11.3. End-user must provide SUNGROW service personnel with access to the Site or any special instructions for Site access. SUNGROW will not be held liable if access to the Site is not granted. If a second visit to the Site is required due to lack of access, the warranty holder will bear any costs.

12. OTHER LIMITATIONS

12.1. Sungrow's obligations under this Warranty are valid only if the End-user complies with its payment obligations under the applicable purchase order. If the End-user is in breach of its payment obligations for the applicable Product, in accordance with the contract terms under which the Product is sold, Sungrow shall have no Warranty obligations with respect to such Product until the payment has been made in full to Sungrow. The Warranty Period will not be extended because of late payments.

12.2. The termination of this Warranty does not release either Party from the obligation to make outstanding payments due at termination of the Warranty to the other Party.

13. COSTS NOT RELATED TO WARRANTY

13.1. The End-user shall be invoiced for, and shall pay for, all services not expressly provided for by the terms of this Warranty, including without limitation, Site calls involving an inspection that determines no corrective maintenance is required.

13.2. The End-user shall be invoiced for, and shall pay, any costs for replacement equipment, installation, materials, freight charges, travel expenses or labor of Sungrow representatives to the extent such costs and expenses are outside the terms of this Warranty.

13.3. If, after performing Warranty work, Sungrow determines that the cause of the defect was not covered under this Warranty, Sungrow reserves the right, in its sole and absolute discretion, to charge the End-user for all reasonable costs incurred by Sungrow in performing the work.

13.4. Any request from the End-user for accompaniment by their own maintenance team during repair services, whether under warranty or out-of-warranty, will be at the End-user's expense.

© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

14. WARRANTY CONTRACT EFFECTIVE DATE, APPLICATION AND VALIDITY

14.1. This Warranty is valid as of the date of the applicable Purchase Order or purchase agreement between the parties and shall be applicable to all those Products purchased under such Purchase Order or purchase agreement. Sungrow reserves the right, in its sole and absolute discretion, to make any changes and modifications to this Warranty, without prior notice, for future, unsigned purchase orders or contracts, in addition to the right to decide whether to accept new contracts or annual contract renewals. Sungrow will notify the Buyer within 30 days of any changes and modifications to this Warranty if the Buyer and Sungrow still have an active Master Supply Agreement in place.

15. Out-of-Warranty Service

15.1. If the Product is defective but not covered under warranty, Sungrow will, at its discretion, offer a paid repair. The End-user may contact Sungrow to organize the paid repair service. Sungrow will provide a quotation covering inspection, labor, freight, materials, waste disposal, and management costs for the repair. Sungrow warrants the workmanship of the repair for six (6) months.

16. WARRANTY TRANSFER

16.1. The Warranty is transferable when the Product remains installed in its original location. This means, when the ownership of the Products has changed, the new owner shall continue to benefit under this Warranty if the new owner maintains the Product at its original location. Further, a lessee or assignee may obtain consent from the owner of the Products and make a claim under this Warranty. If the Products are relocated to another site, whether the warranty is transferable to the new site will be subject to a site inspection by Sungrow at the new site prior to installation with the written consent. For the avoidance of doubt, Sungrow shall not bear any costs associated with the re-installation of the Products such as installation, commissioning, site inspection by Sungrow, etc.

16.2. When Sungrow replaces a defective Product, the remaining Warranty Period of the original Product will be transferred to the replaced Product. There are no extensions applied on repair or replaced Products.

16.3. Notwithstanding the requirements of this article, this Warranty is not transferable to:

(a) More than one (1) Entity at a time.

(b) Any battery manufacturers or system integrators regardless of size, type or applications including, without limitation, ones used for electric vehicles, automotive applications and/or stationary storage applications.

17. CONDITIONAL TERMS

The following terms and conditions will apply to the extent that the parties have not executed a purchase order or other applicable agreement containing similar terms. In the event of any conflict between the term of this Section 17, and the term of the parties' executed purchase order or purchase agreement, the purchase order or purchase agreement shall prevail.

18. LIMITATIONS ON LIABILITY.

To the fullest extent allowed under the law, this Warranty constitutes End-user's sole and exclusive remedy for claims against Sungrow in respect of defective or non- conforming Products hereunder and is in lieu of all other warranties, conditions, guarantees or representations from Sungrow relating to the Products hereunder, whether oral or written, express or implied, statutory or otherwise, in contract, tort or otherwise, including without restriction, any warranties of merchantability or of fitness for a particular purpose, and any such Warranty, condition, guarantee or representation is hereby excluded. In no event shall any claim, failure of any Product hereunder, or breach of this Warranty, render either party, its affiliates, subcontractors or suppliers liable to the other party or its affiliates for indirect or consequential damages or loss of use associated with warranty claims for lost profits or loss of revenues, or any associated equipment, cost of capital, cost of substitute equipment, facilities, services or replacement power, downtime costs, claims of End-user's customers for such damages, or for any other special, consequential, incidental, indirect or exemplary damages. Each party's total liability for any and all warranty claims and costs under this Warranty shall not exceed the total purchase price for the Product that is the subject of the claim.

19. FORCE MAJEURE.

19.1 Sungrow shall not be liable hereunder for any failure or delay in the performance of its obligations hereunder due to an event of Force Majeure. "**Force Majeure**" means an act of god or other cause which is beyond the reasonable control of the party whose performance is affected by such event and could not have been avoided by the exercise of reasonable prudence, including but not limited to: extreme natural disasters (e.g. earthquakes, floods, landslides); explosions; fire; pandemics or epidemics; destruction of machines; equipment, factories and of any kind of installation to the extent caused by an event of Force Majeure; terroristic attacks; nuclear accidents; war, civil war or similar uprising; general strike (or lock-out) of a regional or national nature that is not targeted at Sungrow.

19.2. In the event of the occurrence of any Force Majeure event, Sungrow shall notify the End-user immediately in writing of the invocation of this section, and Sungrow's obligations hereunder shall be suspended for the duration of such Force Majeure event; provided that Sungrow shall be obligated to use its commercially reasonable efforts to restore performance hereunder as soon as reasonably practicable, and provided, further, that if such event continues for more than ninety (90) days in the aggregate in any six (6) month period, the End-user shall have the right to terminate this Warranty at any time upon written notice to Sungrow. Sungrow shall exercise commercially reasonable efforts in accordance with prudent industry practices to alleviate and mitigate the cause and effect of such Force Majeure event. Reasonable actions must be taken to avoid and/or limit damages to the End-user. Any portion of payments for Extended Warranty that is for time periods that follow termination date of this Warranty by the End-user under this provision shall be refunded to the End-user by Supplier.

20. DISPUTE RESOLUTION.

20.1. Any dispute under this Warranty which cannot be resolved by the good faith negotiation of the parties shall be finally settled by binding arbitration before a panel of three arbitrators selected and appointed in accordance with the Commercial Arbitration Rules of the American Arbitration Association ("**AAA**") then in effect on the date the dispute is submitted to the AAA (the "**Rules**"). The venue of the arbitration proceedings shall be San Francisco, California, and the language to be used in the arbitration proceedings shall be English. Unless prohibited by applicable laws, the arbitrator(s) shall have the power to issue interim measures, including but without limitation measures for preservation of property, attachment, preliminary injunction, replevin, preservation of evidence, etc. to avoid irreparable harm, maintain the status quo, or preserve the subject matter of the dispute. All the arbitration costs - including but not limited to the costs of the arbitrators (whether local or foreign arbitrators), all fees charged by the arbitration institution, experts' fees, and reasonable attorneys' fees -- shall be borne by the losing party. This Warranty shall remain in full force and effect pending the resolution of any dispute hereunder, and each party shall continue to perform its obligations not relating to the pending dispute during the pendency of any dispute. This Warranty is governed by and shall be interpreted in accordance with the laws of the State of California, without reference to conflicts of law.

EXHIBIT A
SERVICE CANCELLATION

1. Overview
This policy applies to both under-warranty and out-of-warranty service requests. It outlines terms and conditions for cancellations, rescheduling, and associated fees. This structure ensures fair compensation for time and resources allocated by Sungrow and any third-party vendors.

2. Prepayment Requirement for Out-of-Warranty Services
For any service or repair classified as not covered under warranty, a deposit of 20% of the total service fee is required before the service appointment. This deposit may be non-refundable if cancellation policies are applied.

3. Cancellation Notice Period

a) Under Warranty:
If a scheduled warranty service is cancelled less than 24 hours in advance, a cancellation fee of 20% of the equivalent service cost will be charged.
b) Cancellations made less than 12 hours before the service will incur a 40% fee of the equivalent service cost. This compensates for short-notice cancellations.

Out-of-Warranty:
If an out-of-warranty service is cancelled within 24 hours, a cancellation fee of 20% of the pre-agreed service fee will apply.
For cancellations made less than 12 hours before the scheduled visit, a 40% cancellation fee of the total service fee applies.

4. No-Show Policy

a) Under Warranty:
If the customer is unavailable for a warranty service visit without prior notice, a 40% fee based on the equivalent service cost will be charged. This covers time and preparations already undertaken.

b) Out-of-Warranty:
If the customer is unavailable for an out-of-warranty service without notice, a 40% no-show fee based on the total service fee will apply.

5. Rescheduling Policy

a) Under Warranty:
For rescheduling warranty services within 24 hours, a 20% rescheduling fee of the equivalent service cost may apply.
Rescheduling less than 12 hours in advance will incur a 40% fee of the equivalent service cost.

b) Out-of-Warranty:
Rescheduling requests for out-of-warranty services within 24 hours of the appointment will incur a 20% rescheduling fee.
For rescheduling less than 12 hours in advance, a 40% rescheduling fee of the total service fee applies.

6. Refunds for Prepaid Out-of-Warranty Services
For prepaid out-of-warranty services canceled more than 24 hours in advance, Sungrow will make its best efforts to reschedule. Refunds are not guaranteed unless specifically agreed upon.

EXHIBIT B
SERIAL DEFECT

Term	Definition
Defect	Any material defect in design, manufacturing, materials or workmanship or damage (where the damage is caused by Sungrow or by any defect for which Sungrow or any of its Subcontractors is responsible) in or to the Equipment or any Part thereof, or any failure of the Equipment or any Part thereof to comply with the Technical Specifications, excluding in all cases (a) any of the foregoing attributable to or caused by ordinary wear and tear of the Equipment or any Part thereof and (b) any defects caused by auxiliary parts provided for in the Project.
Serial Defect	A Defect in a Major Component resulting from a similar failure mode or which otherwise could reasonably be expected to result from the same root cause is discovered prior to the expiration of the Serial Warranty Period for the Equipment in an aggregate number of such Major Components at the Project equal to or greater than the Serial Defect Threshold Number (Otherwise, for defects considered by the customer as serial defect, customer has the responsibility to prove failures having the similar mode).
Serial Warranty Period	Follow the duration of standard product warranty
Serial Defect Threshold	With respect to a Major Component, ten percent (10%) of the aggregate number of such Major Component originally installed at the Project within a rolling 12-month period or fifteen percent (15%) within a 24-month period, rounded up to the nearest whole number. This applies to projects with a capacity of 50MW or more.
Corrective action	(1) Root cause analysis: Conduct thorough root cause analysis of the serial defects to identify the underlying issues. (2) Design or manufacturing adjustments: Implement necessary design or manufacturing adjustments to ensure that future production does not result in the same defects. (3) Product recall/retrieval or on-site rectification: If there are serious safety concerns or if the serial defects cannot be resolved through repairs, product recall or rectification may be necessary. (4) Update maintenance manuals or training: Update maintenance manuals or provide training to ensure that maintenance personnel can promptly identify and address any serial defects. (5) Customer communication and response: Communicate promptly with customers regarding the status of serial defects and provide appropriate solutions to protect customer interests and trust. (6) Continuous monitoring and improvement: Establish continuous monitoring mechanisms to periodically assess product quality and performance and take necessary improvement measures to prevent similar serial defects from recurring.

EXHIBIT C
SPARE PARTS WARRANTY

1. Warranty Period

- **Standard Warranty**: All spare parts are provided with a standard 12-month warranty, contingent upon adherence to the specified storage conditions outlined in this agreement. This warranty covers defects in materials and workmanship.

2. Storage Conditions and Compliance

- **Partitioned Storage**: Spare parts must be stored in designated areas based on their attributes, categories, specifications, and models. High-value and hazardous materials, such as PCBA components, modules, storage battery components, and chemicals, must be stored separately from other spare parts and marked accordingly.

3. Temperature and Humidity Requirements for Specific Spare Parts

- Different spare parts require specific storage environments to maintain warranty eligibility. Temperature and humidity requirements for each category are as follows:

Category	Temperature and humidity requirements for storage	Storage period	Remarks
Aluminum heat sink	Temperature: -20℃ ~ 60℃, humidity: 20% ~ 80%	24 months	The storage can be extended after reinspection at expiration
Wire and cable, breakers, switches, fuses	Temperature: -20-60℃, humidity: 20% ~ 80%	24 months	The storage can be extended after reinspection at expiration
Connectors	Temperature: -20℃ ~ 60℃, humidity: 20% ~ 80%	24 months	The storage can be extended after reinspection at expiration
PCBA	Temperature: -20℃ ~ 60℃, humidity: 30% ~ 60%	24 months	The storage can be extended after reinspection at expiration
Capacitors	Temperature: -20℃ ~ 60℃, humidity: 20% ~ 75%	24 months	The storage can be extended after reinspection at expiration
IGBT	Temperature: -20℃ ~ 60℃, humidity: 30% ~ 60%	24 months	The storage can be extended after reinspection at expiration
Transformers, reactors	Temperature: -20℃ ~ 60℃, humidity: 20% ~ 75%	24 months	The storage can be extended after reinspection at expiration
The whole machine finished product	Temperature: -20℃ ~ 60℃, humidity: ≤ 90%	24 months	The storage can be extended after reinspection at expiration
Screws, nuts, and gaskets	Temperature: -20℃ ~ 60℃, humidity: ≤ 90%	12 months	The storage can be extended after reinspection at expiration

4. Inspection and Evaluation Clause

- Sungrow shall conduct visual and basic electrical inspections of the stored spare parts upon expiration of the initial storage period to assess their condition. The results of this evaluation will be provided to the customer. The customer shall be responsible for covering the labor costs associated with this inspection.

5. Storage Condition Records

- End-users must maintain records of temperature and humidity in the storage environment to ensure compliance. Sungrow reserves the right to request these records as a condition for warranty eligibility.

6. Non-Compliance with Storage Conditions

- Failure to maintain and document storage conditions as specified may void the warranty. Specifically, if (1) the spare parts are still available and functional, the warranty remains valid; (2) if the spare parts are rendered unusable due to non-compliance with storage conditions, the warranty will be void. This applies to both standard and extended warranty terms, and any deviations from these conditions require prior written consent from Sungrow to avoid forfeiture of warranty coverage.

SALES CONTRACT

ORIGINAL

Contact No. GY-KA-HGIS20250627003

The Seller: Chint Electric Co., Ltd.
Add: No. 1255 Wenhe Road, Songjiang District, Shanghai, 201614 PRChina
Tel: 021-67777777-89978 Email: xubaoj@chint.com

The Buyer: Red River Clean Energy, LLC on behalf of Blue Heron Solar, LLC
Add: 107 Spring Street, Seattle, WA 98104, United States of America Tel: (+l) 312-883-4846
Email: operations@concordnewenergy.com

The Sales Contract (the "Contract") is made between the Seller and the Buyer concerned on the basis of equality and mutual benefits. The terms and conditions are fully agreed by both parties as below:

I. Scope of Supply (the "Products"):

Item 序号	Description 产品名称	Type 型号	Qty. 数量	Unit 单位	Unit Price 单价	Total Amount 总价	Remark 备注
1	Circuit Breaker	362kV 2200A	3	set			
2	Freight		1	set			DAP Texas site. It shall be subject to the freight at the time of actual shipment.
3	Destination service fee	/	30	set			Including 1 person 30 days technical service, exceed part will cost USD 1500/person/day
4	5 years warranty	/	1	set			5 years warranty
4.1	Spare parts supply service		1	set			Replacement of spare parts due to quality issues within the warranty period

4.2	Guidance of installation and commissioning	/	1	set			On-site service caused by quality issues within the warranty period
5	**Total Amont&Total Amount** **产品总数量和总价**		**37**	**Set**			

10. Guarantee & Warranty

I 0.1 The Seller guarantees that the Products are brand new, unused, good quality with good workmanship and comply with the technical specifications. The Seller warrants the Products be free from defects of design, material, quality and workmanship for a period of 24 months after issuing the Arrival Acceptance Certificate. After the warranty period, the Seller shall still provide after-sales service and technical support and the Buyer shall bear the cost arising

therefrom.

The Seller guarantees that the delivered products will have normal performance within their service life under normal use and maintenance conditions, and that the products will not be scrapped due to design defects, production processes, material defects, quality control, etc.

10.2 Throughout the warranty period, the Buyer shall notify the Seller of defect within 5 days after discovery of the defect. The Seller shall provide a response to the Buyer within four (4) hours of receiving any such notification. If required, the Seller shall send service personnel to the Project Site within twelve (12) hours of receiving any such notification (the "Guaranteed Response Times"). The Seller shall, within reasonable period, repair the defect or replace the defect part with new part at its discretion. The Buyer shall give the Seller sufficient opportunity and full assistance to carry out such remedial work. Replaced parts shall become Seller's property.

10.3 The Seller shall have no responsibility for any defect, failure or non-compliance of the Products or any part thereof if there is any of the following events: (a) failure of the Buyer to comply with any of the Seller's operational or maintenance written guidelines, instructions or requirements; (b) improper use or installation; (c) physical abuse of the Products or any component or acts of vandalism by any persons other than Seller, its employees, agents or subcontractors; (d) alterations, modifications, additions, replacement or repairs made during the warranty period by anyone other than Seller, its employees, agents, subcontractors or personnel certified by the Seller; (e) accidents or damage resulting from fire, water, wind, hail, lightning, electrical surge or failure, earthquake, theft or similar causes not caused by or attributed to the negligence of Seller or its employees, agents, or subcontractors or (t) fair wear and tear. Seller shall provide and maintain a Warranty support contact capable of providing the Guaranteed Response Times that is located in the United States of America for the duration of the Warranty Period.

10.4 For all service and remedial work on the Products provided by Seller where such work shall require the Products to be de-energized, when such Products are connected to a photovoltaic generation Project, all service and work shall be performed during non-daylight hours, and when such Products are connected to a battery energy storage Project, all service and work shall be performed in scheduled coordination with the Buyer to minimize downtime for the Project during operational hours. Buyer shall not be responsible for any costs associated with this requirement. The forgoing requirement applies to non-emergency service and warranty work.

10.5 During the service life of the products, the Seller shall be liable for product liability issues including personal injuries and damages to other property except the product itself caused by the design defects, production workmanship, material defects, quality control of the Seller's products.

1. Introduction

The purpose of this document is to offer guidance on the scope of work and construction progress that **must be completed before the arrival of the Sungrow service engineer to commence the inverter commissioning.** This document is not a replacement for the installation manual or the operation manual. Detailed installation and operation procedures as well as the safety precautions as prescribed in the manuals shall be followed. Customers are encouraged to establish early contact with the Sungrow Service department at https://en.sungrowpower.com/service to coordinate the project schedule and facilitate the project commissioning process.

NOTE: Make sure you sign this sheet before submitting the commission request form.

2. Commissioning Phases

The commissioning process is divided into two parts. The cold commissioning and hot commissioning. During the cold commissioning, mechanical checks (Phase 1) and voltage checks (Phase 2). After cold commissioning, it's hot commissioning (Phase 3). The checklist document comprises the following checklists.

A. Phase 1: Cold Commissioning (mechanical checks) checklist
B. Phase 2: Cold Commissioning (DC/voltage checks) checklist
C. Phase 3: Hot commissioning checklist

Phase 1: Cold Commissioning (mechanical checks) Checklist

☐ All trenches around each inverter are backfilled.

☐ All aprons around each inverter are in place.

☐ Packaging removed (e.g., silica gel bags, dust seal tape on the outside, MVT packaging materials).

☐ Gland plate(s) installed, and conduits sealed.

☐ All load-bearing cushions meet the ground interface.

☐ All designated points for mounting are either welded or bolted per Suppliers drawings.

☐ Situation is not unsafe (e.g., standing water, open trenches).

☐ Shipping dust covers removed o Provided accessories installed.

☐ Sufficient and safe clearance access service areas.

☐ Exterior temporary safety labels removed.

☐ Check that there is no sign of leakage.

Confidential and Proprietary
© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

☐ Grounding cables installed correctly. Check whether the grounding connection is done properly, and if the grounding resistance is less than 4Ω. **EPC or customer needs to provide the document.**

☐ Check the protective device for the Pressure Relief Valve is removed.

☐ Make sure the pressure is released as shown in the pressure requirement of the user manual.

Phase 2: Cold Commissioning (DC/voltage checks) Checklist

☐ All string-level VOC & polarity checks are completed.

☐ A team of at least two is needed from the EPC to turn combiner boxes on & off during DC checks performed by Sungrow.

☐ All string-level fuses are engaged up to the combiner or disconnect box.

☐ All DC feeders are landed at the inverter.

☐ All DC fuses are installed in the correct location based on the DC feeder directly in line with each fuse.

☐ Must have a complete list of protection parameters.

☐ Must have a complete list of IP addresses, subnet, & gateway.

☐ If any or all inverters are going to be derated. If yes, list them: _____

On behalf of the customer (to be filled on or thereabout the date pre-commissioning is complete and transmitted to Sungrow)

Name:

Customer's representative:

Customer's representative is EPC/Self

Signature:

Date:

Confidential and Proprietary
© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

Phase 3: Hot Commissioning Checklist

☐ Must have AC back feed with AC present at each MVT that is connected to each inverter.

☐ Must have permission from the utility company to push power.

☐ All personnel must be removed from the array in active commissioning areas for safety reasons.

☐ All string fuses installed in all combiners.

☐ If trackers are not commissioned, they must be in the 12 o'clock position to allow for as much irradiance as possible.

☐ MVT, if provided by Sungrow, is recommended to be soaked for 24hrs via back feed from the sub-station.

☐ All MV cabling needs to be torqued.

☐ Phase sequence and line-to-line voltage of the AC terminals correct.

☐ PCS auxiliary power connections ready (torqued, phase rotation correct, etc.) up until the terminal blocks of the product electrical interface.

☐ PCS communications connections ready (connected, correct terminals or pinouts, communications tested from outside device to electrical interface).

☐ Terminal connections to busbars/terminals torqued and marked

☐ Surge protection devices, cartridges, and fuses are not tripped o Transformer indicators are visible and easily accessible (not occluded by site installation materials or incorrectly mounting of the Local Controller) o

☐ Tap-changer position has been set by the EPC and matches the position shown on the load flow study7.

☐ MV transformer bushings clean

1. Introduction

This manual gives a brief introduction of the SG4400UD-MV commissioning procedure, and the commissioning personnel shall be qualified and have relevant skills.

1.1. Symbol Explanations

This manual contains important safety and operational instructions that must be accurately understood and respected during the installation and maintenance of the equipment.

> ⚠ WARNING
> **WARNING** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

> **NOTICE**
> NOTICE indicates a situation which, if not avoided, could result in equipment or property damage.

> NOTE indicates additional information, emphasized contents or tips to help you solve problems or save time.

The symbols below may be present on the electrical parts of the station. Make sure to read the following symbols and fully understand them before installing the equipment.

Symbol	Explanation
	Lethal voltage inside! Do not touch!
	Hot surface! Do not touch the hot surface of the device.
	Protective earth. Grounding securely to ensure personal safety.

1.2. Requirements for Commissioning Personnel

- The personnel engaged in site commissioning shall have no physical or visual impairments. They shall be trained, tested, and qualified and deemed electrically competent.
- All commissioning personnel shall obey the unified arrangement and unified management of the person in overall charge. During commissioning, at least two persons should be arranged for commissioning operation: one is responsible for commissioning operation and the other for supervision.
- The commissioning engineer shall be fully aware of all emergency procedures and must confirm these with site manager prior to start.
- During commissioning, the commissioning personnel shall operate in strict accordance with the commissioning steps for each process and shall not proceed to the next process before the previous commissioning process is accepted. Operation against rules is strictly forbidden. The site commissioning

Confidential and Proprietary
© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

personnel shall always focus on their own tasks. All components are treated to be "live" before they are confirmed to be "not live".

- Before commissioning, the commissioning personnel shall carefully check all tools have been appropriately tested and calibrated. Serial numbers and calibration dates must be recorded. All appropriate PPE shall always be worn.

1.3 Requirements for Commissioning Tools

Tool Name	Specification	Quantity
Digital multimeter	1500V or plus	1
Walkie talkie		Several
Tool box	All necessary tools	Several
Insulated Torque wrench	0.7-70 Nm	1
FR clothing, insulated shoes and protective gloves (PPE)	Accord to local regulation	Several
PC with Ethernet cable		1 set

Note: To ensure the commissioning work goes smoothly, the quantity of the tools and appliances can be increased or reduced in time according to the site requirements.

Tightening Torques

Screw size is based on thread diameter. Example M3 equals to 3mm thread diameter.		
Screw size	**Torque (N.m)**	**Torque (lbf.inch)**
M3	0.7~1	6.195~8.85
M4	1.8~2.4	15.93~21.24
M5	4~4.8	35.4~42.48
M6	7~8	61.95~70.8
M8	18~23	159.3~203.55
M10	34~40	300.9~354
M12	60~70	531~619.5
M16	119~140	1053.15~1239

No	Name	Description
A	FU#	Fuse Terminal Blocks
B	SVG circuit contactor	Controls SVG Circuit (Optional)
C	KA1	Emergency Stop Relay
D	Driver board	Drives IGBT in Powerstack
E	AC side fan	Circulates Air In AC Cabinet
F	AC circuit breaker (QF1)	Control the on/off for the AC side circuits of the inverter.
G	PA and PD	Sensing, Controls, Communications etc.
H	PW	Unit to Unit Communications

Figure 2: SG1100UD AC Side

Each SG1100UD inverter must go through its own cold commissioning check which includes all of the points below. Record concerns and dictate which specific units may have issues as they are found. Check the boxes below to confirm that Each unit has undergone the full commissioning check:

Unit 1	Unit 2	Unit 3	Unit 4
☒	☐	☐	☐

Sr.no.	Technical Item	Requirements	Done	Comments
1	General visual check	Check that all external surfaces of enclosures are clean and neat, free from paint peeling, rust, abnormal dents (diameter larger than 50mm), deformation. **Ensure the Desiccant bags are removed.**	Click or tap to enter a date.	
2	DC Cabling	Check DC branch circuits and the presence of torque marks, flat and spring washers.	Click or tap to enter a date.

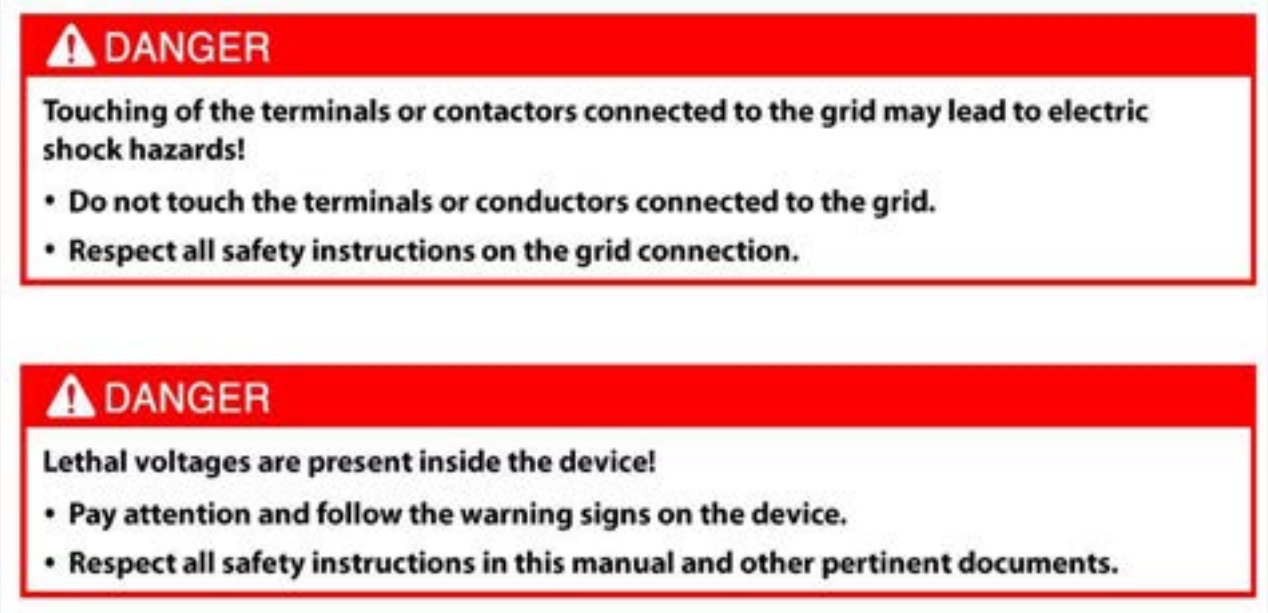
Hot Commissioning



STEPS	Operating Instructions	DONE	COMMENTS
	Precondition for Hot Commissioning.		

Before powering on the equipment, check the following items carefully.

- The EPC or site owner shall make sure everyone shall be outside the PV site when MVT is being energized
- 24 hours Medium Voltage transformer soak has been completed.
- Check whether the protective covers inside the equipment are installed correctly.
- Check whether the emergency stop button is released.
- Check and ensure that no tools or components are left inside the equipment.
- Inform the people in the area when the equipment is about to be energized.
- Everything downstream from the Medium Voltage Transformer has been deenergized, the LOTO shall be on according to site LOTO Procedures and is in accordance with the Sungrow PV LOTO customer guidance document ASD-1852.
- Ensure EPC doesn't have reversed DC polarity and ensure DC input voltages do not exceed 1500Vdc when installing the inverter onsite.

Confidential and Proprietary
© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

DC Voltage Checks and Open Loop Test – Must be performed on each individual SG1100UD

ALL PROPER PPE SHALL BE WORN DURING THE ENTIRETY OF THE HOT COMMISSIONING PROCESS

Before energizing any circuits:
Confirm that all DC, AC, and AUX switches on the inverters are disconnected and in the off position, namely SA1, QS1, QF1, QS2.

Confirm that CATIV PPE is in accordance with the required incident energy rating sticker on the unit undergoing commissioning.

⚠ WARNING

- DC side voltage should be no more than the inverter 1500 VDC input DC voltage. Too high DC voltage may damage the inverter and cause a safety issue.
- If more than one DC input is turned on at once a short circuit potential is possible. Only test one DC input at a time and verify 0Vdc before proceeding to the next box.

1. Remove the LOTO devices on the QF1 AC circuit breaker. Close the DC Load switch QS1, the AC maintenance switch QS2, and the DC Knob Switch SA1, and the QS9 auxiliary switch in the auxiliary cabinet of the SG4400UD. Close all the doors.
2. Connect PC to net port #1 through Ethernet cable and close the Auxiliary Cabinet door.
3. Remove the LOTO device to close all DC combiner boxes for each SG1100UD unit in the field to bring voltage into the SG1100UD units.
4. Connect the UMCG Web Portal and go to "**Device Monitoring**". Perform firmware upgrades based on request. Contact site field supervisor to confirm the operation.
5. Ensure that the "Access Protection Enabling" parameter value is set to disabled or "close" on the Web page. **Device Monitoring → Protection Parameters**
6. Click on the drop-down option next to "SG4400UD" to reveal SG1100UD Units 1-4. Select unit 1 and go to "**Real Time Values**". Observe and record the incoming DC voltage. Do the same for inverter unit 2-4. Check for the reverse polarity/GFDI faults.
7. Perform Open Loop test according to **SG4400UD Open Loop MOP. Refer to the SG4400UD-MV Open Loop MOP** Document ID: **ASD-1644.** After the Open Loop test, key-stop the inverter.
8. If site has automatic DC load switch, put on PPE according to the site's DC incident energy and switch from manual to automatic.
9. If you move on directly to the AC voltage checking, leave combiner boxes, QS2 switches, and QS1 switches closed from the Open Loop Test. Reset all parameters to normal grid tied mode as document (SG4400UD-MV Open Loop MOP ASD-1644) instructs and leave the unit in a key stopped state.

    a. If AC voltage testing is not being performed next be sure to open and LOTO the DC combiners that were closed. **Use PPE** to confirm de-energized state of the SG1100UD DC bus bars and Caps using FU23 and 24 and the bus bars above

Confidential and Proprietary
© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

the DC load switch. Open the DC switch QS1 and open all QS2 switches so the unit can sit in a completely de-energized state and is fully LOTO'd according to site procedures.

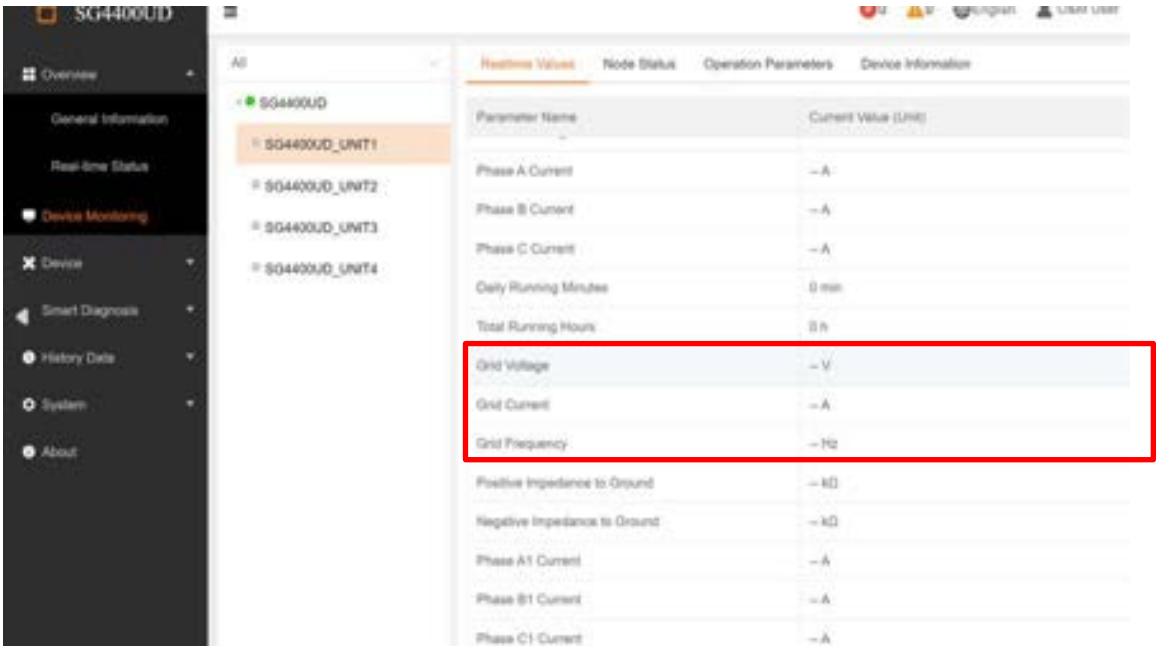
AC Voltage Checks and Gradual Power Limits Testing.

ALL PROPER PPE SHALL BE WORN DURING THE ENTIRETY OF THE HOT COMMISSIONING PROCESS

If performing AC voltage check straight from a de-energized state, follow the below instructions first:

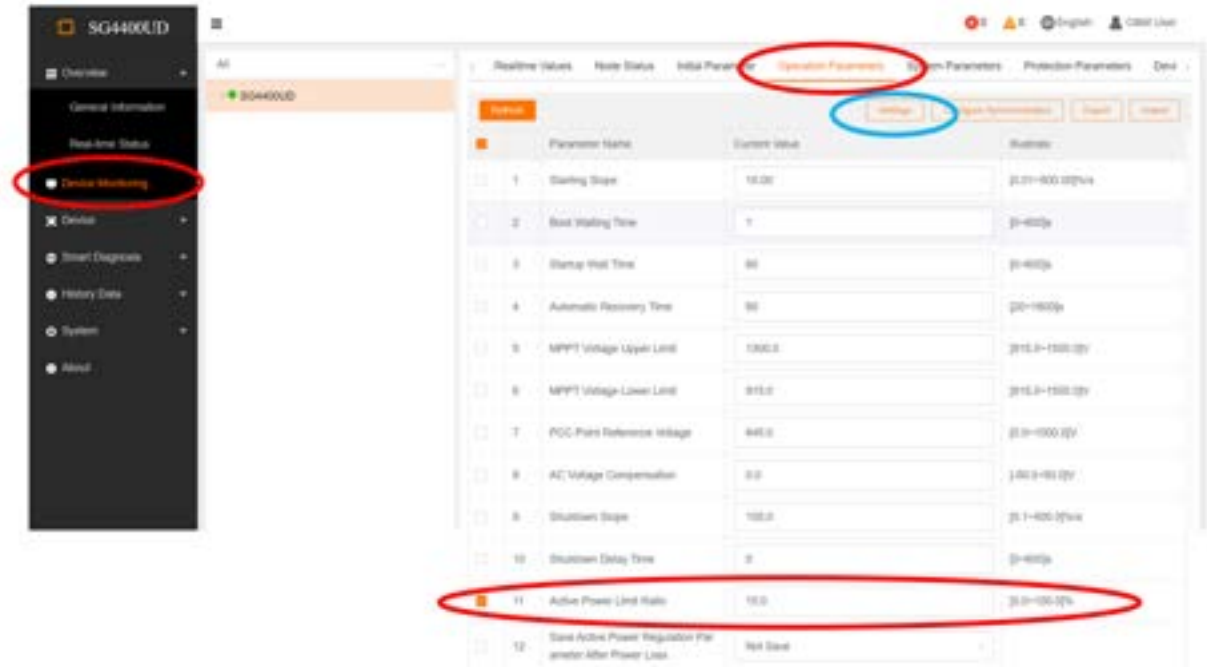
1. Close QS2 maintenance switches in all SG1100UD inverters and close the QS9 Auxiliary switch in the auxiliary cabinet.
2. Manually Close the QS1 DC load switch in all SG1100UD inverters
3. Turn the SA1 DC controls switch on the front of all SG1100UD inverters to the "ON" Position,
4. Close all DC combiners to the SG4400UD inverter

1. If coming straight from the Open Loop Testing: Confirm the SG4400UD is in a key stopped state. Then, have the site operators remove the LOTO devices and close the MVT transformer load switch to energize the LV bus.
2. Confirm the Grid Voltage is at 645VAC (± 10%).



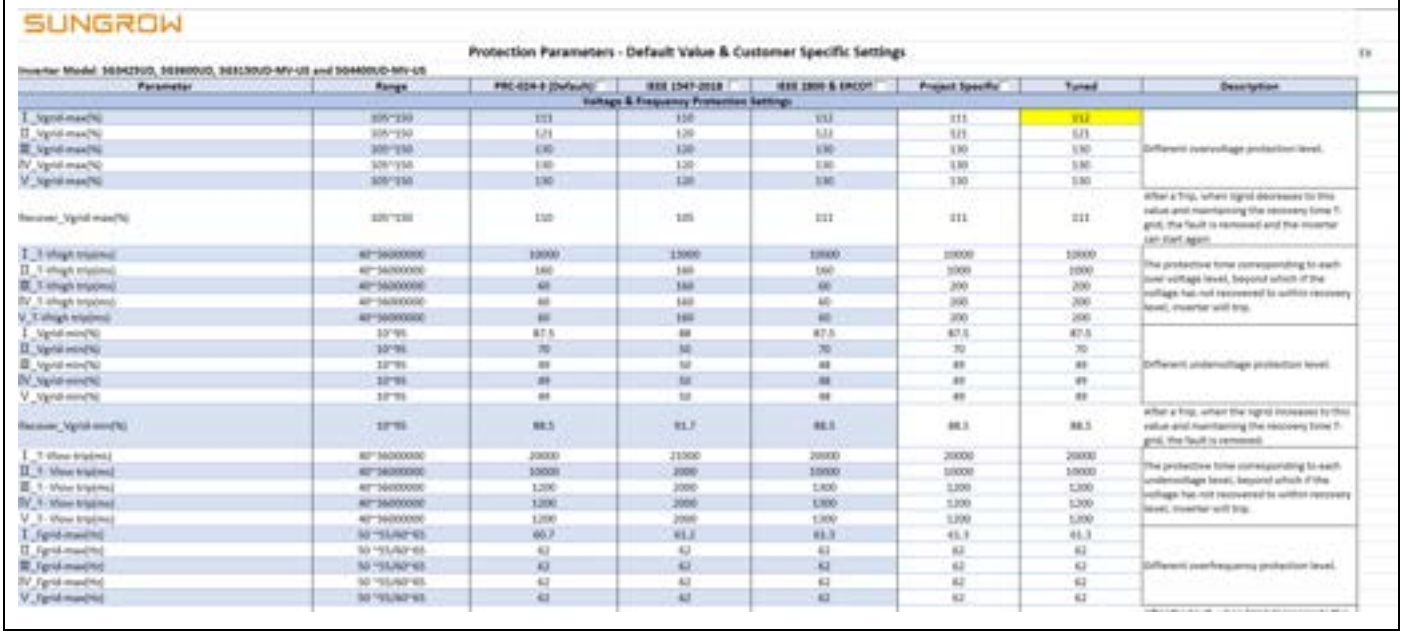
Confidential and Proprietary
© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

3. Lower the output power to 10% by going to operation parameters, going to the UMCG web portal, selecting the "**Device Monitoring**" tab, selecting "**Operation Parameters**", and scrolling to entry 11 "**Active Power Limit Ratio"** and changing the value to 10%**.** To implement the change you must click on the check box by entry 11 and click on the "**Setting**" box highlighted in blue.



4. Verify the date and time are correctly displayed in the UMCG web Portal.

5. Ensure that the Protection parameters shared by the Sungrow project management team and field service team are all set as required by the site requirements. **Note**: If the protection parameters are not provided, please reach out to Sungrow field service supervisor for further clarification.



SUNGROW

Protection Parameters - Default Value & Customer Specific Settings

Parameter	Range	PRC-024-3 (Default)	IEEE 1547-2018	IEEE 1699 & IEC/TS	Project Specific	Tuned	Description
Voltage & Frequency Protection Settings							
I_Vgrid-max(%)	105~150	121	120	121	121	112	Different overvoltage protection level.
II_Vgrid-max(%)	105~150	121	120	121	121	121	
III_Vgrid-max(%)	105~150	130	120	130	130	130

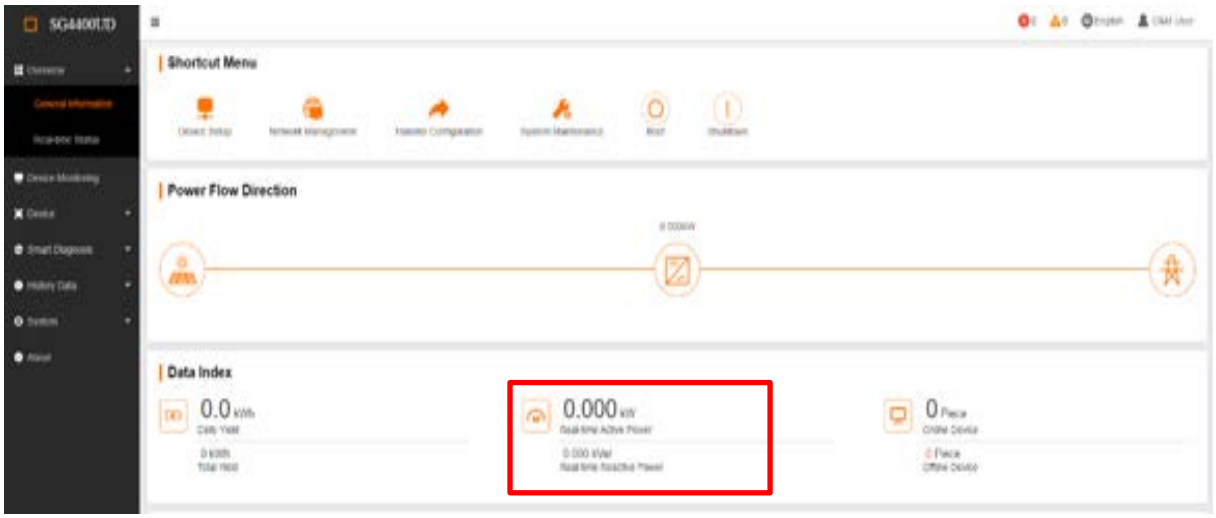
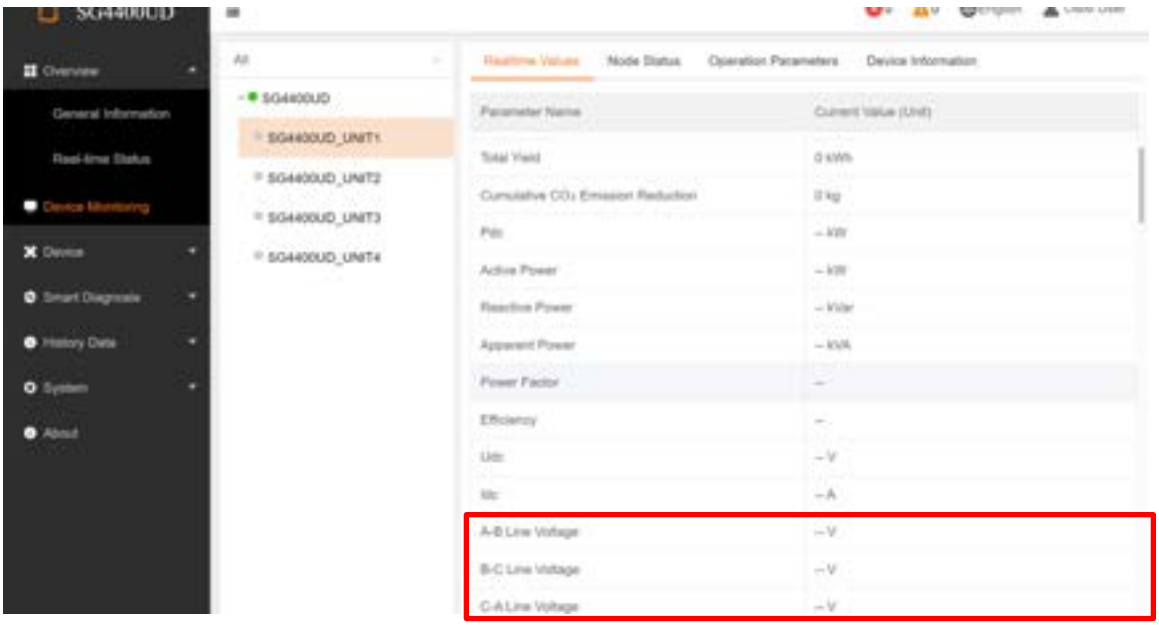
6. Set the inverter into local mode so that SCADA cannot interfere with any of the commissioning processes.

7. Key Start the inverter by going to the overview page and selecting the Boot option. Confirm that you are receiving approximately 10% of SG4400UD rated output on the general information page.



8. Go back to the Device Monitoring page and click on the drop-down icon next to the SG4400UD. This will let you observe Realtime Values for each individual SG1100UD inverter.

9. Confirm that the A-B, B-C, and C-A line voltage for all 4 SG1100UD inverters are at 645VAC (± 10%). Also confirm that the phase A, B, and C current have no large deviations from each other in value.



Confidential and Proprietary
© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

10. Let the inverter operate for 1 minute and check if any faults or alarms populate on the webpage.

11. After 1 minute increase the Active Power Limit Ratio to 50%. Check DC and AC voltage and currents for any anomalies. After operating for a minute verify there are no faults or alarms and that the power output in the general information page reflects 50% of inverter's rating.

12. After 1 minute increase the Active Power Limit Ratio to 100%. Check DC and AC voltage and currents for any anomalies. After operating for a minute verify there are no faults or alarms and that the power output in the general information page reflects 100% of inverter's rating.

13. Leave the inverter running at 100%, and go to the inverter unit1-4 options, and set the branch access for 1-7 to "open/enable" to enable them as shown in the figure below. Check the inverter real time values as shown in the figure, and note which branch current numbers report 0A, which will need the branch access set to "close/disable".

The information in this document is subject to change without notice.

14. Export the parameter settings as well as checking the firmware versions. If you are un aware on where to find these versions follow our **MV-Software Upgrade MOP (ASD-1939)** which outlines how to check current firmware versions.

Firmware Versions

SG1100UD: MDSP Firmware Version: Click or tap here to enter text.

SG1100UD: SDSP Firmware Version: Click or tap here to enter text.

SG4400UD SCU Firmware Version: Click or tap here to enter text.

SG1100UD: CPLD Firmware Version: Click or tap here to enter text.

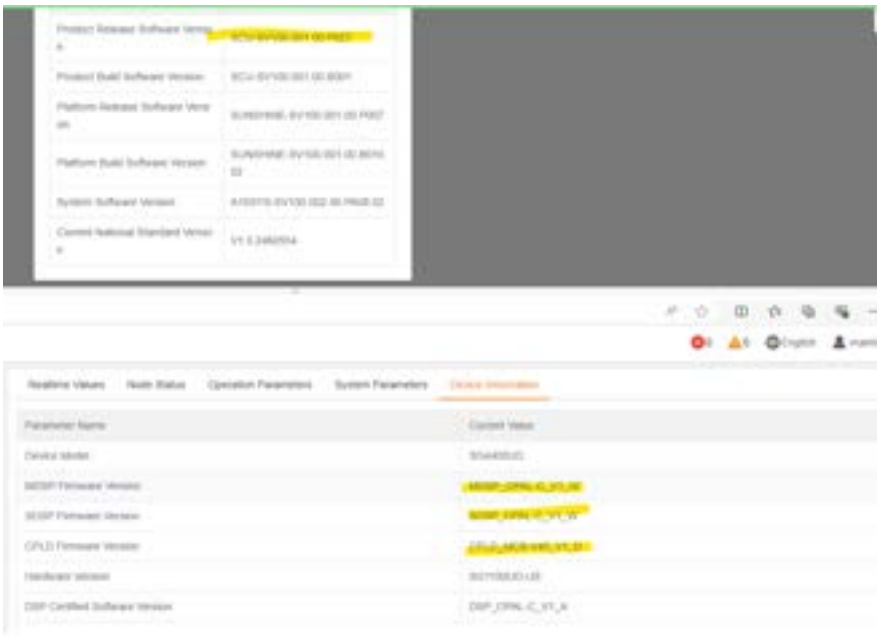

Figure 5: Highlighted Portions of Needed Firmware

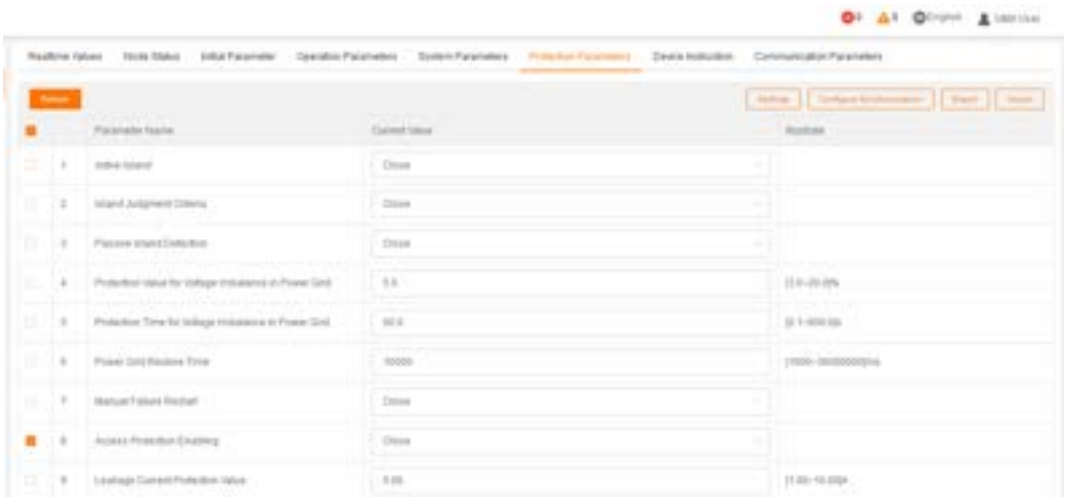
15. Set the inverter back into Local/Remote mode to allow on-site SCADA to reconnect to the SG4400UD's PT board.

