for the project. Proposed layout and equipment will be submitted to the Owner for review and approval to confirm quantity and scope of security coverage is adequate. Contract Price does not include permanent security system, which will be a Change Order.

P. Operations & Maintenance Facilities

1. Owner may request additional scope related to construction of an Operations and Maintenance Facility, which would be a Change Order.

DESIGN CRITERIA

Basic Site Criteria:

Equipment Height: h = 9.51 ft

Structure Type: Square

Equipment Dimension:

Depth: b = 8.00 ft Width: 19.85 ft

Equipment Weight: W_e = 89.70 kip (Per Space)

Total Equipment Weight: W_t = 89.70 kip

Wind Design Parameters:

Risk Category: II

Ultimate Wind Speed: V_{ult} = 130 mph

Exposure Category: C

Topographic Category: 1

Topographic Factor: K_{zt} = 1.00

Gust Effect Factor: G_f = 0.85

Wind Directionality Factor: K_d = 0.95

Velocity Pressure Coefficient: K_z = 0.85

External Pressure Coefficient: C_f (perpendicular) = 1.82

C_f (parallel) = 1.82

Wind Design Load:

Wind Velocity Pressure: q_z = 28.16 psf $q_z = 0.00256\, K_z\, K_{zt}\, K_d\, V^2$

Vertical Wind Projected Area: A_v = 168.99 ft²

Horizontal Wind Load: F_h = 6.88 kip $F = q_z\, GC_f\, A$ $Moment_{base}$ = 32.65 kip-ft

Horizontal Wind Projected Area: A_h = 158.81 ft²

Lateral check and bending of the pile are minimal because the maximum Pile reveal is 2'-8" max, however see the calculation below for verification.

(1)

Design of the Middle/Interior Pile

1 – Corrosion Analysis:

- According to the geotechnical report, the post will be susceptible to corrosion
- The post that will be used is the W12x50.
- Per the Geotech report, the corrosion characteristics are as follows:

6.3 Soil Corrosivity and Resistivity

[illegible] Soil electrical resistivity test values generally ranged from about 1,100 to 2,000 Ω-cm, except for TP-5, which exhibited resistivity test values ranging from about 5,000 to 30,000 Ω-cm. Resistivity values generally increased with probe spacing, increased to about 30 feet, and remained [illegible]. Based on guidelines published in Corrosion Basics: An Introduction, 2nd Ed. (2006), the results of these [illegible] tests generally indicate a moderately corrosive to extremely corrosive environment. ERI results are presented on Illustration C.

FIELD MEASUREMENT OF SOIL RESISTIVITY USING WENNER FOUR-PIN METHOD

PROJECT NAME:	[illegible]		
PROJECT NUMBER:	[illegible]	INSPECTOR:	[illegible]
DATE:	[illegible]	TIME:	[illegible]
TEST LOCATION:	[illegible]	WEA:	[illegible]

DIRECTION 1: <0-3>

ELECTRODE SPACING 'a' (ft)	a (m)	PROBE PENETRATION (inch)	ACTUAL PENETRATION (ft)	a (m)	RESISTANCE (ohm)	RESISTIVITY (ohm-cm)
2	0.61	4.8	0.4	0.12	[illegible]	[illegible]
5	1.52	4	0.3	0.09	[illegible]	[illegible]
10	3.05	6	0.5	0.15	[illegible]	[illegible]
20	6.10	12	1	0.30	[illegible]	[illegible]
30	9.14	24	2	0.61	[illegible]	[illegible]
40	12.19	36	3	0.91	[illegible]	[illegible]
50	15.24	48	4	1.22	[illegible]	[illegible]
60	18.29	60	5	1.52	[illegible]	[illegible]

Therefore, the site is considered moderately corrosive.

For a moderately corrosive environment, we use the following corrosion rates:

Assume a **3-mil of zinc on wide flange shapes and a 50-year** project life:

Table 5 – Estimated Corrosion Rates

Soil resistivity (Ω-cm)	Total Corrosion (mpy)	
	Zinc	Steel (both side)
250 – 750	0.64	5.5
750 – 1250	0.53	3.3
1250 – 3000	0.39	2.2

Z_{xx} = 86.8 in³ Z_{yy} = 17.0 in³

Distance to combined centroid

X_c = 0.00 in Y_c = 0.00 in

Distance to equal axis area (only shapes with all rectangles at 90 degs)

X_p = 0.00 in Y_p = 0.00 in

Elastic section modulus

S_{xx} = 51.4 in³ S_{yy} = 11.2 in³

3 – Post design using RAM Element: - (Middle Piles)

The pile reveal is 30 inches. According to the geotechnical report, skin friction and allowable bearing capacity from the upper 4 feet of soil are disregarded. Consequently, but as per our judment the fixed base point for the pile will be considered to be 2 feet below the ground surface, resulting in a total pile length of 4.5 feet.

Reactions

Utilisation

UTILIZATION = 0.09 < 1.00 ∴ W12X50 OK !

RAM Elements

Steel Code Check

Summary - Group by description

Description	Section	Member	Ch'k Pt	Ratio	Status	Combination
	W (Grid) - Moment Connection	1	LC1 to LC5	0.09	OK	

4- Axial Check:

W8x67 reduced section due to corrosion:

perimeter = $2[b_f + d] + 4[(b_f - t_w)/2]$ = 55.51"/12 = **4.6275 ft**

Area = $2*b_f*t_f + (d - 2\,t_f)*t_w$ = 11.49 in²/144 = **0.078 ft²**

The axial load P = 29,41 lbs, according to the worst case combination load analysis:
LC2 = Ds + 0.75SL + 0.45 Wi

- The allowable skin friction, as mentioned in the geotechnical report, is as follows.

Table 11 - Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (feet)	Allowable End Bearing (psf)	Allowable Unit Skin Friction psf	
			Compression	Tension
Stratum 1	0 – 4			
Stratum 2	4 – 20	20,000	750	525
Stratum 3*	0 – 30	20,000	550	385
Stratum 4	12 – 20	25,000	1,000	700

Notes:
(1) Capacity from geotechnical capacity = factor of safety of 2.5 was used to reduce ultimate values. Skin friction in strata (1) is neglected to avoid loading soil due to frost heave. Uplift capacity should be determined by the structural engineer.
(2) Uplift capacity from geotechnical capacity = factor of safety of 3.0 was used to reduce ultimate values. Skin friction in strata (1) is neglected to avoid loading soil due to frost heave. Uplift capacity should be determined by the structural engineer.
(3) Pile load test was performed in stratum 3 was encountered. Recommended compressive pile tip is 20 feet. Strata 3 should not be considered for load capacity.

- **Allowable Friction force:**

Stratum 1: from 0 – 4 ft = **0 lbs**

Stratum 2: from 4 – 8ft (Conservative Height) = 750 psf x 8ft x 4.6275ft = **13,882 lbs**

Stratum 3: from 8 – 18ft = 550 psf x 10ft x 4.6275ft = **16,196lbs**

- **Allowable End Bearing: 20,000 psf** (Pile to Rest Within stratum 2)

Net bearing Resisting Force = 20,000 psf X 0.078ft² (Section Area) = **1560 lbs**

Total resistance = 13,882+ 16,196+ 1560 = **31,638 lbs > 29,410 lbs → Ratio: 94% OK!**

Therefore, the **W12x50** pile with **18ft** embedment is performing adequately for the axial load check.

5- Expansive Soil :

Based on the geotechnical report, the presence of expansive soils indicates that soil heave should be anticipated. The relevant data are summarized below:

Skin friction on the upper 4 feet of the piles should be neglected to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative skin friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for potential movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations.

Soil Heave Depth = **4.0 ft.**

Soil Heave strength = **750 psf.**

Pile vertical area = 4ft x 4.6275 ft = 16.512 ft^2

Soil Heave Uplift force = 750 psf X 18.51 ft^2 = **13,882 lbs**

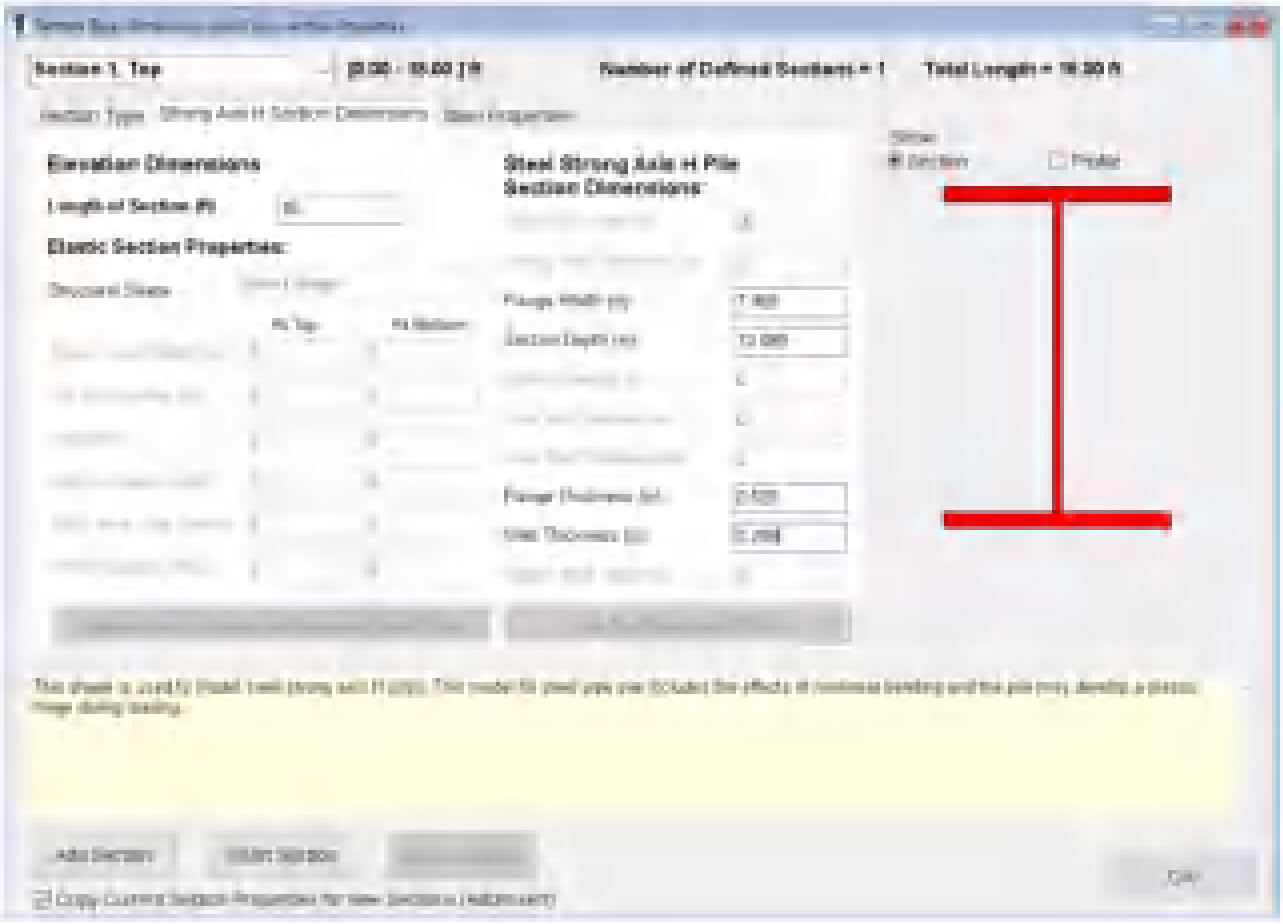
Skin Friction Resistance Force = 13,882lbs + 16,196lbs = **30,078 lbs**

Skin Friction Resistance Force = 13,882lbs < 30,078 Lbs → 47% OK!

6- W12x50 Pile Embedment Design for Lateral Loads Using L-Pile Software:

A) - L-Pile Inputs:

- W12x50 reduced section due to corrosion
- 18ft embedment.

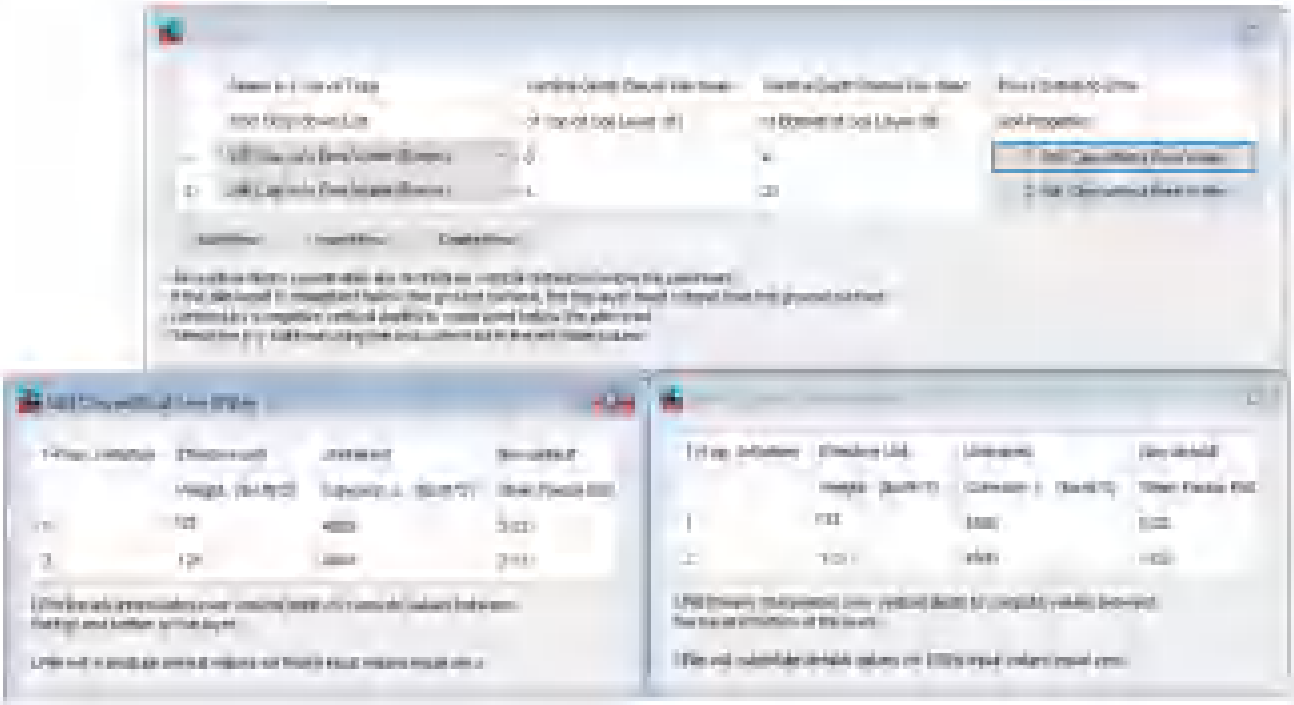


B) Soil Parameter:

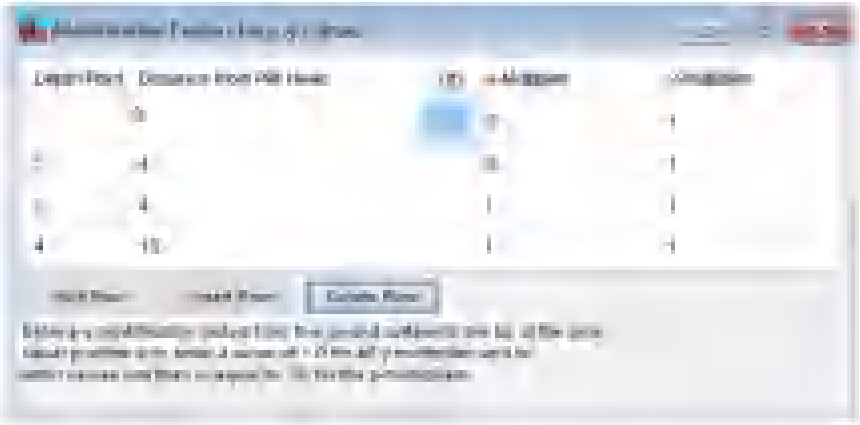
Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor ε50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2a	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 2b	133	Stiff Clay w/o Free Water	4,500	0.02

The soil parameters to be used as input for the L-Pile analysis are detailed below:



the uppermost 4 feet of soil in the profile will be disregarded and omitted from all calculations.



C) Loading Inputs

Loading inputs are based on the worst-case loading from the posts and are as follows:

The Governing load combination is: **LC2 = DL + 0.75SL + 0.45 WL**

Axial: **29,410 Lbs**

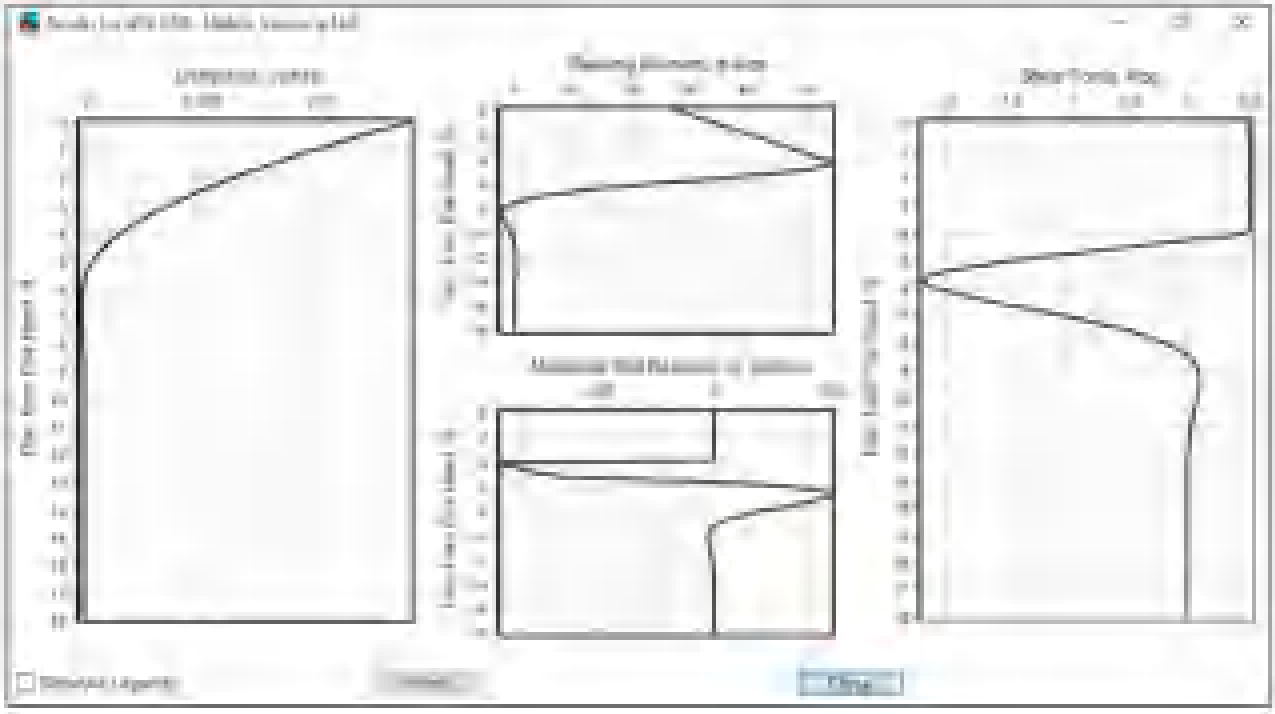
Shear = **520 lb**

Moment = 2.34 kips-ft = 2340 lb-ft = **28,080 lbs-in**

Load L-pile Inputs

Pure Power Engineering	Project				Job No:	
	Section				Sheet no./rev.	
	Calc. by	Date	Chk'd by	Date	App'd by	Date

D) L-Pile Result:



Pile-head conditions are Shear and Moment (Loading Type 1)

Shear force at pile head = 520.0 lbs
Applied moment at pile head = 28080.0 in-lbs
Axial thrust load on pile head = 29410.0 lbs

Depth X feet	Deflect. y inches	Bending Moment in-lbs	Shear Force lbs	Slope S radians	Total Stress psi*	Bending Stiffness lb-in^2	Soil Res. p lb/inch	Soil Spr. Es*H lb/inch	Distrib. Lat. Load lb/inch
0.00	0.01385	28080.	520.0000	3.53E-04	2965.	9.01E+09	0.00	0.00	0.00

Deflection = 0.013" < 0.50" W12X50 W/12ft Embedment min.

E) Moment capacity check:

$Mn/\Omega = (50\ Ksi) * (51.4\ in^3)/1.67 =$ 1538 Kip-in > 54.572 Kip-in OK!

Output Summary for Load Case No. 1:

Pile-head deflection = 0.01384533 inches
Computed slope at pile head = -0.0003529 radians
Maximum bending moment = 54572. inch-lbs
Maximum shear force = -2193. lbs
Depth of maximum bending moment = 4.32000000 feet below pile head
Depth of maximum shear force = 5.76000000 feet below pile head
Number of iterations = 9
Number of zero deflection points = 4

Lateral check and bending of the pile are minimal because the maximum Pile reveal is 2'-6" max, however see the calculation below for verification.

(2)

Design of the Middle/exterior Pile

1 – Corrosion Analysis:

- According to the geotechnical report, the post will be susceptible to corrosion
- The post that will be used is the W12x50.
- Per the Geotech report, the corrosion characteristics are as follows:

6.3 Soil Corrosivity and Resistivity

Field electrical resistivity test values generally ranged from about 1,100 to 3,000 Ω-cm, except for TP-5, which exhibited resistivity test values ranging from about 5,000 to 30,000 Ω-cm. Resistivity values generally increased with probe spacing, increasing to about 30 feet, and remained relatively constant with probe spacing over 30 feet. Based on guidelines published in Corrosion Basics: An Introduction, 2nd Ed. (2006), the results of these field resistivity tests generally indicate a moderately corrosive to extremely corrosive potential. ERT results are provided in Attachment C.

FIELD MEASUREMENT OF SOIL RESISTIVITY USING WENNER FOUR-PIN METHOD

PROJECT NAME:			
PROJECT NUMBER:		INSPECTION:	
DATE:		TIME:	
TESTED BY:		WEA:	

DIRECTION 1: <E-W>

ELECTRODE SPACING 'a' (ft)	(m)	PROBE PENETRATION 'b' (in)	ACTUAL PENETRATION (ft)	(m)	RESISTANCE (ohm)	RESISTIVITY (ohm-cm)
2	0.61	1.5				
5	1.52	4				
10	3.05	8				
20	6.10	12				
30	9.14	20				
40	12.19	28				
50	15.24	36				
60	18.29	52				

Therefore, the site is considered moderately corrosive.

For a moderately corrosive environment, we use the following corrosion rates:

Assume a **3-mil of zinc on wide flange shapes and a 50-year** project life:

Table 5 – Estimated Corrosion Rates

Soil resistivity (Ω-cm)	Total Corrosion (mpy)	
	Zinc	Steel (both side)
200 – 750	0.64	5.5
750 – 1200	0.53	3.3
1200 – 3000	0.39	2.2

3 - Post design using RAM Element: - (Middle Piles)

The pile reveal is 30 inches. According to the geotechnical report, skin friction and allowable bearing capacity from the upper 4 feet of soil are disregarded. Consequently, but as per our judment the fixed base point for the pile will be considered to be 2 feet below the ground surface, resulting in a total pile length of 4.5 feet

Steel Code Check

Summary - Group by description

4- Axial Check:

W8x67 reduced section due to corrosion:

perimeter = $2(b_f + d) + 4\,[(b_f - t_w)/2]$ = 49.5 in /12 = 4.128 ft

Area = $2 * b_f * t_f + (d - 2\,t_f) * t_w$ = 15.79 in²/144 = 0.1165 ft²

The axial load P = 18,803 lbs, according to the eight-case combination load analysis.
LC2 = Ds + 0.75SL + 0.45 Wt

- The allowable skin friction, as mentioned in the geotechnical report, is as follows.

Table 13 – Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (feet)	Allowable Soil-Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
Stratum 1	0 – 4		–	
Stratum 2	4 – 80 (Controlled by Pile Tip Elevation)	20,000	700	350
Stratum 3	80 – 120	20,000	1,400	700
Stratum 4	120 – 200	20,000	1,800	900

Notes:
1) Compressive skin friction shall be neglected along the upper 4 feet of Stratum 1 and Stratum 2 when computing pile capacity to resist uplift or lateral loading. Stratum 1 and Stratum 2 shall be neglected in the upper 4 feet when computing pile capacity to resist downward loads.
2) A minimum embedment depth of 12 feet shall be required for each pile, unless a greater depth is required to develop the required capacity. Piles shall be driven to the minimum depth or greater, as required to develop the required capacity.
3) The Contractor shall be responsible for selecting pile lengths sufficient to develop the required capacity. Pile lengths shall be determined by the Contractor's engineer and submitted to the Engineer of Record for review and approval prior to ordering piles.

- Allowable Friction force:

Stratum 1: from 0 – 4 ft = 0 lbs

Stratum 2: from 4 – 80 (Centerwall height) = 750 psf x 80 x 4.6/750 = 13,892 lbs

Stratum 3: from 8 – 12ft = 350 psf x 4ft x 4.6275ft = 6,478 lbs

- Allowable End Bearing: 20,000 psf (Pile to Bear Within stratum 2)

Net bearing Resisting Force = 20,000 psf X 0.078ft² (Section Area) = 1560 lbs

Total resistance = 13,892 + 6,478+ 1560 = 21,920 lbs > 18,560 lbs ✓ Ratio: 50% OK!

Therefore, the W12X50 pile with 12ft embedment is performing adequately for the axial load check.

5- Expansive Soil :

Based on the geotechnical report, the presence of expansive soils indicates that soil heave should be anticipated. The relevant data are summarized below:

Skin friction on the upper 4 feet of the piles should be neglected to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative skin friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for potential movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations.

Soil Heave Depth = **4.0 ft.**

Soil Heave strength = **750 psf.**

Pile vertical area = 4ft x 4.6275 ft = 16.512 ft^2

Soil Heave Uplift force = 750 psf X 18.51 ft^2 = **13,882 lbs**

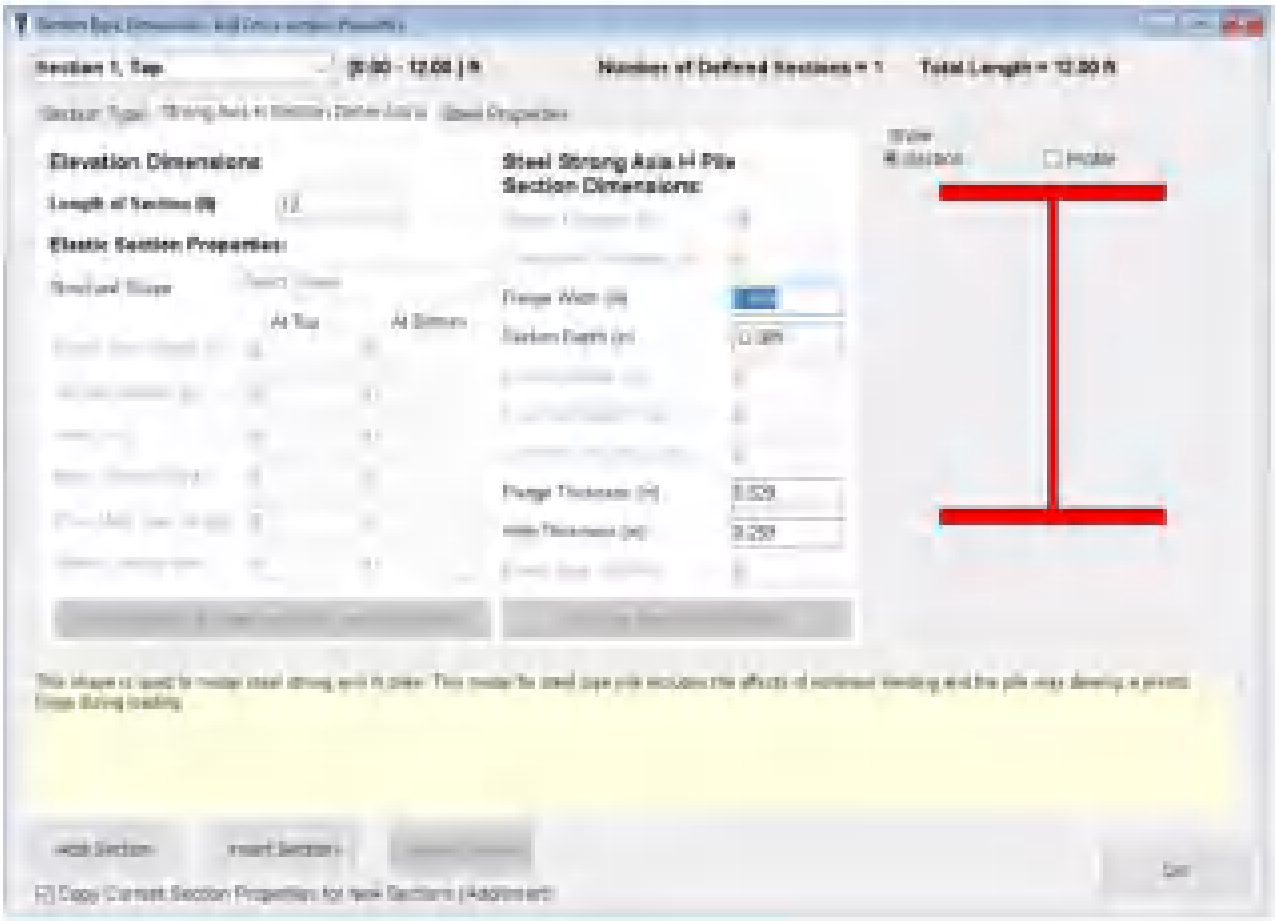
Skin Friction Resistance Force = 13,882lbs + 6,478lbs = **20,360 lbs**

Skin Friction Resistance Force = 13,882lbs < 20,360 Lbs → 69% OK!

6- W12x50 Pile Embedment Design for Lateral Loads Using L-Pile Software:

A) - L-Pile Inputs:

- W12x50 reduced section due to corrosion
- 12ft embedment

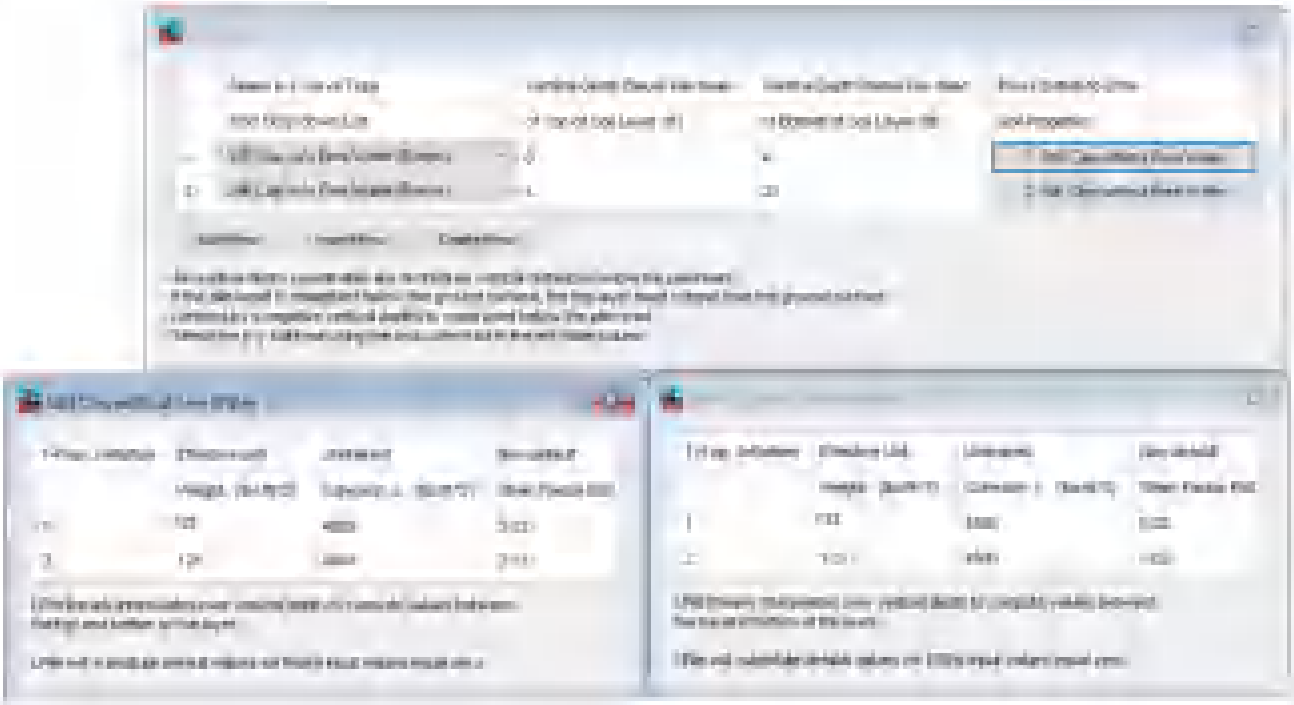


B) Soil Parameter:

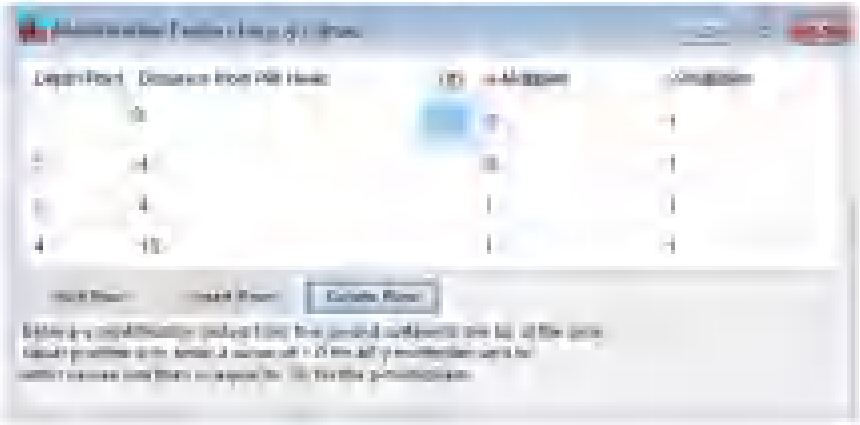
Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor ε50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2a	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 2b	133	Stiff Clay w/o Free Water	4,500	0.02

The soil parameters to be used as input for the L-Pile analysis are detailed below:



the uppermost 4 feet of soil in the profile will be disregarded and omitted from all calculations.



C) Loading Inputs

Loading inputs are based on the worst-case loading from the posts and are as follows:

The Governing load combination is: **LC2 = DL + 0.75SL + 0.45 WL**

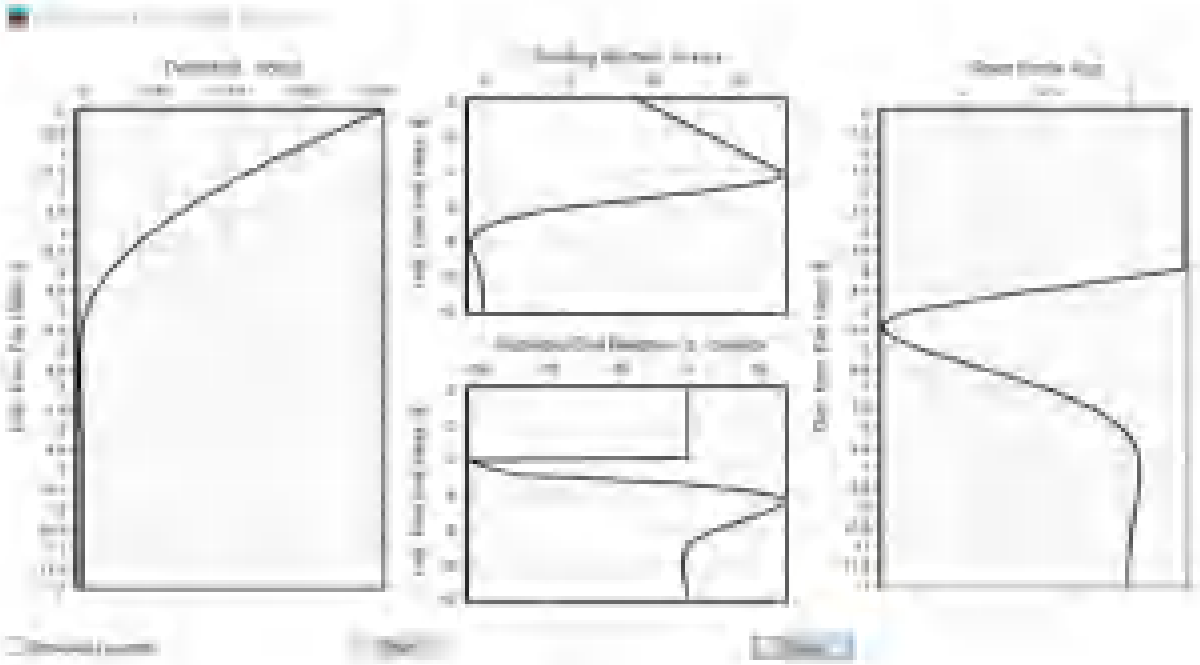
Axial: **19,660 Lbs**

Shear = **340 lb**

Moment = 1.53 kips-ft = 1530 lb-ft = **18,360 lbs-in**

Load L-pile Inputs

D) L-Pile Result:



Pile-head conditions are Shear and Moment (Loading Type 1)

Shear force at pile head = 340.0 lbs
Applied moment at pile head = 18360.0 in-lbs
Axial thrust load on pile head = 19660.0 lbs

Depth x feet	Deflect. y inches	Bending Moment in-lbs	Shear Force lbs	Slope S radians	Total Stress psi*	Bending Stiffness lb-in^2	Soil Res. p lb/inch	Soil Spr. Es*H lb/inch	Distrib. Lat. Load lb/inch
0.00	0.0867	18360.	340.0000	-2.19E-04	1977.	9.01E+09	0.00	0.00	0.00

Deflection = 0.09" < 0.50" W12X50 W/12ft Embedment min.

E) Moment capacity check:

M_n/Ω =(50 Ksi)*(51.4 in^3)/1.67 = 1538 Kip-in > 35.331 Kip-in OK!

Pile-head deflection	=	0.00822678 inches
Computed slope at pile head	=	-0.0002188 radians
Maximum bending moment	=	35331. inch-lbs
Maximum shear force	=	-1481. lbs
Depth of maximum bending moment	=	4.20000000 feet below pile head
Depth of maximum shear force	=	5.40000000 feet below pile head
Number of iterations	=	7
Number of zero deflection points	=	3

Uplift =	0.00	kip
Lateral =	0.62	kip

Controlling Edge/exterior Pile Load

Downward =	19.31	kip
Uplift =	0.00	kip
Lateral =	0.48	kip

Controlling Edge/Interior Pile Load

Downward =	19.81	kip
Uplift =	0.00	kip
Lateral =	0.62	kip

Lateral check and bending of the pile are minimal because the maximum Pile reveal is 2'-8" max, however see the calculation below for verification.

(3)

Design of the Edge/Interior Pile

2 – Corrosion Analysis:

- According to the geotechnical report, the post will be susceptible to corrosion
- The post that will be used is the W8x24
- Per the Geotech report, the corrosion characteristics are as follows:

6.3 Soil Corrosivity and Resistivity

6.3.1 ERT Test Results

Field electrical resistivity (soil volume resistivity) values from about 1,700 to 9,000 Ω-cm across the ERT-5 which reflected resistivity test values ranging from about 5,100 to 30,100 Ω-cm. Minimum values generally decreased as probe spacing increased to about 30 feet, and maximum values generally increased with probe spacing past 30 feet. Based on guidelines presented in Corrosion Basics, An Introduction, 2nd Ed. (2006), the results of these field resistivity tests indicate [illegible] soil. ERT results are provided in Attachment D.

FIELD MEASUREMENT OF SOIL RESISTIVITY USING WENNER FOUR-PIN METHOD

PROJECT NAME:			
PROJECT NUMBER:		DEPTH:	
DATE:		TIME:	
TEST LOCATION:		TEMP:	

DIRECTION:						
ELECTRODE SPACING 'a'		DEPTH OF PENETRATION (SPL) 'b'	ACTUAL PENETRATION		RESISTANCE	RESISTIVITY = 2πaR (Ω-cm)
(ft)	(m)	(in)	(ft)	(m)	(Ω)	
2	0.61	1.5	1	0.3048	1.7	2,137
5	1.52	3	4	1.2192	0.4	12,566
10	3.05	6	9	2.7432	0.2	12,566
20	6.10	12	19	5.7912	0.1	12,566
30	9.14	18	29	8.8392	0.1	18,850
40	12.19	24	39	11.8872	0.1	25,133
50	15.24	30	49	14.9352	0.1	31,416
60	18.29	36	59	17.9832	0.1	37,699

Therefore, the site is considered moderately corrosive.

For a moderately corrosive environment, we use the following corrosion rates:

Assume a **3-mill of zinc on wide flange shapes and a 50-year** project life.

Table 6 – Estimated Corrosion Rates

Soil resistivity (Ω-cm)	Total Corrosion (mpy)	
	Zinc	Steel (both side)
250 – 750	0.64	5.5
750 – 1250	0.50	2.5
1250 – 3000	0.39	2.2

4- Axial Check:

Wind induced suction due to corrosion:

perimeter = $2(b_f + d) + 4\,[(b_f - t_w)/2]$ = 2(6.389 + 7.810)+ 4[(6.389-0.134)/2] = 40.598'/12 = **3.4105 ft**

Area = $2^* b_f{}^* t_f + (d - 2\,t_f)^* t_w$ = 2*6.389*0.389 + (7.810-2*0.389)*0.134 = 5.05 in²/144 = **0.032 ft²**

The axial load P = 15,380 lbs, according to the Most-case combination load analysis.
LC2 = 0.6 + 0.75L + 0.45 Wi

- The allowable skin friction, as mentioned in the geotechnical report, is as follows:

Table 13 – Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (ft)	Allowable End-Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
Stratum 1	0 – 4	–	–	–
Stratum 2	4 – 20 4 – 13	20,000	750	540
Stratum 3	8 – 20	22,000	350	260
Stratum 4	13 – 20	25,000	1,000	800

Notes:
(1) [illegible]
(2) [illegible]
(3) [illegible]

- **Allowable Friction force:**

Stratum 1: from 0 – 4 ft = **0 lbs**

Stratum 2: from 4 – 8ft (Conservative margin) = 750 psf x 8ft x 3.4105ft = **10231 lbs**

Stratum 3: from 8 – 13ft = 350 psf x 5ft x 3.4105ft = **5968 lbs**

- **Allowable End Bearing: 20,000 psf** (Pile to Bear Within stratum 2)

Net Bearing Resisting Force = 22,000 psf X 0.032ft² (Section Area) = **704 lbs**

Total resistance = 10,231 + 5,968 + 704 = **16,903 lbs > 15,380 lbs → Ratio 91% OK!**

Therefore, the W6X8 pile with **13ft** embedment is performing adequately for the axial applied shear.

PUREPOWER ENGINEERING Pure Power Engineering	Project				Job No:	
	Section				Sheet no./rev.	
	Calc. by	Date	Chk'd by	Date	App'd by	Date

5- Expansive Soil :

Based on the geotechnical report, the presence of expansive soils indicates that soil heave should be anticipated. The relevant data are summarized below:

Skin friction on the upper 4 feet of the piles should be neglected to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative skin friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for potential movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations.

Soil Heave Depth = **4.0 ft.**

Soil Heave strength = **750 psf.**

Pile vertical area = 4ft x 3.4105ft = 13.642 ft^2

Soil Heave Uplift force = 750 psf X 13.642 ft^2 = **10231.5 lbs**

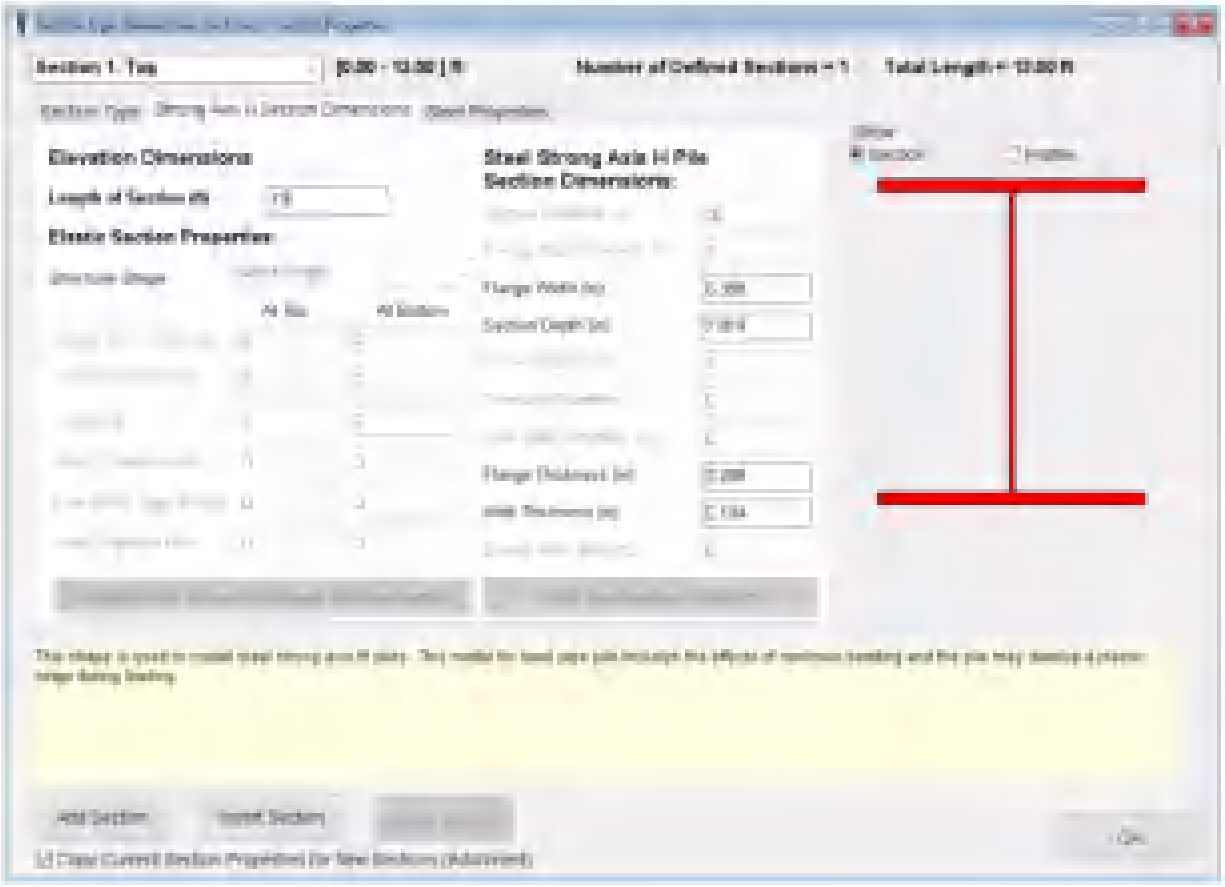
Skin Friction Resistance Force = 10,231 lbs + 5,968 lbs = **16,199 lbs**

Skin Friction Resistance Force = 10231 lbs < 16,199 Lbs → 63% OK

6- W8x24 Pile Embedment Design for Lateral Loads Using L-Pile Software:

A) – L-Pile Inputs:

- **W8x24** reduced section due to corrosion
- **13ft** embedment.

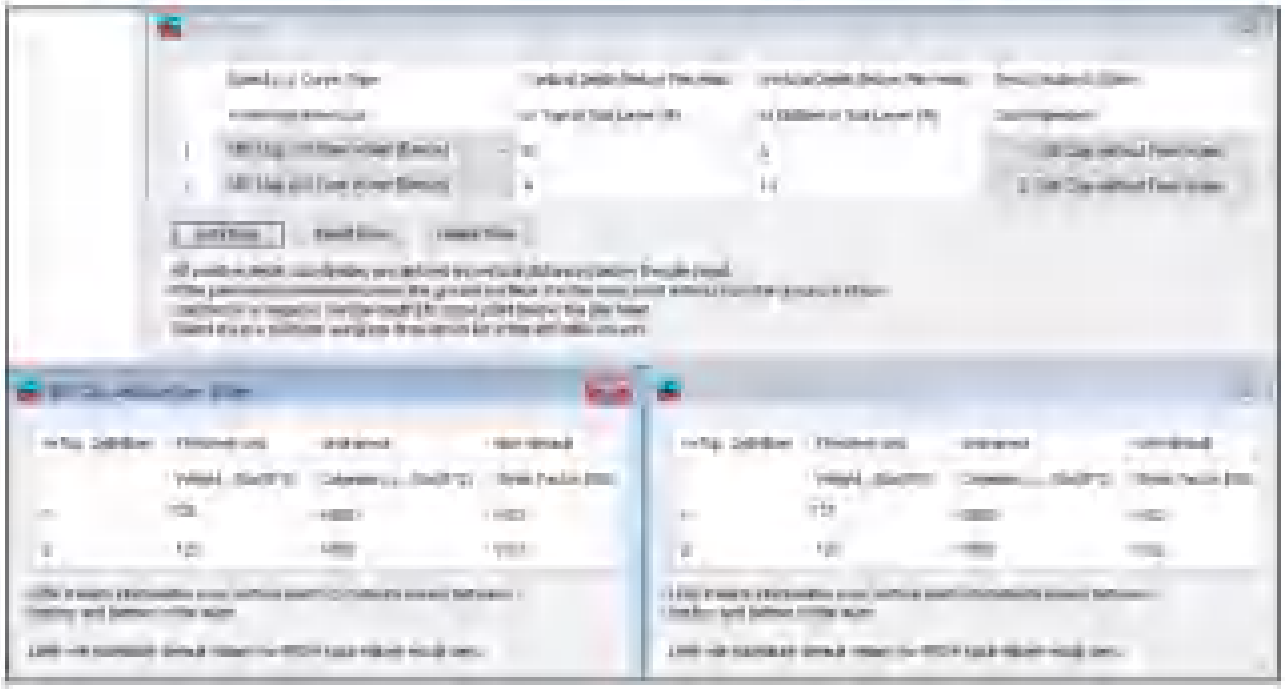


B) Soil Parameter:

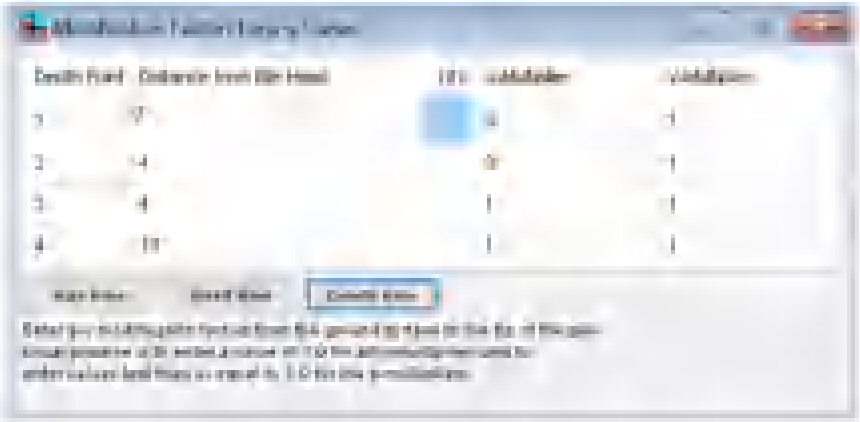
Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor ε50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2a	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 2b	133	Stiff Clay w/o Free Water	4,500	0.02

The soil parameters to be used as input for the L-Pile analysis are detailed below:



the uppermost 4 feet of soil in the profile will be disregarded and omitted from all calculations.



C) Loading Inputs

Loading inputs are based on the worst-case loading from the posts and are as follows:

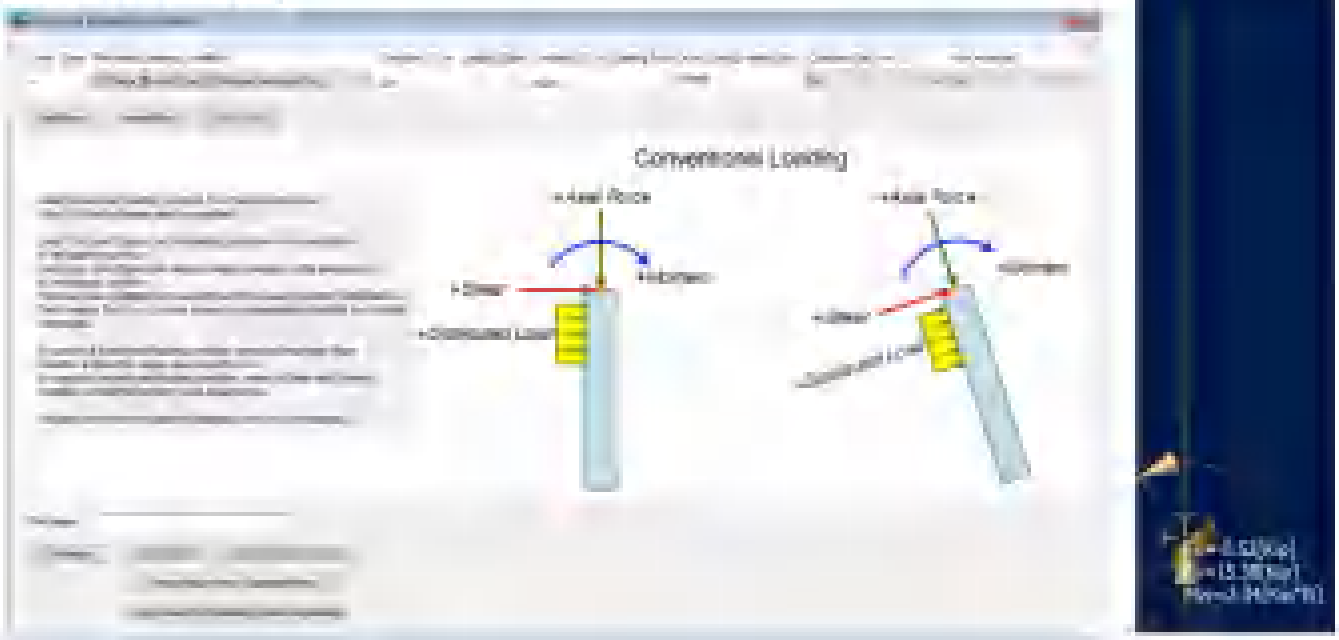
The Governing load combination is: **LC2 = DL + 0.75L + 0.45 WL**

Axial: **15,380 lb**

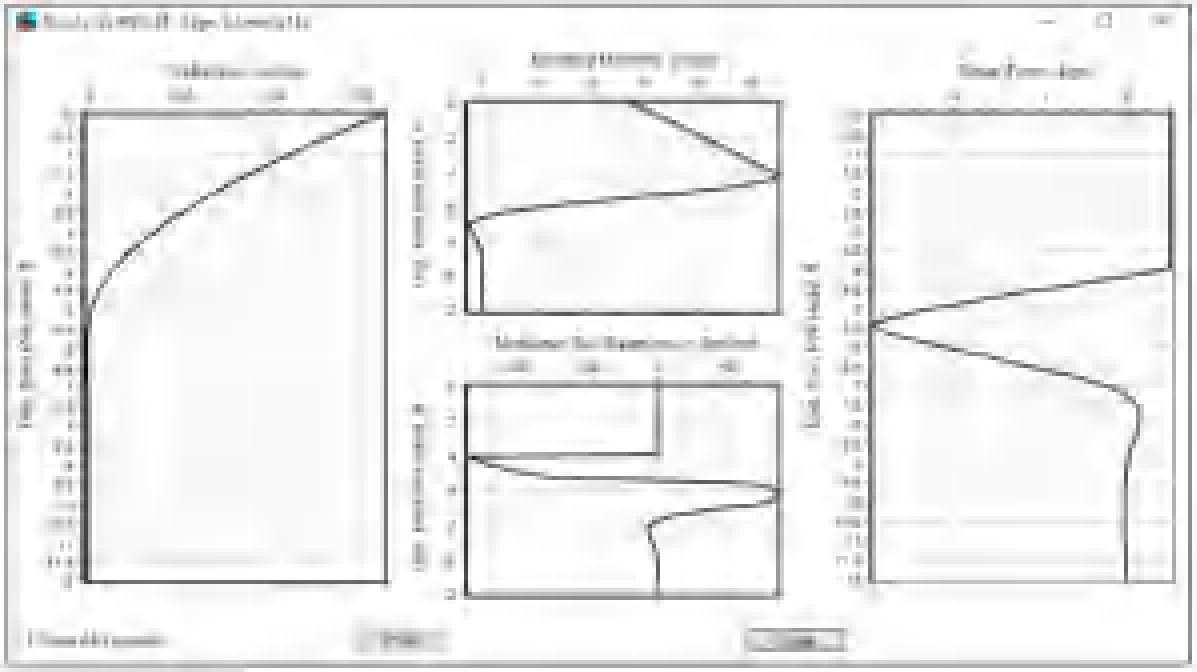
Shear = **520 lb**

Moment = 2.34 kips-ft = 2340 lb-ft **=28,080 lbs-in**

Load L-pile Inputs



D) L-Pile Result:



Pile-head conditions are Shear and Moment (Loading Type 1)

LC5: 0.6D + 0.6W (Vertical) **[Vertical] V = 0.6Wh /12**

R1 = 2* [(0.6DL + 0.6Wv)/2	11.04 kip	V = 0.384 kip		(middle exterior pile)
R1 = 2* [(0.6DL + 0.6Wv)/2	17.91 kip	V = 0.576 kip		(middle interior pile)
R2 = [(0.6DL + 0.6Wv)/2] + [(0.6Wh*4.75)/8	6.46 kip	V = 0.384 kip		(Edge exterior pile)
R2 = [(0.6DL + 0.6Wv)/2] + [(0.6*Wh*4.75)/8	9.69 kip	V = 0.576 kip		(Edge interior pile)

Controlling Middle/Exterior Pile Load

Downward =	18.89	kip
Uplift =	0.00	kip
Lateral =	0.48	kip

Controlling Middle/Interior Pile Load

Downward =	19.24	kip
Uplift =	0.00	kip
Lateral =	0.62	kip

Controlling Edge/exterior Pile Load

Downward =	19.31	kip
Uplift =	0.00	kip
Lateral =	0.48	kip

Controlling Edge/Interior Pile Load

Downward =	19.81	kip
Uplift =	0.00	kip
Lateral =	0.62	kip

Lateral check and bending of the pile are minimal because the maximum Pile reveal is 2'-8" max, however see the calculation below for verification.

(4)
Design of the Edge/Exterior Pile

2 – Corrosion Analysis:

- According to the geotechnical report, the post will be susceptible to corrosion
- The post that will be used is the W8x24
- Per the Geotech report, the corrosion characteristics are as follows:

6.3 Soil Corrosivity and Resistivity

6.3.1 ERT Test Results

Field electrical resistivity (soil volume resistivity) values from about 1,700 to 9,000 Ω-cm across the ERT-5 which reflected resistivity test values ranging from about 5,100 to 30,100 Ω-cm. Minimum values generally decreased as probe spacing increased to about 30 feet, and maximum values generally increased with probe spacing past 30 feet. Based on guidelines presented in Corrosion Basics, An Introduction, 2nd Ed. (2006), the results of these field resistivity tests indicate [illegible] soil. ERT results are provided in Attachment D.

FIELD MEASUREMENT OF SOIL RESISTIVITY USING WENNER FOUR-PIN METHOD

PROJECT NAME:			
PROJECT NUMBER:		DEPTH:	
DATE:		TIME:	
TEST LOCATION:		TEMP:	

DIRECTION:						
ELECTRODE SPACING 'a'		DEPTH OF PENETRATION (SPL) 'b'	ACTUAL PENETRATION		RESISTANCE	RESISTIVITY = 2πaR (Ω-cm)
(ft)	(m)	(in)	(ft)	(m)	(Ω)	
2	0.61	1.5	1	0.3048	1.7	2,137
5	1.52	3	4	1.2192	0.4	12,566
10	3.05	6	9	2.7432	0.2	12,566
20	6.10	12	19	5.7912	0.1	12,566
30	9.14	18	29	8.8392	0.1	18,850
40	12.19	24	39	11.8872	0.1	25,133
50	15.24	30	49	14.9352	0.1	31,416
60	18.29	36	59	17.9832	0.1	37,699

Therefore, the site is considered moderately corrosive.

For a moderately corrosive environment, we use the following corrosion rates:

Assume a **3-mill of zinc on wide flange shapes and a 50-year** project life.

Table 6 – Estimated Corrosion Rates

Soil resistivity (Ω-cm)	Total Corrosion (mpy)	
	Zinc	Steel (both side)
250 – 750	0.64	5.5
750 – 1250	0.50	2.5
1250 – 3000	0.39	2.2

3 - Post design using RAM Element

The pile reveal is 30 inches. According to the geotechnical report, skin friction and allowable bearing capacity from the upper 4 feet of soil are disregarded. Consequently, but as per our judgment the fixed base point for the pile will be considered to be 2 feet below the ground surface, resulting in a total pile length of 4.5 feet.

UTILIZATION = 0.08 < 1.00 :) W8X24 OK !

RAM Elements

Current Date:
Units system:
File name:

Steel Code Check

Summary - Group by description

Load combinations to be calculated:

Description	Section	Member	Ctrl Eq	Ratio	Status	Reference
	W 8X24 - MODERATE CORD...	1			OK	

4- Axial Check:

Wide flange section due to corrosion:

perimeter = $2(b_f + d) + 4\ [(b_f - t_w)/2]$ = 2(6.389 + 7.813)+ 4[(6.389-0.134)/2] = 40.528"/12 = **3.4105 ft**

Area = $2^* b_f{}^* t_f + (d - 2\ t_f)^* t_w$ = 2(6.389)(0.285) + (7.813-2*0.285)(0.134 = 8.88 in²/144 = **0.062 ft²**

The axial load P = 10,280 lbs, according to the Most-case combination load analysis.
LC2 = 0.6 + 0.75L + 0.45 Wt

- The allowable skin friction, as mentioned in the geotechnical report, is as follows:

Table 13 – Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (ft)	Allowable End-Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
Stratum 1	0 – 4	-	-	-
Stratum 2	4 – 20	20,000	750	540
	4 – 13			
Stratum 2*	8 – 20	20,000	360	260
Stratum 3	13 – 70'	20,000	1,000	720

Notes:
(1) [illegible]
(2) [illegible]
(3) [illegible]

Allowable Friction force:

Stratum 1: from 0 – 4 ft = **0 lbs**

Stratum 2: from 4 – 8ft (Conservative Height) = 750 psf x 4ft x 3.4105ft = **10231 lbs**

Stratum 3: from 8 – 13ft = 360 psf x 5ft x 3.4105ft = **5968 lbs**

- **Allowable End Bearing: 20,000 psf** (Pile to Bear Within stratum 3)

Net bearing/resisting force = 20,000 psf X 0.062ft² (Section Area) = **704 lbs**

Total resistance = 10,231 + 5,968 + 704 = **16,903 lbs > 10,280 lbs → Ratio: 61%** OK!

Therefore, the **W6x24** pile with **13ft** embedment is performing adequately for the axial load check.

5- Expansive Soil :

Based on the geotechnical report, the presence of expansive soils indicates that soil heave should be anticipated. The relevant data are summerized below:

Side friction in the upper 4 feet of the piles should be neglected to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative side friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for potential movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations.