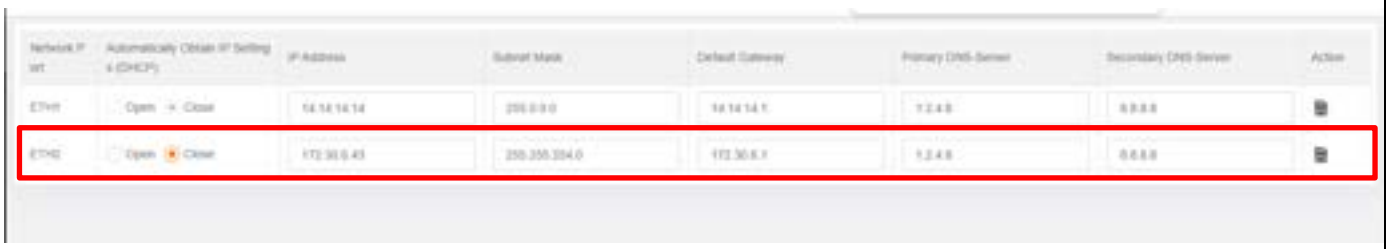
Confidential and Proprietary
© Sungrow USA Corporation. All rights reserved.
The information in this document is subject to change without notice.

16. Ensure that the "Access Protection Enabling" parameter value is set to enabled or "open" on the UMCG Web page. **Device Monitoring → Protection Parameters**



17. Leave the Inverter running, or key stop and de-energize the entire station as required by site at the time.

18. Setup IP address for SCADA by going to System -> Port Parameters -> Ethernet (details provided by PM/customer)



19. After the IP address setup, you will be automatically logged out by the unit. Relogging back to the unit using the IP address that was newly configured to check if the IP address was set up successfully.

Note: Once done, disconnect the PC from the auxiliary cabinet. Ensure appropriate PPE is always worn based on the incident energy.

Commissioning is now complete! ✅

END

North America Standard Warranty

Extended Warranty

1. DEFINITIONS

1.1. The warrantor for the limited warranties set forth herein is Sungrow USA Corporation, as well as Sungrow Power Supply Co., Ltd. (collectively referred to as "Sungrow").

1.2. The "Product" means the Inverters, transformers and peripheral devices manufactured by Sungrow and purchased from Sungrow by End-user.

1.3. The "Warranty" means this limited warranty contract for the Product.

1.4. "End-user" means the party who purchases the Products from Sungrow, or any subsequent owner of the Product with valid assignment of ownership, for which Service, as defined herein, will be performed under the Warranty.

1.5. "'Manual' means all manuals, guides, or similar documents which are provided in writing by Sungrow to End-user and which relate to the installation, operation, maintenance, or storage of the Products; provided, however, that any changes or additions to such documents shall not be retroactively applied."

1.6. "Service" means a site visit or remote services by Sungrow technicians, including its subcontractors, in response to a Warranty Claim, whether covered under this Warranty or excluded.

1.7. "Site" means the location the End-user has installed the Product covered under this Warranty.

1.8. "Warranty Period" means the period the Product is covered under this Warranty as set forth in Section 3 below titled *Warranty Period*.

1.9. "Warranty Commencement Date" has the meaning set forth in Table A.

1.10. "Warranty Claim" means notifying Sungrow of a Product non-conformity or defect during the Warranty Period within five (5) business days via phone, email, or the Global Service Platform. "Product Delivery Date" means the earlier of: (i) the day the product is delivered to the location designated by the End-user; or (ii) sixty (60) days from the date Sungrow stores the Products in the United States or Canada (as applicable) at the direction of, and on the behalf of, End-user.

1.11. "Defect" means a design, engineering, materials, manufacturing, production, workmanship or assembly of the Product or Product Components that does not conform to the Product Specifications and/or adversely affects the Product's operation or functioning.

1.12. "Extended Warranty" means the option for the End-user to purchase additional years of warranty services by Sungrow for the Products, prior to the last twelve (12) months of the Warrant Period and provided that the Warranty has not been voided.

2. LIMITED WARRANTY

2.1. Sungrow warrants that the Products are free from defects in design and manufacturing by Sungrow, and from defects in material and workmanship.

2.2. If the End-user identifies any non-conformity or defect in the Product during the Warranty Period, the End-user will provide notice by phone, email or via the Global Service Platform (https://gsp.sungrow.cn/) within five (5) business day of the date that the End-user identified the non-conformity or defect. To issue a Warranty Claim for Defect under this Warranty the End-user shall provide the following information:

(a) Product and serial number
(b) A brief description of the non-conformity or Defect, including any failure code and what investigation has been done so far.

2.3. Upon request by Sungrow, End-user shall provide (i) proof of ownership, including valid assignment of ownership, the Warranty Claimed serial number and/or (ii) evidence of executed regular or corrective maintenance reports on the Products in reference to the Warranty Claim.

2.4. Sungrow will make all commercially reasonable efforts to notify End-user by email within one (1) business day of receiving End-user's Warranty Claim of a Defect under this Warranty, whether Sungrow accepts the Warranty Claim or if more information is required to evaluate the Warranty Claim. If the Warranty Claim is approved, Sungrow will assign the warranty work a service ticket number. In the event that Sungrow denies the Warranty Claim due to one of the exclusions or limitations listed in this Warranty, Sungrow will offer a thorough written justification to End-user.

2.5. Sungrow's decision to accept or reject a Warranty Claim is final, although the End-user may dispute it under the applicable dispute terms of a relevant purchase order or purchase agreement for the Products.

2.6. If Sungrow accepts a Warranty Claim submitted by End-user, Sungrow shall, in its sole and absolute discretion, either send a replacement Product(s) to the End-user or shall dispatch technicians to the Site to perform any needed on-Site

SUNGROW USA CORPORATION
Add: 5780 S 40th St, STE 1, Phoenix, AZ, USA 85040

Service: techsupport@sungrow-na.com
Web: www.sungrowpower.com

repairs.

2.7. Sungrow will have sole and absolute discretion for determining whether it will pursue the repair or replacement remedy, but in either case, the costs of performing the remedial work (including, but not limited to, the costs of transporting replacement Products) shall be at Sungrow's expense, subject to a right of recuperation of those costs under the circumstances described in Section 2.11.

2.8. Sungrow may, in its sole and absolute discretion, engage third-party service providers to perform any of the remedial work hereunder, provided that Sungrow shall be solely responsible for the actions, omissions and costs of such third-party service providers.

2.9. Sungrow shall produce (or ask its service providers to produce) a field service report in respect of any on-Site remediation work performed under Warranty.

2.10. If Sungrow sends replacement parts, the defective Products that have been replaced shall become the sole property of Sungrow, and the End-user shall collect and store those defective Products for Sungrow until such time as Sungrow can collect said Products or arrange for shipment back to Sungrow. End-user's obligation to collect and store defective Products shall last for: (i) up to one (1) month in, Canada, United States (excluding Alaska).

2.11. If, after performing Warranty work, Sungrow determines that the cause of the defect was not covered under this Warranty, Sungrow reserves the right to charge the End-user for all reasonable costs directly incurred by Sungrow in performing work for the Warranty Claim.

2.12. Installed Product relocated to another site requires the unit be re-commissioned by Sungrow.

2.13. Sungrow and the End-user shall mutually agree upon the conduct of any tests required to determine whether a Product is defective in advance of conducting such tests. Sungrow reserves the right to supply a different inverter model to settle a Warranty Claim, provided that such inverter model is functionally equivalent to the original inverter and does not negatively affect the performance of the system to which the inverter will be installed. Any parts that are replaced may be new or reconditioned to be like new.

2.14. All parts repaired or replaced pursuant to this Warranty will also be subject to the provisions of Section 2 Warranty, to the same extent as original Products. The Warranty Period with respect to repaired or replaced parts by Sungrow will run for the longer of the: (i) the original Warranty Period for the defective Product; or (ii) twelve (12) months from the date of completion of the repair or replacement.

2.15. End-users authorized by Sungrow to perform repair or replacement of Products with the use of Spare Parts are covered by this Warranty for the longer of: (i) the original Warranty Period for the defective Product; or (ii) twelve (12) months from the date the repair or replacement was completed.

2.16. All Service work performed by Sungrow is warranted for one (1) year from the day the service was completed.

3. WARRANTY PERIOD

The Warranty Period for a Product installed in the United States, or Canada are indicated in Table A below.

TABLE A

Products	**Standard Warranty Period**	**Warranty Commencement Date**
String Inverters (SG36CX, SG60CX, SG125HV)	10 Years	The earlier date between: i) First-time commissioning date; or ii) Six (6) months after the Product delivery date. In case no evidence of the two above the warranty commencement will be 12 months from production according to the serial number.
All other String Inverters	5 Years	
All Central Inverters	5 Years	
Inverter Station Products (MV transformer, switchgear)	5 Years	
Inverter Station Products (all other equipment)	3 Years	
Re-combiners and Combiners	2 Years	
Communication, Monitoring, and Control Equipment	2 Years	

4. EXTENDED WARRANTY PERIOD

4.1. Prior to the last twelve (12) months of the Warranty Period and if the Warranty has not be voided, End-user may

SUNGROW USA CORPORATION
Add: 5780 S 40th St, STE 1, Phoenix, AZ, USA 85040
Tel: 1-833-SGPOWER (747-6937)
Sales: info@sungrowamericas.com
Service: techsupport@sungrow-na.com
Web: www.sungrowpower.com

purchase additional years of warranty services by Sungrow for the Products (the "Extended Warranty"), if the conditions outlined herein have been met.

4.2. An Extended Warranty shall start only if Sungrow has received payment in full for the extension, or annual installments may be accepted with an additional fee.

4.3. Should Sungrow agree to provide an Extended Warranty beyond the five (5) years specified in Table B of these Warranty terms, the End-user must additionally, in accordance with the Manual conduct regular & proper maintenance which can be provided to Sungrow upon request for review. All maintenance on the Products may be performed by any of the following:

(a) by Sungrow through a written agreement for Sungrow to provide the required maintenance in accordance with the Manual.
(b) by a qualified third-party through a written agreement for the qualified third-party to provide the required maintenance in accordance with the Manual
(c) or by self-performance with qualified personnel.

4.4. The period covered by the Extended Warranty for Product installed in the United States, or Canada is indicated in Table B below.

TABLE B

Products	Offered Extended Warranty Options
String Inverters (SG36CX, SG60CX, SG125HV)	5,10 Years
All other String Inverters	5, 10, 15 Years
All Central Inverters	5,10,15 Years
Inverter Station Products (MV transformer, switchgear)	5 Years
Inverter Station Products (all other equipment)	Not available
Re-combiners and Combiners	Not available
Communication, Monitoring, and Control Equipment	Not available

4.5. It is recommended that the Extended Warranty be purchased together with the Sungrow preventive maintenance plan to comply with Sungrow standards.

4.6. If purchasing an Extended Warranty, it must be purchased for every inverter on the Site.

4.7. Sungrow will, upon request and for a reasonable fee, perform additional Services not covered by this Warranty, such as repairs or replacements with the most recent version of the Product.

5. WARRANTY EXCLUSIONS

5.1. The Warranty does not cover defects or damages caused by:

(a) Normal wear and tear, oxidation, deterioration or damage due to misuse or neglect by End-user, or superficial imperfections, dents or marks, in each case that do not impact Product performance or integrity.
(b) Improper transportation and/or delivery in the event Customer assumes transportation responsibility.
(c) Failure to properly store the Product before installation by Customer.
(d) Improper installation unless caused by Sungrow or its agents.
(e) Use and application of the Product beyond the definition in the Manual.
(f) Repair, adjustment, or alteration, not authorized in writing by Sungrow.
(g) Force Majeure events
(h) The customer's non-compliance with applicable regulations and standards
(i) Voltage surge coming from DC side, grid AC side or externally caused harmonics.

SUNGROW USA CORPORATION

Service: techsupport@sungrow-na.com
Web: www.sungrowpower.com

(j) Neglect, abuse, misuse, improper maintenance, or lack of maintenance, as set forth in the Manual. This includes the case that maintenance is not executed by qualified personnel.
(k) Acts of nature such fire, flood, earthquake, and lightning
(l) Damage or accidents due to third parties' actions, vandalism, a surge, or improper use of the Product
(m) Any other non-conformity, defect, damage or failures not: (x) caused by Sungrow or a Sungrow agent; or (y) arising out of the manufacture of the Product or component by Sungrow or a Sungrow agent resulting from: (i) the operation, maintenance or repair of the Product by the End-user or any third party other than a Sungrow or a Sungrow agent and (ii) a failure to perform (or cause to be performed) maintenance of the Product required under the Manual; provided that operation of the Product consistently with the Sungrow Manual and other guidelines shall not, on its own, invalidate a claim or be reason for Sungrow's rejection of a claim for Defect under this Warranty

5.2. The Warranty does not cover:
(a) fuses, surge suppressors, filters, cosmetic damages optical damages or normal wear and tear.
(b) costs for End-user's employees and/or any third parties, unless stipulated otherwise in the Warranty.
(c) Regulatory changes or recertifications
(d) Downtimes or other business interruption of the Product and/or the installation, including but not limited to loss of profit, loss of availability, or loss of production.

5.3. The Warranty shall be void, if any of the below occurs.
(a) Serial number of the Product has been altered, manipulated, or cannot be clearly identified.
(b) The End-user does not provide sufficient access to the property/building on or in which the Product concerned is stored or installed, to the PV array itself, of which the Product concerned has become an integral part in the event the Product has already been installed, or to the Product itself, which is subject to inspection, testing, and correction, including Firmware/Software upgrades. This is applicable to both on-Site and remote access.
(c) The End-user fails to make any Product subject of a Warranty Claim available for inspection, testing and correction.
(d) The End-user does not provide maintenance records or other similar evidence consistent with Sungrow's Manual that the required maintenance was performed during the relevant Warranty Period as detailed in the Sungrow's Manual.

6. END-USER'S OBLIGATIONS

6.1. In order to receive the benefits of this Warranty, the End-user must install, maintain and operate the Product according to the Manual; reasonably protecting against further damage to the Product if a defect is discovered.

6.2. End-user shall provide Sungrow service personnel with reasonable access to the Site and any special instructions needed to access the Site. Provided that Sungrow gives reasonable advance notice to the End-user of its intent to access the Site for Service, Sungrow shall have no liability if Site access is not provided, and End-user will be invoiced for any costs incurred by Sungrow if an additional visit is required due to lack of access.

6.3. It is the End-user's responsibility to notify Sungrow of any hazards at the Site and to guarantee the Site is free from hazards or obstructions, and that all applicable Site safety precautions have been communicated to Sungrow in a timely manner. Sungrow shall ensure that its own personnel follow the safety precautions at the Site as provided by the End-user.

7. OTHER LIMITATIONS

7.1. Sungrow's obligations under this Warranty are valid only if the End-user complies with its payment obligations under the applicable purchase order or other purchase agreement for the Products. If the End-user is in breach of its undisputed payment obligations for the applicable Product, in accordance with the contract terms under which the Product is sold, Sungrow shall have no Warranty obligations with respect to such Product until the undisputed payment has been made in full to Sungrow. Also, during such time, the Warranty Period for the Product shall continue to run and the expiration of this Warranty shall not be extended upon payment of any overdue or unpaid amounts.

8. COSTS NOT RELATED TO WARRANTY

8.1. The End-user shall be invoiced for, and shall pay for, all Services not expressly provided for by the terms of this Warranty, including without limitation, Site calls involving an inspection that determine no corrective maintenance is required. The End-user shall also be invoiced for, and shall pay, any costs for replacement equipment, installation, materials, freight charges, travel expenses or labor of Sungrow representatives to the extent such costs and expenses are not included in the terms of this Warranty.

SUNGROW USA CORPORATION
Add: 5780 S 40th St, STE 1, Phoenix, AZ, USA 85040
Tel: 1-833-SGPOWER (747-6937)
Sales: info@sungrowamericas.com
Service: techsupport@sungrow-na.com
Web: www.sungrowpower.com

9. WARRANTY APPLICATION AND VALIDITY

9.1. Sungrow, in its sole and absolute discretion, reserves the right to make any changes and modifications to this Warranty, at no prior notice, for future, unsigned purchase orders or contracts, in addition to the right to decide whether to accept new contracts or annual contract renewals.

10. PRICE

10.1. For Services not covered under this Warranty, Sungrow will charge based on its standard service price schedule. Sungrow, in its sole and absolute discretion, reserves the right to revise prices with respect to the excluded Services at any time.

11. CONDITIONAL TERMS

The following terms and conditions shall apply solely to the extent that the parties have not executed a purchase order or purchase agreement containing similar terms. In the event of any conflict between and term of this Section 11 and a term of the parties' executed purchase order or purchase agreement, the purchase order or purchase agreement shall prevail.

11.1. LIMITATIONS ON LIABILITY.

11.1.1. To the fullest extent allowed under the law, this Warranty constitutes End-user's sole and exclusive remedy for Warranty Claims against Sungrow in respect of defective or non-conforming Products hereunder and is in lieu of all other warranties, conditions, guarantees or representations from Sungrow relating to the Products hereunder, whether oral or written, express or implied, statutory or otherwise, in contract, tort or otherwise, including without restriction, any warranties of merchantability or of fitness for a particular purpose, and any such warranty, condition, guarantee or representation is hereby excluded. In no event shall any Warranty Claim, failure of any Product hereunder, or breach of this Warranty, render either party, its affiliates, subcontractors or suppliers liable to the other party or its affiliates for indirect or consequential damages or loss of use associated with Warranty Claims for lost profits or loss of revenues, or any associated equipment, cost of capital, cost of substitute equipment, facilities, services or replacement power, downtime costs, Warranty Claims of End-user's customers for such damages, or for any other special, consequential, incidental, indirect or exemplary damages. Each party's total liability for any and all Warranty Claims and costs under this Warranty shall not exceed the total purchase price for the Product that is the subject of a Warranty Claim.

11.2. FORCE MAJEURE.

11.2.1. Sungrow shall not be liable hereunder by reason of any failure or delay in the performance of its obligations hereunder due to an event of Force Majeure. "Force Majeure" means an act of god or other cause which is beyond the reasonable control of the party whose performance is affected by such event and could not have been avoided by the exercise of reasonable prudence, including but not limited to: extreme natural disasters (e.g. earthquakes, floods, landslides); explosions; fire; pandemics or epidemics; destruction of machines; equipment, factories and of any kind of installation to the extent caused by an event of Force Majeure; terroristic attacks; nuclear accidents; war, civil war or similar uprising; general strike (or lock-out) of a regional or national nature that is not targeted at Sungrow.

11.2.2. In the event of the occurrence of any Force Majeure event, Sungrow shall notify the End-user immediately in writing of the invocation of this section, and Sungrow's obligations hereunder shall be suspended for the duration of such Force Majeure event; provided that Sungrow shall be obligated to use its commercially reasonable efforts to restore performance hereunder as soon as reasonably practicable, and provided, further, that if such event continues for more than ninety (90) days in the aggregate in any six (6) month period, the End-user shall have the right to terminate this Warranty at any time upon written notice to Sungrow. Sungrow shall exercise commercially reasonable efforts in accordance with prudent industry practices to alleviate and mitigate the cause and effect of such Force Majeure event. Reasonable actions must be taken to avoid and/or limit damages to the End-user.

11.3. DISPUTE RESOLUTION.

11.3.1. Any dispute under this Warranty which cannot be resolved by the good faith negotiation of the parties shall be finally settled by binding arbitration before a panel of three arbitrators selected and appointed in accordance with the Commercial Arbitration Rules of the American Arbitration Association ("AAA") then in effect on the date the dispute is submitted to the AAA (the "Rules"). The venue of the arbitration proceedings shall be San Francisco, California, and the language to be used in the arbitration proceedings shall be English. Unless prohibited by applicable laws, the arbitrator(s) shall have the power to issue interim measures, including but without limitation measures for preservation of property, attachment, preliminary injunction, replevin,

preservation of evidence, etc. to avoid irreparable harm, maintain the status quo, or preserve the subject matter of the dispute. All the arbitration costs - including but not limited to the costs of the arbitrators (whether local or foreign arbitrators), all fees charged by the arbitration institution, experts' fees, and reasonable attorneys' fees -- shall be borne by the losing party. This Warranty shall remain in full force and effect pending the resolution of any dispute hereunder, and each party shall continue to perform its obligations not relating to the pending dispute during the pendency of any dispute. This Warranty is governed by and shall be interpreted in accordance with the laws of the State of California, without reference to conflicts of law.

NOTWITHSTANDING ANYTHING TO THE CONTRARY HEREIN OR IN THE PURCAHSE AGREEMENT FOR THE PRODUCTS, SUNGROW DISCLAIMS ALL IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Limited Warranty for Solar Modules

Utility Generation Market

20230810

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

This Limited Warranty applies to the following modules		
Series	60&66 cells	72&78 cells
Hi-MO 5	LR5-66HBD-xxxM	LR5-72HBD-xxxM
	/	LR5-72HIBD-xxxM
Hi-MO 7	/	LR5-72HGD-xxxM
	/	LR7-72HGD-xxxM

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

1. Limited Warranty

The warranty start date of the Solar Modules stipulated under this Limited Warranty for Solar Modules (hereinafter referred to as “Limited Warranty”) is the date of delivery to the Customer or 6 months after the modules are shipped out of the production plant, whichever is earlier (hereinafter referred to “Warranty Start Date”). For the avoidance of doubt, the aforesaid Customer means the Buyer as agreed in the Sales Contract for sale of the Solar Modules.

1.1. 12-Year Limited Product Warranty

The Supplier warrants that for a period of 12 years since the Warranty Start Date that the Solar Modules (including the DC connectors and cables) will be free of defects in material or workmanship which affects the normal installation or utilization of the modules, provided that the Solar Modules are installed, utilized and maintained according to the stipulations of the Installation Manual provided by the Supplier, which may be updated from time to time. Defects do not include changes in appearance or normal wear and tear of the Solar Modules after the modules is installed. Performance warranty for the power output is not included here but it shall be specifically elaborated in the "30 Year Limited Performance Warranty" section below.

1.2. 30-Year Limited Performance Warranty

The Supplier warrants for a period of 30-year performance warranty (“Performance Warranty Period”) in details as below. For the avoidance of doubt, this limited performance warranty only applies to the actual power output of the front-side of the modules.

As for the Hi-MO 5 series, during the first year of the Performance Warranty Period, the actual power output (performance) of the modules will reach at least 98% of the nominal power output; and from the second year, the actual power output will decline annually by no more than 0.45% for a period of 29 years; by the end of the 30th year, an actual output of at least 85% of the nominal power output is guaranteed.
Actual Power Output (Year=1) ≥ Nominal Power * (1 - 2%)
Actual Power Output(Year=N, 2≤N≤30）≥ Nominal Power *(1 −(2% + 0.45% *(N-1)))

As for the Hi-MO 7 series, during the first year of the Performance Warranty Period, the actual power output (performance) of the modules will reach at least 99% of the nominal power output; and from the second year, the actual power output will decline annually by no more than 0.4% for a period of 29 years; by the end of the 30th year, an actual output of at least 87.4% of the nominal power output is guaranteed.
Actual Power Output (Year=1) ≥ Nominal Power * (1 − 1%)
Actual Power Output(Year=N, 2≤N≤30）≥ Nominal Power *(1 −(1% + 0.4% *(N-1)))

The actual power output is to be measured under standard testing condition (“STC” or “Standard Test Conditions”) in an independent testing lab accepted by the Supplier or previously designated by the Supplier, and when measuring the actual power output, measurement equipment tolerance is to be taken into consideration, as per IEC60904.

Standard Test Conditions are: Air mass 1.5, wind speed 0m/s, irradiance 1000W/㎡, cell temperature 25℃

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

2. Warranty Claim Procedure

In any case, any and all warranty claims shall be submitted to the Supplier or its authorized distributor in writing or by mail within the corresponding warranty period. The customer shall provide necessary evidence documents for its claim. If the customer believes that the Solar Module does not meet the requirements of the “Limited Warranty”, the customer should notify the sales team or global technical service department of the Supplier in writing or submit the notice via email through "Contact LONGi" button on the Supplier's global official website page (the website is www.longi.com) within 30 days after the claim is identified. The notice should include the following information: (a) the claimant; (b) a detailed description of the claim; (c) supporting materials, including photos or data; (d) serial number of affected module; (e) evidence for purchase of the affected module; (f) model of the affected module; (g) project location; (h) other supplementary information required by the Supplier. The Supplier will review and evaluate alleged claims after receipt of the claim and full information as stipulated herein. If the Supplier at its sole discretion considers it necessary, the Supplier can request the module be shipped back to the Supplier’s factory or 3rd-partyfor testing, in which case, the Supplier will provide the customer with a Return Merchandise Authorization (“RMA”).

In the event the Customer fails to notify the Supplier and provide the relevant information of (a)-(h) as described above within the time required by the Supplier, or fail to coordinate the Supplier arrange the defected modules transfer under necessary circumstances, the Supplier is entitled to refuse to process the relevant claim demand without any liability until the Customer has provided the relevant information as required by the Supplier.

In the absence of such RMA, any returned module will not be accepted by the Supplier. In the event the Customer returns the Solar Modules without written agreement of the Supplier, the risks (including but not limited to damage and loss of the Solar Modules) and expenses related to the Solar Modules shall be borne by the Customer. Subject to the approval of the Supplier’s technical service department, the necessary and documented shipping costs related to the Limited Product Warranty or the Limited Performance Warranty will be compensated by the Supplier to the customer.

The Supplier is entitled to decide whether to send a representative to investigate the alleged claims on site and related cost and expenses shall be borne by the Supplier. In the event that the Supplier decides to send a representative to the product installation site for verification, the customer shall actively cooperate for such investigation. If the customer refuses the Supplier to enter the site for investigation without a proper and appropriate reason, the Supplier has the right to extend the claim process until necessary evidence is provided. In case a consensus regarding the cause of any module defect cannot be reached between the Supplier and the customer, the supplier have rights to assign authoritative testing facilities, such as PI, TÜV SUD, TÜV Rheinland, Intertek, UL, CQC, CGC, etc., which should be accepted by both parties to participate in the final settlement. The Supplier will pay for the reasonable costs incurred by such test in advance. All costs shall be borne by the losing party finally, including shipping freight, transportation insurance, and laboratory testing costs etc., except for the lawsuit which should be judged by written judgment. The Supplier reserves the right of final interpretation.

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

3. Remedies for Claims

In the event that the customer claims that the module(s) fails to meet the "Limited Warranty" as described in Sections 1.1 and 1.2 above and the Supplier confirms the cause for such defect lies on the product material or workmanship; or at the request of the client, a mutually-agreed third-party testing was done to reveal that the cause of such defect lies on the material or workmanship, then the Supplier shall, at its sole discretion, either

1. Repair the defective solar modules. In such case, the Supplier shall prepare the repair project plan and carry out the repair project for the affected modules; or

2. Replace the defective modules or provide additional module(s) to make up for the output gap between the guaranteed output and the actual power output of the defective module(s) ; or

3. Refund the residual value of the defective modules or refund the value equivalent of the output gap between the guaranteed power output and the actual power output of the defective module(s).

*Residual value = current market price (price-per-watt) * nominal power * left-over service life/ 30*
*Value Equivalent of Output Gap = current market price (price-per-watt) * (guaranteed power output – actual power output) * left-over service life/ 30*

SPECIAL NOTE:

1. Unless otherwise agreed by the Parties in written, the repaired module(s) or replacement module(s) will be delivered by the Supplier in accordance with the same Incoterms and destination as the relevant module supply contract. The insurance, freight, customs clearance fees and other reasonable expenses shall be borne in accordance with the Incoterms in the original module supply contract. In the case that the Customer pays for such costs in advance, and expects to contact the Supplier for compensation for such aforesaid costs, the Customer shall provide the invoices to evidence that such costs are incurred from related service providers. Costs incurred due to dismantling, repacking, installation or reinstallation the module(s) and other related expenses shall be borne by the Customer.

2. Any repair or replacement of the affected module(s) shall not renew the applicable warranty period. The warranty period for replaced or repaired module(s) is the remainder of the warranty for the affected modules. The Supplier is entitled to deliver similar module(s) at its sole discretion in replacement of the affected module(s) if the affected module(s) is no longer available. The nominal power of the module(s) used to replace the concerned module(s) shall at least equal or over the power wattage of the affected module(s).

3. Unless instructed by Supplier or required by law, the Customer shall dispose of out-of-use module (s) in accordance with applicable regulations on electronic waste treatment and disposal at its own cost. If the Supplier decides or is required by law to retrieve these defective modules, the ownership of the relevant module(s) belong to the Supplier. In the event the Customer returns the Solar Modules to the Supplier without the prior written consent of the Supplier, the risks (including but not limited to damage or loss of the Solar Modules) and expenses related to the Solar Modules shall be borne by the Customer, and the Supplier is entitled to refuse to deal with the related claims and demands without any liability therefrom. Unless with written authorization from the Supplier, any replaced module(s) shall not be resold, reworked or reused in any way.

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

4. Product limited warranty will terminate after refunding the residual value. If the output gap keeps growing after compensating the value equivalent had been compensated, the Customer could apply claim based on the growing value equivalent as well, which means it should exclude the value equivalent of last claim.

5. The buyer is obliged to cooperate with the Supplier to sign a "Settlement Agreement" so that the remedy plan for any alleged claim can be implemented. The Parties agree that the Supplier is entitled to use this as a precondition for fulfilling the obligations under this "Limited Warranty".

4. Liability Exemptions

The Supplier shall be free of any liability in the event that any defect of the Solar Modules is caused by or in connection to the Force Majeure. The Supplier and the Customer understands and agree that the Supplier shall free of liability in the event any obligations under this “Limited Warranty” is delayed or could not be provided because of the occurrence of the Force Majeure as defined under Clause 9 of this “Limited Warranty”.

Save the stipulations under Clause 9, the Supplier and the Customer understand and agree that this "Limited Warranty" does not apply to any one of the following situations:

- Module(s) have been installed, used and maintained in a manner that fails to strictly comply with the relevant provisions of the supplier's installation manual, module technical specification and maintenance manual; or

- Module(s) which have been subject to misuse, abuse, negligence, vandalism or accident; or

- Module(s) which have been subject to power supply failure, power surge, lightning, flood, fire, accidental damage or other events beyond the control of the Supplier directly or indirectly; or

- Module(s) which have been installed on mobile equipment (except for photovoltaic tracking systems) such as vehicles, ships, etc., or offshore facilities (except for pre-authorized floating systems or fishery-solar hybrid project); or

- Module(s) which have been subject to system voltage over the rated maximum system voltage or surge; or

- Module(s) which have been installed on unqualified buildings; or

- Module(s) which have been installed near extreme heat or in extreme or volatile environmental conditions, causing the module(s) to corrode, oxidize, or to suffer from chemical materials in the environment; or

- Failure to pay the purchase price to the Supplier or its affiliated company that sells the module(s) to the customer; or

- Module(s) which have been used in a way that infringes on the intellectual property rights of the Supplier or any other third party (including but not limited to patent rights, trademark rights, etc.);

In addition, when the nameplate and serial number of the module(s) are tampered with, removed or unrecognizable without the written authorization of the Supplier, the claim will be rejected.

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

5. Limitation of Liability

The Supplier assumes no warranties, express or implied, other than the warranties made herein and specifically disclaims all other warranties, including but not limited to, merchantability or fitness for a particular purpose, usage or application, or other obligations and responsibilities assumed by the Supplier, unless the Supplier expressly recognizes other obligations and responsibilities in a dully signed written document. The customer understands and agrees that the Supplier shall not be liable for personal injury or property damage, and shall not be liable for other losses or injuries caused by or related to the module(s) (including but not limited to any module defect, or any defect arising from improper use and installation of the module(s)). The Supplier excludes all liabilities for any collateral, consequential or special damages. Losses caused by module defect, including but not limited to, loss of profit, loss of power, loss of business opportunity, loss of goodwill, increase of the operating cost or loss of income are clearly excluded here. If the Supplier is liable for compensation to the customer, the total amount of compensation shall not exceed the invoice price of the defective module(s) paid by the customer.

6. Assignment

The Customer can transfer the rights and obligations under this "Limited Warranty" to the subsequent project owner by informing the Supplier in writing of this transfer of rights, provided that:

1. The module(s) remain at the initial installation site without being tempered with; and

2. The purchase price of the module(s) are fully paid to the Supplier or other payable amounts (such as liquidated damages); and

3. This transfer of rights covers all provisions of this “Limited Warranty”; and

4. The transferee agrees to be bound by all terms of this "Limited Warranty".

If required by the Supplier, the Customer shall, within 15 days upon receipt of the notice from the Supplier, provide reasonable evidence to prove the inheritance of ownership. Otherwise, the Supplier shall have the right to refuse to process the relevant claim and shall not be liable for it.

The rights of this "Limited Warranty" shall only be transferred if above mentioned requirements are fully met, otherwise such transfer shall not be binding upon on the Supplier, and the Supplier has the right to refuse to process the relevant demand for claims without any liability.

7. Severability

If a certain section or clause of this "Limited Warranty" itself or its applicability to certain people or certain situation is deemed invalid, ineffective or unable to be implemented, this does not affect the validity of any other sections or clauses of this warranty. In such case, the applicability of other sections or clauses of this shall be regarded as independent and effective.

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

8. Applicable Law and Dispute Resolution

Any dispute relating to this “Limited Warranty”, including but not limited to, disputes relating to the survival, validity, breach or termination of the “Limited Warranty”, shall be resolved in accordance with the governing law and jurisdiction written in the Solar Module supply contract. The Supplier reserves the right of final interpretation.

9. Force Majeure

Force Majeure refers to unforeseeable, unavoidable and insurmountable objective conditions in practice, including but not limited to war, riot, strike, epidemic, quarantine, traffic control and other social events; and earthquake, fire, flood, blizzard, hurricane, lightning, natural disaster and other natural disaster; or due to lack of adequate or adequate labor force, shortage of raw materials or inability to produce capacity, technology or output, or delay not caused by either Party due to delay of construction period due to approval delay of non-municipal supporting facilities; or the delay caused by national laws, regulations, administrative rules or orders and any unforeseeable events beyond the control of the Supplier.

Upon occurrence of Force Majeure or its continuing, in sales or defective product warranty claim, the Supplier cannot fulfill or delay in performance of its obligations under this “Limited Warranty”, the Supplier shall be free of any liability to the loss or damages incurred therefrom, but the Supplier shall promptly notify the Customer regard to the Force Majeure, and shall negotiate with the Customer in time to take necessary measurements to minimize the impact of the Force Majeure.

隆基组件产品质量标准

LONGi Module Quality Criteria

1. 基本定义和要求 General Definition and Requirement

1.1 目的 Purpose

定义隆基主要原辅材料及组件生产过程控制及隆基组件出厂验货的检验项目、检验方法、抽样基准等，确保进厂原辅材料质量及组件生产过程及组件出厂质量得到有效控制，且满足规定的要求。

Define the inspection items, inspection methods and sampling standards, etc. for LONGi main raw materials incoming and module process control and output inspection module, in order to ensure the quality of raw materials and production process and pre-shipment inspection has been controlled and can meet related requirements.

1.2 适用范围 Scope of Application

本文件适用于隆基所有组件工厂生产所需的主要原辅材料进厂检验，组件生产过程控制及出厂检验工作。

These inspection criteria are applicable to raw materials incoming inspection, production process control and pre-shipment inspection for all LONGi modules.

1.3 不良等级 Defect Level

从可能造成影响的程度对条款类别进行区分，分为关键不良、严重不良、轻微不良。

Defect level: Categorized based on potential impacts to 3 levels, Critical defect, Major defect, Minor defect.

关键不良：对人体会造成伤害或违反法律法规的缺点。

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

Critical Defect：Defects may cause injury on the human body, or cause violation of laws and regulations.

严重不良：对产品的基本性能、实用性与操作会构成障碍。

Major Defect: Defects may have effect on the basic performance, practicality and operating of the product.

轻微不良：外观性质量不良，或对产品的基本性，实用性与操作性不会构成障碍。

Minor Defect: Quality defects only on the appearance, or defects which have no effect on the basic performance, practicality and operating of the product.

1.4 抽样及 AQL 标准 Sampling and AQL standards

抽样水平：参照 ISO2859-1:1999 标准，并按具体条款中列明的参数执行。

Sampling Level: Referring to ISO2859-1:1999, and detailed parameters in related listed item.

AQL 标准：按照具体条款中列明的参数执行。

AQL Standard: Referring to detailed parameters in related listed item.

2. 原辅材料进料检验要求 Raw Material Incoming Inspection Requirement

2.1 检验要求 Inspection Condition

电池片，玻璃，背板，EVA/POE，线盒，焊带，硅胶，边框材料进料检验要求如下：

The incoming inspection requirements for Cell, Glass, Baksheet, EVA/POE, J-box, Ribbon, Silicon, Frame are as below.

材料 Material	序号 No.	测试项目 Test Item	规范/公差 Standard/Tolerance	测试设备 Test Equipment	取样频率 Frequency
电池片检验 Cell Inspection	1	尺寸 Size	参考电池片进货检验指导书 Refer to cell incoming inspection instructions	游标卡尺、千分尺 Caliper\Microcalliper	每批 Each batch
	2	外观 Appearance	参考电池片进货检验指导书 Refer to cell incoming inspection	点线规、钢尺 Steel Ruler	每批 Each batch

4. 组件出厂检验标准 Module Pre-shipment Inspection Requirement

4.1 出厂检验基本条件 Pre-shipment Inspection Basic Conditions

4.1.1 抽样及 AQL 标准 Sampling and AQL standards

抽样水平：参照 ISO2859-1:1999 标准，一般检验水平 I 适用于外观、EL 和功率检验，特殊检验水平 S-3 适用于绝缘耐压和接地检验。

Sampling Level: General Inspection Level I according to ISO2859-1:1999 is applicable for Visual, EL and Power Inspections, Special Inpsection Level S-3 is applicable for Hi-Pot and Grounding Inspection.

AQL 标准：关键性不良 Cr: AQL 0，主要不良 Ma: AQL 1.5，次要不良 Mi: AQL 4.0。适用于所有检验项目，但不同的检验项目按照对应的不良类型需单独统计 AQL。

AQL Standard: Critical defect AQL 0, Major defect AQL 1.5, Minor defect AQL 4.0. This AQL is applicable for all inspections, but AQL shall be calculated separately for each different inspection and defect level.

4.1.2 隆基标准验货次数 LONGi standard inspection times

第一次验货不通过，剔除不符合隆基标准产品后，对第一次不通过的检验项目进行第二次验货，第二次不通过进行全部返工后，对第二次仍不通过的检验项目进行第三次验货，第三次验货不通过拒货。

If the first inspection is fail, carry out the second inspection for the failed inspection item in first time after removing the products that do not meet the LONGi standard. If the second inspection is fail, all product rework and carry out the third inspection for the failed inspection item in second time. If the third inspection fail, reject.

4.1.3 隆基标准验货批次 LONGi standard inspection batch

标准验货可以按照 15~20MW/批次进行。

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

Standard inspection batch volume can be 15MW~20MW.

4.1.4 隆基标准验货测试项目 LONGi standard test items

指在厂内验货线进行的基本项目，包括外观，EL，功率，绝缘耐压，接地。

Refers to the basic items carried out in the factory inspection line, including appearance, EL, power, Hi-pot, Grounding inspections.

4.2 组件外观检验 Module Appearance Inspection

4.2.1 检验条件 Inspection Condition

4.2.1.1 检验员：矫正视力>0.8，无色盲；Inspector：Naked or corrected acuity of human eyes above 0.8，No color-blind.

4.2.1.2 室内检验：光照强度 700-1000LUX，外观目视检验距离 80cm-100cm。正视查看不良角度 0~90°，检验方式:翻转检查；检验频次：100%全检；检验时间：不少于 5s.

Indoor inspection: Module inspection condition: Luminance within 700-1000 lux, Overall appearance viewed at a distance of 80cm-100cm；An approximate angle of 0~ 90°（perpendicular) to the surface， Inspection method: flip inspection; Inspection frequency: 100% full inspection; Inspection time: no less than 5s:

室外检验：光照强度 1000LUX 以上，外观目视检验距离 80cm-100cm；检验角度:顺光 0~180°；检验方式：目视移动检查；检验频次：同版型 3pcs，检验时间不少于 5s.

Outdoor inspection: Light intensity above 1000LUX, visual inspection distance of appearance 80cm-100cm; Inspection Angle: smooth 0~180°;

4.2.1.3 工具：直尺、游标卡尺、菲林尺、检验工装等；Tools: Ruler/Vernier caliper/Film size/Inspection tooling.

4.2.1.4 不良面积界定：规则图形（如圆形、矩形、三角形）的面积按不良实际面积计算，不规则图形以外切矩形的近似面积计算。

Defect area judgment: Regular graphics (such as circle/ rectangle/ triangle): Calculate the actual area. Irregular graphics: Calculate the area of enclosing rectangle.

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

4.2.1.5 数量定义：电池数量均为半片电池数量概念，涉及标准为百分比的不能整除的，四舍五入取整数（如 1.6 片取整后为 2 片），但结果＜1 片的按 1 片计算。quantity: the number of batteries is the concept of the number of half cells, Refers to the standard percentage is not divisible, rounded to an integer (such as 1.6 pieces rounded to 2 pieces), but the result < 1 piece is calculated as 1 piece

4.2.1.6 长度定义：长度数值是整片电池边长或者半片电池长边 Length: the length value is the length of the whole battery or the long side of half a cell

4.2.1.7 面积定义：面积大小是整片电池概念 Area: Area size is the whole cell concept

4.2.1.8 缺陷判定： 组件正背面单独判定；有特殊注明背面要求的，按照要求判定。Module front and back separately determined; Where there is a special indication of the requirements on the reverse side, it shall be judged according to the requirements.

4.2.2 术语定义 Terms and definitions

外观标准：按照材料类型，分为 1.电池片相关（单双面区分）、2、焊带相关、3.玻璃相关（含单双玻区分）、4.背板相关（含单双玻区分）、5.边框相关、6.铭牌相关、7、接线盒相关。

Appearance standard: According to the type of material, it is divided into 1、cell related（Single and double sided）,2、Ribbon related 、3、glass related(including single/double glass module), 4、back plate related(including single/double glass module),5、frame related, 6、Label related、7、junction box related.

边框 A 面：组件玻璃面侧，默认为装饰面，组件安装后，能被客户能看到或长时间使用到的一面。

Side A: the glass side of the component, which is the decorative surface by default. After the component is installed, it can be seen or used by customers for a long time.

边框 B 面：组件侧面，默认为非装饰面，组件安装后，不能被客户看到或长时间不使用的一面。

Side B: the side of the component, which is non decorative by default. After the component is installed, it cannot be seen by the customer or will not be used for a long time.

边框 C 面：组件背板面侧，默认为非装饰面，组件安装后，不能被客户看到或长时间不使用的一面。

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

Side C: the side of the back panel of the module, which is not decorative by default. After the component is installed, it cannot be seen by the customer or will not be used for a long time.

4.2.1 检验标准 Inspection criteria

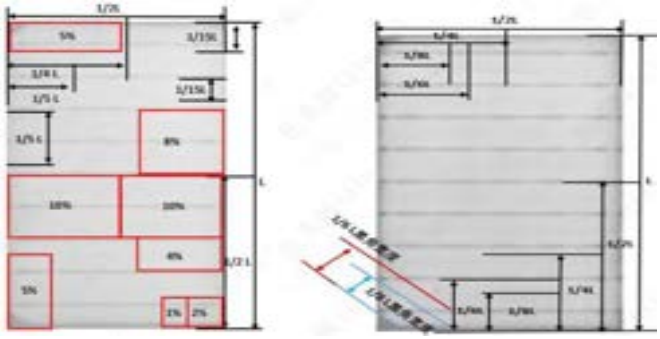
参考附件 1 组件外观检验标准，按照每个项目列出的不良类型和相应的 AQL 判定。

Refer to Annex 1 Module Appearance Inspection Criteria, judged according to listed defect level and related AQL for each item.

4.3 组件 EL 检验 Module EL Inspection

4.3.1 面积判定示意图 Area determination diagram

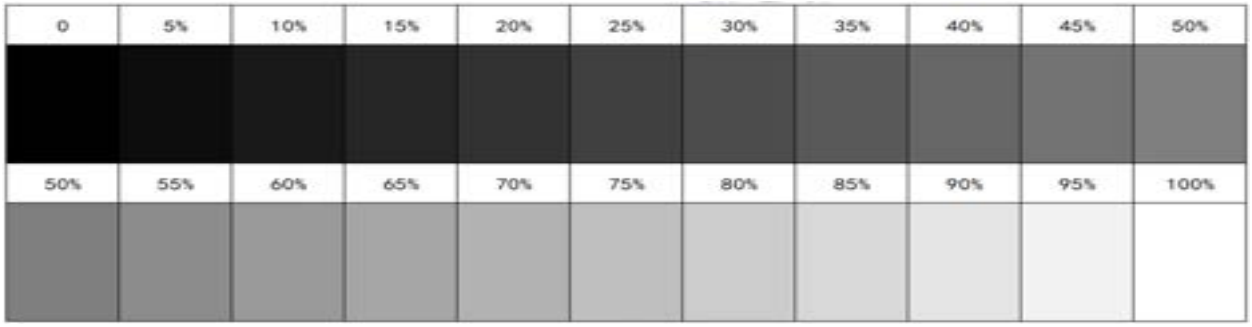
Hi-MO5 半片电池面积图示 Area determination diagram for half cell of Hi-MO5



Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

LONGi

4.3.2 光伏组件灰度尺标准 Module Gray scale Standard



灰度：灰度量化概念请按照以上灰度尺为准。

Gray scale: the concept of grayscale quantization should be based on the above gray scale.

灰度对比说明：电池单片上缺陷灰度与单片整体灰度进行对比；电池整片灰度与组件其他电池片灰度对比.

The grayscale of defects on a single cell was compared with that of the whole cell. The grayscale of the whole cell is compared with that of other cells in the module

数量：电池数量均为半片电池数量概念。

Quantity: the number of batteries is the cOncept of the number of half cells.

长度：长度数值是整片电池边长或者半片电池长边。

Length: the length value is the length of the whole battery or the long side of half a cell.

面积：面积大小参考半片电池图例。

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

Area: refer to the legend of half cell.

4.3.3 组件 EL 判定及标准图示 EL inspection criteria and limit/sample picture

参考附件 2 组件 EL 检验标准，按照每个项目列出的不良类型和相应的 AQL 判定。

Refer to Annex 2 Module EL Inspection Criteria, judged according to listed defect level and related AQL for each item.

4.4 功率检验 Power Inspection

检验标准 Inspection criteria

1. 复测平均功率≥平均铭牌功率，合格

Average retest power ≥ Average nameplated power，OK.

2. 复测单块功率 < 铭牌功率*99.5%，不允许。

Individual retest power < Nameplated power * 99.5%, Not allowed.

3. 铭牌功率*99.5% ≤ 复测单块功率 < 铭牌功率，按照次要不良 AQL 2.5 判定。

Nameplated power * 99.5% ≤ Individual retest power < Nameplated power, judged according to Minor defect AQL 4.0.

4.5 绝缘耐压检验 Hi-pot Inspection

检验标准 Inspection criteria

漏电流小于 0.05mA，按照关键不良 AQL 0 判定。

Current leakage < 0.05mA, judged according to Critical defect AQL 0.

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

4.6 接地检验 Grounding Inspection

检验标准 Inspection criteria

测试电阻 < 1Ω，按照关键不良 AQL 0 判定。

Resistance < 1Ω, judged according to Critical defect AQL 0.

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

LONGi

附件 1 组件外观检验标准

Annex 1 Module Appearance Inspection Criteria

检验项目 Inspection Item	缺陷 Defect name	缺陷等级 Defect grade	图片 Reference pictures	QA级 Grade QA
1、电池片 Cell	1.1色差 Color contrast	轻微缺陷 Minor		1) 组件整体颜色呈中蓝、深蓝、深深蓝、不允许混色（不同颜色出现在同一块组件中），图一为限度样片，超出不允许，图二为OK图片 ，具体以实物封样为准 2）单片中镀膜导致的黄金片、彩虹片不允许，左图三 3）整体背面颜色不管控包含氮氧化硅镀膜工艺,左图四 1)The overall color of each module should be uniform （(medium/dark blue/dark dark blue blue） ；colour mixture; (different color in one module not allowed) Figure 1 is the limit sample, which is beyond the allowable limit, and Figure 2 is the OK picture 2) single film coating caused by gold film，rainbow film is not allowed 3）the overall back color is not controlled including the silicon oxide coating process

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	1.2 电池片污痕（正、背面） Stain(Front/ back side)	轻微缺陷 Minor	 	1）手指印：不允许； 2）脏污：单个≤20mm²，单片电池片≤1 个，同一组件脏污电池片≤ 5%组件电池片总数 3）助焊剂印迹：单片电池片总面积≤10mm²，同一组件助焊剂电池片≤4%组件电池片总数 Front and back side count and judge separate 1) Finger prints not allowed. 2) Stain: area≤20㎜², amount per cell ≤ 1 Affected cell qty./module ≤ 5% total module cells 3）Scaling powder Imprint:Sigle Cell Area ≤10㎜², Affected cell qty./module≤ 4% total module cells
	1.3.电池片划痕（正面） Scratch of cell（front side）	轻微缺陷 Minor	 	1）可见划痕长度≤20㎜， 2）单片电池片划痕≤2处， 同一组件划痕电池片≤5%组件电池片总数 1) Visible scratch length ≤ 20mm 2) Scratch qty./cell ≤ 2 Affected cell qty./module ≤5% total module cells
	1.4.电池片白斑（正背面） White spot(front /blackside)	轻微缺陷 Minor	 	正面 1）面积≤0.05㎜²，不计片数和个数； 2）0.05㎜2＜单个面积≤3㎜² 单片电池片白斑数量≤2 个，同一组件白斑电池片数量≤5%组件电池片总数 背面 1)直径≤3㎜，不计个数和片数 2)3㎜＜直径≤10㎜，单片＜8 个；单块组件白斑电池片数量≤15%组件电池片总数； 3)直径＞10㎜，不允许

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

				Front Side: 1) Area≤0.05mm², no counting amount of cell and white spot. 2) 0.05mm2<Area of each white spot≤3mm² Amount in each cell≤2; Amount of cell in each module≤5% total module cells Black Side: 1) Diameter≤3mm, no counting amount of cell and white spot. 2) 3mm<Diameter of white spot≤10mm, Amount in each cell≤8;Amount of cell in each module≤15% total module cells 3)Diameter>10mm,not allowed
	1.5 断栅（正面） Broken finger(Front side)	轻微缺陷 Minor		1）长度≤1mm：单片电池数量不计，同一组件断栅电池片数量不限 2）1mm<断栅长度≤2mm （非连续断栅）：单片电池片断栅数量≤2处，同一组件断栅电池片数量≤5%组件电池片总数 3）长度>2mm，不允许 1)length of broken finger≤1mm: no counting amount of cell and white spot 2) 1mm<length of broken finger ≤ 2mm: Amount of broken finger ≤2per cell; Amount of cell with broken finger≤5% total module cells 3) length of broken finger Broken finger>2mm,not allowed.
	1.6 脱晶（正、背面单独判定） Silicone peel off(front side and back side judged separately)	轻微缺陷 Minor		正背面单独判定 1)面积≤1mm²，单片≤2个，片数不计； 2)1mm²<面积≤5mm²，单片电池片≤2处，单块组件≤3%组件电池片总数 1) Affected area ≤ 1mm²,amount ≤2per cell，cell amount

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

				no need to count; 2) 1mm² ＜Affected area≤5mm²，≤2per cell; cell amount ≤3% total module cells
	1.7崩边 Edge Chip	轻微缺陷 Minor		边沿缺失，厚度方向没有贯穿整片电池片厚度 1)长度≤3mm，宽度≤0.5mm， 2)单片电池片≤2处，单块组件≤3%组件电池片总数 The edge is missing and the thickness direction does not run through the whole thickness of the cell 1)Length≤3mm;Width0.5mm; 2)Amount of edge chip ≤2per cell; Amount of cell with edge chip ≤3% total module cells
	1.8 缺角 Corner chipped	重要缺陷 Major		边沿缺失，贯穿整个电池片厚度 V形、锯齿不允许； 其他参考崩边标准 The edge is missing, and the thickness direction runs through the thickness of the whole cell "V" chip or zigzag notch Not allowed，Other reference Edge Chip standards

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	1.9 碎片/穿孔 Breakage/ pinhole	重要缺陷 Major		不允许 Not allowed
	1.10 虚印（正背面） Poor printing	轻微缺陷 Minor		轻微非断开的虚印 1）正面单块电池片虚印面积≤12cm^2，单块组件≤5%组件电池片总数 2）背面： 不管控 Slight no breaking virtual print 1）Front：Area of poor printing per cell≤12cm^2 ,Amount of cell with poor printing ≤5% total module cells 2）Back：No requirement

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	1.11 栅线氧化 Finger Oxidation	轻微缺陷 Minor		1）单块电池片氧化面积≤20cm^2，单块组件≤5%组件电池片总数 2）背面： 不管控 1）Slight non breaking virtual print Front：Area of poor printing per cell≤20cm^2 ,Amount of cell with poor printing ≤5% total module cells 2）Back：No requirement
	1.12边缘白印 Edge white print	轻微缺陷 Minor		1）月牙形、长条形目视可见的彩虹印不允许; 2）宽度≤1mm线状边缘白印，长度≤20mm，单片电池片划痕≤3处；同一组件电池片≤3%组件电池片总数 1. the crescent shaped and long strip-shaped rainbow print visible by visual inspection is not allowed; 2. White mark on linear edge with width ≤ 1mm, determined according to scratch standard: length ≤ 20mm, single cell scratch ≤3; Scratch cells of the same component ≤ 3% total module cells

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

2 焊带 Busribbon	2.1.焊带偏移 Ribbon Shifted	轻微缺陷 Minor		9BB: 1） 焊带偏离主栅线≤2mm，偏移数量不超过组件总焊带数量的 5% 2）每根焊带允许空焊点≤2(不包括头尾焊点) 1)ribbon shifted Bus-bar ≤2mm, Total number shall not exceed 5% of the total number of weld belts 2)Empty solder joints of Each Ribbon ≤ 2（head and tail solder joints are not included） 18BB: 1）鱼叉位置：焊带偏离主栅线在鱼叉内，数量不计，超出鱼叉位置按照主栅线要求管控； 2）正面主栅线位置：焊带偏离主栅线＜3mm，每根焊带允许空焊点≤3（不包括头尾焊点），每片≤2 根，总数不超过总焊带数量的 3%； 背面主栅线位置：焊带偏离主栅线＜3mm，每根焊带允许空焊点≤4（不包括头尾焊点），每片≤2 根，总数不超过总焊带数量的 3%； 3）焊带偏离主栅线≥3mm，不允许 1) Harpoon position: The welding strip deviates from the main grid line within the harpoon (not exceeding the edge lines on both sides of the harpoon), and the quantity is not allowed. The position beyond the harpoon is controlled according to the requirements of the main grid line 2) Main grid line position ： ribbon shifted Bus-bar ≤3mm ； Empty solder joints of Each Ribbon ≤ 3（head and tail solder joints are not inluded），Single cell≤2,，Total number shall not exceed 3% of the total number of weld belts

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

				3）Welding strip deviation from the main grid line ≥ 3mm, not allowed
	2.2.焊带与汇流条搭接 Junction of ribbon and connector	轻微缺陷 Minor		1) 未剪焊带超出汇流条≤2mm,焊带与汇流条 2) 完全接触 左图一，涉及汇流与汇流条焊接的,超出部分≤2mm，汇流条与汇流条完全接触 如图一 图二 2) 汇流条超出焊带0-6mm 如图三 3) 汇流带与焊带焊接长度≥1.5mm，如图四 1) Uncut ribbon length ≤ 2mm Ribbon should contact completely with bus-bar. 2) Ribbon to bus-bar Distance0-6mm 3) Ribbon of Junction and weld length≥1.5mm
2 焊带 Bus-bar	2.3.汇流条位置偏移 Bus-bar shifted	轻微缺陷 Minor		1、汇流条与电池片之间≥1mm 2、汇流条与铝边框之间≥1mm 1、 Gap between bus-bar and cell≥1mm 2、 Gap between bus-bar and frame≥1mm

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	2.4.汇流条位置偏移 Bus-bar shifted	轻微缺陷 Minor		头尾部焊带与汇流条之间保持垂直状态，头尾部焊带偏移≤3mm 1）Maintain a vertical position between the head/tail welding strip and the bus-bar 2）Shift between the head/tail welding strip and the bus-bar ≤3mmD
3 黑色EPE放置(适用于全黑组件) EPE position(suitable to all black module)	3.1 EPE遮盖 Bus-bar uncovered by EPE	轻微缺陷 Minor		EPE全部遮盖住汇流条 Bus-bar fully covered by EPE
	3.2 EPE遮盖电池片 Cell covered by EPE	轻微缺陷 Minor		1、常规组件EPE遮挡电池片不超过第二根栅线 The EPE shield battery does not exceed the second cell line 2、1102组件：EPE直线形均匀遮盖电池片边缘且宽≤2mm不管制，非均匀性遮盖电池片时，极差≤3mm。 EPE covers the edge of the cell uniformly in a straight line with a width ≤ 2mm, which is not controlled. When the cell is covered by non-uniformit ，the range ≤ 3mm

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

LONGi

3 黑色汇流条 Black Bus-bar	3.3汇流条弯折处泛白（全黑组件） White at bus bar bend (all black modules)	轻微缺陷 Minor		1，泛白面积 S≤60mm2 2，数量不计 1,White area≤60mm2 2, The quantity is not counted
	3.4 汇流条旁边溢锡	轻微缺陷 Minor		1） 溢锡面积≤5mm2 2） 数量不计 1） in o erflow area ≤ mm2 2）The quantity is not counted
	3.5 焊带与汇流条搭接	轻微缺陷 Minor		1)未剪焊带超出汇流条≤1.5mm 2)汇流条超出焊带0-6mm 3)黑色汇流条面焊疤无可视面积要求 1 ncut welding strip e ceeding us ar ≤ 1.5mm 2) The bus bar exceeds the welding strip by 0-6mm 3) There is no visual area requirement for welding scar on black bus bar surface

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	3.6 黑色汇流条划伤（掉漆）			1)划伤面积小于5mm² 或者长度小于5mm，数量≤3个； 2)面积≤1mm²，忽略不计 1) The scratch area≤5mm² or the length ≤ 5mm, Qty≤3 2）area≤1mm²，The quantity is not counted
	3.7隔离方块色差	/		隔离方块与背板颜色、汇流条颜色允许有颜色差异 Color difference is allowed between isolation block and backplane and bus bar
	3.8 引线孔溢胶	/		引出线孔溢AB胶不做管控 The overflow of AB glue in the outlet hole is not controlled
4 玻璃面 Glass	4.1.安全距离Safety distance	重要缺陷 Major		安全距离：电池片到玻璃边缘距离 以层压图纸为准。 测量方式：电池片到边框内侧的距离 1)双玻安全距离 1mm 2)单玻安全距离 0. mm 防积灰组件：短边框安全距离满足IEC标准要求，长边框参考以上常规标准； 测量方式：汇流条外侧边缘到玻璃边缘距离

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

				Prevent dust Product：short frame Safety distance，Meet the design requirements of the drawings，Long frame refers to the above conventional standards Safety distance: The distance from the cell to the glass edge should refer to the designation drawing of lamination.The distance from the cell to the inside of the frame 1)Double glass safety distance ≥ 1mm， 2)Safety distance of single glass ≥ 0.85 mm Prevent dust Product：short frame Safety distance，Meet the requirements of IEC standards，Long frame refers to the above conventional standards Measurement method：Distance from outside edge of bus bar to glass edge
	4.2.EPE放置位置 EPE Position	重要缺陷 Major		1、层压件：EPE开口处距离汇流条内测边缘≤2mm Laminated module: Distance of EPE opening cut to inner edge of bus- ar ≤2mm 2、EPE开口处超出电池片边缘≥0.5mm，同时不能覆盖汇流条 Laminated module: Distance of EPE opening cut to Beyond the edge of the battery ≥0.5mm，Bus bars cannot be covered at the same time
4 玻璃面 Glass	4.3片间距 Cell gap	重要缺陷 Major		常规： M6: 1.8±1mm M10: 0.6±0.5mm（背面打光，整体漏光即可） 大间距： M10: 1.5±0.5mm 其他过程变更参考层压件图纸 Other changes Refer to the designation drawing of lamination

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

4 玻璃面 Glass	4.4.串间距 Cell string gap	重要缺陷 Major		常规： M6: 2.1 +3/-1.5mm M10: 1.7 +3/-1.5mm 其他过程变更参考层压件图纸 Other changes Refer to the designation drawing of laminatio
	4.5 方阵偏移 Array shifted	重要缺陷 Major		长边框侧 组件两端电池片与边框距离之差≤8mm Distance difference between the battery and the frame at both ends of the module≤8mm
	4.6 错位 Misalignment	轻微缺陷 Minor		1、常规组件 电池串相邻错位≤1.5mm Conventional module Misalignment ≤ 1.5mm 2、1102组件电池串相邻错位≤2.5mm 1102 module Misalignment ≤ 2.5mm

	9.6 玻璃叠差 Glass misalignment	轻微缺陷 Minor		1.长度或宽度 L＜500mm，最大允许误差≤0.5mm 2.长度或宽度 500mm≤L＜1000mm，最大允许误差≤1mm 3.长度或宽度 1000mm≤L＜2000mm，最大允许误差≤2mm 4.长度或者宽度 2000mm≤L＜4000 mm，最大允许误差≤3mm 1) Length/width: L ＜ 500mm, allowable difference ≤ 0.5mm 2) Length/width: 500mm ≤ L＜ 1000mm, allowable difference ≤ 1mm 3) Length/width: 1000mm ≤ L＜ 2000mm, allowable difference ≤ 2mm 4) Length/width: 2000mm ≤ L＜ 4000mm, allowable difference ≤ 3mm
	9.7 玻璃面印痕（正面） Glass Mark (front side)	轻微缺陷 Minor		1)1m处直视可见明显印痕 圆形直径≤15mm， 椭圆长度≤100mm，宽度≤10mm 2)单片组件≤8处 1) Allowable visible mark on glass surface from 1m: i) Round shape: Diameter ≤15mmii) Oval-shaped: Length ≤100mm, Width ≤10mm 2) Mark qty./module ≤8
	9.8 玻璃面压痕 Glass indentation	轻微缺陷 Minor		1、常规组件：长条、圆形及不规则正常 90 度 1mm 直视不允许 Strip, circle and irregularity Normal 90 °1mm direct vision is not allowed 2、1102组件:1m处直视可见明显印痕圆形直径≤20mm,椭圆长度≤1 0mm,宽度≤1 mm 单片组件≤ %组件电池片总数 Allowable visible mark on glass surface from 1m:Round shape: Diameter ≤ 20mm Oval-shaped: Length ≤1 0mm, Width ≤1 mm, ark t . module ≤ %

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	9.9 引出线长度 Length of lead-out wire	轻微缺陷 Minor		1） 按照图纸尺寸偏差±1mm，适于安装接线盒 2） 层压后引出线间距≥1mm 1）According to technical drawing, Lead-out bus-bar length: 20 ±1mm 2）Lead out spacing after lamination≥1mm
漏光 Light leakage	9.10 网格与电池片间漏光 Light leakage between grid and cell	轻微缺陷 Minor		宽度≤3mm,数量不计 Width ≤ 3mm, quantity not counted
锯齿波 Sawtooth wave	9.11 镀釉面锯齿波 Saw tooth wave on glazed surface	轻微缺陷 Minor		高度≤2mm Height ≤ 2mm
镀釉面斑点 Enamel spots	9.12 镀釉面斑点 Enamel spots	轻微缺陷 Minor		直径<2.0mm，≤10.0 个/m2; 2.0mm≤直径≤4mm，≤5.0 个/m2; 4mm＜直径≤6.0mm，≤2.0 个/m2; Diameter < 2.0 mm, ≤ 10.0 pieces / m²; 2.mm ≤ diameter ≤ 4 mm, ≤ 5.pieces / m² 4 mm ≤ diameter ≤ 6 mm, ≤ 2pieces / m²

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

镀釉面针孔 Pinhole on glazed surface	9.13 镀釉面针孔 Pinhole on glazed surface	轻微缺陷 Minor		直径≤0.5mm 允许; 0.5mm＜直径≤1mm ，≤10 个/m2， 1mm＜直径≤2mm ，≤6.0 个/m2 Diameter ≤ 0.5mm is allowed 0.5mm ＜ diameter ≤ 1mm, ≤ 10 pieces / m², 1mm ＜ diameter ≤ 2mm, ≤ 6 pieces / m²
镀釉层间距 Glazing layer spacing	9.14 镀釉层到边框间距 Glazing layer to frame spacing	轻微缺陷 Minor		玻璃镀釉层边缘到长短边框 A 面内侧距离≤2.5mm The distance between the edge of the glazing layer and the inside of side A of the long and short frame is less ≤2.5mm
削边工艺（BIPV 组件） Edge cutting process （BIPV module）	9.15 削边后外观要求 Appearance requirements after edge cutting	轻微缺陷 Minor		削边后组件四边平整、无明显残胶、毛边及毛刺： 1）直角边残胶长度及宽度≤3mm（从玻璃边缘到胶的外围），四角各允许 1 处(缺陷位置如图一)； 2）边缘毛刺、拉丝长度≤3mm 以内，宽度≤1mm 以内，忽略不计；大于 3mm 不允许（缺陷位置如图二、图三）； After trimming, the four edges of the module are flat and free of obvious adhesive residue, burrs, and burrs: 1）The length and width of the residual adhesive on the right angle edge should be ≤ 3mm (from the glass edge to the outer edge of the adhesive), and one defect is allowed on each corner (as shown in Figure 1); 2）Edge burrs, wire drawing length ≤ 3mm, width ≤ 1mm, ignored; Greater than 3mm is not allowed (as shown in Figure 2 and Figure 3 for defect location)

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

防积灰组件玻璃面 Prevent dust Product	9.16 玻璃与短边框间隙 Glass and Short frame gap	轻微缺陷 Minor		玻璃与短边框间隙≤1.5mm Glass and Short frame Gap≤1.5mm
10 背板面 Back sheet	10.1 背板划伤 Damage on back sheet	重要缺陷 Minor		背板表层第一层背膜划破 不允许 The first dorsal membrane on the surface of the back sheet was cut Not allowed
	10.2.背板划痕 Scratch on back sheet	轻微缺陷 Minor		无手感的划痕 长度≤100mm，≤2处 Scratch without feel Length≤100mm，amount≤2
10 背板面 Back sheet	10.3 背板偏移 Back sheet shifted	重要缺陷 Major		层压件不允许 Laminations are not allowed

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	10.4.背板鼓包 Blister	轻微缺陷 Minor		形成面积的鼓包（例如：自然鼓起，因气泡、胶带方面的鼓起）不允许 Bulge forming area (e.g. natural bulge due to bubble and tape bulge) is not allowed
	10.5.背板凸点 Bump	轻微缺陷 Minor		高度≤0.5mm，数量不计 高度＞0.5mm，单片组件≤3处 Height ≤0.5mm，The quantity is not counted Height ＞0.5mm，≤3per module.
	10.6.背板凹坑/褶皱 Dented/ Wrinkle	轻边微缺陷 Minor		1)凹坑深度≤0.5mm：直径≤5mm个数不计；5mm＜直径≤10mm，数量≤3处；直径＞10mm或深度＞0.3mm不允许 2)褶皱深度≤0.5mm，长度≤50mm,数量≤3处 1) Depth of dent ≤ 0.5mm: i) Diameter of dent ≤5mm, ignore dent quantity. ii) 5mm < Diameter of dent ≤ 10mm, dent qty. ≤3. iii) Diameter of dent >10mm or depth of dent >0.3mm. Not allowed. 2) Depth of wrinkle ≤0.5mm: i) Length ≤50mm ii) Wrinkle qty./module ≤3

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	10.7.背板脱层 Delamination	重要缺陷 Major		不允许 Not allowed
	10.8.背板色差 Color contrast of back sheet	轻微缺陷 Minor		背板颜色、外观、透明度整体一致，无拼接痕迹 Back sheet overall color, appearance, transparency shall consistent. No splitting marks.
	10.9.背板脏污 Stain on back sheet	轻微缺陷 Minor		1m外观察无明显脏污，不允许有不可擦拭的脏污 No stain, Un-removable stain not allowed.
10 背板面 Back sheet	10.10泡棉胶带 foam tape	重要缺陷 Major		符合图纸安装要求，不允许泡棉胶带缺失， Meets the installation requirements of the drawing, and it is not allowed to lose foam tape
	10.11 线卡 Line Card	轻微缺陷 Minor		符合图纸安装要求，线卡不允许缺失及与组件分离 Comply with the installation requirements of the drawings, and the line card is not allowed to be missing or separated from the module
	10.12 跨接汇流条折叠 Jumper Busbar fold	轻微缺陷 Minor		折叠高度≤0.5mm，折叠长度≤0.4mm，单根跨接汇流条折叠≤1 处，单片组件≤3 处 Folded height≤0.5mm，folded length≤0.4mm，single jumper Busbar folding≤1，Qty≤3 per module

	11.4 边框毛刺 Burr	轻微缺陷 Minor		不允许（超过即返工） Not allowed. Rework if found.
	11.5 边框变形Deformed	重要缺陷 Major		1、 C 面轻微弓形≤5mm 2、变形不允许（超过即返工） 1、 bow ≤5mm 2、deformation Not allowed Rework if found.
	11.6 边框清洁度 Stain	轻微缺陷 Minor		边框上脏污、硅胶等残留，不可擦拭污渍距离 1m 处不可视放行。 There is no dirt and silicon residue on the frame；cannot be cleaned but not visible from 1m，acceptable
	11.7 组件尺寸 Module dimension	重要缺陷 Major		1） 长短边框公差±2mm； 2） 两对角线之差绝对值≤3mm 1) Long/short frame difference: ± 2mm； 2) Both side diagonal difference absolute value: ≤ 3mm

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	12.1硅胶 Sealant	轻微缺陷 Minor	 	1)闭口气泡背膜与边框间隙不接受，未破气泡直径≤5mm，每边≤5 个 2)开口气泡导致缺胶的不允许，开口气泡直径≤5mm，每边≤15 个，背板与边框间隙不允许， 3）边框溢胶：可见溢胶，0mm＜胶线宽度≤7mm，胶线均匀美观，允许组件四角堆胶 4）补胶后胶线均匀美观，补胶接头无毛刺、堆胶、缝隙 5）预打胶工艺，与正常溢胶无缝隙，无毛刺，节点高度≤4mm 6）每边卷边长度≤30cm，单块组件卷边总长度≤60cm，单边数量不超过 2 处，总数量不超过 8 处 7）防积灰组件产品： 正面：A 面长短边框接缝处的溢胶，0mm<胶线宽度≤2mm 胶线均匀美观；正面无溢胶污染， 背面： 一次溢胶：可见溢胶，1mm＜胶线宽度≤7mm,胶线宽度极差≤5mm，允许组件四角堆胶 1) Closed bubble and Gap between back sheet and frame are not allowed. The diameter of the unbroken bubble is iess than 5mm and Qty≤5 2）The gap between the back plate and the frame is not allowed，Opening bubble diameter﹤5mm ，≤15 on each side Gap between back sheet and frame are not allowed 3) Frame Overflowing of sealant：1mm＜the width of overflow ≤7mm，allowing four comers of the componends to pile glue 4) After the normal process, the glue line is uniform and beautiful, and the glue joint has no burr, glue pile and gap 5）Pre-gluing process, no gap with normal glue overflow, no burr, node height ≤4mm

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

				6)Each crimping dege≤30cm，total crimping length of single block component≤60mm，The number of single side shall not exceed 2, and the total number shall not exceed 8 7）Prevent dust Product： On the front： Glue overflow at the seams of long and short frames on side A, 0mm<glue line width≤2mm.； No overflow glue pollution on the front； The back： Overflowing of sealant：1mm＜the width of overflow ≤7mm，Width difference of adhesive line ≤ 5mm ，allowing four comers of the module to pile glue.
	13.1安装孔/漏水孔 Installation/ drainage hole	重要缺陷 Major	 	边框安装孔、漏水孔、接地孔位置尺寸正确，符合图纸要求，不允许缺失 Frame mounting hole，grounding hole and drainage hole position are correct and conform to the drawing requirements,Missing is not allowed 1）安装孔之差≤1mm 2）漏水孔之差≤1.5mm 1) Installation hole dimension difference: ≤ 1mm 2) Drainage hole dimension difference: ≤ 1.5mm
	13.2.边框地标缺失Earth symbol missing	轻微缺陷 Minor		不允许 Not allowed

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	13.2 边框爆膜 Frame burst film	轻微缺陷 Minor		单个面积≤150㎜²，数量不计 Single Area≤150㎜², Quantity is not counted
14 铭牌 Label	14.1铭牌偏移 Label shifted	轻微缺陷 Minor		1)条码，铭牌无明显褶皱气泡 2)铭牌偏移≤3mm （超过返工） 1)No obvious bubble or drape on label and barcode 2)Label shifted ≤3mm,Barcode (Rework if exceed the criteria)
铭牌 Label 条码 Barcode	14.2 激光打码	轻微缺陷 Minor	 	条码： 1)条码打印内容、格式、位置 符合图纸要求，内容清晰可辨，条码无断码，且易于扫描 2)以边框 B 面和 C 面交界位基准，条码偏移≤2㎜（L1-L2） 铭牌 1、铭牌打印内容、格式、位置置 符合图纸要求，内容清晰可辨 2、以边框 C 面为基准，铭牌偏移≤3㎜（L1-L2） Barcode: 1) The content, format and position of barcode printing shall meet the requirements of the drawing, the content shall be clear and legible, the barcode shall not be broken, and it is easy to scan 2)Base on border B and C, Barcode offset≤2㎜（L1-L2） Nameplate 1)The printed content, format and position of the nameplate shall meet the requirements of the drawing, and the content shall be clear and legible 2) Base on border C, Barcode offset≤3㎜（L1-L2）

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

15 接线盒 J-box	15.1 接线盒偏移 J-box shifted	轻微缺陷 Minor		分体式组件：接线盒左右端与边框之差≤5mm（超过返工） Split J-box: Difference between left and right end of J-box to glass edge (A-B): ≤5mm，Rework if found.
	15.2接线盒焊接 J-box soldering	重要缺陷 Major		1.引出线安装/焊接必须牢固（汇流条与接线柱无明显偏移，引出线与焊接柱有效焊接长度大于焊接柱长度的 1/2） 1.The lead-out wire must be firmly installed/welded (There is no obvious deviation between the bus bar and the terminal post, the effective welding length between the outgoing line and the welding column is more than 1/2 of the length of the welding column)
	15.3接线盒线胶J-box sealant	轻微缺陷 Minor		胶线光滑饱满，不得有毛刺、缺胶、堆胶现象，溢胶范围 2-7mm（超过返工） 1) Excessive sealant should be smooth surface and no burr, no lack of sealant and no accumulated sealant. 2) Sealant overflow should within 2-7mm.
	15.4接线盒灌胶 J-box sealant	重要缺陷 Major		1)接线盒内密封胶固化后必须盖过引出线，引出线不能可见，– 2）灌封胶必须完全覆盖二级管，引出线、焊盘金属件，整体灌胶外观不可见； 1)AB sealant shall fully cover lead-out busbar 2) The sealing adhesive must completely cover the secondary pipe, lead wire, and solder pad metal parts, and the overall appearance of the sealing adhesive must not be visible;

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

	15.5 接线盒线圈 J-box seal ring	重要 缺陷 Major		密封圈无断裂、破损且密封圈未脱（超过返工） No breakage/damage in seal ring, and not falling off.
	15.6接线盒外观 Appearance of J-box	重要 缺陷 Major		1) 各种标识清晰、无缺失 2) 接线盒盒盖应盖紧； 1)Each identification/symbol is clear and no missing 2) J-box cover shall be tightly closed,
		致命 缺陷 Critical		1）接线盒（包括盒体、盒盖、导线、连接器、二极管等）规格正确，金属不得外漏； 2）零件齐全，安装到位、牢固， 3）连接线极性标志正确，长度符合订单要求 1) J-box (Include J-box body, cover, cable, connector, bypass diode) specification shall correct no crack, no damage and other defect. 2) Parts complete, properly installed, firm, 3) Cable correctly labelled with terminal, length of cable fulfill WO requirement
	15.7接线盒线尺寸 J-box dimension	重要 缺陷 Major		参照图纸要求 Refer to the designation drawing
16.包装 Packing	16.1.包装 托盘外观 Appearance of packing tray	轻微缺陷 Minor	/	1)托盘无发霉、开裂、破损、不得露尖钉； 2) 箱体与托盘不可错位，箱体必须平均放在托盘内，纸箱四边距离托盘边位置相等； 3)纸箱无破损、脚印、脏污； 4)胶合板舌片锁紧，箱体无破损、脚印、脏污、开裂，钢边无破损，不允许EVA槽脱落

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

				5)PE膜缠绕符合要求，破损不能超过1层、不可露出组件 6)打包带符合要求， 无翻转、歪斜、开裂 7)外箱标识应与内箱实物对应一致，条码清晰； 8)不同色系的组件不允许混箱、混柜 9）尾拖组件可混包 1) No mold, crack, damage, or nail exposure on the tray 2)The box body and the tray shall not be misplaced. The box body shall be placed in the tray on an average basis. The four sides of the carton shall be equal to the distance between the sides of the tray 3) .No damage, footprints or smudges in the carton 4)Plywood tongue lock, box body no damage,footprints, dirt, cracking, steel edge no damage, EVA groove is not allowed to fall off 5)PE film winding meets the requirements, the damage shall not exceed 1 layer, and the components shall not be exposed 6)Packing belt meets the requirements, no turning, skew, cracking; 7）The label of the outer box should be consistent with that of the inner box, and the barcode should be clear 8）Mixing boxes and cabinets are not allowed for components of different colors 9）The trailing modules can be mixed package

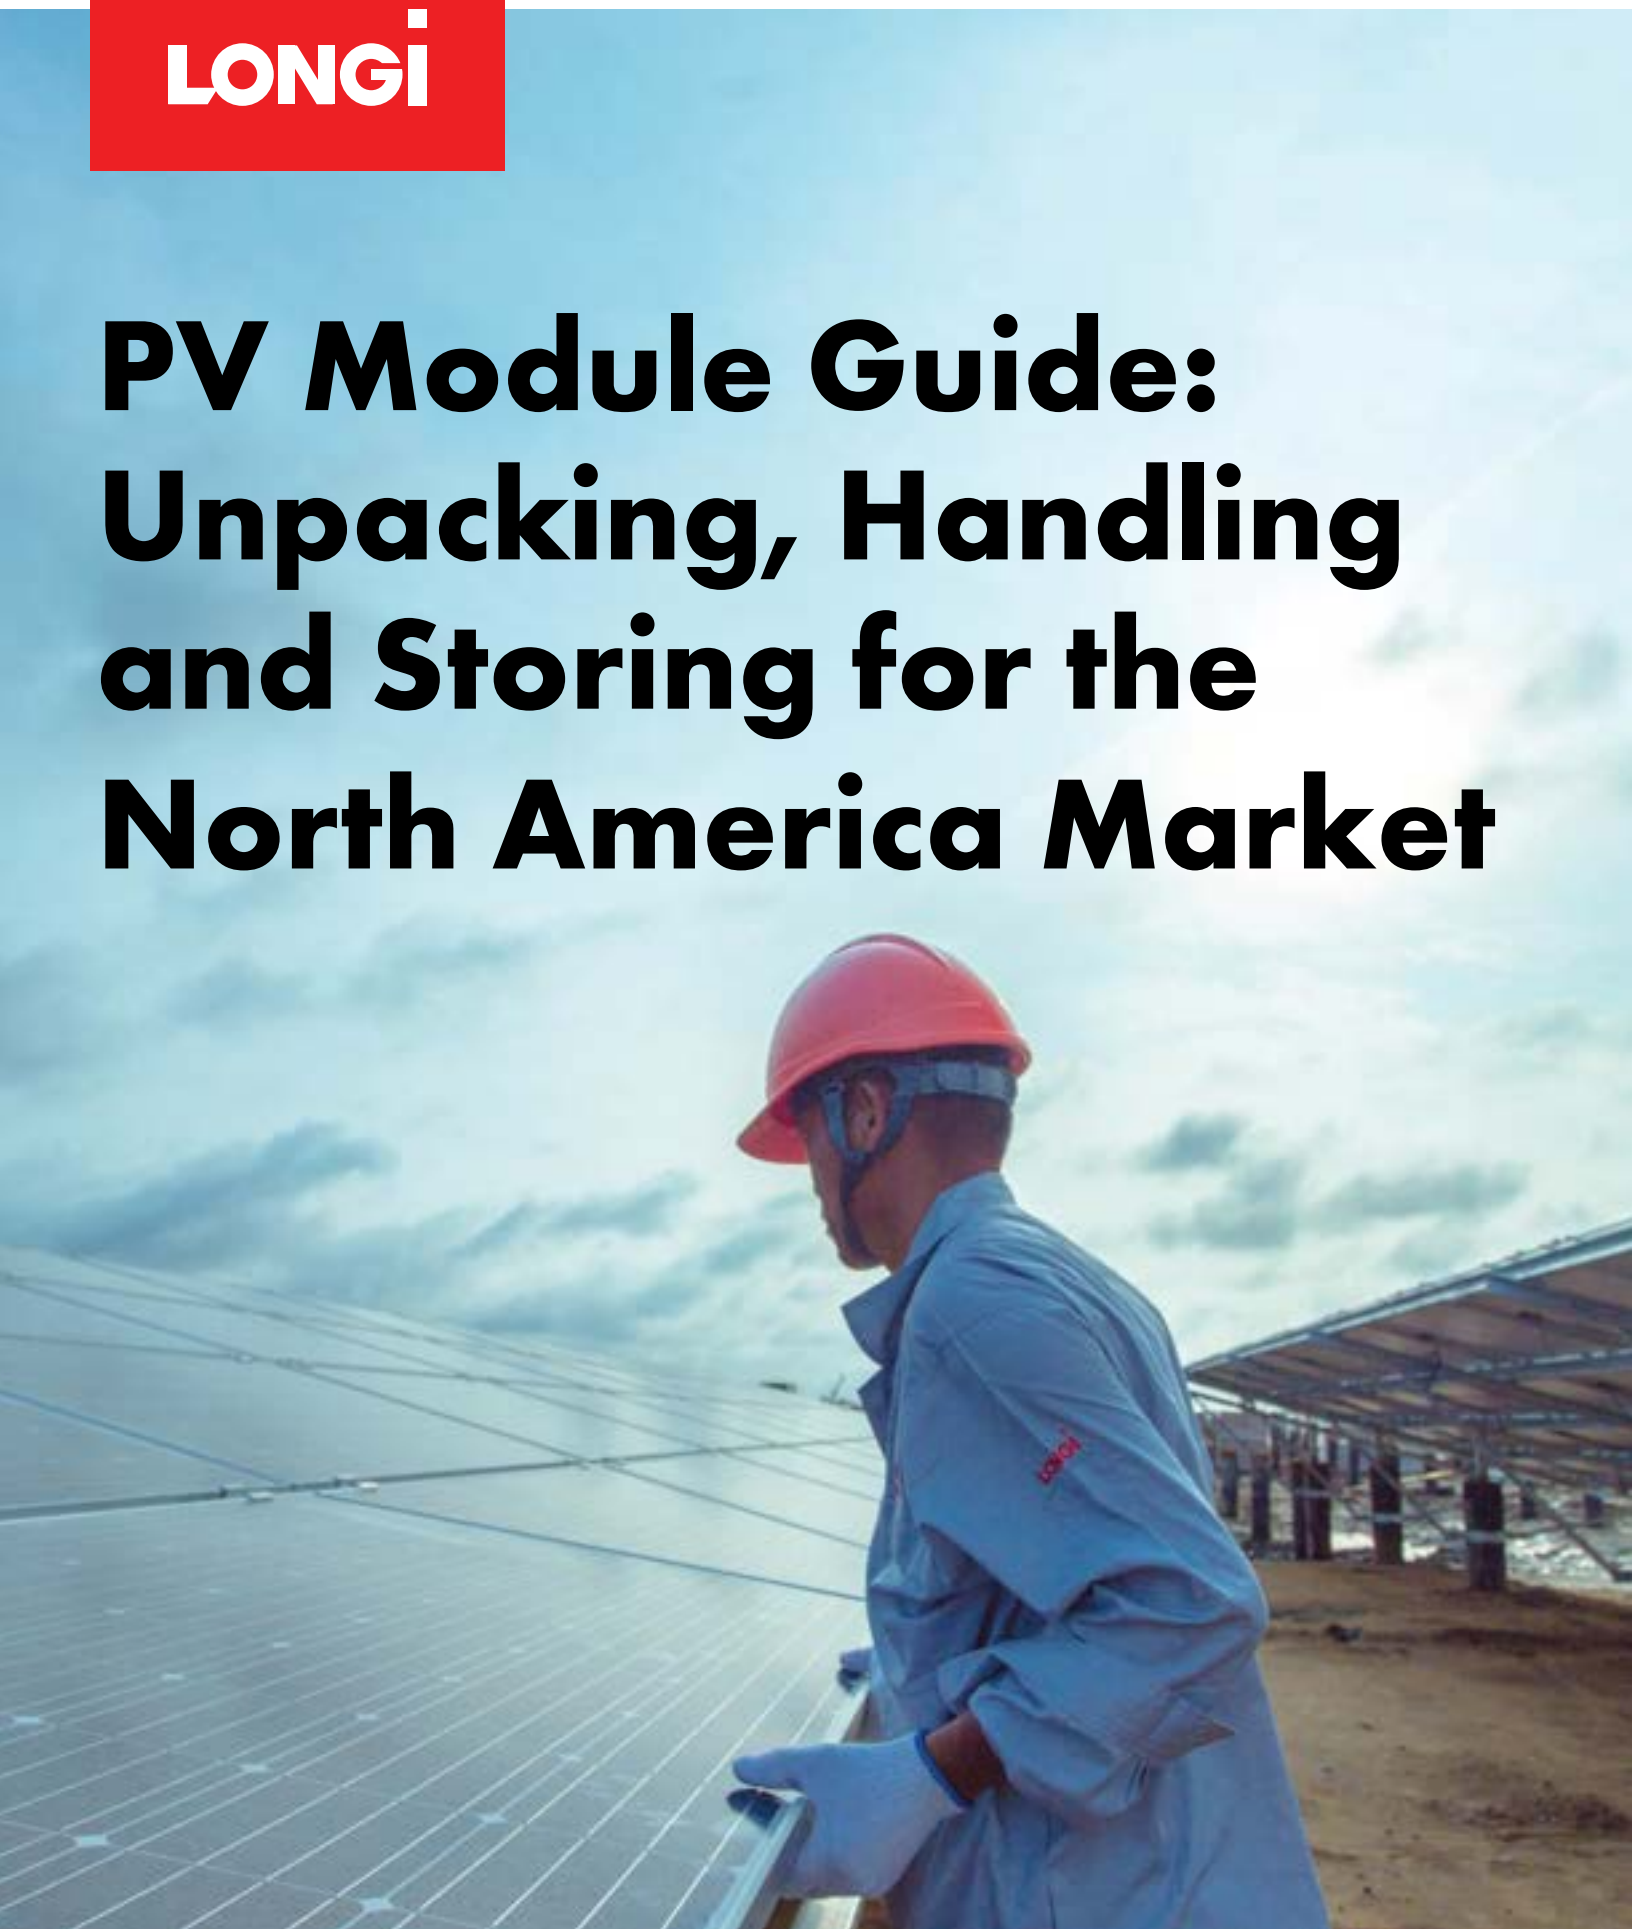
The number of single defects in a cell is less than or equal to 5. The number of defective cells in a module is less than or equal to 6% of the total number of cells

Docusign Envelope ID: 040D1157-5A89-4288-B102-93AC90480AB5

				3) Single defect length > 1/6L of cell length is not allowed intensive 1) Gray difference < 30%, the number of defective cells in the module is less than 7% of the total number of cells 2) 30%≤ gray difference ≤35%, the number of defective cells in the module ≤5% total number of cells 3) Gray difference > 35%, not allowed
23	水纹印 Watermark	轻微缺陷 Minor		Hi-MO7: 单片电池片内灰度差异≤30%，组件电池片数量不计；单片电池片内灰度差异＞30%，不允许 Hi-MO7: Single cell Gd≤30%，the quantity is not counted；Single cell Gd＞30%，not allowed

LONGi

PV Module Guide: Unpacking, Handling and Storing for the North America Market



Top Tips for Unpacking, Handling and Storing LONGi Modules

If modules are damaged upon arrival, notify the driver immediately. Notify the carrier and LONGi staff within 24 hours of delivery, and provide a record with detailed information within 48 hours of delivery. See **claims and warranties** for full details.

Store pallets in a flat, covered, dry and ventilated location. Always inspect your safety PPE items for proper wear and tear and replace those items no longer suitable.

When moving modules with a forklift:

- Place all module pallets on a flat and even surface in a dry, open location.
- Always insert the fork from the short side of the pallet, as long as it is safe to do so.
- Use the right-size forklift forks based on the pallet size. Do NOT use oversized forks.
- Use forklifts with a backrest greater than 48 inches.
- DO NOT press the forklift backrest into the cardboard
- Lift the forks high enough so the pallet wooden supports do not hit the ground and break

When unpacking, position pallets next to a solid, self-standing support structure. Do NOT support the pallet with sharp objects, modules, or loose materials.

Review the Installation Manual for LONGi Solar PV Modules before you begin installation.

Do not carry a module alone – two people are recommended to lift and carry modules.

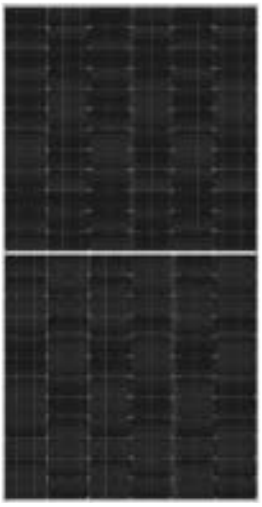
Introduction

This guide serves as a reference for inspecting, transporting, unpacking, handling and storing LONGi PV solar modules to ensure safety for you and your modules. No matter where you are in the delivery and installation process, LONGi is here to help, and our team of industry experts is proud to partner with you for a successful project.

These unpacking, handling and storing best practices pertain to all LONGi modules, including 54, 66, 72, and 78-cell products:

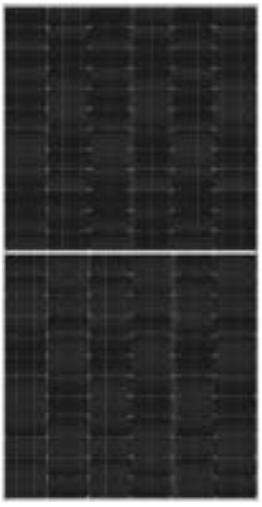
Hi-MO 5 54-cell

54-cell/ 108 half-cell, single glass monofacial (LR5-54HPH/HPB-xxxM)
(For U.S. market)



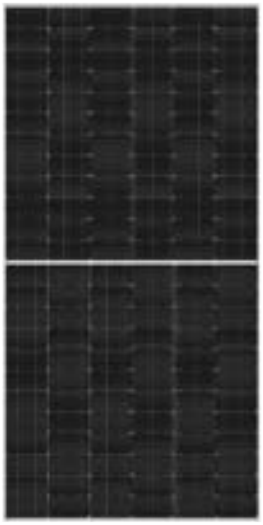
Hi-MO 5 72-cell

72-cell/ 144 half-cell, dual glass, bifacial (LR5-72HBD-xxxM)
(For U.S. market)



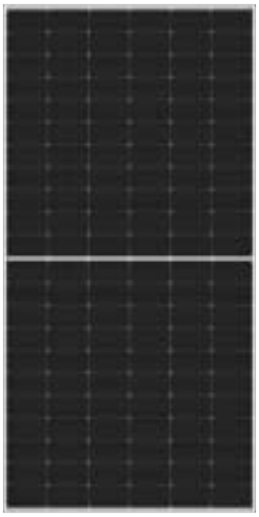
Hi-MO 5 72-cell Ice-Shield

72-cell/ 144 half-cell, dual glass, bifacial (LR5-72HBD-xxxM)
(For U.S. market)



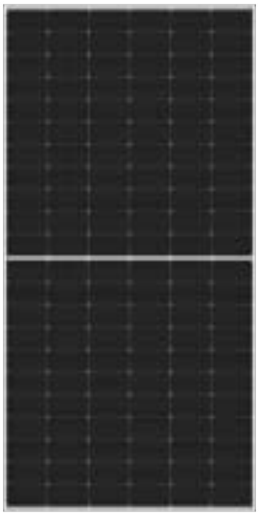
Hi-MO 5 78-cell

78-cell/ 156 half-cell, dual glass, bifacial (LR5-78HBD-xxxM)
(For U.S. market)



Hi-MO 7 66-cell

66-cell/ 132 half-cell, dual glass, bifacial (LR8-66HGD-xxxM)
(For Canadian market)



Hi-MO 7 66-cell Ice-Shield

66-cell/ 132 half-cell, dual glass, bifacial (LR8-66HGD-xxxM)
(For Canadian market)

Module packaging

LONGi ships modules in pallets with the following dimensions, depending on module type:

Family	Module Type	Module Dimensions (mm)	Pcs/ Pallet	Pallet Dimensions LxWxH (mm)	Pallet Weight (kg)	Pallets per 20'GP Container	Pallets per 40'HC Container
Hi-MO 5	LR5-54HPH/HPB	1722 x 1134 x 30	36	1767 × 1130 × 1244	798.8	6	24
Hi-MO 5	LR5-72HBD	2278 x 1134 x 30	36	2322 x 1120 x 1243	1195	5	16
Hi-MO 5 Ice-Shield	LR5-72HBD	2278 x 1134 x 30	36	2340 x 1150 x 2504	1477	5	13
Hi-MO 5	LR5-78HBD	2465 x 1134 x 30	36	2500 x 1120 x 1252	1329	4	14 (for 53' DV)
Hi-MO 7	LR8-66HGD	2382 x 1134 x 30	36	2396 x 1120 x 1254	1230	4	20
Hi-MO 7 Ice-Shield	LR8-66HGD	2382 x 1134 x 30	36	2396 x 1120 x 1252	1553	4	16

Note: Pallet dimensions and weight are for reference only.

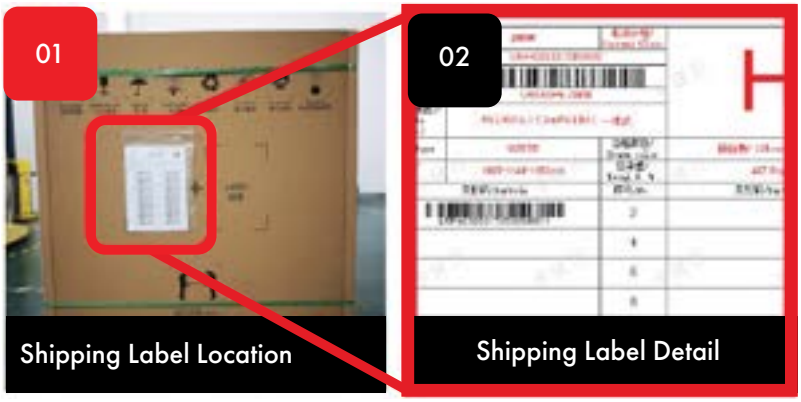
Modules are packaged using industry best practices to ensure safe transport, sustainable packaging, and ease of unpacking. LONGi packages each pallet as follows:

Components

1. Stack interconnecting straps
2. Shipping label. Use this label to identify modules.
3. External strapping
4. External corner protectors
5. Cardboard sleeve. DO NOT cut into the cardboard with a sharp object – the glass side of the module is directly on the other side.
6. Plywood divider
7. Internal strapping. When you remove the strapping, be sure to store your modules safely, and always secure unattended modules from falling over.
8. Module corner protector
9. Vertically strapped panels

Module verification

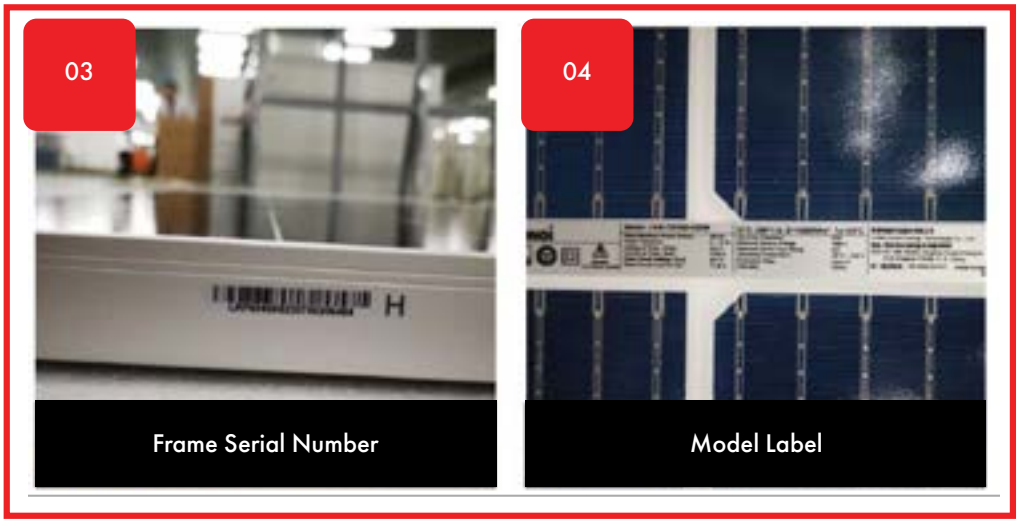
Before unpacking, review the shipping label to confirm that delivered modules match your order.



Pallet shipping label is located on the short side of the box, and includes:

- Power bin (wattage)
- Pallet ID
- Model number
- Module barcodes and serial numbers

After unpacking, check the module frame serial number and model label against the shipping label.



The serial number is the unique identifier of each PV module. A protected copy of the barcode is located on the front top-left corner, under the glass, and it cannot be removed or damaged. The matching serial number is located on the frame and on the rear of the module.

The model label includes:

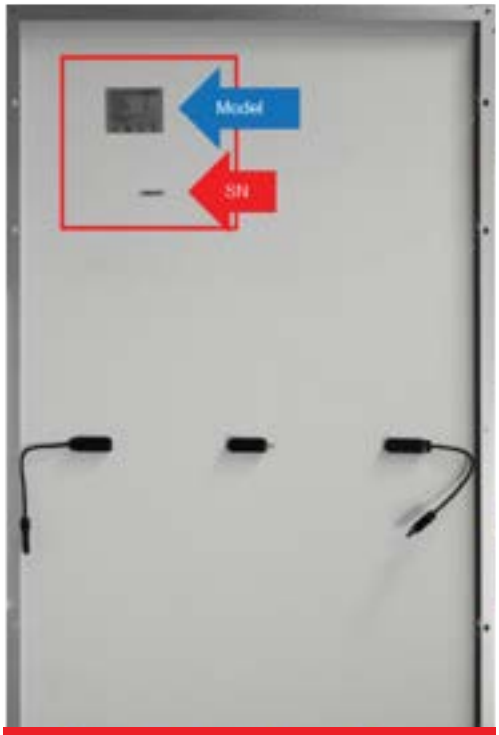
- Model number
- Nominal power rating
- Voc, Isc, Vmp, Imp
- Maximum system voltage + certifications

Unique identifier for each individual PV panel, located in three places per standard panel:

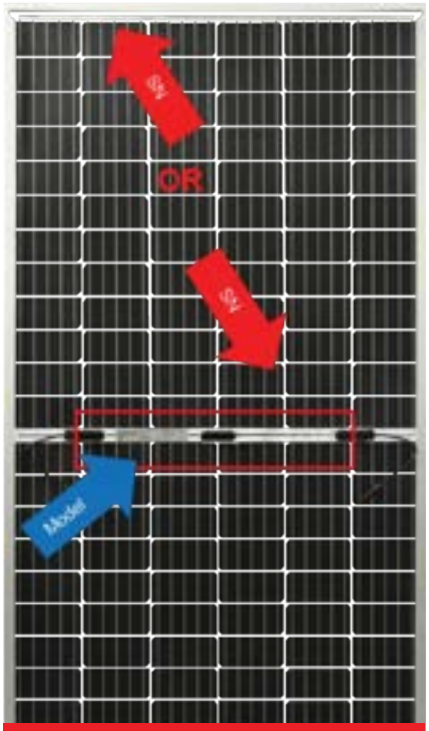
- Front (under glass)
- Side (on frame)
- Rear (top corner)

Front Barcode

Side Frame Barcode



Rear (Monofacial)

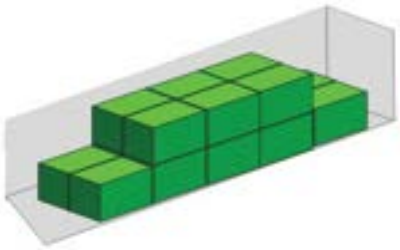


Rear (Bifacial)

Module loading for transit

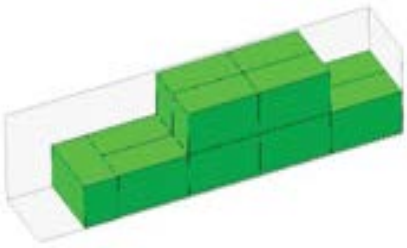
LONGi uses industry best practices to load modules for transit in standard-sized shipping containers.

We use a standard loading pattern for all LONGi modules. For example:



Hi-MO 5 LR5-72HBD:
16 pallets per 40′ HC container (U.S.).

Hi-MO 7 LR8-66HGD:
20 pallets per 40′ HC container (Canada).



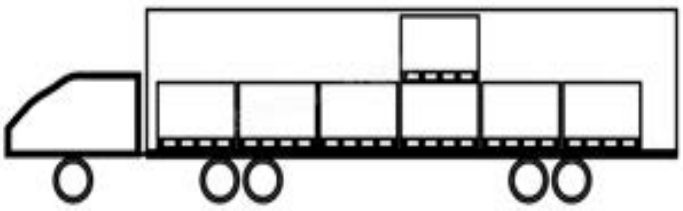
Hi-MO 5 LR5-72HBD Ice-Shield:
13 pallets per 40′ HC container (U.S.).

We recommend a transloaded arrangement for 53-foot dry moving van with:

- No unsupported, free-standing pallet stacks.
- Pallets parallel to the vessel, with any spaces greater than 4″ filled with airbags.