Soil Heave Depth = **4.0 ft.**

Soil Heave strength = **750 psf.**

Pile vertical area = 4ft x 3.4105ft = 13.642 ft^2

Soil Heave Uplift force = 750 psf X 13.642 ft^2 = **10231.5 lbs**

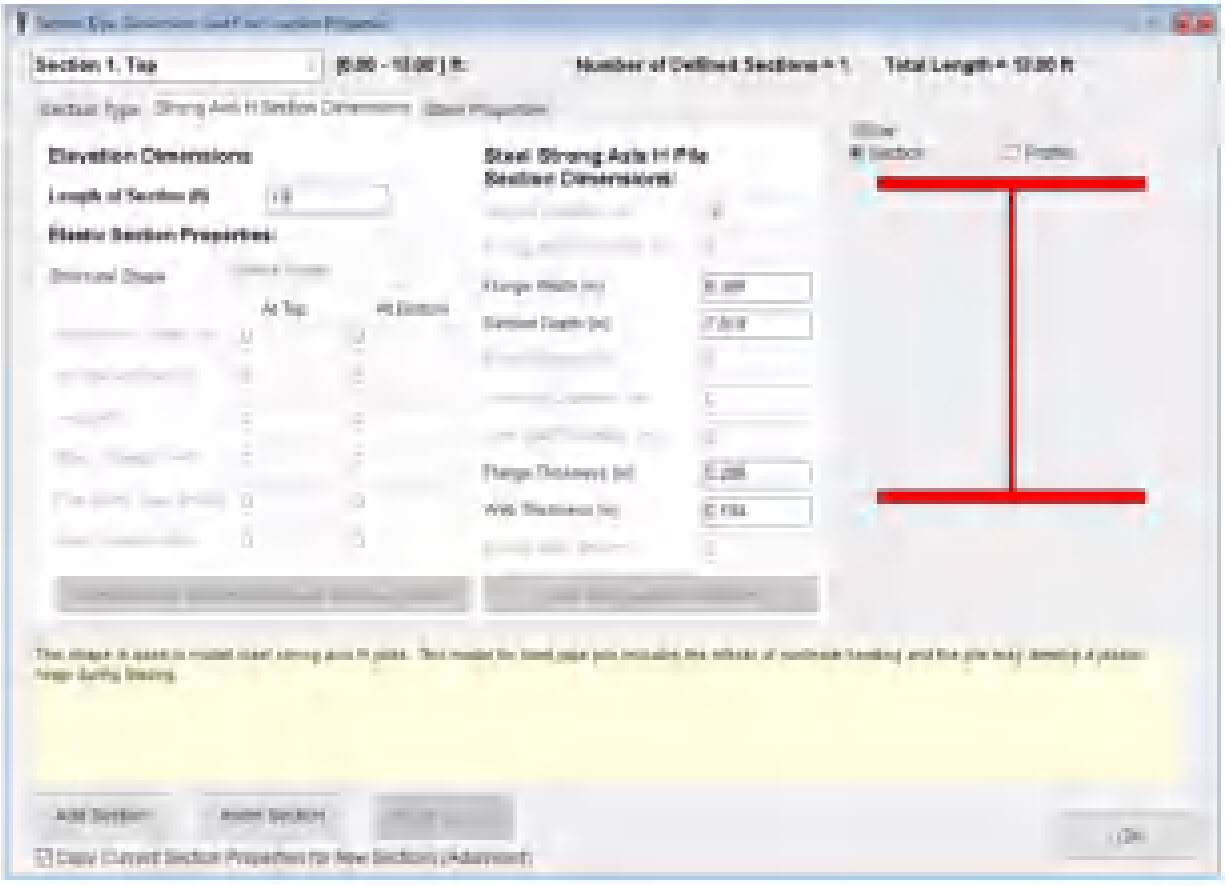
Skin Friction Resistance Force = 10,231 lbs + 5,968 lbs = **16,199 lbs**

Skin Friction Resistance Force = 10231 lbs < 16,199 Lbs → 63% OK

6- W8x24 Pile Embedment Design for Lateral Loads Using L-Pile Software:

A) - L-Pile Inputs:

- **W8x24** reduced section due to corrosion
- **13ft** embedment.

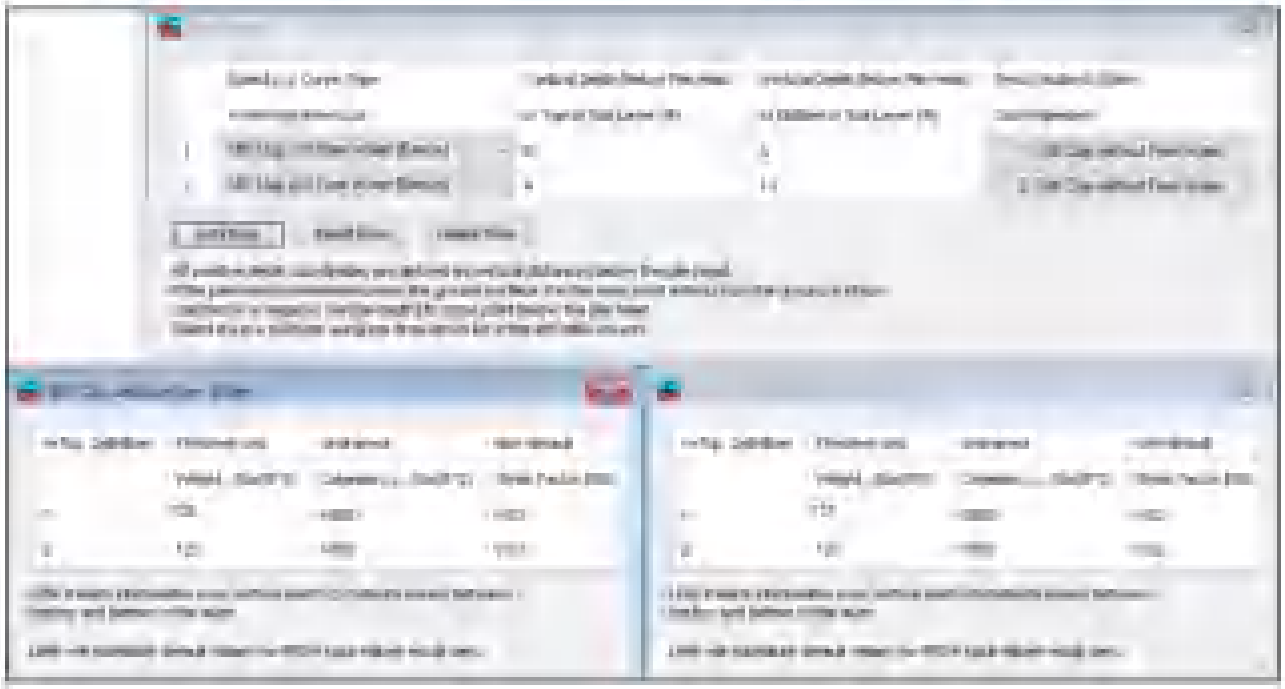


B) Soil Parameter:

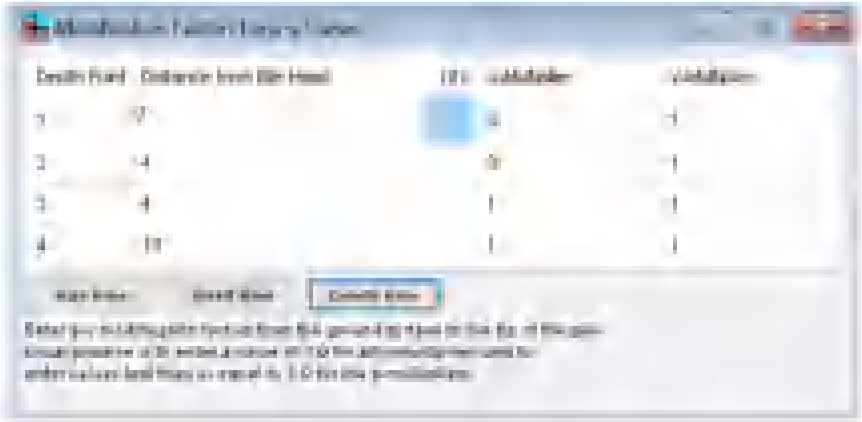
Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor ε50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2a	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 2b	133	Stiff Clay w/o Free Water	4,500	0.02

The soil parameters to be used as input for the L-Pile analysis are detailed below:



the uppermost 4 feet of soil in the profile will be disregarded and omitted from all calculations.



C) Loading Inputs

Loading inputs are based on the worst-case loading from the posts and are as follows:

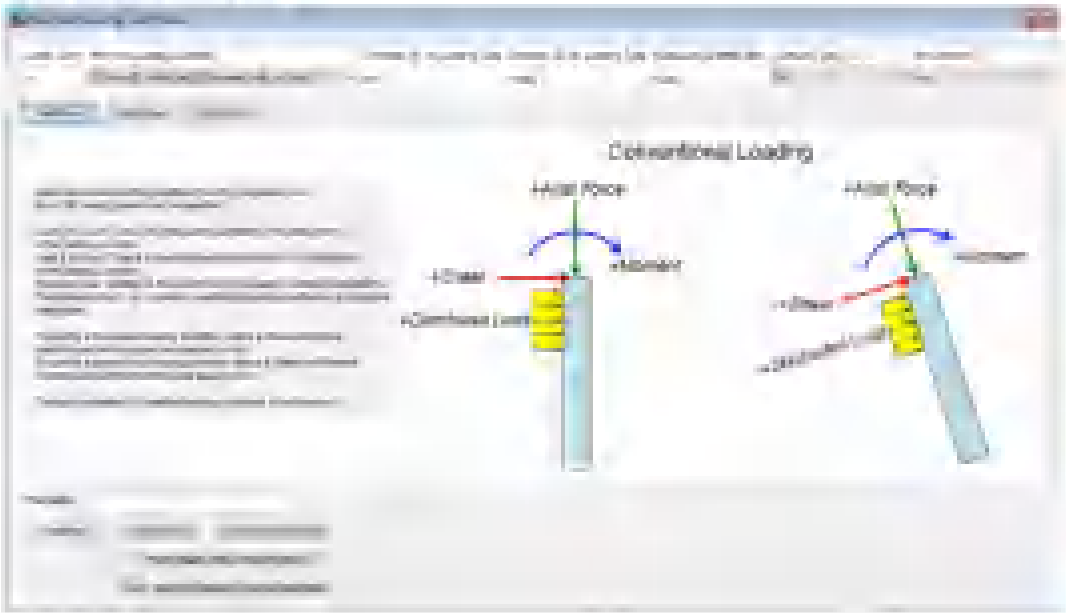
The Governing load combination is: **LC2 = DL + 0.75L + 0.45 WL**

Axial: **10,280 lb**

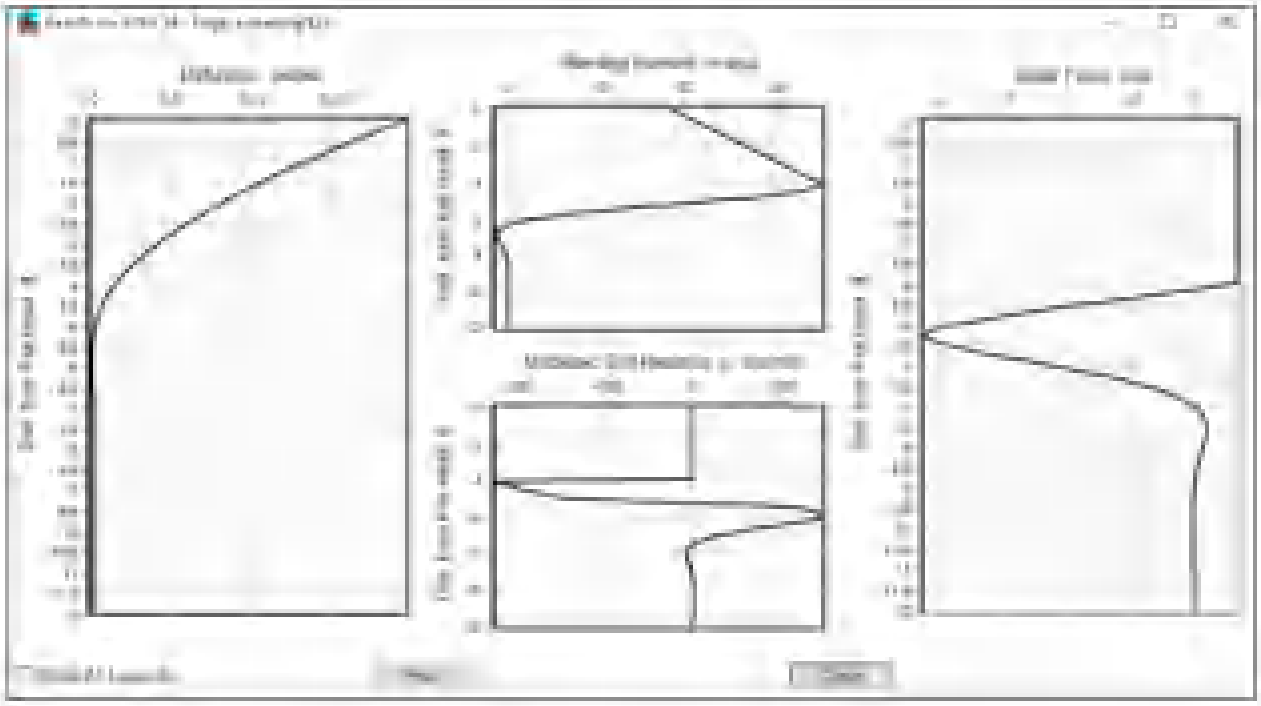
Shear = **340 lb**

Moment = 1.53 kips-ft = 1530 lb-ft = **18,360 lbs-in**

Load L-pile Inputs



D) L-Pile Result:



Pile head conditions are Shear and Moment (Loading type 1)

Shear force at pile head = 340.0 lbs
Applied moment at pile head = 18360.0 in lbs
Axial thrust load on pile head = 10280.0 lbs

Depth X feet	Deflect. y inches	Bending Moment in lbs	Shear Force lbs	Slope S radians	Total Stress psi*	Bending Stiffness lb-in^2	Soil Res. p lb/inch	Soil Spr. Es*H lb/inch	Distrib. Lat. Load lb/inch
0.00	0.03928	18360.	340.0000	-0.00111	3241.	1.64E+09	0.00	0.00	0.00

Deflection = 0.04" < 0.50" W8X24 W/13ft Embedment min.

E) Moment capacity check:

$M_n/\Omega = (50\ Ksi)*(14.5\ in^3)/1.67 =$ 434 Kip-in > 35.424 Kip-in OK!

Output Summary for Load Case No. 1:

Pile-head deflection = 0.03928029 inches
Computed slope at pile head = -0.0011131 radians
Maximum bending moment = 35424. inch-lbs
Maximum shear force = -2103. lbs
Depth of maximum bending moment = 4.20000000 feet below pile head
Depth of maximum shear force = 5.28000000 feet below pile head
Number of iterations = 12
Number of zero deflection points = 4

3 - Post design using RAM Element

The pile reveal is 30 inches. According to the geotechnical report, skin friction and allowable bearing capacity from the upper 4 feet of soil are disregarded. Consequently, but as per our judgment the fixed base point for the pile will be considered to be 2 feet below the ground surface, resulting in a total pile length of 4.5 feet

RAM Elements

Steel Code Check

Summary - Group by description

Description	Section	Member	Ctrl Eq.	Ratio	Status	Reference
	W8X24 - W-DESIGNATION COMBO...	1		0.13	OK	

4- Axial Check:

Wt&ft reduced section due to corrosion:

perimeter = $2[b_f + d] + 4[(b_f - t_w)/2]$ = 2(6.389 + 7.810)+ 4((6.389-0.134)/2) = 40.598'/12 = **3.4105 ft**

Area = $2*b_f * t_f + (d - 2\,t_f)* t_w$ = 2(6.389*0.259) + (7.810-2*0.259)*0.134 = 5.05 in²/144 = **0.033 ft²**

The axial load P = 8,080 lbs, according to the worst case combination load analysis:
LC2 = 0.9 + 0.75L + 0.45 Wt

- The allowable skin friction, as mentioned in the geotechnical report, is as follows.

Table 13 - Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (feet)	Allowable End Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
Stratum 1	0 – 4	-	-	-
Stratum 2	4 – 8	20,000	750	375
	4 – 10			
Stratum 3	8 – 30	20,000	350	175
Stratum 4	10 – 30	20,000	1,000	500

Notes:
1) Geotechnical driven pile capacities only. Structural capacity of the pile to be determined by the structural engineer. Pile capacities include a factor of safety of 2.0 and are for combined dead and live loads. Allowable capacities may be increased by one-third for short duration loadings.
2) Pile tip elevations given are estimates only. Actual pile tip elevations should be determined during pile installation based on the results of the pile driving analyzer tests and the load capacities required.
3) Allowable capacities are for vertical piles loaded axially. Capacity of battered (batter not to exceed 4 horizontal to 1 vertical) piles to be evaluated by the structural engineer.

Pile vertical area = 3.4105' x 6' (based on 30' total embedment & ignoring the upper 6.0') = 20.463 ft²

- **Allowable Friction force:**

Stratum 1: from 0 – 4 ft = **0 lbs**

Stratum 2: from 4 – 8ft (Conservative Height) = 750 psf x 4ft x 3.4105ft = **10231 lbs**

Stratum 3: from 8 – 9ft = 350 psf x 1ft x 3.4105ft = **1193 lbs**

- **Allowable End Bearing: 20,000 psf** (Pile to Bear Within stratum 2)

Net bearing Resisting Force = 22,000 psf X 0.033ft² (Section Area) = **704 lbs**

Total resistance = 10231 + 1193 + 704 = **12128 lbs > 8,080 lbs → Ratio 67% OK!**

Therefore, the **W6x24** pile with **9ft** embedment is performing adequately for the axial load check.

	Section				Sheet no./rev.	
	Calc. by	Date	Chk'd by	Date	App'd by	Date

5- Expansive Soil :

Based on the geotechnical report, the presence of expansive soils indicates that soil heave should be anticipated. The relevant data are summerized below:

Side friction in the upper 4 feet of the piles should be neglected to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative side friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for potential movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations.

Soil Heave Depth = **4.0 ft.**

Soil Heave strength = **750 psf.**

Pile vertical area = 4ft x 3.4105ft = 13.642 ft^2

Soil Heave Uplift force = 750 psf X 13.642 ft^2 = **10231.5 lbs**

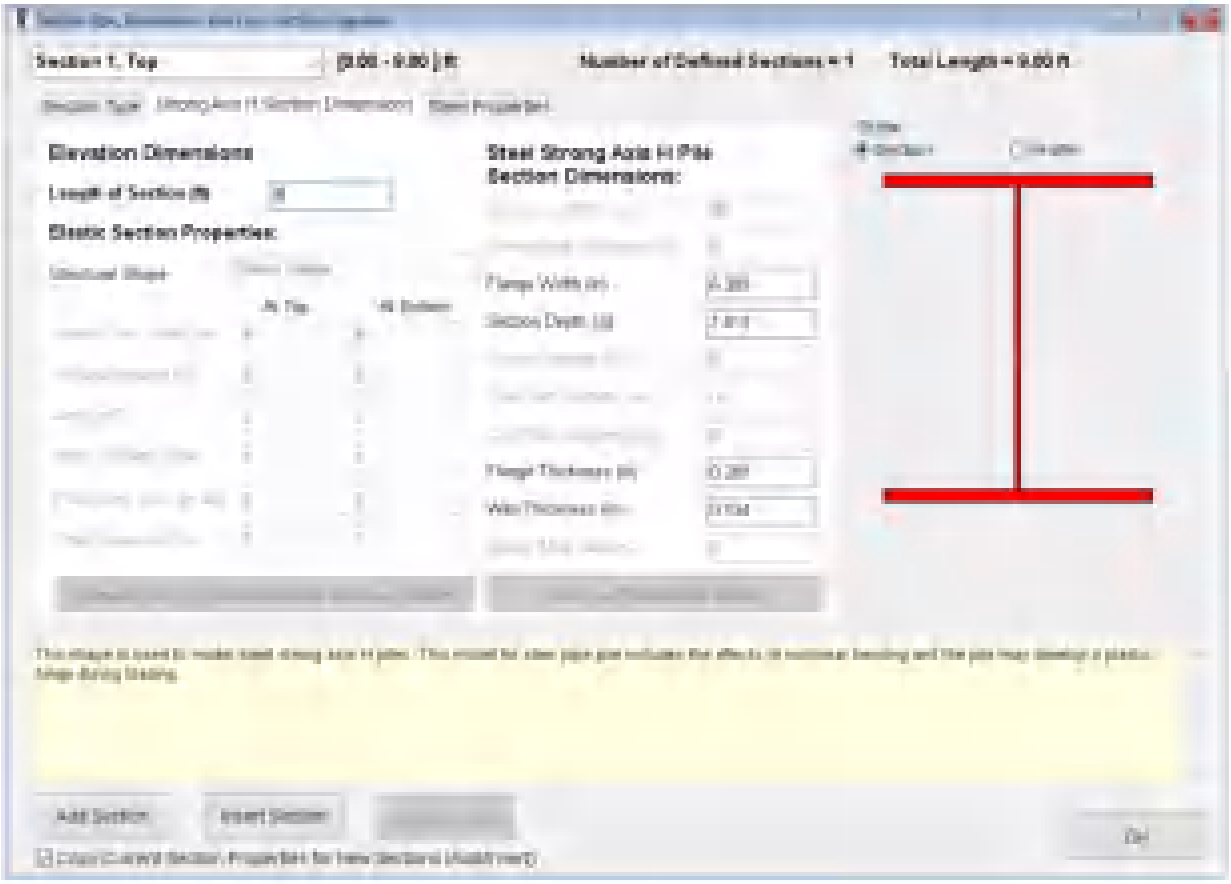
Skin Friction Resistance Force = 10,231 lbs + 1,193 lbs = **11,424 lbs**

Skin Friction Resistance Force = 10,231 lbs < 11,424 Lbs → 89.55% OK

6- W8x24 Pile Embedment Design for Lateral Loads Using L-Pile Software:

A) - L-Pile Inputs:

- W8x24 reduced section due to corrosion
- 5ft embedment.

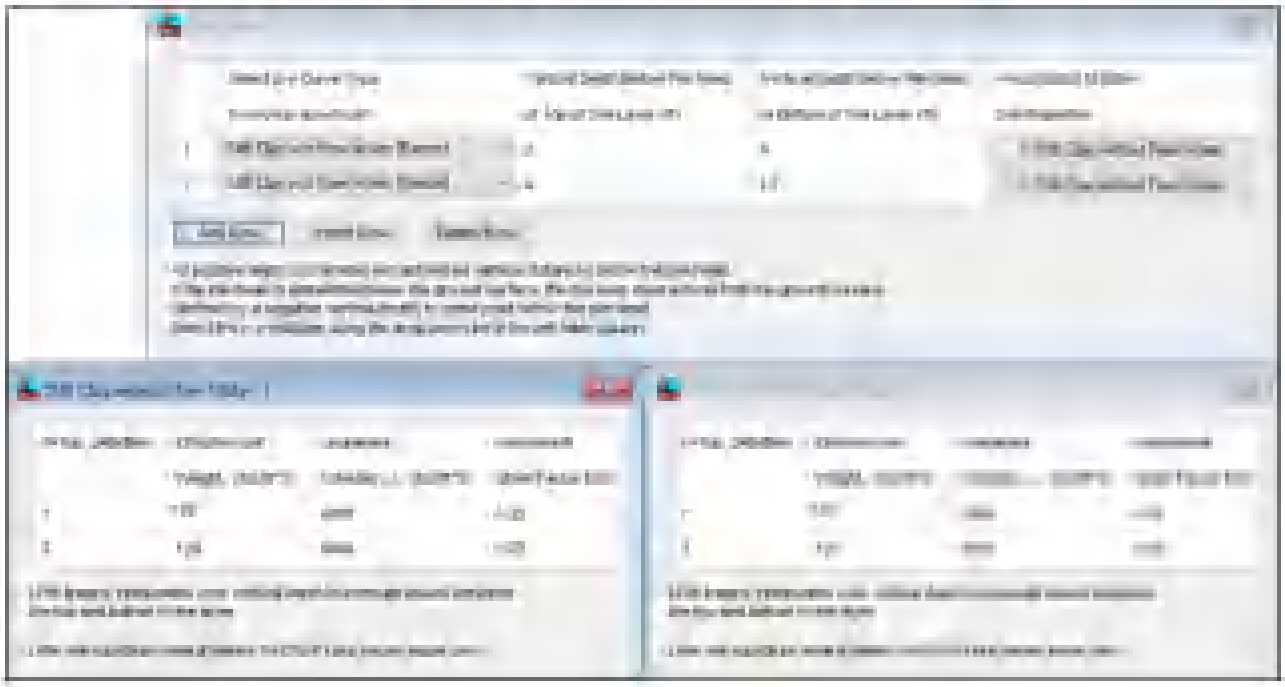


B) Soil Parameter:

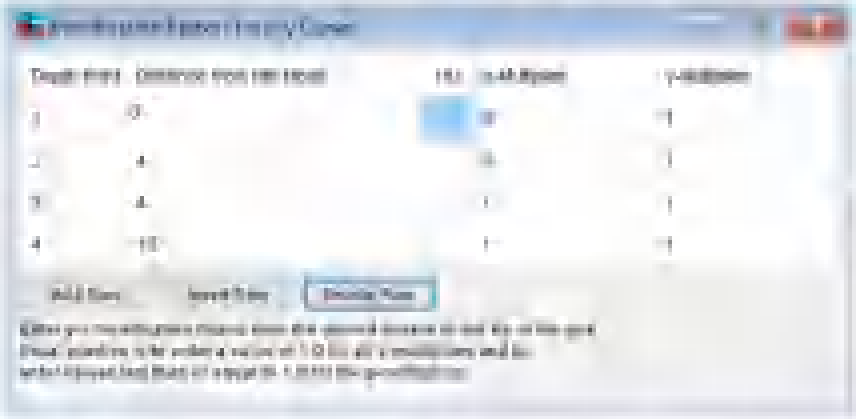
Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor ε50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2a	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 2b	132	Stiff Clay w/o Free Water	4,500	0.02

The soil parameters to be used as input for the L-Pile analysis are detailed below:



the uppermost 4 feet of soil in the profile will be disregarded and omitted from all calculations.



C) Loading Inputs

Loading inputs are based on the worst-case loading from the posts and are as follows:

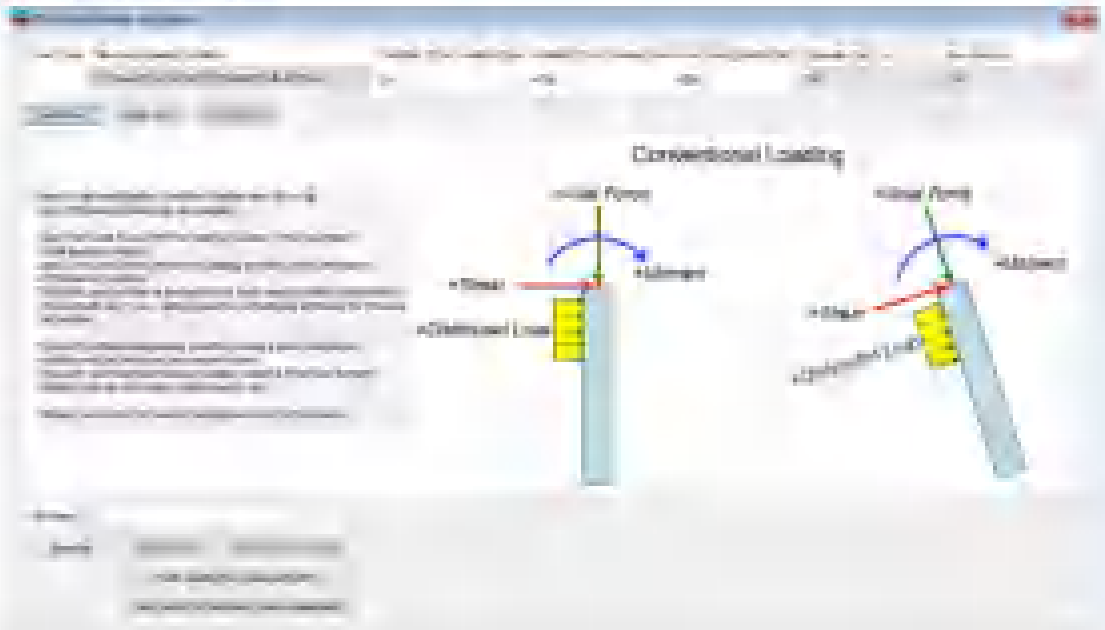
The Governing load combination is: **LC2 = DL + 0.75L + 0.45 WL**

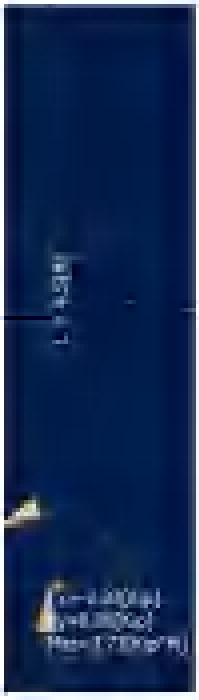
Axial: **8080lb**

Shear = **830 lb**

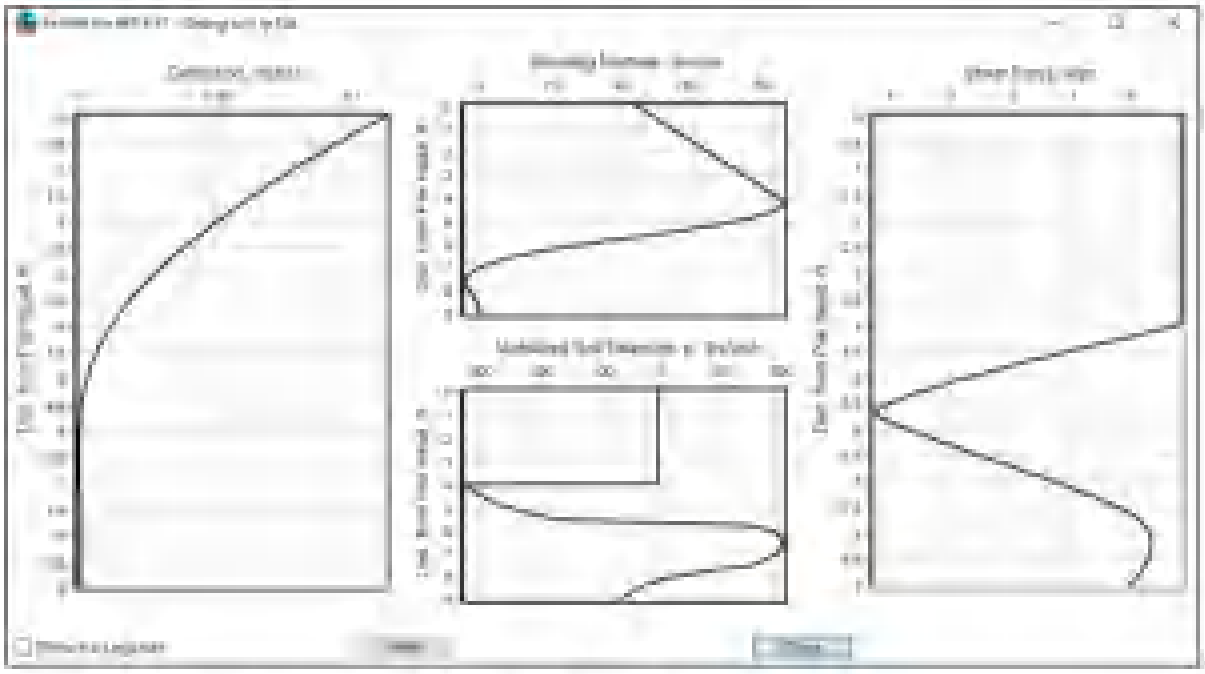
Moment = 3.73kips-ft = 3730 lb-ft = **44,760 lbs-in**

Load L-pile Inputs





D) L-Pile Result:



Shear force at pile head	=	830.0 lbs
Applied moment at pile head	=	44760.0 in-lbs
Axial thrust load on pile head	=	8000.0 lbs

Depth X feet	Deflect. y inches	Bending Moment in-lbs	Shear Force lbs	Slope S radians	Total Stress psi*	Bending Stiffness lb-in^2	Soil Res. p lb/inch	Soil Spr. Es*H lb/inch	Distrib. Lat. Load lb/inch

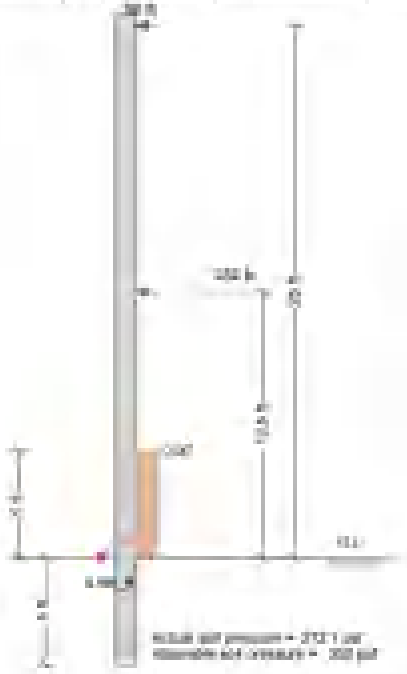
FLAGPOLE EMBEDMENT (IBC)

In accordance with IBC 2018

Tedds calculation version 1.2.04

Design summary

Description	Unit	Allowable	Actual	Utilization	Result
Lateral passive pressure	psf	300.0	272.1	0.91	PASS



Soil capacity data

Allowable passive pressure	L_{allow} = **100** pcf
Maximum allowable passive pressure	P_{max} = **150** psf
Load factor 1 (1806.1)	LDF_1 = **1.00**
Load factor 2 (1806.3.4)	LDF_2 = **2.0**

Pole geometry

Shape of the pole	**Round**
Diameter of the pole	Dia = **36** in
Laterally restrained	**Yes**

Load data

First point load	P_1 = **66** lbs
Distance of P_1 from ground surface	H_1 = **25** ft
Second point load	P_2 = **252** lbs
Distance of P_2 from ground surface	H_2 = **12.5** ft
Uniformly distributed load	W = **0** plf
Start distance of W from ground surface	a = **0** ft
End distance of W from ground surface	a_1 = **5** ft
Applied moment	M_1 = **0.0** lb_ft

Distance of M_1 from ground surface $H_3 = 0$ ft

Shear force and bending moment

Total shear force $F = P_1 + P_2 + W \cdot (a_0 - a) = 318$ lbs

Total bending moment at grade $M_g = P_1 \cdot H_1 + P_2 \cdot H_2 + W \cdot (a_1 - a) \cdot (a + a_1) / 2 + M_1 = 4808.9$ lb_ft

Distance of resultant lateral force $h = \text{abs}(M_g / F) = 15.1$ ft

Embedment depth (1807.3.2.2)

Embedment depth provided $D = 5$ ft

Allowable lateral passive pressure $S_3 = \min(P_{max}, L_{abv} \cdot \min(D, 12\text{ ft})) \cdot LDF_1 \cdot LDF_2 = 360$ psf

Embedment depth required $D_1 = ((4.25 \cdot \text{abs}(F) \cdot h) / (S_3 \cdot Dia))^{0.5} = 4.76$ ft

Actual lateral passive pressure $S_4 = (4.25 \cdot \text{abs}(F) \cdot h) / (D^2 \cdot Dia) = 272.1$ psf

PASS - Provided depth is adequate

GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE REQUIREMENTS OF THE 2015 INTERNATIONAL BUILDING CODE.
2. ALL CONSTRUCTION SHALL BE UNDER STATE SPECIAL INSPECTION REQUIREMENTS, AS REQUIRED BY 2015 INTERNATIONAL BUILDING CODE.
3. COORDINATE ALL WORK OF THESE DRAWINGS WITH WORK REQUIRED ON ELECTRICAL AND/OR MECHANICAL DRAWINGS.

DESIGN CRITERIA

1. RISK CATEGORY: (III)
2. FOUNDATION DESIGN LIFE: 50 YEARS.
3. GROUND SNOW LOAD, Pg = 5 psf
4. WIND CRITERIA:
   - BASIC WIND SPEED = 120 MPH
   - WIND IMPORTANCE FACTOR, Iw = 1.15
   - EXPOSURE CATEGORY = C
5. EARTHQUAKE DESIGN DATA:
   - SEISMIC USE GROUP = III
   - SEISMIC IMPORTANCE FACTOR, Ie = 1.25
   - MAPPED SPECTRAL ACCELERATION FOR SHORT PERIOD, Ss = 0.058 g
   - MAPPED SPECTRAL ACCELERATION FOR 1 SECOND PERIOD, S1 = 0.035 g
   - SITE CLASS = C
   - SPECTRAL RESPONSE COEFFICIENTS, SDs = 0.047 g, SD1 = 0.059 g
   - SEISMIC DESIGN CATEGORY = A

ALLOWABLE BEARING CAPACITY: 2500 PSF AS PER THE GEOTECHNICAL REPORT No: 52Q102301 DATED APRIL 10TH 2025 AND PREPARED BY LANGAN

MATERIAL SPECIFICATIONS:

CONCRETE/PADS

1. ALL CONCRETE SHALL CONFORM TO ACI 318-14.
2. REINFORCED CONCRETE IN THE FOUNDATION (I.E. FOUNDATION WALLS, GRADE BEAMS, PIER & SLAB ON GROUND) SHALL BE OF NATURAL AGGREGATE CONFORMING TO ASTM C-33.
3. PROPORTION CONCRETE MIXTURE AS FOLLOWS:
   a. MINIMUM COMPRESSIVE STRENGTH: 3500 PSI AT 28 DAYS.
   b. MAXIMUM WATER-CEMENTITIOUS MATERIALS RATIO: 0.45.
   c. SLUMP LIMIT: 5 INCHES FOR CONCRETE WITH VERIFIED SLUMP OF 2 TO 4 INCHES BEFORE ADDING HIGH-RANGE WATER-REDUCING ADMIXTURE, PLUS OR MINUS 1 INCH.
4. REINFORCEMENT SHALL BE HIGH TENSILE GRADE DEFORMED BARS CONFORMING TO ASTM A-615 GRADE 60, WELDED WIRE FABRIC SHALL CONFORM TO ASTM A-185.
5. CALCIUM CHLORIDE ADMIXTURES OR ADMIXTURES CONTAINING CHLORIDE SALTS SHALL NOT BE ADDED TO THE CONCRETE.
6. FOLLOW A.C.I. RULES AS TO STIRRUPS, ANCHORAGE, TEMPERATURE REINFORCEMENT AND SPACING OF BARS IN BEAMS UNLESS OTHERWISE NOTED.
7. ALL CONCRETE EXPOSED TO THE WEATHER TO BE AIR ENTRAINED AND SHALL CONFORM TO ASTM C-260.
8. REINFORCING BARS SPLICED AT POINTS OF STRESS TO BE LAPPED A MINIMUM OF 40 DIAMETERS UNLESS OTHERWISE NOTED.
9. PROVIDE SUPPORTS FOR REINFORCEMENT IN ACCORDANCE WITH A.C.I. STANDARDS.
10. CONTRACTOR SHALL NOTE AND PROVIDE ALL MISCELLANEOUS CURBS, EQUIPMENT AND MECHANICAL BASES THAT ARE REQUIRED BY THE ARCHITECTURAL, MECHANICAL & ELECTRICAL DRAWINGS.
11. COORDINATE ANCHORAGE DETAIL REQUIREMENTS AND LOCATIONS WITH EQUIPMENT MFR. PROVIDE A MIN OF (4) ANCHORS PER PIECE OF EQUIPMENT.
12. MEASUREMENTS OF CONDUIT WINDOWS AND CONDUIT WINDOW PLACEMENT ARE FOR RECOMMENDATION PURPOSES ONLY. GENERAL CONTRACTOR IS RESPONSIBLE FOR VERIFICATION OF CONDUIT WINDOWS IN THE FIELD.
13. IF SLEEVE IS REQUIRED, DIAMETER OF SLEEVE TO BE CONDUIT DIAMETER + 1".
14. SLEEVES TO BE PLACED BETWEEN REBAR. MAINTAIN 2" MIN. DISTANCE FROM REBAR FROM ALL SIDES.
15. AT PAD OPENINGS, SEE 2/S100.

STEEL/PILES:

1. ALL STEEL SHALL CONFORM TO THE LATEST EDITION OF THE AISC.
2. ALL STEEL SHALL BE GRADE 50.
3. FOR SOIL PREPARATION PLEASE REFER TO GEOTECHNICAL REPORT NO: 52Q102301 DATED APRIL 10TH 2025 AND PREPARED BY LANGAN.
4. ALL STEEL AND HARDWARE SHALL BE COATED WITH MIN. 3MIL ZINC COATING OR GALVANIZED TO RESIST CORROSION.
5. WIDE FLANGE SECTIONS: MUST BE A992 STEEL COVERED WITH WITH 3 MIL MIN. ZINC COATING — HOT DIPPED GALVANIZED PER ASTM A123.
6. PILE FOUNDATIONS AND DRILLED PIER INSTALLATION. A SPECIAL INSPECTOR SHALL BE PRESENT WHEN PILE FOUNDATIONS ARE BEING INSTALLED AND DURING TESTS. THE SPECIAL INSPECTOR SHALL MAKE AND SUBMIT TO THE COMMISSIONER RECORDS OF THE INSTALLATION OF EACH PILE AND RESULTS OF LOAD TESTS.

1 INTRODUCTION

1.1 SUMMARY

The Project is a 152 MW / 304 MWh Battery Energy Storage System (BESS).

Equipment	Make	Model	Quantity	Discharge Duration (Hours)	Power Rating (kW)	Energy Rating (kWh)
Battery	Sungrow	ST5015kWh-2500kW-2h	70	2	2,500	5,015
MV Skid	Sungrow	MVS5140-LS	35	N/A	N/A	N/A

Table 1.1-1: Major Equipment List

The facility utilizes a 34.5kV collector system with direct buried medium voltage (MV) feeders.

See Appendix D for applicable codes and standards.

1.2 BACKGROUND AND SCOPE

The purpose of this study is to determine the maximum current a cable can sustain without the deterioration of any of its electrical or mechanical properties. This study along with the Short Circuit study identifies the minimum required MV cable specifications.

The scope of this study will include details of the project specific analysis of the conductor ampacities for the AC system associated with the project.

PRELIMINARY

Above ground conductors are sized using the NRC Chapter 3 requirements. The conductor size (gauge) and minimum self-supported arc sized using the CYMCAP application.

2.1 SOFTWARE

The ampacity analysis were performed using CYMCAP 8.0.

CYMCAP is a Windows based software application designed to perform thermal analysis of cables.

The program utilizes the Neher – McGrath method and the IEC 60287 and IEC 60853 international standards to model the cable ampacity based on load conditions, cable construction, and bonding. The program provides the maximum current a cable can carry while not exceeding over a long-conductor temperature.

2.2 ENGINEERING DESIGN INPUTS

The design used in CYMCAP models the conductor conditions shown in the Pure Power Engineering design drawings. CYMCAP evaluates cross sections of circuits and the design drawings are used to identify cross sections that represent points in the circuit runs that need to be evaluated. These points give the evaluation that it is assumed the rest of the circuit runs will also pass.

If available for the installation, the Pure Power Engineering short circuit calculation report will be used to provide conductor thermal (CN) sizes. In early installations where the short circuit study has not been completed, the following assumptions will be used for CN conductors:

- 1000MCM and above: 1/0 CN
- Between 4/0 AWG and 1000MCM: 1/0 CN
- 4/0 AWG: 2/0 CN

2.3 STEADY STATE & TRANSIENT ANALYSIS

2.3.1 Steady State Analysis

The steady state analysis assumes constant current loading. The techniques and formulas outlined in the international standards IEC 60287, IEC 60853 and IEC 60949 issued by the International Electrotechnical Commission are used throughout the calculations. CYMCAP also includes analysis options, computation methods, and cable configurations that are not directly addressed in the IEC standards.

Since generation facilities typically operate under a steady state condition, a purely steady state analysis of cable loading would be overly conservative. To consider the daily varying of generation, a cyclic loading analysis must be carried out.

2.3.2 Cyclic Loading Analysis

Cyclic loading analysis is a simple way of representing cable loading varying by using a cable loading factor (LF) to consider load variations that take place during a period. The LF is the ratio of the average hourly load over a period to the peak load occurring in that period. These load variations allow higher peak loading of the conductors during off period is provided. When performing the cyclic loading analysis the Neher-McGrath method is used.

For a 69kV supply in a wind where hourly data is not available, a conservative approach using a LF of 0.7 will be used in the analysis. This has been determined from analysis with other methods to provide a reasonably conservative cable loading when utilizing purely steady state analysis.

The result of the cyclic loading analysis is cable loading in amps that results in a target cable dimensions and the installed LF. The cable summarization report may be less than the cable used conductors.

2.3.3 Transient Analysis

Transient loading analysis is a more detailed loading analysis than a cyclic loading analysis. In a transient analysis, a load profile is constructed that represents the loading of the cable over a period of hours, months or years.

The transient load profile for a BESS project is a charge-style followed by a discharge-style with a period equal to the maximum charge or discharge rate. For example, a 4-hour storage BESS will have a 4-hour period at maximum discharge current followed by the maximum charge current for the required charge period and that will be used to build a 24-hour load profile.

Arbitrary 24-hour periods together will provide a worst-case loading profile for any total period needed.

The initial conditions for ampacity and temperature for the transient analysis are based on the steady-state cyclic analysis. The cyclic LF is adjusted in an iterative process checking that the transient analysis shows that a long-term cable temperature equal to or less than 90% of the cable rated temperature is maintained past the 1,500 hour mark for MV cables, and the 500 hour mark for DC conductors. This has been found to result in a cable temperature that will peak at a point equal to or less than 98% of the cable rate temperature in the first 48 hours and stays under the cable rating after that. The resulting cable ampacity is typically higher than that found using the cyclic loading analysis alone. Using this analysis technique has been found to provide realistic results compared to a full transient study while requiring much less processing run time.

2.4 ENVIRONMENTAL INFORMATION

Evaluation of the site environmental conditions for the ampacity simulations and other calculations presented here is contingent upon the environmental data made available in the particular project-required industry standard meteorological datasets. The available data will be reviewed to identify the maximum soil temperature at typical cable burial depths, selection of the appropriate soil thermal resistivity (RHO), and selection of the ambient air temperatures.

The data sources typically used are the geotechnical report for the site, ASHRAE climatic data, and USDA Natural Resources Conservation Service (NRCS) regional SCAN probe data.

2.4.1 Soil Data

Soil Temperature

Soil data from the SCAN station closest to the project site can be used to find historical soil data. The maximum average hottest daily ground temperature data is found from the hourly mean soil temperature data at a depth chosen to minimize the cable temperature rise over a historical period.

Soil Moisture

Soil data from the SCAN station closest to the project site can be used to find historical soil data, or data from the geotechnical report may be used if it covers summer. If the SCAN data is used, then the minimum average moisture is found from the hourly mean soil moisture data at a depth chosen to represent the cable installation depth over a historical period.

Soil Thermal Resistivity

The soil thermal resistivity data comes from the geotechnical report.

2.4.2 Soil Zones

The site is divided up into three zones:

Zone 1: Native undisturbed soil

Zone 2: Backfill, may be native soil or soil from off site

Zone 3: This zone contains the cables. This is the dry out box where the soil moisture is driven out by the heated cables and a moisture value of 0% is used. The boundaries are 1ft from the center, making the box 2ft on a side.

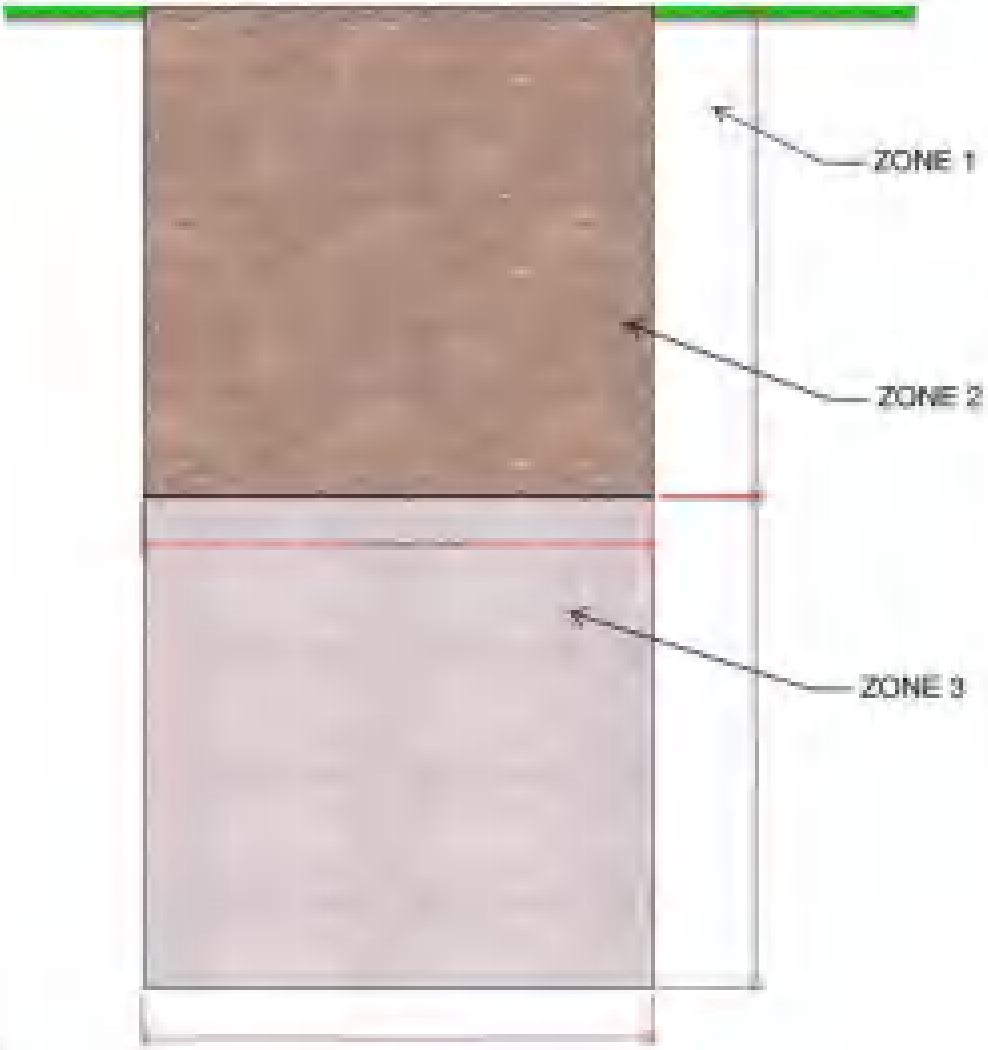

Figure 2.4.2: Soil Zones

2.5 UNDERGROUND CONDUCTOR LOCATION SELECTION

CYMCAP simulates cables in a cross section of the cable run. Therefore, the engineer must select cross sections in the site to simulate which are representative of the worst-case examples for ampacity calculation.

3 STUDY MODEL

3.1 ENGINEERING DESIGN INPUT

The following engineering documents are used as the basis for the CYMCAP model in this study.

- Pure Power Engineering electrical design 2025-08-01 Chisme BESS Electrical 60% dated 8/1/2025

3.2 PROJECT LOCATION

The site location is Brown County, Texas, 31.578332° -98.834972°. The weather station will be selected for SCAN sites nearest to the project location/address.

3.3 SOIL MODEL

3.3.1 Soil Historical Data

The SCAN station used is named Stephenville. Figure 3.3.1-1 shows the location of the Project and the SCAN site.

Figure 3.3.1-1: SCAN Station

Soil Temperature

The SCAN site hourly mean soil temperature historical data shown in Figure 3.3.1-2 at a conservative 40-inch depth and shows a maximum mean hourly temperature of 90°F (32.2°C).

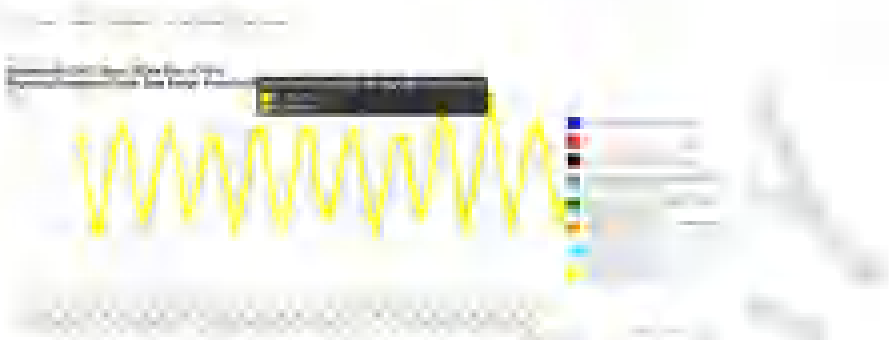

Figure 3.3.1-2: Soil Temperature at 40-inch Depth

Soil moisture

The SCAN site hourly mean soil moisture historical data is shown in Figure 3.3.1-3 at a conservative 40-inch depth and shows a minimum average moisture of 8.8%.

Figure 3.3.1-3: Soil Moisture at 40-inch Depth

3.3.2 Soil Zones:

Three soil zones are illustrated for installations in the cable ampacity study. Zone 1 is identified as the native soil which is an area around the trench. Zone 2 is the backfill area above the cable dry-out region and the moisture level is estimated to be 1/2 that of zone 1 because the soil is disturbed in the cable installation process, and we will assume it has less moisture than zone 1 soil. Zone 3 is identified as the cable dry-out region. Figure 3.4.2-1 illustrates the various zones.

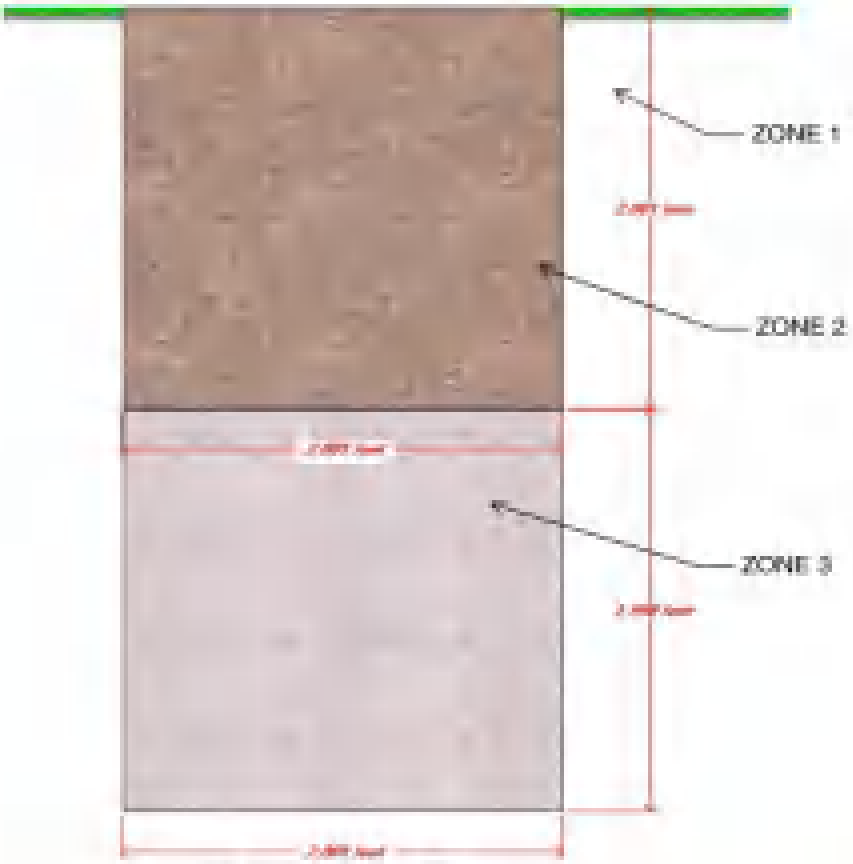

Figure 3.3.2-1: Soil Zones

Table 3.4.2-1 shows the moisture values for the three zones used in the study model.

Zone	Description	Moisture (%)
1	Native Soil	8.8
2	Trench Backfill	4.4
3	Dry-Out Zone	0.0

Table 3.4.2-1; Soil Moisture Values for Zones

3.3.3 Soil Thermal Resistivity

The Thermal Resistivity dry out curve from the Geotech report is shown in Figure 3.3.3-1.

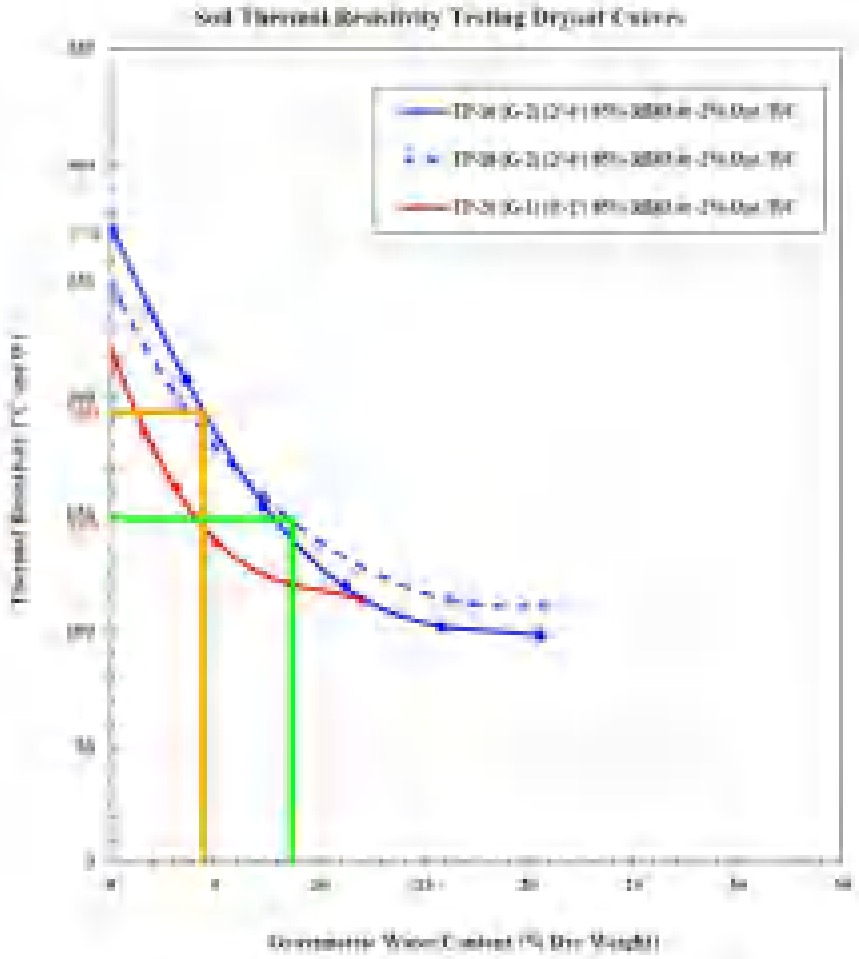

Figure 3.3.3-1; Thermal Resistivity Dry Out Curve

The curve from sample location TP-25 was chosen to represent the site conditions. Since the dry out curve for TP-25 does not extend to 18.4% moisture the maximum moisture value for the curve, 7%, will be used for native soil.

Table 3.3.3-1 shows the RHO values at those moisture levels from the graph in Figure 3.3.3-1.

Zone	Sample	Moisture Content (%)	RHO (cm°C /W)	Soil Compaction (%)
1	Composite of TP 16 & 18	8.8	149	Native
2		4.4	193	85
3		0	276	85

Table 3.3.3-1; RHO Values and Soil Compaction

Refer to Appendix B and the geotechnical report for additional information regarding the dry out curves and boring locations.

3.4 ANALYSIS MODEL

3.4.1 Steady State with Cyclic Load & Transient Analysis

The transient analysis will be used to validate the cyclic cF at values less than 0.7 as described in section 2.3.3.

The BESS system transient analysis shape is constructed to represent a charge and discharge cycle. A 4-hour charge and 4-hour discharge cycle is used to size the MV feeders to allow for future transition of the system from 2-hour to 4-hour and an increase in storage capacity.

The load profile has been modeled in CYMCAP as shown in Figure 3.4.1-1.

Figure 3.4.1-1; Transient Load Profile

3.5 FEEDER MODELS

3.5.1 Above Ground Conductor Sizing

Above ground conductor sizing is performed in accordance with NEC conductor sizing requirements. The conductor sizes are shown in the electrical design drawing package referenced in section 3.1 of this study.

3.5.2 MV AC Cable Sizing

MV AC cables run between the MV transformers and the substation. The transformers are connected in parallel, and each cable may carry the current from more than one inverter/transformer. Trench details are in the Trench Details sheet in the design drawings referenced in Section 3.1. The following cases were evaluated.

Case 1: Single circuit in individual trench, direct buried, 36" below grade

Case 2: Six circuits in parallel – multi-feeder in individual trenches, direct buried, 36" below grade, 96" on center spacing, same feeder size.

Case 3: Two circuits in parallel, multi feeder in individual trenches, direct buried, 36" below grade, 48" on center spacing, same feeder size.

Locations of cases other than Case 1 are shown in Appendix A.

All conductors are modeled with 100% TR-XLPE insulation with concentric neutrals grounded on both ends. The circuits are evaluated for ampacity at a maximum temperature of 90°C and a LF of 0.64.

Element	Value	Reference
Soil Ambient Temperature [°C]	32.2	Section 3.3.1
Soil thermal Resistivity [cm°C/W]	Zone 1: 149 cm°C /W	Table 3.3.3-1
	Zone 2: 193 cm°C /W	
	Zone 3: 274 cm°C /W	

Table 3.5.2-1: Soil Analysis Parameter Summary

The results of the analysis are shown in Table 3.5.3-2, indicating each case number, cable size, and the maximum allowable ampacity. The maximum design current comes from the worst-case cable loading for the cases in the design drawings referenced in Section 3.1. CYMCAP analysis reports are in Appendix C.

The transient load shape used for the MV cable is a four-hour battery load with a single eight-hour charge-discharge cycle in 24 hours.

Case	Conductor Size	Concentric Neutral Size	Max Allowed Ampacity (A)	Design Current (A)	Loading (%)
MVC1	500 MCM	1/3	381.8	344.1	90.1
	1000 MCM	1/6	541.7	430.1	79.4
	1250 MCM	1/6	602.5	516.1	85.7
MVC2	1250 MCM	1/6	570.8	516.1	90.4
MVC3	1250 MCM	1/6	570	516.1	90.5

Table 3.5.3-2; Analysis Results for MV Cables

PRELIMINARY

4 STUDY RESULTS

The results of the thermal ampacity cable and conductor sizing study demonstrate that the cables and conductors specified are adequately sized based on the information available at the time of this study.

"Remolded" Soil Thermal Resistivity Testing Summary

No.	Boring	Depth	Remolded Dry Unit Weight	Remolded Dry Unit Weight	Thermal Resistivity at Wet (ASTM D5334)	Thermal Resistivity at Dry (ASTM D5334)
		ft	%	pcf	°C-cm/W	°C-cm/W
1[1]	TP-3 (G-1)	0-2	20.6	82.6	91.3	240.2
2[1]	TP-6 (G-1)	0-2	11.7	96.1	78.5	206.3
3[1]	TP-7 (G-1)	0-2	11.6	96.5	86.2	215.0
4[1]	TP-11 (G-1)	0-2	12.4	95.6	79.9	199.5
5[1]	TP-13 (G-1)	0-2	12.1	95.3	92.7	219.2
6[1]	TP-14 (G-1)	0-2	12.1	95.2	83.4	235.2
7[2]	TP-16 (G-2)	2-4	20.6	82.8	97.9	274.4
8[2]	TP-18 (G-2)	2-4	20.7	84.8	121.5	249.4
9[1]	TP-20 (G-1)	0-2	12.1	95.3	113.2	222.5

Note 1: Testing specimen remolded to 85% of maximum dry unit weight @ -2% below optimum water content per the request by the client.

[1] Dry Density results of Bulk #1 (0-4 ft). [2] Dry Density results of Bulk #4 (0-4 ft). [3] Dry Density results of Bulk #5 (0-4 ft).