LR5-78HBD
(Example)

Head	1PLT	1PLT	Airbag
	Airbag	1PLT	1PLT
	1PLT	1PLT	Airbag
	Airbag	**2PLT**	**2PLT**
	1PLT	1PLT	Airbag
	Airbag	1PLT	1PLT
Back	Strap		



53′DV 14-pallet cabinet (U.S.)

Packaging inspection upon arrival

After arrival, **verify your modules**, then inspect the packaging for any visible damage.

Common issues may include:

Pallet wear and tear
or damaged modules

Unusual dents or scratches
on cardboard

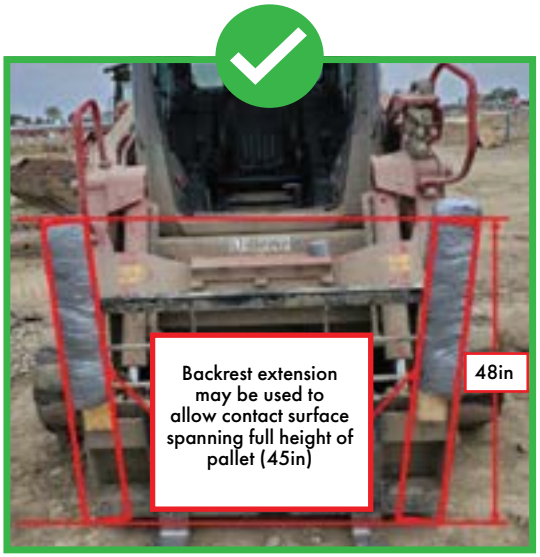
Unusual loading method,
with shifted or titled pallets

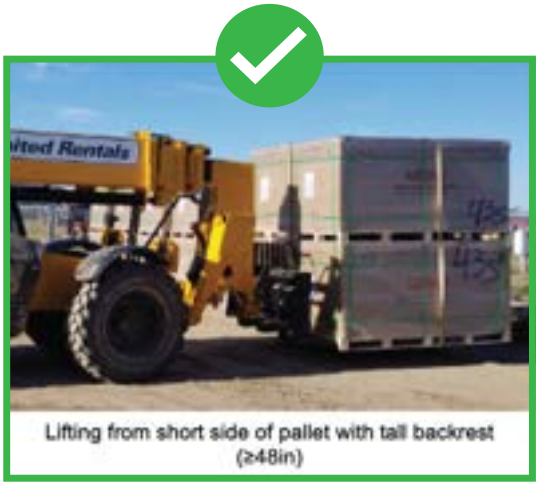
Forklift damage on pallet
that exposes modules

If modules are damaged:

- Immediately notify driver
- Within 24 hours of delivery: Notify carrier and LONGi staff
- Within 48 hours of delivery: Provide record with detailed delivery information, photos, and description of damage

See **claims and warranties** for complete details.





Lifting from short side of pallet with tall backrest (≥48in)

Maneuvering pallets with a forklift

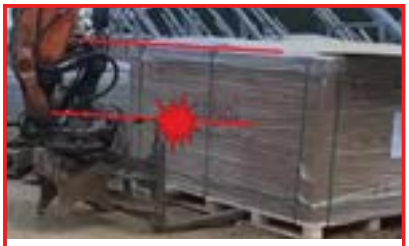
Adhere to forklift best practices to ensure safety and avoid module damage.

- Allow space between the backrest and pallet when safe to do so.
- ALWAYS insert the fork from the short side of the pallet if it is safe to do so. Backrest impacts are the leading cause of module damage, and moving modules from the short side avoids contact with this area.
- ALWAYS use the right-sized forklift forks based on the pallet size. DO NOT use oversized forks.
    - For loading from the short side, use a 72-inch fork for 72 and 78-cell modules. Use a fork between 60 inches and 70 inches for 54 and 66-cell modules.
    - When loading from the long side (only if required for safety reasons), use a 42-inch fork.
- Use forklifts with a backrest greater than 48 inches whenever possible.
    - The backrest may be extended using padded lumber to achieve 48 inches above the forks.
    - Side contact areas to backrest should be against the wooden parts of the pallet.

Maneuvering pallets with a forklift (continued)

Using oversized forks and damaging adjecent pallets

DO NOT ram or force pallets.



Lifting from long side of pallet with low backrest (<48 in)

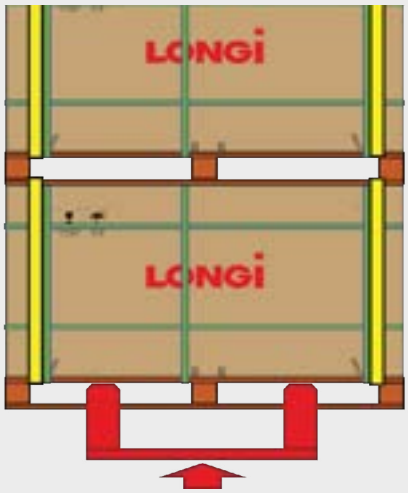
DO NOT press the backrest into cardboard, particularly against areas marked in red (see image).

DO NOT extend forks past the pallet, as it may damage adjacent pallets. Check the surrounding area before loading/unloading.

Avoid leaning or tilting pallets while in transit.

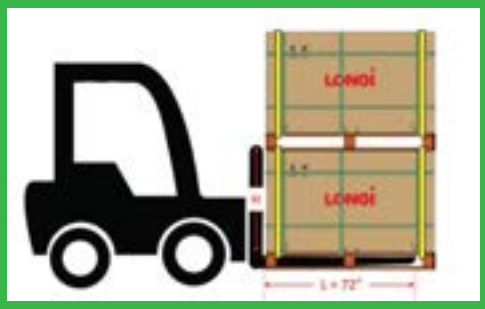
Use proper forklift length based on module model and loading side

Short side: size appropriately based on model



Long side: use 42″ forks

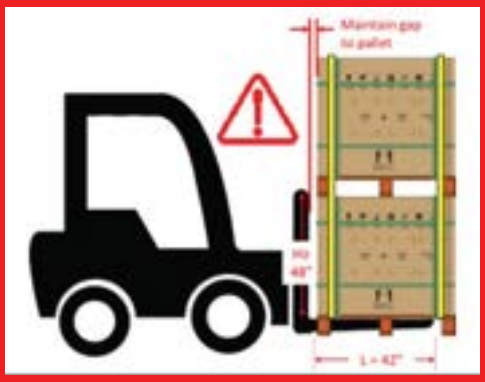
Pressure Sensitive Areas for Palletized PV Modules (Shown in red)



How to load a pallet from the short side (RECOMMENDED METHOD)

Short side forklift specifications:

- Length: Minimum 60 inches. 72 inches for 72 and 78-cell formats, up to 70 inches for 54 and 66-cell formats
- Height: 48 inches recommended
- Allow gap between pallet and backrest where safe to do so
- When lifting stacked pallets, minimize cargo recline
- Inspect connecting strap integrity (marked in yellow)



How to load a pallet from the long size (NOT RECOMMENDED)

Long side forklift specifications:

- Length: 42 inches
- Height: 52 inches for Hi-MO 5 (LR5 models)
- Backrest height MUST be equal to or higher than single pallet height
- Gap MUST be maintained between pallet and back-rest. DO NOT press backrest into cardboard
- Avoid reclining stacked pallets
- Inspect connecting strap integrity (marked in yellow), employ additional strapping where needed

Module unpacking

Recommended forklift specifications:

1. Stage pallets on a flat, open and dry location.
2. Position pallets next to a solid, self-standing support structure (e.g., tracker post, wall, another pallet) to prevent loose modules from falling. Do not use sharp or unstable structures to support modules, which may harm the installer or cause damage to the modules.
3. Cut and remove the external straps and shrink wrap.
4. Remove the cardboard top.
5. Inspect the cardboard for dents or tears. Then slide the cardboard panel up to remove and inspect the outermost modules. In case of damage, take a photo of the following areas and see **claims and warranties** for next steps.
6. Cut internal straps.
7. Lean modules against support structure (See **module storage**).
8. Remove modules one at a time.

Module unpacking

- **DO** unstack the pallets immediately if the pallet or packaging is compromised, wet, or damaged.
- **DO** use stable, self-standing structures or devices, or other pallets for support.

- **DO NOT** unpack the module pallets from a wet, soft, or inclined area.
- **DO NOT** use sharp, unstable structures for support.
- **DO NOT** stand or walk on PV modules.

Module storage

- **DO** store unused pallets in a covered, dry and ventilated area.

- **DO NOT** remove cardboard packaging if not installing modules immediately.
- **DO NOT** leave panels loose and unsupported.
- **DO NOT** exceed the indicated maximum stacking layer limit as shown on the pallet.
- **DO NOT** place sharp or heavy objects on your modules, as they may cause glass damage.

Moving and preparing modules for installation

- Prior to the start of module install, review the **Installation Manual for LONGi Solar PV Modules**.
- Two people are recommended for lifting and carrying modules.
- Never carry modules above your head.
- Do not drill holes on the module frame. This invalidates LONGi product warranty and may lead to reduced frame load capacity and corrosion.
- Be careful not to scratch the anodized frame coating, except for the grounding connection.
- Never carry a module by its cables, connectors, or junction box.
- Keep connectors dry and free of dust and foreign debris.
- Prevent module connectors from resting on the ground.
- Never mate connectors that are damaged or dirty.
- Always make sure each connector's locking mechanism is properly engaged and locked.

Transportation damage

Warranty claims can be filed for individual or full pallets.

In the event of transportation damage:

- Immediately notify the driver.
- Indicate damage on the Bill of Lading, and take pictures for your records.
- Within 24 hours of delivery, notify carrier dispatch and LONGi staff to enable an effective investigation.
- Within 48 hours, record the following and share with carrier dispatch and LONGi staff:
  - Truck container ID
  - Arrival and unload time and date
  - Pallet ID
  - Photo showing damaged pallet in position on truck (if available)
  - Detailed photo and description of damage, including pallet overview and damage area closeup

Information for warranty claim verification and processing:

- Complete warranty claim information form with a detailed claim issue description.
- Model number and corresponding quantities of claimed modules.
- Pallet ID for whole-pallet issues and/or module ID for individual module issues.
- Photos of claimed module/pallet:
  - Module label showing model number and serial number, or pallet label (**see module verification**)
  - Front side of whole module and rear side of whole module
  - Damage location detail, and multiple angles highlighting point of collision/impact
  - Corresponding external cardboard indicating collision/impact
- Additional supporting evidence, which may include:
  - Bill of Lading with driver verification of on-arrival fault
  - Container number for on-arrival fault
  - Any additional supporting information indicating quality or transportation issue

Contact us

If modules were damaged in transport, see **claims and warranties**.

Questions about safe handling practices? Visit the **Service Consultation webpage** and complete the form, select the phone headset on the right side of the webpage, and select the appropriate contact method or contact us directly at **us-info@longi.com** .

SALES CONTRACT

Contact No. GY-KA-2024121488

The Seller: CHINT Electric Co., Ltd
Add: No.3555 Si Xian Road , Songjiang District 201614 Shanghai China
Tel: (+86) 21 6777 7777 Fax: (+86) 21 6777 7999

The Buyer: Red River Clean Energy, LLC on behalf of Blue Heron Solar, LLC,

Add: 107 Spring Street, Seattle, WA 98104, United States of America
Tel: (+1) 312-883-4846 Email: operations@concordnewenergy.com

The Sales Contract (the "Contract") is made between the Seller and the Buyer concerned on the basis of equality and mutual benefits. The terms and conditions are fully agreed by both parties as below:

1. Scope of Supply (the "Products"):

Item	Description	Type	Qty.	Unit			Remark
1	Transformer	SFZ-200000/345	1	set			
2	Spare Parts	Gasket, HV bushing, HVN bushing, LV bushing	1	set			
3	special tool's list	Torque spanner, Valves handle, Socket spanner	1	set			
4	Special accessories list	AVR, RTCC, DGA, Intelligent temperature, HV lightning arrester, LV lightning arrester, vacuum gauge	1	set	Included	Included	
5	Customs duties	/	1	set			
6	Freight		1	set			Including sea transportation and inland transportation in USA
7	Destination service fee	/	1	set			Including 1 person 60 days technical service,
8	**Chisme Solar and Storage Total Amount.**		**7**	**Set**			**Blue Heron Solar, LLC**

38 ML

10. Guarantee & Warranty

10.1 The Seller guarantees that the Products are brand new, unused, good quality with good workmanship and comply with the technical specifications. The Seller warrants the Products be free from defects of design, material, quality and workmanship for a period of 60 months after issuing the Arrival Acceptance Certificate. After the warranty period, the Seller shall still provide after-sales service and technical support and the Buyer shall bear the cost arising therefrom.

The seller guarantees that the delivered products will have normal performance within their service life under normal use and maintenance conditions, and that the products will not be scrapped due to design defects, production processes, material defects, quality control, etc.

10.2 Throughout the warranty period, the Buyer shall notify the Seller of defect within 5 days after discovery of the defect. The Seller shall provide a response to the Buyer within four (4) hours of receiving any such notification. If required, the Seller shall send service personnel to the Project Site within twelve (12) hours of receiving any such notification (the "Guaranteed Response Times"). The Seller shall, within reasonable period, repair the defect or replace the defect part with new part at its discretion. The Buyer shall give the Seller sufficient opportunity and full assistance to carry out such remedial work. Replaced parts shall become Seller's property.

10.3 The Seller shall have no responsibility for any defect, failure or non-compliance of the Products or any part thereof if there is any of the following events: (a) failure of the Buyer to comply with any of the Seller's operational or maintenance written guidelines, instructions or requirements; (b) improper use or installation; (c) physical abuse of the Products or any component or acts of vandalism by any persons other than Seller, its employees, agents or subcontractors; (d) alterations, modifications, additions, replacement or repairs made during the warranty period by anyone other than Seller, its employees, agents, subcontractors or personnel certified by the Seller; (e) accidents or damage resulting from fire, water, wind, hail, lightning, electrical surge or failure, earthquake, theft or similar causes not caused by or attributed to the negligence of Seller or its employees, agents, or subcontractors or (f) fair wear and tear. Seller shall provide and maintain a Warranty support contact capable of providing the Guaranteed Response Times that is located in the United States of America for the duration of the Warranty Period.

10.4 For all service and remedial work on main power transformers where such work shall require the transformer to be de-energized, when such transformer is connected to a photovoltaic generation Project, all service and work shall be performed during non-daylight hours, and when such transformer is connected to a battery energy storage Project, all service and work shall be performed in scheduled coordination with the Buyer to minimize downtime for the Project during operational hours. Buyer shall not be responsible for any costs associated with this requirement. The forgoing requirement applies to non-emergency service and warranty work.

10.5 During the service life of the products, the Seller shall be liable for product liability issues including personal injuries and damages to other property except the product itself caused by the design defects, production workmanship, material defects, quality control of the Seller's products.

MAIN POWER PURCHASE AGREEMENT

This Main Power Purchase Agreement (this "Agreement") is entered into August 1, 2025 (the "Main Agreement Effective Date"), between Tesla and Seller (each as defined below, together the "Parties" and each individually as a "Party").

The terms and conditions of this Agreement will apply and are intended to be incorporated by reference into one or more Power Purchase Agreement Confirmations (each, a "Confirmation") that may be entered into between Tesla and Seller or between any of their respective Affiliates, except to the extent otherwise provided in such Confirmation. Except to the extent Tesla and Seller (or an Affiliate of either) execute and deliver such a Confirmation, this Agreement shall have no binding effect upon Tesla, Seller or any Affiliate thereof, and no Party shall have any obligation to enter into any such Confirmation solely as the result of entering into this Agreement.

Annex I – DEFINITIONS 20
Annex II – INSURANCE 28

1. **Defined Terms; Confirmations.**

(a) Definitions. The capitalized terms used in this Agreement and not otherwise defined in Annex I of this Agreement have the meaning given to them in Annex I of the applicable Confirmation.

(b) Confirmations. This Agreement does not obligate Tesla to engage Seller with respect to any proposed Project, or Seller to engage in any activities with respect to any proposed Project, until the Parties have executed a Confirmation and then only with respect to any Project specified in such Confirmation. To the extent that the Parties execute one or more Confirmations, then this Agreement shall govern each such Confirmation, except to the extent that a given Confirmation expressly states that it is intended to modify conflicting terms of this Agreement or expressly states that a term of this Agreement is not incorporated into the Confirmation by reference. The provisions of each Confirmation are intended to be complementary rather than conflicting and should be interpreted as a single agreement with this Agreement.

2. **Term.**

The term of this Agreement shall commence on the Main Agreement Effective Date and shall remain in effect during the Confirmation Term of any Confirmation entered into pursuant to this Agreement (the "Term"). The term of each Confirmation shall commence on the Effective Date and shall continue in full force and effect until the end of the Settlement Term (the "Confirmation Term").

3. **Financial Delivery.**

(a) Settlement Amount. For each Settlement Interval under any Confirmation, Seller shall calculate an amount (the "Settlement Amount") equal to the difference resulting from (i) the Fixed Price Payment, less (ii) the Floating Price Payment. If the Settlement Amount is greater than zero, the Settlement Amount shall be payable by Tesla to Seller according to Section 5. If the Settlement Amount is less than zero, the absolute value of the Settlement Amount shall be payable by Seller to Tesla according to Section 5. If the Settlement Amount equals zero, no amount shall be payable by either Party.

(b) Floating Price Payment. For each Settlement Interval under any Confirmation, Seller shall be responsible for an amount equal to the sum, over all Calculation Intervals in such Settlement Interval, of the product of (i) the Floating Price for such Calculation Interval, and (ii) the Interval Quantity for such Calculation Interval (the "Floating Price Payment"); provided that, when the Floating Price is equal to or less than the Minimum Floating Price, (X) if the Confirmation indicates Non-Settlement as "Not Applicable", Seller shall not be obligated to produce Energy or Environmental Attributes, but if Seller does produce Energy and Environmental Attributes, the Floating Price shall be equal to the Minimum Floating Price, and (Y) if the Confirmation indicates Non-Settlement as "Applicable", Tesla shall not be obligated to purchase Energy or Environmental Attributes.

(c) Fixed Price Payment. In consideration for Seller's payment of the Floating Price Payment pursuant to Section 3(b) and delivery of Environmental Attributes under any Confirmation, for each Settlement Interval under any Confirmation, Tesla shall be responsible for an amount equal to the sum, over all Calculation Intervals in such Settlement Interval, of the product of (i) the Fixed Price and (ii) the Interval Quantity during such Calculation Interval (the "Fixed Price Payment"). For the avoidance of doubt, Tesla shall not be responsible for a Fixed Price Payment when Tesla does not purchase Energy or Environmental Attributes pursuant to Section 3(a).

4. **Environmental Attributes.**

(a) Transfer of Environmental Attributes. Each calendar quarter during the Settlement Term of any Confirmation, Seller shall transfer to Tesla (or, upon Tesla's written request, its designee) by the Transfer Deadline, and Tesla shall accept (or shall cause its designee to accept) from Seller, in each case, in accordance with the rules of the Renewable Energy Tracking System, all of Seller's right and title to, and interest in, Environmental Attributes, including

RECs, in an aggregate quantity equal to the Interval Quantity; provided, if Tesla is unable to receive any Environmental Attributes, upon Tesla's written request, Seller will (i) transfer such Environmental Attributes to Tesla or Tesla's designee via attestation, (ii) retire such Environmental Attributes on behalf of Tesla, or (iii) monetize such Environmental Attributes and pay to Tesla the net revenues received for the Environmental Attributes; provided further that Tesla shall be responsible for any costs reasonably incurred by Seller directly arising from Seller's retirement and/or monetization of Environmental Attributes pursuant to limbs (ii) and (iii) of this Section 4(a).

(b) Clean Title. Seller represents and warrants that, at the time of transfer to Tesla of any Environmental Attributes under any Confirmation, (i) Seller has good and marketable title to such Environmental Attributes; (ii) such Environmental Attributes have not been sold to any other Person or used to meet compliance requirements of any other regulatory or voluntary renewable Energy program or standard, including any greenhouse gas reduction requirements; and (iii) Seller shall transfer to Tesla all right, title to and interest in such Environmental Attributes, free and clear of any liens or other encumbrances by, through or under Seller.

(c) Acceptance of Environmental Attributes. Tesla shall be responsible for all arrangements and other actions required to receive, at the applicable place of delivery, if any (or, for any Environmental Attributes that, by their nature, do not have a place of delivery, upon transfer within the applicable Environmental Attribute program(s) and associated monitoring, tracking, certification and/or trading system(s)), any Environmental Attributes to be transferred to Tesla under this Agreement. Risk of loss of any such Environmental Attributes shall transfer from Seller to Tesla at the time as the same are made available at the applicable place of delivery, if any (or, for any Environmental Attributes that, by their nature, do not have a place of delivery, upon transfer within the applicable Environmental Attribute program(s) and associated monitoring, tracking, certification and/or trading system(s)).

(d) Failure to Transfer Environmental Attributes. If, with respect to any Settlement Interval under any Confirmation, Environmental Attributes are required to be obtained by Seller and transferred to Tesla according to this Section 4, but Seller fails to obtain and transfer to Tesla all or part of such Environmental Attributes solely as a result of a failure by Seller to comply with this Section 4 by the Transfer Deadline, then, within fifteen (15) days of the Transfer Deadline, Seller shall pay Tesla's EA Cost to Cover, which shall be Tesla's sole and exclusive remedy, and Seller's sole and exclusive liability, for Seller's failure to comply with this Section 4. The Parties acknowledge and agree that the terms, conditions and amounts determined according to this Section 4(d) for such payment are reasonable considering the Damages that Tesla would sustain if any failure described in the immediately preceding sentence occurs. The Parties have agreed upon and established such terms, conditions and amounts because of the difficulty of ascertaining the exact amount of Damages that Tesla would sustain in such event and because otherwise obtaining an adequate remedy would be difficult or inconvenient.

(e) Future Environmental Attributes. Tesla shall be entitled to all Future Environmental Attributes at no additional cost. If Future Environmental Attributes become available during the Confirmation Term, Tesla may request that Seller transfers to it such Future Environmental Attributes, and upon such request, Seller shall take commercially reasonable efforts to effectuate such transfer. Tesla shall be responsible for any costs reasonably incurred by Seller directly associated with the transfer of such Future Environmental Attributes.

5. **Payments.**

(a) Invoicing. With respect to each Settlement Interval under any Confirmation, Seller shall deliver an invoice to Tesla in substantially the form of Annex VII of the Confirmation within ten (10) Business Days after the end of each Settlement Interval reflecting the Settlement Amount and any other amounts due under such Confirmation. Seller shall include in each such invoice a statement of the Interval Quantity, any Delay Damages, any Capacity Shortfall Damages, the Floating Price for each Calculation Interval, and any other information used by Seller in the determination of the Settlement Amount for such Settlement Interval, and with the first invoice of each Contract Year, Seller shall provide Tesla with a statement of any Availability Damages incurred during the prior Contract Year and represented on the invoice, the calculation performed to calculate any such Availability Damages, and any other information used by Seller in the determination of any such Availability Damages (and Seller will provide additional detail and supporting data

within five (5) Business Days of Tesla's request). Invoices shall be sent to Tesla at the addresses as provided in the Key Terms or as otherwise specified according to the Confirmation.

(b) Payment. Payments due by Tesla, or Seller as the case may be, shall be made by electronic funds transfer, or by wire transfer, as designated by the owed Party to the account of the owed Party as provided in the invoice on or before the Due Date, without deduction or set-off except as specifically set forth in the immediately following sentence. If Seller and Tesla each owes an amount to the other on the same invoice for obligations incurred under the applicable Confirmation, the undisputed portion(s) of such amounts shall be aggregated, and the Parties shall satisfy their payment obligations through netting, in which case the Party owing the greater aggregate undisputed amount shall pay to the other Party the difference between the undisputed amounts owed.

(c) No Set-off. Tesla and Seller may not offset or set off against any amounts that may be due and owed to the other Party under any Confirmation any amounts that are owed by such other Party to Tesla or Seller, as applicable, pursuant to such Confirmation or otherwise, including Damages and other payments, except as set forth in Section 5(b) and in Section 26(g).

(d) Adjustments to Invoices. In the event that either Party to a Confirmation discovers an error in billings or payments under such Confirmation due to metering, billing or other errors, each Party shall be entitled to an adjustment of the amount payable hereunder to reflect such revised price, error discovery, or the availability of actual (as opposed to estimated) invoicing information. A Party that seeks an adjustment to invoices as described in this Section 5(d) must provide the other Party with notice and a description of the desired adjustment within twelve (12) months of the date the invoice that is to be adjusted was received by Tesla. Such notice shall include a calculation of the payment necessary to correct the prior invoice. Any invoice that has not been challenged pursuant to this Section 5(d) within twelve (12) months of the date it was received by Tesla shall be deemed final and not subject to adjustment under this Section 5(d).

(e) Disputed Amounts. Either Party may, in good faith, dispute the correctness of any invoice. In the event an invoice or portion thereof, or any other claim or adjustment arising hereunder, is disputed, payment of the undisputed portion of such invoice shall be required to be made when due, with notice of the objection given to the other Party in writing and stating the basis for the dispute (including all supporting calculations). Payment of the disputed amount shall not be required until the dispute is resolved. Upon resolution of the dispute, any required payment shall be made (and any overpayment shall be refunded) within thirty (30) days after such resolution.

6. **Financial Close Date; Commercial Operation Date; Obligation to Complete.**

(a) Project Financing. Seller shall use commercially reasonable efforts to achieve Financial Close for any Project on or before the applicable Financial Close Date. Seller shall notify Tesla of progress toward Financial Close on a monthly basis until the Financial Close Date and shall formally notify Tesla once Seller achieves Financial Close by issuing the Notice of Financial Close. If the Project does not achieve Financial Close by the Financial Close Date, then Tesla may elect, in its sole discretion and upon three (3) days' prior written notice to Seller, to terminate the Confirmation. In the event that Tesla exercises its termination right pursuant to this Section 6(a) Seller shall pay to Tesla liquidated damages in the amount of the Financing Termination Payment. Tesla may draw on Seller's Pre-COD Credit Support in an amount equal to the Financing Termination Payment.

(b) Commercial Operation Date. Seller shall use commercially reasonable efforts to achieve Commercial Operation for any Project on or before the applicable Expected Commercial Operation Date. Seller shall provide Tesla with quarterly progress reports describing its progress toward completion of each milestone described on Annex III of the Confirmation. Such reports shall describe any anticipated delays to the milestone dates set forth in Annex III of the Confirmation, the reasons for such delays, and any updates with respect to any anticipated changes to the Commercial Operation Date, along with reasonable supporting information or documentation regarding the milestone status. Seller shall formally notify Tesla once the Project achieves Commercial Operation by issuing the Notice of Commercial Operation.

(c) Delay Damages. If the Project has not achieved Commercial Operation for any Project by the applicable Expected Commercial Operation Date, Seller shall use commercially reasonable efforts to ensure that such Project achieves Commercial Operation as soon as possible thereafter, and Seller shall pay to Tesla liquidated damages ("Delay Damages") for each day after the Expected Commercial Operation Date until the earlier of the Commercial Operation Date and the Guaranteed Commercial Operation Date, in an amount equal to the product of (x) the Expected Project Capacity, *multiplied by* (y) Tesla's Capacity Percentage, *multiplied by* (z) the Delay Damages Amount. If Seller has not paid any accrued Delay Damages within 30 days after the end of each month that such Delay Damages accrued, Tesla may draw on Seller's Pre-COD Credit Support in an amount equal to such Delay Damages.

(d) Capacity Shortfall Damages. If the Project achieves Commercial Operation, but the Installed Quantity for such Project is less than the Expected Project Capacity on the Guaranteed Commercial Operation Date, Seller shall pay to Tesla liquidated damages ("Capacity Shortfall Damages") in an amount equal to the product of (x) the difference between the Expected Project Capacity and the Installed Quantity as of such date, *multiplied by* (y) Tesla's Capacity Percentage, *multiplied by* (z) the Capacity Shortfall Damages Liquidated Value. If Seller has not paid any Capacity Shortfall Damages within 30 days of the Guaranteed Commercial Operation Date, Tesla may draw on Seller's Pre-COD Credit Support in an amount equal to the Capacity Shortfall Damages.

(e) Early Termination for Failure to Complete. If the Project does not achieve Commercial Operation by the Guaranteed Commercial Operation Date, then (i) for a period beginning the day after the Guaranteed Commercial Operation Date and ending on the Commercial Operation Date, Tesla may elect, in its sole discretion and upon three (3) days' prior written notice to Seller, to terminate the Confirmation. In the event that Tesla exercises its termination right pursuant to this Section 6(e), Seller shall pay to Tesla liquidated damages in the amount of (x) Seller's Pre-COD Credit Support Amount less (y) aggregate Delay Damages paid by Seller prior to the date that Tesla provides notice of its termination ("Early Termination Payment"). The payment of Financing Termination Payment, Delay Damages, Capacity Shortfall Damages, Early Termination Payment and Tesla's termination rights set forth this Section 6 shall be Tesla's sole and exclusive remedy, and Seller's sole and exclusive liability, for any failure to achieve, or delay in achieving, the Commercial Operation Date. The Parties acknowledge and agree that the terms, conditions and amounts determined according to this Section 6 for Delay Damages are reasonable considering the Damages that Tesla would sustain if any failure described in the immediately preceding sentence occurs. The Parties have agreed upon and established the amounts of the Financing Termination Payment, Early Termination Payment, Delay Damages and Capacity Shortfall Damages because of the difficulty of ascertaining the exact amount of Damages that Tesla would sustain in such event and because otherwise obtaining an adequate remedy would be difficult or inconvenient. The Financing Termination Payment, Early Termination Payment, Delay Damages and Capacity Shortfall Damages are not penalties and shall be paid regardless of the amount of Damages that Tesla actually sustains.

(f) Right of First Offer. If a Confirmation is terminated for any reason other than as a result of a Tesla Event of Default and Seller seeks to enter into an agreement to sell Tesla's Capacity Percentage of the output of the Project and any related Environmental Attributes at any time within twenty-four (24) months following such termination, Seller shall notify Tesla of the same and provide Tesla with a written offer price equal to the lesser of (i) the price Seller seeks to offer to the third party and (ii) the Fixed Price. Tesla shall have thirty (30) days after receipt of such notice from Seller to accept such offer by delivery of written notice to Seller, and thereafter the Parties will use diligent good faith efforts to consummate the transaction on or before the forty-fifth (45th) Business Day after Tesla's acceptance of Seller's offer on substantially the same terms and conditions as set forth in this Agreement. If Tesla rejects such purchase offer or the Parties are unable to consummate the transaction within such forty-five (45) Business Day period, Seller may sell the output of the Project and any related Environmental Attributes to any third party so long as the price for such output and related Environmental Attributes is not less than the price proposed by Tesla and the terms and conditions of any such sale taken as a whole are no more favorable to the purchaser thereof than those set forth in this Agreement. This Section 6(f) shall survive the expiration or termination of this Agreement.

7. **Construction; Operation and Maintenance.**

(a) Construction. Seller shall design and construct the Project in accordance with Prudent Electrical Practices and Applicable Laws. Seller shall design and construct the Project to meet, and shall not alter or modify (or permit to be altered or modified) the Project in any material respect from, the characteristics set forth in Annex II of the Confirmation pertaining to the Project's power capacity and energy production; provided, however, that Seller may deviate from such characteristics (prior to, on or after the Commercial Operation Date) with Tesla's written consent.

(b) Operations and Maintenance. Seller shall operate the Project at all times in accordance with Prudent Electrical Practices and Applicable Laws. Failure to do so shall be considered a material breach of this Agreement. In addition, during the months of [June through September] inclusive, Seller shall not schedule any maintenance that reduces the Energy generation capability of the Project, unless (i) such outage is required to avoid damage to the Project, (ii) such outage is required as a result of or to avoid a System Emergency, (iii) such outage is required to preserve equipment warranties and cannot be scheduled outside the months of [June through September], (iv) such outage is required in accordance with Prudent Electrical Practices, or (v) the Parties agree otherwise in writing.

(c) Production and Operational Information. Seller shall provide Tesla with reasonable access to data from the Project, either directly or through a third-party software program, in a format mutually agreeable to the Parties. Seller shall provide, on a near real-time basis in formats reasonably acceptable to Tesla, the following: supervisory control and data acquisition system data in read-only format relating to the Project's performance and maintenance outages; meteorological conditions including wind speed, wind direction or plane-of-array irradiance, global horizontal irradiance, as applicable, and temperature; energy output (EMO revenue meter output); Project nodal pricing; and availability information including explanatory details. Tesla may request, on a monthly or other regular basis, a report on any scheduled and unscheduled maintenance outages and curtailment events. From time to time, Tesla may request other reasonable and appropriate operational information from Seller, which information shall not to be unreasonably withheld. Subject to Section 21, Tesla may disclose the information provided in this Section 7(c) to potential providers for the purposes of managing this Agreement, any Confirmation, and/or entering into certain hedging and risk management products.

(d) Project Site Visits. Tesla may request of Seller permission to visit or for its representatives to visit a Project site during normal business hours. Seller shall accommodate reasonable requests of Tesla with respect to such visits; provided that Tesla and its representatives shall comply with all Seller health and safety policies and procedures and instructions that are communicated to Tesla and its representatives while present at the Project site and shall conduct themselves in a manner that will not unreasonably interfere with or disrupt the operation of the Project or other activities of Seller and its subcontractors.

(e) Shared Facilities. Except as set forth in Annex II to the Confirmation, the Project shares no interconnection facilities with any Other Project. If any Other Project is reflected on Annex II to the Confirmation, Seller represents to Tesla that: (i) Seller will have sufficient interconnection capacity and rights under the Interconnection Agreement and any agreement by which Seller shares capacity of interconnection facilities ("Shared Facilities Agreement") to interconnect the Project to the Transmission System at the Installed Quantity and fulfill its obligations to Tesla under this Agreement; and (ii) any instruction from the EMO of the Transmission System to curtail Energy deliveries that does not specify the generating facility to be curtailed will be allocated first to the Other Projects and all other resources subject to any Shared Facilities Agreement.

8. **Availability Guarantee.**

Seller guarantees to Tesla that the Project will be available to produce Energy in accordance with, and will otherwise comply with, the provisions of Annex IV of the Confirmation.

9. **Metering.**

Seller shall cause to be provided, at no cost to Tesla, any and all meters required by the EMO, and shall utilize metering data provided by the EMO to measure the total electric Energy generation from the Project delivered at the Interconnection Point. The total electric Energy generation from the Project delivered at the Interconnection Point (expressed in MWh) shall be measured in accordance with the metering methodology recognized by the EMO for settlement purposes; and the amount of total electric Energy generation from the Project delivered at the Interconnection Point recognized by the EMO for settlement purposes (for the avoidance of doubt, meaning the amount recognized by the EMO at the Interconnection Point without deduction for transmission losses from and after the Interconnection Point for any reason) shall be deemed the amount of total electric Energy generation from the Project delivered at the Interconnection Point for all purposes of this Agreement. Without limiting the foregoing, any adjustment to prior meter readings shall be made and settled in accordance with the methodologies recognized by the EMO for settlement purposes, and only any such adjustment recognized by the EMO for settlement purposes shall be made to the amount of total electric Energy generation from the Project delivered at the Interconnection Point for purposes of this Agreement.

10. **Indemnity; Third Party Charges.**

(a) Indemnification. Seller shall indemnify, defend and hold Tesla harmless from and against any and all Damages for (i) personal injury, death or property damage to Tesla's property or facilities, (ii) personal injury, death or property damage to third parties, (iii) infringement, misappropriation or other violation by Seller of any third party's intellectual property rights, or (iv) other third-party claims (whether arising under contract or tort), in each case that arise out of or are connected with development, construction, operation, ownership or leasing of, or other acts or omissions of Seller with respect to, the Project, except to the extent such injury, death or damage or other third-party claims are attributable to the willful misconduct or breach of this Agreement or any Confirmation by Tesla or any of its Affiliates. Seller shall also indemnify, defend and hold Tesla harmless from and against any and all Damages resulting from a breach of its obligations set forth in Section 26(j).

(b) Third-Party Charges. Seller shall be responsible for the payment of all Third-Party Charges during the Confirmation Term.

11. **Seller's Credit Support.**

(a) No later than ten (10) days after the Effective Date, Seller shall deliver to Tesla security (the "Seller's Pre-COD Credit Support") in the form of a Letter of Credit in an amount (subject to Section 13) equal to Seller's Pre-COD Credit Support Amount, which such Seller's Pre-COD Credit Support shall be promptly returned by Tesla upon Tesla's receipt of the Seller's Operation Credit Support (as defined below). Seller shall not be required to replenish any amounts drawn under the Seller's Pre-COD Credit Support.

(b) Seller shall, upon the Commercial Operation Date, deliver to Tesla security (the "Seller's Operation Credit Support", and together with Seller's Pre-COD Credit Support, the "Seller's Credit Support"), in the form of (i) a Guaranty (from an entity that directly or indirectly controls Seller, which is a Creditworthy Entity and is acceptable to Tesla in its commercially reasonable discretion), (ii) a Letter of Credit, (iii) cash, (iv) any other form acceptable to Tesla in its commercially reasonable discretion, or (v) any combination thereof, in an aggregate amount (subject to Section 13) equal to Seller's Operation Credit Support Amount. Seller shall replenish any amounts drawn under the Seller's Operation Credit Support.

(c) The Seller's Credit Support shall not be deemed a limitation of damages.

12. **Tesla's Credit Support.**

If at any time during the Confirmation Term, (i) Tesla is not a Creditworthy Entity and (ii) Tesla does not have a Consolidated Liquidity of at least [redacted] then Tesla shall, within ten (10) Business Days of such occurrence, deliver to Seller security (the "Tesla's Credit Support") in the form of (i) a Guaranty (from an entity that directly or indirectly controls Tesla, which is a Creditworthy Entity), (ii) a Letter of Credit, (iii) cash, (iv) any other form acceptable to Seller in its commercially reasonable discretion, or (v) any combination thereof in an aggregate amount (subject to Section 13) equal to Tesla's Credit Support Amount. If Tesla delivers Tesla's Credit Support before the Commercial Operation Date (and the Installed Quantity is less than the Expected Project Capacity), the Tesla's Credit Support Amount shall be reduced accordingly at the Commercial Operation Date, and Seller shall promptly execute any documents reasonably requested by Tesla or the issuing bank who issued any Letter of Credit (if applicable) in order to memorialize any such reduction. If Tesla delivers Tesla's Credit Support and subsequently (i) becomes a Creditworthy Entity or (ii) has a Consolidated Liquidity of at least [redacted] then Seller shall return Tesla's Credit Support to Tesla on the date on which Tesla (i) has remained a Creditworthy Entity or (ii) has a Consolidated Liquidity of at least [redacted] for six (6) consecutive months. Tesla shall not be required to replenish any amounts drawn under Tesla's Credit Support.

13. **Posting, Maintenance and Drawing of Credit Support.**

(a) Security Interest. To secure its obligations under a Confirmation, Credit Support Provider hereby grants to Credit Support Beneficiary, as the secured party, a first priority, present and continuing security interest in, and lien on (and right of setoff against), and assignment of, all security posted in the form of cash and all cash obtained by Credit Support Beneficiary resulting from a draw on the Credit Support, and any and all proceeds resulting therefrom or the liquidation thereof, whether now or hereafter held by, on behalf of, or for the benefit of the Credit Support Beneficiary, and Credit Support Provider agrees to take such action as Credit Support Beneficiary reasonably requires in order to protect the Credit Support Beneficiary's first-priority security interest in, and lien on (and right of setoff against), such collateral and any and all proceeds resulting therefrom or from the liquidation thereof; provided, however, that the Credit Support Beneficiary may exercise its rights as a secured party (including the right of setoff granted pursuant to this sentence) against such cash collateral only upon the terms and conditions of Section 13(b). If Credit Support Beneficiary receives cash proceeds from a Letter of Credit pursuant to a drawing made according to the last sentence of Section 13(b), then the Credit Support Beneficiary shall deposit such proceeds in a depository account with a Qualified Issuer under terms and conditions that allow the proceeds to be disbursed to Credit Support Beneficiary only upon the terms and conditions of Section 13(b) and provide for disbursement to Credit Support Provider according to Section 13(d).

(b) Drawing of Credit Support. If an Event of Default has occurred and is continuing, Credit Support Beneficiary shall be entitled to draw upon Credit Support for any amounts due and owing from the Credit Support Provider to the Credit Support Beneficiary with respect to this Agreement and any Damages arising from (i) such Event of Default and/or (ii) any prior Event of Default to the extent that Damages arising therefrom have not yet been timely paid in full to the Credit Support Beneficiary. In addition, in the case of Credit Support in the form of a Letter of Credit, Credit Support Beneficiary may draw the full amount of such Letter of Credit within thirty (30) days before the expiration of such Letter of Credit if, as of the date of such drawing, Credit Support Beneficiary does not receive replacement Credit Support meeting the requirements of this Agreement.

(c) Replacement. If, at any time during which Credit Support is required to remain in place, a Credit Event occurs with respect to said Credit Support, then the Credit Support Provider shall not be deemed to be in breach of this Section 13; provided that, within ten (10) Business Days after a request from Credit Support Beneficiary, the Credit Support Provider replaces the affected Credit Support with other Credit Support in order to have Credit Support with undrawn capacity in the amount required by the definition thereof at such time. In addition to the replacement of the Credit Support that may be required pursuant to the preceding sentence, the Credit Support Provider shall, at any time and from time to time, have the right to replace the Credit Support in effect at such time with other

Credit Support, so long as Credit Support Provider maintains the Credit Support with undrawn capacity in the amount required by the definition thereof at such time.

(d) Release Upon Replacement. If any Credit Support is replaced in accordance with Section 13(c), then, subject to Section 13(e), if the Credit Support being replaced is (i) a Guaranty, the corresponding Credit Support Guarantor(s) shall be deemed released from all obligations under such replaced Credit Support, and Credit Support Beneficiary shall execute any documents reasonably requested by Credit Support Provider or any such Person to confirm such release, or (ii) a Letter of Credit, the Credit Support Beneficiary shall return such Letter of Credit to the bank that issued such Letter of Credit and shall execute any documents reasonably requested by Credit Support Provider or such issuing bank in order to release such Letter of Credit. Further, at six (6) months after the end of the Term (subject to Section 13(e)), if any part of the Credit Support being released is (i) a Guaranty, the corresponding Credit Support Guarantor(s) shall be deemed released from all obligations under the Credit Support, and Credit Support Beneficiary shall execute any documents reasonably requested by Credit Support Provider or any such Person to confirm such release or (iii) a Letter of Credit, the Credit Support Beneficiary shall return such Letter of Credit to the bank that issued such Letter of Credit and shall execute any documents reasonably requested by the Credit Support Provider or such issuing bank in order to release such Letter of Credit.

(e) Release Upon Termination. If, on any scheduled security release date set forth in Section 13(d), there are outstanding any claims that (i) were validly made prior to such date against Credit Support then being released and (ii) in the case of any Credit Support being released because it is being replaced, are not fully secured by the replacement Credit Support, then, on such scheduled release date, (a) the amount of the applicable Credit Support shall be deemed reduced to the amount of such outstanding claims, (b) such release date shall be extended until the final resolution and (if applicable) full payment of such outstanding claims and (c) at the election of Credit Support Provider, the scope of such security may be reduced to secure only such outstanding claims. In the event of a reduction in the amount and/or scope of any Credit Support in accordance with clause (a) or clause (c) of the immediately preceding sentence, Credit Support Beneficiary shall promptly execute any documents and take any other actions reasonably requested by the Credit Support Provider or any applicable Credit Support Guarantor to effect and/or confirm such reduction in amount and/or scope, including by executing and delivering an amendment to such Credit Support, by exchanging such Credit Support or by other reasonable means.

14. **Taxes.**

Unless otherwise agreed to in writing by the Parties or specifically expressed in this Agreement, neither Party is liable for any of the taxes of the other Party that the other Party is legally obligated to pay and that are incurred or arise in connection with or are related to income generated by the transactions contemplated under this Agreement and any Confirmation or arise from ownership of property subject to the transactions contemplated by this Agreement and any Confirmation, and all such taxes (including net income taxes, franchise taxes, and property taxes) shall be the financial responsibility of the Party who is obligated by operation of law to pay such tax. In the instance that sales, gross receipts, transfer, use or similar taxes are incurred or arise in connection with or are related to a transaction between the Parties contemplated by this Agreement or any Confirmation, a purchasing Party may provide to the other Party a valid exemption certificate executed by the purchasing Party, in which case such other Party shall not collect the taxes covered by such certificate.

15. **Representations and Warranties; Covenants.**

(a) On the Effective Date, each Party hereby represents and warrants (or shall be deemed to represent and warrant, as applicable) to the other Party as follows:

(i) Good Standing. It is duly organized, validly existing and in good standing under the laws of the jurisdiction of its organization or incorporation and is in good standing and qualified to do business in each jurisdiction where the failure to so qualify could reasonably be expected to have a material adverse effect on such Party's ability to perform its obligations under this Agreement or on the business, operations or financial condition of such Party.

(ii) Authority. It has all necessary company power and authority to execute and deliver this Agreement and perform its obligations hereunder.

(iii) No Conflict. Its execution, delivery and performance of this Agreement (i) has been duly authorized by all necessary company action, (ii) does not violate any of the terms or conditions of (A) its governing documents, (B) any contract to which it is a Party (or result in acceleration of any amounts owed or otherwise adversely affect its rights or obligations under such a contract) including any sharing and common ownership, use and financing arrangements between Seller and the owners of the Other Project(s), or (C) any Applicable Laws currently in effect having applicability to such Party or its assets (subject, in the case of Seller as the representing Party, obtaining any permits that are not yet required) and (iii) does not result in, or require, the creation or imposition of any mortgage, deed of trust, pledge, lien, security interest or other charge or encumbrance of any nature (other than as may be contemplated by this Agreement) upon or with respect to any of the properties of such Party now owned or hereafter acquired, in the case of each clauses (ii)(B), (ii)(C) and (iii), to the extent such violation or creation or imposition could reasonably be expected to have a material adverse effect on such Party's ability to perform its obligations under this Agreement or on the business, operations or financial condition of such Party.

(iv) Binding Agreement. This Agreement has been validly executed and delivered on behalf of such Party and constitutes the legal, valid and binding obligation of such Party enforceable against such Party according to its terms, except as the enforceability of this Agreement may be limited by (i) bankruptcy, insolvency, reorganization or other similar laws affecting the enforcement of creditors' rights generally and (ii) general principles of equity whether considered in a proceeding in equity or at law.

(v) Licenses and Permits. All governmental and other third-party consents that are required to have been obtained by it with respect to its execution, delivery or performance of this Agreement have been obtained and are in full force and effect and all conditions of any such consents have been complied with, except, in the case of Seller as the representing Party, any permits that are not yet required.

(vi) Ability to Perform. There is no pending or (to its knowledge) threatened litigation, arbitration or administrative proceeding that could reasonably be expected to have a material adverse effect on such Party's ability to perform its obligations under this Agreement or on the business, operations or financial condition of such Party.

(vii) Eligible Participant. As of the Commercial Operation Date, each Party is an "eligible contract participant" within the meaning of Section 1a(18)(A)(v) of the Commodity Exchange Act or an "eligible commercial entity" within the meaning of Section 1(a)(17) of the Commodity Exchange Act. The Parties acknowledge and agree that all transactions under this Agreement, except for the transfer of Environmental Attributes, shall be deemed to be "swaps" as defined in Section 1a(47)(A) of the Commodity Exchange Act and the CFTC's rules and regulations promulgated under the Commodity Exchange Act.

(b) Seller covenants that it will perform its obligations under this Agreement in compliance with all Applicable Laws.

16. **Limitation of Liability.**

(a) Waiver of Consequential Damages. EXCEPT FOR INDEMNIFICATION UNDER SECTION 10(a), IN NO EVENT SHALL EITHER PARTY OR ANY OF ITS RELATED PERSONS BE LIABLE TO THE OTHER PARTY OR ANY OF ITS RELATED PERSONS FOR SPECIAL, PUNITIVE, INCIDENTAL, INDIRECT, EXEMPLARY, OR CONSEQUENTIAL DAMAGES OF ANY NATURE WHATSOEVER, INCLUDING LOSS OF PROFITS, ARISING OUT OF OR IN CONNECTION WITH THIS AGREEMENT; PROVIDED, HOWEVER, THAT THIS LIMITATION SHALL NOT BE CONSTRUED TO LIMIT A PARTY'S RIGHT TO RECEIVE LIQUIDATED DAMAGES AND REPLACEMENT CONTRACT LOSSES AS PROVIDED IN THIS AGREEMENT OR, SUBJECT TO THE OTHER LIABILITY LIMITATIONS, TO RECEIVE "COVER" DAMAGES. THE PARTIES INTEND THAT, EXCEPT AS OTHERWISE EXPRESSLY PROVIDED IN THIS AGREEMENT, THE LIABILITY LIMITATIONS SHALL APPLY EVEN IN THE EVENT OF THE FAULT,

NEGLIGENCE (INCLUDING GROSS NEGLIGENCE) (IN WHOLE OR IN PART), STRICT LIABILITY, OR BREACH OF CONTRACT OF THE BENEFICIARY THEREOF AND WHETHER ASSERTED IN CONTRACT, IN WARRANTY, IN TORT, BY STATUTE OR OTHERWISE.

(b) Non-Recourse. NO RELATED PERSON OF EITHER PARTY SHALL HAVE ANY LIABILITY OR RESPONSIBILITY FOR, RELATING TO OR IN CONNECTION WITH SUCH PARTY'S FAILURE TO PERFORM OR FAULTY PERFORMANCE OF ANY TERM, COVENANT, CONDITION OR PROVISION OF THIS AGREEMENT OR ANY OTHER FAILURE, BREACH (INCLUDING BREACH OF ANY DUTY OR STANDARD OF CONDUCT) OR OTHER ACT OR OMISSION OF SUCH PARTY ARISING OUT OF OR IN CONNECTION WITH THIS AGREEMENT, INCLUDING (WITHOUT LIMITING SECTION 17(A)) AS A RESULT OF THE FAULT, NEGLIGENCE (INCLUDING GROSS NEGLIGENCE) (IN WHOLE OR IN PART), STRICT LIABILITY OR BREACH OF CONTRACT OF THE RELATED PERSON THAT IS THE BENEFICIARY OF THIS PROVISION. IN PURSUING ANY REMEDY FOR ANY SUCH FAILURE TO PERFORM, FAULTY PERFORMANCE OR OTHER FAILURE, BREACH OR OTHER ACT OR OMISSION OF A PARTY, NEITHER THE OTHER PARTY NOR ANY OF ITS RELATED PERSONS SHALL HAVE ANY RECOURSE AGAINST ANY PERSON OTHER THAN THE DEFAULTING OR BREACHING PARTY ITSELF, NOR AGAINST ANY ASSETS OTHER THAN THE ASSETS OF THE DEFAULTING OR BREACHING PARTY ITSELF. NOTWITHSTANDING THE FOREGOING, NOTHING IN THIS SECTION 16(B) SHALL LIMIT OR AFFECT THE OBLIGATIONS OF ANY GUARANTOR OF EITHER PARTY'S CREDIT SUPPORT UNDER THE TERMS OF SUCH PARTY'S CREDIT SUPPORT.

(c) No Warranty. TESLA ACKNOWLEDGES AND AGREES THAT IT HAS ENTERED INTO THIS AGREEMENT TO RECEIVE PAYMENTS AND ENVIRONMENTAL ATTRIBUTES BASED SOLELY UPON THE EXPRESS REPRESENTATIONS AND WARRANTIES IN THIS AGREEMENT, AND NO IMPLIED WARRANTIES FROM SELLER OR ANY OTHER PERSON SHALL BE DEEMED TO APPLY TO THE SAME. THE PARTIES NEGATE ANY REPRESENTATION OR WARRANTY WITH RESPECT TO THE INTERVAL QUANTITY AND ENVIRONMENTAL ATTRIBUTES NOT EXPRESSLY SET FORTH IN THIS AGREEMENT, INCLUDING ANY REPRESENTATION OR WARRANTY WITH RESPECT TO MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

(d) Survival. This Section 16 shall survive the expiration or termination of this Agreement.