PROJECT #: TX-PS-2701

PROJECT: BATTERY ENERGY STORAGE SYSTEM AT CHISME STORAGE – TX-PS-2703
8987 CR 268
BROWN AND MILLS COUNTY, TX 76801

NOT FOR CONSTRUCTION

DRAWING TITLE: ELECTRICAL BASIS OF DESIGN

DRAWING #: G0.003

GENERAL

1. THE WORK INCLUDED SHALL CONSIST OF FURNISHING LABOR AND MATERIALS NECESSARY FOR THE COMPLETE INSTALLATION OF LIGHTING AND POWER SYSTEMS SHOWN ON THE DRAWINGS. ALL WORK SHALL BE COMPLETE AND LEFT IN OPERATING CONDITION AT COMPLETION OF CONTRACT.
2. INCLUDE ALL MATERIALS, ACCESSORIES AND OTHER ITEMS NECESSARY TO COMPLETE THE INSTALLATION.
3. SOME EQUIPMENT AND MATERIALS PROVIDED UNDER OTHER DIVISIONS MAY REQUIRE COMPOSITE WORK CREWS BECAUSE OF TRADE JURISDICTION. IT IS THE CONTRACTOR'S OR SUBCONTRACTOR'S RESPONSIBILITY TO REVIEW ALL CONTRACT DOCUMENTS TO DETERMINE WHERE THESE COMPOSITE CREWS ARE REQUIRED.
4. ALL TEMPORARY AND PERMANENT PERMITS AND LICENSES REQUIRED IN CONNECTION WITH THE DIVISION'S WORK SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
5. INSTALLATION SHALL MEET OR EXCEED CURRENT APPLICABLE CODES, ORDINANCES AND REGULATIONS IN EFFECT AT THE SITE. IN LIEU OF COUNTY SPECIFIC REQUIREMENTS, APPLICABLE CODES DEFAULT TO STATE STANDARDS. IF A CONTRACTOR OR SUBCONTRACTOR OBSERVES THAT THE CONTRACT DOCUMENTS ARE AT VARIANCE WITH GOVERNING CODES AND REGULATIONS, CONTRACTOR SHALL PROMPTLY NOTIFY THE ENGINEER IN WRITING, WHO WILL RESPOND TO SUCH VARIANCES IN WRITING. IF THE CONTRACTOR PERFORMS WORK KNOWING IT IS NOT COMPLIANT WITH APPLICABLE CODES, AND DOES NOT NOTIFY THE ENGINEER, THE CONTRACTOR SHALL ASSUME SOLE RESPONSIBILITY AND BEAR ALL COSTS ATTRIBUTABLE TO CORRECTING THE NON-COMPLYING WORK.
6. THE REFERENCE TO CODES AND STANDARDS SHALL NOT PERMIT A LOWER GRADE OF CONSTRUCTION WHERE CONTRACT DOCUMENTS CALL FOR WORKMANSHIP AND/OR MATERIALS IN EXCESS OF THOSE REFERENCED.
7. WHERE THE TERMS "PROVIDE" OR "SHALL BE" ARE USED HEREIN OR ON THE DRAWINGS, THEY SHALL BE TAKEN TO MEAN "THE CONTRACTOR SHALL FURNISH AND INSTALL".
8. WHERE THE TERM "WHERE REQUIRED" AND "AS REQUIRED" ARE USED HEREIN OR ON THE DRAWINGS THIS VERBIAGE SHALL BE TAKEN TO MEAN "WHERE REQUIRED BY THE CONTRACT DOCUMENTS, APPLICABLE CODES, APPLICABLE STANDARDS AND UTILITY AGREEMENTS".
9. IF EQUIPMENT OR MATERIALS OTHER THAN THOSE SPECIFIED IN THE DESIGN OF THIS PROJECT ARE PROPOSED TO BE USED ON THIS PROJECT, THE CONTRACTOR AND SUPPLIER SHALL DOCUMENT DIMENSIONAL DIFFERENCES, ELECTRICAL REQUIREMENTS AND ANY OTHER POTENTIAL VARIANCES. THIS DOCUMENTED COMPARISON SHALL BE MADE FOR MANUFACTURERS SPECIFIED AS WELL AS THOSE PROPOSED PRIOR TO REQUESTING APPROVAL. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY EXTRA COSTS INCURRED AS A RESULT OF SUBSTITUTIONS, INCLUDING THOSE OF OTHER CONTRACTORS, SUCH AS MIGHT BE DUE TO (BUT NOT LIMITED TO) DIFFERENT ELECTRICAL, MECHANICAL AND ARCHITECTURAL REQUIREMENTS.
10. SHOP DRAWINGS:
    a. CAREFULLY EXAMINE ALL SHOP DRAWINGS NOTING CAPACITY, ARRANGEMENT AND PHYSICAL DIMENSIONS AND MARK THE DRAWINGS AS BEING REVIEWED AND APPROVED PRIOR TO SUBMITTING TO THE ENGINEER. WHERE CATALOG DATA IS SUBMITTED WHICH INCLUDES ITEMS WHICH DO NOT APPLY TO THIS PROJECT, THOSE ITEMS SHALL BE CLEARLY MARKED OUT OR RELEVANT ITEMS CLEARLY NOTED. ANY DEVIATIONS FROM THE DOCUMENTS SHALL BE SO NOTED BY THE CONTRACTOR OR EQUIPMENT SUPPLIER. THE INTENT AND REQUIREMENTS OF THE DRAWINGS AND SPECIFICATIONS SHALL BE ADHERED TO AT ALL TIMES AND ARE NOT WAIVED OR OVERRIDDEN IN ANY WAY BY THE SHOP DRAWING SUBMITTAL OR REVIEW.
    b. SUBMIT A MINIMUM OF (1) ELECTRONIC COPY OF SHOP DRAWINGS FOR REVIEW AND APPROVAL. CONTRACTOR SHALL RETAIN A FINAL APPROVED COPY FOR INCORPORATION IN THE OPERATION AND MAINTENANCE MANUALS.
    c. IF RETURNED SHOP DRAWINGS ARE MARKED "NO EXCEPTIONS TAKEN", NO ADDITIONAL SUBMITTAL IS REQUIRED. IF THE SHOP DRAWING IS MARKED "MAKE CORRECTIONS NOTED", THE CHANGES NOTED ON THE SHOP DRAWINGS ARE TO BE INCORPORATED, WITH NO FURTHER RESUBMITTAL REQUIRED. IF MARKED "REVISE AND RESUBMIT", CHANGES NOTED ON THE SHOP DRAWINGS ARE TO BE MADE AND THE DRAWINGS RESUBMITTED FOR REVIEW. IF MARKED "REJECTED", THE EQUIPMENT SUBMITTED IS UNACCEPTABLE AND DIFFERENT EQUIPMENT OR MATERIALS NEED TO BE SUBMITTED.
11. NO ASBESTOS OR PCB CONTAINING MATERIALS OF ANY TYPE SHALL BE USED ON THIS PROJECT.
12. CONSULT THE CONTRACT DRAWINGS AND SPECIFICATIONS OF ALL OTHER DIVISIONS AND OTHER TRADES FOR CORRELATING INFORMATION AND LAYOUT WORK SO THAT IT WILL NOT INTERFERE WITH OTHER TRADES. VERIFY ALL DIMENSIONS AND CONDITIONS. IF CONFLICTS OCCUR SUCH THAT RESOLUTION IS NOT POSSIBLE BY THE AFFECTED TRADES ON THE JOB, THE ENGINEER SHALL BE NOTIFIED AND A RESOLUTION SHALL BE WORKED OUT.
13. ELECTRICAL EQUIPMENT ENCLOSURES (SWITCHBOARDS, PANELBOARDS, TRANSFORMERS, RELAY CABINETS, SYSTEMS RACKS/CABINETS, COMBINER BOXES, ETC.) SHALL BE VACUUMED AND WIPED CLEAN PRIOR TO ENERGIZING.
14. INSTALL MATERIAL AND EQUIPMENT IN ACCORDANCE WITH MANUFACTURERS' RECOMMENDATIONS, INSTRUCTIONS, AND CURRENT N.E.C.A. STANDARDS.
15. INSTALL EQUIPMENT AND MATERIALS TO PROVIDE REQUIRED ACCESS FOR SERVICING AND MAINTENANCE. COORDINATE FINAL EQUIPMENT LOCATION WITH REQUIRED ACCESS PANELS AND DOORS. ALLOW AMPLE SPACE FOR REMOVAL OF ALL PARTS THAT REQUIRE REPLACEMENT OR SERVICING.
16. RECORD DRAWINGS: THROUGHOUT CONSTRUCTION ACTIVITIES, IN A NEAT AND LEGIBLE MANNER, DOCUMENT AND RECORD ALL CHANGES FOR DEVIATIONS FROM THE CONTRACT DRAWINGS. SUBMIT RECORD DRAWINGS TO ENGINEER FOR REVIEW AT COMPLETION OF WORK AND INTERMITTENTLY IF REQUESTED BY THE ENGINEER IN WRITING. THE RECORD DRAWINGS WILL BECOME PART OF THE OPERATION AND MAINTENANCE MANUAL PACKAGE SUBMITTED TO THE OWNER AFTER THE COMPLETION OF THE PROJECT.

MATERIALS AND METHODS

1. ALL MATERIALS SHALL BE NEW, AS SPECIFIED (OR APPROVED), AND RECEIVED IN ORIGINAL PACKAGING. CATALOG NUMBERS SPECIFIED SHALL BE VERIFIED WITH VENDORS PRIOR TO ORDERING MATERIAL.
2. ALL MATERIALS SHALL BE LISTED BY A NRTL (I.E. UL, ETL, ETC.) AND HAVE AN ASSOCIATED LABEL UNLESS SPECIAL FABRICATION OF MATERIAL IS REQUIRED. SPECIAL FABRICATED MATERIAL SHALL BE FABRICATED USING LISTED COMPONENTS AND PROCEDURES.
3. ALL WORK SHALL BE TESTED IN ACCORDANCE WITH INDUSTRY ACCEPTED STANDARDS. BEFORE TESTING, A THOROUGH VISUAL INSPECTION SHALL BE MADE TO DETECT CONNECTION PROBLEMS, DAMAGED COMPONENTS, POOR WORKMANSHIP, INAPPROPRIATE OVERCURRENT PROTECTION, DEBRIS, ETC. TESTING APPARATUS SHALL BE CERTIFIED OR DEMONSTRATED TO BE ACCURATE WITHIN REASONABLE LIMITS. COMPETENT PERSONNEL FAMILIAR WITH THE TEST EQUIPMENT SHALL PERFORM ALL TESTS. IF TESTING PROCEDURES EMPLOYED ARE NOT SATISFACTORY TO THE ENGINEER, OUTSIDE TESTING WILL BE DONE AT THE CONTRACTOR'S EXPENSE.
4. ALL LOW VOLTAGE CABLES SHALL BE BUNDLED AND LABELED AS TO THEIR FUNCTION WITHIN TERMINAL CABINETS, WIREWAYS AND CABLE TRAYS.
5. BRANCH CIRCUITRY SHALL MATCH CIRCUIT NUMBERS AS SHOWN ON THE DRAWINGS AND AS SCHEDULED. NOTIFY ENGINEER IN WRITING AND RECORD ALL DEVIATIONS ON THE AS-BUILT DRAWINGS.
6. ALL OPENINGS INTO EQUIPMENT SHALL BE SEALED WITH GALVANIZED STEEL PLATES OR SCREENS TO PREVENT ENTRY OF INSECTS AND RODENTS.
7. CLEAN, DE-BURR AND RE-FINISH ALL FIELD-PERFORMED ENCLOSURE PENETRATIONS TO MATCH OR EXCEED THE MANUFACTURER'S MEANS OF WEATHERPROOFING AND CORROSION-PREVENTION. UTILIZE MATERIALS THAT MEET OR EXCEED THE PERFORMANCE OF THE MANUFACTURER'S MEANS OF CORROSION PROTECTION.

RACEWAYS

1. WHERE REQUIRED, PROVIDE CABLE SEPARI RELIEF AND GROUNDING CONNECTORS.
2. UNLESS NOTED OTHERWISE, EXPANSION FITTINGS SHALL BE UTILIZED FOR ALL PVC CONDUITS EMERGING FROM THE GROUND.
3. SCHEDULE 40 PVC SHALL BE USED FOR ALL RACEWAYS WHERE NOT RESTRICTED BY THIS SECTION OR SPECIFICALLY NOTED OTHERWISE.
4. ABOVE-GRADE PVC CONDUIT IS ONLY ALLOWED WHERE TRANSITIONING FROM BELOW GRADE AND SHALL BE UV RESISTANT TYPE SCHEDULE 80.
5. INSTALLATIONS OF UNDERGROUND WIRING SHALL BE IN TRENCH, DUCT OR CONDUIT OR BY PLOWING IN PLACE AS SPECIFIED ON THE DRAWINGS.
6. WHEN NON-METALLIC CONDUIT REQUIRES FIELD BENDING, UTILIZE A HOT-BENDING APPLIANCE. USE OF TORCHES TO BEND CONDUIT IS UNACCEPTABLE. WHERE CONDUITS TERMINATE IN HANDHOLES/VAULTS OR IN PAD MOUNTED EQUIPMENT, TERMINATE CONDUITS A MINIMUM OF 4 INCHES ABOVE BEDDING OR SLAB. WHERE ROUTED THROUGH SLABS, PROVIDE SLEEVES TO ALLOW SETTLING/HEAVING OF SLAB.
7. WHERE HDPE (HDPE/DUCT IS USED, SCHEDULE 80 PVC CONDUIT SHALL BE USED FOR TRANSITIONS TO ABOVE GRADE.
8. ALL RACEWAYS SHALL UTILIZE POLYWATER OR EQUAL FOR SEALANT. DUCT SEAL IS NOT CONSIDERED EQUAL.
9. ALL ELECTRICAL EQUIPMENT, CONDUITS, AND COMPONENTS MUST BE ADEQUATELY PROTECTED FROM DAMAGE AND VANDALISM BY THE USE OF BOLLARDS, FENCES, SHIELDS, GUARDS OR OTHER APPROVED MEANS.
10. IT IS CRITICAL TO MAINTAIN PROPER EQUIPMENT CLEARANCES. COMMON EQUIPMENT CLEARANCE REQUIREMENTS INCLUDE:
    a. NEC WORKING CLEARANCES PER NEC 110.26(A)(1) AND 110.34(A)
    b. VENDOR CLEARANCES PER VENDOR DOCUMENTATION
    c. ACCESS CLEARANCES FOR OPERATIONS AND MAINTENANCE
    d. ADDITIONAL CODES/ORDINANCES AS REQUIRED BY OWNER OR AHJ
    e. RECOMMENDATIONS PER NFPA-850. IN LIEU OF SPECIFIC REQUIREMENTS, 10'-0" IS A REASONABLE CLEARANCE BETWEEN EQUIPMENT, INCLUDING SEPARATION FROM FENCE LINE.
11. TO COMPLY WITH REQUIREMENTS OF NFPA 855, IMPACT PROTECTION SHALL BE PROVIDED AS FOLLOWS:
    a. BOLLARDS OR OTHER IMPACT PROTECTION MATERIALS SHALL BE UTILIZED TO PROTECT ALL BESS RELATED PCS EQUIPMENT LOCATIONS.
        i. MINIMUM PLACEMENT SHALL BE AT INTERSECTIONS AND ACCESS ROAD CORNERS WHERE VEHICLES COULD BE MORE LIKELY TO MAKE TURNS INTO EQUIPMENT. IMPACT PROTECTION IS NOT MANDATORY ALONG STRAIGHT ACCESS ROADS, AS THEY ARE CONSIDERED LESS OF A RISK.
    b. IF BOLLARDS ARE SELECTED, THEY SHALL COMPLY WITH THE MINIMUM REQUIREMENTS PER NFPA 855 (2020) SECTION 4.5.13.3
    c. MODULAR CONCRETE OR PLASTIC BARRIERS MAY BE CONSIDERED SUITABLE AS WELL, WITH THE BENEFIT OF ABOVE GROUND INSTALLATION.
    d. MAXIMUM GAP BETWEEN IMPACT PROTECTION SHALL BE 4'.
    e. IMPACT PROTECTION IS NOT CONSIDERED MANDATORY FOR ANCILLARY SYSTEMS SUCH AS AUXILIARY EQUIPMENT, LIGHTING POLES, ETC. UNLESS SPECIFIED BY THE OWNER OR AHJ.
12. MINIMUM CONDUCTOR INSTALLATION DEPTH SHALL BE PER NEC TABLE 300.5 FOR CIRCUITS <1000V, OR 300.15 FOR 1000V OR GREATER.
    a. DIRECT BURIED CIRCUITS:
        i. MV STANDARD DEPTH OF 36"
        ii. NON-MV STANDARD DEPTH OF 24"
    b. CIRCUITS IN CONDUIT:
        i. MV CONDUIT STANDARD DEPTH 2'-0"
        ii. NON-MV CONDUIT STANDARD DEPTH OF 18"
    c. BURIAL DEPTH MAY BE INCREASED FROM THE MINIMUM TO AVOID OTHER CABLE/CONDUIT SYSTEMS OR INFRASTRUCTURE, AND TO ACCOMMODATE CONDUIT SWEEP TANGENT LENGTHS.
13. ELECTRICAL WARNING TAPE SHALL BE LOCATED WITH 12" OF GRADE, AND NO CLOSER THAN 12" TO CONDUCTORS. ELECTRICAL WARNING TAPE SHALL BE PLACED AT A MINIMUM EVERY 2'-0" OF TRENCH WIDTH.

WIRING AND CABLE

1. WIRE:
    a. DESCRIPTION: SINGLE CONDUCTOR INSULATED WIRE.
    b. CONDUCTORS: 98% COMMERCIALLY PURE COPPER CONDUCTORS OR AA-8000 SERIES ALUMINUM ALLOY COMPACT STRANDED CONDUCTORS.
    c. INSULATION VOLTAGE RATING: 600 VOLTS (VAC) AND 2000 VOLTS (DC) ONLY.
    d. INSULATION: AWG/NFPA 70; 90°C TYPE: THHN-2/THWN-2, XHHW-2; RHW-2, USE-2, AND PV-WIRE.
    e. PROVIDE SERVICE LOOPS AT TERMINATIONS.
2. USE SUITABLE WIRE PULLING LUBRICANT FOR PULLING WIRE 4 AWG AND LARGER.
3. NEATLY TRIM AND LACE WIRING INSIDE BOXES, EQUIPMENT, ETC.
4. CLEAN CONDUCTOR SURFACES BEFORE INSTALLING LUGS AND CONNECTORS.
5. MAKE SPLICES, TAPS AND TERMINATIONS TO CARRY FULL AMPACITY OF CONDUCTORS WITH NO PERCEPTIBLE TEMPERATURE RISE. SPLICES ARE NOT ALLOWED UNLESS APPROVED IN WRITING BY PROJECT OWNER.
6. PARALLEL 3-PHASE FEEDER RUNS IN CONDUIT SHALL HAVE ALL THREE PHASE CONDUCTORS (INCLUDING NEUTRAL AND GROUND WHERE REQUIRED) INSTALLED IN EACH CONDUIT. GROUPING A SINGLE PHASE (OR TWO PHASES) IN A SINGLE CONDUIT IS NOT PERMITTED.
7. TIE WRAPS: EACH USE OF A TIE WRAP, OTHER THAN SPECIFIED IN THIS DOCUMENT, MUST BE APPROVED BY OWNER. CONTRACTOR SHALL ADHERE TO THE FOLLOWING SPECIFICATIONS WHEN USING TIE WRAPS:
    a. CONTRACTOR MAY USE TIE WRAPS TO BUNDLE WIRES TOGETHER, BUT NOT AS THE SUPPORT METHOD TO STRUCTURE.
    b. WHEN USING TIE WRAPS, CONTRACTOR SHALL AVOID PINCHING WIRE INSULATION, AND ENSURE THAT THE TIE WRAP IS PULLED TO A REASONABLE TIGHTNESS.
    c. ALL TIE WRAPS USED BY CONTRACTOR SHALL HAVE A MINIMUM WIDTH OF 0.189 INCHES.
    d. CONTRACTOR SHALL ONLY USE HEAT STABILIZED/ULTRAVIOLET RESISTANT TIE WRAPS THAT ARE UL LISTED.
8. DISTANCES PROVIDED IN SCHEDULES TABLES ARE ONE-WAY ESTIMATES GENERATED FOR ENGINEER'S CALCULATIONS. CONTRACTOR IS RESPONSIBLE FOR FIELD MEASUREMENTS AND TAKEOFFS.
9. PHASE RELATIONSHIP
    a. CONNECT FEEDERS TO MAINTAIN PHASE RELATIONSHIP THROUGH SYSTEM. PHASE LEGS OF FEEDERS SHALL MATCH BUS OR CABLE ARRANGEMENTS IN EQUIPMENT TO WHICH THE FEEDERS ARE CONNECTED. COLOR CODING SHALL BE AS FOLLOWS:

        208/120 VAC
        A PHASE: BLACK, B PHASE: RED, C PHASE: BLUE

        277/480 VAC, 346/600 VAC, 364/630 VAC
        A PHASE: BROWN, B PHASE: ORANGE, C PHASE: YELLOW

        1000 VDC, 1050 VDC, OR 600 VDC
        POSITIVE CONDUCTOR: RED
        NEGATIVE CONDUCTOR: BLACK

        AC AND DC SYSTEMS
        GROUNDED CONDUCTOR: WHITE
        EGC: GREEN OR MARK

        MEDIUM VOLTAGE SYSTEMS
        A PHASE: BLACK, B PHASE, RED, C PHASE: BLUE

    b. GROUNDED CONDUCTORS (NEUTRAL) AND EQUIPMENT GROUNDING CONDUCTORS SMALLER THAN #4 MUST HAVE COLOR CODED INSULATION. WHERE COLOR CODED CABLE IS NOT USED, TAPE CONDUCTOR WITH OVERLAPPED COLORED TAPE FOR A MINIMUM OF 6" IN ACCESSIBLE LOCATIONS. COLOR CODING MUST BE USED CONSISTENTLY FOR THE ENTIRE PROJECT.

MEDIUM VOLTAGE CABLES

1. CABLES FOR THE 34.5 KV SYSTEM SHALL BE UD 35 KV MV105 LISTED SINGLE CONDUCTOR, INSULATED, CONCENTRIC NEUTRAL AND JACKETED MEDIUM VOLTAGE TYPE POWER CABLE WITH 100% INSULATION LEVEL, 105° C CONTINUOUS OPERATION RATING, 130° C EMERGENCY RATING, 250° C SHORT CIRCUIT RATING.
2. CABLE SHALL HAVE ASTM B-609 ALUMINUM CONDUCTORS WITH CLASS B STRANDING IN ACCORDANCE WITH ASTM B-231, MOISTURE BLOCKED STRANDS, AN EXTRUDED SEMI-CONDUCTING SHIELD LAYER (40 MIL MIN.) OVER THE CONDUCTOR FOR STRESS CONTROL, DIRECT-BURIAL TRIPLE INSULATION (345 MILS MIN.), A CONCENTRIC COPPER NEUTRAL, AND MOISTURE/CHEMICAL/OIL/FLAME RESISTANT PVC JACKET.
3. COMPLETE INSTALLATION SHALL BE PER NATIONAL ELECTRICAL CODE ARTICLES 310 AND 328. DO NOT EXCEED MANUFACTURER'S PUBLISHED MAXIMUM PULLING TENSION OR SIDEWALL PRESSURE. PROVIDE SUFFICIENT SLACK IN CABLE, GROUND AND DRAIN WIRES TO PERMIT ELBOW CONNECTORS TO BE MOVED TO THEIR RESPECTIVE PARKING STANDS.
4. ALL CABLES SHALL BE LABELED AT EACH END AT AN ACCESSIBLE LOCATION FOR VIEWING. LABEL SHALL INDICATE CIRCUIT, PHASE, AND DESTINATION/ORIGINATION. LABELS SHALL BE CABLE ID TAGS WITH WHITE LETTERING AND SECURED WITH A MINIMUM OF (2) UV-RESISTANT ZIP TIES.
5. SPLICES ARE NOT ALLOWED UNLESS SPECIFICALLY APPROVED BY OWNER. SPLICES AND TERMINATIONS SHALL BE MADE BY A QUALIFIED JOURNEYMAN.
6. ARRANGE PHASES AT TERMINATION POINTS, A-B-C FROM LEFT TO RIGHT OR TOP TO BOTTOM AS VIEWED FROM THE FRONT. PROVIDE ADEQUATE SLACK TO INTERCHANGE CABLES AT TERMINATION POINTS.
7. PERFORM TESTING IN ACCORDANCE WITH EPC CONTRACT.
8. 35KV CABLES SHALL BE DIRECTLY BURIED IN TRENCHES IN A TREFOIL (TRIANGULAR) CONFIGURATION (CABLE TOUCHING), UNLESS OTHERWISE NOTED.
9. WHERE BORING IS REQUIRED TO AVOID OBSTACLES, CABLES SHALL BE INSTALLED IN HDPE PIPE WITH ALL THREE PHASES IN ONE PIPE. 5" HDPE CONDUIT WITH AN SDR OF 13.5 SHALL BE USED FOR MV CABLE SIZES FROM 350KCMIL TO 1250KCMIL. 6" HDPE CONDUIT WITH AN SDR OF 13.5 SHALL BE USED FOR MV CABLE FROM 1/0 AWG TO 250KCMIL.
10. A TRENCH GROUND CONDUCTOR SHALL BE INSTALLED IN PARALLEL WITH COLLECTOR FEEDERS AND BONDED TO SUBSTATION AND BESS GROUNDING SYSTEMS.

BOXES

1. PULL AND JUNCTION BOXES SHALL BE CODE GAUGE, GASKETED, PAINTED, GALVANIZED STEEL, PVC, OR FIBERGLASS. COVERS SHALL BE SECURED WITH SCREWS.
2. OUTLET BOXES SHALL BE CAST MALLEABLE IRON WITH THREADED HUBS OR PVC AND BE OF HIGH CONDUCTIVE METAL TO MAINTAIN MAXIMUM ELECTRIC CONTINUITY.
3. ALL OUTLETS SHALL BE WEATHER RESISTANT WITH WEATHERPROOF WHILE-IN-USE COVERPLATES AND WEATHERPROOF BOXES.
4. COVERS OR PLATES FOR BOXES SHALL CONFORM SUBSTANTIALLY TO THE OUTLET OF THE BOXES WITH NO PROJECTING EDGES OR CORNERS.
5. CONDUIT FITTINGS ("LB", "T", "LL", "LR", "C") OR TYPES APPROVED FOR THE LOCATION MAY BE EMPLOYED AS REQUIRED TO FACILITATE PULLING IN CONDUCTORS.
6. PROVIDE PULL AND JUNCTION BOXES TO FACILITATE PULLING OR SPLICING OF CONDUCTORS.
7. MOUNT BOXES TO ALLOW FOR MAXIMUM FLEXIBILITY.
8. INSTALL GROUNDING BUSHINGS WITH BONDING CONDUCTOR ON ALL METALLIC FEEDER CONDUITS ENTERING BOX. GROUND BUSHINGS AND BONDING CONDUCTORS ARE NOT REQUIRED ON BRANCH CIRCUIT CONDUITS.
9. ALL GALVANIZED EQUIPMENT SHALL BE HOT DIPPED. (U ALTERNATIVE) ARE ALLOWED.

GROUNDING

1. PROVIDE COMPLETE GROUNDING SYSTEMS AS DESCRIBED HEREIN AND AS SHOWN ON THE DRAWINGS.
2. ALL GROUNDING COMPONENTS SHALL BE LISTED FOR THE PURPOSE THEY ARE INSTALLED FOR. COMPONENTS SHALL BE MANUFACTURED BY AMPACT, BURNDY, ITT BLACKBURN, LSCO, OR LINCOLN (OR EQUAL).
3. GROUND RODS SHALL BE 5/8 INCH DIAMETER BY 8 FEET LONG COPPER CLAD STEEL. CONNECTING CABLES SHALL BE COPPER, SIZE(S) AS INDICATED ON DRAWINGS. ALL GROUND CONDUCTORS EXPOSED TO THE ELEMENTS OR IN DIRECT CONTACT WITH THE EARTH SHALL BE TIN COATED OR BARE COPPER.
4. ALL METALLIC CONDUITS, SUPPORTS, CABINETS, NON-CURRENT CARRYING PARTS OF EQUIPMENT, AND METALLIC STRUCTURES SHALL BE SOLIDLY GROUNDED TO FORM A CONTINUOUS PERMANENT AND EFFECTIVE GROUNDED SYSTEM.
5. ALL WIREWAYS, METAL ENCLOSURES, CABLE TRAYS AND SIMILAR PARTS OF THE ELECTRICAL INSTALLATION DESCRIBED HEREIN SHALL BE GROUNDED.
6. ALL GROUNDING ELECTRODE CONNECTIONS SHALL BE IRREVERSIBLE CRIMP TYPE. CONNECTIONS MADE BELOW GRADE SHALL BE EXOTHERMIC WELD OR IRREVERSIBLE CRIMP TYPE.
7. BOLTED CONNECTIONS TO GROUND BUS BARS SHALL BE MADE USING: A (2) EYELET IRREVERSIBLE CRIMP CONNECTOR ON THE GROUND CONDUCTOR.
8. PAY SPECIAL ATTENTION OF THE CONTRACTOR IS CALLED TO METALLIC BUILDING COMPONENTS AND MECHANICAL PIPING WHICH MUST BE GROUNDED IN AN APPROVED MANNER ACCORDING TO THE NEC.
9. PROVIDE A SEPARATE GREEN INSULATED EQUIPMENT GROUNDING CONDUCTOR FOR EACH SINGLE OR THREE PHASE FEEDER AND EACH BRANCH CIRCUIT WITH A THREE PHASE PROTECTIVE DEVICE. INSTALL THE REQUIRED GROUNDING CONDUCTOR IN THE COMMON CONDUIT WITH THE RELATED PHASE/HOT AND NEUTRAL CONDUCTORS. WHERE PARALLEL FEEDERS ARE INSTALLED IN MORE THAN ONE RACEWAY, PROVIDE A GREEN OR BARE INSULATED EQUIPMENT GROUNDING CONDUCTOR IN EACH RACEWAY.
10. SINGLE PHASE BRANCH CIRCUITS FOR LIGHTING, RECEPTACLES, MOTORS AND OTHER SIMILAR EQUIPMENT: PROVIDE SINGLE PHASE BRANCH CIRCUITS SERVING LIGHTING, RECEPTACLES, MOTORS, AND OTHER SIMILAR EQUIPMENT CONSISTING OF PHASE, NEUTRAL AND GREEN INSULATED EQUIPMENT GROUND CONDUCTOR INSTALLED IN A COMMON CONDUIT.

FUSES

1. FUSES SHALL BE INSTALLED SUCH THAT THE RATING IS VISIBLE WITHOUT REMOVAL.

GENERAL FACILITY CODES AND STANDARDS

1. National Electric Code (NEC)
2. National Electric Safety Code (NESC)
3. NFPA 70E Standard for Electrical Safety in the Workplace
4. NFPA 855 Standard for Installation of Stationary Energy Storage Systems
5. IEEE Std. 80, Guide for Safety in AC Substation Grounding
6. IEEE Std. 81, Guide for Measuring Earth Resistivity, Ground Impedance, and
7. Earth Surface Potentials of a Ground System
8. IEEE 519, Recommended Practices and Requirements for Harmonic Control in Electrical Power Systems
9. UL 1741 Standard for Inverters, Converters, Controllers and Interconnection
10. System Equipment for Use with Distributed Energy Resources
11. IEEE 1547 Standard for Interconnecting Distributed Resources with Electric Power Systems
12. UL 62109-1 Standard for Safety of Power Converters for Use in Photovoltaic Power Systems
13. UL 44 Thermoset-Insulated Wires and Cables
14. UL 854 Service Entrance Cable
15. UL 4703 Photovoltaic Wire
16. UL 9540 Energy Storage Systems
17. International Building Code (IBC)
18. State and local electric requirements to the extent required
19. Other (IEEE standard) as required.

SHEET NOTES:
1. DISTANCES ARE ONE-WAY ESTIMATES GENERATED FOR ENGINEER'S CALCULATIONS, CONTRACTOR IS RESPONSIBLE FOR OWN MEASUREMENTS AND TAKEOFFS.

TABLE 1: MV FEEDER CABLE & AMPACITY SCHEDULE				
CABLE SPEC: 35KV, AL, MV105, TRXPLE OR EPR, 100% INSULATION				
CABLE SIZE	STUDY CASE	CABLE AMPACITY [A]	MAX APPARENT POWER [MVA]	MAX # OF INVERTERS
500MCM	1	381.8	22.81	4
1000MCM	1	541.7	32.37	6
1250MCM	1	602.5	35.85	6
	2	570.8	34.11	6
	3	570.0	34.06	6
SIMULATION PARAMETERS: CABLES ARE DIRECT BURY OR BURIED IN CONDUIT IN TREFOIL CONFIGURATION. RHO = 274°C-CM/WATT AT 0% MOISTURE IN A 2'x2' DRY OUT BOX AROUND CABLE, RHO = 193°C-CM/WATT AT 4.4% MOISTURE BETWEEN DRY OUT BOX UP TO THE SURFACE, RHO = 149°C-CM/WATT AT 8.8% MOISTURE FOR ALL OTHER SOIL. AMBIENT EARTH TEMP = 30°C, 36" OF COVER. WORST CASE INSTALLATION SCENARIO. REFER TO CABLE STUDY FOR ADDITIONAL INFORMATION.				

TABLE 2: MV FEEDER STUDY CASE SCHEDULE	
CASE	DESCRIPTION
1	SINGLE CABLE IN INDIVIDUAL TRENCH, DIRECT BURIED, 36" BELOW GRADE
2	6 CIRCUITS IN PARALLEL - MULTI-FEEDER IN INDIVIDUAL TRENCHES, 36" BELOW GRADE, 96" ON CENTER SPACING, SAME FEEDER SIZE SUBSTATION ENTRANCE.
3	2 CIRCUITS IN PARALLEL - MULTI-FEEDER IN INDIVIDUAL TRENCHES, DIRECT BURIED, 36" BELOW GRADE, 48" ON CENTER SPACING, SAME FEEDER SIZES.
REFER TO CABLE AMPACITY STUDY FOR SIMULATION PARAMETERS. THE CASE APPLIED FOR EACH MV FEEDER REPRESENTS THE WORST CASE SCENARIO FOR THAT SPECIFIC FEEDER SEGMENT.

1 BATTERY COLLECTION SCHEDULES & CALCULATIONS
SCALE: NOT TO SCALE

NOT FOR CONSTRUCTION

DRAWING TITLE: BATTERY COLLECTION SCHEDULES & CALCULATIONS

DRAWING #: E2.410

PROJECT: BATTERY ENERGY STORAGE SYSTEM AT CHISME STORAGE – TX-PS-2703
8987 CR 268
BROWN AND MILLS COUNTY, TX 76801

PREPARED FOR: LANGAN

PREPARED BY: PURE POWER ENGINEERING
116 HIGH STREET, HUDSON, MA 01749
RICHARD A. PARIS

LANGAN, LLC
2401 FISCHER ROAD, SUITE 740
HOUSTON, TX 77004
T: 713.783.5588
WWW.LANGAN.COM

DATE: 09/03/2025 (ISSUED FOR PERMIT); 04/30/2025 (ISSUED FOR DESIGN)

SEVERN DESCRIPTION: AUTO ELECTRICAL DESIGN; 30% ELECTRICAL DESIGN

PW | TRD | CHK
BR | AP | LL
BR | AP | EL

PAGE SIZE: 36" x 24"
PROJECT #: TX-PS-2701

BUILT IN INCHES

SHEET NOTES:
1. AMPACITY HAS BEEN DETERMINED BY NEC 310.20, 75DEGREE RATING. REFER TO AWM THERMAL STUDY FOR ADDITIONAL INFORMATION AND VALIDATION USING THE AWM CLEAT SYSTEM.

1 BATTERY COLLECTION SCHEDULES & CALCULATIONS
SCALE: NOT TO SCALE

NOT FOR CONSTRUCTION

DRAWING TITLE: BATTERY COLLECTION SCHEDULES & CALCULATIONS

DRAWING #: E2.420

PROJECT: BATTERY ENERGY STORAGE SYSTEM AT CHISME STORAGE – TX-PS-2703
8887 CR 268
BROWN AND MILLS COUNTY, TX 76801

PREPARED FOR: LANGAN
LANGAN, LLC
840 DESPER ROAD, SUITE 740
HOUSTON, TX 77067
T: 713.780.2500
WWW.LANGAN.COM

PUREPOWER ENGINEERING
1111 W. MOCKINGBIRD LANE, SUITE 1111
DALLAS, TEXAS 75247
T: 214.865.2000
RICHARD A. PARKS

NO.	DATE	DESCRIPTION	BY	CHK
1	09/01/2025	60% ELECTRICAL DESIGN	AP	LL
2	11/25/2025	90% ELECTRICAL DESIGN	BA	AP
			SA	LL

DESIGNED: [illegible]

PLOT DATE: 12/1/2025 8:11:17 PM

RULER IN INCHES

SHEET NOTES:
1. AMPACITY HAS BEEN DETERMINED BY NEC 310.20, 75DEGREE RATING. REFER TO AWM THERMAL STUDY FOR ADDITIONAL INFORMATION AND VALIDATION USING THE AWM CLEAT SYSTEM.

NOTES:
1. GROUND GRID SHALL BE MADE UP 3/0 BARE COPPER CABLE BURIED A MINIMUM OF 18" BELOW GRADE.
2. CONTRACTOR TO COIL GROUND LEADS OF SUFFICIENT LENGTH ON FOUNDATIONS, AS NECESSARY PER THE GROUNDING PLAN, TO GROUND EQUIPMENT AS IDENTIFIED IN THE GROUNDING DETAILS. SPLICING PIGTAILS SHALL NOT BE PERMITTED.
3. FOR EQUIPMENT CONNECTIONS, PROVIDE PIGTAILS OF ADEQUATE LENGTH TO EXTEND TO FINAL ELEVATION OF EQUIPMENT WITHOUT SPLICING TO MAKE UP APPLICABLE DETAILS.
4. PIGTAILS AND EXPOSED GROUNDING CONDUCTOR SHALL BE PROTECTED FROM PHYSICAL DAMAGE DURING CONSTRUCTION.
5. DO NOT DRIVE GROUND RODS CLOSER THAN 18" FROM ANY FOOTING.

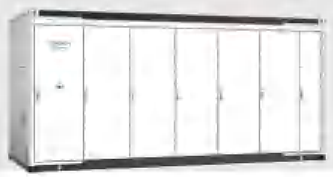
PowerTitan 2.0 Liquid Cooled Energy Storage System

NEW



OPTIMAL COST

- Increased liquid cooled temperature control system
- Maximizing energy conservation
- Pre-assembled, modular design for the entire equipment compact system

SAFE AND RELIABLE

- Each module is assessed and evaluated for its safety and reliability performance
- The electrical cabinet and battery cabinet are equipped with explosion-proof valves

EFFICIENT AND FLEXIBLE

- High efficiency and adjustable, flexible setting the grid system discharge capacity
- Multi-level fault detection design, identification, health to cell level alarms
- Function electrically limited on-site work, remote communication possible

CONVENIENT O&M

- One-click system upgrade
- Automatic pressure refilling design
- Cloud intelligent monitoring

1 INTRODUCTION

1.1 SUMMARY

The results of the short circuit analysis indicate that the MV cable capacity is suitable for the installation. The maximum 3PH fault current at the MV terminals of the PCS equipment and MV terminals of the inverters in the system is less than the rating of the PCS equipment, therefore all inverters are acceptable for use.

The Project is a 176.00 MWac/ 351.05 MWh battery energy storage system (BESS) facility with a 345.0 MVAc point of interconnection (POI) 4mH. The facility consists of the following equipment.

Major BESS System Equipment List						
Equipment	Make	Model	Quantity	Duration (Hours)	Power Output (MW)	Energy Capacity (MWh)
Battery	Sungrow	5150.15kWh-[5000.6V-2h	70	2	2.5	5.015
MV Skid	Sungrow	MVS6340-LS	35	n/a	n/a	n/a

Table 1.1

The Facility utilizes a 34.5 kV collector system with direct buried medium voltage (MV) feeders. The medium voltage transformers for each PCS are connected to the high-voltage substation via six 34.5 kV underground distribution circuits. The distribution circuits are connected to the high-voltage substation via six 34.5 kV circuit breakers.

The current model is focused solely on the BESS design. At this stage, the PV system is modeled as [illegible] power sources at each of the dedicated substation switches. This simplified representation allows for the project to progress with BESS design analysis while the detailed PV design is being finalized. Once the final PV design package is completed, the model will be updated to incorporate the full PV system. This phased approach ensures the study reflects the as-designed configuration while supporting project continuity.

Applicable electrical code: National Electrical Code (NEC) 2020 Edition

1.2 BACKGROUND AND SCOPE

The scope of this study is to identify the maximum available fault currents throughout the facility. This includes medium voltage cables, major electrical equipment, auxiliary systems*, and low voltage power distribution. This study, along with the Cable Ampacity study, identify the minimum required MV cable specifications.

The results of this study are used to ensure equipment has been selected to withstand the calculated fault current levels and to ensure that the MV cable shield and concentric neutral conductors can withstand these currents. Additionally, these results are consistent with the thermal and ampacity study.

*Ancillary or other equipment included within a skid or other assembly provided by others (ie Power Conversion Unit, PCS), is excluded from the scope of this study. Ratings for the equipment shall be provided by the manufacturer of the assembly or integrator and compared to the results of this study.

2 METHODOLOGY

This section discusses the inputs required to model the system, the source of the inputs, and how the inputs impact the results. The information in this section is for descriptive purposes only and does not reflect the inputs to the project in this report. Refer to Section 3 for details specific to this project.

2.1 SOFTWARE

The system was modeled in Etap version 24 by Operation Technology, Inc.

2.2 UTILITY FAULT CURRENT CONTRIBUTION

The basis of a short circuit study is the available fault current provided by the utility. This is usually given at the high voltage side of the substation at the utility point of common coupling (PCCC) and can be supplied by the utility or the substation engineer. It is modeled in Etap using the utility component.

2.3 HIGH-VOLTAGE SUBSTATION DESIGN

The HV substation design is by others however, key elements are included in the ETAP system model so the model needs to include all the electrical components up to the utility PCCC.

2.3.1 Fault Protection Clearing Time

The MV cable withstand evaluation is based on the fault clearing time of the HV overcurrent protective devices in the substation. This data is provided by the HV substation design engineer. Increasing the fault clearing time will result in lower cable withstand evaluations.

2.3.2 Main Power Transformer (MPT)

The substation MPT model is required for the short circuit study model. This data is provided by the HV substation design engineer.

2.3.3 Neutral Ground Reactor (NGR)

An NGR in the MPT neutral to ground bond may be recommended by the analyzer or specified by the HV engineer for a project to reduce the ground fault current.

2.4 POWER CONVERSION SYSTEMS (PCS)

2.4.1 Inverter Short Circuit Contribution

The inverter short circuit contribution may be different for the equipment evaluation and for the cable withstand evaluation. The inverter short circuit currents are provided by the manufacturer. The time the inverter requires to reach steady-state short circuit current is typically much faster than the trip time of an OCPD.

The ground fault current contribution to the MV distribution by the inverters also depends on the PCS MV transformer winding and grounding configuration as some topologies do not pass ground fault current.

2.4.2 PCS Medium Voltage Transformer (GSU)

The PCS GSU wiring configuration will determine if it will source ground fault current. The following is a summation of the possible options:

The inverter can contribute to a three-line fault on the MV side with any winding configuration.

2.5 OVERHEAD DISTRIBUTION SYSTEM

If an overhead power distribution system is part of the project the circuits are included in the model to model the fault current flow in the system. The overhead conductors may or may not be evaluated for short circuit capacity depending on the scope of the study.

2.6 MV CABLE WITHSTAND RATING

To evaluate the MV cable withstand rating the following data is required:

- Available fault current to the MV conductor
- Phase conductor and concentric neutral (CN) conductor withstand ratings
- Fault clearing time
- Split factor of the fault current between the CN and trench ground conductor current paths. If trench ground conductor is not used
- Capacity allowance to allow for a future increase in the fault current

The MV cable manufacturer provides the withstand rating values for the phase and CN conductors based on the cable size, CN size, and the fault clearing time.

The split factor is the percentage of the fault current carried by the CN during a line to ground fault. The values typically used are as follows:

- Trench ground conductor absent – 100% of the fault current on the CN
- Trench ground conductor present – 70% of the fault current on the CN, 30% on the trench ground

The capacity factor is used to add a buffer to the fault current capacity of the MV cables in anticipation of future increases in the utility fault contribution. The utility fault contribution includes a 15% growth factor to account for future system upgrades. As a result, the minimum capacity factor applied is 100%.

Etap is used to calculate the three-phase fault and single line-to-ground fault currents at each MV cable in the system. The ratio of the MV cable withstand rating (both phase conductor and CN) to the fault current needs to be equal to or greater than the chosen capacity factor for the cable to pass.

2.7 EQUIPMENT SCCR

Etap can also compute the available fault current at the terminals of equipment in the project. If the SCCR or AIC rating of the equipment is known, then the equipment can be evaluated on a pass/fail basis.

3 STUDY MODEL

3.1 ENGINEERING DESIGN INPUT

The following engineering documents are used as the basis for the Etap model in this study.

Pure Power Engineering electrical design 2025-08-01 Chisme BESS – 60% Design dated 08/01/2025

Quanta substation design: *Rio d Chisme Solar & Storage – TX PS 2701 345/34.5kV Substation* dated 12/11/2024 and 03/12/2025

Oncor short circuit study, titled *Chisme Solar & Storage Generation Interconnection Short Circuit Study – 24INR0393 & 24INR0882*, dated 02/28/2024

Note: the above referenced substation design represents the latest available version from the substation engineer, however that does not imply that the contents of the report reflect the most current design

3.2 UTILITY CONTRIBUTION

Per information provided by the utility, the following utility contribution information is used at the 345 kV point of interconnection:

- Service voltage: 345 kV
- 3 Phase short-circuit current: 12,795.1 A
- 1 Phase short-circuit current: 9,191.7 A

A growth factor of 15% is applied, resulting in the following adjusted values:

- 3 Phase short-circuit current: 14,714.4 A
- 1 Phase short-circuit current: 10,570.5 A

The X/R ratio values are as follows:

- Positive-sequence impedance X/R: 38.903
- Zero-sequence impedance X/R: 7.937

The utility contribution details shown in Appendix E.

3.3 HIGH VOLTAGE SUBSTATION DESIGN

3.3.1 Fault Protection Clearing Time

Per discussion with the substation engineer, a clearing time of 18 cycles has been assumed for this analysis. Final coordination is pending and subject to confirmation.

3.3.2 Main Power Transformer

Per the HV substation one-line diagram, there will be two 120/160/200 MVA MPTs designated as 'T1' and 'T2'.

Per information provided by the transformer manufacturer, the MPTs is modeled as shown in Figures 3.3.2-1, 3.3.2-2, and 3.3.2-3. Both MPTs are modeled the same.

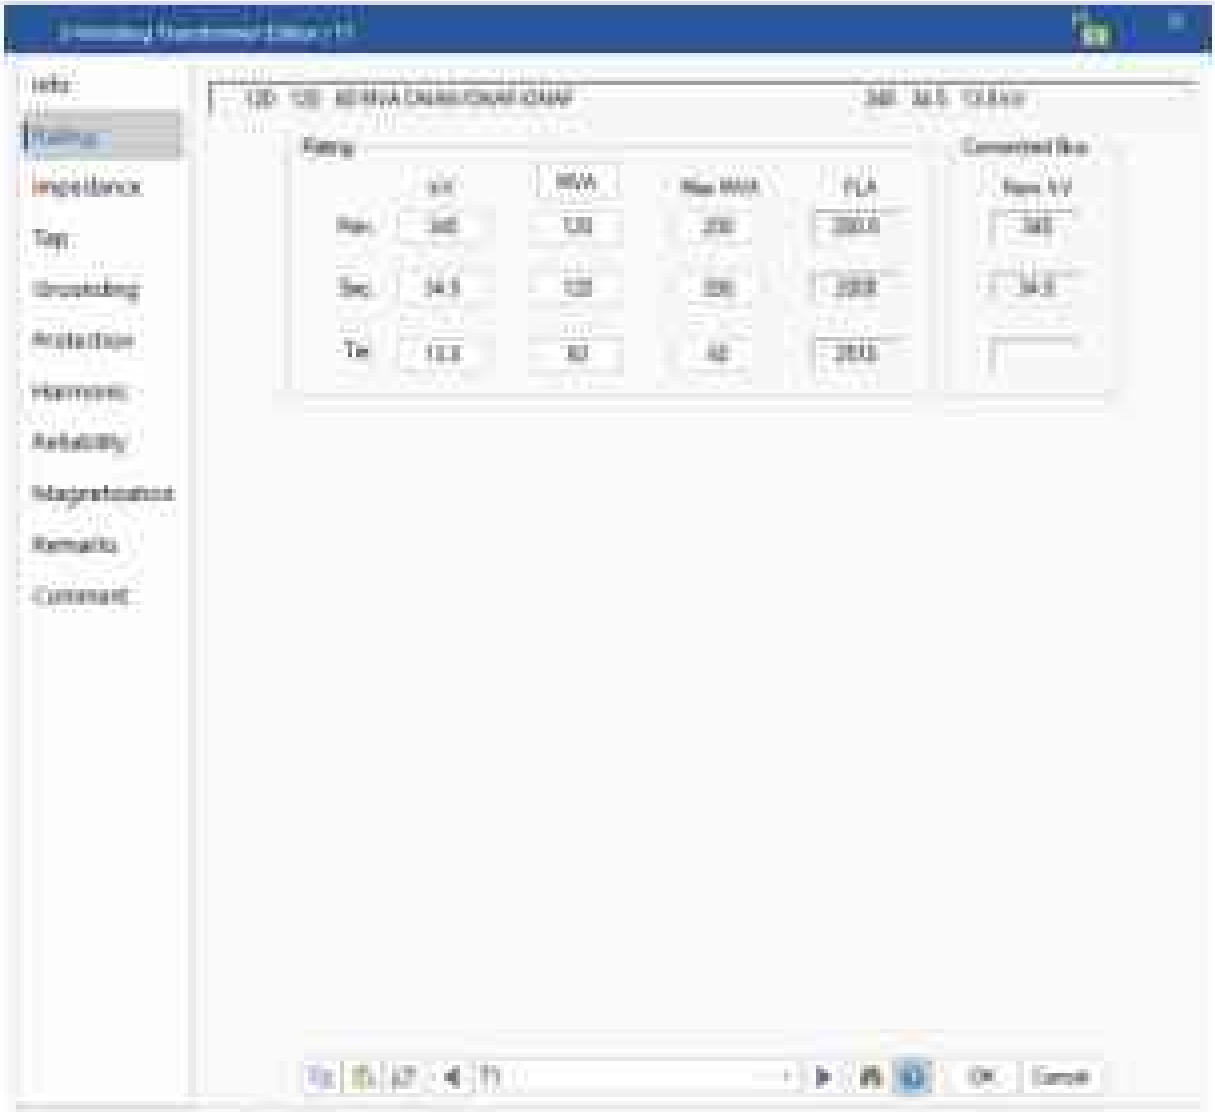

Figure 3.2.2-1: MPT Rating

PRE

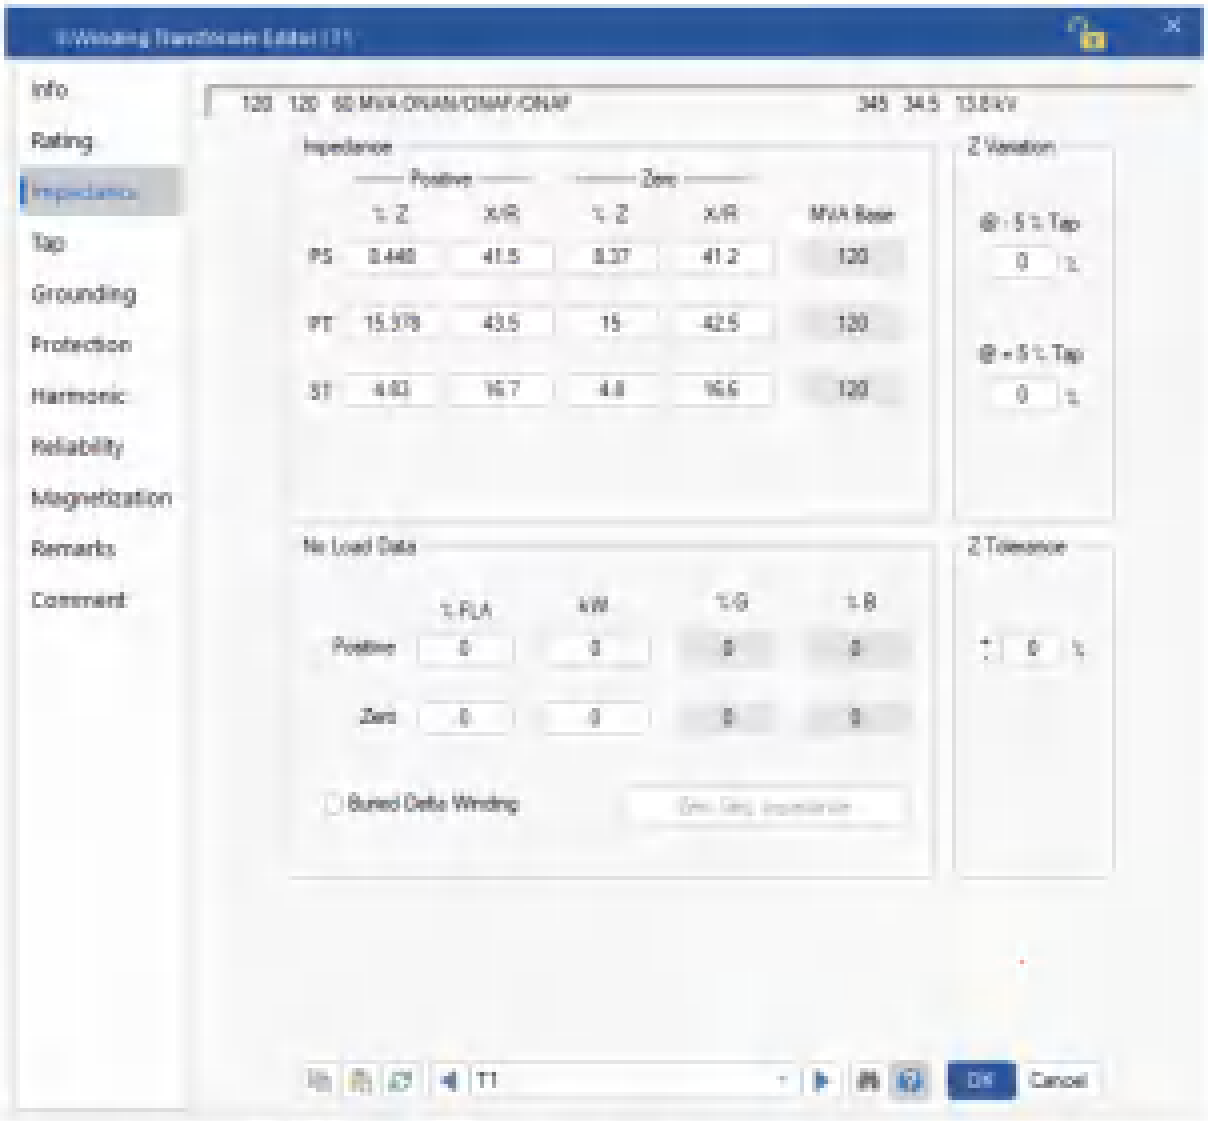

Figure 3.2.2-2: MPT Impedance

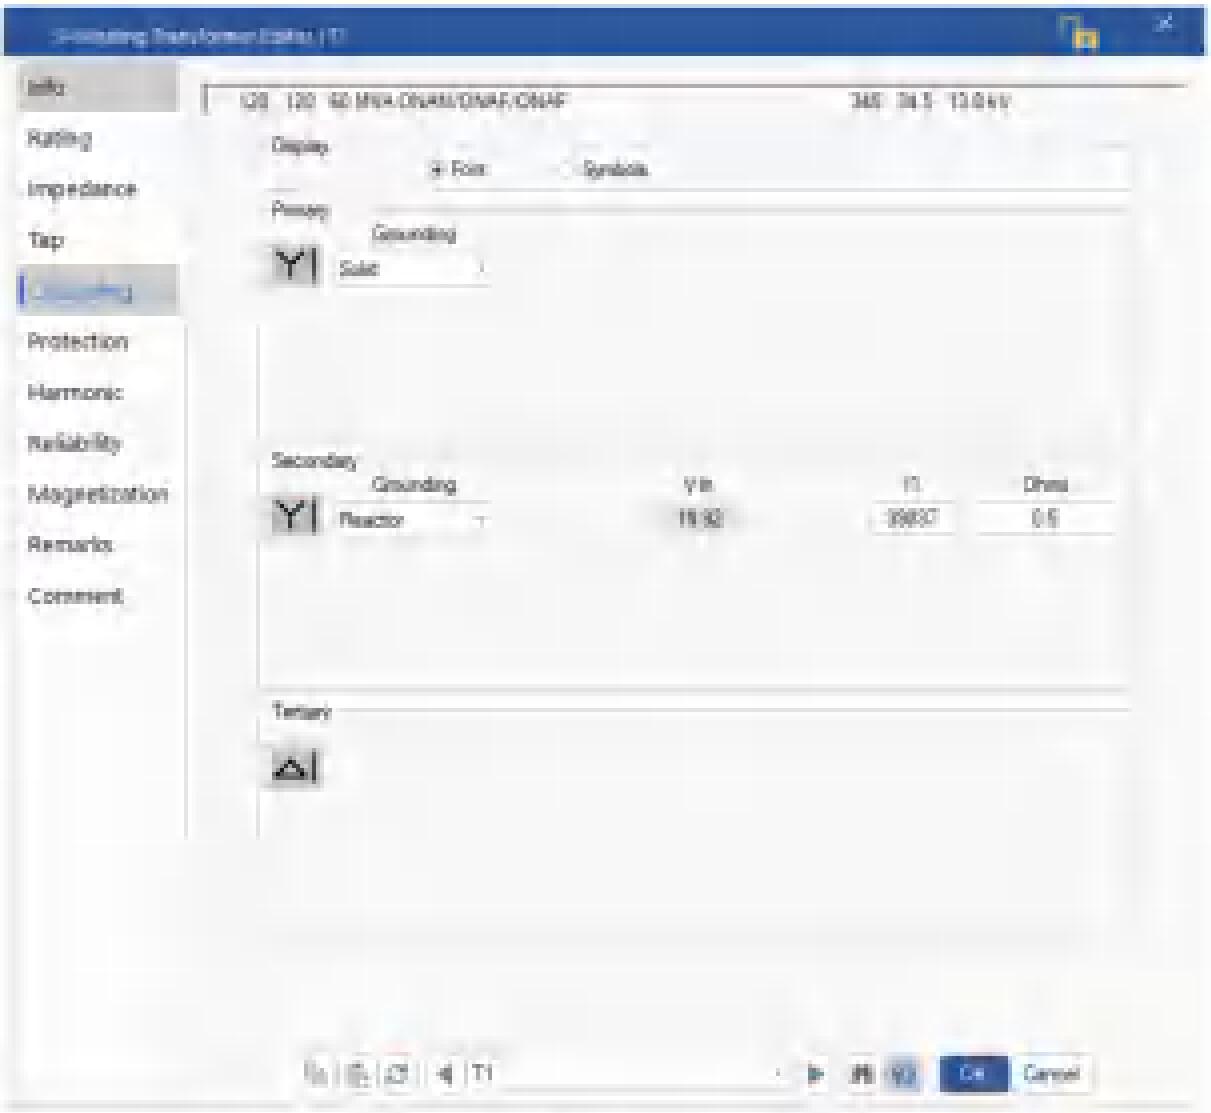

Figure 3.2.2-3: MPT Grounding with NGR

As per the Qualus document titled *34.5 kV Neutral Grounding Reactor Technical Specification 24144-01-ES-NGR*, dated 04/11/2025, a 0.5-ohm NGR is to be installed at each MPT. Therefore, NGRs have been modeled in the system as shown in Figure 3.2.2-3 above. The document also notes that the ratings are to be confirmed. Final coordination is pending and subject to confirmation.

3.4 POWER CONVERSION SYSTEMS

3.4.1 Inverter Short Circuit Contribution

The steady-state fault contribution is used for evaluating the cable withstand capability while the peak short-circuit contribution is used for the equipment evaluation. The BESS inverter short-circuit contribution values are based on the *Sungrow Short-Circuit Current SC2.0MW-US* document.

The BESS inverter's three-phase-steady-state short-circuit current is approximately 1.24 per unit (217 A per inverter). The inverter reaches this steady-state fault current in 50 ms. With 12 inverter modules in the PCS, the total modeled short-circuit current input is 2,615 A. This value is used for the inverter cable withstand evaluation, as shown in Figure 3.3.1-1.

The BESS inverter's peak short-circuit current is approximately 2.47 per unit (433 A per inverter), resulting in a total of approximately 5,196 A for the PCS. This value is used for the inverter equipment evaluation, as shown in Figure 3.3.1-2.

The PV inverter short-circuit contribution values are based on *Modeling of SUNGROW SG440CUD PV Inverter for Short Circuit Studies in Aspen OneLiner®* document. The PV inverter's three-phase steady-state short-circuit current is approximately 1.06 per unit. The inverter reaches this steady-state fault current in 70 ms. For each PCS, the total modeled short-circuit current input is 8,225 A. The inverter's peak short-circuit current is approximately 2.20 per unit, resulting in a total of approximately 8,905 A for the PCS.

The source document's used for modeling the BESS and PV inverter short-circuit contributions are provided in Appendix A.

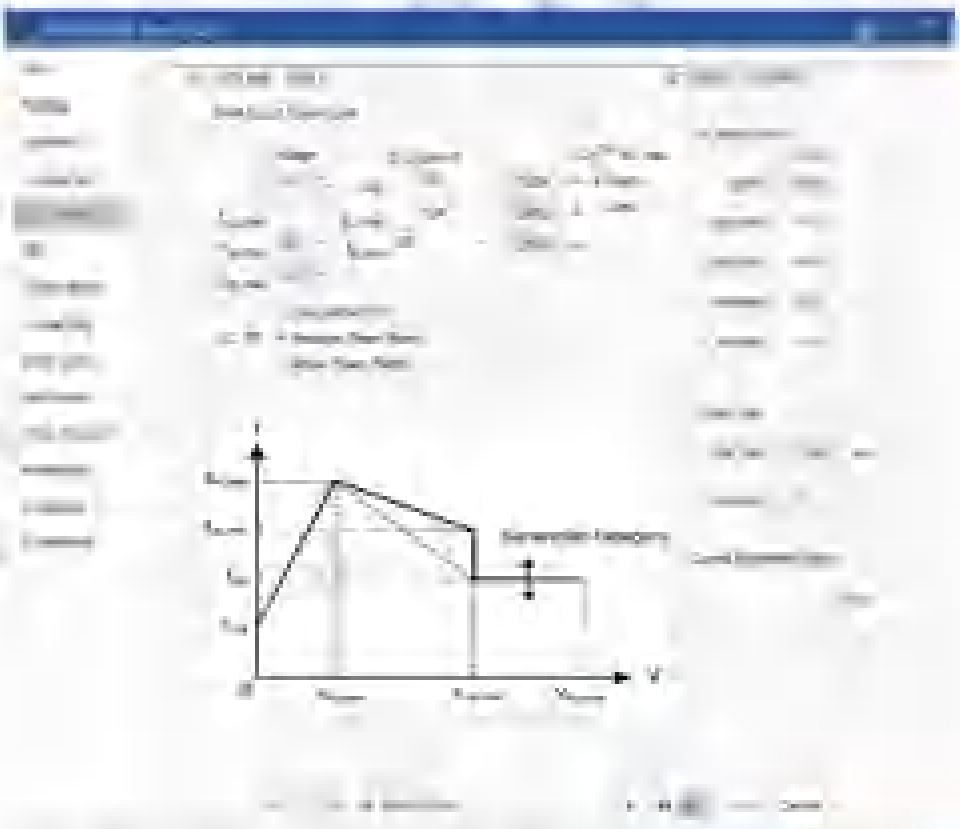

Figure 3.3.1-1: BESS Inverter Short Circuit Model, Steady State

Figure 3.3.1-2: BESS Inverter Short Circuit Model, Peak

3.4.2 PCS Medium Voltage Transformer

The impedance data provided by the inverter manufacturer was used to model all PCS GSU transformers. The positive-sequence impedance was entered directly into the model. While values are also entered for zero-sequence impedance, the transformers are configured as delta-ungrounded wye in Etap, as shown in the Impedance and Grounding tabs (Figures 3.3.2-1 and 3.3.2-2, respectively). For ungrounded transformers, the zero-sequence impedance is considered infinite. As a result, Etap blocks any data entered in the zero-sequence fields, effectively treating the zero-sequence impedance as infinite. This modeling approach is consistent with the configuration specified in the Grounding tab

Figure 3.3.2-1: GSU Impedance

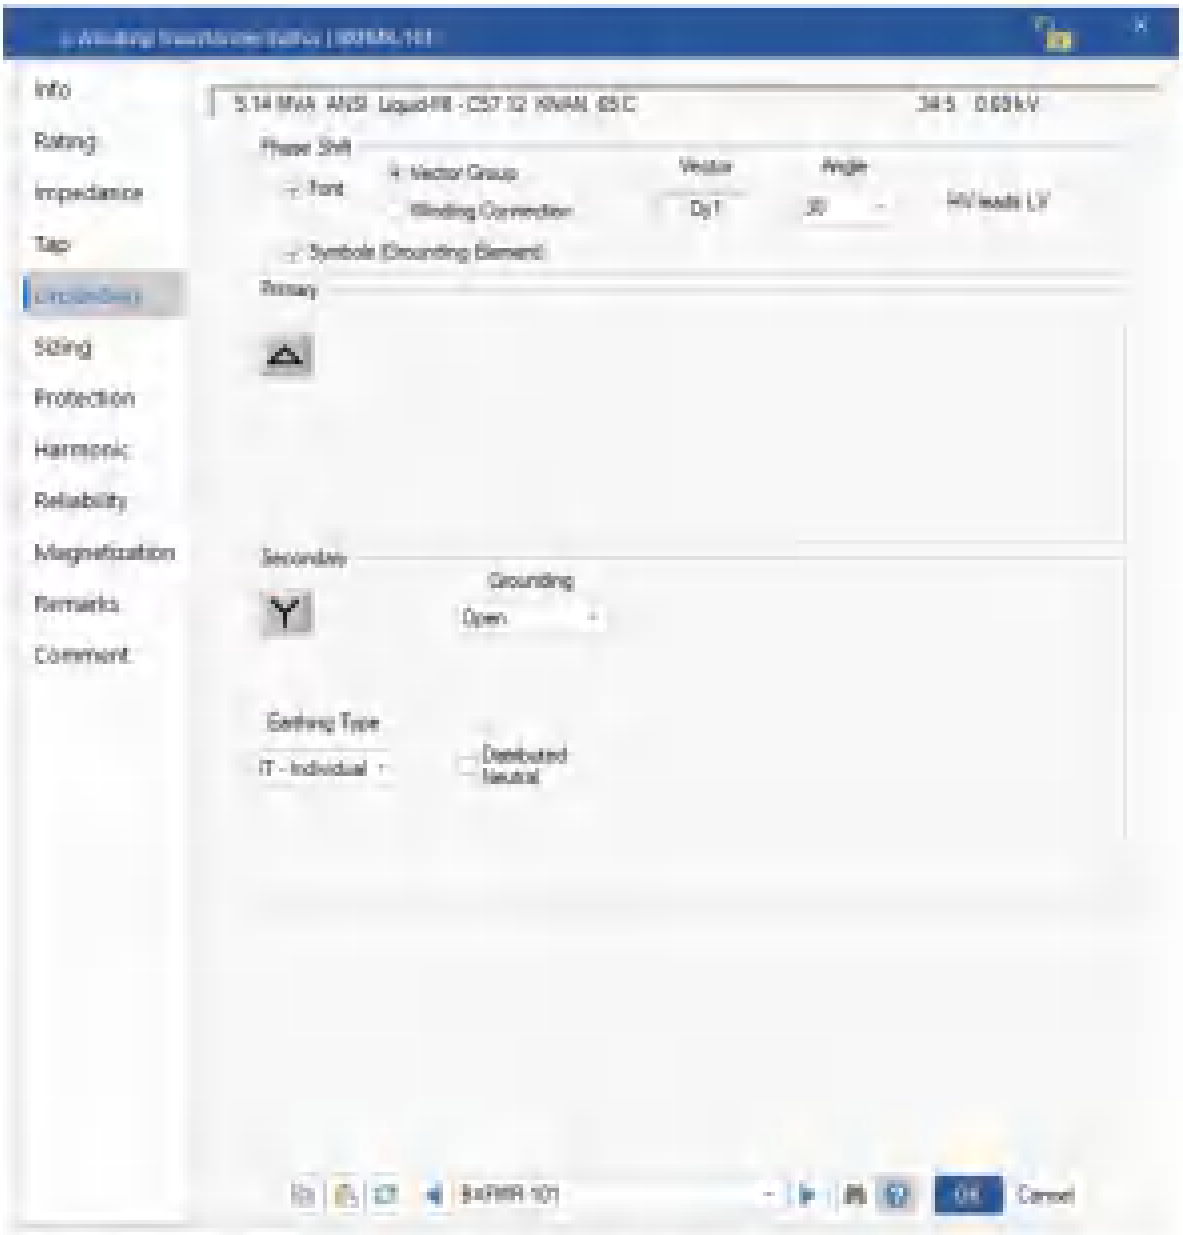

Figure 3.3.2-2: GSU Grounding

3.5 MV CABLE

The MV cable withstand data is provided by the manufacturer and shown in Appendix A. Since the L-G fault current values are in excess of the CN withstand ratings for all feeders, a trench ground is required.