17. **Events of Default.**

If any of the following events occur:

(a) Failure to Pay. A Party fails to make, when due, any payment required pursuant to this Agreement (other than amounts disputed in good faith), and such failure is not remedied within fifteen (15) Business Days after written notice of such failure from the other Party;

(b) Material Breach. A Party is in material breach of its obligations under this Agreement (other than an obligation to make payment, an obligation that is otherwise specifically set forth in this Section 17 as a separate Event of Default or an obligation in respect of which this Agreement provides a remedy that is stated to be an exclusive remedy), and such breach is not remedied within thirty (30) days after written notice of such breach from the other Party (or, to the extent such Party has commenced and is continuing reasonable efforts to remedy such breach, within ninety (90) days after written notice of such breach from the other Party);

(c) Misrepresentation. A Party's representation or warranty made in this Agreement proves to have been false in any material respect when made and (i) the underlying facts are not corrected or cured so as to make such representation and warranty correct within thirty (30) days after written notice of such misleading or false representation or warranty from the other Party (provided that, to the extent such inaccuracy is not reasonably capable of being remedied within the thirty (30)-day remedy period specified above but is reasonably capable of being remedied, such Party shall have such additional time as is reasonably necessary to remedy such inaccuracy, so long as such Party promptly commences and diligently pursues such remedy) or (ii) if such inaccuracy is not capable of a remedy but the other Party's Damages can be ascertained, the payment of such Damages (subject to the Liability Limitations) is not made

within ten (10) Business Days after the amount of such Damages is agreed upon by the Parties or is determined by a final and non-appealable judgment or order;

(d) Failure to Maintain Credit Support. A Credit Support Provider fails to deliver or maintain Credit Support when and as required pursuant to Section 11 or Section 12 or Section 13, as applicable, and such breach is not cured within the applicable period specified therein;

(e) Bankruptcy. A Party (i) files a petition or otherwise commences, or authorizes the commencement of, a proceeding or cause under any bankruptcy, insolvency, receivership or similar law for the protection of creditors, (ii) has such a petition filed or proceeding commenced against it, which remains un-dismissed for ninety (90) days, (iii) files an answer or pleading admitting or failing to contest the material allegations of any such petition, (iv) takes any action for its winding up, liquidation or dissolution, (v) is otherwise adjudged bankrupt or insolvent under any bankruptcy, insolvency, receivership or similar law for the protection of creditors, or (vi) consents to any of the actions described in the preceding clauses (i) through (v);

(f) Unauthorized Assignment. A Party assigns or transfers this Agreement or any portion thereof in violation of Section 23 of this Agreement; or

(g) Availability. The Project does not achieve an Actual Availability Percentage equal to or greater than eighty percent (80)% in each of two (2) consecutive Contract Years;

then an "Event of Default" shall exist as to such Party (the "Defaulting Party") and the other Party (the "Non-Defaulting Party") shall be entitled to exercise the remedies set forth in Section 18.

18. **Remedies.**

(a) Termination. If an Event of Default occurs and is continuing, the Non-Defaulting Party shall have the right to exercise one or more of the following remedies: (i) send written notice of its intent to terminate this Agreement for such Event of Default, and if the Defaulting Party fails to cure such Event of Default within thirty (30) days of receiving the Non-Defaulting Party's notice of intent to terminate this Agreement, terminate this Agreement early by providing notice to the Defaulting Party designating an early termination date that shall be no earlier than the date such notice is effective and not later than twenty (20) days after the date such notice is effective and (ii) to exercise such remedies as otherwise provided in this Agreement or (subject to the Liability Limitations) available at law or in equity, including the right to specific performance in the event of Seller's default for failure to deliver the Environmental Attributes as required hereunder and the right (subject to the Liability Limitations) to Damages arising out of the Event of Default, including, in the case of termination of this Agreement as a result of an Event of Default, Damages suffered by the Non-Defaulting Party as a result of the termination, which shall be determined as equal to the Replacement Contract Losses (if any) incurred by the Non-Defaulting Party as a result of such termination. Further, whether or not this Agreement is terminated, either Party may assert any claims available to it under this Agreement or (subject to the Liability Limitations) at law or in equity, so as to recover any other Damages against the other Party resulting from any breach of or default under this Agreement by such other Party. Each Party shall use commercially reasonable efforts to mitigate its Damages resulting from the other Party's breach of or default under this Agreement, including upon any termination hereof as a result of an Event of Default of the other Party.

(b) Suspension. In addition to (and without limiting) the remedies for Event of Default set forth in Section 18(a) or (subject to the Liability Limitations) otherwise available at law or in equity, during the existence of an Event of Default, the Non-Defaulting Party may suspend (in whole or in part) its performance under this Agreement, but without relieving the Defaulting Party of its obligations to pay (subject to the Liability Limitations) Damages arising out of such Event of Default.

(c) Payment of Damages. Promptly upon any termination of this Agreement pursuant to Section 18(a), the Non-Defaulting Party shall determine in a commercially reasonable manner its Damages, including the

Replacement Contract Losses (if any) and any payments then due to the Non-Defaulting Party for prior performance (net of payments owed to the Defaulting Party for prior performance). The Non-Defaulting Party shall provide by notice to the Defaulting Party, its determination of Damages, together with reasonable supporting material. The Defaulting Party shall pay such Damages within thirty (30) days of such notice.

(d) Remedies Cumulative. Except as expressly provided in this Agreement, all remedies are cumulative and not exclusive of any rights, privileges and remedies provided by Applicable Laws.

19. **Survival.**

Neither the termination nor expiration of this Agreement shall relieve either Party of (i) any undischarged liability of such Party in respect of the period prior to such termination or expiration (including for unpaid amounts owing under this Agreement in respect of the period prior to such termination or expiration) or any liability for breach by such Party of this Agreement prior to such termination or expiration or (ii) any obligations or liabilities arising out of any such termination. All obligations and liabilities described in the preceding sentence, the Liability Limitations, and Sections, 6(f), 16, 21, and 26(i), together with applicable provisions of this Agreement to the extent relating to any of the foregoing (including for final billings and other provisions relating to the discharge and enforcement of any of the foregoing), shall survive termination or expiration of this Agreement.

20. **Notices.**

All invoices, notices, demands or other communications that either Party may give to the other under or in connection with this Agreement shall be in writing and shall be delivered either by hand or express courier mail addressed to the relevant Party at the address stated in the Key Terms or at any other address notified by that Party to the other Party as its address for notice. A Party may change its addresses or other notice information by providing notice of same in accordance with this Section 20.

21. **Confidentiality.**

(a) Confidentiality. The NDA sets out the Parties' confidentiality obligations under this Agreement and any Confirmation. It is incorporated by reference into this Agreement, mutatis mutandis, and the terms and conditions of the NDA will continue in force throughout the term of this Agreement and for three (3) years following its expiration or earlier termination. The terms and conditions of this Agreement and any Confirmation shall be Tesla's Confidential Information for purposes of the NDA.

(b) Goodwill and Publicity. Neither Party shall use any name, trade name, service mark or trademark of the other Party in any promotional or advertising material without the prior written consent of such other Party. The Parties shall coordinate and cooperate with each other when making public announcements related to the Project or the execution and existence of this Agreement, and each Party shall have the right to promptly review, comment upon and approve any publicity materials, press releases or other public statements (to include via social media) by the other Party that refer to, or that describe any aspect of, the Project or this Agreement. Neither Party shall make any press release or public announcement of the specific terms of this Agreement (except for filings or other statements or releases as may be required by Applicable Laws or pursuant to Section 26(i)) without the specific prior written consent of the other Party.

(c) Naming Rights. Tesla shall have the exclusive right to name any Project during the applicable Confirmation Term; provided that Seller shall not be obligated to change its legal entity name. Seller agrees that Tesla may also include graphics, trade dress, logos, or other marks ("Tesla Marks") wherever the name of such Project will appear. Upon Tesla's request, Seller will use such Tesla Marks on signs, billboards and posters, websites, advertisements in any medium, presentations or descriptive materials and anywhere else the Project's proper name would typically be displayed. Tesla grants Seller a non-exclusive, non-transferable, non-assignable, revocable right and license for the

during the Confirmation Term to use the Tesla Marks. Upon the termination or expiration of the Confirmation, Seller will immediately cease and discontinue all further use of the Tesla Marks.

22. **Records and Audits.**

Seller shall create and keep (i) meter records and other records substantiating amounts due from Tesla to Seller under this Agreement and (ii) all other records required to be kept by Seller according to Applicable Laws. Seller shall maintain the records that it is required to create and keep under this Section 22 according to Prudent Electrical Practices and, if applicable, generally accepted accounting practices, consistently applied. Seller shall keep and maintain those records for a period of at least four (4) years after the respective records are created, and Tesla may inspect and audit those records during normal business hours upon reasonable advance notice (but not more frequently than once every calendar year unless Tesla has a commercially reasonable reason for auditing more frequently) and with as little impact to Seller's business as possible. Each Party's costs of audits will be borne by such Party.

23. **Assignment.**

Neither Party shall be entitled to assign or transfer all or any portion of its interest in this Agreement or any Confirmation, except as provided herein, without the prior written consent of the non-assigning Party, which consent shall not be unreasonably withheld, delayed or conditioned. Any Change in Control of Seller will be deemed an assignment. Any assignment without the prior written consent of the non-assigning Party is void. Notwithstanding the foregoing, a Party may make the following assignments without the prior written consent of the other Party:

(i) Seller may collaterally assign this Agreement or any Confirmation to a Financing Party relating to Seller's construction or long-term financing for the Project, and, in connection with any such financing, Tesla shall execute and deliver an estoppel certificate and/or Tesla's standard form direct agreement, each containing customary terms and conditions; and

(ii) Tesla may transfer or assign all of its rights and obligations under this Agreement or any Confirmation to an Affiliate; provided that, if Tesla assigns any Confirmation to an Affiliate and such Affiliate is not a Creditworthy Entity, Tesla's Credit Support is provided or remains in place, as applicable.

24. **Force Majeure.**

(a) Effect of Force Majeure. To the extent a Party is prevented by Force Majeure from carrying out, in whole or in part, its obligations under this Agreement, then the affected Party shall be excused from performing such obligations.

(b) Notice of Force Majeure. The Party claiming Force Majeure will promptly (but no later than ten (10) Business Days after becoming aware, or after such Party reasonably should have been aware, of events that constitute such Force Majeure event) notify the other Party in writing of such event, giving details of the Force Majeure event, its anticipated effect on the affected Party's performance under this Agreement, and the steps that the affected Party is taking to remedy the delay.

(c) Termination Due to Force Majeure event. If any Force Majeure event prevents a Party from carrying out its material obligations under this Agreement before or after the Commercial Operation Date for a period of one hundred eighty (180) days or longer, and Force Majeure event is not subject to dispute resolution pursuant to Section 24(e) of this Agreement, the Party not claiming Force Majeure may (so long as the consecutive days of excused performance are continuing) terminate this Agreement, without liability of either Party arising out of such termination, upon at least thirty (30) days written notice and such termination shall not be considered a termination due to an Event of Default; provided that such termination right shall expire (and shall no longer apply) if, prior to the end of such thirty (30) day period, the Force Majeure is remedied. If the Party not claiming Force Majeure does not exercise its right to terminate this Agreement pursuant to this Section 24(c) within thirty (30) days, the Party claiming Force Majeure shall

have the right to terminate this Agreement without liability of either Party arising out of such termination, upon written notice to the other Party.

25. **Insurance Requirements.**

Seller shall, at its sole cost, maintain insurance as set forth in Annex II of this Agreement with responsible insurance carriers.

26. **Miscellaneous.**

(a) Entire Agreement. This Agreement, the Confirmations, including all Annexes hereto, contains the entire understanding of the Parties with respect to the subject matter hereof and shall completely and fully supersede all prior understandings or agreements, both written and oral, including any term sheet, between the Parties relating to the subject matter hereof and thereof. No representations, inducements, promises, or agreements, oral or otherwise, have been relied upon or made by any Party, or anyone on behalf of a Party, that are not fully expressed in this Agreement. The section titles in this Agreement are only for purposes of convenience and do not form a part of this Agreement and will not be taken to qualify, explain or affect any provision thereof.

(b) Severability. If any article, section, phrase or portion of this Agreement is held to be invalid, illegal or unenforceable for any reason, such article, section, phrase, or portion so adjudged will be deemed separate, severable and independent and replaced automatically by a legal, valid and enforceable provision which most nearly accomplishes and reflects the original intention of the Parties. This Agreement, as so modified, shall remain in full force and effect and shall not be invalidated or rendered illegal or unenforceable or otherwise affected thereby. If the application of any provision of this Agreement to any Person or circumstance is determined to be void, unlawful, or unenforceable, then that provision shall remain valid, lawful, and enforceable as applied to other Persons and circumstances.

(c) Amendment/Binding Effect. This Agreement shall become effective and binding upon the Parties as of the Main Agreement Effective Date upon the execution and delivery of this Agreement by each of the Parties. This Agreement may not be amended, changed, modified, or altered unless such amendment, change, modification, or alteration is in writing and signed by both of the Parties. This Agreement shall inure to the benefit of and shall be binding upon the Parties and their respective successors and permitted assigns.

(d) Waiver. No delay or omission by a Party in the exercise of any right under this Agreement shall be taken, construed or considered as a waiver or relinquishment thereof, and any such right may be exercised from time to time and as often as may be deemed expedient. If any term and condition hereof is breached and thereafter waived by a Party, such waiver shall be limited to the particular breach so waived and is not deemed to waive any other breach hereunder.

(e) Governing Law; Dispute Resolution; Venue. This Agreement and all claims arising out of or relating to this Agreement and the transactions contemplated hereby shall be governed by the laws of the State of Texas, without regard to the conflicts of law principles that would result in the application of any law other than the law of such state. Any dispute arising from or relating to this Agreement shall first be promptly referred to the Parties' senior level management for resolution. If the Parties' senior level management are unable to resolve any such dispute within twenty (20) days after referral, then either Party may take a dispute to binding arbitration in accordance with the then-current Streamlined Arbitration Rules of the Judicial Arbitration and Mediation Services ("JAMS"). The existence, content and result of the arbitration shall be held in confidence by the Parties, their representatives, any other participants and the arbitrator. The arbitration will be conducted by a single arbitrator selected by agreement of the Parties or, failing such agreement, appointed in accordance with JAMS, in either case in English in Austin, Texas. The arbitration award shall be final and binding on the Parties and the Parties shall not have the right to appeal any such award. Each Party will bear its own expenses in the arbitration and will share equally the costs of the arbitration; provided, however, that the arbitrator may, in their discretion, award reasonable costs and fees to the prevailing Party. Each Party hereby excludes

and waives irrevocably any rights or application or appeal to the courts of any country otherwise having jurisdiction to the fullest extent permitted by law in connection with any questions of law arising in the course of arbitration or arising out of any award made, except for actions to obtain a judgment recognizing or enforcing an arbitral award or actions to take (or request any judicial or other authority to order) any provisional measure prior to the commencement of or during the arbitration proceedings for the preservation of its rights and interests.

(f) Waiver of Jury Trial. EACH OF THE PARTIES HEREBY IRREVOCABLY WAIVES, TO THE FULLEST EXTENT PERMITTED BY LAW, ANY RIGHT TO HAVE A JURY PARTICIPATE IN RESOLVING ANY DISPUTE ARISING OUT OF, IN CONNECTION WITH, RELATED TO, OR INCIDENTAL TO THE RELATIONSHIP BETWEEN THEM BY THIS AGREEMENT OR THE TRANSACTIONS CONTEMPLATED HEREBY.

(g) Bankruptcy Treatment. The Parties acknowledge and agree that (i) this Agreement constitutes a "commodity contract" and/or a "forward contract" and that Seller and Tesla are "forward contract merchants" and all payments under this Agreement are "transfers" or "settlement payments" in each case within the meaning of the United States Bankruptcy Code; (ii) the Parties are entitled to the rights under, and the protections afforded by, Sections 362, 546, 548, 556, 560 and 561 of the United States Bankruptcy Code. In addition, Seller and Tesla each represent that it is an "eligible commercial entity" and an "eligible contract participant" within the meaning of United States Commodity Exchange Act §§1a(17) and 1a(18), respectively. To secure its obligations under this Agreement, each Party hereby grants the other Party a present and continuing security interest in, lien on, and right (without limiting Section 5(c)) to set off against, its respective payment obligations to the other Party under this Agreement. Each Party acknowledges and agrees that the pledge of its payment obligations to the other Party under this Agreement shall serve to "guaranty" or "secure" such obligations within the meaning of the United States Bankruptcy Code.

(h) Equitable Relief. Nothing in Section 26(e) shall prevent either Party from applying to a court of competent jurisdiction (subject to Section 26(e)) for interim measures, specific performance, or other similar relief prior to completion of the procedures in Section 26(e).

(i) Disclosures to Governmental Authorities. Tesla and Seller hereby acknowledge and agree that the Parties shall be entitled, each at its own expense, to report and disclose information concerning any or all of the transactions hereunder (including information regarding the economic terms and valuations of such transactions) to any applicable Governmental Authority (or a third-party swap data repository as required by a Governmental Authority), from time to time, as may be required by Applicable Laws or as such Party may determine, in its reasonable discretion, to be necessary or advisable for it to comply with Applicable Laws. Additionally, to the extent either Party needs additional information or details from the other Party in order to comply with any such Applicable Laws (including information concerning such other Party's organization, corporate status, status under the CFTC's regulations and/or unique entity identifier), such other Party shall promptly provide such additional information or details to the first Party upon request therefor.

(j) Dodd-Frank. Each Party represents and warrants to the other Party that the information provided with respect to such Party in Annex VI of the Confirmation is true and correct as of the Effective Date and as of the Commercial Operation Date. From and following the Effective Date, each Party shall update the information provided in Annex VI of the Confirmation by notice to the other Party promptly after any material change to such information or after any such information ceases to be true and correct at any time during the balance of the Term. Seller covenants that it shall keep full, complete and systematic records of all transactions under this Agreement and maintain such records until the date that is the five (5) year anniversary of the termination or expiration of this Agreement. For purposes of Parts 43.3 and 45.8 of the regulations of the CFTC promulgated under the Commodity Exchange Act, the Parties hereby agree that, Seller shall be the reporting counterparty (the "Reporting Party") with respect to such transaction, provided that Seller shall be responsible for all costs incurred by Seller as the Reporting Party. Tesla hereby agrees that, upon the occurrence of any "life cycle event" (as defined in Part 45.1 of the regulations of the CFTC) relating to a corporate event in respect of Tesla and any swap, it will, as soon as practicable, but in no event later than 10:00 a.m. PT on the second

(2nd) Business Day following the day on which such life cycle event occurs, notify Seller of the occurrence of such life cycle event, with sufficient detail regarding such life cycle event to allow Seller to comply with any reporting requirement.

(k) Further Assurances. Each Party shall deliver or cause to be delivered to the other Party such instruments, documents, statements, certificates of its officers, accountants, engineers or agents as to matters as may be reasonably requested, and shall make available, upon reasonable request, personnel and records relating to the Project to the extent required for the requesting Party to carry out the purposes of this Agreement or fulfill any legal obligation or regulatory reporting requirements.

(l) No Rights of Third Parties. This Agreement is intended only for the Parties' benefit, and nothing in this Agreement may be construed to create any duty to, any standard of care concerning, or any liability to, any person not a Party to this Agreement, other than the rights of Persons expressly included in the Liability Limitations to the protection of such Liability Limitations.

(m) Relationship of the Parties. This Agreement shall not be interpreted or construed to (a) create an association, joint venture or partnership between the Parties or impose any partnership obligation or liability on either Party, or (b) create any agency relationship between the Parties or impose any fiduciary duty of any kind on either Party, or (c) create a trust or impose any trust obligations of any kind on either Party, or (d) constitute a lease of any properties of any kind. Neither Party shall have any right, power or authority to enter into any agreement or undertaking for, or act on behalf of, or act as or be an agent or representative of, or otherwise bind, the other Party. Each Party waives any and all rights that it may otherwise have under Applicable Laws or legal precedents to make any claim or take any action against the other Party or any of its Related Persons in respect of this Agreement based on any theory of agency, fiduciary duty or other special standard of care.

(n) Counterparts; Electronic Format. This Agreement may be executed in several counterparts, each of which is an original and all of which constitute one and the same instrument. This Agreement may be duly executed and delivered by a Party by electronic format (including portable document format (.pdf)) delivery of the signature page of a counterpart to the other Party.

ANNEX I – DEFINITIONS

"Affiliate" shall mean, when used with reference to a specified Person, any other Person that directly, or indirectly through one or more intermediaries, controls, is controlled by or is under common control with the specified Person; provided, however, that the term "Affiliate," when used with respect to Seller, shall not include any direct or indirect tax equity investor in Seller. For purposes of this definition, "control" shall mean the power or authority, through ownership of voting securities, by contract or otherwise, to direct the management of the specified Person.

"Agreement" shall have the meaning set forth in the introductory paragraph.

"Applicable Laws" shall mean all (i) constitutions, treaties, statutes, laws, ordinances, rules, regulations, judgments, decrees, injunctions, writs and orders of any Governmental Authority; (ii) rules or listing requirements of any stock exchange or trading market on which securities issued by either of the Parties or any of their respective Affiliates are listed or quoted; (iii) decisions of and determinations by, and interpretations of, any of the foregoing set forth in clauses (i) and (ii) by any Governmental Authority or stock exchange or trading market or arbitrator; and (iv) requirements of permits, in the case of each of the items described in clauses (i)-(iv), that apply to either or both of the Parties or their Affiliates, the Project, the terms of this Agreement or otherwise to the Person or matter in question. Applicable Laws includes the EMO Protocols and the requirements of NERC and any applicable regional reliability entity.

"Business Day" shall mean a day on which Federal Reserve member banks in New York City are open or required to be open for business.

"Capacity Shortfall Damages" shall have the meaning set forth in Section 6(d).

"CFTC" shall mean the Commodity Futures Trading Commission.

"Change in Control" shall mean the occurrence of any one of the following events or actions with respect to Seller: (i) a direct or indirect transfer of a majority of the ownership or equity interests of such Party; or (ii) a sale or conveyance of any direct or indirect voting rights such that the Party is no longer in control of its interests under this Agreement, provided, that, for the avoidance of doubt, (x) the sale or issuance of equity interests by Seller to a Financing Party pursuant to any tax equity investment transaction or (y) the foreclosure on or similar acquisition of any equity or ownership interests in Seller by a lender or secured party; or (z) transfer by a lender or secured party pursuant to a collateral pledge or assignment agreement to a Qualified Operator that (A) is not a Competitor or Competitor Related Party, (B) is not a party to a dispute with Tesla or an Affiliate of Tesla, and (C) is primarily engaged in the business of owning or operating renewable generation projects, shall not constitute a Change in Control.

"Code" shall mean the U.S. Internal Revenue Code of 1986, as amended.

"Commercial Operation" shall mean when the following conditions have been satisfied or waived by the Parties: (a) the Generation Equipment with an aggregate nameplate capacity equal to or greater than the Minimum Installed Capacity have been installed and have been Commissioned, (b) the Project systems (other than the Generation Equipment) have been completed in all material respects and are capable of delivering Energy to the Interconnection Point in accordance with Prudent Electrical Practices, and (c) Seller has issued the Notice of Commercial Operation.

"Commercial Operation Date" shall mean the date on which Commercial Operation occurs.

"Commissioned" or "Commissioning" shall mean, as to the Generation Equipment, the performance of the start-up and commissioning activities identified in the applicable equipment manufacturer's commissioning completion checklist.

"Competitor" shall mean a Person who is a competitor of Tesla with respect to the manufacture, design, integration or supply of battery energy storage equipment or systems; provided, that Competitor does not include a

Person who performs such functions solely for itself or its wholly-owned Affiliates and not for revenue generation purposes; provided, further, that transfer pricing arrangements between Affiliates shall not be deemed revenue generation for purposes of the foregoing (including monies transferred between Affiliates primarily for tax and accounting reasons on a transfer pricing basis).

"Competitor Related Party" shall mean, with respect to any Competitor, any other Person (x) that is a controlling direct or indirect beneficial owner of such Competitor, or (y) for whom such Competitor is a controlling direct or indirect beneficial owner. For purposes of this definition, the term "control" shall mean the right and power, directly or indirectly through one or more intermediaries, to direct or cause the direction of substantially all of the management and policies of a Person through ownership of voting securities or by contract.

"Confidential Information" shall mean all oral and written information relating to the business, strategy, policies, prospects, assets or plans of the other Party or any of the other Party's Related Persons (including, in the case of Tesla as the receiving Party, Project capabilities and availability) and, to the extent marked "Confidential" or otherwise identified with specificity in writing as confidential at the time of disclosure, all other information provided by the Parties to one another pursuant to this Agreement. The following information does not constitute Confidential Information for purposes of this Agreement: (i) information that is or becomes generally available to the public other than as a result of a disclosure by the receiving Party in violation of this Agreement; (ii) information that was already known by the receiving Party on a non-confidential basis prior to this Agreement; (iii) information that becomes available to the receiving Party on a non-confidential basis from a source other than the disclosing Party if such source was not subject to any prohibition against disclosing the information to the receiving Party; (iv) information that the receiving Party develops independently without using the Confidential Information, and (v) information that the disclosing Party approves for release in writing.

"Confirmation" shall have the meaning set forth in the introductory paragraph.

"Confirmation Term" shall have the meaning set forth in Section 2.

"Consolidated Liquidity" shall have the meaning set forth in the RCF Credit Agreement.

"Contract Year" shall mean each one-year period during the Settlement Term commencing at the Commercial Operation Date or on one of the anniversaries of the Commercial Operation Date; provided that, if this Agreement is terminated prior to its expiration, the Contract Year in which such termination occurs will begin on the anniversary of the Commercial Operation Date immediately preceding the termination date (or, if such termination occurs during the first Contract Year, at start of the Settlement Term) and will end on the termination date.

"Credit Event" shall mean, at the applicable time, with respect to any Credit Support, (a) if such Credit Support is in the form of a Guaranty, the Guarantor fails to meet the standards required in the definition of "Guaranty," (b) if such Credit Support is in the form of a Letter of Credit, the bank issuing such Letter of Credit ceases to have the Credit Rating required in the definition of "Qualified Issuer," or (c) in the case of any Credit Support, such Credit Support ceases to be in full force and effect at such time.

"Credit Rating" shall mean, for any Person, the senior unsecured and uncredit-enhanced long term debt rating of such Person by Moody's or S&P or, if such Person does not have such a senior unsecured and uncredit-enhanced long term debt rating, the issuer rating of such Person by Moody's or S&P.

"Credit Support" shall mean either Seller's Credit Support or Tesla's Credit Support, as applicable.

"Credit Support Beneficiary" shall mean either Seller or Tesla, which is the beneficiary of a Credit Support, as applicable.

"Credit Support Guarantor" shall mean (a) in respect of any Credit Support in the form of a Guaranty, the Guarantor issuing such Guaranty and (b) in respect of any Credit Support in the form of a Letter of Credit, the bank issuing such Letter of Credit.

"Credit Support Provider" shall mean either Seller or Tesla, which is the provider of a Credit Support, as applicable.

"Creditworthy Entity" shall mean an entity that maintains at least one of the following Credit Ratings: (i) "Baa3" or higher by Moody's, (ii) "BBB-" or higher by S&P, or (iii) "BBB-" or higher by Fitch.

"Damages" shall mean any and all claims, liabilities, losses, damages, causes of action, fines interest, awards, penalties, litigation, lawsuits, administrative proceedings, administrative investigations, costs and expenses (including reasonable attorneys' fees, court costs and other costs of suit, arbitration, dispute resolution or other similar proceedings), including for injury, illness or death and including those owed to third parties (whether asserted in contract, in warranty, in tort, by statute or otherwise), but (for the avoidance of doubt) in all events subject to the Liability Limitations.

"Defaulting Party" shall have the meaning set forth in Section 17.

"Delay Damages" shall have the meaning set forth in Section 6(c).

"Dollars" or "$" shall mean the lawful currency of the United States of America.

"Due Date" shall mean, for any amount on an invoice issued by Seller pursuant to Section 5(a), (i) if Seller is required to pay such amount, the Seller Due Date or (ii) if Tesla is required to pay such amount, Tesla Due Date.

"EA Cost to Cover" shall mean the reasonable costs incurred (or that would be incurred) by Tesla to purchase Environmental Attributes necessary to replace any shortfall between the Environmental Attributes required to be obtained by Seller and transferred to Tesla and the Environmental Attributes actually transferred to Tesla.

"Early Termination Payment" shall have the meaning set forth in Section 6(e).

"EMO Protocols" shall mean the documents adopted by the EMO, including any exhibits or attachments referenced therein, that contain the scheduling, operating, planning, reliability and settlement policies, rules, guidelines (including the guidelines approved by the EMO describing the reliability standards for the EMO), procedures, standards and criteria of the EMO.

"Energy" shall mean three-phase, 60-cycle alternating current electric energy, expressed in units of kilowatt-hours or megawatt-hours.

"Environmental Attribute" shall mean (i) any emissions, air quality or other environmental attribute, aspect, characteristic, claim, credit, benefit, reduction, offset or allowance, howsoever entitled or designated, resulting from, attributable to or associated with the Interval Quantity and/or Tesla's Capacity Percentage of the Project that is related to the Project's benefits to the environment and capable of being measured, verified or calculated and (ii) the reporting rights related to any such attributes, aspects, characteristics, claims, credits, benefits, reductions, offsets or allowances, including the right of a Person to report the ownership thereof in compliance with federal or state law, if applicable, or otherwise to a federal or state agency or any other Person, including under any present or future federal, state or local law, regulation or bill or any international or foreign emissions trading program. Environmental Attributes include RECs, carbon credits, portfolio credits, emissions allowances, environmental air quality credits and emissions reduction credits, offsets and allowances, howsoever entitled, resulting from the avoidance of the emission of any gas, chemical or other substance attributable to the generation of the Energy by a renewable Energy facility, including any of the same arising out of legislation or regulation concerned with oxides of nitrogen, sulfur, carbon, particulate matter, soot or mercury or

implementing the United Nations Framework Convention on Climate Change (the "UNFCCC") or the Kyoto Protocol to the UNFCCC or crediting "early actions" with a view thereto, or laws or regulations involving or administered by the Environmental Protection Agency or successor administrator. Notwithstanding the foregoing or anything to the contrary, Environmental Attributes do not include federal, state and local tax credits, grants or other tax incentives.

"Event of Default" shall have the meaning set forth in Section 17.

"FERC" shall mean the Federal Energy Regulatory Commission, or its success in function.

"Financing Parties" shall mean lenders and/or equity investors (including any trustee or agent on behalf of such lenders and/or equity investors) providing equity and/or debt financing or refinancing to Seller or any of its Affiliates, whether that financing or refinancing takes the form of private debt or equity, public debt or equity or any other form.

"Financial Close" shall mean full and complete construction financing of the Project.

"Fitch" shall mean Fitch Ratings or its successor.

"Fixed Price Payment" shall have the meaning set forth in Section 3(c).

"Floating Price" shall mean, for any Calculation Interval, the Settlement Point Price for electricity at the Settlement Point, as defined and published by the EMO, expressed in $/MWh.

"Floating Price Payment" shall have the meaning set forth in Section 3(b).

"Force Majeure" means any act or circumstance beyond the reasonable control and not attributable to the fault or negligence of, the Party seeking relief, including acts of God, epidemic, pandemic, flood, fire, earthquake, climatic conditions at the Project site that are unusual for the time of year, explosion, action or inaction of a public authority (including delays caused by permitting authorities) for reasons other than the claiming Party's fault, war, terrorist threats or acts or other civil unrest, piracy, lock-outs, strikes or other labor disputes other than those limited to the Project site, restraints or delays affecting carriers to the extent caused by a Force Majeure event, the inability or delay in obtaining supplies of adequate or suitable materials to the extent caused by a Force Majeure event, any emergencies declarations by any Governmental Authority, the applicable utility or EMO requiring shutdown or forced curtailment of the Project or Project site, or imposing delays or other impacts on a Party's performance (including those arising from shut-in, social distancing or other orders by Governmental Authorities or enhanced safety or monitoring requirements, or due to any epidemic or pandemic), and delays or non-availability of labor or materials to the extend caused by a Force Majeure event. Under no circumstances shall the following constitute a Force Majeure event: (i) a Party's ability to enter into a contract for sale or purchase of Energy or Environmental Attributes at a more favorable price or under more favorable conditions or other economic reasons; (ii) outages to the extent such are not caused by a Force Majeure event; (iii) changes in import tariff rates and/or the imposition of new import tariffs (including anti-dumping and/or countervailing duties or other trade measures); (iv) any event relating to charging of or discharging from the BESS; or (v) any other economic hardship (including lack of funds), financial cost, or changes in market conditions affecting the economics of either Party.

"Future Environmental Attributes" shall mean Environmental Attributes, generated by, attributable to or associated with the Interval Quantity and/or Tesla's Capacity Percentage of the Project that are not recognized as of the Effective Date and become recognized and marketable during the Term.

"Governmental Authority" shall mean (a) any federal, state, local, municipal or other government or (b) any other governmental, quasi-governmental, regulatory or administrative agency, commission or other authority (including CFTC, the EMO, FERC, NERC and any applicable regional reliability entity) lawfully exercising or entitled to exercise any administrative, executive, judicial, legislative, police, policy, regulatory or taxing authority or power.

"Guarantor" shall mean any Person issuing a Guaranty pursuant to this Agreement in connection with a Confirmation.

"Guaranty" shall mean a guaranty issued by a Person that is a Creditworthy Entity in form and substance reasonably satisfactory to the relevant Credit Support Beneficiary.

"HE" shall mean "hour ending."

"Installed Quantity" shall mean the nameplate capacity of the Generation Equipment that has been installed and Commissioned and for which the Project systems (other than the Generation Equipment) have been completed in all material respects and are capable of delivering Energy to the Interconnection Point in accordance with Prudent Electrical Practices.

"Interconnection Facilities" shall mean all the facilities installed for the purpose of interconnecting the Project to the Interconnection Point, including, but not limited to, all transformers and associated equipment, relay and switching equipment, and safety equipment.

"Interval Quantity" shall mean, for each Calculation Interval during the Settlement Term, an amount (expressed in MWh) equal to Tesla's Capacity Percentage of the net electric Energy generation from the Project delivered at the Interconnection Point during such Calculation Interval.

"Letter of Credit" shall mean an irrevocable standby letter of credit substantially in the form of Annex V of the Confirmation issued by a Qualified Issuer.

"Liability Limitations" shall mean the indemnities and other releases, waivers, allocations and disclaimers of, and limitations on, liabilities or remedies set forth in this Agreement.

"Main Agreement Effective Date" shall have the meaning set forth in the introductory paragraph.

"Moody's" shall mean Moody's Investors Service, Inc.

"MW" shall mean megawatt AC.

"MWh" shall mean megawatt-hour.

"NERC" shall mean the North American Electric Reliability Corporation.

"Non-Defaulting Party" shall have the meaning set forth in Section 17.

"Notice of Commercial Operation" shall mean written notice provided by Seller to Tesla stating that the conditions in clauses (a) and (b) of the definition of "Commercial Operation" have been satisfied or waived by the Parties and the Installed Quantity as of the Commercial Operation Date along with substantiating documentation.

"Notice of Financial Close" shall mean written notice provided by Seller to Tesla stating that Financial Close has been satisfied along with substantiating documentation.

"Other Project" shall mean any other r electricity-generating facility or energy storage facility that proposes to interconnect with the Transmission System through all or any portion of the Interconnection Facilities, including Shared Facilities.

"Party" and "Parties" shall have the respective meanings set forth in the introductory paragraph.

"Person" shall mean an individual, corporation, limited liability company, voluntary association, joint stock company, business trust, partnership, Governmental Authority or other entity.

"Prudent Electrical Practices" shall mean those practices, methods and acts that would be implemented and followed by prudent operators of wind or solar, as applicable, electric energy generating facilities, similar to the Project, during the relevant time period, which practices, methods and acts, in the exercise of prudent and responsible professional judgment in the light of the facts known or that shall reasonably have been known at the time the decision was made, would reasonably have been expected to accomplish the desired result consistent with manufacturers' warranties and recommendations, contractual obligations, the requirements or guidance of the Connecting Utility, the state Public Utility Commission or equivalent regulatory entity, the EMO and each other applicable Governmental Authority, Applicable Laws, the requirements of insurers, good business practices, reliability and safety. Prudent Electrical Practices shall not be limited to the optimum practice, method, technique or standard to the exclusion of all others, but rather shall be a range of possible practices, methods, techniques or standards. Seller acknowledges that the use of Prudent Electrical Practices by Seller does not exempt Seller from any obligations set forth in this Agreement or any Confirmation.

"PT" shall mean the prevailing time at the Project as observed by the EMO.

"Qualified Issuer" shall mean a major U.S. commercial bank, or a U.S. branch of a foreign commercial bank, which U.S. bank, or foreign bank, has and maintains (i) at least [redacted] in total assets and (ii) a Credit Rating of "A-" or better from S&P, or "A3" or better from Moody's.

"Qualified Operator" shall mean (a) a Person that has at least five (5) years' experience with operating at least seven hundred fifty (750) MW of renewable energy generation (excluding the Project) or (b) any other Person reasonably acceptable to Tesla.

"RCF Credit Agreement" shall mean the Credit Agreement, dated as of January 20, 2023, among Tesla, Inc., the Lenders and Issuing Banks from time to time party thereto, Citibank, N.A., as Administrative Agent and Deutsche Bank Securities, Inc., as Syndication Agent, as may be amended from time to time.

"Related Persons" shall mean, in respect of a referenced Person, (i) its owners (direct and indirect) and Affiliates, (ii) its subcontractors and (iii) the respective directors, officers, employees and agents of the referenced Person and the Persons described in clauses (i) and (ii) of this definition.

"Renewable Energy Tracking System" shall mean the REC tracking and trading system administered by the EMO in accordance with the EMO Protocols.

"Replacement Contract Losses" shall mean, with respect to a termination by a Non-Defaulting Party, an amount equal to (a) the difference (positive or negative) to such Non-Defaulting Party between the present value of the payments to be made and received under this Agreement (less the costs and expenses to be incurred in performing this Agreement) during the remaining term of this Agreement and the present value of the payments to be made and received (less the costs and expenses to be incurred) under transaction(s) replacing this Agreement, plus (b) attorneys' fees and expenses, brokerage fees and commissions and other third-party transaction costs and expenses to be reasonably incurred by the Non-Defaulting Party in entering into transaction(s) replacing this Agreement, attorneys' fees and expenses to be reasonably incurred by the Non-Defaulting Party in connection with the termination of this Agreement and any other reasonable incremental costs and expenses to be reasonably incurred by such Non-Defaulting Party in connection with the termination of this Agreement and/or in entering into transaction(s) replacing this Agreement; provided, however, that, if the foregoing amount is negative, the Replacement Contract Losses shall be deemed to be zero. For the avoidance of doubt, the Non-Defaulting Party shall not be required to enter into a replacement transaction in order to establish the Replacement Contract Losses owed.

"Reporting Party" shall have the meaning set forth in Section 26(j).

"S&P" shall mean Standard & Poor's Credit Ratings, Inc.

"Seller" shall have the meaning set forth in the Key Terms.

"Seller Due Date" shall mean, with respect to any invoice issued by Seller pursuant to Section 5(a), the forty-fifth (45th) day after the end of the applicable Settlement Interval.

"Seller's Credit Support" shall have the meaning set forth in Section 11(b).

"Seller's Operation Credit Support" shall have the meaning set forth in Section 11(b).

"Seller's Pre-COD Credit Support" shall have the meaning set forth in Section 11(a).

"Settlement Amount" shall have the meaning set forth in Section 3(a).

"Settlement Interval" shall mean each calendar month during the Settlement Term, commencing HE 0100 PT on the first calendar day of such calendar month and ending HE 2400 PT on the last calendar day of such calendar month; provided that, if this Agreement is terminated prior to its expiration, the Settlement Interval in which such termination occurs will be HE 0100 PT on the first calendar day of the calendar month in which such termination occurs and will end on the termination date.

"Shared Facilities" means the equipment, assets, and property (real or personal) that are used in common with Other Projects, as applicable, and all as necessary to enable delivery of energy from the Project (which is excluded from Shared Facilities) to the Interconnection Point.

"Shared Facilities Agreement" shall have the meaning set forth in Section 7(e).

"System Emergency" shall mean any circumstance or combination of circumstances or any condition of the Project, the Interconnection Facilities, the Transmission System, or the transmission system of other electric utilities, in which continued operation of the Project (a) is reasonably likely to endanger life or property and necessitates immediate action to avert injury to persons or serious damage to property, or (b) is reasonably likely to adversely affect, degrade or impair Transmission System reliability or transmission system reliability of the transmission system of other electric utilities.

"Term" shall have the meaning set forth in Section 2.

"Tesla" shall have the meaning set forth in the Key Terms.

"Tesla Due Date" shall mean, with respect to any invoice issued by Seller pursuant to Section 5(a), the forty-fifth (45th) day after the later of the end of the applicable Settlement Interval and the date of such invoice.

"Tesla's Credit Support" shall have the meaning set forth in Section 12.

"Third-Party Charges" shall mean all fees, costs, charges and penalties of every kind assessed by the EMO or other third-party charges arising from Seller's development, construction, operation, ownership or leasing of, or other acts or omissions of Seller with respect to, the Project, including, but not limited to, maintaining the Project's account with the EMO (if applicable), costs associated with registering, issuing and transferring Environmental Attributes (subject to Section 4(a)), and charges arising from the Project's operator failure to follow dispatch instructions or follow the EMO Protocols.

"Transfer Deadline" shall mean, with respect to any Environmental Attribute required to be obtained by Seller and transferred to Tesla according to Section 4(a), the fifteenth (15th) Business Day of the financial quarter following the

date that the applicable monitoring, tracking, certification and/or trading system(s) posts (or would have posted, had Seller complied with its obligations in Section 4), such Environmental Attribute in Seller's account (as extended for any delays due to the act or omission of Tesla or a Force Majeure event).

"Transmission System" shall mean the electric transmission system to which the Project is connected.

"UNFCCC" shall have the meaning set forth in the definition of Environmental Attribute.

ANNEX II – INSURANCE

1. Insurance Requirements.

1.1. **Commercial General Liability Insurance.**

1.1.1. $2,000,000 each occurrence or per claim, combined single limit for third party bodily injury or property damage and $2,000,000 general aggregate.

1.1.2. Include Tesla as additional insured in connection to this Agreement and the applicable Confirmation.

1.2. **Business Automobile Liability or similar Motor Liability Insurance.**

1.2.1. Seller's vehicles utilized in scope of this Agreement and the applicable Confirmation insured in accordance with local statutory requirements.

1.2.2. Include Tesla as additional insured in connection to this Agreement and the applicable Confirmation.

1.3. **Worker's Compensation Insurance and Employer Liability Insurances.**

1.3.1. Workers Compensation as required by state or federal laws.

1.3.2. Employer Liability with limits of $1,000,000 bodily injury for each accident, $1,000,000 bodily injury by disease for each employee and $1,000,000 bodily injury by disease policy limit.

1.4. **"All Risk" Property Insurance.**

1.4.1. Seller may elect to procure or maintain "All Risk" Property insurance for Seller-owned property, which shall include, but not limited to, building, structures, equipment and/or other property owned and all non-owned property in Seller's care, custody or control for which the Seller is legally liable or for which the Seller has agreed to insure or be responsible for at the Site.

2. Other Requirements for Seller's Insurances.

2.1. **Waiver of Subrogation.** Where permitted by law, all applicable insurance in this Annex II shall include waivers of subrogation.

2.2. **Notice of Cancellation.** Seller shall give Tesla prior written notice in the event of cancellation of insurance required to be obtained under this Annex II.

2.3. **Evidence of Insurance**. Seller shall provide certificate(s) of insurance or equivalent evidencing the required coverages under this Annex II to Tesla upon execution of the applicable Confirmation and upon each insurance renewal through the duration of the applicable Confirmation.

POWER PURCHASE AGREEMENT CONFIRMATION

(Chisme Solar/8987 CR268, Early, TX 76802)

This Power Purchase Agreement Confirmation (this "Confirmation") is entered into August 1, 2025 (the "Execution Date"), by and between Tesla and Seller (each as defined below, together the "Parties" and each individually as a "Party"). This Confirmation shall take effect on August 1, 2025 ("Effective Date").

Key Terms	
These Key Terms set out the scope of this Confirmation and certain key terms.	
Parties:	
Tesla:	Tesla, Inc., a corporation organized under the laws of Texas, whose registered office is at 1 Tesla Road, Austin, TX 78725.
Seller:	Blue Heron Solar, LLC, a limited liability company organized under the laws of Delaware, whose registered office is at 107 Spring St, Seattle, WA 98104
Notices:	
Tesla Notice Address:	1 Tesla Road, Austin, TX 78725 Attn: General Counsel / Legal Phone: +1. 512.516.8177 Email: energynotices@tesla.com; Tesla-Renewable-Notices@tesla.com
Seller Notice Address:	11515 Burnet Road, Suite 825, Austin, TX, 78758 Attn: Legal Phone: +1 (312) 883-4898 Email: info@redrivercleanenergy.com
NDA:	
NDA:	The Mutual Non-disclosure Agreement dated May 24, 2024, between Tesla (or its Affiliate) and Seller (or its Affiliate).
Project Terms:	
Project:	A solar energy generation facility located in Mills County, Texas as further described in Annex II.
Expected Project Capacity:	147 MWac.
Energy Market Operator:	Electric Reliability Council of Texas (ERCOT), or successor organization, or successor organization.
Financial Close Date:	Not Applicable.
Expected Commercial Operation Date:	[redacted]

Guaranteed Commercial Operation Date:	The date that is one hundred eighty (180) days after the Expected Commercial Operation Date.
Project RECs:	RECs generated by the Project.
Capital Expenditure Estimate	[redacted] Seller's expected capital expenditure to construct the Project.
Commercial Terms:	
Fixed Price:	[redacted]/MWh.
Minimum Floating Price:	[redacted]/ MWh.
Non-Settlement:	Applicable
Settlement Term:	15 years.
Settlement Point:	ERCOT North Hub.
Tesla's Capacity Share:	147 MW.
Tesla's Capacity Percentage:	100%.
Capacity Shortfall Damages Liquidated Value:	[redacted]
Expected Annual Production (as generated)	384,015 (associated with Tesla's Capacity Share).
Delay Damages Amount:	[redacted]/MW/day.
Seller's Pre-COD Credit Support Amount:	[redacted]/MW of Tesla' Capacity Percentage of the Expected Project Capacity.
Seller's Operation Credit Support Amount:	[redacted]/MW of Tesla's Capacity Percentage of the Installed Quantity.
Tesla's Credit Support Amount:	(i) Prior to the Commercial Operation Date, [redacted]/ of Tesla's Capacity Percentage of the Expected Project Capacity, and (ii) on and after the Commercial Operation Date, [redacted] of Tesla's Capacity Percentage of the Installed Quantity.
Financing Termination Payment:	Not Applicable.
Guaranteed Availability Percentage:	90% in the first Contract Year, and 92% in each Contract Year thereafter

EXECUTED by the Parties on the Execution Date, to take effect on and from the Effective Date.

TESLA, INC.	**Blue Heron Solar, LLC**

POWER PURCHASE AGREEMENT CONFIRMATION

TERMS AND CONDITIONS

1. Incorporation of Terms of Main Power Purchase Agreement. Tesla and Seller agree that the terms of the Main Power Purchase Agreement, entered into August 1, 2025, between Tesla and Red River Clean Energy, LLC (the "Main Agreement") are hereby incorporated into this Confirmation as if set forth in their entirety. With respect to the transaction described in this Confirmation, to the extent that any term of this Confirmation conflicts with a term of the Main Agreement, this Confirmation shall govern.

2. Definitions. The capitalized terms used in this Confirmation and not otherwise defined in Annex I of this Confirmation have the meaning given to them in the Main Agreement.

3. Annexes. The following Annexes attached to this Confirmation are the respective Annexes to the Confirmation referenced in the Main Agreement:

Annex I	Definitions
Annex II	Project Description
Annex III	Project Milestones
Annex IV	Availability Guarantee
Annex V	Form of Letter of Credit
Annex VI	Dodd Frank Information
Annex VII	Form of Invoice and Settlement Interval Data

4. Amendments to Main Agreement. [Insert any Project-specific amendments to Main Agreement].

a. Change in Law.

i. If a Change in Law occurs which (i) renders it impossible or unlawful to give effect to this Agreement; (ii) renders any material matter required to be ascertained under this Agreement impossible to ascertain; or (iii) causes the provisions of this Agreement to become inconsistent with Applicable Law (each, a "Relevant Change in Law"), then a Party may give notice to the other Party of the Relevant Change in Law occurring. The Parties shall meet within fifteen (15) Business Days of such notice to negotiate in good faith such amendments to this Agreement as are necessary to achieve (so far as is possible) the same overall balance of rights, obligations, liabilities, risks, costs and rewards under this Agreement as applied immediately prior to the Relevant Change in Law and to ensure that performance of this Agreement remains legal and enforceable. If sixty (60) days have elapsed since such meeting and there exists an unresolved dispute between the Parties as to whether there has been a Relevant Change in Law and/or consequently whether any amendments to this Agreement are necessary, then either Party will have a right to terminate this Agreement without further liability hereunder.

ii. If, prior to the earlier of the Commercial Operation Date and the Guaranteed Commercial Operation Date, a Change in Law occurs which (i) in the case of Seller, causes a Minor Federal Tax Credit Impact or a Major Federal Tax Credit Impact in respect of the Project (a "Seller Economic Change in Law"), or (ii) in the case of Tesla, materially and adversely affects the value or benefits of the Environmental Attributes (or Tesla's ability to realize the value or benefits of the Environmental Attributes) (a "Tesla Economic Change in Law"), then the impacted Party may give notice to the other Party of the Seller Economic Change in Law or Tesla Economic Change in Law, as applicable (each, an "Economic Change in Law") occurring, including details of the Economic Change in Law (and, in the case of a Seller Economic Change in Law, Seller's increased actual costs associated with such Seller Economic Change in Law and the calculation of how such costs resulted in the proposed increase to the Fixed Price) and supporting documents as reasonably requested by the other Party to validate such claim (the "Economic Change in Law Notice").

iii. If Seller provides an Economic Change in Law Notice to Tesla relating to a Minor Federal Tax Credit Impact, Tesla shall have thirty (30) days from receipt of such Economic Change in Law Notice to provide Seller with Notice that it has rejected such Economic Change in Law Notice if Tesla determines in good faith that Seller's documentation fails to substantiate the Seller Economic Change in Law and/or the related calculation of the impact to the Fixed Price. Tesla's notice to Seller of such determination shall include a reasonable explanation for why Tesla made its good faith determination that Seller's Economic Change in Law Notice fails to substantiate the Seller Economic Change in Law and/or the related calculation of the impact to the Fixed Price. Following receipt of such notice, Seller may (a) within fifteen (15) days, resubmit the Seller Economic Change in Law Notice, or (b) dispute Tesla's determination pursuant to the dispute resolution procedures set forth in Section 26(e) of this Agreement. If Tesla does not reject the Economic Change in Law Notice within such thirty (30) day period, the Fixed Price will automatically be increased by fifty percent (50%) of the impact to the Fixed Price set forth in such Economic Change in Law Notice. For the avoidance of doubt, in no event will Tesla be required to increase the Fixed Price due to one or more Seller Economic Change in Law events by more than five percent (5%) of the original Fixed Price in the aggregate.

iv. If Seller provides an Economic Change in Law Notice to Tesla relating to a Major Federal Tax Credit Impact, the Parties shall meet within fifteen (15) Business Days of such Economic Change in Law Notice to negotiate in good faith amendments to this Agreement that reflect a mutually agreeable sharing of costs directly attributable to the Seller Economic Change in Law. If thirty (30) days have elapsed since such meeting and there exists an unresolved dispute between the Parties as to such Seller Economic Change in Law, then either Party will have a right to terminate this Agreement without further liability hereunder.

v. If Tesla provides an Economic Change in Law Notice to Seller, the Parties shall meet within fifteen (15) Business Days of such Economic Change in Law Notice to negotiate in good faith such amendments to this Agreement as are necessary to achieve (so far as is possible) the same overall balance of rights, obligations, liabilities, risks, costs and rewards under this Agreement as applied immediately prior to the Economic Change in Law. If sixty (60) days have elapsed since such meeting, and there exists an unresolved dispute between the Parties as to whether there has been an Economic Change in Law and/or consequently whether any amendments to this Agreement are necessary, either Party may refer such dispute for resolution in accordance with Section 26(e) of the Main Agreement.