3.6 EQUIPMENT SCCR

The PCS SCCR data is provided by the manufacturer and shown in Appendix A.

4 STUDY RESULTS AND CONCLUSIONS

4.1 MV CABLE WITHSTAND RATING EVALUATION

All the MV feeders pass the evaluation in the study. The results for each feeder and MV cable are shown in Appendix C.

The final determination of the MV cable vendor for this project has not been made for the time report, but the newer WTEC cables will be utilized. Refer to Appendix A for the cable datasheets.

The worst-case short-circuit currents for each cable phase and the circuit arrangement are shown in Table 4.1-1 and 4.1-2.

Cable ID	Cable Size	Concentric Neutral (CN) Size	Total Fault Clearing Time (cycles)	Cable Withstand Rating (A)	3-PH Short Circuit Current (A)
MVF-BES-40L	1250	1/0	18	109,108	13,875
MVF-BES-402	1000	1/0	18	87,287	22,351
MVF-BES-605	500	1/3	18	48,443	12,800

Table 4.1-1: Worst-Case Cable 3-Phase Short-Circuit Currents

Cable ID	Cable Size	Concentric Neutral (CN) Size	Total Fault Clearing Time (cycles)	Cable Withstand Rating (A)	L-G Short Circuit Current (A)*
MVF-BES-40L	1250	1/0	18	94,861	16,340
MVF-BES-402	1000	1/0	18	91,531	16,277

*SLG Short Circuit Current assumes a 70/30 split factor per section 3.6 and 3.5

4.2 EQUIPMENT SCCR AND AS EVALUATION

The maximum three-phase fault current at any MV terminal in the system is 24.130 kA at 34.5 kV (PCS-8801) which is less than the 25 kA SCCR of the PCS equipment skid. As the maximum peak current is less than the rating provided by the inverter manufacturer, the inverters are acceptable for use.

The maximum calculated peak current is close to the maximum allowance of 25 kA. The following items will need to be monitored to ensure the fault current at PCS-8801 does not exceed this limit:

- Initial MPT impedance. This will be surveyed via the FAT. The FAT report should be reviewed to verify the value that was used.
- Utility fault current. For coordination a 15% power factor is being utilized. Any future increase in fault current from the utility beyond this allowance should be communicated to the owner for evaluation throughout the life of the facility.
- Conductor installation lengths. Any deviation to the installed MV conductor lengths for the PCS system as shown in the drawings shall be submitted to the engineer for review prior to installation.

Per the inverter manufacturer's document titled *TR_ST5015UX Short Circuit Study Report for Sungrow Energy Storage System V1* dated 04/14/2024, the battery containers are protected by dedicated OCPDs. These devices are identified as Main QF1 and Main QF2 and are shown on page 17 of the report. The OCPDs have an interrupting rating of 75 kA which is represented by the identifier SCC QF1 on page 15. Based on this, it is assumed that the battery containers downstream of these OCPDs have a SCCR of 75 kA.

The maximum three-phase fault current at any of the battery containers in the system is 55.487 kA at 690 V (BATT-401-01) which is less than the 75 kA SCCR of the battery container. As the maximum peak current is less than the rating provided by the inverter manufacturer, the battery containers are acceptable for use.

4.3 CONCLUSION

This study shows that the equipment short circuit current ratings and the cable withstand ratings pass review in this study and are suitable for this project.

PRELIMINARY

Etap Modeling Note:

The current model is primarily focused on the BESS design. The PV system is currently represented as equivalent power sources at each of the dedicated switches within the substation. Upon delivery of the 60% PV design package, Pure Power Engineering will update the model to incorporate the full, detailed PV design. This approach allows the project to progress in parallel while ensuring the final model accurately reflects the as-designed PV system.

Short-Circuit Current

SC210HX-US

V1

1 Introduction

This document describes the short-circuit current of SG210HX-US.

This document is intended to be used by the specific addressees. No part of this document may be reproduced or distributed in any form or by any means without the prior written permission of Sungrow Power Supply Co., Ltd.

2 Brief Description

Single-phase ground short-circuit, two-phase short-circuit, and three-phase symmetrical short-circuit of the power grid will cause the voltage drop of the power grid. Among them, the three-phase symmetrical short-circuit is the most serious one, which causes the grid voltage to drop to 0. Under this condition, the peak value of the PCS output current and the reactive power support current value surpass the values under other fault types.

When the grid voltage drops, the output current of the PCS will change accordingly. During the first 1 to 2 power frequency cycles, the output current changes abruptly due to the voltage drop, resulting in a current that is significantly higher than the rated value. Then, during the ZVRT period of grid connection, it outputs a relatively stable reactive current to support the grid.

Given the technical requirements of grid connection, such as VDE4110/4120, both peak current impact on the grid and stable reactive current support are important indicators for grid connection. Therefore, it is necessary to provide corresponding parameters when performing grid connection simulation analyses.

IEC 60909 specifies the characteristic values of short-circuit current for the PCS when a short circuit occurs on the grid: peak current I_p, initial symmetrical short-circuit current I''_k, and steady-state short-circuit current I_k, where

Peak short-circuit current I_p: the maximum peak value of instantaneous impulse current at the moment of fault.

Initial symmetrical short-circuit current I''_k: within 1 to 2 cycles after the fault, the RMS

value of the short-circuit current during dynamic adjustment.

Steady-state short-circuit current I_k: the steady value of the reactive current output after the fault is stable.

3 Test Result

When a three-phase symmetrical short-circuit occurs in the power grid, the short-circuit current test waveform of SC210HX-US is shown in the figure below.

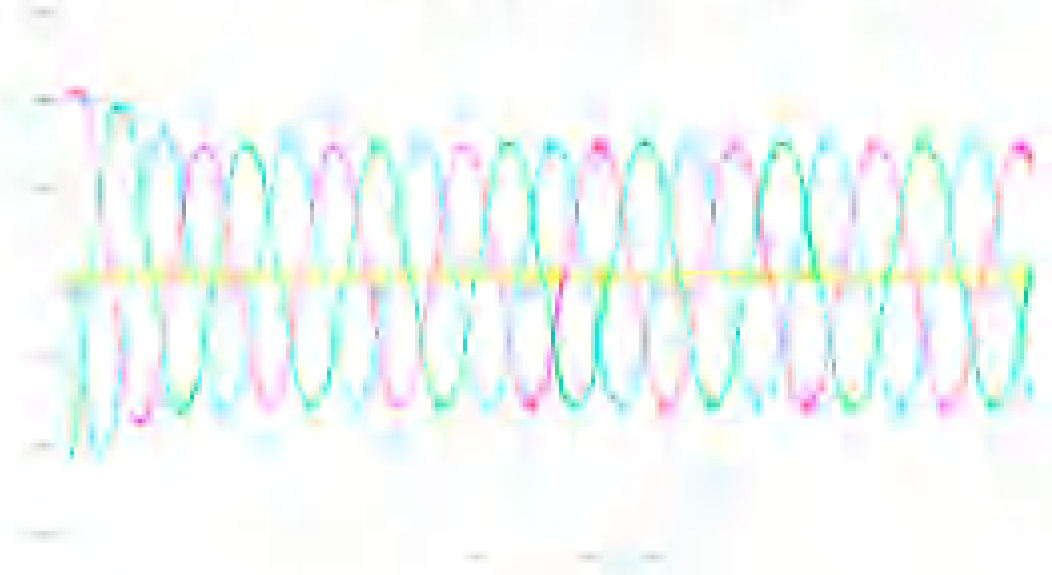

Fig. 1 Short-Circuit Current Waveform

Each characteristic value of the test waveform is shown in the table below.

Fig. 2 Characteristic Values of Short-Circuit Current

Product	Peak Short-circuit Current I_p (A)	Initial Symmetrical Short-Circuit Current I" (A)	Steady-State Short-Circuit Current I_k (A)
SC210HX-US	433A	272A	217A

For ESS composed of several SC210HX-US × 12 such as ST5015UX, each characteristic value can be calculated as N times the characteristic value of SC210HX-US.

PV INVERTER FAULT CONTRIBUTION DATA

Short Circuit Sequence Current Data

The short circuit behavior of the SUNGROW SG440HXUD inverter is analyzed for different types of fault scenarios. Three different types of faults (Line-Line-Line-Ground (3LG), Line-Line (LL) & Line-Ground (LG)) scenarios are simulated to calculate the sequence current and power factor angle values for 1, 3 and 5 cycle periods. In order to replicate the SLG fault behavior, Phase A-to-Ground is considered and for LL fault, Phase A-to-Phase B fault is considered during simulation. The fault scenarios are implemented using the voltage sag method on the SUNGROW SG440HXUD inverter model. Table 1 gives the 1st cycle, 3rd cycle, and 5th cycle short circuit data of the SUNGROW SG440HXUD inverter for the SLG fault. Similarly, Table 2 and Table 3 provide the 1st cycle, 3rd cycle, and 5th cycle short circuit data for the SLG fault and LL fault scenarios respectively.

Short Circuit Parameter Calculation

The Short circuit current parameter calculation is carried out on the SUNGROW SG4400UD inverter model. The PSCAD model that has been validated is representative of the actual inverter software. Data is provided for default inverter settings. The inverter is operating at 100% real power output at the unity power factor. Presented data are based on measurements at inverter terminals.

Ip, Ik'', Ik' & Ik are calculated based on the measured inverter current waveforms of SG4400UD PV inverter for a bolted 3LG fault as per the IEC 60909 standard [1] as shown in Figure 5.

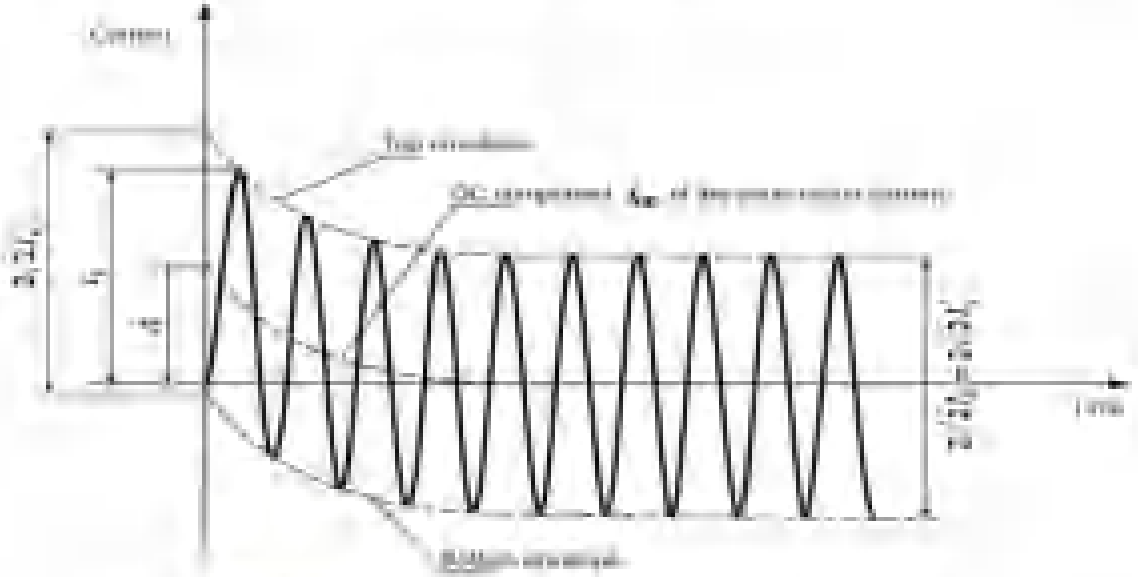

Figure 5: Balanced Current Waveform for Short Circuit Calculation [1]

The per-unit short circuit current parameter and impedance parameters of the SG4400UD PV inverter are listed in Table 7 & Table 8.

Where, Ik'', Initial Symmetrical Short circuit current

Ip, Peak short-circuit current

Ik, Steady-State short-circuit Current

I_{DC}, Decaying d.c. component of short circuit current

A, Initial value of I_{DC}

Table 7: Short Circuit Current Parameters

Short Circuit Current Parameter of SUNGROW SG4400UD PV Inverter				
Current Parameters		Value	Unit	
Ip	First Peak (Ip)	2.7007	p.u.	Peak
Ik''	Subtransient (Ik'')	1.5572	p.u.	RMS
Ik'	Transient (Ik')	1.1085	p.u.	RMS
Ik	Synchronous (Ik)	1.0585	p.u.	RMS
t	Time to reach steady state	70	ms	-

Table 8: Short Circuit Impedance Parameters

Short Circuit Impedance Parameter of SUNGROW SG4400UD Inverter				
Impedance Parameters	**Value (pu based on unit kVA)**			**Unit**
Subtransient	0.000	+j	0.64218	p.u.
Transient	0.000	+j	0.90228	p.u.
Synchronous	0.000	+j	0.94473	p.u.

1. PURPOSE

The objective of this document is to verify the short circuit level for ST5015UX system, and propose rating for equipment.

The electrical power for all the facilities mentioned above shall be generated at site from an external power and distributed through substations catering to each of these facilities.

This short circuit study report is based on the available network characteristics, analyses the system performance during differential case conditions and values listed in the report.

2. REFERENCE DOCUMENTS

- ELECTRICAL SYSTEM DESIGN BASIS
- SPECIFICATION FOR TRANSFORMER
- SPECIFICATION FOR POWER AND CONTROL CABLE
- SPECIFICATION FOR ELECTRIC MOTORS
- SPECIFICATION FOR EARTHING SYSTEM
- ELECTRICAL KEY LINE DIAGRAM
- ELECTRICAL SINGLE LINE DIAGRAM FOR 35KV
- ELECTRICAL SINGLE LINE DIAGRAM FOR 0.4KV

3. ACRONYM AND DEFINITIONS

The following terms used in this document have the meaning defined below:

OWNER	Sungrow Power Supply Co.,Ltd
PROJECT	ST5015UX
SCOPE OF WORK	The scope of work to be performed and services to be rendered by CONTRACTOR under the CONTRACT in relation to the realization of the PROJECT

The acronyms used in this document have the meaning defined below:

- IEC	International Electrotechnical Commission
- ANSI	American National Standards Institute
- AC	Alternating Current
- DC	Direct Current
- SC	Short Circuit

- LG fault — Line to Ground fault
- LL fault — Line to Line fault
- LLG fault — Line to line to Ground fault

4. CODES AND STANDARDS

4.1 Applicable Codes & Standards

This report is established in accordance with the following IEC standards:

IEC 62271-100 High-voltage switchgear and controlgear – Part 100: High-voltage alternating-current circuit breakers

IEC 62271-200 High-voltage switchgear and controlgear – Part 200: AC metal-enclosed switchgear and controlgear for rated voltages above 1 kV and up to and including 52 kV

IEC 60282-2 High-voltage fuses – Part2: Expulsion fuses

IEC 60076-1 Power transformers – General

IEC 60909 Short-Circuit Currents in three-phase a.c. systems – Part 0: Calculation of Currents

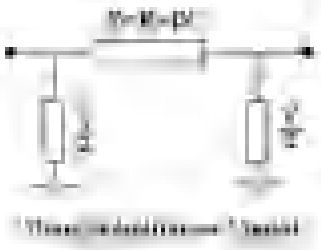
Unless otherwise specified, the latest applicable revision of codes and standards shall be considered.

4.2 General Description of AC Short Circuit Calculation Methodology

In IEC short-circuit calculations, an equivalent voltage source at the fault location replaces all voltage sources. A voltage factor c is applied to adjust the value of the equivalent voltage source for maximum and minimum current calculations.

All machines are represented by their internal impedances. Transformer taps can be set at either the nominal position or at an operating position, and different schemes are available to convert transformer impedance and system voltages if off-nominal tap setting exists. System impedances are assumed to be balanced 3-phase, and the method of symmetrical components is used for unbalanced fault calculations.

Zero sequence capacitances of transmission lines, cables and shunt admittances can be considered for unbalanced fault calculations (LG and LLG) if the option in the study case is selected to include Branch Y and static load. This means that the capacitances of static loads and branches are considered based on IEC 60909-0 2001. The basic model used to consider these shunt admittances is shown below:



Calculations consider electrical distance from the fault location to synchronous generators. For a far-from-generator fault, calculations assume that the steady-state value of the short-circuit current is equal to the initial symmetrical short-circuit current and only the DC component decays to zero. However, for a near-to-generator fault, calculations count for decaying to both AC and DC components. The equivalent R/X ratios determine the rates of decay of both components and different values are recommended for generators and motors near the fault.

Calculations also differ for meshed and unmeshed networks. The factor k, which is used to multiply the initial short-circuit current to get the peak short-circuit current, is defined differently for different system configurations and the methods selected to calculate the R/X ratios.

4.3 General Description of DC Short Circuit Calculation Methodology

In compliance with IEEE Standard 946, the DC Short Circuit calculates the total fault current, current contributions from different sources, and the rise time constant of the total fault current. It can conduct calculations on both radial and looped systems. The fault under consideration is a short circuit between the positive and the negative terminals of the fault location. The contributing sources to the short circuit current include charger/rectifier, UPS, battery, and DC motor. These sources can be modeled as a constant current source or a constant voltage source behind an impedance. For a charger/rectifier source, the AC system equivalent impedance on the AC side can also be considered.

5 DEFINITION OF TERMS

The IEC standard uses the following definitions that are described in the calculation output contained in this report.

5.1 Short Circuit

Accidental or intentional conductive path between two or more conductive parts forcing the electric potential differences between these conductive parts to be equal or close to zero.

5.2 Line-to-line Short Circuit

Accidental or intentional conductive path between two or more live conductors with or without earth connection.

5.3 Line-to-earth Short Circuit

Accidental or intentional conductive path in a solidly earthed neutral system or an impedance earthed neutral system between a line conductor and local earth.

5.4 Short Circuit Current

Over-current resulting from a short circuit in an electric system.

5.5 Initial Symmetrical Short circuit current (I"k)

This is the rms value of the AC symmetrical component of an available short-circuit current applicable at the instant of short-circuit if the impedance remains at zero time value.

5.6 Peak Short Circuit Current (ip)

This is the maximum possible instantaneous value of the available short-circuit current.

5.7 Symmetrical Short Circuit Breaking Current (Ib)

This is the rms value of an integral cycle of the symmetrical AC component of the available short-circuit current at the instant of contact separation of the first pole of a switching device.

5.8 Steady-State Short Circuit Current (Ik)

This is the rms value of the short-circuit current, which remains after the decay of the transient phenomena.

Note: It is necessary to distinguish between the short-circuit current at the short-circuit location and partial short-circuit currents in the network branches at any point of the network.

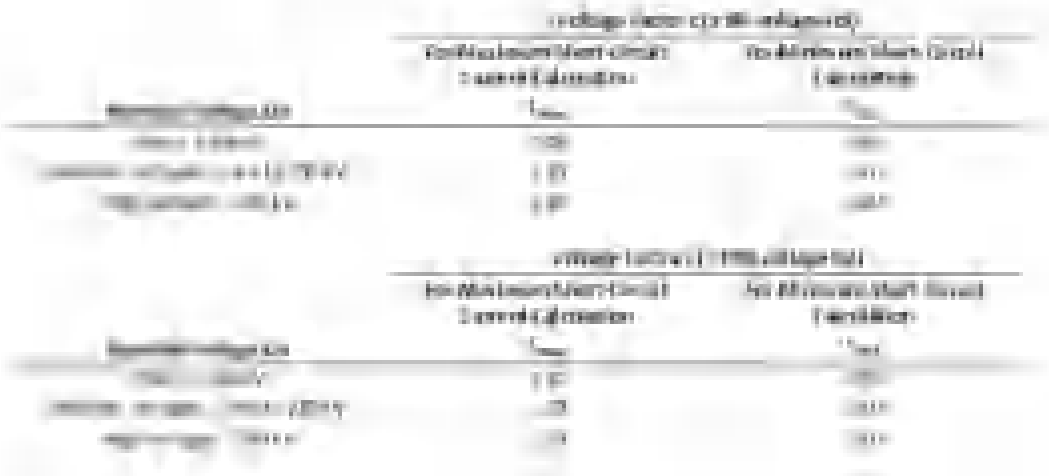
5.9 Minimum Time Delay (T_{min}) of a Circuit Breaker

This is the shortest time between the beginning of the short-circuit current and the first contact separation of one pole of the switching device.

The time delay (T_{min}) is the sum of the shortest possible operating time of an instantaneous relay and the shortest opening time of a circuit breaker. Minimum time delay does not include the adjustable time delays of tripping devices.

5.10 Voltage Factor c

This is the factor used to adjust the value of the equivalent voltage source for minimum and maximum current calculations according to the following figure.



6. CALCULATION METHORD

6.1 Initial Symmetrical Short Circuit Current Calculation

Initial symmetrical short-circuit current (I''_k) is calculated using the following formula

$$I''_k = \frac{cU_n}{\sqrt{3}Z_k}$$

Where Z_k is the equivalent impedance at the fault location

6.2 Peak Short Circuit Current Calculation

Peak short-circuit current (i_p) is calculated using the following formula

$$i_p = \sqrt{2}\kappa I''_k$$

Where κ is a function of the system R/X ratio at the fault location

IEC Standards provide three methods for calculating the κ factor:

Method C – Equivalent frequency. The value of the κ factor is calculated using a frequency-altered R/X. R/X is calculated at a lower frequency and then multiplied by a frequency-dependent multiplying factor

7. Comparison of Device Rating and Short-Circuit Duty

In the 3-phase Device Duty calculation, ETAP compares the protective device rating against bus short-current duty for the devices that are checked as complying with IEC Standard and also have device rating entered. In case the short circuit duty is greater than the device duty, ETAP will flag the device as underrated in both one-line diagram and output reports. The following table lists the device ratings and short-circuit duties used for the comparison for MVCB, LVCB, and fuses

Device Type	Device Capability	Calculated Short Circuit Duty
MVCB	Making	I_p
	AC Breaking	I_{sym}
	I_{sym} *	I_{sym}
	I_p *	
	I_{th}	I_{th}
LVCB	Making	I_p
	Breaking	I_{sym}
	I_{sym} *	I_{sym}
	I_{th}	I_{th}
Fuse	Breaking	I_{sym}
	I_{sym} *	I_{sym}

Comparison of Device Rating and Short-Current Duty

8. SYSTEM CONFIGURATION AND MODELLING

8.1 Electrical System Configuration

This report provides the system study for short circuit project configuration name ST5015UE, comprising the following electrical equipment:

- 2 nos. of battery units 5015kWH
- 12 nos. of racks per battery unit
- 4 nos. of modules per rack (4 nos. of 1P104S total 416 cells)
- 24 nos. of PCS
- 1 MV skid (MVS5000-LS) includes:
  - 1 nos. of MV transformer
  - 2 nos. of LV switchgear

8.2 Power System Study Software

Short circuit study for system conducted using ETAP ver 21.0.0.

8.3 Grid Data

Grid input data are based on the document provided by Sungrow Power Supply Co. Ltd.

No.	Description	Rated Voltage(V)	SC Max Rating
1	Aux Power	480	34.5kA
2	FSS Power Supply	230	20kVA,Single Phase
3	Power Grid	35000	31.5kA

8.4 Transformer Data

No.	Transformer Tag	Rating (kVA)	Voltage Ratio	Impedance%	Grounding	Type
1	T1	5	400V/230V	4.0	N.A	Dry
2	Box-type transformer	5140	0.69kV / 33kV	8.0	D/Y11	Oil

8.5 Load

All motors on LV switchboards are modelled as individual motors in order later relevant calculation. Other loads on LV switchboards are grouped as static load or lump load, the power factor can reference to below table:

Motor parameters are based on the typical parameters in ETAP library. The LRC for LV motor are considered as 650% and 700% of full load current. When the motors are all started by frequency converters short-circuit feedback current does not exist.

ID	Rated Capacity/W	Rated Voltage/V	Power Factor/%	VFD Ratio/%	LRC/%
LCS	27400	400	0.82	40	650
24V SMPS	9600	400	0.84	/	/
24V SMPS1	648	400	0.85	/	/
Medium Socket	100	230	/	/	/
BCP FAN	452	230	/	/	/
FRS FAN	60	230	/	/	/
SMPS4	300	230	0.84	/	/
BSP FAN	72	230	/	/	/
FACP	368	230	/	/	/
24V SMPS1	300	230	0.84	/	/
24V SMPS2	600	230	0.84	/	/
HVAC	800	230	/	/	/
FAN	800	230	/	/	/
UPS	3000	230	/	/	/
Socket	200	230	/	/	/

6.6 Cable

The parameters of cable are based on the typical parameters in ETAP library.

The power cables from the entire system are entered into ETAP software according to cable parameters provided by Sungrow power.

6.7 Circuit Breaker and Fuse

Circuit breaker and switch impedance can also be added to feeder impedance, but as this impedance is very small it has been ignored in calculations.

8. SHORT CIRCUIT ANALYSIS

8.1 Design Basis/Criteria

The short-circuit analysis shall be performed in accordance with IEC60909 standard and to determine maximum prospective fault levels at each bus-bar.

In this report, maximum short-circuit studies are performed for selection of equipment rating.

Circuit breakers or fuse shall have the capabilities to withstand the calculated fault i.e.

8.2 Short Circuit Study Result

The short circuit currents values on other bus have been calculated and these data are listed hereinunder.

The short circuit capacity of the Bus Power is 34 bus and Power grid is 31.5, the short circuit data are as follows:

No	Description	Voltage (kV)	Max. SC Current(kA)

3.2 DC Short Circuit Study Result

In a DC short circuit calculation, a contributing source may be represented by different models, either as a voltage source or as a current source. Even the sources that are represented as constant voltage sources may have different per unit values. This is different from the AC short circuit calculation by the IEC method, where a default voltage is specified and a circuit network is solved to find the fault current. If the DC short circuit calculation is two-step procedure is adopted that applies the superposition theorem to calculate fault current. The two steps are voltage profile calculation and short circuit current calculation.

For DC short circuit of this project, the short circuit of DC side is almost same, because the dc cables have the same size and a small deviation in length, so we take the worst short circuit value to verify the fuse capacity.

The worst short circuit current values on DC bus have been calculated and the data are listed here under.

No.	Description	Voltage (kV)	DC SC Fault Current(kA)
1	Main DC short circuit value	1.5	45

10. CONCLUSION

Based on short circuit calculate results, the minimum short circuit parameters requirement for 35KV and 0.69KV, 0.40KV, 0.23kV, 0.115KV for electrical equipment, such as breakers, fuses, contactors, busbar, are decided as listed in the following table considering. For all the study case, the LV CB rated short-circuit breaking current is characterized only by the r.m.s. value of its a.c. component (Int symm kA r.m.s). For more detailed short circuit data, please refer to the following appendix.

The following color code applies for these tables:

Black: — The rated values are above the calculated values — the equipment is sufficiently rated.

Yellow / Marginal: — The rated values are close to and above the calculated values — the equipment is sufficiently rated.

Red / Failed: — The rated values are below the calculated values — the equipment is not sufficiently rated.

111 Bus(s) Total

All voltages reported by ETAP are in % of bus nominal kV.
Bus kV values of buses not considered will mark unavailable for ETAP.

All bus voltages are symmetrical (1/2 Cycle) values in rms kV.

* Line-to-Line-to-Ground fault current is the sum of the two individual line currents.

I" = Maximum fault current contribution of all sources, shown on one-line diagram, used for interrupting capability of circuit breakers.
* = Indicates a value exceeding fault current interrupting capability of bus. Value shown is symmetrical interrupting capability of bus.

All bus voltages are symmetrical (1/2 Cycle) values in nominal kV.

* LLG fault current is the larger of the two faulted line currents.

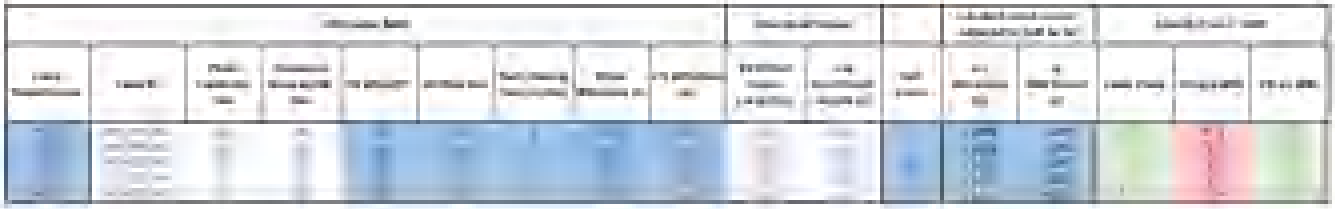
APPENDIX D – MV CABLE WITHSTAND CALCULATION

PRELIMINARY



APPENDIX E – UTILITY CONTRIBUTION

PRELIMINARY

** -- Application Rating is available for each circuit breaker depending on the number and timing of automatic reclosures, X/R ratio, CB rating structure (symmetrical or asymmetrical), CB rated interrupting time, and contact parting time; all of which are included in the ASPEN Circuit Breaker Rating Module used for this study.

Short Circuit Data

The following table lists estimated short circuit currents and system equivalent impedances:

Quantity		Fault Location and System Configuration		
		Fault at 345kV Oncor Station with [Blue Heron Solar, LLC- Online]	Fault at 345kV Oncor Station with [Blue Heron Solar, LLC- Offline]	Fault at 345kV Oncor Station with [Blue Heron Solar, LLC- Offline and the 345kV Line to Brown Switch out of service]
Three Phase	Fault Current (A)	13,772.9	12,795.1	8,650.3
	ANSI X/R	19.2372	18.9011	19.7844
Single Phase	Fault Current (A)	11,316.8	9,191.7	5,345.4
	ANSI X/R	20.3731	7.93675	12.3667
Equivalent Impedance (Ohms)	Positive Sequence	0.7598+j13.5449	0.41994+j15.4817	3.13388+j55.1189
	Zero Sequence	3.52635+j23.2861	7.04954+j33.2611	30.7764+j70.2416

Conclusion

Based on this study, there are no Oncor Electric Delivery circuit breakers that will be over-duty as a result of Generation Interconnection Request 24INR0333 & 24INR0331.

ONCOR ACCESS ROAD	1.0	1.0	250	5,000	-4750
TOTAL			170,950	92,700	-72,750

NOTES:
1. OVEREXCAVATION OF GEOTECHNICALLY UNSUITABLE MATERIALS IS NOT INCLUDED.
2. CALCULATIONS DO NOT ACCOUNT FOR SHRINK/SWELL OR GEOTECHNICALLY UNSUITABLE/UNRESOLVABLE SOILS.
3. PRELIMINARY IN SITU CUT AND FILL BALANCES ARE IDEALLY TARGETED TO PROVIDE A NET CUT OF 2-7% OF THE CUT/FILL TOTAL VOLUMES TO ACCOUNT FOR FIELD VARIANCES DURING CONSTRUCTION. TEMPORARY STOCKPILING OF EXCESS CUT IS A LOWER COST ALTERNATIVE TO SOURCING EITHER SUITABLE ONSITE OR OFFSITE FILL MATERIALS.

BORROW PIT NOTE:
1. FOUR SITES SITUATED OUTSIDE THE PROJECT LEASE BOUNDARY HAVE BEEN IDENTIFIED AS POTENTIAL BORROW PITS FOR SOURCING FILL MATERIALS, AS AN ALTERNATIVE TO IMPORTING FILL FROM EXTERNAL LOCATIONS. THE GEOTECHNICAL INVESTIGATION REPORT BY LANGAN ENGINEERING DELINEATES THESE FOUR BORROW PIT LOCATIONS ON THE SUBSURFACE INVESTIGATION PLAN - FIGURE 3, AND PROVIDES A DETAILED ANALYSIS OF THE SOIL TYPES IN SECTION 6.7.2. UPON COMPLETION OF THE CONSTRUCTION PHASE, AND AT THE LANDOWNER'S REQUEST, THESE BORROW PITS ARE INTENDED TO BE CONVERTED INTO PERMANENT DETENTION PONDS TO FACILITATE THE RANCHER'S ONGOING LIVESTOCK OPERATIONS.

LANGAN RECOMMENDS A COLLABORATIVE EVALUATION INVOLVING RRCE, THE CONTRACTOR, AND LANGAN TO ASSESS THE POTENTIAL COST BENEFITS AND DRAWBACKS OF UTILIZING THE BORROW PITS FOR FILL MATERIAL. THIS ASSESSMENT SHOULD INCLUDE CONSIDERATIONS SUCH AS THE POSSIBLE REDUCTION IN UXO CLEARING COSTS. THE FINAL DECISION IS ANTICIPATED TO SIGNIFICANTLY INFLUENCE THE GRADING DESIGN STRATEGY FOR THE PROJECT.

HV = HIGH VOLTAGE

GENERAL EXCAVATION REQUIREMENTS

1. EXCAVATION CONSISTS OF THE REMOVAL OF SUBSURFACE MATERIAL BELOW THE "STRIPPED" LEVEL TO THE LINES AND ELEVATIONS SHOWN ON THE DRAWINGS.
2. EXCAVATION OF EACH SOIL CATEGORY AS DEFINED HEREIN SHALL BE PERFORMED SEPARATELY SUCH THAT EARTH SOIL SUITABLE FOR USE AS EMBANKMENT MATERIAL SHALL BE EXCAVATED SEPARATELY FROM UNSUITABLE SOILS. ALL EXCAVATED SOILS THAT ARE TO BE STOCKPILED ON SITE SHALL BE FREE OF TRASH, DEBRIS, VEGETATION AND DELETERIOUS MATERIALS. ANY EXCAVATED MATERIALS CONTAINING THESE ELEMENTS SHALL BE DISPOSED OF OFF-SITE.
3. EXCAVATION SHALL BE PERFORMED IN A MANNER TO VERIFY DRAINAGE DURING THE COURSE OF THE WORK. FLOODED EXCAVATIONS SHALL BE DE-WATERED IN ACCORDANCE WITH THE STORMWATER POLLUTION PREVENTION PLAN (SWPPP) AND ALL LOOSE AND SATURATED SOILS REMOVED BEFORE PROCEEDING WITH THE WORK. SEPARATE AREAS EXCAVATED FROM FLOODED EXCAVATIONS SHALL BE STOCKPILED SEPARATELY AS CATEGORY II GENERAL FILL AND ALLOWED TO DE-WATER PRIOR TO BEING USED AS GENERAL FILL IN ORGANIZATION IS ENCOUNTERED, THE CONTRACTOR SHALL NOT PROCEED WITH THE WORK UNTIL THEIR CONSTRUCTION METHOD IS APPROVED BY THE ENGINEER.
4. MAINTAIN EXISTING DITCHES TO VERIFY DRAINAGE AT ALL TIMES. CONSTRUCT AND MAINTAIN DITCHES AND CHANNELS TO AVOID DAMAGE TO SLOPES.
5. EXCAVATING FOR STRUCTURES AND SPREAD FOOTINGS IF CUT BELOW THE DEPTHS INDICATED WITHOUT SPECIFIC DIRECTIONS FROM THE ENGINEER, EXTEND CONCRETE TO THE BOTTOM OF THE EXCAVATIONS.
6. UNDER NO CIRCUMSTANCES SHOULD FOUNDATIONS BE ESTABLISHED UPON LOOSE OR DISTURBED EXISTING FILL OR REPLACEMENT COMPACTED FILL AND BOULDERS, CONSTRUCTION DEBRIS, FROZEN SOIL, OR WATER PONDED WATER. IF THE SOILS UPON WHICH THE FOOTINGS ARE TO BE ESTABLISHED BECOME LOOSE OR DISTURBED, THEY MUST BE RE-COMPACTED BEFORE CONCRETE IS POURED. IF UNSUITABLE MATERIALS ARE ENCOUNTERED AT FOOTING BEARINGS, THESE MATERIALS SHALLS BE REMOVED IN ITS ENTIRETY AND REPLACED WITH COMPACTED STRUCTURAL FILL.
7. EXCAVATION FOR PRODUCTS: EXCAVATE TRENCHES FOR UTILITY LINES, CABLE AND CONDUIT TRENCHES ALONG STRAIGHT LINES. WIDTH AND DEPTH OF TRENCHES SHALL BE AS INDICATED. A MINIMUM OF 6 INCHES BETWEEN THE OUTSIDE OF THE PIPE BELL OR UNDERGROUND PORTION OF THE PIPE OR COUPLING AND THE SIDES OF THE TRENCH OR BRACING SHALL BE PROVIDED.
8. FOR PIPE AND CONDUIT TRENCH EXCAVATIONS ONLY, MECHANICAL EXCAVATION, EXCEPT IN ROCK SHALL BE USED TO AT LEAST 3 INCHES ABOVE FINAL INVERT GRADE. THE REMAINDER OF THE EXCAVATION SHALL BE SHAPED AND GRADED TO PROVIDE UNIFORM BEARING ON COMPACTED SOIL IMMEDIATELY BEFORE THE PIPE OR CONDUIT IS LAID.
9. EXCAVATIONS OF UNSUITABLE MATERIAL UNDER PAVEMENTS AND EQUIPMENT: A MINIMUM OF 12 INCHES OF UNSUITABLE SHALL BE REMOVED FROM ALL AREAS OF UNSUITABLE SUBGRADE OR FOUNDATION LOCATIONS.
10. ALL UNSUITABLE MATERIAL DISCOVERED WITHIN DEPTHS ESTABLISHED BY THE GEOTECHNICAL ENGINEER, MEASURED FROM THE FINAL FINISHED GRADE OF THE PAVEMENT SHALL BE REMOVED. SURFACE MATERIAL FOUND TO BE SUITABLE MAY REMAIN IN THE AREA OF THE WORK. THE GEOTECHNICAL ENGINEER WILL DETERMINE THE SUITABILITY OF IN-PLACE MATERIAL. ANY DISTURBED MATERIAL OR SUBGRADE SOIL AND A DEPTH TWO TIMES THE DISTURBANCE SHALL BE SCARIFIED AFTER THE REMOVAL OF UNSUITABLE MATERIAL AND THE FIRST LAYER OF EMBANKMENT FILL SHALL BE COMPACTED EQUAL TO THE SCARIFIED MATERIAL.
11. THE GEOTECHNICAL ENGINEER MAY REQUIRE UNDERCUTTING IN THE PROPOSED SUBGRADE TO REMOVE CONTAMINATED, WEAK OR WATER-SATURATED SOIL. THE GEOTECHNICAL ENGINEER WILL MAKE DETERMINATION OF UNSUITABLE AREAS.
12. WHERE MATERIAL IS ENCOUNTERED BELOW THE APPROVED SUBGRADE WITHIN THE CONSTRUCTION LIMITS IT SHOULD UNDERMINE THE CONTRACTOR SHALL EXCAVATE UNSUITABLE MATERIAL AND REPLACE WITH STABLE APPROVED FILL MATERIAL, AND COMPACT TO THE SPECIFIED DENSITY.
13. EXCAVATED LIMESTONE, CLAYSTONE, SILTSTONE, SANDSTONE, OR OTHER SOIL-LIKE NON-DURABLE ROCK SHALL NOT BE PLACED AS EMBANKMENT AND SHALL BE REMOVED AND DISPOSED OF AS SPOIL OR EMBANKMENT IN ACCORDANCE WITH ITS APPLICABLE FILL CATEGORY WHEN USED AS STRUCTURAL FILL WITHIN SUBSTATION OR PV PLANT AREAS. ARGILLITE, CLAYSTONE, SILTSTONE, SANDSTONE, OR OTHER SOIL-LIKE NON-DURABLE ROCK CREATED THAN 6-INCHES IN WIDTH OR DIAMETER SHALL NOT BE PLACED IN AND IN-SITE EMBANKMENTS OR FILLS.

GENERAL NOTES

1. UNLESS SHOWN OR SPECIFIED OTHERWISE, ALL CONSTRUCTION AND MATERIALS SHALL COMPLY WITH LOCAL COUNTY AND STATE CODES.
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING ALL MATERIALS AND LABOR TO CONSTRUCT THE PROPOSED IMPROVEMENTS AS SHOWN AND DESCRIBED IN THE CONSTRUCTION DOCUMENTS AND IN ACCORDANCE WITH THE APPROPRIATE APPROVING AUTHORITIES' SPECIFICATIONS AND REQUIREMENTS.
3. ALL EXISTING UTILITIES SHOWN ARE LOCATED ACCORDING TO THE INFORMATION AVAILABLE TO THE ENGINEER AT THE TIME THE DRAWINGS WERE PREPARED AND HAVE NOT BEEN INDEPENDENTLY VERIFIED, GUARANTEED IS NOT MADE THAT ALL EXISTING UNDERGROUND UTILITIES ARE SHOWN OR THAT THE LOCATION OF THOSE SHOWN ARE ACCURATE.
4. THE CONTRACTOR SHALL BE RESPONSIBLE TO VERIFY THE ACTUAL LOCATION OF ANY EXISTING UTILITIES PRIOR TO THE COMMENCEMENT OF ANY WORK IN THE VICINITY. THE CONTRACTOR SHALL BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGE DUE TO THE CONTRACTOR'S FAILURE TO LOCATE, PRESERVE AND PROTECT ALL UTILITIES ANCHOR ADJACENT TO THE UTILITY OWNER'S REQUIREMENTS.
5. THE CONTRACTOR SHALL BE RESPONSIBLE TO MAINTAIN UP-TO-DATE AS-BUILT OPERATION FOR ALL WORK AREAS. IT IS NECESSARY TO BACK BACK OR RELOCATE ACTIVITY, THE UTILITY COMPANY SHALL BE CONTACTED BY THE CONTRACTOR TO OBTAIN PERMISSION REGARDING THE METHOD TO USE FOR SUCH WORK.
6. THE CONTRACTOR SHALL BE RESPONSIBLE TO CONTACT THE VARIOUS UTILITY COMPANIES WHICH MAY HAVE BURIED OR AERIAL UTILITIES WITHIN OR NEAR THE CONSTRUCTION AREA BEFORE COMMENCING WORK. THE CONTRACTOR SHALL PROVIDE 72 HOURS MINIMUM NOTICE TO ALL UTILITY COMPANIES PRIOR TO THE START OF CONSTRUCTION. THE CONTRACTOR SHALL ALSO TAKE ALL NECESSARY SAFETY PRECAUTIONS TO AVOID CONTACT WITH OVERHEAD AND UNDERGROUND POWER LINES. THE CONTRACTOR SHALL CONTACT 811 OR TEXAS ONE CALL SYSTEM, AND MAINTAIN UP-TO-DATE ONE-CALL DESIGNATIONS THAT ALL WORK AREAS.
7. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CONSTRUCTION FIELD STAKING, TESTING AND INSTRUMENTATION UNLESS SPECIFIED.
8. ALL CONTRACTORS MUST CONFINE THEIR ACTIVITIES TO THE APPROVED LIMITS OF CONSTRUCTION WORK AREAS. ANY DAMAGE OUTSIDE THE LIMITS OF CONSTRUCTION SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO REPAIR.
9. THESE PLANS DO NOT INCLUDE DESIGNS OR SYSTEMS DEPENDENT TO THE SAFETY OF THE CONTRACTOR OR ITS EMPLOYEES, AGENTS OR REPRESENTATIVES IN THE PERFORMANCE OF THE WORK. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE DESIGN AND IMPLEMENTATION OF ALL ADEQUATE SAFETY PROCEDURES AND PROGRAMS.
10. THE CONTRACTOR SHALL OBTAIN AND COMPLY WITH TERMS OF PERMITS ISSUED BY EACH JURISDICTIONAL AGENCY. PERFORMANCE OF THIS PLAN DOES NOT RELIEVE ITS APPROVAL FROM THE APPLICABLE AGENCIES.
11. THE CONTRACTOR IS RESPONSIBLE FOR REMOVAL OF ALL CONSTRUCTION DEBRIS, SURFACE AND/OR SUBSURFACE MUST BE APPROVED BY AGENCY.
12. THE CONTRACTOR SHALL RELOCATE ALL POWER LINES, SIGNS, FENCES AND OTHER OBSTRUCTIONS AS NECESSARY TO THE PLANS AND/OR AS REQUIRED TO CONSTRUCT THE PROPOSED IMPROVEMENTS.
13. THE CONTRACTOR SHALL UTILIZE TECHNIQUES AS THEY DO NOT TRESPASS WITH SITE DRAINAGE AND INTERFERE WITH, DAMAGE, OR CAUSE SEDIMENTATION TO CONSTRUCTED SEDIMENT TRANSPORT (NORMAL RAIN EVENTS).
14. IF EROSION ARE PRESENT, TEMPORARY FENCES AND GATES SHALL BE ADDED INSTALLATION OF GATES AT FENCE CROSSING AS WELL AS GATE OPENING/CLOSING PROCEDURES SHALL BE VERIFIED WITH AGRICULTURAL OPERATIONS.
15. THE PROPOSED IMPROVEMENTS SHOWN/NOTED ON THE FINAL CONSTRUCTION DRAWINGS WILL BE STAKED IN THE FIELD BY EITHER SURVEY MARKERS, SURVEYORS RIBBON, PIN FLAGS, OR SUITABLE EQUIVALENT.
16. THE BOUNDARIES OF ALL AREAS OF EXISTING TREES TO BE CLEARED AS SHOWN ON THE FINAL CONSTRUCTION DRAWINGS WILL BE MARKED IN THE FIELD BY EITHER SURVEY MARKERS, SURVEYORS RIBBON, PIN FLAGS, OR SUITABLE EQUIVALENT PRIOR TO CONSTRUCTION BY THE CONTRACTOR.
17. THE CONTRACTOR SHALL AVOID THE DESTRUCTION OF ANY EXISTING TREES THAT MAY BE IMPACTED BY PROPERTY CONSTRUCTION. TREES THAT MUST BE REMOVED AND/OR CUT WILL HAVE A TEMPORARY SAFE INSTALLED OF HEALTHY GROW SUPPLEMENTS OF CONSTRUCTION, THE FENCE WILL BE REBUILT AT A MINIMUM TO THE PRE-CONSTRUCTION CONDITION.
18. IN THE EVENT THAT ARCHAEOLOGICAL MATERIALS, HUMAN REMAINS OR EVIDENCE OF HUMAN REMAINS ARE ENCOUNTERED DURING CONSTRUCTION, ALL WORK IN THE VICINITY OF THE FIND WILL BE IMMEDIATELY HALTED AND THE PROJECT TEAM WILL BE NOTIFIED TO DETERMINE NEXT STEPS.
19. IMMEDIATELY FOLLOWING CONSTRUCTION ACTIVITY, THE WORK AREAS WILL BE THOROUGHLY AND SAFELY CLEARED OF DEBRIS WORK SHARD, WIRE, SCRAPS OF STEEL, AND OTHER ACCIDENTAL ITEMS.
20. NO EXCAVATION, GRADING OR OTHER EARTHWORK SHALL BE PERFORMED WHEN SOIL CONDITIONS (MOISTURE CONTENT) ARE UNSUITABLE AS DETERMINED BY THE GEOTECHNICAL ENGINEER OF RECORD (EOR). EARTHWORK SHALL NOT BE PERFORMED DURING OR IMMEDIATELY AFTER RAINFALL OR WHEN, IN THE OPINION OF THE EOR, OTHER WEATHER CONDITIONS PREVENT ACCEPTABLE COMPACTION AND GRADING. THE CONTRACTOR SHALL COMPLY WITH ALL RECOMMENDATIONS IN THE GEOTECHNICAL ENGINEER'S REPORT REGARDING EARTHWORK CONSTRUCTION.
21. THE PRIVATE ACCESS ROADS ARE NOT DESIGNED FOR ALL-WEATHER USE OF HIGH VOLUME, HEAVY DISTRIBUTION LOADS REQUIRE ROADWAY MAINTENANCE IS REQUIRED SUCH AS GRADING AND RESHAPING OF AGGREGATE BASE COURSE AND AFTER CONSTRUCTION AND WORKING AFTER HEAVY RAIN EVENTS.
22. UNUSABLE EXCAVATED MATERIAL AND ALL WASTE RESULTING FROM SITE CLEARING AND GRUBBING SHALL BE DISPOSED OF OFF-SITE OR BY ARRANGEMENT SUBMITTED WRITTEN DOCUMENTATION AS CONCRETE DUMPS OR DEMOLITION WASTES, WITH CLEARING WASTES OR DEBRIS WASTES IS PERMITTED WITHOUT EXPRESSED WRITTEN CONSENT OF THE GEOTECHNICAL ENGINEER.
23. THE CONTRACTOR SHALL MAINTAIN POSITIVE SITE DRAINAGE AND EXISTING DRAINAGE PATTERNS THROUGHOUT CONSTRUCTION. NO GRADING ISSUES OF THE ESTABLISHED LIMITS OF DISTURBANCE SHALL OCCUR WITHOUT PRIOR WRITTEN SUBMISSION FROM THE OWNER/EOR.
24. ALL TREES, BRUSH, STUMPS AND DEBRIS SHALL BE REMOVED BY THE CONTRACTOR IN THE CONSTRUCTION AREA. THE DISPOSAL SHALL BE DISPOSED FROM ALL ROADWAY UTILITIES AND FOUNDATION AREAS AS NEEDED AND STOCKPILED FOR LATER USE IN THE AREA THAT IS TO BE RE-VEGETATED. EXISTING ROADS, WHERE PRACTICAL, ANY EXISTING AGGREGATE SHOULD BE LEFT IN PLACE AND NOT REMOVED WITH THE TOPSOIL.
25. AFTER REMOVAL OF THE TOPSOIL, THE ROADWAY SUBGRADE SHOULD BE COMPACTED USING A SHEEPS FOOT ROLLER WHERE HIGH SLAW CEMENT SURFACE SOILS ARE PRESENT, VIBRATORY SMOOTH DRUM OR PNEUMATIC TIRE COMPACTION EQUIPMENT SHOULD BE USED WHERE CONSIDERABLE SILTY OR SANDY SURFACE SOILS ARE ENCOUNTERED. ANY SOFT, YIELDING OR UNSUITABLE SURFACES SHOULD THEN BE EXCAVATED AND CHECKED FOR FURTHER USING A MINIMUM 20-TON TWO-AXLE DUMP TRUCK OR SIMILAR VEHICLE. IF AREAS "PUMP" OR MOVE GREATER THAN 1.5 INCHES, SOFT AREA SHALLS SHOULD BE EXCAVATED AND RE-COMPACTED. THE EXCAVATED AREA SHOULD THEN BE BACKFILLED WITH APPROVED GRANULAR MATERIAL AND COMPACTED TO THE REQUIRED DENSITY. SOFT AREAS SHOULD BE EXCAVATED AND THE AREAS BACKFILLED AS NEEDED. PROOF-ROLLING SHALL BE PERFORMED IN THE PRESENCE OF THE GEOTECHNICAL ENGINEER OR QUALIFIED TECHNICIAN.
26. FILL SOILS USED TO ATTAIN GRADES IN THE PROPOSED PAVEMENT SUBGRADE AREAS MAY CONSIST OF EXCAVATED GRANULAR SOILS FREE FROM ORGANICS AND OTHER DELETERIOUS MATERIALS AND PARTICLES GREATER THAN 4 INCHES IN DIAMETER.
27. EARTHWORK SHOULD BE PERFORMED IN AREAS THE APPROVED SUBGRADE OR FILL SOILS DO NOT DRY OUT OR BECOME SATURATED PRIOR TO PLACEMENT OF ADDITIONAL FILL OR BASE MATERIAL. IF THIS OCCURS, THE EXPOSED FILL SOILS OR SUBGRADE SHOULD BE SCARIFIED, MOISTURE ADJUSTED AND RE-COMPACTED BEFORE THE PLACEMENT OF ADDITIONAL MATERIAL.
28. AGGREGATE BASE SHOULD BE PROOF-ROLLED WITH A PNEUMATIC ROLLER OR A MINIMUM 20-TON CROSS-AXLE TANDEM AXLE VEHICLE IF FLEXIBLE BASE THAN 1.5 INCHES ARE DISTORTED, SOFT AREAS SHOULD BE EXCAVATED AND RE-COMPACTED OR REPLACED. (NO RE-DISTORTED BY PROOF-ROLLING.)
29. IRON OXIDE AND MANGANESE FOR ALL DISTRICTS THE SOILS SHOULD BE AMENDED THAN JUNE UNLESS OTHERWISE SPECIFICALLY INDICATED ON THE PLANS.
30. CULVERT MARKERS SHALL BE PLACED AT ALL NEW PERMANENT CULVERT LOCATIONS WITHIN THE PUBLIC RIGHT-OF-WAY ADJACENT HIGH-TRAFFIC THE MARKERS SHALL BE PLACED ON BOTH SIDES OF ALL INVERTED ROADS AND ALONG ALL ROAD SIDEWALK DESIGNATED AS LOW WATER CROSSINGS ON THE PLANS. GRADING FOR INITIATIVE MARKERS AT LOW WATER CROSSINGS SHALL NOT EXCEED 6% LINEAR PER.
31. DURING GRADING OPERATIONS, LARGE PARTIALS EXPOSED BOULDERS MAY BE ENCOUNTERED. IF THESE BOULDERS ARE REMOVED, SECONDARY NOTE MAY REMAIN WHICH SHOULD BE REMOVED, BACK-FILLED WITH APPROPRIATE FILL TYPES FOR THE DESIGNATED AREAS AND COMPACTED. IT MAY BE MORE PRUDENT TO BREAK OFF THE EXPOSED BOULDER THAN TO REMOVE THEM ENTIRELY. BOULDERS THAT ARE NOT TO BE USED FOR USE AS GENERAL OR STRUCTURAL FILL IN ACCORDANCE WITH THE MATERIAL REQUIREMENTS HEREIN SHALL BE DISPOSED OR STOCKPILED AS DIRECTED.

STRIPPING NOTES

1. STRIPPING CONSISTS OF REMOVAL OF TOPSOIL, ORGANIC MATTER AND OTHER DELETERIOUS MATERIALS. THE DEPTH OF STRIPPING WILL TYPICALLY VARY FROM 4" TO 6" FOR ALL AREAS WITHIN THE STAKED CLEARING LIMITS, EXCEPT FOR ON-LINE PLANTS WITHIN THE LIMITS OF THE SITE UNLESS OTHERWISE INDICATED ON THE PLANS. AFTER STRIPPING THE STUMPS AND ROOTS IN EXCESS OF 1/2" IN DIAMETER, TOPSOIL SHALL BE STOCKPILED IN AREAS DESIGNATED FOR THE TEMPORARY STORAGE (GRAVEL OR TYPE) PAVEMENTS AND FOUNDATIONS STRIPPED TOPSOIL SHALL BE STOCKPILED ON SITE AS DIRECTED BY THE GEOTECHNICAL ENGINEER OR CONTRACTOR TO BE USED FOR FINAL DRESSING OF THE DEPARTMENT AREAS AND/OR AREAS REQUIRING STRIPPING.
2. THE DEPTH OF TOPSOIL STRIPPING MAY VARY WITH THE AREA BEING STRIPPED. AT A MINIMUM, STRIP ALL SURFACE SOILS CONTAINING VISIBLE ROOT STRUCTURES AND ORGANIC MATTER. WHERE TOPSOIL DEPTHS ARE NOT VISUALLY DISCERNABLE, SOILS EXHIBITING PITCH STRIPPING SHALL HAVE AN ORGANIC CONTENT OF LESS THAN 5% BY USDA APPROVED WET COMBUSTION METHOD.
3. EXCAVATE AND STOCKPILE ANY ADDITIONAL SOILS DESIGNATED BY THE GEOTECHNICAL ENGINEER TO BE UNSUITABLE AS GENERATED FOR BASES ARE STRIPPED AREAS.
4. SUBSEQUENT TO STRIPPING AND PRIOR TO PLACEMENT OF ENGINEERED FILL, PAVEMENTS AND/OR FOUNDATION BEARING, THE SUBGRADE SHOULD BE PROOF ROLLED BY PASSING A FULLY LOADED DUMP TRUCK OR SIMILAR TWO-AXLE, CONSTRUCTION EQUIPMENT DUMP TRUCK OR TRAILER'S HEAVY PNEUMATIC TIRE OVER THE SURFACE AT LEAST TWICE. SOFT OR UNSUITABLE SOILS SHOULD BE REMOVED AND REPLACED WITH STRUCTURAL FILL. IN THOSE AREAS WHERE FILL LOOSELY NEAR-SURFACE SOILS HAVE BEEN DISTURBED, THEY SHOULD BE SCARIFIED AND RE-COMPACTED PRIOR TO THE PLACEMENT OF ENGINEERED FILL, PAVEMENTS AND FLOOR SLABS.
5. EXCAVATION OF THE NEAR-SURFACE DISTURBED SOILS SHOULD BE AS RECOMMENDED BY THE GEOTECHNICAL ENGINEER FOR THE CORRESPONDING SOIL TYPE.
6. MAINTENANCE OF TOPSOIL STOCKPILES SHALL BE IN ACCORDANCE WITH THE PROVISIONS OF THE STORMWATER POLLUTION PREVENTION PLAN (SWPPP).

POTENTIAL UNEXPLODED ORDNANCE (UXO) NOTES

1. PRIOR TO THE INITIATION OF ANY CONSTRUCTION ACTIVITIES, A COMPREHENSIVE UXO SURVEY MUST BE CONDUCTED BY A CERTIFIED UXO SPECIALIST. THIS ASSESSMENT SHALL INCLUDE A GEOPHYSICAL SURVEY AND ANOMALY INVESTIGATION METHODS, TO IDENTIFY AND DEMARCATE POTENTIAL UXO LOCATIONS.
2. ALL CONSTRUCTION PERSONNEL MUST PARTICIPATE IN A SITE-SPECIFIC UXO AWARENESS TRAINING CONDUCTED BY A CERTIFIED UXO SPECIALIST. THIS EDUCATION SHALL COVER THE IDENTIFICATION OF UXO, ASSOCIATED RISKS AND EMERGENCY RESPONSE PROCEDURES.
3. A CERTIFIED UXO SPECIALIST MUST BE ON-SITE DURING ALL SUBSURFACE EXCAVATIONS, INCLUDING BUT NOT LIMITED TO EXCAVATION, DRILLING, TRENCHING AND DIGGING. THE SPECIALIST IS RESPONSIBLE FOR CONTINUOUS MONITORING AND IMMEDIATE RESPONSE TO ANY SUSPECTED OBJECTS.
4. CONTRACTOR TO ESTABLISH AND DISSEMINATE A DETAILED UXO EMERGENCY RESPONSE PLAN. THIS PLAN MUST INCLUDE IMMEDIATE CESSATION OF WORK, SITE EVACUATION PROTOCOLS, AND NOTIFICATION PROCEDURES FOR THE UXO SPECIALIST AND RELEVANT LOCAL AUTHORITIES.
5. ANY SUSPECTED UXO MUST BE CLEARLY MARKED WITH VISIBLE INDICATORS, AND ACKNOWLEDGED IMMEDIATELY TO THE UXO SPECIALIST. UNDER NO CIRCUMSTANCES SHOULD PERSONNEL ATTEMPT TO MOVE, HANDLE, OR DISTURB THE SUSPECTED UXO.
6. MAINTAIN OPEN PUBLIC COORDINATION WITH LOCAL AUTHORITIES AND MILITARY EXPLOSIVE ORDNANCE DISPOSAL (EOD) UNITS TO FACILITATE THE SAFE IDENTIFICATION, REMOVAL, AND DISPOSAL OF ANY UXO DISCOVERED ON-SITE.
7. IMPLEMENT STRINGENT PROTECTIVE MEASURES, INCLUDING THE ESTABLISHMENT OF EXCLUSION ZONES AND PHYSICAL BARRIERS, TO ENSURE THE SAFETY OF ALL PERSONNEL AND THE PUBLIC DURING UXO IDENTIFICATION AND REMEDIATION ACTIVITIES.
8. MAINTAIN COMPREHENSIVE RECORDS OF ALL UXO-RELATED ACTIVITIES, INCLUDING INITIAL SITE ASSESSMENTS, SAFETY BRIEFINGS, UXO DISCOVERIES, AND SUBSEQUENT DISPOSAL ACTIONS. THESE RECORDS MUST BE READILY AVAILABLE FOR REVIEW BY RELEVANT AUTHORITIES.
9. VERIFY FULL COMPLIANCE WITH ALL APPLICABLE LOCAL, STATE, AND FEDERAL REGULATIONS GOVERNING UXO MANAGEMENT.