ANNEX I – DEFINITIONS

"Actual Availability Percentage" shall mean, for any Contract Year, a percentage calculated as (i) 100 multiplied by (ii) the result of (a) the sum of all Available Intervals for all inverters during Contract Year, divided by (b) the sum of all Period Intervals for all inverters during such Contract Year.

"Availability Damages" shall mean, for any Contract Year, the amount equal to the product of (i) the Guarantee Differential Price, multiplied by (ii) the Availability Shortfall, multiplied by (C) the sum of Deemed Generated Energy plus the Interval Quantity for such Contract Year.

"Calculation Interval" shall mean each hour period (or such other period as required by the EMO Protocols) during a Settlement Interval.

"Capacity Shortfall Damages Liquidated Value" shall have the meaning set forth in the Key Terms.

"Change in Law" shall mean the occurrence, after the Effective Date, of any of the following: (i) the adoption or taking effect of any law, rule, regulation or treaty; (ii) any change in any law, rule, regulation or treaty or in the administration, interpretation or application thereof by any Governmental Authority; or (iii) the making or issuance of any request, guideline or directive (whether or not having the force of law) by any Governmental Authority.

"Connecting Utility" shall mean Oncor Electric Delivery TSP LLC, or the successor organization that owns the portion of the electric transmission system at the Interconnection Point.

"Day-Ahead Market" shall have the meaning ascribed to it by the EMO.

"Delay Damages Amount" shall have the meaning set forth in the Key Terms.

"Expected Project Capacity" shall have the meaning set forth in the Key Terms.

"Federal Investment Tax Credit" means the investment tax credit determined using the energy percentage determined under Section 48(a)(2) or (a)(9)(A)(i) of the Code (or any successor) or the applicable percentage determined under Section 48E(a)(2) of the Code (or any successor) as in effect on the Effective Date providing for a federal tax credit for which Seller, as the owner of the Project, is eligible. For the avoidance of doubt, Federal Investment Tax Credit shall not include any "bonus" or "adder" such as those for domestic content, energy communities or low-income communities.

"Financial Close Date" shall have the meaning set forth in the Key Terms.

"Financing Termination Payment" shall have the meaning set forth in the Key Terms.

"Fixed Price" shall have the meaning set forth in the Key Terms.

"Generation Equipment" shall mean those electric energy generating devices powered by solar irradiance that are included in the Project and transform the solar irradiance into Energy.

"Guaranteed Commercial Operation Date" shall have the meaning set forth in the Key Terms.

"Expected Commercial Operation Date" shall have the meaning set forth in the Key Terms.

"Energy Market Operator" or "EMO" shall have the meaning set forth in the Key Terms.

"Interconnection Point" shall mean the point where the Project is interconnected with the transmission system at the Gobbers Knob Switch bus to the Connecting Utility's transmission line to which the Project will interconnect to the electrical transmission system owned by the Connecting Utility, and as further specified in the ERCOT Standard Generation Interconnection Agreement between the EMO, the Connecting Utility and Seller.

"Minimum Floating Price" shall have the meaning set forth in the Key Terms.

"Minimum Installed Capacity" shall mean ninety percent (90%) of the Expected Project Capacity.

"Major Federal Tax Credit Impact" means a material and adverse impact on Seller's actual costs to construct the Project directly due to (i) a Change in Law that reduces Seller's reasonably expected Federal Investment Tax Credit available for the Project as of the Effective Date, and which would require the Fixed Price to increase by more than ten percent (10%) for Seller to recoup such actual costs, or (ii) multiple Changes in Law, which, in the aggregate, have the cumulative impact of reducing Seller's reasonably expected Federal Investment Tax Credit available for the Project as of the Effective Date, and which would require the Fixed Price to increase by more than ten percent (10%) for Seller to recoup such actual costs..

"Minor Federal Tax Credit Impact" means a material and adverse impact on Seller's actual costs to construct the Project directly due to a Change in Law that reduces Seller's reasonably expected Federal Investment Tax Credit available for the Project as of the Effective Date, and which would require the Fixed Price to increase by more than five percent (5%) and less than ten percent (10%) for Seller to recoup such actual costs.

"Project" shall have the meaning set forth in the Key Terms.

"Project RECs" shall have the meaning set forth in the Key Terms.

"RECs" shall mean certificates, green tags, or other transferable indicia indicating generation of a particular quantity of energy from a solar energy facility attributed to all of the energy output during a specified term created under a renewable energy, emission reduction or other reporting program adopted by a governmental authority, which are certified, certifiable or "CRS Listed" under the Renewable Energy Standard. RECs include Project RECs and Replacement RECs.

"Renewable Energy Standard" shall mean Green-e National Standard Version [4.2], or successor version.

"Replacement REC" shall mean RECs generated by any solar energy facility located in Texas that is not the Project and are similar to Project RECs in all material respects.

"Seller's Operation Credit Support Amount" shall have the meaning set forth in the Key Terms.

"Seller's Pre-COD Credit Support Amount" shall have the meaning set forth in the Key Terms.

"Settlement Point" shall have the meaning set forth in the Key Terms.

"Settlement Point Price" shall mean the price established through the EMO locational marginal pricing system at the pricing node or aggregated pricing node associated with the Settlement Point in the Day-Ahead Market.

"Settlement Term" shall mean the period from HE 0100 PT on the Commercial Operation Date until the earlier of (a) HE 2400 PT on the day prior to the anniversary set forth in the Key Terms of the day on which the Settlement Term commences or (b) termination of this Confirmation in accordance with its terms.

"Tesla" shall have the meaning set forth in the Key Terms.

"Tesla's Capacity Share" shall have the meaning set forth in the Key Terms.

"Tesla's Capacity Percentage" shall have the meaning set forth in the Key Terms.

"Tesla's Credit Support Amount" shall have the meaning set forth in the Key Terms.

ANNEX II – PROJECT DESCRIPTION

Project: Chisme Solar and Storage Project

Owner: Blue Heron Solar, LLC

Operator: Operations & Maintenance Operator TBD

Location: Brown and Mills Counties, Texas

Solar Capacity: 147 MWac (approx. 215 MWdc)

Technology: Solar PV

Key Equipment:

- Longi Solar Technology PV Modules
- Sungrow SG4400UD PV Inverters and MV Transformer Skids
- Array Technologies Omnitrack PV Tracker System
- Chint Electronics Main Power Transformer
- Merit SI Power Plant Controller/SCADA System
- Medium Voltage collection system

Storage Capacity: 146 MWac – 2hr Duration

Technology: Lithium Ion Battery System

Key Equipment:

- Storage Vendor: TBD
- Chint Electronics Main Power Transformer
- Merit SI Power Plant Controller/SCADA System
- Medium Voltage collection system

Point of Interconnection: Gobbers Knob Switch to be built on existing 345 kV line between Brown Switch and Buckhorn Switch

ANNEX III – PROJECT MILESTONES

	Milestones	*Date*
1	Obtains control of all lands and rights-of-way comprising the Project site.	[redacted]
2	Executes interconnection agreement.	[redacted]
3	Receives construction permit.	[redacted]
4	Receives other material permits.	[redacted]
5	Executes an engineering, procurement and construction agreement.	[redacted]
6	Procures the material equipment for the Project.	[redacted]
7	Completes financing, including construction financing.	[redacted]
8	Begins construction of the Project.	[redacted]
9	Begins startup activities.	[redacted]
10	Initial synchronization date.	[redacted]
11	Commercial Operation Date.	[redacted]

ANNEX IV – AVAILABILITY GUARANTEE

1. Availability Guarantee. Seller guarantees to Tesla that in each Contract Year, the Project shall achieve an Actual Availability Percentage equal to or greater than the Guaranteed Availability Percentage.

2. Availability Damages. In any Contract Year, if the Actual Availability Percentage falls below the Guaranteed Availability Percentage, Seller shall (i) pay to Tesla the Availability Damages and (ii) provide Replacement RECs corresponding to the Availability Shortfall. Upon determination by the Parties of any Availability Damages owed for any Contract Year, the Availability Damages shall be included on the next invoice; provided, however, that under no circumstances shall Tesla be liable to Seller for Availability Damages. The Parties acknowledge and agree that the terms, conditions and amounts determined according to this Annex IV for Availability Damages are reasonable considering the Damages that Tesla would sustain if any event or circumstance described in the immediately preceding sentence occurs. The Parties have agreed upon and established the amounts of the Availability Damages because of the difficulty of ascertaining the exact amount of Damages that Tesla would sustain in such event or circumstance and because otherwise obtaining an adequate remedy would be difficult or inconvenient. The Availability Damages are not penalties and shall be paid regardless of the amount of Damages that Tesla actually sustains.

3. Reporting. Seller shall, within fifteen (15) days after the end of each month, provide to Tesla a report showing which (if any) Calculation Intervals during such month were deemed Period Intervals, Available Intervals, Excused Intervals, and Unexcused Intervals for each inverter, and the reason for any such determination. In addition, Seller shall, within forty-five (45) days after the end of each Contract Year, provide to Tesla a report showing Seller's computation of the Actual Availability Percentage for such Contract Year and the Availability Damages due to Tesla (if any). The report shall provide sufficient detail and supporting data to allow Tesla to audit and verify any matters set forth in the report.

4. Definitions. The capitalized terms in this Annex IV shall have the meanings set forth herein, whether singular or plural or in the present or past tense.

"Actual Availability Percentage" shall mean, for any Contract Year, a percentage calculated as (i) 100 multiplied by (ii) the result of (a) the sum of all Available Intervals for all inverters during Contract Year, divided by (b) the sum of all Period Intervals for all inverters during such Contract Year.

"Availability Damages" shall mean, for any Contract Year, the amount equal to the product of (i) the Guarantee Differential Price, multiplied by (ii) the Availability Shortfall, multiplied by (C) the sum of Deemed Generated Energy plus the Interval Quantity for such Contract Year.

"Availability Shortfall" shall mean, for any Contract Year, the amount (expressed as a percentage) equal to the difference between the Guaranteed Availability Percentage and the Actual Availability Percentage.

"Available Intervals" shall mean the number of Period Intervals in which an inverter was electrically connected and capable of delivering energy to the Interconnection Facilities, as counted by an inverter's programmable logic controller, plus any Excused Intervals less any Unexcused Intervals.

"Deemed Generated Energy" shall mean, for any Contract Year, the quantity of Energy, expressed in MWh, calculated by Seller in a manner reasonably acceptable to Tesla using available Project data, Prudent Electrical Practices, Applicable Law or other established industry practices relevant to the Project's location and characteristics, that would have otherwise been delivered in such Contract Year but was not actually delivered.

"Directed Curtailment" shall mean a required curtailment of all or any part of the deliveries of Interval Quantity by the EMO or Connecting Utility not due to actions or omissions of Seller or its Affiliates. For the purpose of this Confirmation, Directed Curtailment shall not include curtailments or instructions not to dispatch issued by the EMO or Connecting

Utility as a result of the price of Energy produced by the Project that is bid by Seller or the value of that Energy relative to Energy produced by other generation facilities or bid by market participants.

"Excused Intervals" shall mean all Period Intervals during which an inverter was not electrically connected to the system due to: (i) System Emergency (excluding any System Emergency caused by Seller's breach of the Project's interconnection agreement with the Connecting Utility); (ii) a Force Majeure event; (iii) Tesla's failure to perform (unless due to a failure by Seller to meet its obligations under this Confirmation); (iv) Directed Curtailment; or (v) any Calculation Interval during which the Floating Price is equal or less than the Minimum Floating Price and the Interval Quantity is not delivered due to Seller's elective curtailment.

"Guarantee Differential Price" shall mean, for the applicable Contract Year, the positive difference, if any, of the average weighted Floating Price value for such Contract Year minus the Fixed Price.

"Guaranteed Availability Percentage" shall have the meaning set forth in the Key Terms.

"Interval Quantity" shall mean, an amount (expressed in MWh) equal to the Tesla's Capacity Percentage of the net electric Energy generation from the Project delivered at the Interconnection Point during each Calculation Interval during the Contract Year.

"Period Intervals" shall mean the sum total of all Calculation Intervals between sunrise and sunset in the applicable Contract Year as determined by the Global Monitoring Laboratory of the National Oceanic and Atmospheric Administration.

"System Emergency" shall mean any circumstance or combination of circumstances or any condition of the Project, the Interconnection Facilities, the Transmission System, or the transmission system of other electric utilities, in which continued operation of the Project (a) is reasonably likely to endanger life or property and necessitates immediate action to avert injury to persons or serious damage to property, or (b) is reasonably likely to adversely affect, degrade or impair Transmission System reliability or transmission system reliability of the transmission system of other electric utilities.

"Unexcused Intervals" shall mean the sum total of all Period Intervals where: (i) the inverters are electrically connected to the Interconnection Facilities and (ii) no Interval Quantity is produced or delivered for any reason other than those set forth in the events identified as Excused Intervals.

ANNEX V – FORM OF LETTER OF CREDIT

Irrevocable Standby Letter of Credit No
[ACCOUNT NUMBER]

[NAME AND ADDRESS OF BANK AT WHICH ACCOUNT IS MAINTAINED]

[ABA NUMBER] . [_____]

Date: [_____]

APPLICANT
[Insert Applicant name and address and e-mail]

BENEFICIARY
[Insert Beneficiary name and address and e-mail]

Amount: [_____]

Expiration Date: [_____]

Issuance

At the request and for the account of XXX ("Applicant"), we, XXX ("Issuing Bank") hereby issue this irrevocable standby letter of credit No. XXX (this "Letter of Credit"), for drawings up to but not to exceed the aggregate sum of XXX U.S. Dollars and no cents (US$XXX)(such amount, as it may be reduced in accordance with the terms hereof, the "Stated Amount"), in favor of XXX ("Beneficiary"), in connection with the XXX dated as of XXX, XXX, by and between Beneficiary and Applicant (as may be amended, amended and restated, supplemented or modified).

Drawings

Subject to the terms hereof, funds are available to you hereunder against presentation of a completed certificate (Exhibit A) on Beneficiary's letterhead, dated and purportedly signed by your representative, stating ***one*** of the following:

1. The undersigned being a duly authorized [officer][signatory] of XXX ("Beneficiary") hereby demands payment of US$XXX and certifies, in such capacity, that XXX ("Applicant") has failed to pay or perform in accordance with the terms of the XXX dated as of XXX, XXX, as may be amended, amended and restated, supplemented or modified, by and between Beneficiary and Applicant, which entitles Beneficiary to draw under the Letter of Credit No. XXX.

2. The undersigned being a duly authorized [officer][signatory] of XXX ("Beneficiary") certifies that Letter of Credit No. XXX will expire in [sixty (60)] days or less and XXX ("Applicant") has

not provided a replacement security acceptable to Beneficiary as required in accordance with the terms of the XXX dated as of XXX, XXX, as may be amended, amended and restated, supplemented, or modified, by and between Beneficiary and Applicant. Wherefore, Beneficiary does hereby demand payment of the entire undrawn amount of the Letter of Credit.

Partial and multiple drawings are allowed. The amount which may be drawn under this Letter of Credit shall be automatically reduced by the amount of any drawings previously paid by us hereunder.

Presentment

A copy of this Letter of Credit must be presented together with the sight draft in the form of Exhibit A ("Sight Draft"). Presentation of such documents may be made (a) in person at our office located at XXX or (b) by overnight courier to our office at XXX, or (c) by telecopy to facsimile number XXX or to such other facsimile number identified by us in a written notice to you, or (d) by electronic mail to XXX, or to such other electronic mail address identified by us in a written notice to you. Presentation by telecopy or electronic mail should be confirmed by telephone to XXX or to such other telephone number identified by us in a written notice to you, but receipt of such telephone notice shall not be a condition to presentation hereunder. If presentation is made by telecopy or electronic mail, the original sight draft and accompanying documents referred to above are not required to be sent to us, except that in the event of a full or final drawing the original of the Letter of Credit must be returned to us by overnight courier, but our receipt of the original Letter of Credit following a presentation by telecopy shall not be a condition to presentation under this Letter of Credit. We hereby agree with Beneficiary that any Sight Draft drawn under and in compliance with the terms and conditions of this Letter of Credit shall be duly honored by us upon delivery, if presented to us on or before our close of business on the Expiration Date. Provided that a compliant drawing is presented by 12:00 noon (XXX time), on any Business Day (as hereinafter defined), payment shall be made to Beneficiary of the amount specified in the applicable Sight Draft, not to exceed the Stated Amount, in immediately available funds, not later than 11:00 a.m. (XXX time), on the second following Business Day. A compliant drawing presented after 12:00 noon (XXX time) on any Business Day, will be paid on the third following Business Day.

As used herein, "Business Day" means a day other than a Saturday, Sunday or other day on which commercial banks in New York City are authorized or required by law to close.

If any drawing presented under this Letter of Credit does not comply with the terms and conditions hereof, we will advise Beneficiary of same by facsimile transmission to XXX or email at XXX within one (1) Business Day and give the reasons for such non-compliance. Upon being notified that Beneficiary's drawing was not honored by us, Beneficiary may attempt to correct any such noncompliant drawing if, and to the extent that, Beneficiary is entitled and able to do so on or before the Expiration Date.

Expiration

This Letter of Credit shall be deemed automatically extended without an amendment for a one year period beginning on the present Expiration Date hereof, and upon each future Expiration Date, unless at least [sixty (60)] days prior to any such Expiration Date we have sent you written notice via email and confirmed by courier service or overnight mail at the above address that we elect not to permit this Letter of Credit to be so extended beyond, and will expire at 5 p.m. (XXX time) on its then current Expiration Date. Upon receipt of such notice, Beneficiary may draw hereunder up to the full amount then available by presentation of Beneficiary's Sight Draft drawn on us accompanied by the original Letter of Credit and all amendments thereto. No presentation made under this Letter of Credit after such Expiration Date will be honored except for any demand validly presented under this Letter of Credit and received prior to the then current Expiration Date that remains unpaid after such Expiration Date.

Notices

All communications to you in respect of this Letter of Credit shall be in writing and shall be delivered to your address first shown above or such other address as may from time to time be designated by you in a written notice to us. All documents to be presented to us hereunder and all other communications to us in respect of this Letter of Credit, which other communications shall be in writing, shall be delivered to the address for us indicated above, or such other address as may from time to time be designated by us in a written notice to you.

Charges

All charges associated with this Letter of Credit (including any transfer of this Letter of Credit) are for the account of Applicant.

Transferability

This Letter of Credit is transferable in its entirety (but not in part) one or more times without notice to Applicant and without first obtaining Applicant's consent. Only Issuing Bank or its successors is authorized to act as the transferring bank. Any such transfer shall be subject to the completion of a transfer form (which we shall provide to you promptly upon your request therefor) executed by Beneficiary.

Governing Practices

This Letter of Credit shall be governed by and construed in accordance with the laws of state of New York and applicable US Federal law. Except to the extent it is inconsistent with the express terms of this Letter of Credit, this Letter of Credit is subject to the International Standby Practices ISP 98, ICC Publication No. 590.

1.0 EXECUTIVE SUMMARY

In accordance with your request, Langan Engineering and Environmental Services, LLC (Langan) has prepared this report to summarize the results of the geotechnical investigation and to present geotechnical engineering recommendations for the proposed Photovoltaic (PV) array and Battery Energy Storage System (BESS) (the "Project") in Brown and Mills Counties, Texas (site). The approximately 820-acre site is located about 12 miles southeast of Brownwood, Texas, and is primarily undeveloped land used for agricultural purposes.

A summary of the findings and recommendations are as follows:

Subsurface Conditions

- The subsurface conditions at the site generally consist of 2 to 8 feet of stiff lean to fat clay overlying clayey loam residuum originating from weathered shale and claystone and terrace deposits. Weathered rock was encountered at depths ranging from 2 to 43 feet below grade but was generally encountered at depths ranging from about 8 to 18 feet below grade in the northwestern, northeastern, and southwestern portions of the site. The depth to weathered rock within the proposed substation footprint ranged from about 13 to 18 feet below grade.

- Silty sand pockets in the upper clays were generally encountered in the northwestern portion of site and along the dirt roads in the southern portion of site. Pockets of gravelly clay with sand were encountered in Borrow Pit #2, Borrow Pit #4, and Additional Parcel #2.

- Groundwater was not encountered during the subsurface investigation.

- The site was previously part of Camp Bowie and used as a U.S. Army training base in the 1940s, and there is a risk of encountering unexploded ordnances (UXOs) across the site. Due to the risk of encountering UXOs, it is assumed that a comprehensive UXO site survey will be conducted prior to any earthwork activities being performed, and that all earthwork activities will be performed under the full-time monitoring of a UXO specialist.

County Road Conditions

- Langan performed hand auger borings and visual observations along County Roads 265, 264, and 268 between FM 45 and the northern gate of the site, as part of a high-level assessment of the condition of the designated site access path for construction equipment to the project site.

- Generally, the county roads consist of of gravelly sand overlying a sandy clay/clayey sand subbase. The total road thicknesses were observed to be 2 to 12 inches thick. Noted deficiencies included some minor potholes along CR 268, and the areas along the intersections of each county road were slightly looser than the rest of the roadways.

- Gravel or gravelly sand was not encountered in hand auger locations RW-14, RW-15,

and RW-18 along CR 264, and in hand auger locations RW-1 through RW-7 along CR 268. The portion of CR 268 south of the northernmost site entrance gate generally consists of no gravel materials and 12 to 24 inches of silty sand overlying native sandy clay. Vegetation was noted to be growing along the centerline of the road.

Borrow Pit Locations

- Four locations surrounding the site were identified as potential detention areas or as areas to use for potential borrow fill material, referred to as Borrow Pit 1 to Borrow Pit 4. All borrow pit locations appear to be viable for use as detention ponds based on the materials encountered at design excavation depths. Soils encountered within Borrow Pit 2 and Borrow Pit 4 include material that may be used as select fill.

Foundation and Earthwork Recommendations

- The surficial clays have a high expansion potential, and the underlying calcareous clays have a moderate to high expansion potential. The estimated Potential Vertical Rise (PVR) ranges from about 1 to 5 inches across the site and from about 4.5 to 5 inches within the proposed substation location, for native soil conditions.

- Site soils may be stabilized using lime to reduce their expansion potential and to increase their workability after rainfall events. Sulfate contents of site soils in the upper 4 feet ranged from 146 to 375 ppm based on laboratory testing, indicating that lime treatment may be suitable. Based on preliminary lime series testing, Langan recommends an initial dosage of 14% lime be used for stabilization estimates.

- Rainfall events may cause the surficial clays across the site to become soft and unworkable, particularly in areas with thicker layers of Stratum 1 clays. This may warrant stabilized access roads for construction.

- The PV arrays and BESS foundations are expected to be supported on driven pile foundations. Pile load testing was performed at a total of 8 locations, with one tension load test and one lateral load test performed at each location. All piles were installed to a depth of 10 feet below grade except for the lateral test pile at location PLT-2, which encountered refusal at 9 feet below grade. The maximum tensile load applied on the piles was about 10 kips, and maximum deflection observed during the tension load tests ranged from about 0.01 to 0.07 inches. The maximum lateral load applied on the piles ranged from about 6 to 6.7 kips, and the lateral load applied at a measured deflection of ½-inch ranged from about 2.6 to 5 kips.

- Structures within the BESS and substation footprints may be supported on conventional shallow foundations bearing on undisturbed Stratum 2 soils or on moisture conditioned and recompacted Stratum 1 or 2 materials prepared as described in later sections of this report, depending on the allowable expansion potential below the foundations.

- Alternatively, structures within the substation footprint may be supported on straight shaft drilled piers bearing in Stratum 4 weathered rock.

- The Stratum 1a and Stratum 2a clays are generally not suitable for use as select fill and should only be used in areas where structures are not sensitive to moisture-induced heave. The Stratum 1b and 2b silty, clayey sands and the Stratum 3 gravelly clay may be used as select fill.

Seismicity

- A seismic site class of "C" per the International Building Code (IBC) should be used for project.

Additional discussion of the encountered subsurface conditions and geotechnical recommendations are provided in the following report. The report is one complete document and should be read in its entirety to understand the basis of the geotechnical recommendations. Recommendations provided are dependent upon one another and no recommendation should be followed independent of the others.

2.0 INTRODUCTION

This report presents the results of our initial and supplemental geotechnical investigations and associated recommendations for the proposed PV Array, BESS, and substation development in Brown and Mills Counties, Texas.

Langan performed an initial subsurface investigation and prepared a report for the project titled "Geotechnical Engineering Report for Chisme Solar and Storage – Brown and Mills County, Texas", dated 10 April 2025. Following submission of the initial report, Red River Clean Energy, LLC requested Langan perform a supplemental investigation for 3 additional parcels totaling about 95 acres, the revised proposed substation location, and about 8.7 miles of existing county road designated for primary site access. The purposes of the supplemental geotechnical investigation were to explore subsurface conditions at the site within the additional development footprints and along the existing county roads, analyze and evaluate the encountered subsurface conditions with respect to the proposed construction, and develop recommendations related to earthwork, foundation, and pavement design for the proposed development.

The geotechnical investigations were performed following the scope of services in the Change Order Request, authorized 21 April 2025, the Master Engineering Services Agreement for Grid Connected Solar and Storage Projects, authorized 2 August 2024, and Task Order – Chisme Solar and Storage, authorized 7 October 2024.

Elevations (el) in this report reference the North American Vertical Datum of 1988 (NAVD 88).

3.0 PROJECT DESCRIPTION

3.1 Existing Conditions

3.1.1 Project Site

The site is located about 12 miles southeast of Brownwood, Texas and spans across Brown County and Mills County. The northernmost 40 acres of the 820-acre site lies within Brown County, while the remaining portion of the site lies within Mills County. The approximate GPS coordinates of the northern site entrance are 31°34'58.9"N, 98°50'20.8"W along County Road 268. The site is generally bordered by Fisk Creek to the south and undeveloped land to the east, north, and west. Pecan Bayou runs northwest-southeast about one-half mile northeast of the site. A Site Location Map is included as Figure 1A.

The site is generally undeveloped and has historically been used primarily for farming and cattle ranching but was formerly part of Camp Bowie and was used as a U.S. Army training area from 1940 to 1946. The area is listed as a Formerly Used Defense Site (FUDS) and has a risk of containing unexploded ordnances (UXOs).

In the northern portion of the site, about 61 acres are open field with sparse vegetation followed by about 102 acres of dense tree cover. The remainder of the site is lightly to moderately vegetated with cactus, mesquite, and other scrub vegetation. An overhead transmission line runs northwest-southeast and turns northeast-southwest along the site boundary.

Several streams and wetland areas are present on the property; the main water features include a stream running west-east across the central portion of the site, a stream running north-south at the southeastern site boundary, and an about 0.6-acre pond in the southwestern portion of the site. Additionally, the site is sectioned off by multiple fences and accessible through dirt roads.

Site grades vary from about el 1250 to 1326[1], with isolated high and low points throughout. The site generally ranges in elevation from el 1260 to 1305, sloping down from the northwest to the southeast. Additionally, grades in the southwestern part of the site range from el 1270 to 1307, sloping down from the southwest to the northeast and southeast. Notable topographic features include:

- The southwestern corner of the site has a cluster of four hills in a line with peaks at about el 1326, el 1302, el 1294, and el 1300, from west to east.
- The southern central area of site has one hill with a peak at el 1323 and a base elevation of el 1270.

[1] Based on draft drawing AB101, "Orthomosaic and Topographic Survey" by Langan, dated 20 March 2025.

3.1.2 County Roads

The nearest major thoroughfare to site is Farm to Market Road 45 South (FM 45 S), which is connected to the project site through a series of county roads. Four county roads comprising about 8.7 miles of roadway have been identified as the primary site access path for equipment and other vehicles to access the site during construction. The site access path begins at the intersection of FM 45 S and County Road (CR) 265 and continues southeast on CR 265 for about 0.9 miles to its intersection with CR 264, then continues northeast along CR 264 for about 3.7 miles to its intersection with Elkins Road (CR 267). The path continues south along CR 267 for about 0.9 miles and turns northeast onto CR 268, following CR 268 to the northern site entrance. A Site Location Map is included as Figure 1B.

The county roads along the primary site access path are generally unpaved gravel or caliche roads, with intermittent areas of rutted asphalt on CR 265 and CR 264. An about-0.4-mile-long section of CR 268 at the northern site entrance is primarily a dirt road with short grass along the centerline.

3.2 Proposed Construction

The proposed construction includes a 207 MW DC/147 MWac AC photovoltaic (PV) array[2], a 152 MWac battery energy storage system (BESS) with an approximate storage capacity of 304 MWh[3], a 345/34.5 kV substation, and associated site features such as roadways and security. The proposed work also includes the construction of the 345 kV Gobblers Knob Switching Station which will connect to the site substation and existing transmission lines. The Gobblers Knob Switching Station design is outside of the Langan project scope and will be designed by others. Four borrow pit areas on site are proposed for use in generating fill materials for site mass grading and being developed as detention ponds.

Structural loads for the PV arrays, BESS support structures, and substation support structures have not been evaluated at this time. From past experience, BESS and support equipment loads are anticipated to range between 10 and 50 kips, and PV array pile loads are anticipated to range between about 1 and 10 kips.

4.0 REVIEW OF AVAILABLE INFORMATION

4.1 Soil Survey Data

Langan reviewed the United States Department of Agriculture (USDA), Natural Resource Conservation Service (NRCS) web soil survey. The map indicates that the project site is underlain by ten soil types, but the majority of the site is underlain by soils characterized as Deleon silty

[2] Based on Chisme Solar & Storage Project Description provided by Red River Clean Energy, dated 9 August 2024.
[3] Based on preliminary design drawing E1.000, "Overall Electrical Plan" by Pure Power Engineering, dated 7 March 2025.

clay (0 to 1 percent slopes, rarely flooded) and Frio silty clay loam (0 to 1 percent slopes, occasionally flooded). The reported soils are summarized in Table 1.

Table 1 – USDA Soils Survey Summary

Soil Unit Name	Map Unit	Percent of Site Area	Parent Material Description	Depth to Restrictive Feature	Drainage Class	Runoff Class	Hydro-logic Soil Group
Abilene Clay Loam, 1 to 3% slopes	2	1.6%	Calcareous alluvium	More than 80 inches	Well drained	Medium	C
Bonti-Callahan Association, 1 to 8% slopes	10	0.3%	Loamy and/or clayey residuum weathered from sandstone and/or claystone	20 to 40 inches to paralithic bedrock	Well drained	High	C
Bonti-Owens Complex, 8 to 30% slopes	11	1.1%	Loamy residuum weathered from sandstone	20 to 40 inches to paralithic bedrock	Well drained	High	C
Callahan Loam, 1 to 3% slopes	15	6.6%	Clayey residuum weathered from claystone	20 to 40 inches to densic bedrock	Well drained	High	D
Callahan-Throck Complex, 1 to 8% slopes	18	11.4%	Clayey residuum weathered from claystone	20 to 40 inches to densic bedrock	Well drained	High	D
Deleon Silty Clay, 0 to 1% slopes	25	33.5%	Clayey and/or loamy alluvium	More than 80 inches	Moderately well drained	Medium	C
Pedernales Fine Sandy Loam, 1 to 3% slopes	58	11.8%	Loamy residuum weathered from sandstone and siltstone	More than 80 inches	Well drained	Medium	C
Sagerton Clay Loam, warm, 1 to 3% slopes	67	9.2%	Calcareous loamy alluvium	More than 80 inches	Well drained	Medium	C
Winters Fine Sandy Loam, 1 to 3% slopes	79	9.6%	Mixed loamy alluvium	More than 80 inches	Well drained	Medium	C
Frio Silty Clay Loam, 0 to 1% slopes	FsoA	14.9%	Loamy alluvium derived from limestone and shale	More than 80 inches	Well drained	Low	C

4.2 Regional Geology

Soils underlying the site are mapped predominantly as the Strawn Group of Middle Pennsylvanian age in the northwestern area of the site and as fluviatile terrace deposits of Quarternary age[4] in the southeastern area of the site. The Strawn Group consists of silty greenish-gray to red shale and mudstone with thin limestone beds and plant and marine megafossils. The fluvial terrace

[4] Geologic Atlas of Texas, Brownwood Sheet (1976) published by the University of Texas at Austin, Bureau of Economic Geology.

deposits consist of sand, silt, clay, and gravel locally indurated with caliche. A Regional Geology Map of the site is included as Figure 2A.

Soils underlying the county road access path are mapped as the Strawn Group of Middle Pennsylvanian age along CR 268 and the eastern portion of CR 264, and as the Travis Peak Formation[4] along CR 265 and the western portion of CR 264. The Travis Peak Formation consists of conglomerates, sandstone, and limestone. A Regional Geology Map of the roadway is included as Figure 2B.

4.3 Federal Emergency Management Agency Flood Map

Langan reviewed the Flood Insurance Rate Maps (FIRM) for Brown County published by the Federal Emergency Management Agency (FEMA), Map No. 48049C0550E effective 28 August 2018. The portion of the site within Brown County is in Zone X, "areas determined to be outside the 0.2% annual chance floodplain." FEMA has not published a FIRM Panel for Mills County, therefore floodplain information is not available for the remainder of the site.

5.0 SUBSURFACE EXPLORATION

Subsurface conditions at the site were assessed by performing 38 geotechnical borings, 43 test pits, 8 pairs of pile load tests, and 10 electrical resistivity tests (ERTs) during the initial investigation. An additional 4 geotechnical borings, 4 test pits, and 3 ERTs were performed for the supplemental investigation. Roadway conditions along the county road access paths were assessed by performing 22 hand auger borings. The subsurface investigation program is summarized in Table 2. The Subsurface Investigation Plan showing the locations of the borings, test pits, pile load test locations, and ERTs performed across the site is included as Figure 3A; locations of proposed site features including borrow pit areas are also included. The Subsurface Investigation Plan showing the locations of the roadway hand auger borings performed is included as Figure 3B.

Table 2 – Subsurface Investigation Program

Investigation Series	Method	Site Area	ID	Completion Depth (feet bgs)
Initial	Soil Boring	PV Array Area[5]	LB-1 to LB-4	37.5 to 50[6]
		PV Array Area[7]	LB-5 to LB-8	20
		PV Array Area	LB-9 to LB-30

		CR 264	RW-12 to RW-18	
		CR 265	RW-19 to RW-20	

The drilling, test pit, soil sampling, and pile load test activities were completed under the full-time observation of a Langan field professional and under the direct supervision of a Langan project professional engineer. The field professional laid out the boring, test pit, and pile load test locations, maintained logs of the borings and test pits, examined and classified soil samples, and packaged soil samples for transportation to the Langan office.

5.1 Borings

The borings for the initial subsurface investigation were drilled between 11 and 21 November 2024 and between 10 and 14 February 2025 by a specialty drilling contractor using Mayhew 200

[5] Borings, test pits and ERTs within this PV Array area were performed prior to relocation of the proposed substation footprint.
[6] Borings were performed to a target depth of 50 feet below grade or until auger refusal, whichever is shallower.
[7] Borings, test pits, and ERTs within this PV Array area were performed prior to relocation of the proposed BESS footprint.
[8] Pile load tests were performed adjacent to selected test pit locations across the site.
[9] Piles were installed to a target depth of 10 feet below grade or pile refusal, whichever is shallower.
[10] Test pits were performed to a target depth of 8 feet below grade or until excavator refusal, whichever is shallower.

and Mobile B58 truck-mounted drill rigs with auger drilling methods. The borings for the supplemental subsurface investigation were drilled on 8 May 2025 by a specialty drilling contractor using a CME55 truck-mounted drill rig with auger drilling methods. Soil samples were obtained semi-continuously from ground surface to a depth of 10 feet below the ground surface (bgs)[11] and at 5-foot intervals thereafter until the target depths were achieved or until auger refusal was encountered. The boring logs for the initial and supplemental subsurface investigations are included as Attachment A-1.

A 2-inch-outer-diameter split-spoon sampler was generally used to obtain disturbed samples of the underlying granular soils. The Standard Penetration Test (SPT)[12] was completed consistent with ASTM D1586 as part of the split-spoon sampling procedure, using an automatic trip hammer to evaluate the density of the soils. The SPT results were recorded by the Langan field professional observing the boring conditions and documenting the observations.

A 3-inch-diameter Shelby tube sampler was used to obtain relatively undisturbed samples of the underlying cohesive soils. Samples obtained using a Shelby tube sampler were extruded in the field and tested by the Langan field professional using a pocket soil penetrometer to obtain estimates of the unconfined compressive strength of the cohesive soils as well as to evaluate their consistency.

A Texas Cone Penetrometer (TCP)13 test was performed in stiff cohesive materials to obtain soundings in materials that were too stiff to be sampled using a split-spoon or Shelby tube sampler. The TCP test was conducted in general accordance with TxDOT standard TEX-132-E. The TCP results were recorded by the Langan field professional observing the boring conditions and documenting the observations.

Groundwater was not encountered during the subsurface investigation. Borings were backfilled with soil cuttings upon completion.

5.2 Roadway Hand Auger Probes

Hand auger probes were performed at 20 locations along the three unpaved county roads (RW-1 to RW-20) and in 2 locations with observed potholes or similar roadway defects (PH-1 and PH-2). The hand auger borings for the roadway investigation were performed between 13 and 14 May 2025 by a Langan field professional using a 3-inch-outer-diameter hand auger and a tamping bar. Soil samples were obtained continuously from ground surface to a depth of about 2 feet bgs or

[11] Below the ground surface and below the existing grade are interchangeable in this report.
[12] The Standard Penetration Test is a measure of the soil density and consistency. The SPT N-value is defined as the number of hammer blows required to drive a 2-inch-outer-diameter split-spoon sampler 12 inches, after an initial seating penetration of 6 inches, using a 140-pound hammer free falling 30 inches.
[13] The TCP blow count provides a measure of material hardness and penetration resistance. The recorded values help assess the bearing capacity of the subsurface materials and inform foundation design recommendations. The TCP blow count is defined as the number of hammer blows required to drive a 3-inch-diameter cone 12 inches into the ground, using a 170-pound hammer free falling 24 inches.

until hand auger refusal was encountered. Hand auger borings were backfilled with soil cuttings and pea gravel and tamped down after completion. The roadway boring logs are included as Attachment A-2.

5.3 Test Pits

The test pits for the initial investigation were performed between 5 and 7 February 2025 by a specialty drilling contractor using a John Deere 135G excavator. The test pits for the supplemental subsurface investigation were performed on 7 May 2025 by a specialty drilling contractor using a John Deere 35P excavator. Bulk soil samples were obtained at 2-foot intervals in each test pit until excavator refusal was encountered or the target depths were achieved. The test pits were backfilled with soil cuttings upon completion. The test pit logs are included as Attachment B.

5.4 Electrical Resistivity Testing (ERT)

Soil resistivity testing was performed consistent with ASTM G57 using the Wenner Array 4-point method by a Langan field professional between 4 and 6 March 2025 for the initial investigation and between 6 and 8 May 2025 for the supplemental investigation. Resistivity testing was run in two orthogonal lines at each location summarized in Table 2. For each line, readings were taken with spacings of 2, 5, 10, 20, 30, 50, and 100 feet. Electrode penetration ranged from 2 to 6 inches bgs. The ERT test results are included as Attachment C.

5.5 Pile Load Testing

The test piles were installed between 28 February and 1 March 2025 by a specialty contractor using a Vermeer PD5 vibratory pile driver. At each pile load test location, two 14-foot-long W6x9 piles were installed about 9 feet apart and driven to the target depth of 10 feet below grade or to pile refusal. The pile driving times were recorded by the Langan field professional.

One tension load test and one lateral load test were performed on separate piles at each test location. Piles were installed a minimum of three days before testing to allow for pile setup in the soils. The piles were tested between 10 March and 12 March 2025 by the specialty drilling contractor using a KOBELCO SK210 excavator, an ENERPAC P80 hydraulic hand pump jack, and a Dillon Edjr 10T Dynamometer load cell.

The tension tests were performed by applying an axial load using a hydraulic jack attached to the boom of an excavator, and a load cell was used to measure the applied loads. The lateral tests were performed by applying a lateral load with a hydraulic pull cylinder, and a load cell was used to measure the applied loads. The test pile was fastened using a chain system to the excavator bucket, which served as the reaction force. Displacements for each load test were measured using a pair of dial gauges fastened to a reference beam. The lateral loads were applied to the test piles at a height of 42 inches above grade, and displacements were measured at a height of

6 inches above grade. The Langan field professional recorded pile loads and deflections for each test. The piles were extracted by the contractor after termination of each load test.

The pile load test locations are shown in Figure 3A. A summary of the lateral pile load test results is included as Attachment D, and a summary of the tension pile load test results is included as Attachment E.

5.6 Laboratory Testing

Representative soil samples were subjected to testing by a specialty geotechnical laboratory to aid in the analyses and evaluations. The testing was aimed at evaluating index, strength, and chemical characteristics of the underlying soils. The laboratory testing program is summarized in Tables 3A and 3B for the site and roadway investigations, respectively.

Table 3A – Site Laboratory Testing Program

Test	Quantity		Test Method
	Initial	Supplemental	
Natural Water Content	40	16	ASTM D2216
Percent Passing No. 200 Sieve	22	-	ASTM D1140
Particle Size Analysis	27	5	ASTM D6913
Atterberg Limits	38	8	ASTM D4318
1-D Swell Test, Method B	5	-	ASTM D4546
1-D Swell Test, Method C	5	3	ASTM D4546
Unconfined Compression (UC) Strength Test	13	4	ASTM D2166
Standard Proctor Test	3	1	ASTM D698
CBR	2	1	ASTM D1883
Sulfate Content, Water-Soluble	13	1	ASTM C1580
Sulfide Content	13	1	EPA 376.1
Chloride Content	13	1	ASTM D512
Redox Potential	9	1	SM 2580B
Soil pH	9	1	ASTM D4972
Thermal Resistivity	8	3	ASTM D5334
Soil-Lime to Reduce pH	-	1	TEX-121-E Pt III

Table 3B – Roadway Laboratory Testing Program

Test	Quantity	Test Method
Natural Water Content	31	ASTM D2216
Particle Size Analysis	31	ASTM D6913
Atterberg Limits	18	ASTM D4318

The laboratory test results are discussed in Section 6 and are included as Attachment F-1 and F-2 for the site and roadway investigations, respectively.

6.0 SUBSURFACE CONDITIONS

The encountered soil stratigraphy within the project site generally consisted of a surficial layer of clay and silty sand, overlying calcareous and sandy lean clay, with pockets of gravelly clay with sand, overlying weathered rock. The soil stratigraphy encountered is summarized in Table 4.

Table 4 – Generalized Soil Stratigraphy

Stratum Number	Soil Type	Depth to Top of Stratum (feet bgs)(1)	Thickness of Stratum (feet)(1,2)
1a	Upper Clay	0 to 4	2 to 8
1b	Upper Silty Sand	0	0.75 to 4
2a	Calcareous Lean Clay	0 to 8	2 to 36+
2b	Sandy Clay/Clayey or Silty Sand	0 to 18	2 to 20+
3	Gravelly Clay with Sand	2 to 13	2 to 13+
4	Weathered Rock	2 to 43	2 to 16+

Notes:
(1) Depths and thicknesses are approximate values. Subsurface conditions have been generalized.
(2) Substation borings terminated within Stratum 4. PV area borings terminated within Stratum 2 through Stratum 4. Test pits terminated within Stratum 2 through Stratum 4. Maximum thicknesses provided represent encountered thicknesses to boring or test pit termination depth.

6.1 Stratum 1 – Surficial Materials

A surficial layer of clay and silty sand was encountered at existing grade and extending to depths ranging from about 2 to 8 feet bgs. Stratum 1 is split into two substrata based on plasticity characteristics and fines contents as discussed below.

6.1.1 Stratum 1a – Upper Clay

Dark brown to black clay with varying amounts of sand and trace amounts of gravel, calcareous nodules, and rootlets was encountered at existing grade in 27 of the 42 borings[14] and in 16 of the 26 test pits[15]. Stratum 1a was also encountered below Stratum in Borings LB-11 and LB-22. Stratum 1a was generally encountered in the northwest section of site, in the southeastern area of the site, and in Borrow Pit Areas 1 and 3. The thickness of Stratum 1a ranged from about 2 to 8 feet, and rootlets were generally encountered in the upper 2 to 4 feet.

SPTs were performed within Stratum 1a resulted in N-ranging from 17 to 38 blows per foot (bpf). Field estimates of unconfined compressive strength using a pocket penetrometer resulted in values of at least 4.5 tons per square foot (tsf), with one outlying value of 1 tsf in Boring LB-3. The SPT N-values and field estimates of unconfined compressive strength indicate that the consistency of Stratum 1a is generally hard.

[14] LB-1 to LB-7, LB-9 to LB-15, LB-18, LB-20, LB-22, LB-24, LB-26, LB-28, LB-29, LB-31 to LB-34, and LB-39 to LB-42.
[15] TP-1 to TP-5, TP-8, TP-10, TP-15, TP-16, and TP-18 to TP-21, and TP-23 to TP-25.

Laboratory testing of samples within Stratum 1a resulted in natural water contents ranging from 10.4% to 16.3%, liquid limits ranging from 39 to 52, plasticity indices (PIs) ranging from 24 to 35, and fines contents ranging from 66.7% to 92.3%. One Standard Proctor compaction test was performed within Stratum 1a, resulting in a maximum dry unit weight of 97.4 pcf and an optimum moisture content of 22.8%. Swell tests performed within Stratum 1a resulted in vertical strains ranging from 3.2% to 6.1% for overburden pressures ranging from 350 to 750 psf, with estimated swell pressures ranging from 7,250 to 10,750 psf, indicating that the Stratum 1a soils are highly expansive. Unconfined compression (UC) tests performed within Stratum 1a resulted in undrained shear strengths ranging from 1.6 to 10.2 tsf.

The Stratum 1a soils are generally classified using the USCS[16] as lean clay [CL] with some occurrences of fat clay [CH].

6.1.2 Stratum 1b – Upper Silty Sand

Brown to dark brown silty fine sand with trace amounts of sand and gravel and varying amounts of rootlets was encountered at grade in 7 of the 42 borings[17] and in Test Pits TP-7, TP-25 and TP-26. Stratum 1b was generally encountered in part of the northwest section of the site, including within Additional Parcel 3, and along the dirt roads in the southern portion of the site. The thickness of Stratum 1b was about 4 feet in Boring LB-11 and Test Pit TP-7 and ranged from about 0.75 to 2 feet thick where otherwise encountered.

One SPT was performed within Stratum 1b, resulting in an N-value of 22 bpf. The SPT N-value and observations made during hand augering indicate that Stratum 1b is generally medium dense.

Laboratory testing of samples within Stratum 1b resulted in moisture contents ranging from 2.1% to 10.7%, a liquid limit of 17, a PI of 1, and fines contents ranging from 26.4% to 38.9%. One Standard Proctor compaction test was performed within Stratum 1b, resulting in a maximum dry unit weight of 111.3 pcf and an optimum moisture content of 12.8%. One California Bearing Ratio (CBR) test was performed within Stratum 1b, which resulted in a CBR value of 15.8 when compacted at 95% maximum dry density and optimum moisture content based on the Standard Proctor compaction test.

The Stratum 1b soils are generally classified using the USCS as silty sand [SM].

6.2 Stratum 2 – Calcareous Clay with Silt and Sand

Clayey residuum and fluviatile deposits of varying constituency was encountered in all borings and test pits. Stratum 2 was encountered at grade or below Stratum 1 where present, at depths

[16] Unified Soil Classification System.
[17] Borings LB-8, LB-11, LB-16, LB-17, LB-19, LB-22, and LB-25.

ranging from existing grade to 8 feet below grade. Stratum 2 is split into two substrata based on plasticity characteristics and fines contents as discussed below.

6.2.1 Stratum 2a – Calcareous Lean Clay

Stratum 2a consists of light brown to reddish brown to grayish brown lean clay with varying amounts of sand and calcareous nodules, and was encountered in 33 of the 42 borings[18] and 20 of the 26 test pits[19]. The thickness of Stratum 2a generally ranged from 4 to 36 feet in the PV array area and from 7 to 12 feet in the substation area. 9 of the borings and 19 of the test pits were terminated within Stratum 2a.

SPT values within Stratum 2a ranged from 16 bpf to refusal[20] but were generally between 20 and 30 bpf. Field estimates of unconfined compressive strength using a pocket penetrometer resulted in values ranging from 3.5 to 4.5 tsf but were generally at least 4.5 tsf. The SPT N-values and field estimates of unconfined compressive strength indicate that the consistency of Stratum 2a is generally very stiff to hard.

Laboratory testing of samples within Stratum 2a resulted in natural water contents ranging from 6.2% to 19.2%, liquid limits ranging from 35 to 48, PIs ranging from 20 to 32, and fines contents ranging from 61.8% to 97.7%. Swell tests performed within Stratum 2a resulted in vertical strains ranging from 1.2% to 3.5% for overburden pressures ranging from 400 to 1,100 psf, with corresponding swell pressures ranging from 3,750 to 4,250 psf, indicating that the Stratum 2a soils are moderately to highly expansive. UC tests performed within Stratum 2a resulted in undrained shear strengths ranging from 3.62 to 8.76 tsf.

The Stratum 2a soils are generally classified using the USCS as lean clay [CL].

6.2.2 Stratum 2b – Sandy Clay/Clayey or Silty Sand

Reddish brown to light tan clayey sand to sandy clay with pockets of silty sand and varying amounts of gravel and calcareous nodules was encountered in 19 of the 42 borings[21] and in 7 of the 26 test pits[22]. Stratum 2b was encountered below Stratum 2a at depths ranging from 13 to 28 feet below grade in Borings LB-3, LB-5, LB-6, LB-12, LB-18, and LB-19. 13 of the borings and 3 of the test pits were terminated within Stratum 2b.

SPT N-values within Stratum 2b ranged from 9 bpf to refusal but were generally between 21 and 57 bpf. Field estimates of unconfined compressive strength using a pocket penetrometer

[18] Borings LB-1 to LB-7, LB-12 to LB-14, LB-16 to LB-22, LB-24, LB-25, and LB-28 to LB-42.
[19] Test Pits TP-1 to TP-5, TP-8 to TP-11, TP-13, TP-15 to TP-23, and TP-25.
[20] Less than 6 inches penetration over 50 blows of the SPT hammer.
[21] Borings LB-3, LB-5, LB-6, LB-8 to LB-12, LB-18, LB-19, LB-23, LB-25 to LB-27, LB-30, LB-36 to LB-38, and LB-41.
[22] Test Pits TP-6, TP-7, TP-11 to TP-14, TP-17, and TP-22.

resulted in values of at least 4.5 tsf. The SPT N-values and field estimates of unconfined compressive strength indicate that the consistency of Stratum 2b is generally stiff to hard.