CONTRACTOR NOTES

1. THESE PLANS REPRESENT THE OVERALL SITE-WORK IMPROVEMENTS REQUIRED FOR PROJECT CONSTRUCTION. THE CONTRACTOR SHALL FURNISH, INSTALL, TEST AND COMPLETE ALL WORK AS THE CONSTRUCTION IS IN ACCORDANCE WITH THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR MEANS AND METHODS OF CONSTRUCTION AS SHOWN. THESE PLANS DO NOT COMPLETELY REPRESENT HOW THE SITE IS INTENDED TO REPRESENT ALL SPECIFIC INSTRUCTIONS OR DURING LOW STREAM CONSTRUCTION. THE CONTRACTOR SHALL BE RESPONSIBLE TO CONSTRUCT ALL IMPROVEMENTS DEPICTED ON THESE PLANS IN ACCORDANCE WITH ALL APPLICABLE RULES, REGULATIONS AND LAWS IN EFFECT AT THE TIME OF CONSTRUCTION.
2. THE CONTRACTOR SHALL ACCEPT THE SITE AS IS, THE CONTRACTOR SHALL ASSESS CONDITIONS, AND THE KIND, QUALITY AND QUANTITY OF WORK REQUIRED. THE OWNER MAKES NO GUARANTEE IN REGARD TO THE ACCURACY OF ANY AVAILABLE INFORMATION WHICH WAS OBTAINED DURING INVESTIGATIONS. THE CONTRACTOR SHALL MAKE A THOROUGH SITE INSPECTION IN ORDER TO FIELD VERIFY EXISTING SITE CONDITIONS, CONTRACTOR'S CONDITIONS WITH THE DRAWINGS AND MEASURE ANY POSSIBLE CONSTRUCTION CONFLICTS WITH THE PROPOSED WORK AND TRANSMIT ORDER TO COMMENCEMENT OF WORK. THE CONTRACTOR SHALL MAKE ADDITIONAL TOPOGRAPHIC SURVEYS AS DEEMS NECESSARY, PROVIDED THEY ARE COORDINATED WITH THE OWNER. ANY CONDITIONS ENCOUNTERED BY THE CONTRACTOR THAT DIFFER FROM THE INFORMATION SHOWN ON THE DRAWINGS THAT ARE NOT BROUGHT TO THE ATTENTION OF THE ENGINEER PRIOR TO THE START OF WORK SHALL NOT BE CONSIDERED GROUNDS FOR ADDITIONAL PAYMENT OR CHANGES TO THE CONTRACT DURATION, OR ANY OTHER CLAIMS AGAINST THE OWNER OR OWNER'S ENGINEER.
3. THE CONTRACTOR SHALL MAKE THEIR OWN NECESSARY, PRIVATELY WRITTEN REQUESTS FOR INFORMATION (RFIS) TO THE OWNER AND ENGINEER PRIOR TO THE CONSTRUCTION OF ANY SPECIFIC ASPECTS FROM THE PLANS SHALL BE NO LATER ACCEPTABLE TO OWNER AND ENGINEER AND SHALL ALIGN FOR A MINIMUM OF TWO WORK DAYS BUT ADDITIONAL REASONABLE TIME FOR A RESPONSE BASED ON THE COMPLEXITY OF THE QUESTION. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR CONSTRUCTION ITEMS CONSTRUCTED DIFFERENTLY THAN INTENDED OR AS DEPICTED ON THE PLANS.
4. INFORMATION RELATED TO ELEVATIONS AND PROPOSED GRADES (SUCH AS DRAINAGE GRADES, INVERT ELEVATIONS AND ELEVATIONS, CRATE ELEVATIONS, BUILDING FINISHED FLOOR ELEVATIONS, ETC.) MAY BE FOUND IN MORE THAN ONE LOCATION IN THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL DETERMINE BY REVIEWING ALL PLANS, PROFILES AND ANY OTHER INFORMATION IN THE CONTRACT DOCUMENTS FOR CONSTRUCTION FROM ANY DISCREPANCIES OR DISCREPANCIES THAT ARE FOUND BY THE CONTRACTOR OR HIS AGENTS SHALL BE IMMEDIATELY, BROUGHT TO THE ATTENTION OF THE OWNER AND ENGINEER IN WRITING IN THE FORM OF AN RFI PRIOR TO CONSTRUCTION.
5. THERE ARE ADDITIONAL NOTES, SPECIFICATIONS AND REQUIREMENTS CONTAINED THROUGHOUT THE PLAN SET AS WELL AS REFERENCES TO SPECIFICATIONS FROM APPLICABLE GOVERNING AUTHORITIES AND INDUSTRY STANDARDS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO OBTAIN, REVIEW AND ADHERE TO ALL THESE DOCUMENTS.
6. CONTRACTOR IS RESPONSIBLE FOR ALL DIMENSIONAL AND VERTICAL CONTROL, REFERENCE POINTS AND CONSTRUCTION STAKING AS REQUIRED TO THE PROJECT.
7. CONTRACTOR TO FIELD VERIFY ALL SITE CONDITIONS AND NOTIFY ENGINEER PRIOR TO BEGINNING WORK.
8. CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ALL NECESSARY PERMITS AND NOTIFICATION OF ALL AUTHORIZED INSPECTIONS, SCHEDULE INSPECTIONS OR LICENSES IN ADVANCE TO PRIVATE OR PUBLIC UTILITIES AFFECTED BY ANY OPERATIONS PRIOR TO COMMENCEMENT OF WORK.
9. CONTRACTOR TO BE RESPONSIBLE FOR PROVIDING AND MAINTAINING ALL BARRICADES, WARNING SIGNS, FLASHING LIGHTS AND TRAFFIC CONTROL DEVICES IN CONFORMANCE WITH PART VI OF THE TEXAS MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES (TMUTCD). SHALL BE TRAINED AND CERTIFIED TO MAINTAIN AND INSTALL DEVICES.
10. CONTRACTOR SHALL COMPLY WITH OSHA REGULATIONS AND STANDARDS OF TEXAS LAW CONCERNING EXCAVATION, TRENCHING AND SHORING. EXCAVATIONS OVER 5 FEET DEEP TO BE SHORED AND PROTECTED IN ACCORDANCE WITH THE TRENCH SAFETY DETAILS INCORPORATED IN THE PLANS AS REQUIRED BY STATE LAW AND DISCLOSE ANY DEVIATION FROM THE METHOD SHOWN ON THE PLANS SHALL BE DESIGNED AND SEALED BY A REGISTERED PROFESSIONAL ENGINEER LICENSED IN THE STATE OF TEXAS AND IN GOOD STANDING. SAID DESIGN MUST BE PRESENTED TO THE ENGINEER AND/OR THEIR HANDS AT LEAST 48 HOURS BEFORE EXCAVATION OR TRENCHING BEGINS. THE CONTRACTOR'S PERFORMANCE HEREIN WILL CONSTITUTE AGREEMENT BY THE CONTRACTOR TO ITS FULL RESPONSIBILITY FOR ANY AND ALL DAMAGES WHICH MIGHT BE OCCASIONED BY IMPLEMENTATION OF SAFETY MEASURE THEREIN.
11. CONTRACTOR TO PROVIDE POSITIVE DRAINAGE WITHIN THE LIMITS OF DISTURBANCE AND NO PONDING.
12. CONTRACTOR SHALL REFER TO ARCHITECTURAL PLANS AND SPECIFICATIONS FOR EXACT LOCATIONS OF ALL UTILITY ENTRANCES TO BUILDING SUCH AS WATER, SEWER LATERALS, DOMESTIC WATER SERVICE, ELECTRICAL, TELEPHONE AND CABLE SERVICE, ROOF DRAINS AND ALL OTHER UTILITIES. CONTRACTOR SHALL COORDINATE INSTALLATION OF UTILITIES IN SUCH A MANNER AS TO AVOID CONFLICTS AND TO ENSURE PROPER DEPTHS AND ADJACENT AS WELL AS COORDINATING WITH REGULATORY AGENCY AND TO LOCATION OF AND SCHEDULING OF INSPECTIONS.
13. ALL DEMOLITION DEBRIS/WORK SITE BOUNDARY SHALL COMPLY WITH CURRENT

CONSTRUCTING EMBANKMENTS AND FILLS

1. PREPARATION OF GROUND SURFACE.

a. BACK-FILL STUMP HOLES OR OTHER SMALL EXCAVATIONS WITH FILL MATERIAL AND COMPACT.

b. PLOW, STEP (BENCH), OR BREAK UP SLOPED GROUND SURFACES THAT ARE STEEPER THAN ONE VERTICAL TO FOUR HORIZONTAL ON WHICH FILL IS TO BE PLACED, SO THAT FILL MATERIAL WILL BOND WITH EXISTING SURFACE.

c. SCARIFY OR PLOW AREAS TO BE FILLED TO A DEPTH OF 3" TO 4".

d. RE-COMPACT LOOSENED MATERIAL WITH NEW MATERIAL TO THE INITIAL LIFT THICKNESS OF NEW MATERIAL TO BE COMPACTED WITH THE SCARIFIED MATERIAL SHALL NOT EXCEED 6-INCHES.

2. PROTECTION OF SUBGRADE

a. DURING CONSTRUCTION, ALL SUBGRADE SHAPED AND DRAINED, PRIOR TO ANY ANTICIPATED RAINFALL. ALL LOOSENED OR AREAS POCK-MARKED AREAS BY PAD-FOOTED COMPACTORS SHALL BE ROLLED SMOOTH WITH A PNEUMATIC-TIRED OR SMOOTH-DRUM COMPACTOR TO MINIMIZE MOISTURE ABSORPTION.

b. MAINTAIN DITCHES AND DRAINS ALONG THE SUBGRADE TO DRAIN EFFECTIVELY AT ALL TIMES.

c. NO FILL SHALL BE PLACED UNTIL SUBGRADE HAS BEEN PROPERLY PREPARED.

d. SHOULD SUBGRADE, DUE TO ANY REASON OR CAUSE, LOSE REQUIRED STABILITY, DENSITY, OR FINISH BEFORE SUCCEEDING BASE COURSE IS PLACED, RE-COMPACT AND REFINISH THE SUBGRADE.

e. PREVENT EXCESSIVE LOSS OF MOISTURE IN SUBGRADE BY SPRINKLING, SEALING, OR COVERING WITH THE SUBSEQUENT LAYER.

3. FORMATION OF EMBANKMENTS AND FILLS (STRUCTURAL AND GENERAL FILL)

a. CONSTRUCT AT LOCATIONS SHOWN ON THE DRAWINGS AND TO LINES AND GRADES INDICATED WITHIN LIMITS OF WORK.

b. FOR GRADES WITH SLOPES OF 10% OR LESS: CONSTRUCT IN LAYERS APPROXIMATELY PARALLEL TO FINISH GRADE SURFACE AND COMPACT. FOR GRADES IN EXCESS OF 10% SLOPE: BENCH THE FILL SLOPE AND COMPACT THE SOILS IN HORIZONTAL LAYERS. EXCESS FILL SHALL BE COMPACTED TO THE SPECIFIED DENSITIES ALONG EXPOSED SLOPES. SUCH THAT WHEN THE SLOPES ARE TRIMMED TO THE SPECIFIED LIES AND GRADES, THE SOIL EMPLOYED BY THE TRIMMING OPERATION MEETS THE SPECIFIED COMPACTION DENSITY.

c. CONSTRUCT IN SUCCESSIVE LAYERS FOR FULL WIDTH OF INDIVIDUAL CROSS SECTION AND TO LENGTHS AS BEST SUITED TO HANDLING AND COMPACTION METHODS USED.

d. FINAL LAYERS BY LEGAL EQUIPMENT WHICH WILL SPREAD MATERIAL AS IT IS DUMPED OR SPREAD BY BLADING OR OTHER ACCEPTABLE METHODS FROM PILES OR WINDROWS DUMPED FROM EXCAVATING OR HAULING EQUIPMENT.

e. DEPTH OF EACH LAYER SHALL NOT EXCEED LOOSE MEASUREMENT DEPTH SPECIFIED IN THE SUBSECTION ENTITLED "COMPACTION" IN THIS SECTION.

f. PRIOR TO AND IN CONJUNCTION WITH COMPACTION OPERATION, BRING EACH LAYER TO MOISTURE CONTENT AS SPECIFIED IN THE SUBSECTION ENTITLED "COMPACTION," AND KEEP LEVELED WITH SUITABLE EQUIPMENT TO ENSURE UNIFORM COMPACTION OVER THE ENTIRE LAYER.

g. PULVERIZED OR CRUSHED CLAYSTONE, SILTSTONE, SANDSTONE OR OTHER SOIL-LIKE NON-DURABLE SHALE SHALL NOT BE USED AS FILL WITHIN 2 VERTICAL FEET OF THE FINISHED GRADE.

4. ROCK FILL

a. INSTALL THE UNDERLYING GEOTEXTILES AND COARSE AGGREGATES FOR THE ROCK BEDDING LAYER AS INDICATED ON THE PLANS PRIOR TO INSTALLING THE ROCK.

b. INSTALL THE ROCK KEY AT THE TOE OF THE SLOPE AS INDICATED ON THE PLANS PRIOR TO INSTALLING ANY ROCK ON THE SLOPE.

c. ROCK FILLS SHALL BE PLACED ON EMBANKMENTS AS AN EROSION PROTECTION COVER TO THE LINES AND GRADES INDICATED IN THE PLANS.

d. PLACE THE ROCK ON THE SLOPE ADVANCING FROM THE TOE OF THE SLOPE TO THE TOP, IN THE FULL THICKNESS AS SPECIFIED ON THE PLANS.

5. ROADWAY GRAVEL PAVING

a. PLACE ROADWAY GRAVEL PAVING TO THE LINES AND GRADES INDICATED ON THE PLANS.

b. COMPACT ROADWAY GRAVEL PAVING WITH A MINIMUM OF 6 PASSES OF A SMOOTH-DRUM VIBRATORY ROLLER IN CONFORMANCE WITH THE COMPACTION SUBSECTION OF THESE PLANS.

c. PRIOR TO CONSTRUCTING THE FINAL PORTLAND CEMENT CONCRETE ROADWAY PAVEMENTS, ROADWAY GRAVEL PAVING MAY BE USED ON CONSTRUCTION ACCESS ROUTES TO PROVIDE ALL-WEATHER ACCESS. WHERE ALL-WEATHER CONSTRUCTION ACCESS ROUTES DO NOT COINCIDE WITH THE CONSTRUCTED ROADWAYS INDICATED ON THE PLANS, INSTALL ROADBASE AND ROADWAY GRAVEL PAVING AS INDICATED ON THE PLANS FOR TEMPORARY ACCESS ROUTES.

6. ROAD BASE

a. INSTALL ROAD BASE MATERIALS TO THE LINES AND GRADES INDICATED FOR ASPHALTIC OR CONCRETE PAVEMENTS OR AS REQUIRED FOR THE CONSTRUCTION OF TEMPORARY CONSTRUCTION ACCESS ROUTES.

b. ALL ROAD BASE MATERIALS SHALL BE COMPACTED WITH A PAD-FOOTED VIBRATORY ROLLER AT A MINIMUM. THE ROAD BASE SHALL BE COMPACTED WITH A SUFFICIENT NUMBER OF PASSES TO ACHIEVE COMPLETE WALK-OUT OF THE PAD FEET OF THE ROLLER.

c. AFTER ACHIEVING WALK-OUT, TRIM THE ROAD BASE WITH A ROADWAY MOTOR GRADER TO THE DESIRED LINES AND GRADES.

7. YARD GRAVEL PAVING

INSTALL THE YARD GRAVEL PAVING TO THE LINES AND GRADES INDICATED ON THE PLANS AT A MINIMUM, THE YARD GRAVEL PAVING SHALL BE COMPACTED WITH A MINIMUM OF 3 PASSES OF A SMOOTH-DRUM COMPACTOR. THE SMOOTH-DRUM COMPACTOR SHALL BE OPERATED IN NON-VIBRATORY MODE NEAR FOUNDATIONS AND RETAINING WALLS IN ACCORDANCE WITH THE COMPACTION SUBSECTION.

8. CEMENT STABILIZED SAND

CEMENT-STABILIZED SAND MAY BE USED IN AREAS WHERE ADEQUATE COMPACTION OF SHAPED AND/OR SLOPED SUBGRADES MAY NOT BE PRACTICAL (PIPE BEDDING IN TRENCHES, AREAS BETWEEN EXISTING FOUNDATIONS, ETC.). THE CEMENT STABILIZED SAND SHALL BE PLACED IN MAXIMUM LOOSE LIFTS OF 8-INCHES AND COMPACTED WITH A MINIMUM OF 3 PASSES OF MECHANICAL HAND TAMPERS. COMPACTED CEMENT STABILIZED SAND SHALL MEET THE VISUAL INSPECTION APPROVAL BUT ADDITIONAL COMPACTION TESTING SHALL NOT BE REQUIRED.

9. COMPACTION

a. COMPACT BY UNIFORM LAYERS, NOT EXCEEDING RECOMMENDED LOOSE THICKNESS AS PROVIDED IN THIS SUBSECTION, DRY OR MOISTEN AS NECESSARY TO MAINTAIN MOISTURE CONTENT OF NOT LESS THAN 2% DRY NOR MORE THAN 2% WET OF OPTIMUM MOISTURE CONTENT AND COMPACT TO DENSITY OF NOT LESS THAN THE FOLLOWING REQUIREMENTS FOR EACH SPECIFIED FILL CATEGORY:

CATEGORY I – GRANULAR STRUCTURAL FILL: 95% OF THE MAXIMUM DENSITY ACCORDING TO ASTM D 1557 (MODIFIED PROCTOR)

CATEGORY II – GENERAL FILL: 90% OF THE MAXIMUM DENSITY ACCORDING TO ASTM D 698 (STANDARD PROCTOR).

CATEGORY III – STRUCTURAL FILL: 95% OF THE MAXIMUM DENSITY ACCORDING TO ASTM D 698 (STANDARD PROCTOR).

CATEGORY IV – RIPRAP FILL: ADDITIONAL COMPACTION NOT REQUIRED; PROVIDE CEMENT STABILIZATION OR GROUTING OF THE RIPRAP AS INDICATED ON THE PLANS.

CATEGORY V – ROADWAY GRAVEL PAVING: PROCEDURAL COMPACTION AS SPECIFIED.

CATEGORY VI – ROAD BASE: 95% OF THE MAXIMUM DENSITY ACCORDING TO ASTM D 1557 (MODIFIED PROCTOR) OR CONCRETE WALK-OUT OF THE PAD-FOOTED COMPACTOR.

CATEGORY VII – YARD PAVING: PROCEDURAL COMPACTION AS SPECIFIED.

CATEGORY VIII – CEMENT STABILIZED SAND: PROCEDURAL COMPACTION AS SPECIFIED SUBJECT TO VISUAL INSPECTION.

b. EACH LAYER SHALL BE UNIFORM AS TO MATERIAL DENSITY AND MOISTURE CONTENT BEFORE COMPACTION.

c. IF MATERIAL FAILS TO MEET DENSITY SPECIFIED OR MOISTURE CONTENT IS OUTSIDE REQUIRED RANGE, REWORK LAYER TO OBTAIN SPECIFIED RESULTS AND ALTER COMPACTION METHODS OF SUBSEQUENT WORK.

d. MAXIMUM THICKNESS OF UNIFORM LAYERS (LOOSE MEASUREMENT) SHALL BE AS FOLLOWS:

MECHANICAL HAND TAMPER AND HAND COMPACTION EQUIPMENT AND PROCEDURES: 6" MAXIMUM THICKNESS OF EACH UNIFORM LAYER.

FOOTED OR SMOOTH DRUM ROLLERS: 8" MAXIMUM THICKNESS OF EACH UNIFORM LAYER FOR STRUCTURAL FILLS AND 12" MAXIMUM THICKNESS OF EACH UNIFORM LAYER FOR GENERAL FILLS.

WHEN EMBANKMENTS OR FILLS ARE CONSTRUCTED OF CLAYSTONE, SILTSTONE, SANDSTONE OR OTHER SOIL-LIKE NON-DURABLE SHALE AS IDENTIFIED ON THE PLANS OR BY THE ENGINEER, THE MATERIAL SHALL BE PULVERIZED TO A MAXIMUM DIMENSION OF 12-INCHES, PLACED IN A MAXIMUM LOOSE LAYER THICKNESS OF 12-INCHES AND WATERED TO PROMOTE SLAKING AND BREAKDOWN OF THE NON-DURABLE MATERIAL. COMPACTION OF ALL NON-DURABLE STONE MATERIALS SHALL BE WITH FOOTED VIBRATORY ROLLERS IN CONFORMANCE WITH THIS SECTION.

e. COMPACTION EQUIPMENT: THE FOLLOWING ARE THE APPLICABLE TYPES OF COMPACTION EQUIPMENT REQUIRED FOR THE PROJECT:

10. FINISHING

a. DESCRIPTION: FINISHING SHALL CONSIST OF SHAPING AND FINISHING ENTIRE SITE.

b. CONSTRUCTION METHODS:

AFTER OTHER WORK HAS BEEN COMPLETED, AS REQUIRED, DITCHES SHALL BE SMOOTHLY SHAPED BY DRAGLINE AS NECESSARY.

SLOPES SHALL CONTINUOUSLY BE MAINTAINED UNTIL ACCEPTANCE OF WORK.

11. IN-PLACE DENSITY TESTING FREQUENCY

a. IN-PLACE DENSITY TESTING SHALL BE COMPLETED BY THE CONTRACTOR VIA A 3RD PARTY TESTING AGENCY.

b. CATEGORY I, CATEGORY II, AND CATAGORY VI FILL PLACED AT AREAS DESIGNATED ON THE DRAWINGS SHALL HAVE ONE IN-PLACE DENSITY TEST PERFORMED FOR EACH LIFT COVERING AN AREA NOT TO EXCEED 5,000 SQUARE FEET. WHEN USED AS BACK-FILL, ONE IN-PLACE DENSITY TEST SHALL BE PERFORMED FOR EACH 200 CUBIC YARDS OF BACK-FILL.

c. CATEGORY V FILL AND UN-DESIGNATED AREAS OF FILL SHALL HAVE ONE IN-PLACE DENSITY TEST PERFORMED FOR EACH LIFT COVERING AN AREA NOT TO EXCEED 10,000 SQUARE FEET.

d. THE LOCATION OF FIELD TESTS SHALL BE SELECTED BASED ON ENGINEERING JUDGEMENT OF THE FOLLOWING: (1) REFLECTING THE LEAST COMPACTION ACHIEVED IN A VOLUME OF FILL PLACED, AND (2) REPRESENTING THE COMPACTION ACHIEVED IN A LARGE PART OF THAT VOLUME.

e. IF THE RESULTS OF A TEST FAIL TO MEET THE SPECIFICATIONS REQUIRED, WITH THE TEST MAY BE RE-RUN NO MORE THAN TWICE, ASSUMING AN ERROR IN THE FIRST FIELD TEST, THE RETEST WILL BE PERFORMED IN THE SAME GENERAL AREA AS THE INITIAL TEST WHICH FAILED. ENGINEERING JUDGMENT SHALL BE USED TO SELECT RETEST LOCATIONS SUSPECTED OF HAVING EQUAL OR LESS COMPACTION THAN FILL MATERIAL IN THE FIRST TEST (LOCATIONS OF THE RETESTS MEET THE SPECIFICATIONS), REQUIRED, THEN THE COMPACTION MAY BE CONSIDERED ACCEPTABLE. IF THE RESULTS OF ONE OR MORE OF THE RETESTS DO NOT MEET THE REQUIRED SPECIFICATIONS, THEN THE DEFECTIVE AREA OF COMPACTION SHALL BE REPAIRED OR REPLACED TO MEET SPECIFICATIONS.

FINAL CLEAN-UP

1. BEFORE FINAL ACCEPTANCE OF THE PROJECT, THE CONTRACTOR SHALL REMOVE ALL EQUIPMENT, UNUSED AND USELESS MATERIAL, RUBBISH AND TEMPORARY BUILDINGS; SHALL REPAIR OR REPLACE FENCES AND OTHER PRIVATE OR PUBLIC PROPERTY WHICH MAY HAVE BEEN DAMAGED ON ACCOUNT OF EXECUTION OF THE WORK.

2. THE CONTRACTOR SHALL FILL ALL DEPRESSIONS AND WATER POCKETS (IN ACCORDANCE WITH RAS PROCEDURE) CAUSED BY THEIR OPERATIONS.

3. THE CONTRACTOR SHALL REMOVE ALL OBSTRUCTIONS FROM WATERWAYS CAUSED BY THEIR WORK.

4. THE CONTRACTOR SHALL CLEAN ALL DRAINS AND DITCHES WITHIN AND ADJACENT TO THE SITE WHICH HAVE BEEN OBSTRUCTED BY THEIR OPERATIONS.

5. THE CONTRACTOR SHALL LEAVE THE SITE OF THE PROJECT IN A NEAT AND PRESENTABLE CONDITION WHEREVER THEIR OPERATIONS HAVE DISTURBED CONDITIONS EXISTING AT THE TIME OF STARTING THEIR WORK.

TRAFFIC CONTROL

1. THE CONTRACTOR WILL BE SOLELY RESPONSIBLE FOR IMPLEMENTING AN APPLICABLE TRAFFIC CONTROL PLAN PER STATE DEPARTMENT OF TRANSPORTATION STANDARDS. TRAFFIC CONTROL AND THE LOCAL MANUAL OF THE UNIFORM TRAFFIC CONTROL DEVICES (MUTCD). CONTRACTOR IS RESPONSIBLE FOR ADAPTATION AND IMPLEMENTATION TO SUIT SITE-SPECIFIC SITUATIONS.

2. LEGAL JURISDICTION: TXDOT OR AUTHORITY HAVING JURISDICTION (AHJ) MUST BE NOTIFIED PRIOR TO CONSTRUCTION IN THE RESPECTIVE ROW OR EASEMENT AREA. CONTRACTOR SHALL FOLLOW DOT SPECIFICATIONS AND DETAILS FOR ALL WORK WITHIN THE DOT ROW. IN GENERAL, THE LATEST EDITION OF STATE DOT STANDARD SPECIFICATIONS FOR THE CONSTRUCTION AND MAINTENANCE OF HIGHWAYS, STREETS, AND BRIDGES ARE THE CONTROLLING SPECIFICATIONS.

3. ALL WORK ON OR ADJACENT TO JURISDICTIONAL ROADWAYS SHALL CONFORM TO ANY TRAFFIC CONTROL REQUIREMENTS AND THE MUTCD.

4. EQUIPMENT WILL UTILIZE THE INTERSECTION OF ACCESS ROADS AND EXISTING ROADS FOR TURNING WORK AREAS. SUCH AS SOLAR SITES AND SUBSTATION AREAS. WILL ALSO PROVIDE AREAS FOR EQUIPMENT TURNING AND PARKING IN ADDITION TO DESIGNATED TURNING LOCATIONS.

5. ALL EQUIPMENT ACCESS, STORAGE OF EQUIPMENT AND MATERIALS, AND OTHER CONSTRUCTION ACTIVITIES WILL BE CONFINED TO THE ACCESS ROADS, SOLAR SITES, SUBSTATIONS AND THE COLLECTION LINE AND TRANSMISSION LINE ROUTES AS DEPICTED ON THE FINAL CONSTRUCTION DRAWINGS.

6. DEBRIS RESULTING FROM CONSTRUCTION ACTIVITIES WILL BE MINIMIZED TO THE MAXIMUM EXTENT PRACTICAL BY IMPLEMENTING APPROPRIATE CONTROL MEASURES. THESE MEASURES INCLUDE THE APPLICATION OF MULCH, WATER, OR "STONE" ON ACCESS ROADS, EXPOSED SOILS, STOCKPILED SOILS, OR UNPAVED PUBLIC ROADS WHEN DRY AND WINDY CONDITIONS EXIST. A WATERING VEHICLE SHALL BE AVAILABLE ON AN AS-NEEDED BASIS.

7. CONTRACTOR MUST MAINTAIN ALL EQUIPMENT IN GOOD OPERATING CONDITIONS AND ALL MUFFLERS AND ENGINES WILL BE MUFFLED ACCORDING TO MANUFACTURER'S SPECIFICATIONS AND WILL COMPLY WITH STATE ENVIRONMENTAL LAW, SUBCHAPTER E, PART 480 (NOISE). FROM TIME TO TIME MOTOR VEHICLES AND EQUIPMENT MAY BE REPAIRED OR REPLACED. EQUIPMENT WILL NOT BE LEFT RUNNING UNNECESSARILY, AND EXISTING TALL GROWING VEGETATION WILL BE MAINTAINED, TO THE MAXIMUM EXTENT PRACTICABLE, TO SERVE AS A NOISE BUFFER.

8. CONSTRUCTION ACTIVITY WILL GENERALLY OCCUR BETWEEN THE HOURS OF 6:00 A.M. AND 8:00 P.M. MONDAY THROUGH SATURDAY, AND 8:00 A.M. TO 8:00 P.M. ON SUNDAY OR AS ALLOWED BY THE LOCAL AHJ. HOWEVER, DUE TO SAFETY OR CONTINUOUS OPERATION REQUIREMENTS, CONSTRUCTION ACTIVITIES MAY OCCUR OUTSIDE OF THESE TIMEFRAMES AND ADDITIONAL WORK HOURS MAY BE NECESSARY.

9. TO PREVENT DAMAGE TO ADJACENT AGRICULTURAL LAND, ALL VEHICLE TRAFFIC AND PARKING WILL BE CONFINED TO THE ACCESS ROADS AND DESIGNATED WORK AREAS AT THE SOLAR AND SUBSTATION FACILITY SITES AND NECESSARY BULL-DITS AND PARKING AREAS WILL BE DEVELOPED OUTSIDE OF ACTIVE AGRICULTURAL FIELDS TO THE EXTENT PRACTICAL.

10. THE FUNCTIONS SERVED BY ACTIVE FARM FENCES AND GATES AFFECTED BY THE CONSTRUCTION WILL BE TEMPORARILY SUSTAINED THROUGHOUT ALL PHASES OF CONSTRUCTION AND SUCH SEGMENTS OF AFFECTED FENCES AND GATES WILL BE REBUILT AT A MINIMUM TO ITS PRE-CONSTRUCTION CONDITION.

11. CONTRACTOR TO NOTIFY AND OBTAIN PERMISSION FROM THE DOT PRIOR TO CONSTRUCTION IN THE RESPECTIVE ROW OR EASEMENT AREA, IF APPLICABLE.

12. CONTRACTOR SHALL FOLLOW DOT RECOMMENDATIONS AND DETAILS FOR ALL WORK WITHIN THE DOT ROW, IF APPLICABLE.

SPILL PREVENTION CONTAINMENT AND COUNTERMEASURES

1. PETROLEUM PRODUCTS, HAZARDOUS OR CONTROLLED SUBSTANCES (WHICH MAY BE TEMPORARY OR PERMANENTLY LOCATED ON THE SITE SHOULD BE HANDLED AND STORED IN CONFORMANCE WITH THE US EPA OSDT OR FEDERAL REGULATIONS 40 CFR 112.

2. BULK OR STORAGE MUST BE LOCATED IN A CONTAINMENT AREA OF GREATER THAN 1,320 GALLONS AND HAVE THE CAPACITY TO HOLD THE AMOUNT OF OIL PLUS RAINFALL FROM A 50-YEAR, 24-HOUR STORM EVENT.

3. SPILL RESPONSE EQUIPMENT SUCH AS ABSORBENT MATERIALS, BERMS, AND WASTE DRUMS OR DESIGNATED CONTAINMENT SHALL BE AVAILABLE IN THE EVENT THERE IS A LEAK FROM THE WTG NACELLES, WTG TRANSFORMER, FUEL DRUMS, OR OIL DRUMS.

4. STREAMS, WETLANDS, AND STOCK PONDS MAY BE SCATTERED THROUGHOUT THE PROJECT SITE AND ARE TO BE PROTECTED FROM UNINTENDED POLLUTANT RELEASES.

5. ANY SPILLS ON LAND GREATER THAN 25 GALLONS MUST BE REPORTED TO THE ENVIRONMENTAL AUTHORITY HAVING JURISDICTION (AHJ). SPILLS IN BODIES OF WATER THAT CREATE A SHEEN SHOULD ALSO BE REPORTED. ALL SPILLS SHALL BE REPORTED TO THE CONTRACTOR IMMEDIATELY.

6. IMMEDIATE ACTION MUST BE TAKEN TO CONTROL, CONTAIN AND RECOVER THE DISCHARGED PRODUCT.

7. NO COUNTERMEASURES THAT RISK THE HEALTH OR SAFETY OF PERSONNEL SHOULD BE UNDERTAKEN.

8. THE CONTRACTOR WILL NOT LEAVE FUEL-FIRED GENERATORS RUNNING WHEN THEY ARE NOT IN ACTIVE USE.

9. A PRINTHEAD LOADER, SKID-STEER, GRADER, OR BACKHOE SHOULD BE READILY AVAILABLE TO RESPOND IN CASE OF A SPILL.

10. THE CONTRACTOR SHALL PROVIDE HANDWASHING AND SANITARY FACILITIES. THESE FACILITIES SHALL BE SERVICED REGULARLY AND PROPERLY IN ACCORDANCE WITH LOCAL, STATE AND/OR FEDERAL REQUIREMENTS.

11. THE CONTRACTOR IS RESPONSIBLE FOR THE PLACEMENT, DESIGN, APPROVAL, AND OPERATION OF CONCRETE WASHOUTS. THE CONCRETE WASHOUTS SHALL BE INSTALLED A MINIMUM OF 50 FEET AWAY FROM STORM DRAINAGE, SURFACE WATER, OR OTHER SENSITIVE AREAS. CONCRETE WASTE MATERIAL SHALL NOT BE ALLOWED TO OVERFLOW OR OTHERWISE DISCHARGE FROM THE CONCRETE WASHOUT.

12. CONSTRUCTION WASTES SHALL NOT BE BURIED ON THE PROJECT SITE AND/OR SURROUNDING LAND.

13. ALL SOLID WASTE (INCLUDING BUT NOT LIMITED TO: PLATES, CARDBOARD, PLASTIC WRAPPING, PIPES, AND WIRE WASTE AND CONCRETE WASHOUT SHALL BE PROPERLY CONTAINED AT APPROPRIATE COLLECTION POINTS AND BE PROPERLY DISPOSED OF IN A REGULAR BASIS. CARE SHOULD BE TAKEN TO AVOID THE SPREAD OF MATERIAL THAT CAN BE WIND-BLOWN FROM THE SITE AREA OR CONTAINERS.

ADDING TO BE TAKEN INCLUDE:

a. ELIMINATE POTENTIAL SPARK SOURCES.

b. BE SAFE TO DO SO, IDENTIFY AND SHUT DOWN SOURCES OF DISCHARGE AND STOP THE FLOW.

c. CONTAIN DISCHARGE WITH SORBENTS, BERMS, TRENCHES, SANDBAGS OR OTHER APPROPRIATE MATERIALS.

d. COLLECT AND PROPERLY DISPOSE OF IN ACCORDANCE WITH APPLICABLE REGULATIONS.

e. KEEP ALL RECORDS OF EVENTS AND DISPOSALS.

f. CONCRETE WASHOUT AREAS SHALL BE CONSTRUCTED ON SITE WITHIN THE AREAS SPECIFIED INDICATED IN THE PLANS. THE WASHOUT PITS SHALL BE DEEP ENOUGH TO PREVENT THE DISCHARGE OF FLUIDS.

14. RESTRICTED ACTIVITIES PERTAIN TO WATER-RELATED RESOURCES INCLUDE THE FOLLOWING RESTRICTIONS:

a. NO DEPOSITION OF BLACK MARIA IDENTIFIABLE STREAM CHANNELS OR WOOD CHIPS WITHIN 25 FEET OF WETLANDS.

b. NO UNNECESSARY REMOVAL OF WOOD VEGETATION OR DEGRADATION OF STREAM BANKS.

c. NO EQUIPMENT WASHING OR REFUELING EXCEPT AS SPECIFIED IN THE FINAL CONSTRUCTION DRAWINGS.

d. AND NO STORAGE MIXING OR HANDLING OF ANY PETROLEUM OR CHEMICAL MATERIALS IN OPEN CONTAINERS.

EXCAVATION SAFETY

1. SCOPE OF WORK: THE CONTRACTOR SHALL FURNISH A TRENCH EXCAVATION AND SHORING SAFETY PLAN, INCLUDING DETAILED PLANS FOR A TRENCH SAFETY SYSTEM AND, REQUIREMENTS FOR A SAFETY PROGRAM FOR THE TRENCH SYSTEM, AND ALL LABOR AND MATERIALS FOR INSTALLATION, INSPECTION, AND MAINTENANCE OF TRENCH SAFETY SYSTEM.

2. APPLICATION: FOR ANY TRENCH EXCAVATION AT A DEPTH OF FIVE (5) FEET OR GREATER OR WHERE SHOWN ON PLANS, THE CONTRACTOR SHALL PROVIDE A TRENCH SAFETY SYSTEM. A TRENCH SAFETY SYSTEM IS NOT REQUIRED WHEN (4) SUBCONTRACTORS GEOTECHNICAL ENGINEER DETERMINES THAT THE TRENCH EXCAVATION IS TO BE MADE IN STABLE ROCK; OR (B) EXCAVATIONS ARE LESS THAN FIVE (5) FEET IN DEPTH AND EXAMINATION OF THE GROUND BY A COMPETENT PERSON ON BEHALF OF THE SUBCONTRACTOR PROVIDES NO INDICATION THAT A CAVE-IN SHOULD BE EXPECTED. TRENCH SAFETY SYSTEM SHALL BE IN ACCORDANCE WITH DETAILS SHOWN ON SUBCONTRACTOR'S TRENCH EXCAVATION AND SHORING SAFETY PLAN.

3. QUALITY ASSURANCE: TRENCH SAFETY SYSTEM TO MEET APPROPRIATE REQUIREMENTS ESTABLISHED IN OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) SAFETY & HEALTH REGULATIONS, 29 CFR 1926, SUBPART P — EXCAVATIONS, (REVISIONS) AND SHORING, SHOULD THE APPLICABLE OSHA STANDARDS BE MODIFIED OR AMENDED, THE MORE STRINGENT STANDARDS SHALL APPLY.

4. SUBMITTALS: THE CONTRACTOR SHALL SUBMIT A PLAN, INCORPORATING DETAILED PLANS AND SPECIFICATIONS FOR TRENCH SAFETY SYSTEM CONFORMING TO OSHA STANDARDS THAT ACCOUNTS FOR PROJECT SITE CONDITIONS. SUBCONTRACTOR'S TRENCH CONSTRUCTION MEANS, METHODS, TECHNIQUES OR PROCEDURES; THE RELATIONSHIP OF SPOIL TO EDGE OF TRENCH; AND SUBCONTRACTOR'S EQUIPMENT TO BE USED IN CONSTRUCTION OF PROJECT FACILITIES REQUIRING TRENCH SYSTEM(S). SUBCONTRACTOR SHALL PROVIDE A STATEMENT SIGNED AND SEALED BY A REGISTERED PROFESSIONAL ENGINEER LICENSED IN THE STATE OF TEXAS STATING THAT THE TRENCH EXCAVATION AND SHORING SAFETY PLAN AND THE DETAILED PLANS AND SPECIFICATIONS FOR THE TRENCH SAFETY SYSTEM ARE DESIGNED IN A GOOD AND WORKMANLIKE MANNER AND IS IN CONFORMANCE WITH APPROPRIATE OSHA STANDARDS.

5. GENERAL: THE TRENCH SAFETY SYSTEM SHALL BE CONSTRUCTED, INSTALLED, AND MAINTAINED IN ACCORDANCE WITH THE TRENCH EXCAVATION AND SHORING SAFETY PLAN PREPARED BY THE SUBCONTRACTOR'S REGISTERED PROFESSIONAL ENGINEER.

6. INSTALLATION:

a. TIMBER SHEETING: TIMBER SHEETING AND SIZE OF UPRIGHTS, STRINGERS (WALES), AND CROSS BRACING TO BE INSTALLED IN ACCORDANCE WITH SUBCONTRACTOR'S PLAN. PLACE CROSS BRACES & TRUE HORIZONTAL POSITION SPACED VERTICALLY AND SECURED TO PREVENT SLIDING, FALLING, OR KICKOUTS. CROSS BRACES TO BE PLACED AT EACH END OF STRINGERS (WALES), IN ADDITION TO OTHER LOCATIONS REQUIRED. CROSS BRACES AND STRINGERS (WALES) TO BE PLACED AT SPACES OF (SPACING) IN ADDITION TO OTHER LOCATIONS REQUIRED.

b. STEEL SHEET PILING: STEEL SHEET PILING OF EQUAL OR GREATER STRENGTH MAY BE USED IN LIEU OF TIMBER TRENCH SHORING SHOWN IN THE OSHA TABLES. DRIVE STEEL SHEET PILING TO A LEAST MINIMUM DEPTH BELOW TRENCH BOTTOM AS RECOMMENDED BY THE SUBCONTRACTOR'S REGISTERED PROFESSIONAL ENGINEER PROVIDING DESIGN. PLACE CROSS BRACES IN TRUE HORIZONTAL POSITION, SPACED VERTICALLY AND SECURED TO PREVENT SLIDING, FALLING, OR KICKOUTS. CROSS BRACES TO BE PLACED AT EACH END OF STRINGERS (WALES), IN ADDITION TO OTHER LOCATIONS REQUIRED.

c. TRENCH BOXES: PORTABLE TRENCH BOX MAY BE USED IN LIEU OF TIMBER TRENCH SHORING SHOWN IN THE OSHA TABLES AND SHALL BE DESIGNED TO PROVIDE EQUAL OR GREATER PROTECTION THAN TIMBER TRENCH SHORING SHOWN IN THE OSHA TABLES. IN CASES WHERE THE TOP OF THE PORTABLE TRENCH BOX WILL BE BELOW THE TOP OF TRENCH, THE TRENCH MUST BE SLOPED TO THE MAXIMUM ALLOWABLE SLOPE FOR THE SOIL CONDITIONS EXISTING ON THE PROJECT IN AREAS WHERE A SLOPED TRENCH WILL AFFECT THE INTEGRITY OF EXISTING STRUCTURES, SUBCONTRACTOR IS TO PROTECT STRUCTURES PRIOR TO SLOPING TRENCH.

d. TRENCH JACKS: WHEN TRENCH JACKS ARE USED FOR CROSS BRACING AND/OR STRINGERS (WALES) THE TRENCH JACKS SHALL PROVIDE PROTECTION GREATER THAN OR EQUAL TO THE TIMBER CROSS BRACING SHOWN IN THE OSHA TABLES. TRENCH JACKS TO BE PLACED AT EACH END OF STRINGERS (WALES) IN ADDITION TO OTHER LOCATIONS REQUIRED.

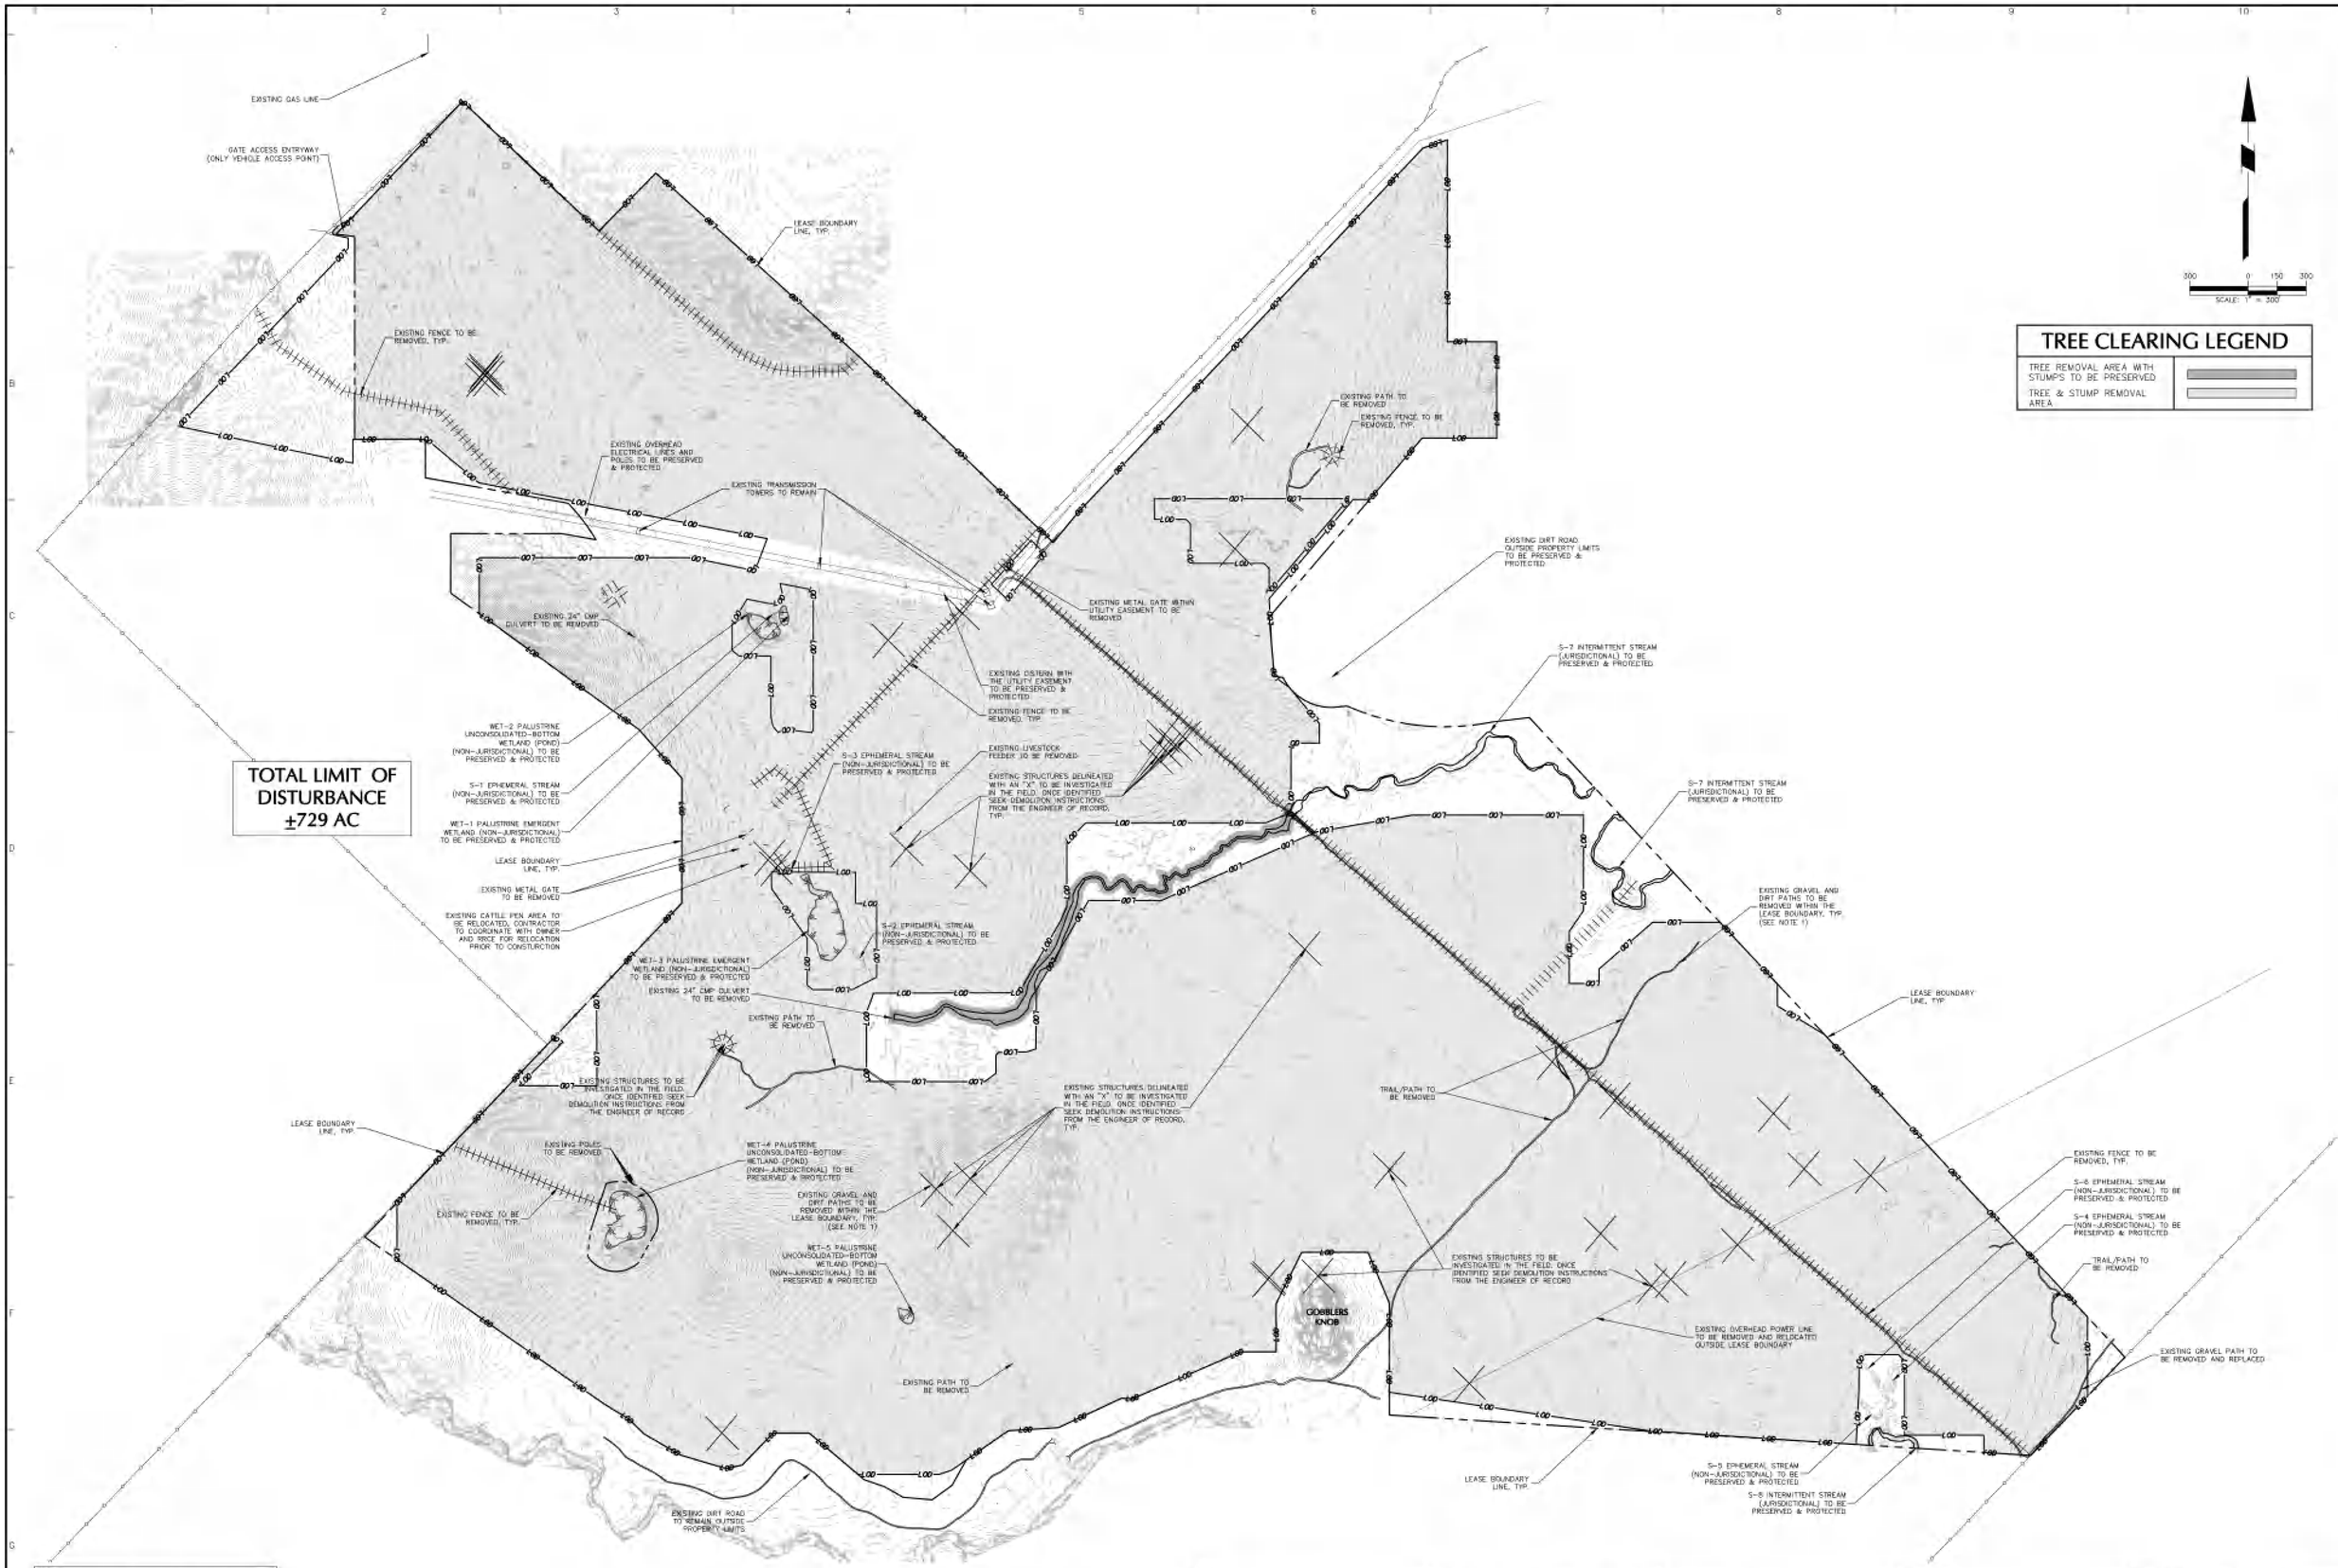
7. SUPERVISION: PROVIDE COMPETENT SUPERVISORY PERSONNEL AT EACH TRENCH WHILE WORK IS IN PROGRESS TO VERIFY SUBCONTRACTOR'S SAFETY MEANS, PROCEDURES, EQUIPMENT AND MATERIALS PERTAINING TO THE SAFETY SYSTEMS IN THIS SECTION ARE SUFFICIENT TO MEET REQUIREMENTS OF OSHA STANDARDS.

8. MAINTENANCE OF SAFETY SYSTEM: THE SAFETY SYSTEM SHALL BE MAINTAINED IN THE CONDITION AS SHOWN IN THE TRENCH EXCAVATION AND SHORING SAFETY PLAN AS DESIGNED BY THE SUBCONTRACTOR'S REGISTERED PROFESSIONAL ENGINEER. THE SUBCONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS TO VERIFY THE SAFETY SYSTEMS ARE NOT DAMAGED DURING THEIR USE. IF AT ANY TIME DURING THE USE A SAFETY SYSTEM IS DAMAGED, PERSONNEL SHALL BE IMMEDIATELY REMOVED FROM THE TRENCH EXCAVATION AREA AND THE SAFETY SYSTEM REPAIRED. THE SUBCONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS TO ENSURE NO LOADS, EXCEPT THOSE PROVIDED FOR IN THE PLAN, ARE IMPOSED UPON THE TRENCH SAFETY SYSTEM.

9. INSPECTION: THE SUBCONTRACTOR SHALL MAKE DAILY INSPECTION OF TRENCH SAFETY SYSTEM TO VERIFY THAT THE SYSTEM MEETS OSHA REQUIREMENTS. DAILY INSPECTION TO BE MADE BY COMPETENT PERSONNEL. IF EVIDENCE OF POSSIBLE CAVE-INS OR SLIDES IS APPARENT, ALL WORK ON THE TRENCH SHALL CEASE UNTIL NECESSARY PRECAUTIONS HAVE BEEN TAKEN TO SAFEGUARD PERSONNEL. ENTERING TRENCH. SUBCONTRACTOR TO MAINTAIN PERMANENT RECORD OF DAILY INSPECTIONS.

10. REMOVAL: BED AND BACK-FILL PIPE AND CONDUIT TO A POINT AT LEAST ONE (1) FOOT ABOVE TOP OF THE PIPE OR OTHER EMBEDDED ITEMS PRIOR TO REMOVAL OF ANY PORTION OF THE TRENCH SAFETY SYSTEM. BEDDING AND BACK FILL TO BE IN ACCORDANCE WITH OTHER APPLICABLE SPECIFICATION ITEMS. ALL WORK ACTIVITIES ASSOCIATED WITH THE TRENCH AND REMOVAL OF TRENCH SUPPORTS SHALL BE IN ACCORDANCE WITH THE SUBCONTRACTOR'S TRENCH EXCAVATION AND SHORING SAFETY PLAN. REMOVAL OF TRENCH SAFETY SYSTEM TO BE ACCOMPLISHED IN SUCH A MANNER TO CAUSE NO DAMAGE TO PIPE, CONDUIT OR OTHER EMBEDDED ITEMS. REMOVE NO BRACES OR TRENCH SUPPORTS UNTIL ALL PERSONNEL HAS EVACUATED THE TRENCH. BACK-FILL TRENCH TO MINIMUM FIVE (5) FEET OF NATURAL GROUND PRIOR TO THE REMOVAL OF THE ENTIRE TRENCH SAFETY SYSTEM.

11. FURTHER AMENDMENT TO CONTRACT: ALL MODIFICATIONS TO THE SUB



TREE CLEARING LEGEND

TREE REMOVAL AREA WITH STUMPS TO BE PRESERVED	
TREE & STUMP REMOVAL AREA	

NOTE:
1. PRIOR TO THE COMMENCEMENT OF ANY DEMOLITION ACTIVITIES, ALL EXISTING ROUTES WITHIN THE LEASE BOUNDARY THAT ARE SCHEDULED FOR REMOVAL MUST BE IDENTIFIED. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATING WITH BOTH THE DEVELOPER AND THE PROPERTY OWNER TO ENSURE THAT ACCESS TO THE PROPERTY OWNER'S KEY INFRASTRUCTURE IS MAINTAINED THROUGHOUT THE DEMOLITION PROCESS. KEY INFRASTRUCTURE TO BE DEFINED BY THE PROPERTY OWNER

ONCOR ACCESS ROAD	1.0	1.0	250	5,000	-4,750
TOTAL			170,950	92,700	-72,750

NOTES:
1. OVEREXCAVATION OF GEOTECHNICALLY UNSUITABLE MATERIALS IS NOT INCLUDED
2. CALCULATIONS DO NOT ACCOUNT FOR SHRINK/SWELL OR GEOTECHNICALLY UNSUITABLE/UNRESOLVABLE SOILS
3. PRELIMINARY IN SITU CUT AND FILL BALANCES ARE IDEALLY TARGETED TO PROVIDE A NET CUT OF 2-7% OF THE CUT/FILL TOTAL VOLUMES TO ACCOUNT FOR FIELD VARIANCES DURING CONSTRUCTION. TEMPORARY STOCKPILING OF EXCESS CUT IS A LOWER COST ALTERNATIVE TO SOURCING EITHER SUITABLE ONSITE OR OFFSITE FILL MATERIALS.

BORROW PIT NOTE:
1. FOUR SITES SITUATED OUTSIDE THE PROJECT LEASE BOUNDARY HAVE BEEN IDENTIFIED AS POTENTIAL BORROW PITS FOR SOURCING FILL MATERIALS, AS AN ALTERNATIVE TO IMPORTING FILL FROM EXTERNAL LOCATIONS. THE GEOTECHNICAL INVESTIGATION REPORT BY LANGAN ENGINEERING DELINEATES THESE FOUR BORROW PIT LOCATIONS ON THE SUBSURFACE INVESTIGATION PLAN - FIGURE 3, AND PROVIDES A DETAILED ANALYSIS OF THE SOIL TYPES IN SECTION 5.7.2. UPON COMPLETION OF THE CONSTRUCTION PHASE, AND AT THE LANDOWNER'S REQUEST, THESE BORROW PITS ARE INTENDED TO BE CONVERTED INTO PERMANENT DETENTION PONDS TO FACILITATE THE RANCHER'S ONGOING LIVESTOCK OPERATIONS.

LANGAN RECOMMENDS A COLLABORATIVE EVALUATION INVOLVING RRCE, THE CONTRACTOR, AND LANGAN TO ASSESS THE POTENTIAL COST BENEFITS AND DRAWBACKS OF UTILIZING THE BORROW PITS FOR FILL MATERIAL. THIS ASSESSMENT SHOULD INCLUDE CONSIDERATIONS SUCH AS THE POSSIBLE REDUCTION IN LAND CLEARING COSTS. THE FINAL DECISION IS ANTICIPATED TO SIGNIFICANTLY INFLUENCE THE GRADING DESIGN STRATEGY FOR THE PROJECT.

NOTES:
1. OVEREXCAVATION OF GEOTECHNICALLY UNSUITABLE MATERIALS IS NOT INCLUDED.
2. CALCULATIONS DO NOT ACCOUNT FOR SHRINK/SWELL OR GEOTECHNICALLY UNSUITABLE/UNRESOLVABLE SOILS.
3. PRELIMINARY IN SITU CUT AND FILL BALANCES ARE IDEALLY TARGETED TO PROVIDE A NET CUT OF 2.7% OF THE CUT/FILL TOTAL VOLUMES TO ACCOUNT FOR FIELD VARIANCES DURING CONSTRUCTION. TEMPORARY STOCKPILING OF EXCESS CUT IS A LOWER COST ALTERNATIVE TO SOURCING EITHER SUITABLE ONSITE OR OFFSITE FILL MATERIALS.

BORROW PIT NOTE:
1. FOUR SITES SITUATED OUTSIDE THE PROJECT LEASE BOUNDARY HAVE BEEN IDENTIFIED AS POTENTIAL BORROW PITS FOR SOURCING FILL MATERIALS, AS AN ALTERNATIVE TO IMPORTING FILL FROM EXTERNAL LOCATIONS. THE GEOTECHNICAL INVESTIGATION REPORT BY LANGAN ENGINEERING DELINEATES THESE FOUR BORROW PIT LOCATIONS ON THE SUBSURFACE INVESTIGATION PLAN - FIGURE 3, AND PROVIDES A DETAILED ANALYSIS OF THE SOIL TYPES IN SECTION 6.7.2. UPON COMPLETION OF THE CONSTRUCTION PHASE, AND AT THE LANDOWNER'S REQUEST, THESE BORROW PITS ARE INTENDED TO BE CONVERTED INTO PERMANENT DETENTION PONDS TO FACILITATE THE RANCHER'S ONGOING LIVESTOCK OPERATIONS.

LANGAN RECOMMENDS A COLLABORATIVE EVALUATION INVOLVING RRCE, THE CONTRACTOR, AND LANGAN TO ASSESS THE POTENTIAL COST BENEFITS AND DRAWBACKS OF UTILIZING THE BORROW PITS FOR FILL MATERIAL. THIS ASSESSMENT SHOULD INCLUDE CONSIDERATIONS SUCH AS THE POSSIBLE REDUCTION IN UXO CLEARING COSTS. THE FINAL DECISION IS ANTICIPATED TO SIGNIFICANTLY INFLUENCE THE GRADING DESIGN STRATEGY FOR THE PROJECT.

EROSION CONTROL NOTES

1. CONTRACTOR MUST COMPLETE A CONSTRUCTION SITE NOTICE, OBTAIN SIGNED COPIES OF NOI FORM FOR BOTH OWNER AND CONTRACTOR (IF APPLICABLE TO THIS SITE), AND POST THEM AT THE CONSTRUCTION SITE, IN ACCORDANCE WITH THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) GENERAL PERMIT FOR CONSTRUCTION ACTIVITIES (TXR150000). THE GENERAL CONTRACTOR, (AND ALL SUBCONTRACTORS INVOLVED WITH ANY CONSTRUCTION ACTIVITY RELATED TO EARTHWORK, EROSION CONTROL, ETC., OR WHICH UTILIZE POSSIBLE POLLUTANTS AS DEFINED IN THE TPDES GENERAL PERMIT) MUST BE FAMILIAR WITH THE CONTENTS OF THE STORM WATER POLLUTION PREVENTION PLAN (SWPPP) AS WELL AS ALL THE REQUIREMENTS SET FORTH IN THE TPDES GENERAL PERMIT AND ANY APPLICABLE LOCAL PERMIT REQUIREMENTS AND SHALL COMPLY WITH ALL SUCH REQUIREMENTS DURING ALL CONSTRUCTION ACTIVITIES.
2. THE CONTRACTOR SHALL ADHERE TO THE SEQUENCE OF OPERATIONS FOR EROSION CONTROL IMPLEMENTATION SHOWN HEREON. ANY DEVIATION FROM THIS SEQUENCE DEEMED NECESSARY BY THE CONTRACTOR MAY REQUIRE THAT THE STORMWATER POLLUTION PREVENTION PLAN BE MODIFIED IN ACCORDANCE WITH THE NPDES GENERAL PERMIT GUIDELINES AND SECTION 1.01 F OF THE STORM WATER POLLUTION PREVENTION PLAN.
3. THE CONTRACTOR SHALL MODIFY THIS PLAN TO SHOW LOCATIONS OF TEMPORARY WASHDOWN AREAS, PORTABLE TOILETS, EQUIPMENT MAINTENANCE/REPAIR AREAS, STOCKPILE AREAS, FUEL STORAGE AREAS, CONCRETE WASH-OUT PITS, AND POLLUTANT CONTROLS FOR EACH, AS SOON AS POSSIBLE. THE GENERAL PERMIT AUTHORIZES THE LAND DISPOSAL OF WASH OUT WATER FROM CONCRETE TRUCKS THAT ARE ASSOCIATED WITH OFF-SITE PRODUCTION FACILITIES, AS LONG AS THE DISCHARGE IS INTO SPECIFICALLY DESIGNATED DIKED AREAS WHICH HAVE BEEN PREPARED TO PREVENT CONTACT BETWEEN THE CONCRETE AND/OR WASH OUT WATER AND STORMWATER WHICH WILL BE DISCHARGED FROM THE SITE. TO PREVENT DIRECT DISCHARGE TO SURFACE WATERS (SEE CONCRETE WASHOUT DETAIL SHOWN IN PLANS). DIRECT DISCHARGE OF CONCRETE TRUCK WASH OUT WATER TO SURFACE WATERS IN THE STATE, INCLUDING DISCHARGE TO STORM SEWERS, IS PROHIBITED BY THE GENERAL PERMIT. IF A CONCRETE PLANT IS LOCATED AT CONSTRUCTION SITE, CONTRACTOR SHALL OBTAIN COVERAGE UNDER AND COMPLY WITH GENERAL PERMIT TXG110000 OR INDIVIDUAL PERMIT.
4. THE GENERAL CONTRACTOR SHALL PERFORM ALL REQUIRED INSPECTIONS OF STORMWATER CONTROLS AND PRACTICES AT FREQUENCIES GIVEN IN THE NPDES GENERAL PERMIT, AND SHALL COMPLETE AND SIGN APPROPRIATE INSPECTION FORMS (AS PROVIDED IN THE SWPPP).
5. OIL AND GREASE ABSORBING MATERIALS SHALL BE READILY AVAILABLE ON-SITE AND SHALL BE PROMPTLY USED TO CONTAIN AND/OR CLEAN UP ALL FUEL OR CHEMICAL SPILLS OR LEAKS.
6. DUST CONTROL SHALL BE ACCOMPLISHED BY WATERING DRY, EXPOSED AREAS ON A REGULAR BASIS. SPRAYING OF PETROLEUM BASED OR TOXIC LIQUIDS FOR THIS PURPOSE IS PROHIBITED.
7. DISTURBED AREAS OF THE SITE WHERE CONSTRUCTION ACTIVITIES HAVE CEASED FOR AT LEAST FOURTEEN DAYS SHALL BE TEMPORARILY STABILIZED WITH VEGETATION AND MULCH.
8. DISTURBED AREAS OF THE SITE WHERE CONSTRUCTION ACTIVITIES HAVE PERMANENTLY CEASED SHALL BE PERMANENTLY SEEDED WITHIN FOURTEEN DAYS PER SEEDING OR LANDSCAPING SPECIFICATIONS.
9. ALL VEHICLES SHALL BE CLEANED AT THE CONSTRUCTION EXIT POINTS ACCORDING TO NOTES SHOWN ON THE DETAIL SHEET(S). IF THE MAJORITY OF MUD OR DIRT IS NOT REMOVED FROM EXITING TRAFFIC, HOSE BIBS SHALL BE PROVIDED AT CONSTRUCTION TRAFFIC EXIT POINTS, AND VEHICLE TIRES SHALL BE WASHED BEFORE EXITING ONTO PUBLIC ROADS. SILT FROM THIS WASHING OPERATION SHALL BE INTERCEPTED AND TRAPPED BEFORE WASHWATER IS ALLOWED TO BE DISCHARGED OFF-SITE.
10. ALL MATERIALS SPILLED, DROPPED, WASHED OR TRACKED ONTO ADJACENT ROADWAYS BY VEHICLES EXITING THE SITE SHALL BE CLEANED OR REMOVED IMMEDIATELY.
11. CONTRACTOR SHALL PREVENT ANY SILTATION FROM ENTERING THE STORM SEWER SYSTEM. ALL INLETS AND INLET OPENINGS SHALL BE FULLY ENCIRCLED WITH APPROPRIATE INLET PROTECTION DEVICES.
12. THE CONTRACTOR SHALL REMOVE ALL ACCUMULATED SILT IN ANY TEMPORARY OR PERMANENT DETENTION PONDS, STORM SEWER INLETS AND PIPES, AND ALONG SILT FENCES, WITHIN 48 HOURS AFTER INSPECTION OF DEVICES REVEALS THE PRESENCE OF EXCESSIVE SILTATION (AS SPECIFIED IN SECTION 3.02 OF THE SWPPP).
13. SILT FENCES SHALL BE PLACED AROUND ANY STOCKPILES USED ON THIS SITE.
14. THE CONTRACTOR IS ADVISED TO CONSTRUCT TEMPORARY OR PERMANENT FENCING AROUND DETENTION PONDS AND SEDIMENT BASINS AT THE EARLIEST POSSIBLE TIME TO PREVENT ACCIDENTAL ACCESS BY PERSONS OR ANIMALS.
15. ANY ADDITIONAL EROSION CONTROL MEASURES REQUIRED TO ENSURE COMPLIANCE WITH THE TPDES GENERAL PERMIT OR LOCAL PERMIT REQUIREMENTS SHALL BE IMPLEMENTED BY THE CONTRACTOR, AT NO ADDITIONAL EXPENSE TO THE OWNER.
16. ALL TEMPORARY EROSION CONTROL MEASURES SHALL BE REMOVED AND PROPERLY DISPOSED OF OFF-SITE WITHIN THIRTY DAYS AFTER STABILIZATION OF ALL SURFACES.
17. THE CONTRACTOR SHALL ASSUME LIABILITY FOR DAMAGE TO ADJACENT PROPERTIES AND/OR PUBLIC RIGHT-OF-WAY RESULTING FROM FAILURE TO FULLY IMPLEMENT AND EXECUTE ALL EROSION CONTROL PROCEDURES SHOWN AND NOTED IN THESE PLANS.
18. WHENEVER DIRT, ROCK, OR OTHER MATERIALS ARE IMPORTED OR EXPORTED ON THE PRIMARY CONSTRUCTION SITE, CONTRACTOR SHALL ASSURE RESPONSIBILITY FOR COMPLIANCE WITH ALL TCEQ STORMWATER REQUIREMENTS FOR THE REMOTE SITE. CONTRACTOR SHALL FURNISH THE ENGINEER AND THE OWNER'S CONSTRUCTION MANAGER WITH DOCUMENTATION OF COVERAGE FOR THE BORROW OR FILL SITE UNDER A NPDES PERMIT FOR STORMWATER DISCHARGES AND OF A WRITTEN AGREEMENT WITH THE LANDOWNER OF THE REMOTE SITE INDICATING EROSION CONTROL MEASURES HAVE BEEN IMPLEMENTED THEREON. AT A MINIMUM, EROSION CONTROL MEASURES MUST CONSIST OF PERIMETER CONTROLS (SILT FENCES) ON ALL DOWN SLOPES AND SIDE SLOPE BOUNDARIES OF ANY DISTURBED AREA, PLUS PROVISIONS FOR RE-VEGETATION AFTER THE FILL MATERIALS ARE IN PLACE.
19. ALL SLOPES ON SITE WHICH ARE 3:1 OR STEEPER SHALL BE STABILIZED BY TRACK WALKING (TRAVERSING UP AND DOWN THE SLOPE WITH A TRACKED VEHICLE) FOLLOWED BY INSTALLATION OF EROSION CONTROL BLANKET INSTALLED IN ACCORDANCE WITH MANUFACTURER'S INSTRUCTIONS. EROSION CONTROL BLANKET SHALL BE NORTH AMERICAN GREEN S150 OR APPROVED EQUAL.
20. DISCHARGES FROM THE DRAINING OF ACCUMULATED STORMWATER OR GROUNDWATER FROM BUILDING FOUNDATIONS, VAULTS, TRENCHES AND OTHER SIMILAR POINTS OF ACCUMULATION MUST BE MANAGED BY APPROPRIATE CONTROLS TO MINIMIZE EROSION AND SEDIMENT TRANSPORT AND MUST BE INSTALLED PRIOR TO COMMENCEMENT OF ANY DEWATERING ACTIVITIES. THESE CONTROLS MUST BE INSPECTED DAILY WHEN A DISCHARGE IS OCCURRING, INCLUDING COMPLETION OF THE APPROPRIATE INSPECTION FORM PROVIDED IN THE SWPPP MANUAL PREPARED FOR THE JOB SITE. FURTHER INFORMATION REGARDING THE REQUIRED INSPECTIONS IS GIVEN IN SECTION 3.02.5 OF THE SWPPP MANUAL PREPARED FOR THE JOB SITE.

EROSION CONTROL SEQUENCES

1. INSTALL SILT FENCES AND/OR STRAW ROLL MATTRESS AROUND PERIMETER OF PROPERTY AND DISTURBED AREAS AS SHOWN.
2. CONSTRUCT TEMPORARY CONSTRUCTION ENTRANCE/EXIT.
3. COMMENCE GRUBBING AND REMOVAL OF VEGETATION IN AREA TO RECEIVE CUT OR FILL.
4. INSTALL ROCK CHECK DAMS.
5. COMPLETE SEEDING TO ACCOMPLISH STABILIZATION.
6. REMOVE TEMPORARY CONSTRUCTION EXIT, SILT FENCES AND/OR STRAW ROLL MATTRESS.

EROSION CONTROL MAINTENANCE NOTES

1. ALL MEASURES STATED ON THIS EROSION AND SEDIMENT CONTROL PLAN, AND IN THE STORM WATER POLLUTION PREVENTION PLAN, SHALL BE MAINTAINED IN FULLY FUNCTIONAL CONDITION UNTIL NO LONGER REQUIRED FOR A COMPLETED PHASE OF WORK OR FINAL STABILIZATION OF THE SITE. ALL EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE CHECKED BY A QUALIFIED PERSON ON A SCHEDULE WHICH COMPLIES WITH THE GENERAL PERMIT REQUIREMENTS AND CLEANED AND REPAIRED WITHIN 48 HOURS OF THE INSPECTION IN ACCORDANCE WITH THE FOLLOWING:
   - 1.A. SILT FENCES SHALL BE REPAIRED TO THEIR ORIGINAL CONDITIONS IF DAMAGED. SEDIMENT SHALL BE REMOVED FROM THE SILT FENCES WHEN IT REACHES ONE-HALF THE HEIGHT OF THE SILT FENCE.
   - 1.B THE TEMPORARY PARKING AND STORAGE AREA (IF PRESENT) SHALL BE KEPT IN GOOD CONDITION (SUITABLE FOR PARKING AND STORAGE). THIS MAY REQUIRE PERIODIC TOP DRESSING OF THE TEMPORARY PARKING AS CONDITIONS DEMAND.
   - 1.C MAINTENANCE PROCEDURES FOR THE EROSION AND SEDIMENTATION CONTROL SYSTEMS SPECIFIED ARE GIVEN IN SECTION 5 OF THE STORM WATER POLLUTION PREVENTION PLAN.

RIP-RAP APRON W/ GEOTEXTILE	

*** CAUTION: NOTICE TO CONTRACTOR ***

THE CONTRACTOR SHALL NOTE ON SITE PLAN THE LOCATION OF ALL MATERIAL STORAGE AREAS, EQUIPMENT STORAGE AREAS, PETROLEUM TANKS, SOLID WASTE RECEPTACLES, SANITARY FACILITIES, CONCRETE WASHOUT PIT, ANY ON-SITE OR OFF-SITE BORROW OR STOCKPILE AREA. ANY ON-SITE OR OFF-SITE SUPPORT ACTIVITIES (SUCH AS ASPHALT OR CONCRETE PLANTS). CONTRACTOR SHALL ALSO PREPARE, KEEP ON SITE, AND MAINTAIN CURRENT A LIST OF MATERIALS WITH APPROXIMATE QUANTITIES, WHICH ARE STORED ON SITE.

NOTES FOR CHANGES TO SWPPP

THE TXR150000 GENERAL PERMIT REQUIRES THAT THE PERMITTEE REVISE OR UPDATE THIS SWPPP WHENEVER THERE IS A CHANGE IN DESIGN, CONSTRUCTION, OPERATION, OR MAINTENANCE, OR WHENEVER THE RESULT OF AN INSPECTION INDICATES THAT THIS SWPPP IS INEFFECTIVE IN ELIMINATING OR SIGNIFICANTLY MINIMIZING POLLUTANTS IN STORMWATER DISCHARGES. HOWEVER, THE REGULATIONS OF THE TEXAS BOARD OF PROFESSIONAL ENGINEERS REQUIRE THAT CHANGES MADE BY THE CONTRACTOR DURING CONSTRUCTION MUST BE AUTHORIZED BY A LICENSED TEXAS ENGINEER. THESE CHANGES MAY BE AUTHORIZED BY THE ENGINEER OF RECORD THROUGH UPDATED DRAWINGS, WORK ORDER CHANGES, OR OTHER METHODS ACCEPTABLE TO THE ENGINEER OR BY ANOTHER ENGINEER PROVIDED THAT THEY NOTIFY THE ENGINEER OF RECORD.

PLACEMENT OF STRAW WATTELS CONSTRUCTION NOTE

IN ACCORDANCE WITH THE SPECIFIED CRITERIA, THE PLACEMENT OF STRAW WATTLES IS SUBJECT TO THE FOLLOWING GUIDELINES:

1. THE PLACEMENT OF THE STRAW WATTLES MAY BE ADJUSTED AT THE CONTRACTOR'S DISCRETION, PROVIDED THAT THE SPACING REQUIREMENT OUTLINED BELOW IS MET. THE INTENT OF THE DESIGN IS TO PLACE THE STRAW WATTLES WITHIN HIGH EROSION POTENTIAL AREAS AT THE HORIZONTAL SPACINGS INDICATED. THE STRAW WATTLES SHOULD BE GENERALLY PLACED PARALLEL TO THE CONTOUR LINES BUT, PLACEMENT MAY BE AT THE DISCRETION OF FIELD PERSONNEL AS REQUIRED TO AVOID CONSTRUCTION INTERFERENCES.
2. PLACEMENT OF 12" STRAW WATTLES:
   - 2.1. STRAW WATTLES ARE REQUIRED IN HIGH SHEAR STRESS AREAS AS DEFINED ON LANGAN'S "POST-DEVELOPMENT SHEAR STRESS FIGURE" TO MITIGATE EROSION.
   - 2.2. VERIFY THE PLACEMENT OF 12" STRAW WATTLES IN ACCORDANCE WITH THE FOLLOWING SPACING REQUIREMENTS BASED ON SLOPE GRADIENTS:
     - 2.2.1. FOR SLOPES RANGING FROM 0% TO 2% SPACING SHOULD BE 500 FT.
     - 2.2.2. FOR SLOPES RANGING FROM 2% TO 5% SPACING SHOULD BE 250 FT.
     - 2.2.3. FOR SLOPES RANGING FROM 5% TO 10% SPACING SHOULD BE 150 FT.
3. CONTRACTORS ARE RESPONSIBLE FOR ACCURATELY PLACING STRAW WATTLES WITHIN THESE PARAMETERS TO ENSURE EFFECTIVE EROSION CONTROL AND STABILIZATION OF HIGH-STRESS AREAS. ANY ADJUSTMENTS MADE TO THE PLACEMENT MUST ENSURE THAT THE SPECIFIED SPACING REQUIREMENT IS MAINTAINED.
4. PLACEMENTS AND SPACINGS OF THE STRAW WATTLES ARE RECOMMENDED BASED ON THE BEST AVAILABLE SITE TOPOGRAPHIC AND FLOW REGIME INFORMATION AVAILABLE AT THE TIME. THE INTENT IS TO REDUCE OVERLAND STORMWATER FLOW VELOCITIES TO MITIGATE THE POTENTIAL FOR RILL EROSION. WHERE RILL EROSION EXCEEDS 2-INCHES DEEP, SUPPLEMENTAL STRAW CRIMPING AND STRAW WATTLING SHOULD BE APPLIED TO THE AFFECTED AREAS.

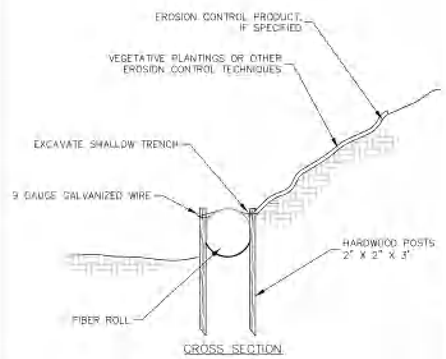
CONSTRUCTION SPECIFICATIONS:

1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES. POSTS SHALL BE STEEL, EITHER "T" OR "U" TYPE, OR HARDWOOD.
2. FILTER CLOTH TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION. FENCE SHALL BE WOVEN WIRE, 14-1/2 GAUGE, 6" MAXIMUM MESH OPENING.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER THEY SHALL BE OVER-LAPPED BY SIX INCHES AND FOLDED. FILTER CLOTH SHALL BE EITHER FILTER X, MIRAFI 100X, STABILINKA T140N, OR APPROVED EQUIVALENT.
4. PREFABRICATED UNITS SHALL BE GEOFAB, ENVIROFENCE, OR APPROVED EQUIVALENT.
5. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED WHEN "BULGES" DEVELOP IN THE SILT FENCE.

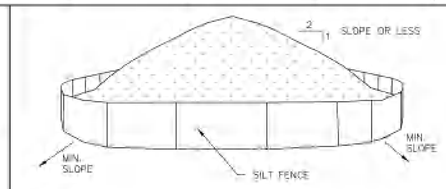
1 SILT FENCE
N.T.S



CONSTRUCTION SPECIFICATIONS:

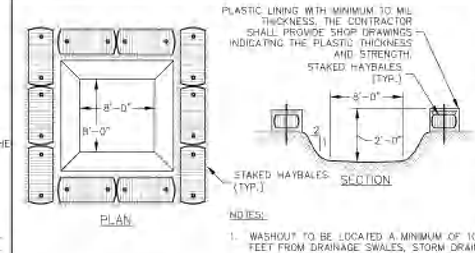
1. EXCAVATE A SHALLOW TRENCH SLIGHTLY BELOW BASEFLOW OR A 4" TRENCH ON SLOPE CONTOURS.
2. PLACE THE ROLL IN THE TRENCH AND ANCHOR WITH 2" X 2" POSTS PLACED ON BOTH SIDES OF THE ROLL AND SPACED LATERALLY ON 2' TO 4' CENTERS. TRIM THE TOP OF THE POSTS EVEN WITH THE EDGE OF THE ROLL, IN NECESSARY.
3. NOTCH THE POSTS AND TIE TOGETHER, ACROSS THE ROLL, WITH 9 GAUGE GALVANIZED WIRE OR ¼" DIAMETER BRAIDED NYLON ROPE.
4. PLACE SOIL EXCAVATED FROM THE TRENCH BEHIND THE ROLL AND HAND TAMP. PLANT WITH SUITABLE HERBACEOUS OR WOODY VEGETATION AS SPECIFIED ELSEWHERE IN THE CONTRACT DOCUMENTS. VEGETATION SHALL BE PLACED IMMEDIATELY ADJACENT TO THE ROLL TO PROMOTE ROOT GROWTH INTO THE FIBER. HERBACEOUS VEGETATION, IF SPECIFIED, SHALL BE PLANTED INTO THE FIBER ROLL.

2 FIBER ROLL/STRAW WATTLE
N.T.S



NOTES:
1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. MAXIMUM SLOPE OF STOCKPILE SHALL BE 1V:2H.
3. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH SILT FENCING, THEN STABILIZED WITH VEGETATION OR COVERED.
4. SEE SPECIFICATIONS FOR INSTALLATION OF SILT FENCE.
5. HAY BALES TO BE USED WHERE STOCKPILES ARE LOCATED ON PAVED AREAS.

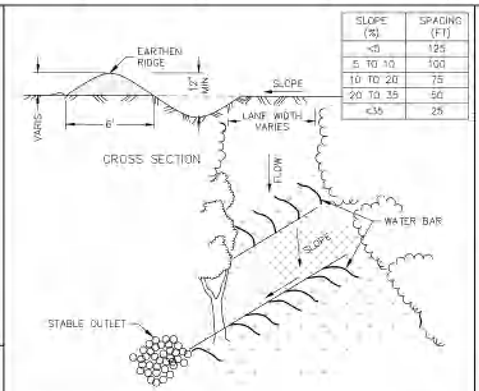
3 TEMPORARY STOCKPILE
N.T.S



NOTES:

1. WASHOUT TO BE LOCATED A MINIMUM OF 100 FEET FROM DRAINAGE SWALES, STORM DRAIN INLETS, WETLANDS, STREAMS, AND OTHER SURFACE WATERS.

4 TEMPORARY CONCRETE WASH AREA
N.T.S

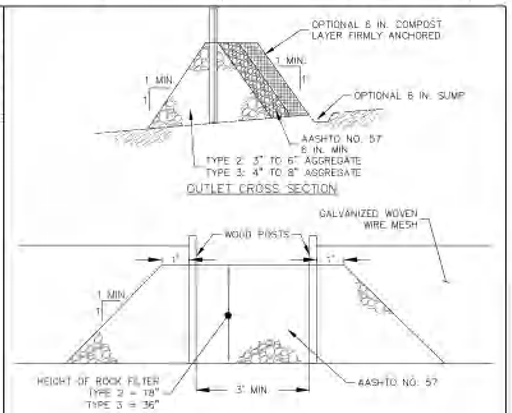


SLOPE (%)	SPACING (FT)
<5	125
5 TO 10	100
10 TO 20	75
20 TO 35	50
>35	25

CONSTRUCTION SPECIFICATIONS:

1. INSTALL THE WATER BAR AS SOON AS THE RIGHT OF WAY IS CLEARED AND GRADED.
2. DISK OR STRIP THE SOD FROM THE BASE FOR THE CONSTRUCTED RIDGE BEFORE PLACING FILL.
3. TRACK THE RIDGE TO COMPACT IT TO THE DESIGN CROSS SECTION.
4. THE OUTLET SHALL BE LOCATED ON AN UNDISTURBED AREA. FIELD SPACING WILL BE ADJUSTED TO USE THE MOST STABLE OUTLET AREAS. OUTLET PROTECTION WILL BE PROVIDED WHEN NATURAL AREAS ARE NOT ADEQUATE.
5. VEHICLE CROSSING SHALL BE STABILIZED WITH GRAVEL. EXPOSED AREAS SHALL BE IMMEDIATELY SEEDED AND MULCHED.
6. PERIODICALLY INSPECT WATER BARS FOR EROSION DAMAGE AND SEDIMENT. CHECK OUTLET AREAS AND MAKE REPAIRS AS NEEDED TO RESTORE OPERATION.

5 WATER BAR
N.T.S



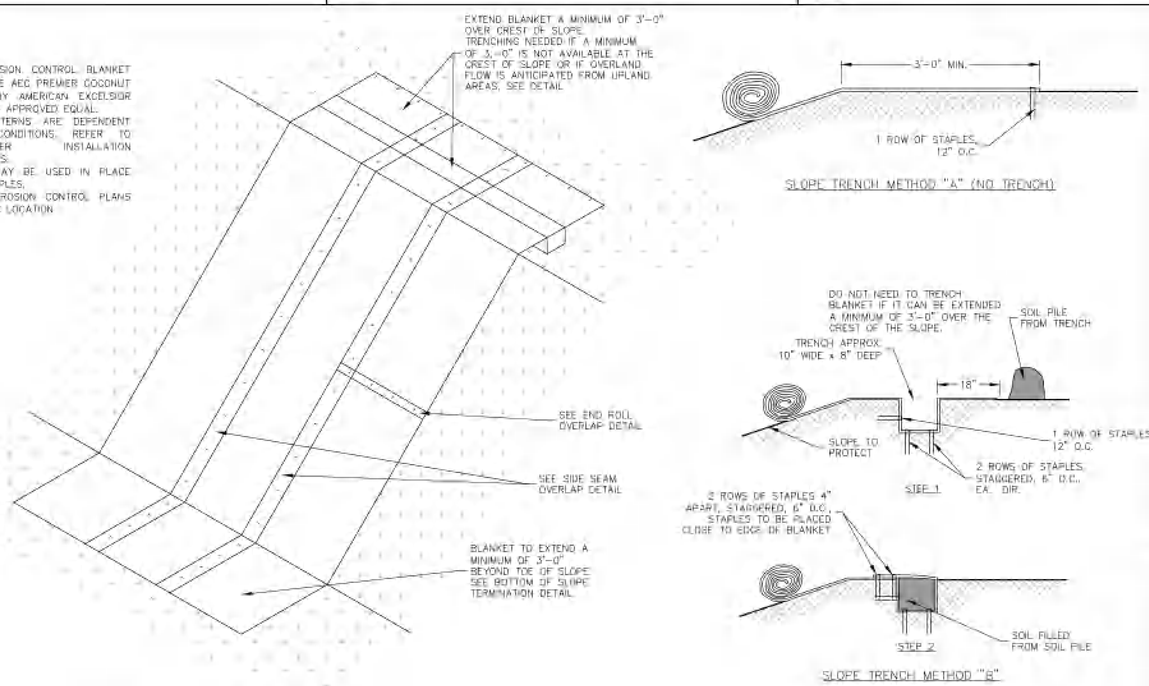
NOTES:

1. A ROCK FILTER OUTLET SHALL BE INSTALLED WHERE FAILURE OF SILT FENCE OR STRAW BALE BARRIER HAS OCCURRED DUE TO CONCENTRATED FLOW. ANCHORED COMPOST LAYER SHALL BE UPSLOPE FACE.
2. SEDIMENT SHALL BE REMOVED WHEN ACCUMULATIONS REACH ½ THE HEIGHT OF THE OUTLET.
3. TYPE 2 (18" HIGH WITH WIRE MESH) (3" TO 6" AGGREGATE): TYPE 2 MAY BE USED IN DITCHES AND AT DIKE OR SWALE OUTLETS.
4. TYPE 3 (36" HIGH WITH WIRE MESH) (4" TO 8" AGGREGATE): TYPE 3 MAY BE USED IN STREAM FLOW AND SHOULD BE SECURED TO THE STREAM BED.

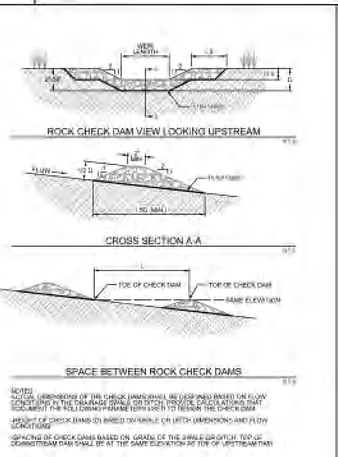
6 ROCK FILTER OUTFALL
N.T.S

NOTES:

1. ROLLED EROSION CONTROL BLANKET (RECB) TO BE AEC PREMIER COCONUT FIBERNET BY AMERICAN EXCELSIOR COMPANY OR APPROVED EQUAL.
2. STAPLE PATTERNS ARE DEPENDENT ON SITE CONDITIONS. REFER TO MANUFACTURER INSTALLATION REQUIREMENTS.
3. E-STAPLE MAY BE USED IN PLACE OF WIRE STAPLES.
4. REFER TO EROSION CONTROL PLANS FOR SPECIFIC LOCATION.



7 ROLLED EROSION CONTROL PRODUCT - SLOPE INSTALLATION
N.T.S



NOTES:
[illegible] DIMENSIONS OF THIS CHECK DAM DRAWING ARE LOOSELY BASED ON FLOW CONDITIONS IN THE DRAINAGE SWALE OR DITCH. PROVIDE CALCULATIONS THAT DOCUMENT THE ROLLED ENGINEERING TURN LINER TO DESIGN THE CHECK DAMS.
HEIGHT OF CHECK DAMS (IN AREAS OF A SWALE OR DITCH) DIMENSIONS AND FLOW CONDITIONS
SPACING OF CHECK DAMS BASED ON GRADE OF THE SWALE OR DITCH. TOP OF DOWNSTREAM DAM SHALL BE AT THE SAME ELEVATION AS TOP OF UPSTREAM DAM

GENERAL NOTES

1. If shown on the plans or directed by the Engineer, filter dams should be placed near the toe of slopes where erosion is anticipated, upstream and/or downstream at drainage structures, and in roadway ditches and channels to collect sediment.
2. Materials (aggregate, wire mesh, sandbags, etc.) shall be as indicated by the specification for "Rock Filter Dams for Erosion and Sedimentation Control".
3. The rock filter dam dimensions shall be as indicated on the SW3P plans.
4. Side slopes should be 2:1 or flatter. Dams within the safety zone shall have sideslopes of 6:1 or flatter.
5. Maintain a minimum of 1' between top of rock filter dam weir and top of embankment for filter dams at sediment traps.
6. Filter dams should be embedded a minimum of 4" into existing ground.
7. The sediment trap for ponding of sediment laden runoff shall be of the dimensions shown on the plans.
8. Rock filter dam types 2 & 3 shall be secured with 20 gauge galvanized woven wire mesh with 1" diameter hexagonal openings. The aggregate shall be placed on the mesh to the height & slopes specified. The mesh shall be folded at the upstream side over the aggregate and tightly secured to itself on the downstream side using wire ties or hog rings. For in stream use, the mesh should be secured or staked to the stream bed prior to aggregate placement.
9. Sack Gabions should be staked down with ¾" dia. rebar stakes, and have a double-twisted hexagonal weave with a nominal mesh opening of 2 ½" x 3 ¼"
10. Flow outlet should be onto a stabilized area (vegetation, rock, etc.).
11. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

ROCK FILTER DAM USAGE GUIDELINES

Rock Filter Dams should be constructed downstream from disturbed areas to intercept sediment from overland runoff and/or concentrated flow. The dams should be sized to filter a maximum flow through rate of 60 GPM/FT^2 of cross sectional area. A 2 year storm frequency may be used to calculate the flow rate.

Type 1 (18" high with no wire mesh) (3" to 6" aggregate): Type 1 may be used at the toe of slopes, around inlets, in small ditches, and at dike or swale outlets. This type of dam is recommended to control erosion from a drainage area of 5 acres or less. Type 1 may not be used in concentrated high velocity flows (approximently 8 Ft/Sec or more) in which aggregate wash out may occur. Sandbags may be used at the embedded foundation (4" deep min.) for better filtering efficiency of low flows if called for on the plans or directed by the Engineer.

Type 2 (18" high with wire mesh) (3" to 6" aggregate): Type 2 may be used in ditches and at dike or swale outlets.

Type 3 (36" high with wire mesh) (4" to 8" aggregate): Type 3 may be used in stream flow and should be secured to the stream bed.

Type 4 (Sack gabions) (3" to 6" aggregate): Type 4 May be used in ditches and smaller channels to form an erosion control dam.

Type 5: Provide rock filter dams as shown on plans.

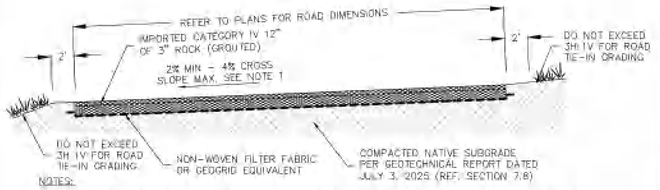
1 TYPICAL SEEDING DETAIL FOR SOLAR ARRAY AREAS
N.T.S.



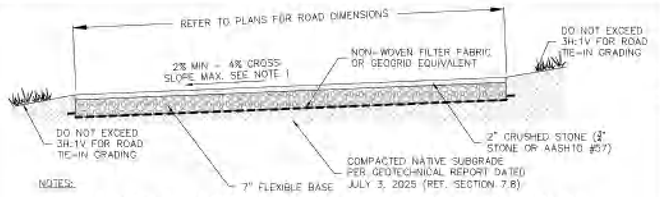
NOTES:

1 MAINTAIN EXISTING STORMWATER OVERLAND FLOW PATTERNS TO MATCH PV AREA GRADES FOR ACCESS ROADS EXCEPT AS INDICATED ON THE PLANS. GRAVEL SURFACE SHALL HAVE A MINIMUM CROSS SLOPE OF 2% AND A MAXIMUM OF 4% AS INDICATED.

2 INTERNAL ROAD SECTION FOR LOW WATER CROSSINGS
N.T.S.

NOTE:

REFER TO GEOTECHNICAL REPORT FOR MORE DETAILS/CONSTRUCTION SPEC.



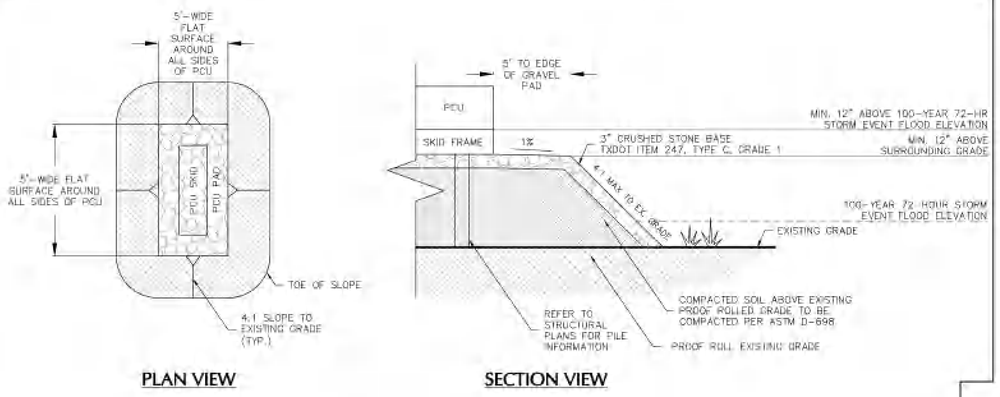
NOTES:

1 MAINTAIN EXISTING STORMWATER OVERLAND FLOW PATTERNS TO MATCH PV AREA GRADES FOR ACCESS ROADS EXCEPT AS INDICATED ON THE PLANS. ROAD SHALL HAVE A MINIMUM CROSS SLOPE OF 2% AND A MAXIMUM OF 4% AS INDICATED.

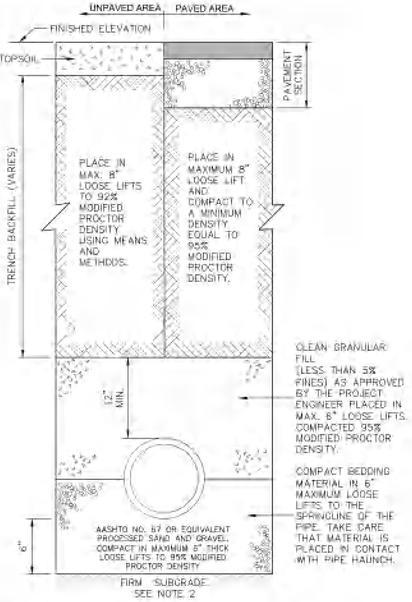
NOTE:

REFER TO GEOTECHNICAL REPORT FOR MORE DETAILS/CONSTRUCTION SPEC.

3 INTERNAL ROAD SECTION
N.T.S.



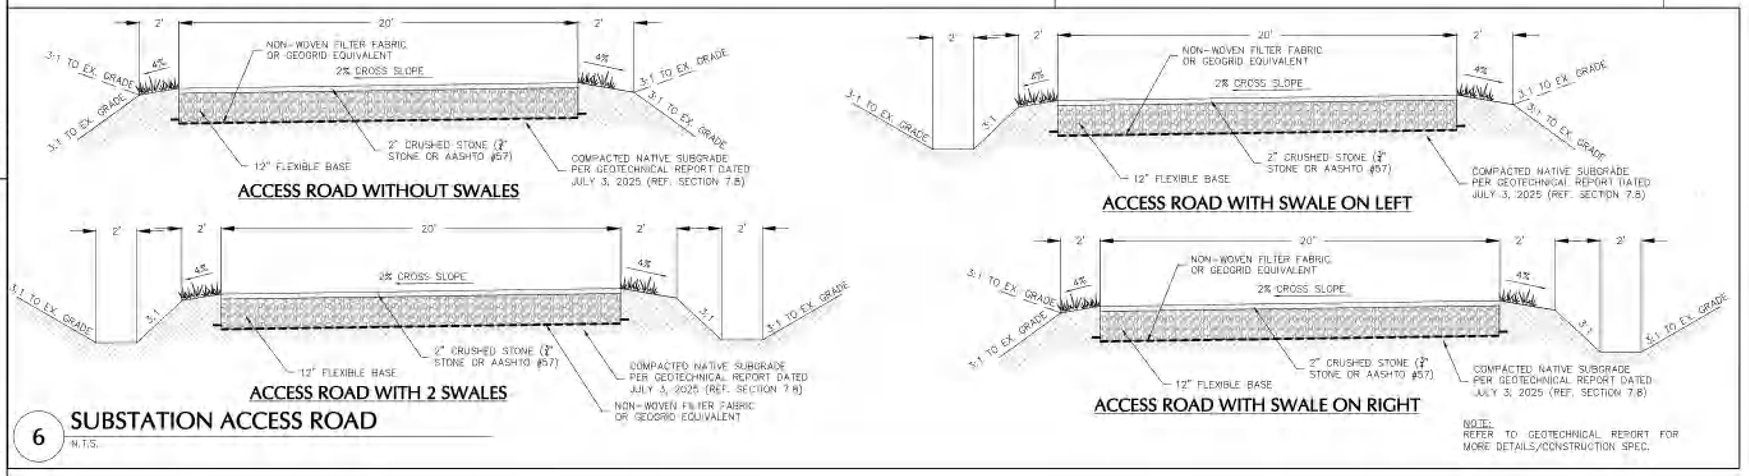
4 TYPICAL PCU PAD FOR PILE FOUNDATIONS
N.T.S.



5 STORM TRENCH DETAIL
N.T.S.

NOTES:

1. ALL TRENCH EXCAVATIONS ARE TO BE DONE IN COMPLIANCE WITH OSHA REGULATIONS.
2. IF SOFT SOIL IS ENCOUNTERED AT BEDDING SUBGRADE, THE SOFT SOIL IS TO BE REMOVED (TO A MAXIMUM DEPTH OF 2 FT) AND REPLACED WITH ¾" CLEAN CRUSHED STONE.
3. TRENCH BACKFILL SHALL BE PREDOMINANTLY GRANULAR FILL MATERIAL AS APPROVED BY THE PROJECT ENGINEER. MATERIAL EXCAVATED FROM THE TRENCH MAY BE USED FOR BACKFILL PROVIDED IT IS PREDOMINATELY SAND AND IS AT WATER CONTENT THAT THE MATERIAL CAN BE READILY COMPACTED TO THE DENSITY REQUIRED.
4. WITHIN PUBLIC RIGHT OF WAY BENEATH PAVEMENT, THE BACKFILL MATERIAL SHALL BE CLEAN CRUSHED STONE EQUIVALENT TO AASHTO NO. 67 OR ¾" STONE, UNLESS AUTHORITY HAVING JURISDICTION REQUIRES OTHERWISE.
5. IN AREAS WHERE THERE IS NOT SUFFICIENT WIDTH FOR A DOUBLE DRUM WALK BEHIND VIBRATORY COMPACTOR THE LIFT THICKNESS SHALL BE DECREASED AS NECESSARY TO ACHIEVE COMPACTION WITH APPROPRIATE EQUIPMENT.
6. MAXIMUM PARTICLE SIZE FOR TRENCH BACKFILL SHALL BE 4 INCHES UNLESS APPROVED OTHERWISE BY PROJECT ENGINEER.
7. BACKFILL CONTAIN NO DELETERIOUS OR CONTAMINATED MATERIAL.
8. PROVIDE MINIMUM OF TWO FEET OF SEPARATION BETWEEN CULVERTS IF MORE THAN ONE CULVERT PROPOSED.



NOTE:

REFER TO GEOTECHNICAL REPORT FOR MORE DETAILS/CONSTRUCTION SPEC.

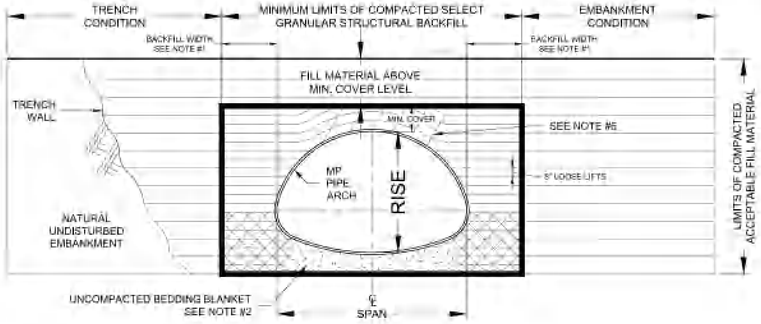
11 MULTI-PLATE PIPE ARCH

N.T.S. (REF: CONTECH)



SELECT GRANULAR STRUCTURAL BACKFILL LIMITS

CRITICAL HAUNCH AREA BACKFILL ZONE, PRESSURE ON SOIL GREATEST HERE.

INITIAL LIFTS OVER THE CROWN OF STRUCTURE AS INDICATED BY SHADED AREA TO BE COMPACTED TO REQUIRED DENSITY WITH HAND OPERATED EQUIPMENT OR WITH LIGHTWEIGHT (D-4 OR LIGHTER) EQUIPMENT

NOTES:

1. TRENCH WIDTH AND/OR SELECT BACKFILL WIDTH SHALL BE DETERMINED BY THE ENGINEER DEPENDING ON SITE SPECIFIC CONDITIONS. TYPICAL BACKFILL WIDTH IS 4 FEET FOR STRUCTURE SPANS 14 FEET AND LESS, AND 6 FEET FOR STRUCTURE SPANS GREATER THAN 14 FEET.
2. SHAPED BEDDING IS REQUIRED FOR A MINIMUM WIDTH OF SPAN/2. THE MINIMUM BEDDING THICKNESS SHALL BE 6 INCHES
3. ALL SELECT GRANULAR BACKFILL TO BE PLACED IN A BALANCED FASHION IN THIN LIFTS (9" LOOSE TYPICALLY) AND COMPACTED TO 90 PERCENT DENSITY PER AASHTO T-180.
4. COMPLETE AND REGULAR MONITORING OF THE PIPE ARCH STRUCTURE IS NECESSARY DURING THE BACKFILL PROCESS TO AT LEAST THE MINIMUM COVER LEVEL.
5. PREVENT DISTORTION OF SHAPE AS NECESSARY BY VARYING COMPACTION METHODS AND EQUIPMENT.
6. PLACE SELECT GRANULAR BACKFILL IN RADIAL LIFTS AT APPROXIMATELY 85% OF THE RISE OF THE PIPE ARCH STRUCTURE.

1.0 STANDARDS AND DEFINITIONS

1.1 STANDARDS - All standards refer to the current ASTM/AASHTO edition unless otherwise noted.

1.1.1 ASTM A761 "Corrugated Steel Structural Plate, Zinc Coated for Field-Bolted Pipe, Pipe-Arches and Arches" (AASHTO Designation M-167).

1.1.2 AASHTO Standard Specification for Highway Bridges - Section 12: Division I - Design, AASHTO LRFD Bridge Design Specifications Section 12

1.1.3 AASHTO Standard Specification for Highway Bridges - Section 26: Division II - Construction, AASHTO LRFD Bridge Construction Specifications - Section 26, ASTM A807, Standard Practice for Installing Corrugated Steel Structural Plate Pipe.

1.2 DEFINITIONS

1.2.1 Owner - In these specifications the word "Owner" shall mean ##########.

1.2.2 Engineer - In these specifications the word "Engineer" shall mean the Engineer of Record or Owner's designated engineering representative.

1.2.3 Manufacturer - In these specifications the word "Manufacturer" shall mean CONTECH ENGINEERED SOLUTIONS (800-338-1122 ##########.

1.2.4 Contractor - In these specifications the word "Contractor" shall mean the firm or corporation undertaking the execution of any installation work under the terms of these specifications.

1.2.5 Approved - In these specifications the word "approved" shall refer to the approval of the Engineer or his designated representative.

1.2.6 As Directed - In these specifications the words "as directed" shall refer to the directions to the Contractor from the Owner or his designated representative.

2.0 GENERAL CONDITIONS

2.1 Any installation guidance provided herein shall be endorsed by the Engineer, discrepancies herein are governed by the Engineers plans and specifications.

2.2 The Contractor shall furnish all labor, material and equipment and perform all work and services except those set out and furnished by the Owner, necessary to complete in a satisfactory manner the site preparation, excavation, filling, compaction, grading as shown on the plans and as described therein. This work shall consist of all mobilization clearing and grading, grubbing, stripping, removal of existing material unless otherwise stated, preparation of the land to be filled, filling of the land, spreading and compaction of the fill, and all subsidiary work necessary to complete the grading of the cut and fill areas in conform with the lines, grades, slopes, and specifications. This work is to be accomplished under the observation of the Owner or his designated representative.

2.3 Prior to bidding the work, the Contractor shall examine, investigate and inspect the construction site as to the nature and location of the work, and the general and local conditions at the construction site, including without limitation: the character of surface or subsurface conditions and obstacles to be encountered on and around the construction site and shall make such additional investigation as he may deem necessary for the planning and proper execution of the work.

If conditions other than those indicated are discovered by the Contractor, the Owner shall be notified immediately. The material which the Contractor believes to be a changed condition shall not be disturbed so that the owner can investigate the condition.

2.4 The construction shall be performed under the direction of the Engineer.

2.5 All aspects of the structure design and site layout including foundations, backfill, and treatments and necessary scour consideration shall be performed by the Engineer.

Date	Description	No.
Revisions		

ADDITIONAL SELECT GRANULAR STRUCTURAL BACKFILL NOTES:

SATISFACTORY BACKFILL MATERIAL, PROPER PLACEMENT, AND COMPACTION ARE KEY FACTORS IN OBTAINING MAXIMUM STRENGTH AND STABILITY.

THE BACKFILL MATERIAL SHOULD BE FREE OF ROCKS, FROZEN LUMPS, AND FOREIGN MATERIAL THAT COULD CAUSE HARD SPOTS OR DECOMPOSE TO CREATE VOIDS. BACKFILL MATERIAL SHOULD BE WELL GRADED GRANULAR MATERIAL THAT MEETS THE REQUIREMENTS OF AASHTO M-145 FOR SOIL CLASSIFICATIONS A-1, A-2-4, A-2-5 OR A-3 MODIFIED. SEE THE *STRUCTURAL PLATE BACKFILL GROUP CLASSIFICATION TABLE ON THIS SHEET*. BACKFILL MUST BE PLACED SYMMETRICALLY ON EACH SIDE OF THE STRUCTURE IN 9" LOOSE LIFTS. EACH LIFT IS TO BE COMPACTED TO A MINIMUM OF 95% DENSITY PER AASHTO T-180.

A HIGH PERCENTAGE OF SILT OR FINE SAND IN THE NATIVE SOILS SUGGESTS THE NEED FOR A WELL GRADED GRANULAR BACKFILL MATERIAL TO PREVENT SOIL MIGRATION. IF THE PROPOSED BACKFILL IS NOT A WELL GRADED GRANULAR MATERIAL, A NON-WOVEN GEOTEXTILE FILTER FABRIC SHALL BE PLACED BETWEEN THE SELECT BACKFILL AND THE IN SITU MATERIAL.

DURING BACKFILL, ONLY LIGHTWEIGHT TRACKED VEHICLES (D-4 OR LIGHTER) SHOULD BE NEAR THE STRUCTURE AS FILL PROGRESSES ABOVE THE CROWN AND TO THE FINISHED GRADE. THE ENGINEER AND CONTRACTOR ARE CAUTIONED THAT THE MINIMUM COVER MAY NEED TO BE INCREASED TO HANDLE TEMPORARY CONSTRUCTION VEHICLE LOADS (HEAVIER THAN D-4).

STRUCTURAL PLATE BACKFILL GROUP CLASSIFICATION REFERENCE AASHTO M-145

GROUP CLASSIFICATION	A-1-a	A-1-b	A-2-4	A-2-5	A-3

Plasticity Index	6 max.	6 max.	10 max.	10 min.	Non Plastic
Usual Materials	Stone Fragment, Gravel and Sand		Silty or Clayey Gravel and Sand		Coarse Sand

*Modified from AASHTO M-145.

Fine beach sands, windblown sands, stream deposited sands, etc., exhibiting fine, rounded particles and typically classified by AASHTO M-145 as A-3 Materials should not be used.

Reference the most current version of ASTM D2487, Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System), for comparable soil groups.

3.0 ASSEMBLY AND INSTALLATION

3.1 Bolts and nuts shall conform to the requirements of ASTM A449. The pipe arch structure shall be assembled in accordance with the plate layout drawings provided by the Manufacturer and per the Manufacturer's recommendations.

Bolts shall be tightened using an applied torque of between 100 and 300 ft.-lbs.

3.2 The pipe arch structure shall be installed in accordance with the plans and specifications, the Manufacturer's recommendations, and AASHTO Standard Specification for Highway Bridges - Section 26 Division II - Construction/AASHTO LRFD Bridge Construction Specifications - Section 26.

3.3 Trench excavation shall be made in embankment material that is structurally adequate. The trench width shall be shown on the plans. Poor quality in situ embankment material must be removed and replaced with suitable backfill as directed by the Engineer.

3.4 Bedding preparation is critical to both structure performance and service life. The bed should be constructed to uniform line and grade to avoid distortions that may create undesirable stresses in the structure and/or rapid deterioration of the roadway. The bed should be free of rock formations, protruding stones, frozen lumps, roots, and other foreign matter that may cause unequal settlement.

3.5 The foundation shall be designed to support the radial pressures exerted by the smaller radius portions of the pipe. The principal foundation support shall be provided in the critical haunch area extending radially outward from the haunches.

3.6 The structure shall be assembled in accordance with the Manufacturer's instructions. All plates shall be unloaded and handled with reasonable care. Plates shall not be rolled or dragged over gravel rock and shall be prevented from striking rock or other hard objects during placement in trench or on bedding.

3.7 The structure shall be backfilled using clean well graded granular material that meets the requirements for soil classifications A-1, A-2-4, A-2-5 or A-3 modified per AASHTO M-145. See the structural plate backfill classification table on this sheet.

Backfill must be placed symmetrically on each side of the structure in 8 inch loose lifts. Each lift shall be compacted to a minimum of 90 percent density per AASHTO T-180.

3.8 If temporary construction vehicles are required to cross the structure, it is the Contractor's responsibility to contact the Engineer to determine the amount of additional minimum cover necessary to handle the specific loading condition.

Normal highway traffic is not allowed to cross the structure until the structure has been backfilled and paved. If the road is unpaved, cover allowance to accommodate rutting shall be as directed by the Engineer.

3.9 If a metal headwall and/or wingwall system is specified, the select granular structural backfill limits shall extend past the deadman anchor system. Contact the Engineer if stiff material or rock is encountered where the wingwalls and deadmen are to be installed.

SPECIFICATIONS FOR MANUFACTURE AND INSTALLATION OF CONTECH® MULTI-PLATE PIPE ARCH

I - GENERAL

1.0 STANDARDS AND DEFINITIONS

1.1 STANDARDS - All standards refer to latest edition unless otherwise noted.

1.1.1 ASTM A-761 "Corrugated Steel Structural Plate, Zinc Coated for Field-Bolted Pipe, Pipe-Arches and Arches" (AASHTO Designation M-167).

1.1.2 AASHTO Standard Specification for Highway Bridges - Section 12

1.1.3 AASHTO Standard Specification for Highway Bridges - Section 26

1.2 DEFINITIONS

1.2.1 Owner - In these specifications the word "Owner" shall mean INSERT OWNER NAME OR PURCHASER.

1.2.2 Engineer - In these specifications the word "Engineer" shall mean the Engineer of Record or Owner's designated engineering representative.

1.2.3 Manufacturer - In these specifications the word "Manufacturer" shall mean CONTECH Construction Products Inc. 800-338-1122 INSERT CONTECH LOCAL REPRESENTATIVE.

1.2.4 Contractor - In these specifications the word "Contractor" shall mean the firm or corporation undertaking the execution of any installation work under the terms of these specifications.

1.2.5 Approved - In these specifications the word "approved" shall refer to the approval of the Engineer or his designated representative.

1.2.6 As Directed - In these specifications the words "as directed" shall refer to the directions to the Contractor from the Owner or his designated representative.

2.0 GENERAL CONDITIONS

2.1 The Contractor shall furnish all labor, material and equipment and perform all work and services except those set out and furnished by the Owner, necessary to complete in a satisfactory manner the site preparation, excavation, filling, compaction, grading as shown on the plans and as described therein. This work shall consist of all mobilization clearing and grading, grubbing, stripping, removal of existing material unless otherwise stated, preparation of the land to be filled, filling of the land, spreading and compaction of the fill, and all subsidiary work necessary to complete the grading of the cut and fill areas in conform with the lines, grades, slopes, and specifications. This work is to be accomplished under the observation of the Owner or his designated representative.

2.2 Prior to bidding the work, the Contractor shall examine, investigate and inspect the construction site as to the nature and location of the work, and the general and local conditions at the construction site, including without limitation: the character of surface or subsurface conditions and obstacles to be encountered on and around the construction site and shall make such additional investigation as he may deem necessary for the planning and proper execution of the work.

If conditions other than those indicated are discovered by the Contractor, the Owner shall be notified immediately. The material which the Contractor believes to be a changed condition shall not be disturbed so that the owner can investigate the condition.

2.3 The construction shall be performed under the direction of the Engineer.

2.4 All aspects of the structure design and site layout including foundations, backfill and treatments and necessary scour consideration shall be performed by the Engineer.

Any installation guidance provided herein shall be endorsed by the Engineer or superceded by the Engineer's plans and specifications.

II - MULTI-PLATE PIPE ARCH

1.0 GENERAL

1.1 Manufacturer shall fabricate the MultiPlate Pipe Arch (XXXFt) CULVERT as shown on the plans. Fabrication shall conform to the requirements of ASTM A-761 and shall consist of plates, fasteners, and appurtenant items.

Plate thickness, end treatment and type of invert and foundation shall be as indicated on the plans. All manufacturing processes including corrugating, punching, curving and required galvanizing shall be performed within the United States of America.

1.2 The contractor shall verify all field dimensions and conditions prior to ordering materials.

2.0 DIMENSIONS

2.1 The proposed structure shall be a pipe arch CULVERT with the following dimensions:

Span: X'-Y" Rise: X'-Y"
Gage: X

2.2 All plan dimensions on the contract drawings are measured in a true horizontal plan unless otherwise noted.

3.0 ASSEMBLY AND INSTALLATION

3.1 Bolts and nuts shall conform to the requirements of ASTM A-449. The structure shall be assembled in accordance with the plate layout drawings provided by the manufacturer and per the manufacturer's recommendations.

Bolts shall be tightened using an applied torque of between 100 and 300 ft.-lbs.

3.2 The structure shall be installed in accordance with the plans and specifications, the manufacturer's recommendations, and AASHTO Standard Specification for Highway Bridges - Section 26.

3.3 Trench excavation shall be made in embankment material that is structurally adequate. The trench width shall be shown on the plans. Poor quality in situ embankment material must be removed and replaced with suitable backfill as directed by the Engineer.

3.4 Bedding preparation is critical to both structure performance and service life. The bed should be constructed to uniform line and grade to avoid distortions that may create undesirable stresses in the structure and/or rapid deterioration of the roadway. The bed should be free of rock formations, protruding stones, frozen lumps, roots, and other foreign matter that may cause unequal settlement.

3.5 Bedding shall provide a minimum of 4,000 psf bearing capacity. Foundation details for bearing capacity less than 4,000 psf shall be approved by the Engineer.

3.6 The structure shall be assembled in accordance with the Manufacturer's instructions. All plates shall be unloading and handled with reasonable care. Plates shall not be rolled or dragged over gravel rock and shall be prevented from striking rock or other hard objects during placement in trench or on bedding.

When assembled on a cast in place spread footing, the structure shall be assembled in the footing starting at the upstream end. When assembled on a full invert or an flexible footing pads, the invert or footing pad shall be placed starting at the downstream end. The structure shall be assembled on the invert or footing pad starting at the inlet end. Circumferential seams shall be installed with the plate laps shingled downstream as viewed from the inside of the structure.

The structure shall be backfilled using clean well graded granular material that meets the requirements of AASHTO M-145 for soil classifications A-1, A-2 or A-3.

Backfill must be placed symmetrically on each side of the structure in 6 to 8 inch loose lifts. Each lift shall be compacted to a minimum of 90 percent density per AASHTO T-180.

3.7 Construction loads that exceed highway load limits are not allowed to cross the structure without approval from the Engineer.

Normal highway traffic is not allowed to cross the structure until the structure has been backfilled and paved. If the road is unpaved, cover allowance to accommodate rutting shall be as directed by the Engineer.

GROUP CLASSIFICATION	A-1	A-2	A-3
Sieve Analysis Percent Passing			
No. 10 (2.000 mm)	—	—	—
No. 40 (0.425 mm)	50 max.	—	51 max.
No. 200 (0.075 mm)	25 max.	35 max.	10 max.
Characteristics of Fraction			
Passing No. 40 (0.425 mm)			
Liquid Limits	—	40 max.	—
Plasticity Index	6 max.	10 max.	Non Plastic
Usual Materials	Stone Fragment, Gravel and Sand	Gravel or Sand With Silt or clay	Sand

Adapted from AASHTO M-145

* Fine beach sands, windblown sands, stream deposited sands, etc., exhibiting fine, rounded particles and typically classified by AASHTO M-145 as A-3 material should be avoided.

[ ] = TRENCH INSTALLATION (TABLE 1-4-25)

1 MINIMUM TRENCH WIDTH MUST ALLOW ROOM FOR PROPER COMPACTION OF HAUNCH MATERIALS UNDER THE PIPE..

2 THE FOUNDATION UNDER THE PIPE AND SIDE BACKFILL SHALL BE ADEQUATE TO SUPPORT THE LOADS ACTING UPON IT.

3 BEDDING MATERIAL SHALL BE RELATIVELY LOOSE MATERIAL THAT IS ROUGHLY SHAPED TO FIT THE BOTTOM OF THE PIPE, AND A MINIMUM OF TWICE THE CORRUGATION DEPTH IN THICKNESS, WITH THE MAXIMUM PARTICLE SIZE OF ONE-HALF OF THE CORRUGATION DEPTH.

4 CORRUGATED STEEL PIPE (CSP / ULTRA FLO), 60" DIAMETER .

5 HAUNCH ZONE MATERIAL SHALL BE HAND SHOVELED OR SHOVEL SLICED INTO PLACE TO ALLOW FOR PROPER COMPACTION.

5a INITIAL BACKFILL SHALL BE WELL GRADED CRUSHED STONE, CONSISTING OF ¾" PARTICLE SIZES AND DOWN (PER AASHTO A-1 OR 1-2). UP TO HALFWAY ABOVE THE INVERT OF PIPE.

5b SAND BACKFILL PLACED ABOVE THE SPRINGLINE TO MEET AASHTO A-3 CLASSIFICATION, OR APPROVED EQUAL, COMPACTED TO 90% STANDARD PROCTOR (T 99), ALL LIFTS PLACED IN A CONTROLLED MANNER, IT IS RECOMMENDED THAT LIFTS NOT EXCEED AN 8" UNCOMPACTED LIFT HEIGHT TO PREVENT UNEVEN LOADING, AND THE LESSER OF 1/3 THE DIAMETER OR 24" AS THE MAXIMUM DIFFERENTIAL SIDE-TO-SIDE.

6 SAND BACKFILL (AASHTO A-3 OR APPROVED EQUAL) TO BE PLACED FROM 1/2 ABOVE INVERT OF THE PIPE TO 12" ABOVE PIPE.

6a TOTAL HEIGHT OF COMPACTED COVER FOR CONVENTIONAL HIGHWAY LOADS IS MEASURED FROM TOP OF PIPE TO BOTTOM OF FLEXIBLE PAVEMENT OR TOP OF RIGID PAVEMENT.

7 FINAL BACKFILL MATERIAL SELECTION AND COMPACTION REQUIREMENTS SHALL FOLLOW THE PROJECT PLANS AND SPECIFICATIONS PER THE ENGINEER OF RECORD.

NOTES:
- GEOTEXTILE SHOULD BE CONSIDERED FOR USE TO PREVENT SOIL MIGRATION INTO VARYING SOIL TYPES (PROJECT ENGINEER).
- FOR MULTIPLE BARREL INSTALLATIONS THE RECOMMENDED STANDARD SPACING BETWEEN PARALLEL PIPE RUNS SHALL BE PIPE DIA./2 BUT NO LESS THAN 12", OR 36" FOR PIPE DIAMETERS 72" AND LARGER. CONTACT YOUR CONTECH REPRESENTATIVE FOR NONSTANDARD SPACING.

SPECIAL INSPECTIONS

TABLE 1705.6 : REQUIRED SPECIAL INSPECTIONS AND TESTS OF SOILS

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION
1. VERIFY MATERIALS BELOW SHALLOW FOUNDATION ARE ADEQUATE TO ACHIEVE THE DESIGN CAPACITY.	—	X
2. VERIFY EXCAVATIONS ARE EXTENDED TO PROPER DEPTH AND HAVE REACHED PROPER MATERIAL.	—	X
3. PERFORM CLASSIFICATION AND TESTING OF COMPACTED FILL MATERIALS.	—	X
4. DURING FILL PLACMENT, VERIFY USE OF PROPER MATERIALS AND PROCEDURE IN ACCORDANCE WITH THE PROVISIONS OF THE APPROVED GEOTECHNICAL REPORT. VERIFY DENSITIES AND LIFT THICKNESSES DURING PLACMENT AND COMPACTION OF COMPACTED FILL.	X	—
5. PRIOR TO PLACMENT OF COMPACTED FILL, INSPECT SUBGRADE AND VERIFY THAT SITE HAS BEEN PREPARED PROPERLY..	—	X

TABLE 1705.7 : REQUIRED SPECIAL INSPECTIONS AND TESTS OF DRIVEN DEEP FOUNDATION ELEMENTS

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION
1. VERIFY ELEMENT MATERIALS, SIZES AND LENGTHS COMPLY WITH THE REQUIREMENTS.	X	—
2. DETERMINE CAPACITIES OF TEST ELEMENTS AND CONDUCT ADDITIONAL LOAD TESTS, AS REQUIRED.	—	X
3. INSPECT DRIVING OPERATIONS AND MAINTAIN COMPLETE AND ACCURATE RECORDS FOR EACH ELEMENT.	—	X
4. VERIFY PLACMENT LOCATIONS AND PLUMBNESS, CONFIRM TYPE AND SIZE OF HAMMER, RECORD NUMBER OF BLOWS PER FOOT OF PENETRATION, DETERMINE REQUIRED PENETRATIONS TO ACHIEVE DESIGN CAPACITY, RECORD TIP AND BUTT ELEVATIONS AND DOCUMENT ANY DAMAGE TO FOUNDATION ELEMENT.	X	—

GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE REQUIREMENTS OF THE 2015 INTERNATIONAL BUILDING CODE.
2. ALL CONSTRUCTION SHALL BE UNDER STATE SPECIAL INSPECTION REQUIREMENTS, AS REQUIRED BY 2015 INTERNATIONAL BUILDING CODE.
3. COORDINATE ALL WORK OF THESE DRAWINGS WITH WORK REQUIRED ON ELECTRICAL AND/OR MECHANICAL DRAWINGS.

DESIGN CRITERIA

1. RISK CATEGORY: (II)
2. FOUNDATION DESIGN LIFE: 50 YEARS.
3. GROUND SNOW LOAD, Pg = 5 psf
4. WIND CRITERIA:
   - BASIC WIND SPEED = 120 MPH
   - WIND IMPORTANCE FACTOR, Iw = 1.15
   - EXPOSURE CATEGORY = C
5. EARTHQUAKE DESIGN DATA:
   - SEISMIC USE GROUP = II
   - SEISMIC IMPORTANCE FACTOR, Ie = 1.00
   - MAPPED SPECTRAL ACCELERATION FOR SHORT PERIOD, Ss = 0.058 g
   - MAPPED SPECTRAL ACCELERATION FOR 1 SECOND PERIOD, S1 = 0.035 g
   - SITE CLASS = C
   - SPECTRAL RESPONSE COEFFICIENTS: SDs = 0.047 g, SD1 = 0.039 g
   - SEISMIC DESIGN CATEGORY = A

ALLOWABLE BEARING CAPACITY: 2500 PSF AS PER THE GEOTECHNICAL REPORT No: 520102301 DATED APRIL 10TH 2025 AND PREPARED BY LANGAN

MATERIAL SPECIFICATIONS:

STEEL/PILES:

1. ALL STEEL SHALL CONFORM TO THE LATEST EDITION OF THE AISC.
2. ALL STEEL SHALL BE GRADE 50.
3. FOR SOIL PREPARATION PLEASE REFER TO GEOTECHNICAL REPORT NO: 520102301 DATED APRIL 10TH 2025 AND PREPARED BY LANGAN
4. LBD & AUX RACKING CONNECTIONS ,USE ⅜"ø HIGH-STRENGTH BOLTS AT UNISTRUT MEMBER CONNECTIONS U.O.N.
5. FOR UNISTRUT MEMBER SIZES REFER TO DETAILS ON PLAN, USE UNISTRUT MANUFACTURER MATERIAL OR OWNER APPROVED EQUIVALENT.
6. ALL STEEL AND UNISTRUT HARDWARE SHALL BE COATED WITH MIN. 3MIL ZINC COATING OR GALVANIZED TO RESIST CORROSION.
7. WIDE FLANGE SECTIONS: MUST BE A992 STEEL COVERED WITH WITH 3 MIL MIN. ZINC COATING – HOT DIPPED GALVANIZED PER ASTM A123.
8. FOR THE EXPANSIVE SOIL HEAVE PROTECTION ONE OF THE FOLLOWING TWO RECOMMENDATIONS MUST BE IMPLEMENTED TO MINIMIZE THE AMOUNT OF EXPANSIVE SOIL HEAVE FORCES ON DRIVEN PILES.
   A. EACH PILE LOCATION SHOULD BE PRE-DRILLED TO THE DEPTH OF FROST PENETRATION. THE DIAMETER OF THE HOLE SHOULD BE 2 INCHES GREATER THAN THE LARGEST DIAGONAL DIMENSION OF THE PILE. THE ANNULUS SHOULD BE FILLED WITH PEA GRAVEL AND WELL COMPACTED, AFTER COMPLETION. PROCEED WITH DRIVING THE PILE.
   B. ALL PILES SHALL RECEIVE A YELLOW JACKET OR SLICKCOAT, WHICH EXTENDS TO THE EXPANSIVE SOIL DEPTH BELOW GRADE AND 6" ABOVE GRADE.
   - (FOR EXPANSIVE SOIL DEPTH REFER TO NOTE #3 ON DESIGN CRITERIA).
9. NOTE THAT POST LOCATIONS MAY BE MOVED ACCORDINGLY AS LONG AS SPACING BETWEEN TWO CONSECUTIVE POSTS IS KEPT AT A MAXIMUM OF 15'-7". POST SPACING MUST BE KEPT CONSTANT AND EQUAL FROM BOTH SIDES OF EACH PILE FOR ALL SPANS BETWEEN ANY GIVEN DEAD END POSTS. POST LOCATION TOLERANCE IS +/- 1'-0". NOTE THAT POST LOCATIONS MARKED IN PLAN ARE FOR REFERENCE ONLY AND DO NOT REPRESENT EXACT LOCATION OR NUMBER OF POSTS.
10. PILE FOUNDATIONS AND DRILLED PIER INSTALLATION. A SPECIAL INSPECTOR SHALL BE PRESENT WHEN PILE FOUNDATIONS ARE BEING INSTALLED AND DURING TESTS. THE SPECIAL INSPECTOR SHALL MAKE AND SUBMIT TO THE COMMISSIONER RECORDS OF THE INSTALLATION OF EACH PILE AND RESULTS OF LOAD TESTS.