Laboratory testing of samples within Stratum 2b resulted in natural water contents ranging from 1.8% to 14.4%, liquid limits ranging from 18 to 33, PIs ranging from 3 to 20, gravel contents ranging from 0% to 6.7%, and fines contents ranging from 40.1% to 76.1%. Two Standard Proctor compaction tests were performed within Stratum 2b, resulting in maximum dry unit weights ranging from 112.4 to 112.9 pcf and optimum moisture contents ranging from 13.6% to 14.2%. UC tests performed within Stratum 2b resulted in undrained shear strengths ranging from 1.7 to 6.7 tsf.

The Stratum 2b soils are generally classified using the USCS as lean clay [CL], clayey sand [SC], and silty sand [SM].

6.3 Stratum 3 – Gravelly Clay with Sand

Pockets of grayish brown to white gravelly sand and clay were encountered in 6 of the 42 borings[23] and 2 of the 26 test pits[24] at depths ranging from 2 to 13 feet below grade. Stratum 3 was encountered below Stratum 2 within the PV footprint, and was encountered between Stratum 2 in 2 of the 4 borrow pit areas. The thickness of the Stratum 3 pockets generally ranged from 2 to 7 feet. Borings LB-8 and LB-35 and Test Pit TP-14 were terminated within Stratum 3.

SPT values within Stratum 3 ranged from 22 to 55 bpf. Field estimates of unconfined compressive strength using a pocket penetrometer resulted in values ranging from 3.5 to 4.5 tsf but were generally at least 4.5 tsf. The SPT N-values and field estimates of unconfined compressive strength indicate that Stratum 4 is dense.

Laboratory testing of samples within Stratum 3 resulted in natural water contents ranging from 2.4% to 13.5%, liquid limits ranging from 26 to 24, PIs ranging from 13 to 18, gravel contents ranging from 17.4% to 29.4%, and fines contents ranging from 15.7% to 65.2%.

The Stratum 3 soils are generally classified using the USCS as lean clay with gravel [CL] or gravelly, clayey sand [SC].

6.4 Stratum 4 – Weathered Rock

Severely weathered shale, limestone, and sandstone that generally presents as a lean clay was encountered below Stratum 2a and Stratum 3 in 19 of the 42 borings[25] and Test Pit TP-26. Stratum 4 was encountered at depths ranging from 13 to 18 feet below grade in the substation

[23] Borings LB-8, LB-15, LB-22, and LB-35 to LB-37.
[24] Test Pits TP-14 and TP-22.
[25] Borings LB-1 to LB-4, LB-13 to LB-17, LB-21, LB-22, LB-31, LB-32,LB-36 to LB-40, and LB-42.

area and at depths ranging from 2 to 18 feet below grade along the northeastern, western, and southwestern areas of the site. Where encountered, the borings terminated within Stratum 4.

SPT values within Stratum 4 ranged from 26 bpf to refusal but were generally at refusal. TCP values within Stratum 4 ranged from 64 bpf to refusal but were generally at refusal, with penetration depths ranging from about 3 to 6 inches over 100 blows of the TCP hammer. The SPT N-values and TCP values indicate that the consistency of Stratum 4 is generally hard to very hard.

Laboratory testing of samples within Stratum 4 resulted in natural water contents ranging from 8.7% to 14.7%, liquid limits ranging from 39 to 49, PIs ranging from 21 to 31, and fines contents ranging from 86.2% to 97.6%.

6.5 Groundwater

Groundwater was not encountered during the subsurface investigation. These observations represent the absence of groundwater at the time of exploration only, and shallow groundwater may be present due to various influences such as seasons, weather/storms, prolonged periods of precipitation, construction activity, and other hydrologic factors.

7.0 GEOTECHNICAL RECOMMENDATIONS

7.1 General

The encountered soil stratigraphy generally consisted of a surficial layer of stiff lean clay with silty sand pockets overlying clayey loam residuum from weathered shale and claystone and terrace deposits. The Stratum 1a clays encountered have a high expansion potential, and the Stratum 2a clays have a moderate to high expansion potential, based on the laboratory tested PIs,[29] in situ moisture contents, and swell test results. The expansion potential of the surficial soils is discussed in further detail below.

The PV arrays and BESS equipment are anticipated to be lightly loaded and can be supported on driven piles; other equipment pads may be supported on conventional shallow foundations. Substation equipment may be supported on conventional shallow foundations bearing on site soils that have undergone remedial grading, or on drilled shaft foundations. Lightly loaded shallow foundations may be susceptible to moisture-induced ground movement and should be designed to accommodate potential total and differential movement, or subgrades should be treated accordingly to reduce the potential for moisture-induced ground movement.

[29] Soils with a PI of greater than 15 are generally considered expansive per International Building Code 2021.

7.2 Expansive Soils

The amount of vertical deformation that expansive soils can generate is termed the "potential vertical rise" (PVR). Langan evaluated the PVR of the soils at the site using the following methods:

1) The Texas Department of Transportation (TxDOT) Tex-124-E Method,
2) The method developed by Nelson and others (2015)[30], and

A brief description of each method used is provided in Table 5. Calculations were performed to estimate the PVR for existing conditions, which is generally indicative of dry in-situ moisture conditions. Calculations assumed a 10-foot-deep zone of seasonal moisture fluctuation. The estimated PVR of the soils within in the substation and BESS area range from about 4.5 to 5 inches. The estimated PVR of the soils across the entire site range from about 1 to 5 inches and generally decreases towards the southern portion of the site.

Table 5 - Summary of PVR Analysis Methods

Analysis Method	Method Description
TDOT Tex-124E	Estimates PVR using studied correlations with the measured plasticity characteristics and moisture contents of the subsurface soils.
Nelson et al. (2015)	Uses measured volume and pressure changes from consolidation-swell tests performed on the subsurface soils to estimate PVR.

7.2.1 PV Array Racking Support

PV racking systems should be selected considering potential heave and differential uplift movements on the racking supports. Methods for built-in components to re-level after installation can be implemented to correct movements as part of regular maintenance.

7.2.2 Substation and Equipment Pads

The estimated PVR exceeds typical allowable ground movements for shallow foundations and equipment pads. For movement sensitive equipment and structures such as transformers, PCS Units, and other equipment within the substation, measures should be implemented to account for potential ground movement such as flexible connections and re-leveling mechanisms. Remedial grading can also be performed to reduce expansion potential locally, or equipment can be supported on deep foundations. Light equipment such as BESS containers or ancillary equipment for PV arrays can be elevated above the free-swelling ground. Substation foundation structures are expected to be thicker and extend below grade, which may require the use of void boxes when pile-supported.

[30] Nelson, John & Chao, Kuo Chieh & Overton, D.D. & Nelson, E.J. (2015). Foundation Engineering for Expansive Soils. 10.1002/9781118996096.

For the remedial grading option, to reduce PVR to a level of about 2 inches, it is recommended to over-excavate to a minimum depth of 5 feet below the bottom of slab or footing elevation, or to the bottom of Stratum 1a, and replace with moisture-conditioned soils from Stratum 1b or Stratum 2.

This remedial grading should be performed to at least 5 feet beyond the limits of the foundation footprint at the bottom of the foundation excavation, and within a 1H:1V zone from bottom of excavation to finished grade. Specific structures across the site may be evaluated on a case-by-case basis to determine if other subgrade preparation should be performed to meet maximum potential heave requirements.

7.3 Soil Corrosivity and Resistivity

7.3.1 ERT Test Results

Field electrical resistivity test values generally ranged from about 1,150 to 11,650 Ω-cm, except for ERT-5, which exhibited resistivity test values ranging from about 5,500 to 34,500 Ω-cm. Resistivity values generally decreased as probe spacing increased to about 30 feet, and resistivity values generally increased with probe spacing past 30 feet. Based on guidelines presented in *Corrosion Basics: An Introduction, 2nd Ed.* (2006), the results of these field resistivity tests generally indicate a moderately corrosive to extremely corrosive potential. ERT results are provided in Attachment C.

7.3.2 Laboratory Chemical Test Results

Laboratory testing for soil sulfate content, sulfide content, chloride content, oxidation-reduction potential, and pH was performed on samples in the upper 2 to 6 feet across the site to estimate corrosion potential for buried structures. The laboratory test results are summarized in Table 6.

Table 6 – Soil Chemistry Test Results

Laboratory Test	ASTM	Range of Values					Units
		Stratum 1a	Stratum 1b	Stratum 2a	Stratum 2b	Stratum 3	
pH in Water	D4972	7.14 – 8.94	6.94	7.27 – 8.54	8.07	NR	-
pH in $CaCl_2$	D4972	6.54 – 7.93	6.23	6.4 – 7.79	7.42	NR	-
Redox Potential	SM 250B	118 – 187	150	144 – 176	135	NR	mV
Soluble Sulfate Content	C1580	0.015 – 0.038	0.027	0.021 – 0.042	0.035	0.021	% mass
Sulfide Content	EPA 376.1	< 6.7	<6.7	<6.7	<6.7	<6.7	ppm
Chloride Content	D512	20 – 230	105	15 – 238	270	33	ppm

7.3.3 Thermal Resistivity Test Results

Laboratory thermal resistivity testing was performed on samples in the upper 2 to 4 feet across the site. Samples were recompacted to 90% of the maximum dry density and 2% dry of optimum water content based on the Standard Proctor for the corresponding soil type and were tested in accordance with ASTM D5334. The thermal resistivity test results are summarized in Table 7 for the initial and supplemental investigations.

Table 7 – Laboratory Thermal Resistivity Test Results

Test Pit ID	Depth (ft)	Stratum #	Water Content (%)	Dry Unit Weight (pcf)	Thermal Resistivity Wet (°C-cm/W)	Thermal Resistivity Dry (°C-cm/W)
TP-3	0 – 2	1a	20.6	82.6	91.3	240.2
TP-18	2 – 4	1a	20.7	80.8	111.3	249.4
TP-20	0 – 2	1a	12.1	95.3	113.2	222.5
TP-23	2 -- 4	1a	20.9	82.8	103.4	272.1
TP-7	0 – 2	1b	11.6	96.5	86.2	215.0
TP-26	0 -- 2	1b	11.0	94.6	91.4	278.3
TP-11	0 – 2	2a	12.3	95.6	74.9	199.5
TP-13	0 – 2	2a	12.1	95.3	92.7	219.2
TP-25	2 -- 4	2a	11.7	95.9	97.3	255.8
TP-6	0 – 2	2b	11.7	96.1	78.5	206.3
TP-14	0 – 2	2b	12.1	95.2	83.4	235.2

7.3.4 Buried Metals

According to the American Water Works Association C105-72(R77): American National Standard For Polyethylene Encasement For Gray and Ductile Cast Iron Piping For Water and Other Liquids and based on soil resistivity, pH, redox potential, sulfides content, and moisture content laboratory test results conducted during Langan's subsurface investigation, the site soils near the BESS area and in the southeastern corner of the site may be corrosive to ferrous metals. Langan recommends subsurface ferrous metal structures and utilities not embedded in concrete in these areas be protected against corrosion. A qualified corrosion engineer or specialist should provide recommendations for protection.

7.3.5 Concrete

American Concrete Institute (ACI) concrete exposure classes for sulfate (S), water (W), freeze-thaw (F), and corrosion protection of reinforcement (C) were evaluated for proposed buried and at-grade concrete placed at the site.

Laboratory tests indicate that the site soils have low (S0) sulfate exposure. All buried and at-grade concrete is expected to be placed above the water table and can absorb moisture from

surrounding soil. Therefore, the concrete should have moderate (W1) exposure to water and moderate (C1) corrosion exposure. Based on typical weather patterns at the site area, the concrete is expected to experience freeze-thaw cycles with limited exposure to water (F1).

The owner's structural engineer should design buried and at-grade concrete in accordance with the requirements provided in the latest edition of ACI 318 based on exposure class.

7.4 County Road Assessment

Langan performed a series of shallow hand auger probes along the about 8.7-mile designated site access path, which is from FM 45 to the northern gate of the site and includes unpaved county roads CR 265, CR 264, and CR 268. Additionally, Langan drove the extent of the path to visually observe the roadway conditions and note areas of concern.

Generally, the county roads along the designated site access path are intact and consist of a surficial layer of about 2 to 12 inches of gravelly or silty sand overlying a clayey sand or lean clay subbase. A summary of roadway conditions along each county road are provided below. Roadway hand auger logs are included as Attachment A-2, and laboratory test results for the roadway samples are included as Attachment F-2.

- Along CR 265, the roadway generally consisted of 3 to 7 inches of gravel overlying clayey sand. The roadway near the intersection of CR 265 and CR 264 was observed to be looser than the rest of the roadway. No significant rutting was observed.
- Along CR 264, gravel or gravelly sand was encountered in 4 of the 7 hand auger locations[32] and was generally 6 to 12 inches thick. In the remaining 3 hand auger locations[33], the roadway consisted of 6 to 16 inches of silty/clayey sand over sandy clay. The portion of roadway near the intersection of CR 264 and CR 267 was observed to be softer than the other observed areas of the roadway.
- The portion of CR 267 between auger locations RW-11 and RW-12 is a paved asphalt road.
- Along CR 268 outside the site entrance gate, the roadway generally consisted of 2 to 3 inches of gravel over sandy clay, except at location RW-7 where the roadway consisted of 12 inches of silty sand over sandy clay. CR 268 is generally intact, but the road surface appears looser and less maintained than the other roads. Two small potholes were observed along CR 268.
- The portion of CR 268 inside the first site entrance gate generally consists of 12 to 24 inches of silty sand overlying sandy clay or clayey sand. The road appears uneven may rut under heavy loads or after rainfall events.

[32] RW-12, RW-13, RW-16 to RW-18
[33] RW-14, RW-15, and RW-18

7.5 Site Preparation

Due to the risk of encountering UXOs across the site, it is assumed that a comprehensive UXO site survey will be conducted prior to any earthwork activities being performed, and that all earthwork activities will be performed under the full-time monitoring of a UXO specialist. Any suspected UXOs or other munitions discovered or UXOs encountered during site work must be reported immediately to the UXO specialist to coordinate removal and disposal.

All vegetation within construction areas, including trees and associated root structures, should be stripped. Excavations made for removals (i.e., large root structures) should be backfilled with approved backfill material. Debris and vegetation should be properly disposed of off-site. Organic material within backfill soils will adversely impact the ampacity of power cables and affect the electrical design. Excavation of soils for direct bury of cables should be monitored closely to prevent stripped vegetation from being backfilled in the excavation.

All construction work should be performed so as not to adversely impact off-site structures or utilities, including any existing utilities and trees that are to remain. Protection of these elements should be provided as necessary.

7.6 Subgrade Preparation Procedures

After performing the aforementioned site preparation work, including overexcavation for remedial grading, and prior to placing and compacting backfill, soil subgrade within the construction areas should be proofrolled/compacted with six overlapping coverages of a sheepsfoot roller having a minimum static drum weight of 5 tons, or two passes using a fully loaded dump truck or pneumatic-tired roller weighing at least 25 tons. Additional proofrolling coverages should be performed in areas deemed necessary based on observations made by an experienced geotechnical engineer. Soft areas identified during proofrolling should be excavated and replaced with approved compacted fill.

7.6.1 Soil Stabilization

The surficial clays are sensitive to moisture exposure and may be potentially unworkable when saturated, particularly the Stratum 1a clays. The soils are expected to require several days to dry out and may be unworkable in extended wet periods. Site soils may be stabilized using lime, Portland Cement, or fly ash to attempt to dry and stiffen the surficial soils and increase their workability. Sulfate contents of site soils in the upper 4 feet ranged from 146 to 375 ppm based on laboratory testing. The results indicate that lime treatment is anticipated to be suitable for the surficial soils per TxDOT guidelines[34]. Based on preliminary lime series testing performed on

[34] Lime stabilization is not recommended for soils with a sulfate concentration of above 3,000 ppm, per the Texas Department of Transportation (TxDOT) Treatment Guidelines for Soils and Base in Pavement Structures.

surficial soil samples, Langan recommends an initial value of 14% lime be used for stabilization estimates.

If lime stabilization is to be performed, Langan recommends that additional lime series and sulfate testing be performed for a minimum of every 500 linear feet of pavement/roadway or 5,000 cubic yards of material. The testing should be performed on soils at subgrade elevation after rough grading has been performed, and the results of the lime testing should be reviewed by Langan to determine recommended lime treatment measures.

7.7 Site Grading and Landscaping Considerations

Earthwork in general should be placed to include a moderate slope (recommended 2% minimum) to promote drainage away from concrete pad footprints and roadway areas during construction and should not contain low areas where ponding would occur. At areas adjacent to pad foundations, grade should be at a slope of not less than 5% sloped for a minimum of 10 feet away from the pad, or at 2% minimum if the surface is impervious, as required by Building Code. Final subgrades, including those below flexible base, which may be used for concrete pads and roadways, should have positive drainage away from pad or roadway footprint.

7.8 Engineered Fill

7.8.1 Fill Materials

Characteristics of fill materials for raising site grades, backfilling excavations, and stabilizing subgrade areas are provided in Table 8 and Table 9 for existing site soils and imported soils, respectively. Suitable fill materials should be free of organics and other deleterious materials and should have a maximum particle size no greater than 4 inches. Sieve analyses, fines content determinations, Atterberg limits tests, and compaction tests should be performed on representative samples of the fill materials proposed by the Contractor and reviewed by the geotechnical engineer for approval.

Table 8 – Existing Site Soil Reuse and Index Parameters

Stratum #	USCS Soil Type	LL Range	PI Range	% Gravel Range	% Fines Range	Application				
						General Backfill[1]	Fill Under Roadways	Fill Under PV Arrays	Fill Under Foundations	Base[2]
1a	CL	40 – 52	24 – 34	+/- 0	67 – 92	X	X			
1b	SM	+/- 17	+/- 1	+/- 0	34 – 39	X	X	X	X	
2a	CL	35 – 48	20 – 32	+/- 0	49 – 97	X	X			
2b	CL/SC/SM	18 – 33	3 – 20	0 – 7	40 – 76	X	X	X	X	
3	CL/SC	26 – 34	13 – 18	17 – 31	16 – 65	X	X	X	X	

Notes:

(1) General backfill should only be used in landscape areas or areas not sensitive to moisture-induced heave.

(2) Subbase should be used as building foundation or pavement base material.

(3) Soil properties indicated in this table are based on laboratory tested results.

Table 9 – Imported Fill Usage and Index Parameters

Imported Soil Type	USCS Soil Type	LL Range	PI Range	% Gravel Range	% Fines Range	Application				
						General Backfill[1]	Fill Under Roadways	Fill Under PV Arrays	Fill Under Foundations	Base[2]
Select Fill	CL/SC	<40	10 – 20	<15	30 – 75	X	X	X	X	
Flexible Base[3]	GP/GW	<40	<10	45 – 75	<20					X

Notes:

(1) General backfill should only be used in landscape areas or areas not sensitive to moisture-induced heave.

(2) Base should be used as building foundation or pavement subbase material.

(3) Flexible base should consist of Type A, Grade 1-2 granular material in accordance with TxDOT Item 247, Flexible Base.

7.8.2 Borrow Pit Fill Material

Four locations surrounding the site were identified as potential detention areas or as areas to use for potential borrow fill material. The locations are labeled as Borrow Pits 1, 2, 3, and 4 and identified on the Subsurface Investigation Plan included as Figure 3. A generalized summary of the soil stratigraphy for each of the borrow pit areas is provided in Table 10, which can be reused as discussed in Section 7.8.1.

Table 10 – Generalized Soil Stratigraphy for Borrow Pits

Stratum Number	Soil Type	Depth to Top of Stratum (feet bgs)			
		Borrow Pit 1	Borrow Pit 2	Borrow Pit 3	Borrow Pit 4
1a	Upper Clay	0	--	0	--
2a	Calcareous Lean Clay	1 to 2	0 to 6	4 to 8	4 to 5.5
2b	Sandy Clay/Clayey Sand	--	0	--	0
3	Gravelly Clay with Sand	--	2 to 8	--	2+
4	Weathered Rock	+/- 13.5	13.5+	18.5+	13.5+

All borrow pit locations appear to be viable for use as detention ponds based on the materials encountered at the design excavation depths. Confirmation and testing of the soils comprising the pond subgrade should be performed during grading activities to verify soil properties used in design.

7.8.3 Fill Placement and Compaction

Compaction recommendations for site soils and imported fill materials are provided in Table 11. The Contractor should make provisions to dry or wet the existing site soils, as necessary, during placement and prior to compaction. Fill placement should be subject to observation and testing by an experienced geotechnical engineer. No fill material should be placed on surfaces which have not been approved and documented by an experienced geotechnical engineer. Langan recommends performing field moisture and density testing at a frequency of at least 1 test per 5,000 square feet per lift, or no less than 3 tests per lift.

Table 11 – Site Soil and Imported Fill Compaction Specifications

Soil Type	Proctor Compaction Test[2]	Compaction Moisture Content Range[3]	Minimum Compaction Dry Density[4]				
			General Backfill	Fill Under Roadways	Fill Under PV Arrays	Fill Under Foundations	Base
Site Soils – Stratum 1a	Standard	-1% to +3%	90%	95%			
Site Soils – Stratum 1b	Standard	-2% to +2%	90%	95%	95%	95%	
Site Soils – Stratum 2a	Standard	-1% to +3%	90%	95%			
Site Soils – Stratum 2b	Standard	-2% to +2%	90%	95%	95%	95%	
Site Soils – Stratum 3	Standard	-2% to +2%	90%	95%	95%	95%	
Select Fill	Standard	-1% to +3%	90%	95%	95%	95%	
Flexible Base	Standard	-2% to +2%					98%

Notes:

(1) Fill should be placed in uniform maximum 8-inch-thick loose lifts.

(2) The Standard Proctor compaction test corresponds to ASTM D698. The Modified Proctor compaction test corresponds to ASTM D1557.

(3) The compaction moisture content ranges listed are relative to the optimum moisture content as determined by the corresponding Proctor compaction test.

(4) The compaction dry density percentages listed are relative to the maximum dry density for each soil type and application, as determined by the corresponding Proctor compaction test.

7.9 Solar Array Foundations

7.9.1 Pile Load Tests

Index piles were installed and load tested to develop an understanding of production pile installation process and behavior under loading. Eight pairs of pile load tests were performed across the site, adjacent to selected test pit locations. Each pile load test was performed on a 14-foot-long W6x9 pile driven using a vibratory PD5 pile driver to a depth of 10 feet below grade or to pile refusal.

A summary of the pile load test results is provided in Table 12. The lateral and tension load test data are provided as Attachments E and F.

Table 12 – Pile Load Test Summary

Pile Load Test Location	Test Pit	Tension Load Test		Lateral Load Test		
		Max Deflection (in)	Load at Max Deflection[1] (lb)	Max Deflection (in)	Load at Max Deflection[2] (lb)	Load at 0.5" Deflection (lb)
PLT-1	TP-7	0.05	10,000	0.68	5,000	4,000
PLT-2[3]	TP-9	0.02	10,000	0.67	5,250	4,000
PLT-3	TP-10	0.05	10,000	1.05	6,000	4,500
PLT-4	TP-17	0.03	10,000	1.05	5,900	4,800
PLT-5	TP-16	0.05	10,000	1.07	6,600	4,000
PLT-6	TP-15	0.06	10,000	1.00	5,000	2,600
PLT-7	TP-19	0.07	10,000	0.79	6,100	5,000
PLT-8	TP-21	0.01	10,000	1.07	6,000	3,200

Notes:
(1) Tension load tests were performed to maximum load of load cell at 10,000 lbs.
(2) Lateral load tests were performed to maximum load of about 6,000 to 6,700 lbs.
(3) Pile PLT-2(L) was installed to pile refusal at a depth of 9 feet below grade.

7.9.2 Driven Pile Design Parameters

The solar array and BESS container structures are expected to be supported on driven steel piles. The piles will derive capacity from side friction and cohesion largely from the Stratum 2 lean clays and sandy clays, with end-bearing in either the Stratum 2 clays, Stratum 3 gravelly clays, or Stratum 4 weathered rock. Pile foundations are expected to resist uplift and lateral loads due to wind and uplift loads due to soil heave, in addition to normal service dead loads from self-weight. Recommended end-bearing and skin friction design values for H-pile analysis are summarized in Table 13.

Side friction in the upper 4 feet of the piles should be neglected to account for the expansive soils. Additionally, the piles should be designed for an additional uplift pressure and negative side friction of 750 psf along the perimeter of the pile within the upper 4 feet to account for potential movement of the surficial expansive soils. These measures will not fully address the risk of expansive soils (which includes soils for the full length that piles are embedded) but are practical measures to reduce expansive soil action for the PV array foundations.

Table 13 – Driven H-Pile Geotechnical Axial Capacity for PV Arrays

Stratum #	Depth (feet)	Allowable End-Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
Stratum 1	0 – 4	-	-	-
Stratum 2	4 – 20	20,000	750	625
	4 – 13[2]			
Stratum 3[3]	8 – 20	22,000	350	300
Stratum 4	13 – 20[2]	25,000	1,000	800

Notes:
(1) Capacities shown are geotechnical capacities only. A factor of safety of 2.5 was used for side friction in compression, and a factor of safety of 3 was used for end-bearing and side friction in tension. Structural capacities should be evaluated by the structural engineer.
(2) In the southwestern area of the site where shallow rock was encountered, we recommend using the generalized depths for Stratum 2 and Stratum 4 for pile design if required to penetrate deeper than 13 feet below grade.
(3) Pile load tests were not performed in areas where Stratum 3 was encountered. Recommended design values are based on soil properties alone. Stratum 3 should only be included in pile design for areas where Stratum 3 is anticipated.

The recommended design parameters provided in Table 13 are interpreted based on soil parameters and corroborated against the pile load test data results.

7.9.3 L-Pile Design Parameters

Langan recommends that lateral resistance of the driven piles be evaluated using the p-y method, where the soil is modeled as a series of lateral non-linear springs. Commercial software programs such as LPILE can be used for lateral pile analysis. Recommended soil parameters for use in LPILE are provided in Table 14, which have been corroborated with the lateral load test data.

Table 14 – LPILE Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor e50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2a	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 2b	133	Stiff Clay w/o Free Water	4,500	0.02

The final pile size, length, and details will be designed once the loads are finalized; the design and details will need to be signed and sealed by a Professional Engineer licensed in the state of Texas. During construction, Langan recommends tension and lateral load testing about 2% to 5% of the piles to verify the design parameters and contractor installation methods.

7.10 Equipment Pad/Energy Storage Shallow Foundations

7.10.1 Shallow Foundation Parameters

Shallow foundations are feasible to support lightly loaded equipment pads, assuming that the anticipated expansion potential is acceptable. Equipment within the proposed substation and BESS areas can be supported on shallow foundations bearing on a minimum of 12 inches of imported select fill, on moisture conditioned and recompacted Stratum 1a clays, or native Stratum 2 materials. Recommended design parameters for shallow foundations are provided in Table 15.

Table 15 – Shallow Foundation Design Parameters

Description	Recommended Value
Allowable Bearing Pressure – Moisture Conditioned and Recompacted Stratum 1 or Stratum 2 Soils	2,500 psf
Allowable Bearing Pressure – Undisturbed Stratum 2 Soils	4,000 psf
Allowable Bearing Pressure – Select Fill (Recompacted)	2,500 psf
Subgrade Modulus (k)	125 pci

Footings should be at least 18 inches wide and bear a minimum of 18 inches below finished grade. Footings should not be unreinforced, and minimum steel requirements should be met, as determined by the project structural engineer.

7.11 Substation Deep Foundations

7.11.1 Drilled Pier Foundations

If the estimated expansion potential or remedial grading recommendations are unacceptable for constructing the substation equipment on conventional shallow foundations, the proposed substation equipment may also be supported on a deep foundation system comprised of drilled straight shaft piers bearing in the Stratum 4 weathered rock. Drilled piers are constructed as auger-excavated, straight shaft reinforced concrete piers that will resist loads primarily via end-bearing, with additional skin friction resistance in overburden soils. Skin friction resistance for design should start below the depth of seasonal moisture change, assumed to be about 10 feet.

The piers should be founded a minimum of 4 feet or 3 shaft diameters (whichever is greater) into the selected bearing stratum. Piers should be spaced a minimum of 3 pile diameters apart to avoid negative axial group effects. If close spacings of piers cannot be avoided, then group effects should be evaluated on a case-by-case basis in coordination with Langan. Piers spaced closer than 6 pile diameters will experience group effects in lateral loading depending on the pile group orientation. Foundation plans should be reviewed by Langan to develop appropriate p-multipliers for pile lateral group effects.

An experienced geotechnical engineer should observe and document the construction of each pier to confirm that construction procedures are in accordance with the specifications, the bearing requirements are satisfied, and concrete is placed properly.

7.11.2 Drilled Pier Axial Capacity

Recommended design values for drilled pier and ACIP design are provided in Table 16 for end-bearing and skin friction values. The allowable design values provided are based on a factor of safety of 2.5 for skin friction in compression, 3.0 for skin friction in tension, and 3.0 for end-bearing. Piles in tension will derive capacity from skin friction only. These design values are for geotechnical capacity only, and foundations should be designed structurally to resist all compression, tension, and lateral loads in accordance with structural demands and Building Code requirements.

Table 16 – Substation Drilled Pier Geotechnical Axial Capacity

Stratum #	Depth (feet)	Allowable End-Bearing (psf)	Allowable Unit Skin Friction (psf)	
			Compression	Tension
Stratum 1	0 – 6	--	--	--
Stratum 2	6 – 20	20,000	875	725
Stratum 4	20 – 50	25,000	3,000	2,500

Drilled piers should also be designed to resist an uplift force of 750 psf along the upper 10 feet to account for expansion potential. Piers should be structurally designed to resist axial compression, tension, and lateral forces in accordance with Building Code and relevant design standards for concrete members (i.e., ACI 318).

7.11.3 L-Pile Design Parameters

Langan recommends that lateral resistance of the drilled shafts be evaluated using the p-y method, where the soil is modeled as a series of lateral non-linear springs. Commercial software programs such as LPILE can be used for lateral pile analysis. Recommended soil parameters for use in LPILE are provided in Table 17.

Table 17 – LPILE Drilled Pier Recommended Soil Parameters

Stratum #	Unit Weight (pcf)	LPILE Soil Model	Undrained Shear Strength (psf)	Strain Factor e50
Stratum 1	125	Stiff Clay w/o Free Water	4,000	0.03
Stratum 2	127	Stiff Clay w/o Free Water	5,500	0.02
Stratum 4	135	Stiff Clay w/o Free Water	9,000	--

The final pile size, length, and details will be designed once the loads are finalized; the design and details will need to be signed and sealed by a Professional Engineer licensed in the state of Texas.

7.11.4 Pile Load Test

A load test program is recommended to verify ultimate load capacities for the drilled piers, as the drilled piers will be designed for different bearing depths and design loads than the driven piles. Pile load tests where piles are loaded to failure can be used to optimize the foundation design if the tested ultimate failure load exceed the estimated ultimate capacities. It is recommended to perform the following load tests for each size of pile used for each structure:

- Two compression load tests for each pile size (ASTM D1143)[35]
- Two tension load tests for each pile size (ASTM D3689)[36]
- Two lateral load tests for each pile size (ASTM D3966)[37]

It is recommended that the load tests be performed as a pre-production load-test program before beginning the installation of production piles to allow for re-design of foundation systems as needed. Test piles may be instrumented with strain gauges as a tool to evaluate skin friction versus depth. The additional data allows for re-design of pile geotechnical capacities in variable soil conditions, and for optimization of structural pile design. Test piles for the lateral load test can also be instrumented with inclinometers to measure curvature and deflection with depth, which can also be used to refine modeling parameters and optimize structural reinforcement design.

Bi-directional axial load testing can also be performed in lieu of separate compression and tension load tests. These tests require the use of sacrificial load cells installed within the pile, but do not require the installation of a reaction frame to resist test loads.

7.12 Seismic Design

This section presents our site seismic evaluation in accordance with ASCE 7-16 as referenced in the 2021 International Building Code.

The Building Code assigns a seismic Site Class based on the type, thickness, and engineering properties of soil and rock in the top 100 feet below the ground surface. Based on the encountered subsurface conditions and the regional geology, the site is classified as Site Class C (Very Dense Soil and Soft Rock) for seismic design purposes in accordance with the Building Code. Based on the design spectral accelerations and an assumed Structural

[35] Standard Test Methods for Deep Foundation Elements Under Static Axial Compressive Load
[36] Standard Test Methods for Deep Foundation Elements Under Static Axial Tensile Load
[37] Standard Test Methods for Deep Foundations Under Lateral Load

Occupancy/Risk Category II for the PV array structures, the Seismic Design Category (SDC) is A in accordance with Building Code. Based on the design spectral accelerations and an assumed Structural Occupancy/Risk Category III for the BESS and substation structures, the Seismic Design Category (SDC) is A in accordance with Building Code. Table 18 provides a detailed summary of seismic design parameter recommendations.

Table 18 – Recommended Seismic Design Parameters

Description	Symbol	Recommended Value
Mapped Spectral Acceleration for 0.2 Second Period	S_s	0.056 g
Mapped Spectral Acceleration for 1 Second Period	S_1	0.035 g
Site Class	Very Dense Soil and Soft Rock	C
Site Coefficient	F_a	1.3
Site Coefficient	F_v	1.5
5 Percent Damped Design Spectral Response Acceleration at 0.2 Second Period	S_{DS}	0.047 g
5 Percent Damped Design Spectral Response Acceleration at 1 Second Period	S_{D1}	0.039 g
Seismic Design Category – PV Arrays (Based on Structural Occupancy/Risk Category II)	SDC	A
Seismic Design Category – BESS and Substation (Based on Structural Occupancy/Risk Category III)	SDC	A

7.13 Temporary Excavation

Excavations should be conducted in accordance with OSHA requirements including, but not limited to, sloping and/or benching the sides and using a trench box or shield. The sides of open-cut excavations should generally be no steeper than 1H:1V. Where mass excavation may occur near the property line, such as for remedial grading under the substation, the excavations may encroach on neighboring properties, roadways, or pipeline easements. To protect these sites, retaining walls or temporary excavation support systems may be needed to facilitate excavation activities.

7.14 Utilities

Prior to starting construction, existing utilities to remain should be field-located and maintained during construction. Excavations for utility installation should be conducted in accordance with OSHA requirements and as described in the previous section of this report, excavated to sufficient width to allow for proper compaction around utilities. Prior to the installation of utilities, the soil at the bottom of the trenches should be proofrolled/compacted with six overlapping

coverages of a double-drum walk-behind sheepsfoot roller. Soft areas identified during proofrolling should be excavated and replaced with approved compacted fill. Utilities should be backfilled with approved compacted fill.

Utility design should consider potential vertical movements due to heave from expansive soils. If utilities are sensitive to vertical movements, flexible connections or isolation measures should be considered within their vicinity. If utility trenches are backfilled with free-draining material, trenches should be capped with an impermeable liner to prevent migration of free water to the underlying expansive soils.

In addition, because of the potential for utility settlement and heave from changes in the moisture content of soils, we recommend the following:

- Provide flexible connections capable of sustaining differential movements for utilities where they transition from building areas to adjacent site areas.
- Construct site utilities using flexible pipe (i.e., HDPE).

Power cables may be installed as direct bury by trenching the site soils and replacing excavated materials after installation. The presence of organic material such as vegetation or rootlets in the backfill will negatively impact the ampacity of the cables and electrical design. Backfill of direct bury cables should be carefully monitored to verify that organics are not mixed in with the backfill materials, and the trench area should be thoroughly stripped and grubbed before earthwork.

7.15 Access Road Design

Access roads within the PV array, substation, and BESS areas are expected to be designed as aggregate-surfaced roadways. Pavement sections have been analyzed following the FHWA Gravel Roads Maintenance and Design Manual (2000). The CBR used in the pavement design is assumed based on laboratory test results on compacted Stratum 1a or 2a soils. Table 19 below summarizes the design parameters used for pavement design.

Table 19 – Pavement Design Parameters

Parameters	Design Values
Standard Duty ESALs	15,000
Heavy Duty ESALs	50,000
Design Life	20 years
Initial Serviceability	4.5
Terminal Serviceability	2.0
Climatic Region	IV (Dry, hard freeze, spring thaw)
California Bearing Ratio (CBR)	5

Access roads should be constructed using flexible base material, with a crushed stone (i.e., 3/4" stone or AASHTO #57) wearing surface to protect from erosion and rutting. The following roadway sections provided in Table 20 are recommended for this project.

Table 20 – Recommended Minimum Pavement Sections

Pavement Section Type	Flexible Base Thickness (inches)	Crushed Stone Wearing Thickness (inches)
Standard Duty	7	2
Heavy Duty	12	2

Aggregate base should consist of flexible base as outlined in Section 7.8.1. The subgrade soils below the roadway aggregate are expected to be existing site soils from Stratum 1 or Stratum 2, prepared and proofrolled per the recommendations described in Section 7.8. Langan recommends a non-woven filter fabric or geogrid be placed below the flexible base to separate the flexible base from the subgrade soils.

A maintenance plan should be implemented for the roadway to maintain roadway conditions over time.

8.0 SERVICES DURING DESIGN, CONSTRUCTION DOCUMENTS AND CONSTRUCTION QUALITY ASSURANCE

During final design, Langan should be retained to consult with the design team as geotechnical questions arise. Technical specifications and design drawings should incorporate Langan's recommendations. When authorized, Langan will assist the design team in preparing specification sections related to geotechnical issues such as earthwork, deep foundations, backfill, and excavation support. Langan should also, when authorized, review the project plans, as well as Contractor submittals relating to materials and construction procedures for geotechnical work, to confirm the designs incorporate the intent of our recommendations.

Langan has investigated and interpreted the site subsurface conditions and developed the design recommendations contained herein, and is therefore experienced with site conditions, and suited to perform quality assurance observation and testing of geotechnical-related work during construction. The work requiring quality assurance confirmation and/or special inspections per the Building Code includes, but is not limited to, earthwork, backfill, ground improvement, shallow and deep foundations, and excavation support.

Recognizing that construction observation is the final stage of geotechnical design, quality assurance observation during construction by Langan is necessary to confirm the geotechnical design assumptions and the conditions encountered during construction are consistent with those anticipated. The foundation system and general geotechnical construction methods recommended herein are predicated upon Langan assisting with the final design and providing

construction observation services, including confirmation and documentation of the removal and recompaction/moisture conditioning efforts, for the Owner. Should Langan not be retained for these services, Langan cannot assume the role of geotechnical engineer of record, and the entity providing the final design and construction observation services must serve as the geotechnical engineer of record and accept/be responsible for all previous investigation results and geotechnical recommendations developed for the project.

9.0 OWNER AND CONTRACTOR RESPONSIBILITIES

The Contractor is responsible for construction quality control, which includes satisfactorily constructing the foundation system and any associated temporary works to achieve the design intent while not adversely impacting or causing loss of support to neighboring property, structures, utilities, roadways, etc. Construction activities that can alter the existing ground conditions such as excavation, fill placement, foundation construction, ground improvement, pile driving/drilling, dewatering, etc. can also induce stresses, vibrations, and movements in nearby structures and utilities, and disturb occupants. Contractors are solely responsible to ensure that their activities will not adversely affect the structures and utilities and will not disturb occupants. Contractors must also take all necessary measures to protect the existing structures, utilities, etc. during construction. By using this report, the Owner agrees that Langan will not be held responsible for any damage to adjacent structures, utilities, etc.

The preparation and use of this report is based on the condition that the project construction contract between the Owner and their Contractor(s) will include: 1) Langan being added to the Project Wrap and/or Contractor's General Liability insurance as an additional insured, and 2) language specifically stating the Foundation Contractor will defend, indemnify, and hold harmless the Owner and Langan against all claims related to disturbance or damage to adjacent structures, utilities, etc. or properties.

10.0 LIMITATIONS

The conclusions and recommendations provided in this report result from Langan's interpretation of the geotechnical conditions existing at the site inferred from a limited number of borings and test pits at the indicated locations, as well as information provided by the Client. Actual subsurface conditions encountered during construction may vary. Recommendations provided are dependent upon one another and no recommendation should be followed independent of the others.

Any proposed changes in structures, structural loads, or the structure locations should be brought to Langan's attention immediately so that Langan can determine whether such changes affect the recommendations. Information on subsurface strata and groundwater levels shown on the boring and test pit logs represent conditions encountered only at the locations indicated and at the time of investigation. If different conditions are encountered during construction, they should

immediately be brought to Langan's attention for evaluation, as they may affect the recommendations presented herein.

This report has been prepared solely to assist the Owner, architect, and structural engineer in the design process and is only applicable to the design of the specific project identified. The information in this report cannot be utilized or relied on by engineers or contractors who are involved in evaluations or designs of facilities (including underpinning, grouting, ground stabilization, etc.) without prior written authorization from Langan, or on adjacent properties which are beyond the limits of that which is the specific subject of this report.

Environmental issues (such as permitting or potentially contaminated soil and groundwater) are outside the scope of this study and should be addressed in a separate evaluation.

Sheet 1 of 1

Project	Project No.	Date
Chisme Solar and Storage	520102301	5/7/2025

Location	Elevation and Datum
8987 CR 268, Brown County, TX	Approx. el. 1286.8 (NAVD 88)

Excavation Company	Depth	Water Level - First	Water Level - Completion
Formulated Solutions, LLC	4.0 ft	N/A	N/A

Excavation Equipment	Excavation Foreman	Field Engineer
John Deere 35P	Joseph Marquez	Sharen Wallace

SYMBOL	Elev. (ft)	DESCRIPTION	Depth Scale	SAMPLE Number	SAMPLE Type	REMARKS
	+1286.8	Dark brown Silty fine SAND, some fine to coarse gravel, with rootlets (moist) [SM]	0	G-1	GRAB	
	+1286.1	Reddish brown to brown Gravelly CLAY, some fine sand, with rootlets (moist) [CL]	1	G-2	GRAB	
		Brown to light brown Gravelly CLAY, some fine sand (moist) [CL]	2	G-3	GRAB	
	+1282.8	End of Test Pit at 4.0ft.	3			Excavator refusal at 4 ft. Test pit backfilled to grade with soil cuttings.

Soil Testing Properties		
Initial Condition	Initial Water Content (%)	6.2
	Initial Specimen Height (in)	0.806
	Initial Dry Unit Weight, γ_o (pcf)	119.7
	Initial Void Ratio, e_o	0.398
	Initial Degree of Saturation (%)	42.1
End of Testing Condition	Final Water Content (%)	13.4
	Final Specimen Height (in)	0.796
	Final Dry Unit Weight, γ_f (pcf)	121.1
	Final Void Ratio, e_f	0.381
Swell Pressure at Initial Void Ratio (psf)		3,800
Swell Strain, ε_s (%)		3.5

Test Method: C
Method of Preparation: *Shelby Tube*
Specimen Diameter (in): 2.497

Specimen was inundated with potable tap water during testing. Loading increment duration was minimum 24 hours. Gs assumed to be 2.68. The machine deflections were measured for all loading steps that also included for the final results.

Soil Testing Properties		
Initial Condition	Initial Water Content (%)	14.6
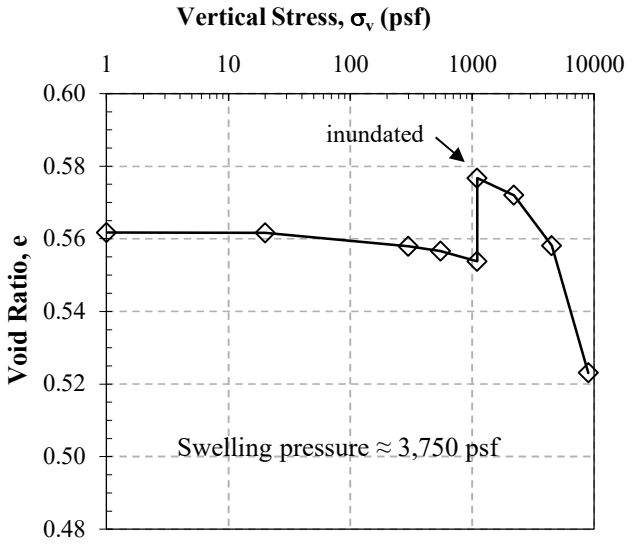
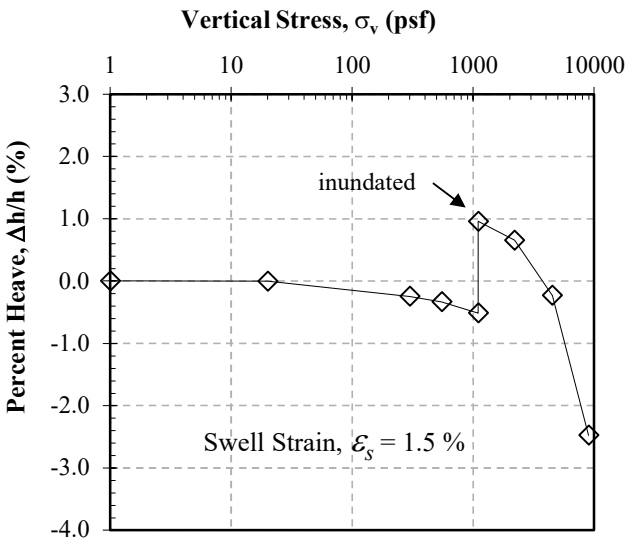
	Initial Specimen Height (in)	0.805
	Initial Dry Unit Weight, γ_o (pcf)	107.1
	Initial Void Ratio, e_o	0.562
	Initial Degree of Saturation (%)	69.4
End of Testing Condition	Final Water Content (%)	19.4
	Final Specimen Height (in)	0.785
	Final Dry Unit Weight, γ_f (pcf)	109.8
	Final Void Ratio, e_f	0.523
Swell Pressure at Initial Void Ratio (psf)		3,750
Swell Strain, ε_s (%)		1.5

Test Method: C
Method of Preparation: *Shelby Tube*
Specimen Diameter (in): 2.500

Specimen was inundated with potable tap water during testing. Loading increment duration was minimum 24 hours. Gs assumed to be 2.68. The machine deflections were measured for all loading steps that also included for the final results.





σ_v (psf)	1	20	300	550	1100	1100	2200	4500	9000

CBR (California Bearing Ratio) Test (ASTM D1883)

Client: Langan Engineering
Project Name: RRCE Chisme
(PN: 520102301)
Sample ID: Bulk-1 (0-4 ft)

Alpine Project No.: 2501017
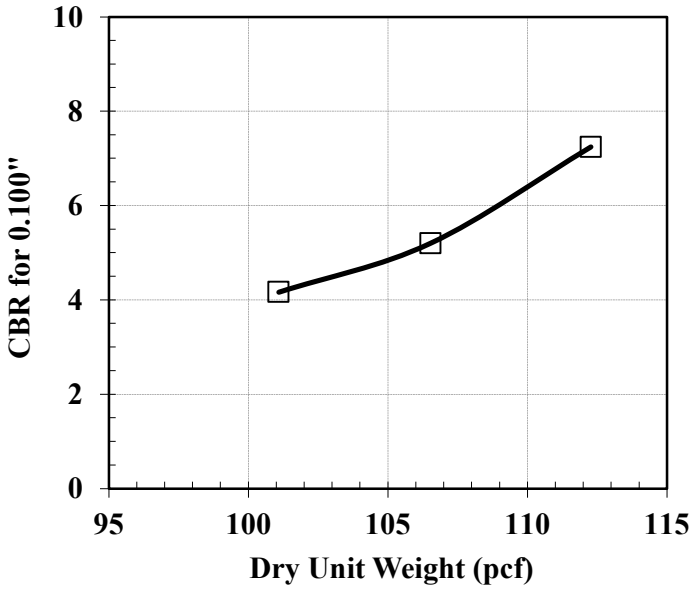
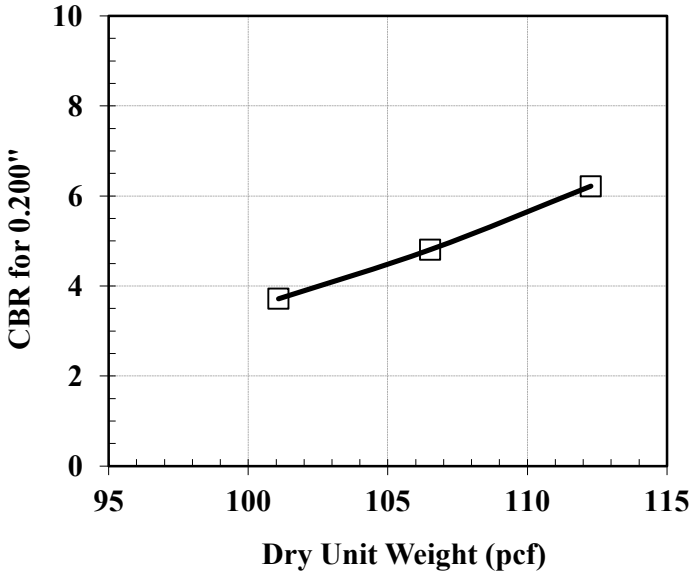
Test Date: 03/09/25
Tested By: C.M.

Rate of Penetration: 0.05 in/min

CBR for 0.100-inch Penetration



CBR for 0.200-inch Penetration



Initial Conditions			
Specimen No.	1	2	3
Target Dry Unit Weight (pcf)	101.2	106.8	112.4
Condition of Sample	Soaked		
Surcharge Weight (lbs)	10	10	10
Water Content (%)	14.2	14.1	14.1
Dry Unit Weight (pcf)	101.1	106.5	112.3

Final Conditions			
Water Content (%) at top 1-inch layer after soaking	24.0	22.7	21.5
Swell (% of initial height)	2.3	2.6	2.7
Bearing Ratio of Specimen at 0.100 in penetration	4.2	5.2	7.2
Bearing Ratio of Specimen at 0.200 in penetration	3.7	4.8	6.2

Note: Soil specimens were remolded to target unit weights of 90%, 95%, and 100% compaction at optimum water content (ASTM D698) per sample: Bulk-2 (0-4 ft). The 10 lbs surcharge load was placed during bearing test. It was allowed the specimens to soak for 96 hrs prior to bearing test. Prior to bearing test, removed the free water and allow the specimens to drain out for at least 15 minutes.

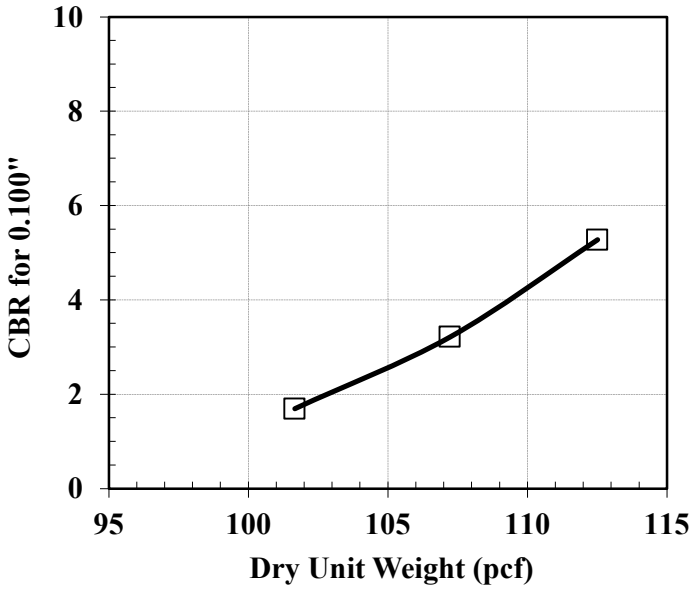
CBR (California Bearing Ratio) Test (ASTM D1883)

Client: Langan Engineering
Project Name: RRCE Chisme
(PN: 520102301)
Sample ID: Bulk-3 (0-4 ft)

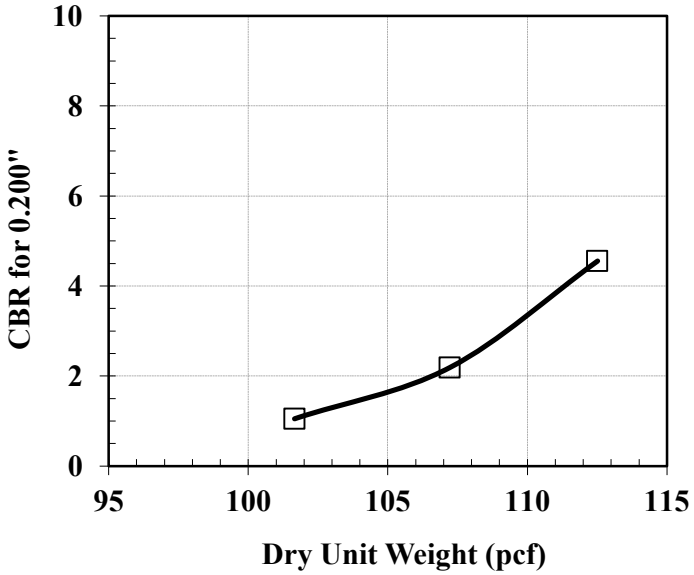
Alpine Project No.: 2501017
Test Date: 03/09/25
Tested By: C.M.