PCS Pile Foundation Design

See following sheets for skid load calculations

Total DL =	55.00	kip
Total SL =	1.91	kip
Total Wh =	6.32	kip
Total Wv =	1.31	kip

Storm Load = 9.2 psf

Load Combination (ASD)

LC1: D + 0.6W

LC2: D+0.75(0.6W)+0.75S

LC3: 0.6D+0.6W

Notes:

* Interior Pile Trib = 22% from Total equipment Trib.
* Exterior Pile Trib = 14% from total equipment Trib.

* Design Will Be performed on the Interior Pile which represent Worst case scenario

Pile Forces (ASD)

LC1: D + 0.6W (Vertical)

R1 = (D+0.6Wv)/2 + (0.6Wh x 4.75/7.5) = 4.52 kip

R2 = (D+0.6Wv)/2 - (0.6Wh x 4.75/7.5) = 3.44 kip

(Lateral) V = 0.6Wh /10

V = 0.42 kip

LC2: D + 0.75(0.6W)+0.75L (Vertical)

R1 = (D + 0.75*0.6*Wv +0.75 SL)/2 + (0.6Wh x 4.75/7.5) = 4.54 kip

R2 = (D + 0.75*0.6*Wv +0.75 SL)/2 - (0.6Wh x 4.75/7.5) = 3.46 kip

(Lateral) V = 0.75*0.6Wh /10

V = 0.31 kip

LC3: 0.6D + 0.6W (Vertical)

R1 = (0.6*DL + 0.75*0.6*Wv +0.75 SL)/2 + (0.6Wh x 4.75/7.5) = 3.09 kip

R2 = (0.6* DL + 0.75*0.6*Wv +0.75*SL)/2 - (0.6Wh x 4.75/7.5) = 2.01 kip

(Lateral) V = 0.6Wh /10

V = 0.42 kip

Controlling Pile Load

Downward =	4.54	kip
Uplift =	0.00	kip
Lateral =	0.42	kip

Lateral check and bending of the pile are minimal because the maximum pile reveal is 2'-6" max, however see the calculation below for verification.

2 - Flood Load – Worst Case Scenario Elevation

A – Hydrodynamic Pressure:

- Base Flood elevation (BFE) *100yr 72hr peak stage (ft. NGVD29)* = 1264.73 ft
- Grade Elevation (GE) = 1261.79 ft

- $d_s = 0.65(BEF - GE) = 0.65*(1264.73ft - 1261.79ft) = 1.911$ ft
- $V_{max} = \frac{d_s}{1\,s} = \frac{1.92\ ft}{1\,s} = 1.92$ ft/s
- $V_{min} = d_s/1s = 1.911$ ft/s
- g = 32.2 ft/s
- $V_{max} = \sqrt{g d_s} = \sqrt{32.2\ ft/s^2 \times 1.92 ft} = 7.87$ ft/s

Since the $V_{max} < 10\ \frac{ft}{s}$ *we do not need to consider hydrodynamic Loads*

B – Hydrostatic Pressure

Since the PCS equipment foundation consists of piles (an open structure), the floodwater lable will equalize on all sides of the piles during inundation. As a result, hydrostatic pressures balance out and effectively cancel each other.

2 – Corrosion Analysis:

- According to the geotechnical report, the post will be susceptible to corrosion. The post that will be used is the W8x24.
- Per the Geotech report, the corrosion characteristics are as follows

8.3 Soil Corrosivity and Resistivity

Field electrical resistivity test values generally ranged from about 1,150 to 9,050 Ω-cm, except for ERT-3, which exhibited resistivity test values ranging from about 5,500 to 34,500 Ω-cm. Resistivity values generally decreased as probe spacing increased to about 30 feet. Based on guidelines presented in Corrosion Basics: An Introduction, 2nd Ed (2006), the results of most field resistivity tests generally indicate [illegible] corrosivity potential. ERT results are summarized in Attachment C.

FIELD MEASUREMENT OF SOIL RESISTIVITY USING WENNER FOUR-POINT METHOD

PROJECT NAME:	Ontario Solar and Storage		
PROJECT NUMBER:	[illegible]	INSPECTOR:	Sydney Mckenzie
DATE:	3/5/2024	TIME:	10:00 AM
TEST LOCATION:	[illegible]	TEMP:	[illegible]

DIRECTION = NE-SW

ELECTRODE SPACING 'a' (ft)	(m)	BASIC PENETRATION (0.1a) (ft)	ACTUAL PENETRATION (ft)	(m)	RESISTANCE (ohm)	RESISTIVITY (2πaR) (ohm-cm)
2	0.61	1.2	1	0.1905	[illegible]	[illegible]
5	1.52	3	3	0.9525	[illegible]	[illegible]
10	3.05	6	4	1.1430	[illegible]	[illegible]
15	4.57	9	5	1.5240	[illegible]	[illegible]
20	6.10	12	7	2.1336	[illegible]	[illegible]
30	9.14	18	8	2.4384	[illegible]	[illegible]
50	15.24	30	9	2.7432	[illegible]	[illegible]
100	30.48	60	10	3.0480	[illegible]	[illegible]

(Maximum) = 1184

= 1184

Therefore, the site is considered moderately corrosive.

For a moderately corrosive environment, we use the following corrosion rates:

Assume a 3-mil of zinc on wide flange shapes and a 50-year project life.

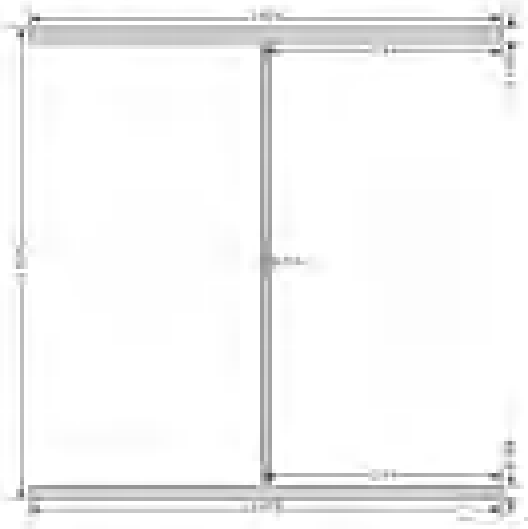
CALCULATION OF SECTION PROPERTIES



Area:

A = 2.65 in²

2nd moment of area:

I_x = 12.5 in⁴ I_y = 5.72 in⁴ I_{xy} = 12.5 in⁴ I_y = 5.73 in⁴

Radius of gyration:

r_x = 2.06 in r_y = 1.47 in r_{xy} = 2.60 in r_y = 1.47 in

Plastic section modulus (only shapes with all rectangles at 90 degs):

Z_x = 5.56 in³ Z_y = 2.94 in³

Distance to combined centroid:

X_c = 3.00 in Y_c = 6.80 in

Distance to equal axis area (only shapes with all rectangles at 90 degs):

X_c = 3.00 in Y_c = 6.80 in

Elastic section modulus:

S_x = 4.00 in³ S_y = 1.91 in³

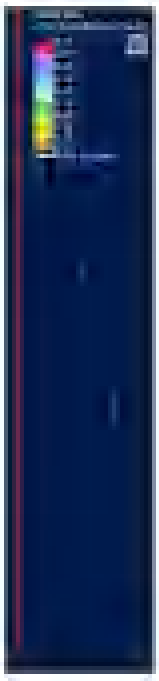
3 - Post design using RAM Element

The pile reveal is 3 ft. According to the geotechnical report, skin friction and allowable bearing capacity from the upper 4 feet of soil are disregarded. Consequently, but as per our judgment, the fixed base point for the pile will be considered to be 2 feet below the ground surface, resulting in a total pile length of 5 feet.

Ram Model

Loading

Reactions



Utilisation

UTILIZATION = 0.19 < 1.00 a W8X24 OK !

RAM Elements

Steel Code Check

Summary - Group by description

Description	Section	Member	Ctrl Eq	Ratio	Status	Reference
	W8X24 - W / CORROSION	1				

4- Axial Check:

W8x24 reduced section due to corrosion:

perimeter = $2(b_f + d') + 4\,[(b_f - t_w)/2]$ = 2(5.83ft + 5.67ft) + 4(5.83ft-0.31ft)/2) = 25.02ft*12 = **2.919 ft**

Area = $2*b_f * t_f + (d - 2\,t_f) * t_w$ = 2*5.83/9*0.160) + (5.83/9-2*0.160)*0.210 = 2.88 in²/144 = **0.0218 ft²**

The axial load P = **4,550 lbs**, according to the worst case combination load analysis: LC2 = Ds + 0.75SL + 0.45 WL

The allowable skin friction, as mentioned in the geotechnical report, is as follows:

Table 13 – Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (ft)	Allowable End-Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
Stratum 1	0 – 4	–	–	–
Stratum 2	4 – 20 4 – 12	20,000	750	525
Stratum 3	8 – 20	22,000	350	245
Stratum 4	12 – 20	24,000	1,050	735

Notes:
1) [illegible]
2) [illegible]
3) [illegible]

Pile surface area = 2.919' x 5' (based on # total embedment & ignoring the upper 4.0') = 14.595 ft²

- **Allowable Friction force:**

Stratum 1: from 0 – 4 ft = .0 lbs

Stratum 2: from 4 – 8ft (Conservatil Height) = 750 psf x 4ft x 2.919ft = **8,757 lbs**

Stratum 3: from 8 – 9ft = 350 psf x 1ft x 2.919ft = **1,021.65 lbs**

Allowable End Bearing: 20,000 psf (Pile to Bear Within stratum 2)

Net bearing Resisting Force = 22,000 psf X 0.0218ft² (Section Area) = **396 lbs**

Total resistance = 8,757 + 1,021 + 396 = **10,174 lbs = 4,550 lbs → Ratio 45 %** **OK**

Therefore, the **W6x15** pile with **5ft** embedment is performing adequately for the axial load check.

5- Expansive Soil :

Based on the geotechnical report, the presence of expansive soils indicates that soil heave should be anticipated. The relevant data are summarized below:

Skin friction in the upper 4 feet of the piles should be neglected to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative skin friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for potential movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations.

Soil Heave Depth = **4.0 ft.**

Soil Heave strength = **750 psf.**

Pile vertical area = 4ft x 2.919ft = 11.676 ft^2

Soil Heave Uplift force = 750 psf X 11.676 ft^2 = **8,757 lbs**

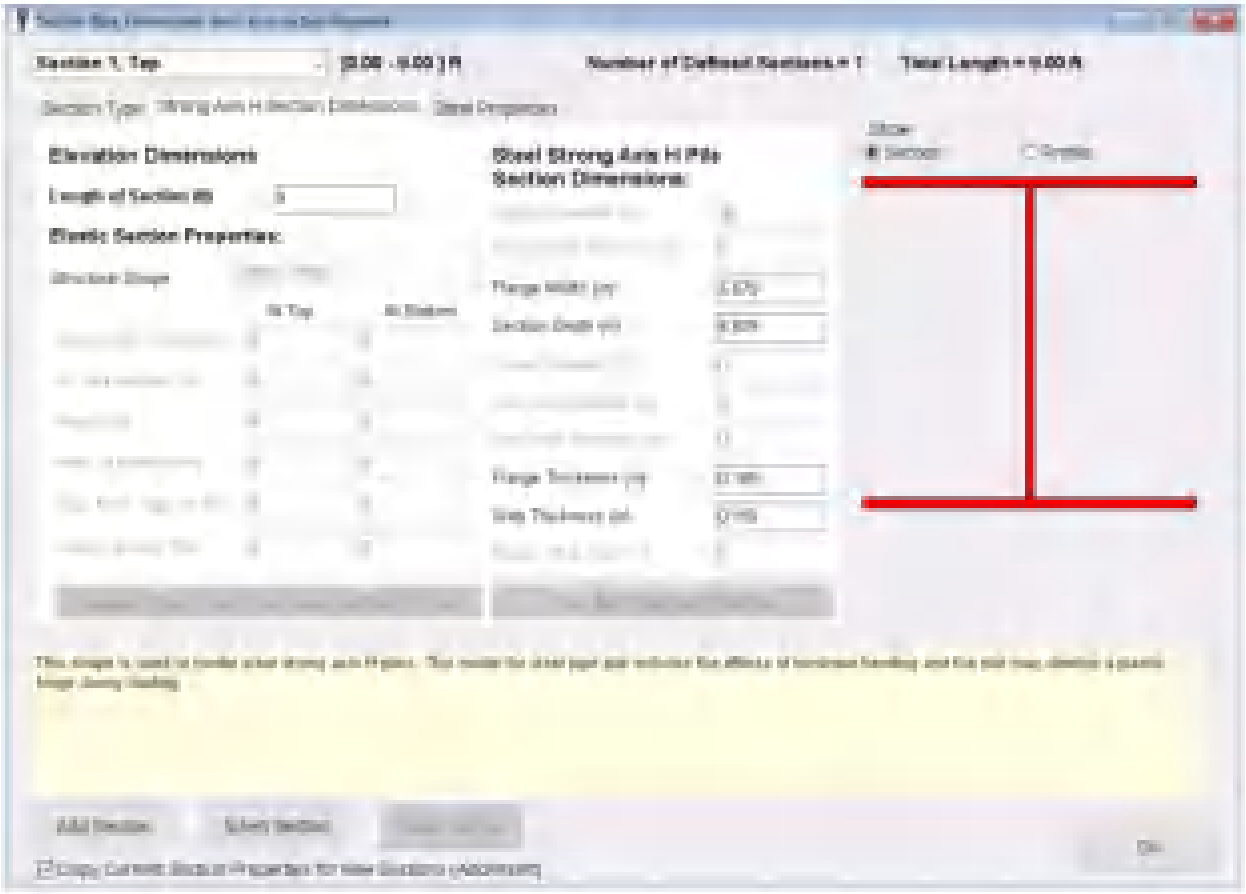
Skin Friction Resistance Force = 8,757 + 1,021 lbs = **9,778 lbs**

Skin Friction Resistance Force = 8,757 lbs < 9,778 Lbs ⇒ 89.55% OK

6- W6x15 Pile Embedment Design for Lateral Loads Using L-Pile Software:

A) - L-Pile Inputs:

- W8x24 reduced section due to corrosion
- 5ft embedment.

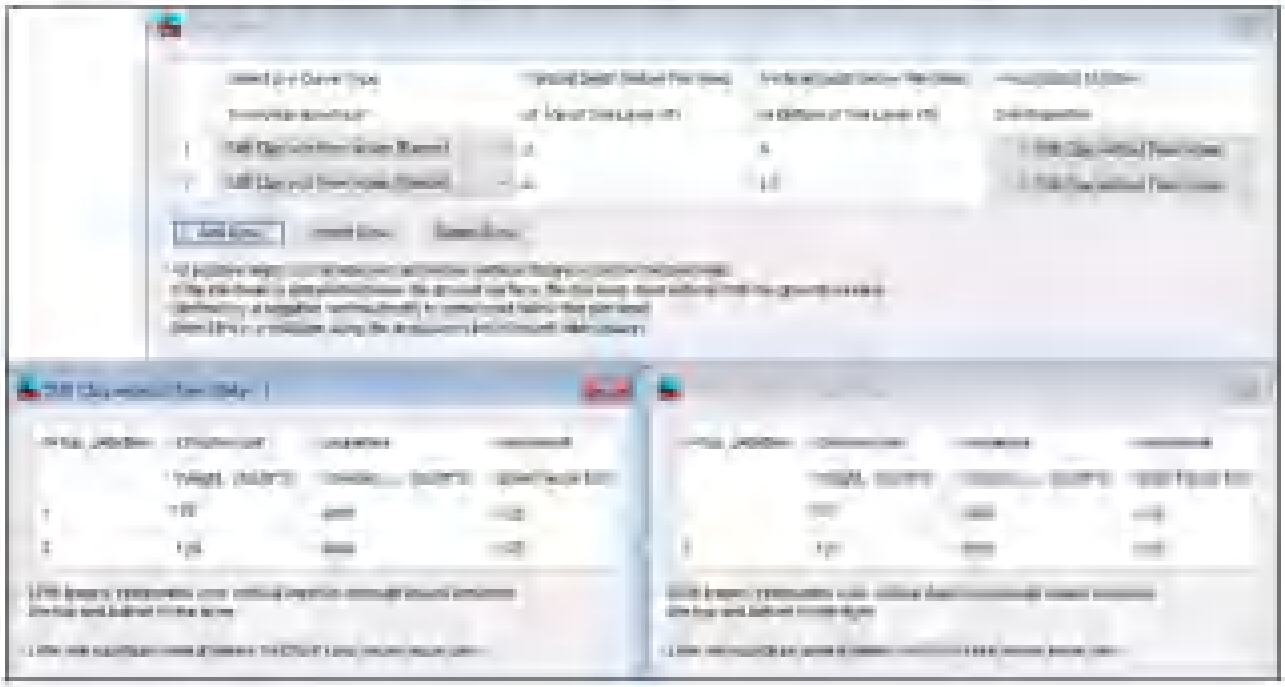


B) Soil Parameter:

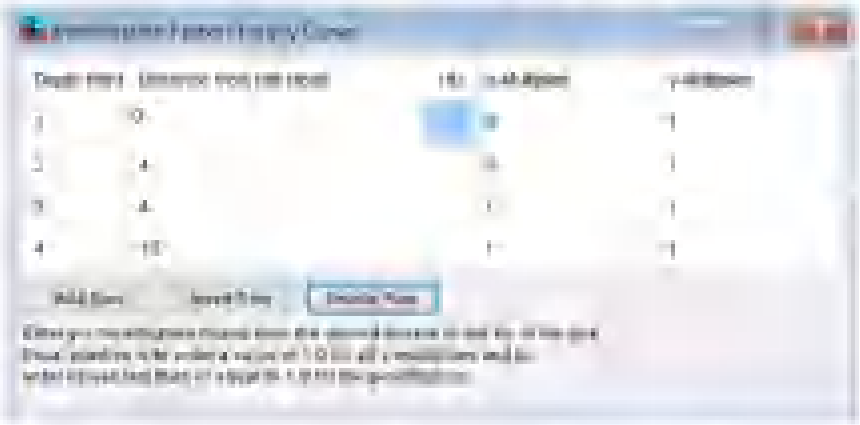
Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor e50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2a	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 2b	132	Stiff Clay w/o Free Water	4,500	0.02

The soil parameters to be used as input for the L-Pile analysis are detailed below:



the uppermost 4 feet of soil in the profile will be disregarded and omitted from all calculations.



C) Loading Inputs

Loading inputs are based on the worst-case loading from the posts and are as follows:

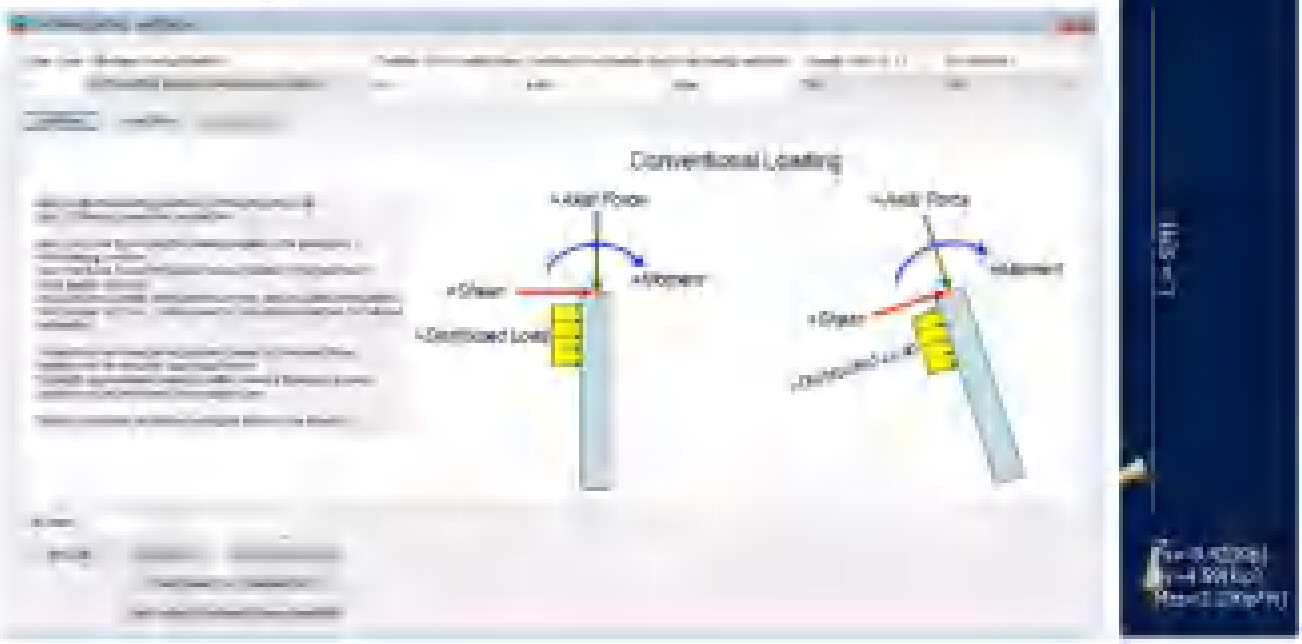
The Governing load combination is: **LC2 = DL + 0.75SL + 0.45 WL**

Axial: **4,590 lb**

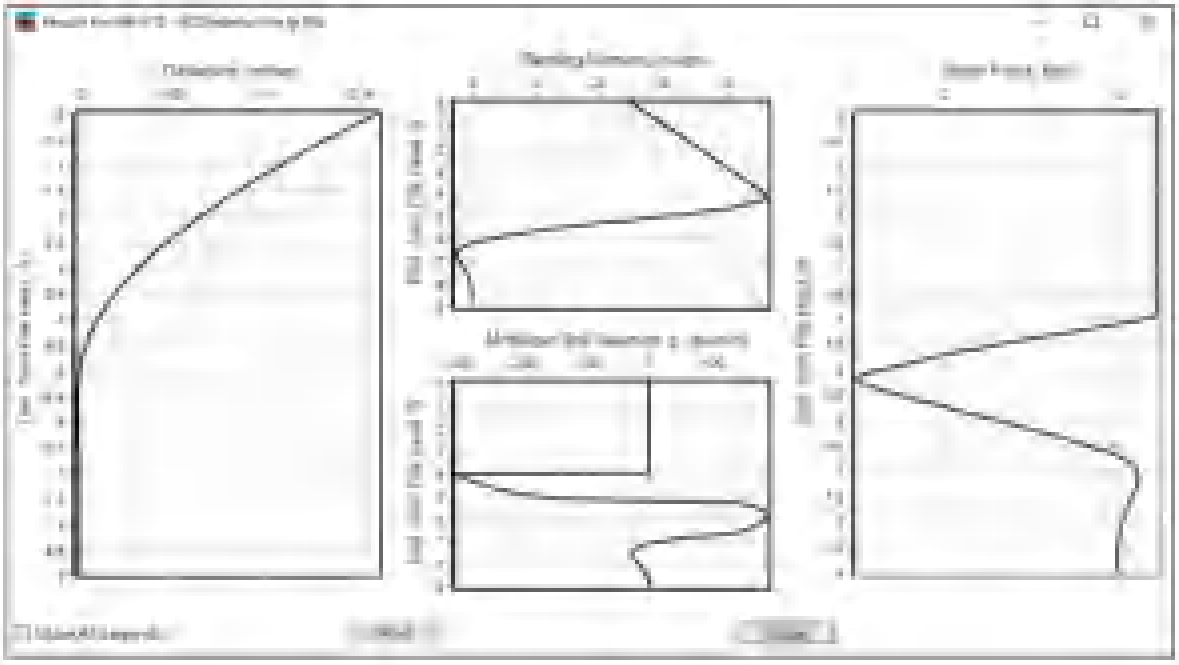
Shear = **420 lb**

Moment = 2.1kips-ft = 2,100 lb-ft = **25,200 lbs-in**

Load L-pile Inputs



D) L-Pile Result:



Shear force at pile head	=	420.0 lbs

	Calc. by	Date	Check by	Date	Appvd by	Date

a) Flood Load – Worst Case Scenario Elevation

1 – Hydrodynamic Pressure:

- Base Flood elevation (BFE) *100yr 72hr peak stage (ft. NGVD29)* = 1264.73 ft
- Grade Elevation (GE) = 1261.79 ft

- $d_s = 0.65(BEF - GE) = 0.65*[1264.73ft - 1261.79ft) = 1.911$ ft
- $V_{max} = \frac{d_s}{1\,s} = \frac{1.92\ ft}{1\,s} = 1.92$ ft/s
- $V_{min} = d_s/1s = 1.911$ ft/s
- g = 32.2 ft/s
- $V_{max} = \sqrt{gd_s} = \sqrt{32.2\ ft/s^2\ x\ 1.92 ft} = 7.87$ ft/s

Since the $V_{max} < 10\frac{ft}{s}$ *we do not need to consider hydrodynamic Loads*

2 – Hydrostatic Pressure

Since the piles is an open structure, the floodwater table will equalize on all sides of the piles during inundation. As a result, hydrostatic pressures balance out and effectively cancel each other.

b) – Corrosion Analysis:

- According to the geotechnical report, the post will be susceptible to corrosion.
- The post that will be used is the W6x15
- Per the Geotech report, the corrosion characteristics are as follows

6.5 Soil Corrosivity and Resistivity

Field electrical resistivity test values generally ranged from about 5,600 to 9,500 Ω-cm. Resistivity values generally increased with probe spacing and soil layer. Based on guidelines presented in Caltrans Basis, An Engineering Service to Advertise Surface Electrical [illegible] values generally increased with probe spacing and soil layer. Based on guidelines presented in Caltrans Basis, An Engineering Service to Advertise Surface Electrical [illegible] the results of these test resistivity tests generally indicate a moderately corrosive to extremely corrosive environment. ERI results are provided in Attachment C.

FIELD MEASUREMENT OF SOIL RESISTIVITY USING WENNER FOUR-ELECTRODE METHOD

PROJECT NAME:			
PROJECT NUMBER:		INSPECTOR:	
DATE:		TIME:	
TEST LOCATION:		TEMP:	

ELECTRODE SPACING "a" (ft)	(m)	MULTIPLIER (3Pi a) (ft)	ACTUAL PENETRATION (in)	(cm)	RESISTANCE (ohms)	RESISTIVITY (ohm-cm)
2	0.61	12	3	7.62	11	4,150
5	1.52	30	3	7.62	11	10,361
10	3.05	60	3	7.62	11	20,722
20	6.10	120	3	7.62	11	41,444
30	9.14	180	3	7.62	11	62,166
40	12.19	240	3	7.62	11	82,888
50	15.24	300	3	7.62	11	103,610
100	30.48	600	3	7.62	11	207,220

Therefore, the site is considered moderately corrosive.

For a moderately corrosive environment, we use the following corrosion rates:

Assume a **3-mill of zinc on wide flange shapes and a 50-year** project life.

Table 3 – Estimated Corrosion Rates

Soil resistivity (Ω-cm)	Total Corrosion (mpy)	
	Zinc	Steel (both side)
250 – 750	0.64	5.5
750 – 1250	0.50	4.5
1250 – 3000	0.39	2.2

C - Post design using RAM Element

The pile reveal is 5 ft. and the attachment will be at 4'-3" and According to the geotechnical report, skin friction and allowable bearing capacity from the upper 4 feet of soil are disregarded. Consequently, but as per our judgment, the fixed base point for the pile will be considered to be 2 feet below the ground surface, resulting in a total pile length of 7 feet.

Summary - Group by description

Description	Section	Member	Crit Eq.	Ratio	Status	Reference
	W6X15 --W / (0)W6X15	1	LC1 at 0.0ft	0.62	OK	

4- Axial Check:

W6x15 reduced section due to corrosion:

perimeter = 2(b$_f$ + d) + 4 [(b$_f$ − t$_w$)/2] = 2(5.879 + 5.879)+ 4(5.879-0.119)/2] = 35.036"/12 = **2.919 ft**

Area = 2*b_f* t_f +(d - 2 t_f)* t_w = 2*5.875*0.169 + (5.875-2*0.169)*0.119 = 2.65 in²/144 = 0.018 ft²

The axial load P = 280 lbs, according to the worst-case combination load analysis: **LC2 = DL + 0.75SL + 0.45 WL**

- The allowable skin friction, as mentioned in the geotechnical report, is as follows.

Table 13 – Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (feet)	Allowable End Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
1	0 – 4			
2	4 – 20	20,000	750	375
	4 – 12*			
3	8 – 20	30,000	1,500	750
4	12 – 20*	40,000	2,000	1,000

Notes:
1) Geotechnical engineering judgement required. A factor of safety of 2.0 was used for skin friction and end bearing. Allowable uplift capacity may be limited by pullout of steel pile from concrete or by allowable tensile stress in steel section. Allowable capacities are calculated by the geotechnical engineer.
2) Minimum pile penetration depth is the lesser of the depth required to develop the full allowable axial capacity or the depth required to attain a pile tip elevation of 4 feet above the bedrock surface. Refusal is defined as 10 blows per inch of penetration or less.
3) Pile spacing should be checked to avoid group reduction considerations. Reduction may be necessary when piles are installed within a group. Group reduction considerations are the responsibility of the engineer of record.

Pile vertical area = 2.919' x 3' (based on 5' total embedment & ignoring the upper 4.0') = 8.757 ft²

- **Allowable Friction force:**

Stratum 1: from 0 – 4 ft = **0 lbs**

Stratum 2: from 4 – 7ft (Conservative Height) = 750 psf x [ft] x 2.919[ft] = **6,567 lbs**

- **Allowable End Bearing: 20,000 psf** (Pile at Base Within stratum 2)

Net bearing Resisting Force = [1,000 psf X 0.018ft²] (Section Area) = **396 lbs**

Total resistance = 6,567 + 396 = **6,964 lbs > 280 lbs → Ratio: 40.2%. OK!**

Therefore, the W6x15 pile with 7ft embedment is performing adequately for the axial load check.

5- Expansive Soil :

PURE POWER ENGINEERING Pure Power Engineering	Project				Job #	
	Location				Sheet no./rev.	
	Calc. by	Date	Check by	Date	Appvd by	Date

Based on the geotechnical report, the presence of expansive soils indicates that soil heave should be anticipated. The relevant data are summarized below.

Solar Reduce ++ the upper 4 feet of the base ground be replaced to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative skin friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for potential movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations

Soil Heave Depth = **4.0 ft.**

Soil Heave strength = **750 psf.**

Pile vertical area = 4ft x 2.919ft = 11.676 ft²

Soil Heave Uplift force = 750 psf X 11.676 ft² = **8,757 lbs**

Skin Friction Resistance Force = **8,567 lbs**

Skin Friction Resistance Force = **8,567 lbs** < 8,757 lbs → 199% [illegible]

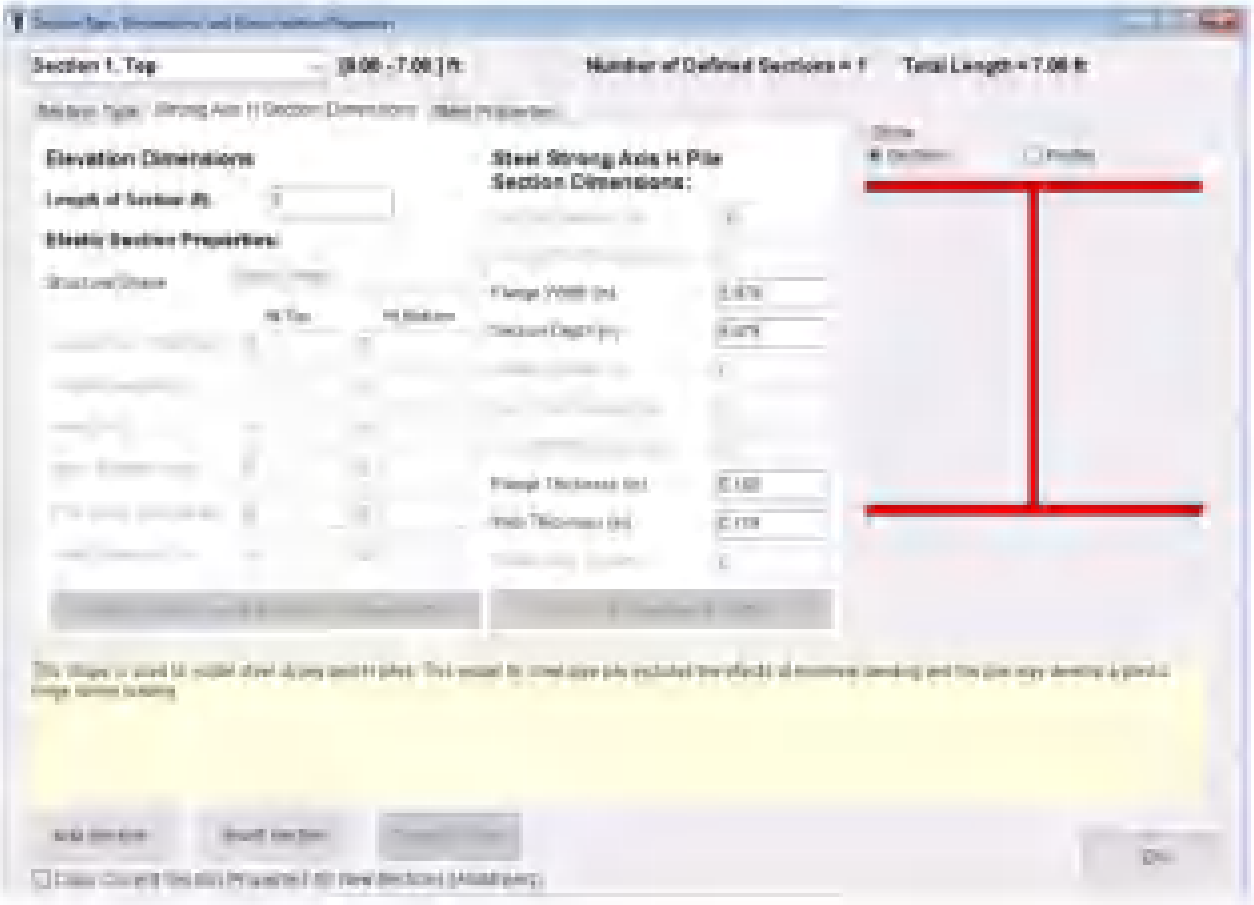
To address the uplift force resulting from expansive soil movement—and recognizing the limited skin friction resistance available along the pile—preventive measures are essential. Several strategies have been proposed to reduce uplift and mitigate these effects:

- Apply Silkcoat in the top **4 ft & 6 inches** above ground
- Apply yellow jacket friction reduction in the top **4 ft & 6 inches** above ground.
  Pre-drill the top **4 ft** and replace the soil with compacted washed ¾" clean gravel
- Or increasing the pile embedment to **9ft**

6- W6x15 Pile Embedment Design for Lateral Loads Using L-Pile Software:

A) –L-Pile Inputs: Design along - Strong Axis:

- W6x15 reduced section due to corrosion
- **7ft** embedment:



B) Soil Parameter:

Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor ε50

Corrosion Analysis:

- According to the geotechnical report, the post will be susceptible to corrosion
- The post that will be used is the W6x9.
- Per the Geotech report, the corrosion characteristics are as follows

6.3 Soil Corrosivity and Resistivity

6.3.1 ERT Test Results

Field electrical resistivity soil values generally ranged from about 1,150 to 5,600 Ω-cm, except for ERT-5, which exhibited relatively high values ranging from about 5,900 to 24,600 Ω-cm. Resistivity values generally decreased as probe spacing increased to about 30 feet, with most soft values generally correlated with drier (dry) fill soil. Based on guidelines presented in Corrosion Basics: An Introduction [illegible] for 12/08), the values of these test locations could be/are considered moderately corrosive or otherwise not/less corrosive. ERT results are provided in Attachment C.

FIELD MEASUREMENT OF SOIL RESISTIVITY USING WENNER FOUR-PINT METHOD

PROJECT NAME:	Chisholm Solar and Storage		
PROJECT NUMBER:	[illegible]	INSPECTOR:	[illegible]
DATE:	[illegible]	TIME:	[illegible]
TEST LOCATION:	[illegible]	WEATHER:	[illegible]

DIRECTION 1: NS/EW

ELECTRODE SPACING 'a' (ft)	(m)	MAX PENETRATION (10% a) (ft)	ACTUAL PENETRATION (ft)	(m)	READING (Ω)	RESISTIVITY (Ω-CM)

40	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
100	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Therefore, the site is considered moderately corrosive.

For a moderately corrosive environment, we use the following corrosion rates.

Assume a **3-mil of zinc on wide flange shapes and a 50-year** project life.

Post design using RAM Element

The pile reveal is 6.5 ft. and the attachment will be at 4.9' and According to the geotechnical report skin friction and allowable bearing capacity from the upper 4 feet of soil are disregarded. Consequently, but as per our judgment the fixed base point for the pile will be considered to be 2 feet below the ground surface, resulting in a total pile length of 8.5 feet.

Ram Model

Loading

Reactions

Utilisation

UTILIZATION = 0.41 < 1.00 ∴ W6X9 OK !

RAM Elements

Steel Code Check

Summary - Group by description

Description	Section	Member	Ctrl Ex.	Ratio	Status	Reference
	W-Sect - W / CORRIDOR	4		0.41	OK	

Axial Check:

W6x15 reduced section due to corrosion:

perimeter = $2(b_f + d) + 4\,[(b_f - t_w)/2]$ = 2(3.939 + 5.789)+ 4[(5.789-0.259)/2] = 26.7"/12 = **2.23 ft**

Area = $2*b_f*t_f + (d - 2\,t_f)^2\,t_w$ = 2*3.939*0.109 + (5.789-2*0.109)^2*0.259 = 1.12in²/144 = **0.007 ft²**

The axial load P = 157 lbs, according to the worst-case combination load analysis: **LC2 = D_L + 0.75L + 0.45 W_L**

- The allowable skin friction, as mentioned in the geotechnical report, is as follows:

Table 13 – Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (ft)	Allowable End Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
Stratum 1	0 – 4			
Stratum 2	4 – 20 4 – 15	8,000	750	375
Stratum 3	15 – 20	20,000	2500	500
Stratum 4	15 – 20	20,000	1,000	500

Notes:
1) [illegible]
2) [illegible]
3) [illegible]

Pile vertical area = 2.23' x 2' (based on 6' total embedment & ignoring the upper 1.0') = 4.46 ft²

- **Allowable Friction force:**

Stratum 1: from 0 – 4 ft = **0 lbs**

Stratum 2: from 4 – 6ft (Conservative Height) = 750 psf x 2ft x 2.23ft = **3,345 lbs**

- **Allowable End Bearing: 20,000 psf** (Pile to Bear Within stratum 2)

Net bearing Resisting Force = 22,000 psf X 0.007ft² (Section Area) = **154 lbs**

Total resistance = 3,345 + 154 = **3,499 lbs > 157 lbs** ✓ Ratio: 5% **OK!**

Therefore, the W6x9 pile with 6ft embedment is performing adequately for the axial loads listed.

Expansive Soil :

Based on the geotechnical report, the presence of expansive soils indicates that soil heave should be anticipated. The relevant data are summarized below:

Skin friction in the upper 1 foot of the piles should be neglected to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative skin friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for possible movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations.

Soil Heave Depth = **4.0 ft.**

Soil Heave strength = **750 psf.**

Pile vertical area = 4ft x 2.23ft = 8.92 ft^2

Soil Heave Uplift force = 750 psf X 8.92 ft^2 = **6,690 lbs**

Skin Friction Resistance Force = **3,345 lbs**

Skin Friction Resistance Force = **5,580 lbs** + 3,345 lbs → 200lb

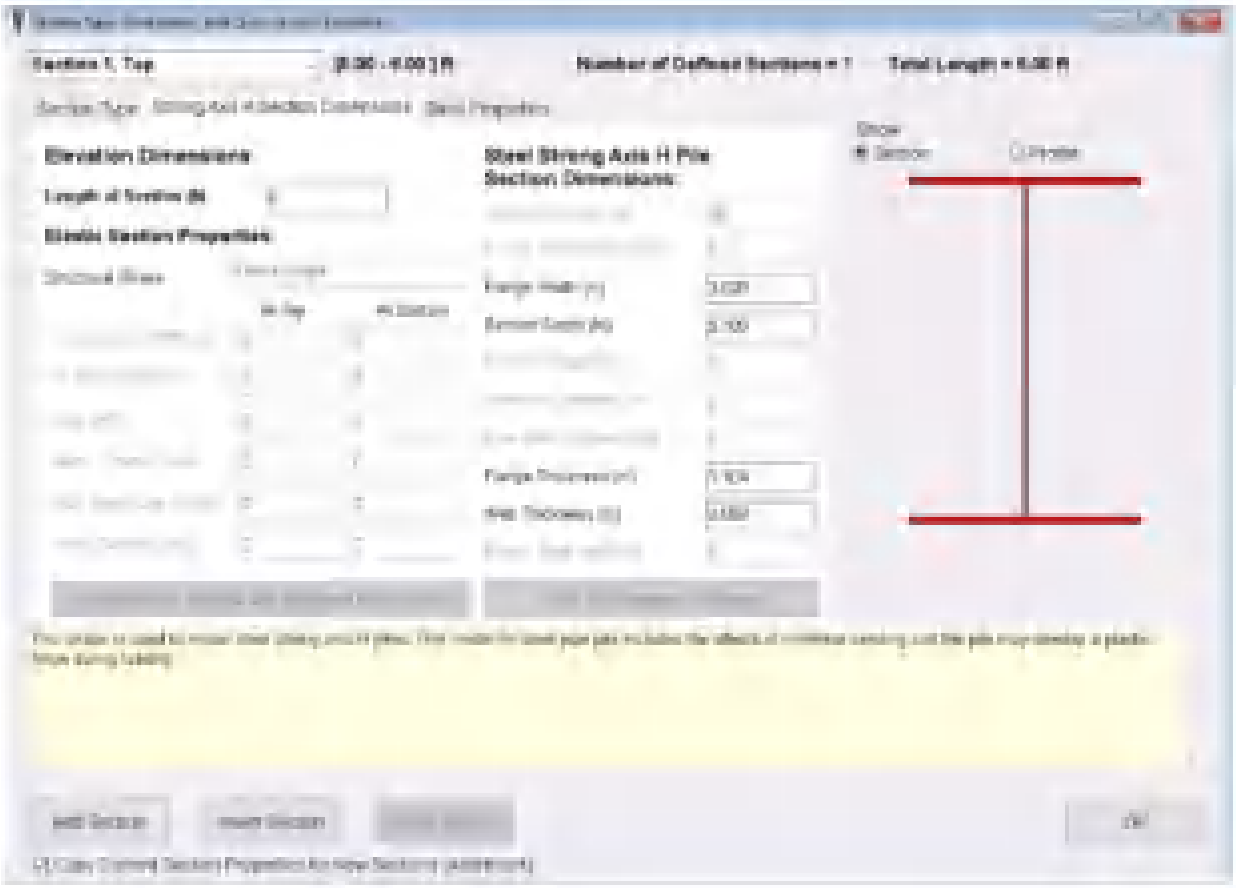
To address the uplift force resulting from expansive soil movement—and recognizing the limited skin friction resistance available along the pile—preventive measures are essential. Several strategies have been proposed to reduce uplift and mitigate these effects.

- Apply Silicoat in the top **4 ft & 6 inches** above ground
- Apply yellow jacket friction reduction in the top **4 ft & 6 inches** above ground.
- Pre-drill the top **4 ft** and replace the soil with compacted washed ¾" clean gravel
- Or increasing the pile embedment to **9ft**

7- W6x15 Pile Embedment Design for Lateral Loads Using L-Pile Software:

L-Pile Inputs: Design along -

- W6x9 reduced section due to corrosion
- **6ft** embedment.

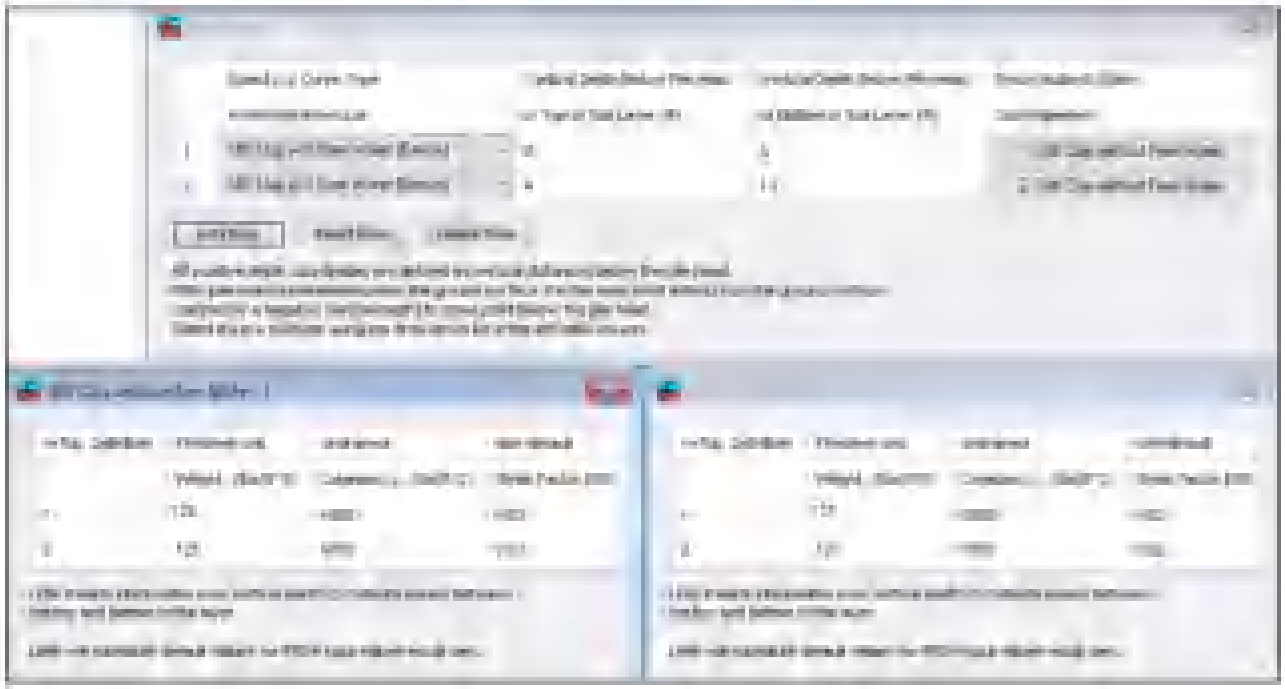


Soil Parameter:

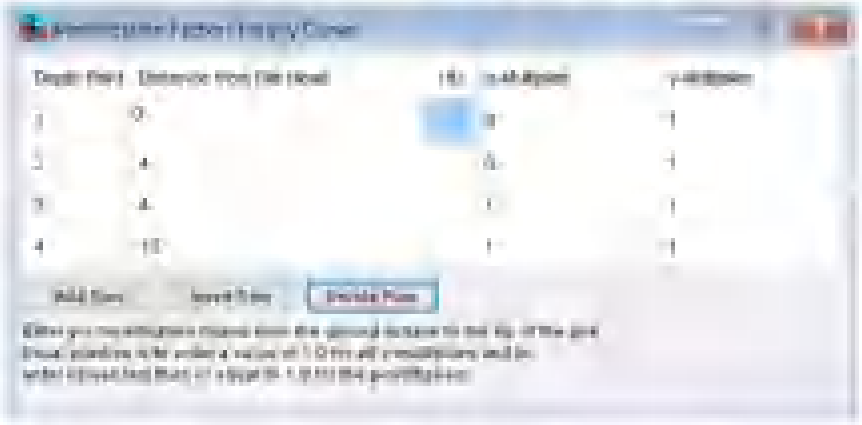
Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor ε50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2a	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 2b	133	Stiff Clay w/o Free Water	8,500	0.02

The soil parameters to be used as input for the L-Pile analysis are detailed below:



the uppermost 4 feet of soil in the profile will be disregarded and omitted from all calculations.



Loading Inputs

Loading inputs are based on the worst-case loading from the posts and are as follows:

Axial: **157 lb**
Shear = **300 lb**
Moment = 2.16 kips-ft = 2,160 lb-ft = **25,920 lbs-in**

Load L-pile Inputs

DRAWING TITLE:
ELECTRICAL BASIS OF DESIGN

DRAWING #:
G0.003

PLOT DATE: 11/11/2025 3:49 PM

RULER IN INCHES:

*NOTE:
- POWER PLANT CONTROLLER AT THE POI WILL DETERMINE THE INVERTER SET POINTS TO AVOID EXCEEDING 149.00 MWAC.
- REDUCED INVERTER AC SIZE SHOWN TO ILLUSTRATE TYPICAL LOAD RATIO.

DO NOT SCALE DRAWINGS

THESE DRAWINGS AND SPECIFICATIONS ARE THE PROPERTY AND COPYRIGHT OF LANGAN AND SHALL NOT BE REPRODUCED OR USED FOR ANY PURPOSE WITHOUT THE EXPRESS WRITTEN CONSENT OF LANGAN. ALL RIGHTS RESERVED.

WHERE IN DOUBT ASK

GENERAL

1. THE WORK INCLUDED SHALL CONSIST OF FURNISHING LABOR AND MATERIALS NECESSARY FOR THE COMPLETE INSTALLATION OF LIGHTING, POWER, AND PHOTOVOLTAIC SYSTEMS SHOWN ON THE DRAWINGS. ALL WORK SHALL BE COMPLETE AND LEFT IN OPERATING CONDITION AT COMPLETION OF CONTRACT.
2. INCLUDE ALL APPURTENANCES NECESSARY TO COMPLETE THE INSTALLATION.
3. SOME EQUIPMENT AND MATERIALS PROVIDED UNDER OTHER DIVISIONS MAY REQUIRE COMPOSITE WORK CREWS BECAUSE OF TRADE JURISDICTION. IT IS THE CONTRACTOR'S OR SUBCONTRACTOR'S RESPONSIBILITY TO REVIEW ALL CONTRACT DOCUMENTS TO DETERMINE WHERE THESE COMPOSITE CREWS ARE REQUIRED.
4. ALL TEMPORARY AND PERMANENT PERMITS AND LICENSES REQUIRED IN CONNECTION WITH THIS DIVISION'S WORK SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
5. INSTALLATION SHALL MEET OR EXCEED CURRENT APPLICABLE CODES, ORDINANCES AND REGULATIONS IN EFFECT AT THE SITE. IF A CONTRACTOR OR SUBCONTRACTOR OBSERVES THAT THE CONTRACT DOCUMENTS ARE AT VARIANCE WITH GOVERNING CODES AND REGULATIONS, CONTRACTOR SHALL PROMPTLY NOTIFY THE ENGINEER IN WRITING, WHO WILL RESPOND TO SUCH VARIANCES IN WRITING. IF THE CONTRACTOR PERFORMS WORK KNOWING IT IS NOT COMPLIANT WITH APPLICABLE CODES, AND DOES NOT NOTIFY THE ENGINEER, THE CONTRACTOR SHALL ASSUME FULL RESPONSIBILITY AND BEAR ALL COSTS ATTRIBUTABLE TO CORRECTING THE NON-COMPLYING WORK.
6. THE REFERENCE TO CODES AND STANDARDS SHALL NOT PERMIT A LOWER GRADE OF CONSTRUCTION WHERE CONTRACT DOCUMENTS CALL FOR WORKMANSHIP AND/OR MATERIALS IN EXCESS OF THOSE REFERENCED.
7. WHERE THE TERMS "PROVIDE" OR "SHALL BE" ARE USED HEREIN OR ON THE DRAWINGS, THEY SHALL BE TAKEN TO MEAN "THE CONTRACTOR SHALL FURNISH AND INSTALL".
8. WHERE THE TERM "WHERE REQUIRED" AND "AS REQUIRED" ARE USED HEREIN OR ON THE DRAWINGS, THIS COVERAGE SHALL BE TAKEN TO MEAN "WHERE REQUIRED BY THE CONTRACT DOCUMENTS, APPLICABLE CODES, APPLICABLE STANDARDS AND UTILITY AGREEMENTS".
9. IF EQUIPMENT OR MATERIALS OTHER THAN THOSE SPECIFIED IN THE DESIGN OF THIS PROJECT ARE PROPOSED TO BE USED ON THIS PROJECT, THE CONTRACTOR AND SUPPLIER SHALL DOCUMENT DIMENSIONAL DIFFERENCES, ELECTRICAL REQUIREMENTS AND ANY OTHER POTENTIAL VARIANCES. THIS DOCUMENTED COMPARISON SHALL BE MADE FOR MANUFACTURERS SPECIFIED AS WELL AS THOSE PROPOSED PRIOR TO REQUESTING APPROVAL. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY EXTRA COSTS INCURRED AS A RESULT OF SUBSTITUTIONS, INCLUDING THOSE OF OTHER CONTRACTORS, SUCH AS MIGHT BE DUE TO (BUT NOT LIMITED TO) DIFFERENT ELECTRICAL, MECHANICAL AND ARCHITECTURAL REQUIREMENTS.
10. SHOP DRAWINGS:
    a. CAREFULLY EXAMINE ALL SHOP DRAWINGS NOTING CAPACITY, ARRANGEMENT AND PHYSICAL DIMENSIONS AND MARK THE DRAWINGS AS BEING REVIEWED AND APPROVED PRIOR TO SUBMITTING TO THE ENGINEER WHERE CATALOG DATA IS SUBMITTED WHICH INCLUDES ITEMS WHICH DO NOT APPLY TO THIS PROJECT, THOSE ITEMS SHALL BE CLEARLY MARKED OUT OR RELEVANT ITEMS CLEARLY NOTED. ANY DEVIATIONS FROM THE DOCUMENTS SHALL BE SO NOTED BY THE CONTRACTOR OR EQUIPMENT SUPPLIER. THE INTENT AND REQUIREMENTS OF THE DRAWINGS AND SPECIFICATIONS SHALL BE ADHERED TO AT ALL TIMES AND ARE NOT WAIVED OR SUPERSEDED IN ANY WAY BY THE SHOP DRAWING SUBMITTAL OR REVIEW.
    b. SUBMIT A MINIMUM (1) ELECTRONIC COPY OF SHOP DRAWINGS FOR REVIEW AND APPROVAL. CONTRACTOR SHALL REVIEW & STAMP APPROVED COPY FOR INCORPORATION IN THE "OPERATION AND MAINTENANCE MANUALS".
    c. IF RETURNED SHOP DRAWINGS ARE MARKED "NO EXCEPTIONS TAKEN", NO ADDITIONAL SUBMITTAL IS REQUIRED. IF THE SHOP DRAWING IS MARKED "MAKE CORRECTIONS NOTED", THE CHANGES NOTED ON THE SHOP DRAWINGS ARE TO BE INCORPORATED WITH NO FURTHER RESUBMITTAL REQUIRED. IF MARKED "REVISE AND RESUBMIT", CHANGES NOTED ON THE SHOP DRAWINGS ARE TO BE MADE AND THE DRAWINGS RESUBMITTED FOR REVIEW. IF MARKED "REJECTED", THE EQUIPMENT SUBMITTED IS UNACCEPTABLE AND DIFFERENT EQUIPMENT OR MATERIALS NEED TO BE SUBMITTED.
11. NO ASBESTOS OR PCB CONTAINING MATERIALS OF ANY TYPE SHALL BE USED ON THIS PROJECT.
12. CONSULT THE CONTRACT DRAWINGS AND SPECIFICATIONS OF ALL OTHER DIVISIONS AND OTHER TRADES FOR CORRELATING INFORMATION AND LAYOUT WORK SO THAT IT WILL NOT INTERFERE WITH OTHER TRADES. VERIFY ALL DIMENSIONS AND CONDITIONS. IF DISCREPANCIES OCCUR SUCH THAT RESOLUTION IS NOT POSSIBLE BY THE AFFECTED TRADES ON THE JOB, THE ENGINEER SHALL BE NOTIFIED AND A RESOLUTION WILL BE WORKED OUT.
13. ELECTRICAL EQUIPMENT ENCLOSURES (SWITCHGEAR, PANELBOARDS, TRANSFORMERS, RELAY CABINETS, SYSTEMS RACKS/CABINETS, COMBINER BOXES, ETC.) SHALL BE VACUUMED AND WIPED CLEAN PRIOR TO ENERGIZING.
14. INSTALL MATERIAL AND EQUIPMENT IN ACCORDANCE WITH MANUFACTURERS' RECOMMENDATIONS, INSTRUCTIONS, AND CURRENT NFPA STANDARDS.
15. INSTALL EQUIPMENT AND MATERIALS TO PROVIDE REQUIRED ACCESS FOR SERVICING AND MAINTENANCE. COORDINATE FINAL EQUIPMENT LOCATION WITH REQUIRED ACCESS PANELS AND DOORS. ALLOW AMPLE SPACE FOR REMOVAL OF ALL PARTS THAT REQUIRE REPLACEMENT OR SERVICING.
16. RECORD DRAWINGS: THROUGHOUT CONSTRUCTION, ACTIVITIES IN A NEAT AND LEGIBLE MANNER, DOCUMENT AND RECORD ALL CHANGES OR DEVIATIONS FROM THE CONTRACT DRAWINGS. SUBMIT REVISED DRAWINGS TO ENGINEER FOR REVIEW AT COMPLETION OF WORK AND INTERMITTENTLY IF REQUESTED BY THE ENGINEER IN WRITING. THE RECORD DRAWINGS WILL BECOME PART OF THE OPERATION AND MAINTENANCE MANUAL (MANUAL) SUBMITTED TO THE OWNER AFTER THE COMPLETION OF THE PROJECT.

MATERIALS AND METHODS

1. ALL MATERIALS SHALL BE NEW, AS SPECIFIED (OR APPROVED), AND RECEIVED IN ORIGINAL PACKAGING. CATALOG NUMBERS SPECIFIED SHALL BE VERIFIED WITH VENDORS PRIOR TO ORDERING MATERIAL.
2. ALL MATERIALS SHALL BE LISTED BY A NRTL (I.E. UL, ETL, ETC.) AND HAVE AN ASSOCIATED LABEL, UNLESS SPECIAL FABRICATION OF MATERIAL IS REQUIRED. SPECIAL FABRICATED MATERIAL SHALL BE FABRICATED USING LISTED COMPONENTS AND PROCEDURES.
3. ALL WORK SHALL BE TESTED IN ACCORDANCE WITH INDUSTRY ACCEPTED STANDARDS. BEFORE TESTING, A THOROUGH VISUAL INSPECTION SHALL BE MADE TO DETECT CONNECTION PROBLEMS, DAMAGED COMPONENTS, POOR WORKMANSHIP, IMPROPERLY OVERCURRENT PROTECTION, DEBRIS, ETC. TESTING APPARATUS SHALL BE CERTIFIED OR DEMONSTRATED TO BE ACCURATE WITHIN REASONABLE LIMITS. QUALIFIED PERSONNEL FAMILIAR WITH THE TEST EQUIPMENT SHALL PERFORM ALL TESTS. IF TESTING PROCEDURES EMPLOYED ARE NOT SATISFACTORY TO THE ENGINEER, OUTSIDE TESTING WILL BE DONE AT THE CONTRACTOR'S EXPENSE.
4. PROVIDE PERMANENT IDENTIFICATION FOR ALL ELECTRICAL EQUIPMENT WITH ENGRAVED 1/4" WHITE LETTERS ON BLACK BAKELITE-MICARTA PLATES (UNLESS NOTED OTHERWISE). NOTED INSCRIPTIONS SHALL INDICATE THE NAME, VOLTAGE, PHASE, WIRES, FEEDER SIZE, LISTING SOURCE AND LOCATION OF SOURCE, AND THE DEVICE NUMBER. THIS REQUIREMENT IS IN ADDITION TO OTHER REQUIREMENTS IDENTIFIED BY THE CONTRACT DOCUMENTS.
5. ALL LOW-VOLTAGE CABLES SHALL BE BUNDLED AND LABELED AS TO THEIR FUNCTION WITHIN TERMINAL CABINETS, WIREWAYS AND CABLE TRAYS.
6. BRANCH CIRCUITS SHALL MATCH CIRCUIT NUMBERS AS SHOWN ON THE DRAWINGS AND AS SCHEDULED. NOTIFY ENGINEER IN WRITING AND RECORD ALL DEVIATIONS ON THE AS-BUILT DRAWINGS.
7. ALL OPENINGS INTO EQUIPMENT SHALL BE SEALED WITH GALVANIZED STEEL PLATES OR SCREENS TO PREVENT ENTRY OF INSECTS AND RODENTS.
8. CLEAN, DE-BURR AND RE-FINISH ALL FIELD-PERFORMED ENCLOSURE PENETRATIONS TO MATCH OR EXCEED THE MANUFACTURER'S MEANS OF WEATHERPROOFING AND CORROSION-PREVENTION. TOUCH MATERIALS THAT MEET OR EXCEED THE PERFORMANCE OF THE MANUFACTURER'S MEANS OF CORROSION PROTECTION.

RACEWAYS

1. CONSTRUCTION SHALL BE AS PER UNDERWRITER'S LABORATORIES STANDARD UL 870 FOR WIREWAYS AUXILIARY GUTTERS AND ASSOCIATED FITTINGS.
2. WIREWAYS SHALL BE PAINTED STEEL WITH HINGED, REMOVABLE COVER WHICH CAN BE USED AS BOTH A HINGED COVER AND A SCREW COVER. WIREWAY SHALL BE FABRICATED SUCH THAT THE ENTIRE LENGTH OF WIREWAY AND FITTINGS PERMIT LAY-IN WIRING APPLICATION. CROSS SECTIONAL AREA SHALL BE 4" X 4" MINIMUM UNLESS OTHERWISE NOTED. WAYSTON "WIREWAY" SHALL BE NEMA 3/4R/4 CONSTRUCTION WITH GASKETS AND ANSI 49 CORROSION RESISTANT FINISH.
3. WHERE REQUIRED, PROVIDE CABLE STRAIN RELIEF AND GROUNDING CONNECTORS.
4. UNLESS NOTED OTHERWISE, EXPANSION FITTINGS SHALL BE UTILIZED FOR ALL PVC CONDUITS EMERGING FROM THE GROUND.
5. SCHEDULE 40 PVC SHALL BE USED FOR ALL RACEWAYS WHERE NOT RESTRICTED BY THIS SECTION OR SPECIFICALLY NOTED OTHERWISE.
6. ABOVE-GRADE PVC CONDUIT IS ONLY ALLOWED WHERE TRANSITIONING FROM BELOW GRADE AND SHALL BE UV RESISTANT TYPE SCHEDULE 80.
7. FLEXIBLE LIQUID TIGHT CONDUIT SHALL BE USED ON ALL MOTOR, MOVING, AND VIBRATING EQUIPMENT CONNECTIONS. USE MINIMUM 3/4" SIZE WITH GROUNDING TYPE FITTINGS AND PROVIDE GROUNDING CONDUCTOR.
8. INSTALLATIONS OF UNDERGROUND WIRING SHALL BE IN TRENCH, DUCT OR CONDUIT OR BY PLOWING IN PLACE AS SPECIFIED ON THE DRAWINGS.
9. UNDERGROUND CONDUIT SHALL BE INSTALLED TO ALLOW DRAINAGE INTO HANDHOLES A MINIMUM OF 4 INCHES PER 100 FEET OF HORIZONTAL RUN.
10. WHEN NON-METALLIC CONDUIT REQUIRES FIELD BENDING, UTILIZE A HOT-BENDING APPLIANCE. USE OF TORCHES TO BEND CONDUIT IS UNACCEPTABLE. WHERE CONDUITS TERMINATE IN HANDHOLES/VAULTS OR IN PAD MOUNTED EQUIPMENT, TERMINATE CONDUITS A MINIMUM OF 4 INCHES ABOVE BOTTOM OF SLAB, WHERE POINTED THROUGH SLABS, PROVIDE "SLEEVE" TO ALLOW SETTLING/HEAVING OF SLAB.
11. WHERE PVMC IMPERVIOUS IS USED, SCHEDULE 80 PVC CONDUIT SHALL BE USED FOR TRANSITIONS TO ABOVE GRADE.
12. ALL RACEWAYS SHALL UTILIZE POLYWATER OR EQUAL FOX SEALANT. DUCT SEAL IS NOT CONSIDERED EQUAL.

WIRING AND CABLE

1. WIRE
    a. DESCRIPTION: SINGLE CONDUCTOR INSULATED WIRE.
    b. CONDUCTOR: 98% COMMERCIALLY PURE COPPER CONFORMING TO ASTM B-8 CLASS B STRANDED, OR ASTM B-800 SERIES ALUMINUM ALLOY COMPACT STRANDED CONDUCTORS.
    c. INSULATION VOLTAGE RATING: 600 VOLTS AND 2000 VOLTS ONLY.
    d. INSULATION: XHHW/THHN 90, OR -2 TYPE THWN-2, THHW-2, XHHW-2, RHW-2, USE-2, AND RHW-WIRE.
    e. EXPOSED PV MODULE WIRING AND DC FEEDERS SHALL BE 2000 VOLT RATED PV-WIRE.
    f. PROVIDE SERVICE LOOPS AT TERMINATIONS.
2. LISTED BURIAL CABLE ASSEMBLY SHALL BE USED ONLY WHERE APPROVED.
3. USE SUITABLE WIRE PULLING LUBRICANT FOR BUILDING WIRE 4 AWG AND LARGER.
4. NEATLY TRIM AND LACE WIRING INSIDE BOXES, EQUIPMENT, ETC.
5. CLEAN CONDUCTOR SURFACES BEFORE INSTALLING LUGS AND CONNECTORS.
6. MAKE SPLICES, TAPS AND TERMINATIONS TO CARRY FULL AMPACITY OF CONDUCTORS WITH NO PERCEPTIBLE TEMPERATURE RISE. SPLICES ARE NOT ALLOWED UNLESS APPROVED IN WRITING BY PROJECT MANAGER.
7. PARALLEL 3-PHASE FEEDER RUNS IN CONDUIT SHALL HAVE ALL THREE PHASE CONDUCTORS (INCLUDING NEUTRAL AND GROUND WHERE REQUIRED) INSTALLED IN EACH CONDUIT. GROUPING A SINGLE PHASE (OF TWO PHASES) IN A SINGLE CONDUIT IS NOT PERMITTED.
8. WIRE CLIPS: CONTRACTOR SHALL PROCURE (EAT, HOOPTI) STRING WIRE SUPPORT CLAMPS). SHOALS WIRE MANAGEMENT CLIPS, OR OWNER-APPROVED EQUAL ON EVERY PANEL SUPPORT BRACKET IN SUPPORT STRING WIRING TO THE TORQUE TUBE STRUCTURE. STAINLESS STEEL E-CLIPS SHALL BE USED ON ALL TRANSITIONS AND MOTORS. FINAL WIRE MANAGEMENT TO BE APPROVED BY OWNER AS PER IFC DESIGN SET.
9. TIE WRAPS: EACH USE OF A TIE WRAP OTHER THAN SPECIFIED IN THIS DOCUMENT, MUST BE APPROVED BY OWNER. CONTRACTOR SHALL NOT USE TIE WRAPS WHEN TRANSITIONING ACROSS LARGE GAPS OR MOTION GAPS. CONTRACTOR SHALL ADHERE TO THE FOLLOWING SPECIFICATIONS WHEN USING TIE WRAPS:
    a. CONTRACTOR MAY USE TIE WRAPS TO BUNDLE WIRES TOGETHER, BUT NOT AS THE SUPPORT METHOD TO STRUCTURE OR MODULE.
    b. WHEN USING TIE WRAPS, CONTRACTOR SHALL AVOID PINCHING WIRE INSULATION, AND ENSURE THAT THE TIE WRAP IS PULLED TO A REASONABLE TIGHTNESS.
    c. ALL TIE WRAPS USED BY CONTRACTOR SHALL HAVE A MINIMUM WIDTH OF 0.150 INCHES.
    d. CONTRACTOR SHALL ONLY USE REAL STABILIZED ULTRAVIOLET RESISTANT TIE WRAPS.
10. ALL PLUG AND SOCKET CONNECTIONS MATED TOGETHER SHALL BE OF THE SAME TYPE AND OF THE SAME MANUFACTURER. "COMPATIBLE" CONNECTORS SHALL NOT BE ACCEPTED.
11. ALL FIELD-MADE PLUG & SOCKET CONNECTORS SHALL BE INSTALLED USING MANUFACTURER APPROVED TOOLS AND METHODS, AND CABLE CLAMPS SHALL BE TIGHTENED TO MANUFACTURER'S SPECIFIED TORQUE VALUE.
12. WHERE EXPOSED, ALL STRING/HARNESS CONNECTORS (MOBILE AND OTHERWISE) SHALL BE CAPPED AS SUCH TO AVOID DAMAGE DUE TO ENVIRONMENTAL ELEMENTS.
13. DISTANCES PROVIDED IN SCHEDULE TABLES ARE ONE-WAY ESTIMATES GENERATED FOR ENGINEER'S CALCULATIONS. CONTRACTOR IS RESPONSIBLE FOR OWN MEASUREMENTS AND LENGTHS.

10. PHASE RELATIONSHIP
    a. CONSIST FEEDERS TO MAINTAIN PHASE RELATIONSHIP THROUGH SYSTEM. PHASE LEGS OF FEEDERS SHALL MATCH BUS OR CABLE ARRANGEMENTS IN EQUIPMENT TO WHICH THE FEEDERS ARE CONNECTED. COLOR CODING SHALL BE AS FOLLOWS:

        208/120 VAC
        A PHASE: BLACK, B PHASE: RED, C PHASE: BLUE

        277/480 VAC, 346/600 VAC, 354/600 VAC
        A PHASE: BROWN, B PHASE: ORANGE, C PHASE: YELLOW

        240 VDC, 1000 VDC, OR 600 VDC
        POSITIVE CONDUCTOR: RED
        NEGATIVE CONDUCTOR: BLACK

        48 AND 24 VOLTS:
        GROUNDED CONDUCTOR: WHITE
        SYSTEM: GREEN OR BARE

        MEDIUM VOLTAGE SYSTEMS
        A PHASE: BLACK, B PHASE: RED, C PHASE: BLUE

    b. CONFIRM CONDUCTORS (INDUSTRIAL) AND EQUIPMENT GROUNDING CONDUCTORS SMALLER THAN #4 MUST HAVE GREEN COLOR INSULATION. WHERE GREEN INSULATION CABLE IS NOT USED, TAG CONDUCTOR WITH OVERWRAPPED COLORED TAPE FOR A MINIMUM OF 6" IN ACCESSIBLE LOCATIONS. COLOR CODING MUST BE USED CONSISTENTLY FOR THE ENTIRE PROJECT.

MEDIUM VOLTAGE CABLES

1. CABLES FOR THE 34.5 KV SYSTEM SHALL BE UL 83 KV RATED LISTED SINGLE CONDUCTOR INSULATED CONCENTRIC NEUTRAL AND JACKETED MEDIUM VOLTAGE TYPE POWER CABLE WITH 100% INSULATION LEVEL, 105° C CONTINUOUS OPERATION RATING, 130° C EMERGENCY RATING, 250° C SHORT CIRCUIT RATING.
2. CABLE SHALL HAVE ASTM B-609 ALUMINUM CONDUCTORS WITH CLASS B STRANDING IN ACCORDANCE WITH ASTM B-231, WATERTIME BLOCKED STRANDS, AN EXTRUDED SEMI-CONDUCTING SHIELD LAYER (40 MIL MIN.) OVER THE CONDUCTOR FOR STRESS CONTROL, DIRECT-BURIAL CROSS-LINKED INSULATION (345 MILS MIN.), A CONCENTRIC COPPER NEUTRAL AND MOISTURE/CHEMICAL/OIL/FLAME RESISTANT PVC JACKET.
3. COMPLETE INSTALLATION SHALL BE PER NATIONAL ELECTRICAL CODE ARTICLES 310 AND 328. DO NOT EXCEED MANUFACTURER'S PUBLISHED MAXIMUM PULLING TENSION OR SIDEWALL PRESSURE. PROVIDE SUFFICIENT SLACK IN CABLE, GROUND AND DRAIN WIRES TO PERMIT ELEVATION/SECTIONS TO BE MOVED TO THEIR RESPECTIVE MARKING STAKES.
4. ALL CABLES SHALL BE LABELED AT EACH END AT AN ACCESSIBLE LOCATION FOR VIEWING. LABEL SHALL INDICATE CIRCUIT, PHASES AND DESTINATION/ORIGINATION. LABELS SHALL BE CABLE TIE TAGS WITH WHITE LETTERING AND SECURED WITH A MINIMUM OF (2) UV-RESISTANT TIE TIES.
5. SPLICES ARE NOT ALLOWED UNLESS SPECIFICALLY APPROVED BY OWNER. SPLICES AND TERMINATIONS SHALL BE MADE BY A QUALIFIED JOURNEYMAN.
6. ARRANGE PHASES AT TERMINATION POINTS, A-B-C FROM LEFT TO RIGHT OR TOP TO BOTTOM AS VIEWED FROM THE FRONT. PROVIDE APPROPRIATE SLACK TO INTERCHANGE CABLES AT TERMINATION POINTS.
7. PERFORM TESTING IN ACCORDANCE WITH EPC CONTRACT.

MEDIUM VOLTAGE JUNCTION BOXES

1. MV JUNCTION BOXES SHALL BE DESIGNED FOR BURIAL WITH THE JUNCTION MODULES MOUNTED ABOVE THE GROUND SURFACE. ENCLOSURE SHALL BE IN COMPLETE CONFORMANCE WITH ANSI 057.12.28, PAD-MOUNTED EQUIPMENT ENCLOSURE INTEGRITY STANDARD.
2. MV JUNCTION BOXES SHALL BE MANUFACTURED BY NORDIC, EATON, HUBBELL, MWE, POWER DESIGN INC., HIGHLINE, FEDERAL PACIFIC, HUFFMAN, OR SIEC (OR EQUAL).
3. ENCLOSURE SHALL BE WITH 7 NOMINAL THICKNESS FIRE RESISTANT LAMINATE FIBERGLASS WITH MUNSELL GREEN GEL COAT FINISH. (1) SHALL BE 12 GAUGE GALVANIZED STEEL WITH MUNSELL GREEN POLYESTER POWDER COAT FINISH. ENCLOSURE DOORS SHALL INCLUDE STAINLESS STEEL HINGES AND SHALL HAVE PROVISIONS FOR PADLOCKING. DOORS SHALL HAVE PROVISIONS FOR SECURING IN THE OPEN POSITION.
4. PROVIDE JUNCTION PANELS WITH WELLS TO ACCOMMODATE THE SIZE AND QUANTITY OF LOAD BREAK ELBOWS INDICATED ON DRAWINGS.
5. PROVIDE GROUND BAR IN UNIT FOR BONDING OF GROUND CONDUCTORS AND BONDING TO NEUTRAL.
6. PROVIDE FIBERGLASS GROUND SLEEVE EXTENDING 30 BELOW CABINET INSTALLED ON A 6" PEA ROCK BASE TO ALLOW DRAINAGE OF LOCAL GROUNDWATER.

BOXES

1. PULL AND JUNCTION BOXES SHALL BE (CODE GAUGE, GASKETED, HINGED, GALVANIZED STEEL, PVC, OR FIBERGLASS) COVERS SHALL BE SECURED WITH SCREWS.
2. OUTLET BOXES SHALL BE CAST MALLEABLE IRON WITH THREADED HUBS OR PVC AND BE OF HIGH CONDUCTIVE METAL TO MAINTAIN MAXIMUM ELECTRIC CONTINUITY.
3. ALL OUTLETS SHALL BE WEATHER RESISTANT WITH WEATHERPROOF WHILE-IN-USE COVERPLATES AND WEATHERPROOF BOXES.
4. COVERS OR PLATES FOR BOXES SHALL CONFORM SUBSTANTIALLY TO THE OUTLET OF THE BOXES WITH NO PROJECTING EDGES OR CORNERS.
5. (SNOOP) FITTINGS (T'S, T', LL, LR, TT) OR TYPES APPROVED FOR THE LOCATION MAY BE EMPLOYED AS REQUIRED TO FACILITATE PULLING IN CONDUCTORS.
6. PROVIDE PULL AND JUNCTION BOXES TO FACILITATE PULLING OR SPLICING OF CONDUCTORS.
7. MOUNT BOXES TO ALLOW FOR MAXIMUM ACCESSIBILITY.
8. INSTALL GROUNDING BUSHINGS WITH GROUNDING CONNECTION ON ALL METALLIC FEEDER CONDUITS ENTERING BOX. GROUND BUSHINGS AND BONDING CONNECTIONS ARE NOT REQUIRED ON BRANCH CIRCUIT DOWNTUBES.
9. ALL GALVANIZED EQUIPMENT SHALL BE HOT DIPPED. NO ALTERNATIVES ARE ALLOWED.

LOAD BREAK DISCONNECTS (LBDS)

1. DISCONNECTS SHALL BE SERVICE RATED (1600V) AT 1.2 CONTINUOUS CURRENT RATING. DISCONNECTS SHALL BE TE CONNECTIVITY OR APPROVED EQUAL.
2. DISCONNECTS SHALL BE LISTED AND MARKED SUCH THAT THE TERMINALS ARE RATED IN THE SAME CURRENT RATING OF THE SWITCH.
3. DISCONNECTS SHALL BE INTERLOCKED TO PREVENT THE OPENING OF THE COVER WHEN THE SWITCH IS IN THE ON POSITION. INTERLOCK SHALL BE DEFEATABLE FOR TESTING PURPOSES. HANDLE MUST BE LOCKABLE IN OFF POSITION.
4. DISCONNECTS SHALL BE DESIGNED FOR A FUNCTIONALLY GROUNDED SYSTEM.
5. ENCLOSURES SHALL BE A MINIMUM OF NEMA 3/IP54 WITH SEAMLESS DOOR GASKETS.
6. ALL WIRE TERMINATIONS/LUGS SHALL BE LISTED FOR 90°C FIELD TERMINATIONS.
7. PROVIDE UNITS WITH INTEGRAL DC SURGE PROTECTION DEVICES RATED FOR ARRA DISCHARGE CURRENT (8/20 µS) AND MAXIMUM CONTINUOUS OPERATING VOLTAGE OF 1500VDC.

COMBINER BOXES

1. ALL COMBINER BOXES SHALL BE 1500VDC, COMPLETE WITH CIRCUITRY AS AND AS NECESSARY TO PROTECT THE EQUIPMENT INCLUDING DISCONNECT SWITCH WITH FINGER-SAFE FUSE HOLDERS HAVING ALL NECESSARY FUSING. COMBINER BOXES SHALL BE EATON/POWERS, SOLAR2, SOLARBOS, AMTEC, TEAL, BENTEK, OR APPROVED EQUAL.
2. A FINGER-SAFE NON-FUSED DISCONNECT IS REQUIRED AND IT SHALL BE INTERLOCKED TO PREVENT THE OPENING OF THE COVER WHEN THE SWITCH IS IN THE ON POSITION. INTERLOCK SHALL BE DEFEATABLE FOR TESTING PURPOSES. HANDLE MUST BE LOCKABLE IN OFF POSITION.
3. ALL FUSE HOLDERS SHALL BE FINGER-SAFE AND SHALL HAVE LOCAL BLOWN-FUSE INDICATION. ALL FUSE HOLDERS ONLY OPEN UPWARD, ALLOWING FUSES TO BE INSERTED TOP-DOWN.
4. THE COMBINER BOX SHALL BE ARRANGED TO HAVE A MINIMUM NUMBER OF INPUT CIRCUITS AND FUSE SIZES AS INDICATED ON THE COMBINER BOX SCHEDULES FOR A NEGATIVELY GROUNDED SYSTEM. FUSE HOLDERS SHALL BE RATED AS SHOWN ON PLANS.
5. ENCLOSURES SHALL BE A MINIMUM OF NEMA 3/IP54 WITH SEAMLESS DOOR GASKETS AND AN INTEGRAL DOOR/PANEL RATED AS INDICATED ON THE COMBINER BOX SCHEDULES.
6. ALL WIRE TERMINATIONS/LUGS SHALL BE LISTED FOR 90°C FIELD TERMINATIONS.
7. COMBINER BOXES INCLUDING DISCONNECT AND FUSES SHALL BE LISTED FOR CONTINUOUS OPERATION AT 100% OF IT'S COLLECTOR BUS/DISCONNECT RATING.
8. PROVIDE UNITS WITH INTEGRAL DC SURGE PROTECTION DEVICES RATED FOR/NOMINAL DISCHARGE CURRENT (8/20 µS) AND MAXIMUM CONTINUOUS OPERATING VOLTAGE OF 1500VDC.
9. EQUIPMENT SHALL HAVE A NAMEPLATE INSTALLED AND MOUNTED TO THE FRONT COVER AND INDICATE AT A MINIMUM: NUMBER OF INPUT CIRCUITS, AMPERE RATING OF INPUT CIRCUITS, VOLTAGE RATING, SHORT-CIRCUIT CURRENT RATING, AND INTEGRATED DISCONNECT AMPERE RATING.
10. PROVIDE TYPED PV WIRING DIRECTORY INDEX CLOSELY TO TERMINAL STRINGS AND THEIR ASSOCIATED FUSE/TERMINAL HOLDER.

GROUNDING

1. PROVIDE COMPLETE GROUNDING SYSTEM AS DESCRIBED HEREIN AND AS SHOWN ON THE DRAWINGS.
2. ALL GROUNDING COMPONENTS SHALL BE USED FOR THE PURPOSE THEY ARE INSTALLED FOR. COMPONENTS SHALL BE MANUFACTURED BY AMPHENOL, BURNDY, ITT BLACKBURN, ILSCO, OR JOSLYN (OR EQUAL).
3. GROUND RODS SHALL BE 3/4-INCH DIAMETER BY 10 FEET LONG COPPER CLAD STEEL. CONNECTIONS TO RODS SHALL BE COPPER, SIZE(S) AS INDICATED ON DRAWINGS. ALL GROUND CONNECTIONS EXPOSED TO THE ELEMENTS OR IN DIRECT CONTACT WITH THE EARTH SHALL BE TIN COATED COPPER.
4. ALL METALLIC CONDUITS, SUPPORTS, CABINETS, NON-CURRENT CARRYING PARTS OF EQUIPMENT AND METALLIC STRUCTURES SHALL BE SOLIDLY GROUNDED TO FORM A CONTINUOUS PERMANENT AND EFFECTIVE GROUNDED SYSTEM.
5. ALL WIREWAY, METAL ENCLOSURES, CABLE TRAYS AND SIMILAR PARTS OF THE ELECTRICAL INSTALLATION DESCRIBED HEREIN SHALL BE GROUNDED.
6. ALL GROUNDING ELECTRODE CONNECTIONS SHALL BE IRREVERSIBLE CRIMP TYPE. CONNECTIONS MADE BELOW GRADE SHALL BE EXOTHERMIC WELD OR IRREVERSIBLE CRIMP TYPE.
7. BOLTED CONNECTIONS TO GROUND BUS BARS SHALL BE MADE USING A (2) EYELET IRREVERSIBLE CRIMP CONNECTION ON THE GROUND CONDUCTOR.
8. THE SPECIAL ATTENTION OF THE CONTRACTOR IS CALLED TO METALLIC BUILDING COMPONENTS AND MECHANICAL PIPING WHICH MUST BE GROUNDED IN AN APPROVED MANNER ACCORDING TO THE NEC.
9. PROVIDE A SEPARATE GREEN INSULATED EQUIPMENT GROUNDING CONDUCTOR FOR EACH SINGLE OR THREE PHASE FEEDER AND EACH BRANCH CIRCUIT WITH A THREE PHASE PROTECTIVE DEVICE. INSTALL THE REQUIRED GROUNDING CONDUCTOR IN THE COMMON CONDUIT WITH THE RELATED PHASE/HOT AND NEUTRAL CONDUCTORS, WHERE PARALLEL FEEDERS ARE INSTALLED IN MORE THAN ONE RACEWAY, PROVIDE A SIZED ON WIRE INSULATED EQUIPMENT GROUNDING CONDUCTOR IN EACH RACEWAY.
10. SINGLE PHASE BRANCH CIRCUITS FOR LIGHTING, RECEPTACLES, MOTORS AND OTHER SIMILAR EQUIPMENT: PROVIDE SINGLE PHASE BRANCH CIRCUITS SERVING LIGHTING, RECEPTACLES, MOTORS, AND OTHER SIMILAR EQUIPMENT CONSISTING OF PHASE, NEUTRAL AND GREEN INSULATED EQUIPMENT GROUND CONDUCTOR INSTALLED IN A COMMON CONDUIT.
11. CONNECTIONS TO THE PV MODULES SHALL BE INSTALLED SUCH THAT REMOVAL OF A MODULE FROM THE STRING DOES NOT INTERRUPT THE GROUNDED CONDUCTOR TO ANOTHER STRING. SETS OF MODULES CONNECTED IN SERIES RATED AT 50 VOLTS OR MORE WITH OR WITHOUT BLOCKING DIODES, AND HAVING A SINGLE OVERCURRENT DEVICE SHALL BE CONSIDERED A STRING.
12. THE TOTAL RESISTANCE TO EARTH OF THE INSTALLED GROUNDING SYSTEM SHALL BE EQUAL TO, OR LESS THAN 5 OHMS. THE RESISTANCE TO EARTH OF THE COMPLETE GROUNDING SYSTEM SHALL BE MEASURED WITH AN EARTH RESISTANCE TESTER DESIGNED FOR THAT PURPOSE AT EACH GROUND CONNECTION TO ENSURE CONTINUITY OF GROUNDING SYSTEM.

FUSES

1. THE FUSES FOR PV STRING CIRCUITS SHALL BE CLASS CPV TYPE AS MANUFACTURED BY BUSSMAN, MERSEN, LITTELFUSE OR APPROVED EQUAL.
2. THE FUSES FOR PV FEEDERS SHALL BE CLASS J OR CPV TYPE AS MANUFACTURED BY BUSSMAN, MERSEN, OR LITTELFUSE OR APPROVED EQUAL.
3. FUSES SHALL BE INSTALLED SUCH THAT THE RATING IS VISIBLE WITHOUT REMOVAL.

NOT FOR CONSTRUCTION

SCALE: NONE

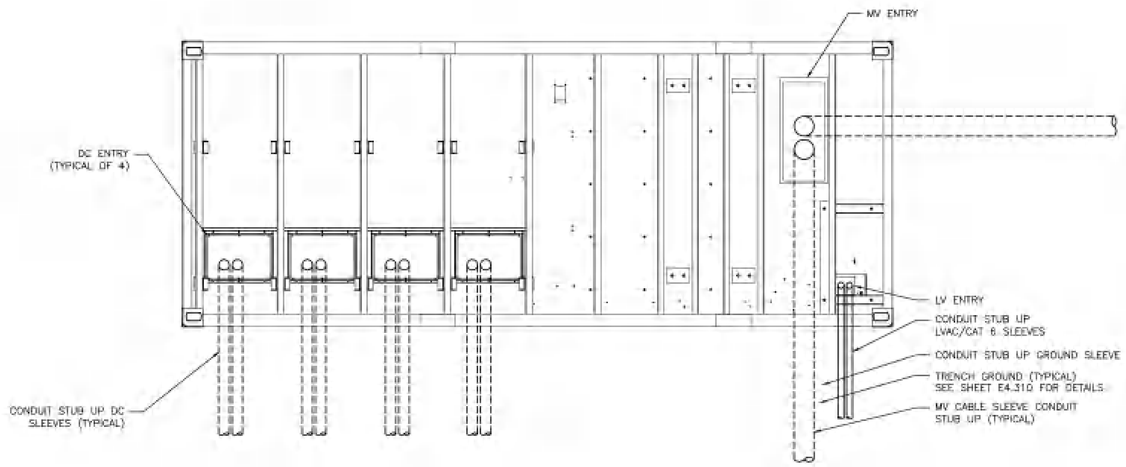
2 TYPICAL AUXILIARY RACK ELEVATION
SCALE: NONE



3 TYPICAL PCS AREA CONDUIT PLAN
SCALE: NONE

CONDUIT STUB-UP SCHEDULE	
CABLE TYPE	STUB-UP CONDUIT SIZE
MV #1000MCM	8"
MV #500MCM OR SMALLER	6"
TWO DC OUTPUT CIRCUITS	4"
LVAC CIRCUITS	1"
FIBER OPTIC	1"
CAT5E/CAT6	1"

NOTES:
1. REFER TO STRUCTURAL PLANS FOR EQUIPMENT OPENING LOCATIONS AND DIMENSIONS.
2. REFER TO CIVIL DRAWINGS FOR ALL GRADING.
3. ONLY (2) DC OUTPUT CIRCUITS SHALL BE IN (1) 4" CONDUIT SLEEVE.
4. ONLY (1) MEDIUM VOLTAGE CIRCUIT SHALL BE IN (1) 6" OR 8" CONDUIT SLEEVE.
5. ALL CONDUIT SLEEVES SHALL BE FOAMED BEFORE CLOSE OF CONSTRUCTION USING APPROVED CONDUIT SEALANT. APPROVED CONDUIT SEALANT NOT TO EXCEED DEPTH OF 4" FROM THE CONDUIT OPENING.
6. FILL ALL CONDUIT WINDOWS WITH GRAVEL AFTER CONDUIT AND EQUIPMENT ARE INSTALLED (TYP).
7. NOT ALL PCS AREAS WILL HAVE THE SAME NUMBER OF CONDUIT SLEEVES.
8. ABOVE GRADE CONDUIT AND FITTINGS WILL BE SCH 80. ALL BELOW GROUND WILL BE SCH 40.
9. INSTALLATION OF THE CABLE WITHIN THE PCS SKID IS BY SUNGROW. CONTRACTOR SHALL INSTALL THE DC WIRING FROM THE ARRAY, THE AC WIRING FROM THE PCS, AND THE COMMUNICATIONS WIRING FROM THE AUXILIARY RACK.
10. CONTRACTOR SHALL CONFIRM CONDUIT ENTRY LOCATIONS AND EQUIPMENT DIMENSIONS PRIOR TO INSTALLATION.
11. SECONDARY CONTAINMENT SHALL BE INSTALLED AT ALL PCS LOCATIONS. SEE SUNGROW DRAWINGS.
12. CONDUITS SHALL BE STUBBED OUT 5' MINIMUM FROM THE PCS SKID FOOTPRINT.
13. MV CONDUCTORS SHALL NOT BE RAN IN PARALLEL WHERE CLOSER THAN SPECIFIED ON E4.310 LONGER THAN 10'.

NOTES:
1. CONNECTING MORE THAN 27 MODULES IN SERIES MAY VIOLATE MANUFACTURER RATINGS AND COULD CAUSE INJURY OR EQUIPMENT DAMAGE.
2. ALL EXPOSED PV WIRE SHALL BE WRAPPED IN UL LISTED WIRE LOOM (OAE) WHEN TRANSITIONING FROM TRACKER TO MESSENGER SYSTEM.
3. MODULE LEAD CONDUCTORS SHALL BE SECURED TO MODULE FRAME WITH WIRE CLIPS.
4. SOURCE CIRCUIT CONDUCTORS SHALL BE TRANSITIONED TO THE WIRE MANAGEMENT SYSTEM SUCH THAT THERE IS NO TENSION THROUGHOUT THE TRACKER'S COMPLETE RANGE OF MOTION.
5. CONTRACTOR SHALL ENSURE THAT MODULE CONNECTION TYPES AND JUMPER CONNECTION TYPES ARE COMPATIBLE.
6. PV WIRE LEAVING TRACKER MUST NOT TOUCH OR COME CLOSE TO MESSENGER WIRE IN TRANSITION FROM TRACKER TO MESSENGER SYSTEM.
7. MODULE JUNCTION BOX LOCATIONS ARE SHOWN DIAGRAMMATICALLY FOR CLARITY.
8. MODULE HOMERUNS, DC HARNESS LEADS, AND PV MODULE LEADS SHOULD NOT SHADE REAR SIDE OF MODULE. WIRE MANAGEMENT SHALL BE DONE ALONG THE TORQUE TUBE IN A WAY TO MINIMIZE THE REAR SHADING ON BACK OF MODULES.
9. CONDUCTORS TRANSITIONING BETWEEN TABLES SHALL BE PROPERLY SECURED AND PROTECTED WITH UV RESISTANT SPLIT LOOM OR SPIRAL WRAP.
10. STRING HOME RUN CONDUCTORS SHALL USE HORIZONTAL PURLINS FOR CABLE MANAGEMENT AND SUPPORT. SECURE CONDUCTORS WITH UV RESISTANT CABLE TIES.

SCALE: NONE

SHEET NOTES:
1. ALL DRAWINGS ON THIS SHEET WERE SUPPLIED BY AWM. PLEASE CONSULT AWM FOR SYSTEM SPECIFIC QUESTIONS.
2. AT THE DISCRETION OF THE PROJECT TEAM, ADDITIONAL HANGERS CAN BE INSTALLED AT THE TRANSITIONS.
3. WHEN POSSIBLE, CABLE BENDS SHOULD OCCUR AT LEAST 4" FROM THE CABLE HANGER, ENSURING THAT CABLE IS STRAIGHT WHEN ROUTED NEAR A CABLE HANGER.
4. WHEN TRANSITIONING FROM EAST/WEST TO NORTH/SOUTH, WHEN POSSIBLE, ROUTE CABLES THROUGH SAME HANGER SADDLES ON ADJACENT HANGERS.
5. AT CABLE TRANSITIONS, ENSURE WIRE POSITIONING DEVICES OR CABLE TIES ARE USED BETWEEN CABLE HANGERS PRIOR TO AND AT THE TRANSITION POINT TO LOOSELY BUNDLE THE CABLING TOGETHER.
6. BEFORE BENDING PV CABLE AND PLACING CABLE IN HANGER, ENSURE THERE IS ENOUGH PV CABLE SLACK THAT CODE-COMPLIANT BEND RADIUS CAN BE MADE.
7. PV CABLE SHOULD BE LAID OUT PRIOR TO BEING PLACED INTO HANGERS. DO NOT PULL PV CABLE THROUGH CABLE HANGERS.
8. BEND PV CABLE BEFORE PLACING IT IN CABLE HANGER. CABLE HANGER SHOULD NOT BE USED TO BEND PV CABLE.

RULER IN INCHES

SHEET NOTES:
1. CONTRACTOR SHALL PULL CONDUCTOR(S) THROUGH THE CONDUITS PROVIDED BY THE SUBSTATION ENGINEER. CONTRACTOR SHALL PROVIDE CABLE TERMINATIONS IN ACCORDANCE WITH THE SUBSTATION ENGINEERING SPECIFICATIONS AND TERMINATE THE CONDUCTORS AT THE LOCATION(S) PROVIDED BY THE SUBSTATION ENGINEER. SCOPE DELINEATION LINE SHALL BE THE TERMINATION LOCATION.
2. PROVIDE MV JUNCTION BOX, EATON SEC38423F6382MOG FOR 2-WAY, SEC38423F6383MOG FOR 3-WAY, OR SEC39833F6384MOG FOR 4-WAY BOXES (OR EQUAL) WITH 18" FIBERGLASS GROUND SLEEVE.
3. SEE SHEETS E3.310 – E3.320 FOR FEEDER SPECIFICATIONS, SIZES, AND LENGTHS.
4. ASSUMED MV CONDUCTOR SPOOL LENGTH OF 3000'. 2-WAY MV SECTIONALIZING CABINET REQUIRED EVERY 3,000' OF CONTINUOUS LENGTH.

	3A	537	32.09	7
	3B	541	32.35	7
REFER TO CABLE STUDY FOR ADDITIONAL INFORMATION.				

TABLE 2: MV FEEDER STUDY CASE SCHEDULE	
CASE	DESCRIPTION
1	SINGLE CABLE IN INDIVIDUAL TRENCH, DIRECT BURIED, 36" BELOW GRADE
2	SEVEN CIRCUITS IN PARALLEL - SUBSTATION COLLECTION. MULTI-FEEDER IN INDIVIDUAL TRENCHES, DIRECT BURIED, 36" BELOW GRADE, 96" ON CENTER SPACING, DIFFERENT FEEDER SIZES. INCLUDES A BESS FEEDER THAT RUNS PARALLEL TO THE PV CIRCUITS AND IS MODELED AS A 90°C THERMAL SOURCE.
3A	SIX CIRCUITS IN PARALLEL, 96" SEPARATION, MULTI-FEEDER IN INDIVIDUAL TRENCHES, DIRECT BURIED, 36" BELOW GRADE, DIFFERENT FEEDER SIZES.
3B	FOUR CIRCUITS IN PARALLEL 72" SEPARATION, MULTI-FEEDER IN INDIVIDUAL TRENCHES, DIRECT BURIED, 36" BELOW GRADE, DIFFERENT FEEDER SIZES. FOR THIS CASE THE ORDER OF THE CIRCUITS IN THE TRENCH MUST BE MAINTAINED AS SHOWN IN TABLE 3.5.3-2 TO OBTAIN THE REQUIRED AMPACITY.
5	NINE DC CIRCUITS IN TWO TRENCHES, FIVE IN ONE AND FOUR IN THE OTHER, 9" SEPARATION, DIRECT BURIED, 30" BELOW GRADE. PASSING UNDERNEATH THEM ARE TWO MV CABLES IN PARALLEL, 48" ON CENTER SEPARATION, MULTI-FEEDER IN INDIVIDUAL TRENCHES, DIRECT BURIED, 48" BELOW GRADE. SEE CYMCAP REPORT IN APPENDIX C FOR A DIAGRAM.

SAM SIMULATED VALUES	
MAXIMUM ISC CURRENT [A]	15.79
MAXIMUM IMP CURRENT [A]	14.83
MAXIMUM STRING VOC [V]	1492.45

THE STRING MAX CURRENT IS CALCULATED BY SYSTEM ADVISOR MODEL SIMULATION PROGRAM PROVIDED BY THE NATIONAL RENEWABLE ENERGY LABORATORY, REFERENCE SAND 2004-3535, PHOTOVOLTAIC ARRAY PERFORMANCE MODEL, AS ALLOWABLE BY NEC 690.8(A)(1)(2), THE CALCULATED CURRENT IS 89.9% OF THE VALUE USING 690.8(A)(1)(1).

NOTE: ALL DC CALCULATION AND SIMULATIONS ARE BASED ON THE 560W MODULE BIN CLASS; HOWEVER, 545W, 550W AND 555W MODULEs ARE INTENDED FOR SITE CONSTRUCTION.

DC STRING WIRING CALCULATION - [MESSENGER WIRE]	SINGLE STRING	TRUNK BUS (500MCM)
STRING IMAX SIMULATED [A]	15.79	15.79 x (20) STRINGS MAX
MAX CONTINUOUS FAULT CURRENT FROM PARALLEL SOURCES [AMPS]	15.79	47.37
1.25x MAX CONTINUOUS FAULT CURRENT [AMPS]	19.74	59.21
MAX # OF WIRES PER BUNDLE	8	2
DERATE FOR # OF CONDUCTORS IN A BUNDLE	0.7	1
MAX AMBIENT TEMPERATURE	36	36
TEMPERATURE DERATE	1.00	1.00
WIRE GAUGE	CU #10	AL 500MCM
90 DEG AMPACITY WITHOUT COU ADJUSTMENT [AMPS]	40	458
IS 90 DEG AMPACITY WITHOUT COU ADJUSTMENT >= 1.25x MAX CIRCUIT CURRENT?	YES. COMPLIES WITH 690.8(B)(1)	YES. COMPLIES WITH 690.8(B)(1)
90DEG AMPACITY WITH COU ADJUSTMENT [AMPS]	34.3	458.0
IS 90DEG AMPACITY WITH COU ADJUSTMENT >= 1.0x MAX CIRCUIT CURRENT?	YES. COMPLIES WITH 690.8(B)(2)	YES. COMPLIES WITH 690.8(B)(2)
PV SOURCE CIRCUIT (SIMULATED) FUSE RATING [AMPS]	25	400
AVAILABLE FAULT CURRENT FROM ALL PARALLEL SOURCES [AMPS]	15.79	47.37
IS FUSE RATING >= 1.25x MAX CIRCUIT CURRENT?	YES. COMPLIES WITH 690.9(B)	YES. COMPLIES WITH 690.9(B)

NOTE: #10AWG CONDUCTOR SIZE IS NOT INCLUDED IN TABLE 310.15(B)(20), THEREFORE THE VALUE SHOWN IN THE TABLE ABOVE HAS BEEN DETERMINED VIA EXTRAPOLATION.

1 DC FEEDER SCHEDULES
SCALE: NONE

NOT FOR CONSTRUCTION

DRAWING TITLE: DC FEEDER SCHEDULES

DRAWING #: E3.530

PROJECT: SOLAR GENERATION SYSTEM AT CHISME SOLAR - TX-PS-2701 8987 CR 266 BROWN & MILLS COUNTY, TX 76801

PREPARED FOR: LANGAN, LLC 2555 TOWN & COUNTRY DRIVE, SUITE 740 HOUSTON, TX 77024 WWW.LANGAN.COM

PREPARED BY: PURE POWER ENGINEERING 717 IRON STREET, HUBBARD, TX 76648 WWW.PUREPOWER.COM

PAGE SIZE: 36" x 24" PROJECT #: TX-PS-2701

NO	DESCRIPTION	DATE
1	ISSUED FOR PERMIT	06/26/2024
2	ISSUED FOR PERMIT	08/23/2024
3	ISSUED FOR ELECTRICAL DESIGN	09/11/2024

SHEET NOTES:
1. DISTANCES ARE ONE-WAY ESTIMATES GENERATED FOR ENGINEER'S CALCULATIONS. CONTRACTOR IS RESPONSIBLE FOR OWN MEASUREMENTS AND TAKEOFFS.

DC FEEDER SCHEDULE

OVERALL CIRCUIT PARAMETERS:									FEEDER UNDERGROUND			FEEDER ON MESSENGER WIRE			VOLTAGE DROP CALCS						
DC FEEDER ID	COMBINER BOX NUMBER	QTY OF STRINGS	OPERATING VOLTAGE Vmp [V]	STRING MAXIMUM CURRENT, SIMULATED Isc [A]	FEEDER MAXIMUM CURRENT [A]	FEEDER MAXIMUM CURRENT X 1.25 [A]	DCFD SIZE [A]	CONDUCTORS PER POLE	CONDUCTOR SIZE (UNDERGROUND)	MINIMUM GROUND SIZE (UNDERGROUND)	LENGTH [FT] (UNDERGROUND)	CONDUCTOR SIZE (MESSENGER WIRE)	MINIMUM GROUND SIZE (MESSENGER WIRE)	LENGTH [FT] (MESSENGER WIRE)	FEEDER OPERATING CURRENT (STRING Imp) [A]	SEGMENT VOLTAGE DROP [%] (UNDERGROUND)	SEGMENT VOLTAGE DROP [%] (MESSENGER WIRE)	SEGMENT VOLTAGE DROP [%] (STRING TO FEEDER)	TOTAL VOLTAGE DROP [%]	TOTAL WATT LOSS [%]	WEIGHTED AVERAGE PCS VOLTAGE DROP [%]

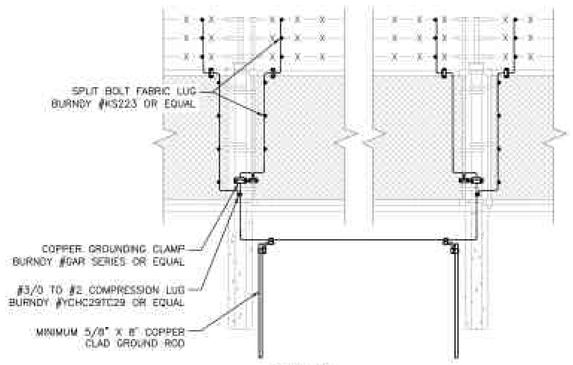
FENCE GROUNDING NOTES:
(1) COORDINATE EXACT GROUNDING HARDWARE REQUIREMENTS WITH FENCE CONTRACTOR. GROUNDING HARDWARE SHALL BE COMPATIBLE WITH PHYSICAL ASPECTS OF THE FENCE DESIGN (I.E. POST DIAMETER).
(2) DETAILS ARE SHOWN FOR ELECTRICAL GROUNDING COORDINATION ONLY. REFER TO CIVIL DRAWINGS FOR FENCE SPECIFICATIONS.



ELEVATION

1 GROUNDED FENCE GATE
SCALE: NONE

NOTES:
1. SURVEYOR SHALL MARK ALL ENDS OF ALL GROUNDED FENCE SEGMENTS WITH WOODEN STAKE PRIOR TO CONSTRUCTION.
2. FENCE SECTIONS SHALL BE GROUNDED WHEN HV OVERHEAD TRANSMISSION LINE IS WITHIN 100' OF ANY PART OF FENCE.
3. ALL FENCE GATES SHALL BE GROUNDED PER DETAIL 1/E411.

SHEET NOTES:
1. NATIVE BACKFILL CONTAINING NO ROCKS LARGER THAN 3/4", FREE FROM SHARP ANGULAR SUBSTANCES AND ORGANIC MATERIAL, SHALL BE COMPACTED IN THE FOLLOWING MANNER:
   1.1. NON-ROADWAYS: 85% STANDARD PROCTOR
   1.2. ACCESS ROADWAYS: 95% STANDARD PROCTOR BELOW THE STABILIZED SUBGRADE. REFER TO GEOTECHICAL REPORT AND CIVIL DRAWINGS FOR ACCESS ROADWAY CONSTRUCTION REQUIREMENTS.
   1.3. AS AN ALTERNATE, PLOW INSTALLATION IS ALLOWED.
2. WHERE MV CABLE CROSSES ANOTHER OBJECT, ROUTE BELOW AS SHOWN AND TRANSITION FIBER HORIZONTALLY ADJACENT TO THE CABLE THROUGHOUT THE LENGTH OF THE CROSSING.
3. TRENCH EDGE SHALL BE BE LOCATED A HORIZONTAL DISTANCE AWAY FROM ANY STRUCTURAL ELEMENT EQUAL TO OR GREATER THAN THE DEPTH OF THE TRENCH.
4. ALL INNERDUCTS/BORE CONDUITS SHALL BE HDPE, SDR-13.5.
5. SUBSTATION ENTRANCE PLAN VIEW TO BE INCORPORATED IN 60% DESIGN PACKAGE.

SG4400UD-MV-US

MV One-connected PV Inverter for 1500Vdc System

HIGH YIELD

- Advanced three-level technology
- Full power operation at 40 °C (104 °F)
- Effective cooling, wide operation temperature

EASY O&M

- Integrated current, voltage and MV parameters monitoring function for fast analysis and trouble shooting
- Modular design, easy maintenance

SAVED INVESTMENT

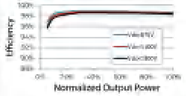
- Low transportation and installation cost due to 2H-foot container packaging
- DC 1500V system, low system cost
- 0.5 at night

GRID SUPPORT

- Compliance with multiple UL1741/UL1741 SA/SB, IEEE 1547, Rule 21 and REC now
- Low / High voltage ride through (0.00s/0.16s/0.32s/1.00s/1.20s/1.60s/2.00s/3.00s/10.00s/20.00s/30.00s/60.00s/300.00s/600.00s/3600.00s/7200.00s/10800.00s/ adjustable) / over voltage ride through (0.00s/0.16s/0.32s/1.00s/1.20s/1.60s/2.00s/3.00s/10.00s/20.00s/30.00s/60.00s/300.00s/600.00s/3600.00s/7200.00s/10800.00s/ adjustable) / stop
- Active & reactive power control and power ramp rate control

CIRCUIT DIAGRAM

EFFICIENCY CURVE



MEDIUM VOLTAGE CABLES

PowerGuard® Al 35 kV 100% TR-XLPE CN XLPE UL Type MV-105, AEIC CS8 - Physical Properties (Compact)

APPLICATIONS

PowerGuard® cables are intended for use in wet or dry locations for distribution of single or three phase medium-voltage power. These cables may be installed in ducts, exposed to sunlight or direct buried.

CONSTRUCTION

Single conductor cable with filled strand blocked conductors, triple-extrusion, dry-cured insulation system consisting of a semi-conducting conductor shield, high dielectric strength PowerGuard® XL, non-retarded, cross-linked polyethylene (TR-XLPE) insulation, then metal-free, semi-conducting insulation shield, water swellable tape and water blocking agents, black, encapsulating cross-linked polyethylene (XLPE) jacket.

Conductor:

1,000 kcmil and Smaller - Compact stranded aluminum alloy 1350.

Larger than 1,000 kcmil - Compressed round stranded aluminum alloy 1350.

Stranded conductors are water-blocked to conductor filling compound.

Conductor Shield:

Extruded semi-conducting, semi-conducting cross-linked polyethylene (XLPE) shield which is then bonded from the conductor shield to the insulation.

Insulation:

Polyolefin, Tree Retardant Cross-linked Polyethylene (TR-XLPE) - 100% insulation level.

Insulation Shield:

Extruded semi-conducting, semi-conducting cross-linked polyethylene (XLPE) shield with non-stick adhesion to the insulation, providing the required bonding between insulation integrity and ease of stripping.

Metallic Shield:

Solid bare annealed copper wires helically applied and uniformly spaced.

Water-blocking agents:

Applied over the insulation shield and around the concentric neutral wires to resist longitudinal water penetration. Longitudinal water penetration shall be tested in accordance with the latest edition of ICEA T-34-664 except that the moisture requirement is 15 psig for 1 hour.

Outer jacket:

An extruded black, UV-protected, cross-linked polyethylene (XLPE) jacket, meeting the physical requirements of Table 1, below, when tested by the methods specified in ANSI/ICEA S-94-649. The jacket shall be free-stripping and not interfere with an intimate contact between the metallic wires and the underlying extruded insulation shield. The jacket is sunlight-resistant and marked. The jacket shall contain a print legend marking, sequential length (meter or feet) marking and three longitudinal extruded ridges.

Typical Tensile Strength and Elongation Properties
Unaged Tensile Strength, minimum (PSI)	1800
Aged** Tensile Strength, minimum retention (%)	75
Unaged Elongation, minimum (%)	300
Aged Elongation, minimum retention (%)	75
Heat Distortion 1 hr @ 130°C, Maximum (%)	30

* Aged for 168 hrs @ 121°C

Typical Electrical Properties
Voltage	105°C
Emergency*	140°C
Short-Circuit – Insulated Conductors	250°C
Short-Circuit – Bared Wires	150°C

* Operation at the emergency overload temperature shall not exceed 1,000 hours cumulative during the lifetime of the cable.

STANDARDS

These cables are manufactured and tested to meet or exceed the following standards:

- ASTM B400 – Compact Round Concentric-Lay-Stranded Aluminum 1350 Conductors.
- ASTM B231 – Concentric-Lay-Stranded Aluminum 1350 Conductors.
- ASTM B3 – Soft or Annealed Copper Wire.
- ICEA S-94-649 – Concentric Neutral Cables Rated 5 Through 46 kV.
- ICEA T-33-690 – Test Method for Conducting Longitudinal Water Penetration Resistance Tests on Sealed Conductors.
- ICEA T-34-664 – Test Method for Conducting Longitudinal Water Penetration Resistance Tests on Longitudinal Water Blocked Cables.
- ICEA P-45-482 – Short Circuit Performance of Metallic Shields and Sheaths on Insulated Cable.
- AEIC CS8 – Extruded Dielectric Shielded Power Cables Rated 5 Through 46 kV.
- UL 1072 – Medium-Voltage Power Cables.

LISTINGS AND CERTIFICATIONS

- UL Listed as Type MV-105 – File E179691

NOTES

1. Dimensions and weights are subject to standard manufacturing tolerances and are subject to change without notice.
2. Cables are manufactured, tested and marked to meet or exceed the requirements in ANSI/ICEA S-94-649 for concentric neutral cable rated 5-46 kV in the latest revision of AEIC CS8.
3. The concentric neutral size is calculated based on the equivalent short circuit capabilities for 1/3 PE jacketed cable (ICEA P-45-482).
4. Utilizing a 105°C normal operating conductor temperature will increase cable ampacity rating, but will reduce the cable fault capability. If the user plan is an operating these cables at 105°C conductor temperature for normal operation and 140°C for emergency overload, please contact American Wire Group for the applicable cable ampacity and shield fault capability ratings.
5. Migration of soil moisture away from the cable is more likely at the higher operating conductor temperature and can result in an increase in soil thermal resistivity, resulting in an increase in conductor and soil temperature.

Messenger Cable Hangers

Performance Features

- Safe, reliable, easy-to-install solution for above-ground wire management
- 35+ year lifetime
- Up to 4.5 ft hanger spacing
- One step crimping installation
- Highly customizable to meet various design needs
- Excellent corrosion resistance
- High mechanical strength
- Retention features keeps the cable in the hanger
- Designed with a large radius at every cable contact surface
- Supports up to 1000mcm conductor

Detail	Specification
Part Number	31-0156-01
Material	Corrosion Resistant Die-Cast Aluminum
Messenger Cable Compatibility	1/0 (Ø0.398in) AAAC, ACSR, or AAC
Certified Load Rating	20lbs per saddle
Certifications	UL1565; UL2239; UL2703 Conformance
Cable Capacity	Top Saddles – String Cabling and Tracker Cabling; All other Saddles – 2X 1000mcm each, up to 12 total
Installation Method	Crimp Hanger Hook onto Messenger Cable
Part Weight	0.43 lbs
Shipping and Packaging	100pc per box

Dimensions and typical cable arrangement

PV Array Characteristics

Array #1 - Feeder 100

PV module

Manufacturer	Longi Solar
Model	LR5-72HBD-545M (2) Bifacial
(Original PVsyst database)	
Unit Nom. Power	545 Wp
Number of PV modules	8007 units
Nominal (STC)	37.24 MWp
Modules	1853 string x 27 In series
At operating cond. (50°C)	
Pmpp	34.04 MWp
U mpp	1016 V
I mpp	33549 A

Inverter

Manufacturer	Sungrow
Model	SG4400-U/SMV-US
(Original PVsyst database)	
Unit Nom. Power	4400 kWac
Number of inverters	6 units
Total power	26400 kWac
Operating voltage	515-1337 V
Pnom ratio (DC:AC)	1.41
Power sharing within this inverter	

Array #2 - Feeder 200

PV module

Manufacturer	Longi Solar
Model	LR5-72HBD-545M (2) Bifacial
(Original PVsyst database)	
Unit Nom. Power	545 Wp
Number of PV modules	19402 units
Nominal (STC)	10.58 MWp
Modules	720 string x 27 In series
At operating cond. (50°C)	
Pmpp	9684 kWp
U mpp	1024 V
I mpp	9732 A

Inverter

Manufacturer	Sungrow
Model	SG4400-U/SMV-US
(Original PVsyst database)	
Unit Nom. Power	4400 kWac
Number of inverters	2 units
Total power	8800 kWac
Operating voltage	515-1337 V
Pnom ratio (DC:AC)	1.20
Power sharing within this inverter	

PV module

Manufacturer	Longi Solar
Model	LR5-72HBD-550M (2) Bifacial
(Original PVsyst database)	
Unit Nom. Power	550 Wp
Number of PV modules	320980 units
Nominal (STC)	177.9 MWp

Inverter

Manufacturer	Sungrow
Model	SG4400-U/SMV-US
(Original PVsyst database)	
Unit Nom. Power	4400 kWac
Number of inverters	33 units
Total power	145200 kWac

Array #3 - Feeder 300

Number of PV modules	80585 units
Nominal (STC)	44.33 MWp
Modules	2985 string x 27 In series
At operating cond. (50°C)	
Pmpp	40.81 MWp
U mpp	1020 V
I mpp	39917 A

Number of inverters	8 units
Total power	35200 kWac
Operating voltage	515-1337 V
Pnom ratio (DC:AC)	1.42
Power sharing within this inverter	

Array #4 - Feeder 400

Number of PV modules	80585 units
Nominal (STC)	44.33 MWp
Modules	2985 string x 27 In series
At operating cond. (50°C)	
Pmpp	40.81 MWp
U mpp	1020 V
I mpp	39917 A

Number of inverters	8 units
Total power	35200 kWac
Operating voltage	515-1337 V
Pnom ratio (DC:AC)	1.26
Power sharing within this inverter	

PV Array Characteristics

Array #5 - Feeder 500

Number of PV modules	69605 units	Number of inverters	8 units
Nominal (STC)	44.39 MWp	Total power	8000 kWac
Modules	2085 string x 27 in series		
At operating cond. (50°C)		Operating voltage	615-1037 V
Pmpp	40.61 MWp	Pnom ratio (DC:AC)	1.55
U mpp	1029 V	Power sharing within this inverter	
I mpp	39417 A		

Array #6 - Feeder 600

Number of PV modules	69605 units	Number of inverters	8 units
Nominal (STC)	44.39 MWp	Total power	8000 kWac
Modules	2085 string x 27 in series		
At operating cond. (50°C)		Operating voltage	615-1037 V

1 INTRODUCTION

1.1 SUMMARY

The Project is a 176 MWac/215.47 MWdc/147 MW export limit photovoltaic generating facility.

Equipment ID	Make	Model	Type	Quantity
Module	Longi Solar	LR5-72HBD-545M LR5-72HBD-550M LR5-72HBD-555M	Bifacial	See design drawings
Inverter	SUNGROW	SG4400UD-MV	Central	40

Table 1.1-1: Major Equipment List

The facility utilizes a 34.5kV collector system with direct buried medium voltage (MV) and DC feeders. Strings and trunk bus are installed in an above ground messenger support system.

See Appendix D for applicable codes and standards.

1.2 BACKGROUND AND SCOPE

The purpose of this study is to determine the maximum current a cable can sustain without the deterioration of any of its electrical or mechanical properties. This study along with the Short Circuit study identifies the minimum required MV cable specifications.

The scope of this study will include details of the project-specific analysis of the conductor ampacities for the AC and DC systems associated with the project.

PRELIMINARY

2 METHODOLOGY

Above ground conductors are sized using the NFPA Chapter 3 requirements. The conductors between low voltage and medium voltage cables are sized using the CYMCAP application.

2.1 SOFTWARE

The ampacity analysis was performed using CYMCAP 8.0.

CYMCAP is a Windows based software application designed to perform thermal analysis of cables.

The program utilizes the iterative technique Newton-McGrath method and uses the Neher and McGrath international standards to establish cable ampacity based on load conditions, cable construction, and routing. The program provides the maximum current a cable can carry while not going over a large conductor temperature.

2.2 ENGINEERING DESIGN INPUTS

The design used in CYMCAP models the conductor configuration shown in the Right Width Engineering design drawings. CYMCAP excludes cross sections of circuits and the design drawings are used to identify many sections that represent points in the circuit runs that need to be evaluated. If these points pass the evaluation, then it is assumed the rest of the circuit runs will also pass.

If available for the calculations, the PV/grid annual hourly production estimate is used to obtain and validate the cable loading factor used in the cyclic steady state analysis.

If available for the calculations, the Pure Power Engineering Short Circuit Cable withstand study will be used to provide conductor normal (CN) sizes. In any instances where the short circuit study has not been completed, reasonable values for the LN conductors will be assumed.

2.3 STEADY STATE & TRANSIENT ANALYSIS

2.3.1 Steady State Analysis

The steady state analysis assumes constant current loading. The techniques and formulas outlined in the international standards IEC 60287, IEC 60853 and IEC 60949 issued by the International Electrotechnical Commission are used throughout the calculations. CYMCAP also includes analysis options, computation methods, and cable configurations that are not directly addressed in the IEC standards.

Since generators that like ely do not operate under a steady state condition, a purely steady state analysis of cable loading would be overly conservative. To consider the daily cycling of generators a cyclic loading analysis must be carried out.

2.3.2 Cyclic Loading Analysis

Cyclic loading analysis is a simple way of approximating cable loading diversity by using a cable loading factor (LF) to consider load variations that take place during a period. The LF is the ratio of the average load over a period to the peak load occurring in that period. These load variations allow higher peak loading of the cable since a cooling off period is provided. When performing the cyclic loading analysis, the Neher-McGrath method is used.

For a 10% study or a study where hourly data is not available, a conservative approach using an LF of 0.7 will be used for the analysis. This has been determined from analysis with other customers to provide a reasonably conservative cable loading which is higher than a purely steady state analysis.

The result of the cyclic loading analysis is cable loading in Amps that results in a target cable temperature using the indicated LF. The cable conductor temperature will be less than the cable rated temperature.

2.2.3 Transient Analysis

Transient loading analysis is a more detailed loading analysis than a cyclic loading analysis. In a transient analysis a load profile is constructed that represents the loading of the cable over a period in one-hour increments on a per unit basis. The PV system transient analysis is only performed if PVSyst hourly production data is available.

The data used to build the transient load profile is the PVSyst production data report E_Grid (kW) data as a proxy for current loading in the AC and DC cables. The PVsyst annual hourly production data is analyzed to determine the day with the highest LF and that curve is used to build a load profile over 24 hours.

Asking 24-hour periods together will provide a worst case loading profile for any total period needed.

The initial conductor size, ampacity and temperature for the transient analysis are based on the steady state cyclic analysis. The cyclic LF is adjusted in an iterative process checking that the transient analysis shows that a long-term cable temperature equal to or less than 90% of the cable rated temperature is maintained past the 1,500-hour mark for MV cables and the 500-hour mark for DC conductors. The first level found to result in a cable temperature that will peak at a point equal to or less than 90% of the cable rate temperature in the first 48 hours and never under the cable rating after that. The resulting cable ampacity is typically higher than that found using the cyclic rating analysis alone. Using this analysis technique has been found to provide materially comparable results compared to a full transient study while requiring much less program run time.

2.4 ENVIRONMENTAL INFORMATION

Evaluation of the site environmental conditions for the ampacity simulation and other calculations presented herein contingent upon the environmental data made available in the geotechnical report and industry accepted meteorological datasets. The applicable data will be reviewed to identify the maximum soil temperature at typical cable burial depths, selection of the appropriate soil thermal resistivity (thermal rating) and selection of the ambient air temperatures.

The data sources typically used are the geotechnical report for the site, NOAA (National Oceanic and Atmospheric Administration), and USDA Natural Resources Conservation Service (NRCS) regional SDAN map data.

2.4.1 Soil Data

Soil Temperature

Soil data from the SDAN mapping closest to the project site can be used to find historical soil data. The maximum average temperature found from the hourly mean soil temperature data at a depth chosen to represent the cable installation depth over a historical period.

Soil Moisture

Soil data from the SDAN mapping closest to the project site can be used to find historical soil data, or data from the geotechnical report may be used if available. If the SDAN data is used, then the minimum average moisture is found from the hourly mean soil moisture data at a depth chosen to represent the cable installation depth over a historical period.

Soil Thermal Resistivity

Thermal resistivity data comes from the geotechnical report.

2.4.2 Soil Zones

The site is divided up into three zones:

Zone 1: Native undisturbed soil

Zone 2: Backfill, may be native soil or soil from off site

Zone 3: This zone contains the cables. This is the dry out box where the soil moisture is driven out by the heated cables and a moisture value of 0% is used. The boundaries are 1ft from the center, making the box 2ft on a side.

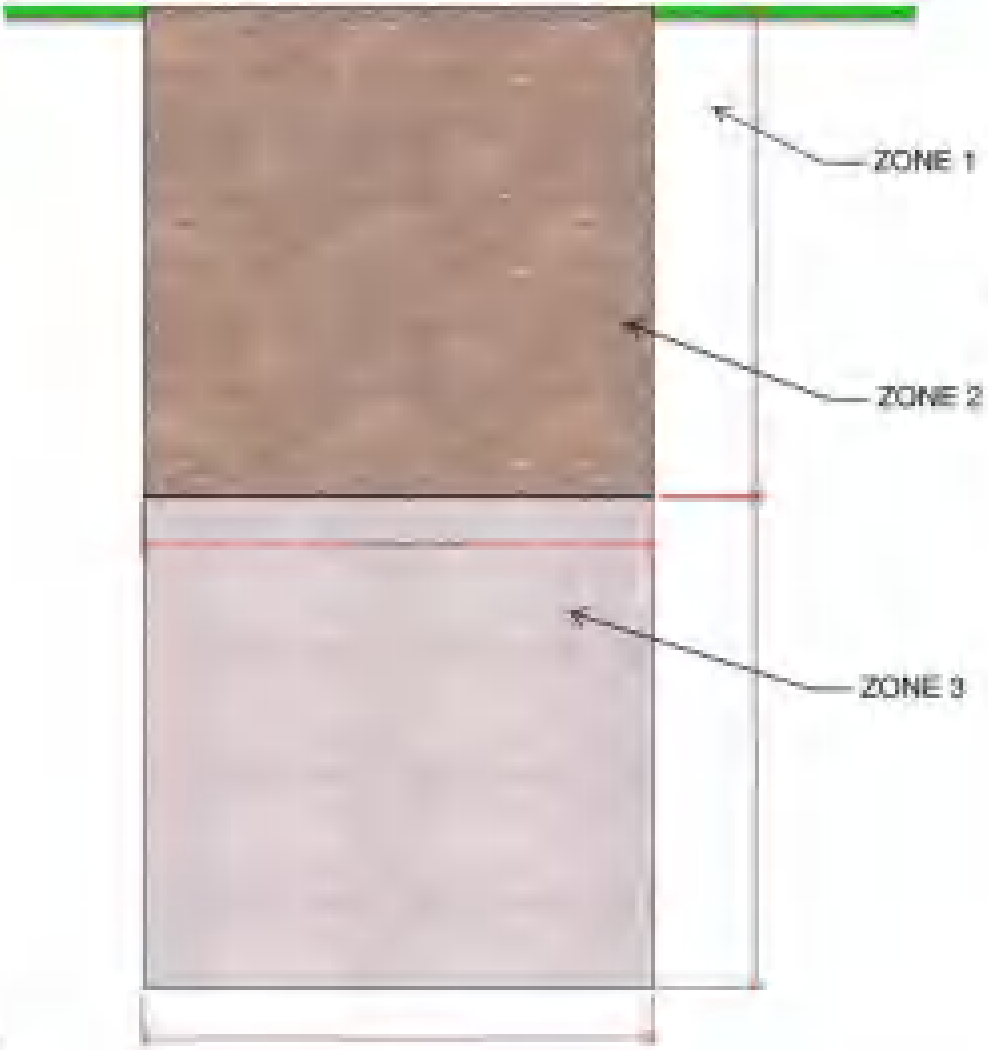

Figure 2.4.2: Soil Zones

2.5 UNDERGROUND CONDUCTOR LOCATION SELECTION

CYMCAP simulates cables in a cross section of the cable run. Therefore, the engineer must select cross sections in the site to simulate which are representative of the worst-case examples for ampacity calculation.

3 STUDY MODEL

3.1 ENGINEERING DESIGN INPUT

The following engineering documents are used as the basis for the CYMCAP model in this study.

- Pure Power Engineering electrical design 2025-09-05 Chisme PV Electrical 60% dated 9/5/2025
- PVSyst 8760 production data PPE-11055_01 - Chisme_30p_8760_4.11.25 dated 4/11/2025
- Pure Power Engineering Short Circuit study 2025-09-05 Chisme Solar - Short Circuit Study – 60% dated 9/5/2025
-

3.2 PROJECT LOCATION

The site location is Brown County, Texas. 31.578332° -98.834972°. The weather station will be selected for SCAN sites nearest to the project location/address.

3.3 SOIL MODEL

3.3.1 Soil Historical Data

The SCAN station used is named Stephenville. Figure 3.3.1-1 shows the location of the Project and the SCAN site.

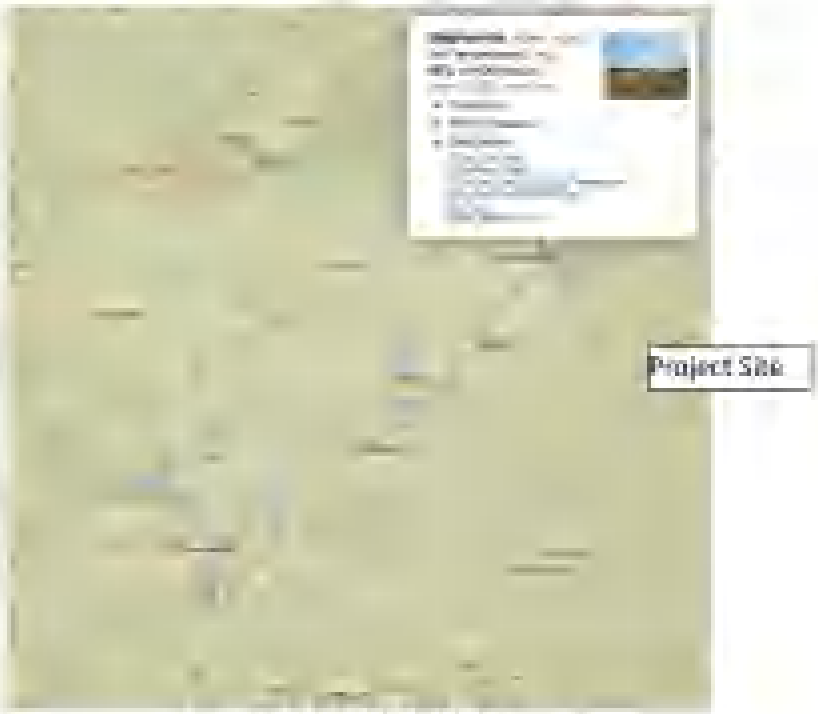

Figure 3.3.1-1: SCAN Station

Soil Temperature

The SCAN site hourly mean soil temperature historical data shown in Figure 3.3.1-2 at a conservative 40-inch depth and shows a maximum mean hourly temperature of 90°F (32.2°C).

Figure 3.3.1-2: Soil Temperature at 40-inch Depth

Soil moisture

The SCAN site hourly mean soil moisture historical data is shown in Figure 3.3.1-3 at a conservative 40-inch depth and shows a minimum average moisture of 8.8%.

Figure 3.3.1-3: Soil Moisture at 40-inch Depth