Rate of Penetration: 0.05 in/min

CBR for 0.100-inch Penetration



CBR for 0.200-inch Penetration



Initial Conditions			
Specimen No.	1	2	3
Target Dry Unit Weight (pcf)	101.6	107.3	112.9
Condition of Sample	Soaked		
Surcharge Weight (lbs)	10	10	10
Water Content (%)	13.5	13.5	13.6
Dry Unit Weight (pcf)	101.7	107.2	112.5

Final Conditions			
Water Content (%) at top 1-inch layer after soaking	18.6	15.8	14.7
Swell (% of initial height)	0.2	0.2	0.2
Bearing Ratio of Specimen at 0.100 in penetration	1.7	3.2	5.3
Bearing Ratio of Specimen at 0.200 in penetration	1.1	2.2	4.6

Note: Soil specimens were remolded to target unit weights of 90%, 95%, and 100% compaction at optimum water content (ASTM D698) per sample: Bulk-2 (0-4 ft). The 10 lbs surcharge load was placed during bearing test. It was allowed the specimens to soak for 96 hrs prior to bearing test. Prior to bearing test, removed the free water and allow the specimens to drain out for at least 15 minutes.

The conclusions in the Report titled **Wetland Delineation and Listed Species Habitat Assessment Report, Texas** are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Red River Clean Energy, LLC (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided to applicable authorities having jurisdiction and others for whom the Client is responsible, Stantec does not warrant the services to any third party. The Report may not be relied upon by any other party without the express written consent of Stantec, which may be withheld at Stantec's discretion.

1 Executive Summary

Stantec was contracted by Red River Clean Energy, LLC, to conduct a wetland delineation for the proposed Chisme Solar Facility (Project) that would be constructed on approximately 722 acres in Mills and Brown counties, Texas (Project Area). The tasks performed as part of the wetland delineation included a review of historical and current topographic maps, true color and infrared aerial imagery, wetland inventory maps, flood maps, and soil survey data. The methodology, results, and recommendations of the review for the Project Area are summarized below.

In compliance with Section 404 of the Clean Water Act, this report contains a delineation of potential waters of the US (WOTUS) that would fall under the jurisdiction of the US Army Corps of Engineers (USACE). The field delineation was performed by Stantec scientists on October 31, 2023. Potential wetlands identified using the US Fish and Wildlife Service's National Wetlands Inventory and potential waters identified using the National Hydrography Dataset within the Project Area were investigated in the field.

Stantec scientists identified 5 wetlands and 8 streams within the Project Area. Of these features, 2 streams appear to have hydrologic connection to onsite and offsite streams that flow into Fisk Creek and Pecan Bayou, a tributary of the Colorado River, which is a traditionally navigable waterway. A total of 0 acres (0%) of the Project Area are within the Federal Emergency Management Agency 100-year floodplain. If Project construction were to affect jurisdictional streams or wetlands, a Section 404 permit may be required from USACE.

Under Section 404 of the Clean Water Act, the Project could be completed under Nationwide Permit (NWP) 51, *Land-Based Renewable Energy Generation Facilities*; NWP 14, *Linear Transportation Projects*; and/or NWP C/57, *Electric Utility Line and Telecommunications Activities*. Additionally, Red River Clean Energy would need to develop a Storm Water Pollution Prevention Plan for the Project and provide Notice of Intent prior to construction. As stated in the NWPs, the discharge of dredged or fill material into wetlands and non-tidal WOTUS must not cause the loss of greater than 0.5 acre of wetlands and non-tidal WOTUS. If activities from the construction of the Project and associated infrastructure, such as roads, parking lots, stormwater management facilities, and pipelines, permanently affect less than 0.5 acre, then Red River Clean Energy, LLC may proceed with the Project using an NWP. Permanent impacts that exceed the 0.5-acre threshold for NWPs require an Individual Permit.

2 Introduction

Stantec, was contracted by Red River Clean Energy, LLC, to perform a preliminary delineation of potential waters of the US (WOTUS) for the proposed Chisme Solar Facility (Project) that would be constructed on approximately 722 acres in Mills and Brown Counties, Texas (Project Area; Figure 2-1). This report presents a delineation of all resources that potentially fall under the jurisdiction of the US Army Corps of Engineers (USACE).

Stantec conducted desktop investigations to meet the following objectives:

- Review physical characteristics of the Project Area for potential WOTUS, and
- Identify potential environmental permits that may be required to construct the Project.

Stantec scientists conducted field delineations of the entire Project Area on October 31, 2023, to meet the following objectives:

- Delineate the approximate boundaries of potential wetlands and waterbodies within the Project Area,
- Determine if potential habitat exists for listed species, and
- Document general site conditions.

Stantec evaluated features in the Project Area for potential federal jurisdiction. Stantec's interpretation was made based on available documentation from the US Environmental Protection Agency (USEPA), including guidance titled Current Implementation of Waters of the United States, which refers to the original 1986/1988 promulgation and subsequent Supreme Court cases that further defined the term, with the most current definition below determined by the 2008 ruling following the Rapanos v. United States case (USEPA 2021). This rule was amended on August 29, 2023; due to ongoing litigation, Texas is one of the 27 states that continue to interpret WOTUS consistent with the pre-2015 regulatory regime and applicable conditions of the 2023 Sackett ruling.

USACE and USEPA assert jurisdiction over the following waters:

- Traditionally navigable waters (TNWs),
- Wetlands adjacent to TNWs,
- Non-navigable tributaries of TNWs that are relatively permanent where the tributaries typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months), and
- Wetlands that directly abut such tributaries.

USACE and USEPA will decide jurisdiction over the following waters based on a fact-specific analysis to determine whether they have a surface connection with a TNW:

- Non-navigable tributaries that are not relatively permanent,
- Wetlands adjacent to non-navigable tributaries that are not relatively permanent, and
- Wetlands adjacent to but not directly abutting a relatively permanent non-navigable tributary.

USACE and USEPA generally will not assert jurisdiction over the following features:

- Swales or erosional features (e.g., gullies, small washes characterized by low-volume, infrequent, or short-duration flow), and
- Ditches (including roadside ditches) excavated wholly in and draining only uplands and that do not carry a relatively permanent flow of water.
- Non relatively permanent waters (ephemeral streams)

The following sections of this Report describe the proposed Project location; present the assessment methodology, results of the desktop review and field investigations, and conclusions and recommendations; and provide the supporting references.

Title
Project Area Overview

Disclaimer: This document has been prepared based on information provided by others as cited in the Notes section. Stantec has not verified the accuracy and/or completeness of this information and shall not be responsible for any errors or omissions which may be incorporated herein as a result. Stantec assumes no responsibility for data supplied in electronic format, and the recipient accepts full responsibility for verifying the accuracy and completeness of the data.

3 Proposed Project Location

The proposed Project would be located in a rural setting approximately 14 miles southeast of Brownwood, Texas, in northwestern Mills County. According to the USEPA's Level III and IV Ecoregions of EPA, the Project falls within the Western Cross Timbers (29c) ecoregion (Griffith, Omernik, Cleland, McMahon, & Woods et. al 2004).

3.1 Ecoregion 29c Western Cross Timbers Level IV Ecoregion

The Western Cross Timbers ecoregion covers the wooded areas west of the Grand Prairie (29d) on sandstone and shale beds. The landscape has cuesta topography consisting of sandstone ridges with a gentle dip slope on one side and a steeper scarp on the other. The soils are mostly fine sandy loams with clay subsoils that retain water. As in the Eastern Cross Timbers (29b), the dominant trees are post oak and blackjack oak with an understory of greenbriar, little bluestem, and purpletop grasses. Some researchers contend that these woodland areas would be savanna-like if they experienced fire, although one early account described the Cross Timbers as "an immense natural hedge" or belt of thick impenetrable forest. It is likely that there were more prairie openings between the belts of forest. The area has a long history of coal, oil, and natural gas production from the Pennsylvanian sandstone/limestone/shale beds. Deeper soils in the eastern part of this ecoregion support a dairy industry, pastureland, and cultivation of forage sorghum, silage, corn, and peanuts.

3.2 Hydrology

The Project is located within the following watershed:

- Mackinally Creek-Pecan Bayou (Hydrologic Unit Code [HUC 12] 120901070407)

The entirety of the Project Area is located within the Mackinally Creek-Pecan Bayou watershed.

USACE, Fort Worth Regulatory District, office exercises regulatory jurisdiction over the Project Area. Tributaries to navigable waters may not be navigable themselves but have a significant impact on water quality in downstream waters through a surface connection and, therefore, are also under the jurisdiction of USACE. During the wetland delineation, Stantec scientists found all waterways within the Project Area to be natural. The entire Project Area drains into the Mackinally Creek-Pecan Bayou watershed.

According to the Federal Emergency Management Agency's (FEMA's) Flood Insurance Rate Map panel 48049C0550E (effective August 8, 2018), 0 acres (0 percent) of the Project Area is within the 100-year floodplain. Overall, hydrology, represented by the National Hydrography Dataset data and Watershed Boundary Dataset data (US Geological Survey [USGS] 2023a), streams, and floodplains are depicted in Figure 3-1.

Disclaimer: This document has been prepared based on information provided by others as cited in the Notes section. Stantec has not verified the accuracy and/or completeness of this information and shall not be responsible for any errors or omissions which may be incorporated herein as a result. Stantec assumes no responsibility for data supplied in electronic format, and the recipient accepts full responsibility for verifying the accuracy and completeness of the data.

3.3 Land Use

The National Land Cover Dataset (NLCD) maps most of the Project Area as Grassland/Herbaceous, which constitutes 55% of the Surveyed Area (Table 3-1, Figure 3-2). Four additional land cover types are mapped within the Surveyed Area.

Table 3-1 NLCD Land Cover Types Within the Project Area

NLCD Cover Type	Acres within Project Area	Percentage of Project Area
Grassland/Herbaceous	396.7	55.0%
Shrub/Scrub	281.1	38.9%
Evergreen Forest	21.7	3.0%
Mixed Forest	21.1	2.9%
Deciduous Forest	1.2	0.2%

Source: US Geological Survey (USGS) 2021
Notes: NLCD - National Land Cover Dataset
Percentages and acreages may be slightly off due to rounding.

3.4 Soil Series

Soils within the Project Area can be generally described as moderately well drained and well drained soils. According to the US Department of Agriculture, Natural Resource Conservation Service (USDA-NRCS) website accessed December 2023, the Project Area is located within 9 soil map units, which are listed in Table 3-2. Two soil types within the Project Area boundaries met the hydric soil criteria as described by the National Technical Committee for Hydric Soils (Figure 3-3). Six of the soils are considered prime farmland and 3 of the soils are not considered prime farmland.

It should be noted that caution must be used when comparing the list of hydric components to soil survey maps. Many of the soil lists have ranges in water table depths that allow the soil component to range from hydric to non-hydric depending on the location of the soil within the landscape as described in the map unit. Lists of hydric soils along with soil survey maps are good offsite ancillary tools to assist in wetland determinations, but they are not a substitute for observations made during onsite investigations.

Title
Soils Within the Project Area

Disclaimer: This document has been prepared based on information provided by others as cited in the Notes section. Stantec has not verified the accuracy and/or completeness of this information and shall not be responsible for any errors or omissions which may be incorporated herein as a result. Stantec assumes no responsibility for data supplied in electronic format, and the recipient accepts full responsibility for verifying the accuracy and completeness of the data.

4 Assessment Methodology

4.1 Desktop Site Investigation

Stantec conducted a desktop investigation of the Project Area using federal and local geographic information system (GIS) data to identify potential wetlands, waterbodies, floodplains, and habitats that could affect the Project development process. Potential WOTUS were identified using the US Fish and Wildlife Service's (USFWS's) National Wetlands Inventory (USFWS 2023a), USGS's National Hydrography Dataset GIS data layers and topographic maps (USGS 2023b), and FEMA's Flood Insurance Rate Map (FEMA 2023).

4.2 Field Site Investigation

Stantec scientists performed a field survey of the Project Area on October 31, 2023. Approximately 722 acres were surveyed for the presence of WOTUS, listed species, or potential habitats. Stantec scientists performed all wetland delineation surveys in accordance with the USACE's *Wetlands Delineation Manual* (USACE 1987) and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Great Plains Region* (USACE 2010).

4.3 Wetlands and Waterbodies

Wetlands are collectively defined by USACE and USEPA as those areas that are inundated or saturated by surface water or groundwater at a frequency or duration sufficient to support, under normal circumstances, a prevalence of vegetation typically adapted for life in saturated soil conditions (USACE 1987). An area is a wetland if it meets the wetland hydrology, hydrophytic vegetation, and hydric soil criteria established in the USACE manual.

Stantec scientists surveyed the Project Area for the presence/absence of wetlands and waterbodies (Appendix A). All pertinent field data were collected using the USACE's Great Plains wetland determination datasheets (Appendix B).

4.3.1 Hydrophytic Vegetation

Hydrophytic vegetation is defined as "the sum total of macrophytic plant life that occurs in areas where the frequency and duration of inundation or soil saturation produce permanently or periodically saturated soils of sufficient duration to exert a controlling influence on the plant species present" (USACE 1987). Stantec identified dominant vegetation and categorized it in accordance with the regional indicator status in USACE's national list of plant species that occur in wetlands. The indicator status of a plant species is expressed in terms of the estimated probability of that species occurring in wetland conditions within a given region (USACE 2020). Table 4-1 lists the plant indicator status categories. A vegetative community would be determined to be hydrophytic if more than 50 percent of the dominant species present were facultative (FAC), facultative wetland (FACW), or obligate wetland (OBL).

Table 4-1 Plant Indicator Status Categories

Indicator Category	Indicator	Frequency of Occurrence in Wetlands (percent)
Obligate Wetland Plants	OBL	Plants that occur almost always (estimated probability >99%) in wetlands under natural conditions but that may also occur rarely (estimated probability <1%) in non-wetlands. Examples: *Carya aquatica* and *Persicaria punctata*.
Facultative Wetland Plants	FACW	Plants that usually occur (estimated probability 67–99%) in wetlands but also occur in non-wetlands. Examples: *Spartina patens* and *Panicum dichotomiflorum*.
Facultative Plants	FAC	Plants with a similar likelihood (estimated probability of 33–67%) of occurring in both wetlands and non-wetlands. Examples: *Stenotaphrum secundatum* and *Rumex cripus*.
Facultative Upland Plants	FACU	Plants that occur sometimes (estimated probability 1–33%) in wetlands but that occur more often (estimated probability 67–99%) in non-wetlands. Examples: *Cirsium vulgare* and *Rubus trivialis.*
Obligate Upland Plants	UPL	Plants that occur rarely (estimated probability <1%) in wetlands but almost always (>99% estimated probability) occur in non-wetlands. Example: *Geranium carolinianum.*

4.3.2 Wetland Hydrology

Wetland hydrology includes all hydrologic characteristics of areas that are periodically inundated or have soils saturated to the surface at some time during the growing season. Areas with evident characteristics of wetland hydrology are those where the presence of water has an overriding influence on characteristics of vegetation and soils from anaerobic and reducing conditions, respectively (USACE 1987).

4.3.3 Hydric Soils

Hydric soils are defined as soils that are saturated, flooded, or ponded long enough during the growing season to develop anaerobic conditions in the upper stratum. In general, hydric soils are flooded, ponded, or saturated for a week or more during the growing season when soil temperatures are above 32 degrees Fahrenheit. The anaerobic conditions created by repeated or prolonged saturation or flooding result in permanent changes in soil color and chemistry and are used to differentiate hydric from non-hydric soils (USACE 1987).

At each recorded data point, a pit up to 20 inches deep was excavated for evaluation. Soils were surveyed to identify horizon profile, matrix, value, chroma, texture, and concretions.

Hydric soils were determined to be present if one primary hydric soil indicator was present. Background soils information for the Project Area was obtained from the USDA-NRCS Web Soil Survey (USDA-NRCS 2023).

4.4 Mapping

All delineated features were recorded using a sub-meter Global Positioning System (GPS) device. The GPS was programmed to record points with a minimum of four satellites and a position dilution of precision value that was no greater than 6.0. Stantec scientists delineated water features by collecting GPS points along the perimeter of the wetland or ordinary high-water mark with suitable frequency to represent the feature within the Project Area. Maps of delineated features are provided in Appendix A, and supporting datasheets are provided in Appendix B.

4.5 Photographs

Photographs are the visual documentation of site conditions as they existed during the field survey. Representative photographs were taken at all delineated features. For all features, a minimum of one photograph was taken. The photographic log is provided in Appendix C.

5 Results of Findings

5.1 Threatened and Endangered Species Assessment

Stantec conducted desktop environmental assessments and onsite habitat evaluations for listed species within the Project Area. Table 5-1 lists the state and federally protected species that were identified by the USFWS's IPaC (USFWS 2023c) database as having the potential to occur within the Project Area or be affected by the Project. Copies of the IPaC and state lists are provided in Appendix A. In total, 4 listed species were identified by the USFWS IPaC database as potentially occurring in Mills and Brown counties. Of the listed species, none were determined to have a moderate likelihood of occurring in the Project Area based on the available habitat and site conditions. No presence of these species was recorded during the site investigation.

Table 5-1 Listed Species for Decatur and Shelby Counties

Category	Common Name	Scientific Name	Federal Status[1]	Likelihood of Occupying the Project Area
Mammals	Tricolored bat	*Perimyotis subflavus*	PE	Low
Birds	Piping Plover	*Charadrius melodus*	T	Low
	Rufa Red Knot	*Calidris canutus rufa*	T	Low
Insect	Monarch butterfly	*Danaus plexippus*	C	Low

Notes: C – Candidate
E – Endangered
T – Threatened
PE – Proposed Endangered
PT – Proposed Threatened

5.1.1.1.1 Birds

The USFWS iPaC listed species list for Mills and Brown counties identified the Piping plover (*Charadrius melodus*) and Rufa red knot (*Calidris canutus rufa*) as a species of concern. Per the iPaC, the Piping plover and Rufa red knot only need to be considered for wind energy projects, so they do not apply to this Project.

5.1.1.1.2 Mammals

Stantec examined the Project Area for potential bat habitat. The tricolored bat (*Perimyotis subflavus*) primarily roost in caves, mines, and culverts during the winter and in trees or structures during the summer roosting season (USFWS, 2022). No known refuges are known to occur in Mills and Brown counties for the species according to USFWS's publicly available map application. No caves or snags for potential roosting were identified. To avoid potential impacts to bats, the Project should avoid waterways, wetlands, and forested areas, and if any trees bordering riparian areas need to be cleared; clearing would occur only during the non-roosting season (winter), outside the active bat season (generally Spring through Fall); then, the Project is not likely to adversely affect federally listed bat species.

5.1.1.1.3 Monarch Butterfly

The monarch butterfly (*Danaus plexippus*) is a candidate species for federal listing, but it is not state protected. Consequently, it does not have federal protection. Milkweeds were not observed in during the October visit. Solar panel construction and conversion of cropland or woodlands may allow for diversity and growth of wildflowers, potentially creating more habitat for milkweeds and monarch butterflies.

5.1.1.2 Regulatory Framework

The following sections provide descriptions of state and federal regulations that pertain to the protection of wildlife and plant species. These regulations may need to be considered if development of the Project would impact protected species or associated habitats.

5.1.1.2.1 Federal Regulations

Endangered Species Act

The Endangered Species Act of 1973 (ESA; 16 United States Code [USC] 1531 et seq. [1973]) establishes a national policy for conserving threatened and endangered (T&E) species of fish, wildlife, and plants and the critical habitats on which they depend. The US Fish and Wildlife Service (USFWS; for terrestrial and freshwater species) and the National Oceanic and Atmospheric Administration Fisheries (for marine species) jointly administer the ESA and are responsible for listing a species as threatened or endangered, designating critical habitat, developing and implementing protective regulations and recovery plans, and undertaking several other management and conservation efforts pursuant to the ESA (e.g., review of project impacts and mitigation, impact determinations, and issuing permits). The Project would fall under the jurisdiction of USFWS.

Section 9 of the ESA prohibits the *take* of any fish or wildlife species listed under the ESA as endangered or of any endangered plant species on federal lands (16 USC 1538 [1973]). By regulation, USFWS has extended this take prohibition to most species listed as threatened (50 Code of Federal Regulations [CFR] 17.31 [2019]). Because the Project is on private land (see Section 3), federally listed plants would not be regulated in the Project Area. Under the ESA, the term *take* for fish and wildlife means “to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct” (16 USC 1532(19) [1973]). If a project may adversely affect a species listed under the ESA, non-federal projects can obtain an incidental take authorization by applying for an incidental take permit, which involves developing, funding, and implementing a USFWS-approved Habitat Conservation Plan to minimize and mitigate the effects of the proposed taking (16 USC 1539(a)(2) [1973] and 50 CFR 17.22(b) [1985]). The determination of the potential for a Project to affect a threatened or endangered species is determined through consultation with the USFWS and may require additional surveys to further determine if a species would be affected by a proposed Project.

Bald and Golden Eagle Protection Act

Bald eagles *(Haliaeetus leucocephalus*) and golden eagles (*Aquila chrysaetos*) eagles are afforded protection under the Bald and Golden Eagle Protection Act of 1940 (BGEPA; 50 CFR 22.26 [2009]). The BGEPA, along with its implementing regulations, provides additional protection to bald and golden eagles. In this statute, the definition of take is to “pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, or molest, or disturb.” The term disturb, as defined in regulations found at 50 CFR 22.3 (1974), is “to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available: (1) injury to an eagle; (2) a decrease in its productivity, by

substantially interfering with normal breeding, feeding, or sheltering behavior; or (3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior."

USFWS published a final rule (Eagle Permit Rule) on September 11, 2009, under the BGEPA authorizing limited issuance of permits to take bald eagles and golden eagles ''for the protection of other interests in any particular locality.'' This rule applies where the take is compatible with the preservation of the bald and golden eagles, is associated with and not the purpose of an otherwise lawful activity and cannot practicably be avoided (74 Federal Register 46836 [September 11, 2009]).

If further evaluation identifies nests and/or high eagle use in an area and construction of a project may result in take of the species, a nest disturbance permit could be acquired to comply with the regulations of the BGEPA. No nests were documented during habitat surveys.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act of 1918 (MBTA; 16 USC 703−712 [1918]) assigns legal authority to USFWS to protect more than 1,000 species of raptors, diurnal migrants, and passerine migratory birds from take. USFWS maintains a list of species protected by the MBTA at 50 CFR 10.13 (1973). The MBTA prohibits the "taking, killing, possession, transportation, import and export of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Department of the Interior" (16 USC 703 [1918]). The term take is defined by regulation as "to pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to pursue, hunt, shoot, wound, kill, trap, capture, or collect" (50 CFR 10.12 [1973]). However, there is currently no mechanism for authorizing incidental take under the MBTA. If significant tree clearing would be required to construct the Project then it is recommended that tree clearing occur outside of the bird nesting season April 1 through August 31 or a pre-clearing nest survey be conducted to eliminate potential take (USDA 2018). During the July 2023 site visit, one active nest of baby songbirds was discovered in an oak sapling close to the ground. Specific species could not be identified but the young appeared to be either a species of swallow or potentially oriole.

5.2 Precipitation Data

According to the USACE's Antecedent Precipitation Tool (version 1.0.19), climatic conditions at the Project Area during the time of survey were considered normal conditions. The drought index through the Palmer Drought Severity Index indicated the area was experiencing wetter than normal conditions at the time of survey. The nearest reporting regional station with historical precipitation data (100 miles east of the Project in Waco, TX) reported 2.73 inches for the week prior to the survey. During the week of the survey, 1.05 inches of precipitation were recorded in Mills and Brown counties, Texas. The rainfall data for the Project Area are presented in Table 5-1.

Table 5-2 Rainfall Data for Mills and Brown Counties, Texas.

Month	Recorded Monthly Rainfall (inches)
July, 2023	0
August, 2023	0.08
September, 2023	3.34
October, 2023	4.90
November, 2023	1.80

Source: Weather Underground 2023

Precipitation amounts were typical for July through November.

5.3 Wetlands

Stantec scientists investigated the Project Area for wetlands that exhibited the three USACE criteria (hydrophytic vegetation, wetland hydrology, and hydric soils) and delineated 5 wetlands: 2 palustrine emergent (PEM) wetlands and 3 palustrine unconsolidated bottom (PUB) wetlands, totaling 2.66 acres (Table 5-2). A figure depicting delineated features is included in Appendix A, and datasheets are presented in Appendix B.

Table 5-3 Delineated Wetlands

Map ID[1]	Wetland Classification[2]	Latitude[3]	Longitude[3]	Acreage within Survey Area	Potentially Jurisdictional?
WET-1	PEM	31.57428	-98.828117	0.08	No
WET-2	PUB	31.574127	-98.828463	0.31	No
WET-3	PEM	31.569901	-98.827491	1.18	No
WET-4	PUB	31.565749	-98.83087	0.99	No
WET-5	PUB	31.56432	-98.82625	0.10	No
			Potentially Non-Jurisdictional	*2.66*	
			Total	**2.66**	

[1] Map identification represents unique designations given to each wetland during field surveys.
[2] Wetland classification represents the wetland classes based on Cowardin et al. (1979).
[3] Latitude and longitude presented in North American Datum of 1983 decimal degrees.

Notes: PEM – palustrine emergent wetland
PUB – palustrine unconsolidated-bottom wetland (pond)

5.4 Waterbodies

Stantec scientists identified 6 ephemeral streams totaling 4,438 feet (0.84 miles) within the Project Area (Table 5-3). A map book depicting all delineated streams can be found in Appendix A.

Table 5-4 Delineated Streams

Map ID[1]	Stream Classification[2]	Latitude[3]	Longitude[3]	Linear Feet within Project Area	Miles within Project Area	Potentially Jurisdictional?
S-1	Ephemeral	31.574292	-98.828262	80.16	0.02	No
S-2	Ephemeral	31.569374	-98.826927	147.75	0.03	No
S-3	Ephemeral	31.570639	-98.827972	245.28	0.05	No
S-4	Ephemeral	31.562938	-98.809992	349.68	0.07	No
S-5	Ephemeral	31.562781	-98.81029	178.56	0.03	No
S-6	Ephemeral	31.563209	-98.810166	190.96	0.04	No
S-7	Intermittent	31.570678	-98.819424	6147.85	1.16	Yes
S-8	Intermittent	31.5624065	-98.809942	232.10	0.04	Yes

Map ID[1]	Stream Classification[2]	Latitude[3]	Longitude[3]	Linear Feet within Project Area	Miles within Project Area	Potentially Jurisdictional?
			Potentially Jurisdictional Subtotal[4]	*6,379.95*	*1.2*	
			Potentially Non-Jurisdictional[4]	*1,192.39*	*0.23*	
			Total[4]	**7,572.34**	**1.43**	

1 Map identification represents unique designations given to each stream during field surveys.
2 Stream classification determined from topographic maps and field observations.
3 Latitude and longitude presented in North American Datum of 1983 decimal degrees.
4 Column may not equal the sum of all rows due to rounding.

6 Conclusion and Recommendations

Stantec reviewed historical and current topographic maps, historical and current aerial imagery, wetland inventory maps, flood maps, and soil survey data as part of a desktop investigation during its wetland delineation. Stantec also completed wetland and waterbody field surveys to document WOTUS within the Project Area.

In compliance with Section 404 of the Clean Water Act, this report contains a delineation of potential WOTUS that may fall under the jurisdiction of USACE. The desktop review and field delineation were performed by Stantec scientists in which all potentially jurisdictional waters within the Project Area were mapped and characterized. Stantec scientists identified 5 wetlands and 8 streams within the Project Area. Only 2 stream features appear to have hydrologic connection to onsite and offsite streams that flow into Fisk Creek and into Pecan Bayou, a tributary of the Colorado River, which is a TNW. A total of 0 acres (0 percent) of the Project Area is within the FEMA 100-year floodplain. If the Project were to impact potentially jurisdictional waters, Stantec recommends obtaining a jurisdictional determination from the USACE, Fort Worth Regulatory District, office to determine whether the identified wetlands and waterways would be considered jurisdictional by USACE.

- Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes No X

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: DP-1

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Type[1]	Loc[2]	Texture	Remarks
0-16	10YR 5/4	100					Sand	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5) **(LRR F)**
- ___ 1 cm Muck (A9) **(LRR F, G, H)**
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ 2.5 cm Mucky Peat or Peat (S2) **(LRR G, H)**
- ___ 5 cm Mucky Peat or Peat (S3) **(LRR F)**
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Loamy Mucky Mineral (F1)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)
- ___ High Plains Depressions (F16) **(MLRA 72 & 73 of LRR H)**

Indicators for Problematic Hydric Soils[3]:

- ___ 1 cm Muck (A9) **(LRR I, J)**
- ___ Coast Prairie Redox (A16) **(LRR F, G, H)**
- ___ Dark Surface (S7) **(LRR G)**
- ___ High Plains Depressions (F16) **(LRR H outside of MLRA 72 & 73)**
- ___ Reduced Vertic (F18)
- ___ Red Parent Material (TF2)
- ___ Very Shallow Dark Surface (TF12)
- ___ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: CL

Depth (inches): 16

Hydric Soil Present? Yes ___ No X

December 06, 2023

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological

evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at: https://www.fws.gov/sites/default/files/documents/endangered-species-consultation-handbook.pdf

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see https://www.fws.gov/program/migratory-bird-permit/what-we-do.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see https://www.fws.gov/library/collections/threats-birds.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/partner/council-conservation-migratory-birds.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Austin Ecological Services Field Office
1505 Ferguson Lane
Austin, TX 78754-4501

PROJECT SUMMARY

Project Code: 2024-0023834
Project Name: Chisme Solar
Project Type: Power Gen - Solar
Project Description: Solar project in Mills and Brown counties, Texas
Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@31.572072249999998,-98.82193864003699,14z

Counties: Brown and Mills counties, Texas

ENDANGERED SPECIES ACT SPECIES

There is a total of 4 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species. Note that 2 of these species should be considered only under certain conditions.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

MAMMALS

NAME	STATUS
Tricolored Bat *Perimyotis subflavus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10515	Proposed Endangered

BIRDS

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is final critical habitat for this species. Your location does not overlap the critical habitat. This species only needs to be considered under the following conditions: ▪ Wind Energy Projects Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Rufa Red Knot *Calidris canutus rufa* There is proposed critical habitat for this species. This species only needs to be considered under the following conditions: ▪ Wind Energy Projects Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened

INSECTS

NAME	STATUS
Monarch Butterfly *Danaus plexippus*	Candidate

No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/9743

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.

The conclusions in the Report titled Phase I Environmental Site Assessment, Chisme Solar Project—Mills and Brown counties, Texas are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Red River Clean Energy, LLC (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided to applicable authorities having jurisdiction and others for whom the Client is responsible, Stantec does not warrant the services to any third party. The report may not be relied upon by any other party without the express written consent of Stantec, which may be withheld at Stantec's discretion.

Executive Summary

General Information

Project Information:	Approximately 722 acres across 8 parcels
Site Information:	Chisme Solar—Mills and Brown Counties, Texas
Reconnaissance Dates:	October 31, 2023
Site Assessors:	Kevin Rubio, Carinne Johnston

Findings and Conclusions Summary

Stantec performed this Phase I Environmental Site Assessment (ESA) for the Chisme Solar Project (Project) that consists of an approximately 722-acre site located in Mills and Brown counties, Texas (Project Area) in conformance with the scope and limitations of American Society of Testing and Material (ASTM) Standard Practice E 2247-16. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. This ESA identified evidence of one of recognized environmental conditions (RECs) and one site of environmental concern in connection with the Chisme Solar Project located in Mills and Brown counties near the town of Brownwood(Project Area).

Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed in the section of the report in which they were encountered. According to ASTM Standard Practice E 2247-16, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." Table ES-1 presents a list of common sources of *significant data gaps* and Stantec's experience with them on this Phase I ESA.

Table ES-1. Significant Data Gap Summary

Report Section		Description
2.4	Current Uses of the Properties	No significant data gap identified.
3.0	User-Provided Information	No significant data gap identified.
4.1	Standard Environmental Records	No significant data gap identified.
4.2	Physical Setting Sources	No significant data gap identified.
4.3	Historical Records Sources	No significant data gap identified.
5.1	Methodology and Limiting Conditions	No significant data gap identified.
6.0	Interviews	No data gap identified, responses were not received from landowner questionnaires, the Texas Department of Environmental Management, or the Mills and Brown counties Emergency Management Agency regarding records of environmental contamination in the Project Area.

Findings

Recognized Environmental Condition

A *recognized environmental condition,* or REC, refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property resulting from its release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment.

Stantec did not identify any RECs at the Project Area while conducting this Phase I ESA.

Controlled Recognized Environmental Condition

A CREC refers to a REC that resulted from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products, allowing it to remain in place subject to the implementation of required controls.

Stantec did not identify any CRECs within the Project Area while conducting this Phase I ESA.

Historical Recognized Environmental Condition

A *historical recognized environmental condition* (HREC) refers to a past release of any hazardous substances or petroleum products occurring in connection with the Project Area that has been addressed to the satisfaction of the applicable regulatory authority or meets unrestricted use criteria established by a regulatory authority, without subjecting the Project Area to any required controls.

Stantec did not identify any HRECs at the Project Area while conducting this Phase I ESA.

Environmental Issue

An *environmental issue* refers to environmental concerns identified by Stantec that warrant further discussion but that do not qualify as RECs.

Stantec did determine that this area was a formerly part of Camp Bowie and is listed as a FUDS Property No. K06TX0009. No unexploded ordinance was found during the Phase I ESA site reconnaissance or the wetland delineation; however the opportunity for UXO's to be onsite is high. Information concerning the probability of UXO's onsite during construction should be communicated to the EPC contractor or any other individuals performing earth moving activities.

Conclusions, Opinions and Recommendations

Stantec performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E2247-16 in the Project Area located in Mills and Brown counties near the town of Brownwood, Texas. Any exceptions to, or deletions from, are described in Section 1.4 of this report.

This Phase I ESA did not reveal evidence of historical or current RECs within the Project Area.

1 Introduction

1.1 PURPOSE

Stantec, conducted this Phase I Environmental Site Assessment (ESA) to identify recognized environmental conditions (RECs) and certain potential environmental conditions outside the scope of American Society of Testing and Material (ASTM) Standard Practice E 2247-16 in connection with the Chisme Solar Project located in Mills and Brown counties near the Town of Brownwood, Texas (Project Area) at the time of the site reconnaissance. This report documents the Stantec's findings, opinions, and conclusions of the Phase I ESA

1.2 SCOPE

Stantec conducted this Phase I ESA in general accordance with the ASTM Standard Practice E 2247-16, consistent with a level of care and skill ordinarily practiced in the environmental consulting profession by specialists currently providing similar services under similar circumstances. Significant additions, deletions, or exceptions to ASTM Standard Practice E 2247-16 are noted below or in the corresponding sections of this report (ASTM 2016). The scope of this Phase I ESA included an evaluation of the following elements:

- Physical setting characteristics of the Project Area through a review of referenced sources such as topographic maps and geologic, soils, and hydrologic reports.
- Use of the Project Area, adjoining properties, and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Use, treatment, storage, disposal, or generation of hazardous substances, petroleum products, hazardous wastes, non-hazardous solid wastes, and wastewater in the Project Area through observations and interviews.
- Use of adjoining and surrounding properties and the likely effects of known or suspected releases of hazardous substances or petroleum products in the Project Area.
- Information referenced in environmental agency databases and local environmental records within the specified, approximate minimum search distance from the Project Area.

The scope of the Phase I ESA also included consideration of the following environmental issues or conditions that are beyond the scope of ASTM Standard Practice E 2247-16:

- Visual observation of suspected asbestos-containing material (ACM) within the Project Area. Visual observation consists of providing an opinion about the condition of suspected ACM within the Project Area based upon visual examination during the site reconnaissance. Limited surveys were performed to identify the presence of readily accessible suspected ACM and to develop recommendations regarding the need for a more thorough survey and/or an operations and maintenance program.
- Radon document review, consisting of the review of published radon data regarding the potential for elevated levels of radon gas in the area surrounding the Project Area.

- Visual observation of lead-based paint (LBP), consisting of providing an opinion about the potential for LBP based on the construction date of buildings within the Project Area and visual examination of the condition of suspected LBP.
- Floodplain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note whether the Project Area is identified as being located within a floodplain.

1.3 SIGNIFICANT ASSUMPTION

Any assumptions in this report were not considered as having significant impact on the determination of RECs associated with the Project Area.

1.4 LIMITATIONS AND EXCEPTIONS

Stantec prepared this Phase I ESA report using reasonable efforts to identify RECs associated with hazardous substances or petroleum products within the Project Area. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

ASTM Standard Practice E 2247-16 recognizes inherent limitations for Phase I ESAs, including, but not limited to, the following:

- *Uncertainty Not Eliminated*—A Phase I ESA cannot eliminate uncertainty regarding the potential for RECs in connection with any property.
- *Not Exhaustive*—A Phase I ESA is not an exhaustive investigation of the Project Area and environmental conditions on such property.
- *Past Uses of the Property*—Phase I requirements only require review of standard historical sources at five-year intervals; therefore, past uses of the Project Area at fewer than five-year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E 2247-16 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews, and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques that are beyond the scope of this Project. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

Stantec makes no representation or warranty that the past or current operations in the Project Area are, or have been, in compliance with all applicable federal, state, and local laws, regulations, and codes. This report does not warrant against future operations or conditions or warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, Stantec is not responsible for consequences or conditions arising from facts not fully disclosed to Stantec while its staff conducted this Phase I ESA.

An independent data research company provided the government agency database referenced in this report. Information on properties in the surrounding area was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by Stantec's observations or other credible sources that Stantec staff reviewed while conducting this Phase I ESA. Stantec shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or to otherwise fail to maintain or produce accurate or complete records.

Stantec used reasonable efforts to identify evidence of aboveground storage tanks (AST) and underground storage tanks (UST) and ancillary equipment within the Project Area while conducting this Phase I ESA. *Reasonable efforts* were limited to observing accessible areas, reviewing referenced public records, and conducting interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials, and landscaping.

Any estimates of costs or quantities in this report are approximations for the purpose of due diligence in commercial real estate transactions. They are based on the Phase I ESA findings, opinions, and conclusions, which are limited by the scope, schedule demands, cost constraints, accessibility limitations, and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board Statement No. 143 and Interpretation No. 47, Sarbanes/Oxley Act, or any United States Securities and Exchange Commission reporting obligations and may not be used for such purposes in any form without the express written permission of Stantec.

Stantec is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the Project Area in this report represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in the front matter of this report does not "certify" the findings contained in this report and is not a legal opinion of the Environmental Professional. The Environmental Professional Statement is intended to document Stantec's opinion that an individual meeting the qualifications of an Environmental Professional was involved in conducting the Phase I ESA and that the activities performed by, or under the supervision of, the Environmental Professional were performed in conformance with the standards and practices set forth in 40 Code of Federal Regulations (CFR) Part 312 per the methodology in ASTM Standard Practice E 2247-16 and the scope of work for this Phase I ESA.

Per ASTM Standard Practice E 2247-16, Section 6, User Responsibilities, the user of this Phase I ESA has specific obligations for performing tasks that will help identify the possibility of RECs in connection with the Project Area. Failure by the user to fully comply with the requirements may impact the ability to use this report to help qualify for Landowner Liability Protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Stantec makes no representations or warranties regarding a user's qualification for protection under any federal, state, or local laws, rules, or regulations.

In accordance with the ASTM Standard Practice E 2247-16, this report is presumed to be valid for a six-month period. If the report is older than six months, the following information must be updated for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge, and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice 2247-16; therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

1.5 SPECIAL TERMS AND CONDITIONS (USER RELIANCE)

This report is for the use and benefit of, and may be relied upon by, Red River Clean Energy, LLC , its affiliates, and third parties authorized in writing by Stantec, including the lender(s) in connection with a secured financing of the Project Area, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on it shall be limited by the exceptions and limitations in this report and with the acknowledgment that actual Project Area conditions may change with time and that hidden conditions that were not discovered within the authorized scope of the Phase I ESA may exist within the Project Area. Any use by or distribution of this report to third parties, without the express written consent of Stantec, is at the sole risk and expense of such third party.

Stantec makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and related information. No other warranties are made to any third party, either expressed or implied. Unless otherwise agreed upon in writing by Stantec and a third party, Stantec's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a total maximum amount of $50,000.

2 Site Description

2.1 PARCEL DESCRIPTION

The Project Area is located outside the municipal limits of the town of Brownwood. The Project Area consists of the following eight Mills and Brown counties parcels, as presented in Table 2-1:

Table 2-1. Mills and Brown Counties Parcels

Assessor Parcel Number	Owner Name	Approximate Acres
8465	CHILDRESS CHARLES GRADY SR &	154.62
8464	CHILDRESS CHARLES GRADY SR &	75.88
8462	CHILDRESS CHARLES GRADY SR &	100.95
5250	GILGER JOHN R	71.00
5958	GILGER JOHN R	24.00
1461	HARDBERGER GEORGE ROBERT TRUSTEE OF THE	1,588.00
3122	CLAYTON RANCHES LTD	1,777.99
28342	CHILDRESS, CHARLES GRADY & ALICE ELAINE	54.10
Note: Acreages are representative of the Assessor Parcel and not Project parcel. Project parcel may be a portion of the assessor parcel.		

A site vicinity map is presented in Appendix A.

2.2 CURRENT USE OF THE PROPERTY

The Project Area is designated for agricultural use and is considered a legal use in its current configuration. Vehicular access to the Project Area can be accessed by, County Road 268.

Photographs of the Project Area are provided in Appendix B.

2.3 DESCRIPTION OF PROPERTY IMPROVEMENTS

Table 2-2 provides general descriptions of the Project Area improvements.

Table 2-2. Property Improvements

Size of Properties (approximate)	Percent of Property
Approximate % Unimproved Areas	39%
Approximate % Agricultural Areas	60%
Approximate % Developed Areas	0%
Approximate % Surface Water and Wetlands	1%
Number of Occupied Buildings	No residences are located within the Project Area
Unoccupied Buildings/Spaces/Structures	No unoccupied buildings are located within the Project Area.

Size of Properties (approximate)	Percent of Property
General Buildings Description	The only structures within the project area are cow feeders.

2.4 CURRENT USES OF ADJOINING PROPERTIES

The immediate vicinity of the Project Area generally included land used for agricultural purposes or undeveloped ranchland.

3 User-Provided Information

The following section summarizes information (if any) provided by Red River Clean Energy, LLC (the user) regarding the Phase I ESA. Documentation may be found where referenced in this report.

3.1 TITLE RECORDS

The user did not provide title record information for the Project Area.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

A review of environmental liens and activity and use limitation documents not included in the scope of this Phase I ESA.

3.3 SPECIALIZED KNOWLEDGE

The user did not provide specialized knowledge regarding RECs associated with the Project Area.

3.4 SIGNIFICANT VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The user did not provide information regarding a significant valuation reduction for environmental issues associated with the Project Area.

3.5 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The user provided Stantec with site access and current landowner information.

3.6 REASON FOR PERFORMING PHASE I ESA

The user indicated that the Phase I ESA was being completed prior to a financial transaction regarding the Project Area.

3.7 OTHER USER-PROVIDED DOCUMENTS

The User and property owners were provided an environmental questionnaire concerning the Project Area. To date, Stantec has received one completed landowner questionnaire and the completed User questionnaire. The landowner questionnaire indicated pesticide use (Tordon) for controlling mesquite and indicated that a portion of the property was used by the U.S. Army during World War two. Pesticide use is typical in agricultural areas and does not constitute an environmental concern. The former use of the property by the U.S. Army is an environmental concern for the Project and is further discussed in Section 4.1. The User questionnaire did not identify any environmental concerns or RECs for the Project No other documents were supplied to Stantec as described in ASTM Standard Practice E 2247-16.

4 Records Review

4.1 STANDARD ENVIRONMENTAL RECORDS

The regulatory agency databases report discussed in this section, provided by Environmental Risk Information Services (ERIS), of Toronto, Ontario, was reviewed for information regarding reported releases of hazardous substances and petroleum products on or near the Project Area. Stantec also reviewed the *unmappable* (also referred to as *orphan*) listings in the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence but potentially occur in the general area of the Project Area based on the partial street address, city, or zip code. Any unmappable site that Stantec identified as a being within the approximate minimum search distance from the Project Area, based on the site reconnaissance and/or cross-referencing to mapped listings, is discussed in this section. The complete regulatory agency database reports are provided in Appendix D. Table 4-1 provides a summary of the findings of the database record review.

Source: ERIS 2023a

4.1.1 Project Area Listings

A listing for FUDS (Formerly Used Defense Sites) and FUDS Munition Response Sites was identified in the ERIS report. These listings are due to the Project Area's past usage as a military operation known as Camp Bowie. From the ERIS report:

"The land was first acquired by the U.S. in June 1943. It was conveyed to private ownership in the late 1940s and was repurchased in July 1953 as potential support for the Korean War. The U.S. again sold the land in 1963. The property was returned to private ownership with no land use restrictions.

This property is known or suspected to contain military munitions and explosives of concern (e.g., unexploded ordnance) and therefore may present an explosive hazard. "

During the October 31 site investigation, no visible presence of unexploded ordinance or military munitions were identified on site.

4.1.2 Surrounding Property Listings

No listings were recorded within 1-mile surrounding the Project Area.

4.1.3 Orphan Listings

The ERIS database report identified zero unplottable or orphan listings for the Project Area.

4.1.4 State Environmental Records

Name of Agency:	Texas Commission on Environmental Quality
Website:	https://www.tceq.texas.gov/agency/directory
Agency Address:	12100 Park Thirty-Five Cir, Austin, Texas
Agency Phone Number:	512-239-1000
Date of Contact:	October 27, 2023
Method of Communication:	Telephone
Communication Summary:	No response has been received at the date of this report.

4.1.5 Emergency Management Department

Name of Agency:	Texas Division of Emergency Management
Website:	https://www.tdem.texas.gov/
Agency Address:	2883 Highway 71 E, Del Valle, Texas 78617
Agency Phone Number:	(512) 424-2208
Date of Contact:	October 27, 2023
Method of Communication:	Telephone
Communication Summary:	No relevant information was available

4.1.6 Oil and Gas Transmission

Name of Agency:	US Department of Transportation's National Pipeline Mapping System
Website:	https://pvnpms.phmsa.dot.gov/PublicViewer/
Date of Contact:	November 2023
Method of Communication:	Online
Communication Summary:	According to the online GIS viewer, there is crude oil transmission pipeline (Sunoco) approximately 4 miles north/northeast of the Project Area. The pipeline does not pose an environmental concern.

Utility providers for the Project Area are detailed in the following table:

Table 4-2. Utilities and Providers in the General Project Area.

Utility	Provider
Electrical Utility Company:	Atmos Energy
Water Utilities:	City of Brownswood
Sewer Utility:	City of Brownswood Wasterwater Treatment
Natural Gas Utility:	Atmos Energy

4.1.7 Other Local Environmental Records Sources

No additional local environmental records sources were reviewed for this Phase I ESA.

4.2 PHYSICAL SETTING SOURCES

4.2.1 Topography

The US Geological Survey 7.5-minute topographic series maps for *Blanket Springs, TX,* were reviewed for this Phase I ESA. The contour lines on the topographic maps show that the Project Area has relatively flat topography, gently sloping towards stream features and ranges from approximately 1200 to 1300 feet above mean sea level.

4.2.2 Geology/Soils

Geology of the Project Area includes sand, silt, clay, and gravel. The Quaternary deposit unit age is Phanerozoic and Cenozoic age.

Most of the soils within the Project Area range from sandy loam to clay loam (US Department of Agriculture, Natural Resources Conservation Service 2022).

4.2.3 Hydrology

According to topographic map interpretation, Fisk Creek and Pecan Bayou are mapped to flow within and around the Project Area. The direction of groundwater in the vicinity of the Project Area is inferred to flow toward the Colorado River. Groundwater in the area is very scarce according to nearby water well data. The depth to the water throughout the Project Area is approximately 150ft according to 2013 water well drill logs.

4.2.3.1 Flood Plain Map

Stantec performed a review of the Flood Insurance Rate Maps (FIRMs), published by the Federal Emergency Management Agency (FEMA). According to FIRM numbers 48049C0550E (effective August 8, 2018) 0 acres fall within the 100-year floodplain (Zone A) for Brown County. Copies of the FEMA FIRMs are included in Appendix E. FEMA floodplain information is not available for Mills County, but it is expected that the southern portion and southeast tip are within the 100 year floodlplain.

4.2.3.2 Wetlands Map

A formal determination is provided under a separate report.

4.3 HISTORICAL RECORDS SOURCES

Table 4-3 summarizes the findings of the research presented in the following subsections pertaining to historical property and surrounding area uses.

Table 4-3. Historical Use Information

Period/Date	Source	Description/Use
1928–2019	Topographic Maps	Undeveloped land with two structures on the map in 1928.
1948–2022	Aerial Photographs	Land is primarily used for agriculture and ranching. A high voltage electric transmission line is seen in the NW corner in 2012.

Potential environmental concerns were not identified in association with the current or former use of the Project Area.

4.3.1 Aerial Photographs

Stantec reviewed aerial photographs of the Project Area and the surrounding areas dated from 1948 to 2022. The aerial photographs were obtained from ERIS on October 2023 (ERIS 2023c). Stantec staff did not identify any potential environmental concerns associated with the current or former use of the Project Area during the review of these photographs. Copies of the aerial photographs obtained for this report are included in Appendix F.

4.3.2 Historical US Geological Survey Topographic Quadrangles

Stantec staff also reviewed historical topographic maps of the Project Area dated from 1928–2019. These maps were obtained from ERIS on October 2023 (ERIS 2023d). Stantec did not identify any potential environmental concerns associated with the current or former use of the Project Area during the review of these topographic maps. Copies of these topographic maps are included in Appendix G of this report.

4.3.3 Fire Insurance Maps

Fire insurance maps were requested for the Project Area however, no information was available. The ERIS report indicating no information is available is provided as Appendix H.

4.3.4 Property Tax Files

Property owner information was obtained and provided by the User. Additional historical ownership information was not available.

4.3.5 Recorded Land Title Records and Activity and Use Limitations

The acquisition of recorded land title records was not required by the scope of work for this Phase I ESA.

4.3.6 City Directories

Stantec Staff reviewed the city directory for the Project Area. The city directory included residential listing Prior Reports. Due to the proximity of the Project to the town of Brownwood and the nature of Chisme Solar Project none of the listings rise to the level of being an environmental concern. The City Directory is provided in Appendix I.

No other reports were reviewed for this Phase I ESA.

4.3.7 Other Historical Sources

No other historical sources were reviewed for this Phase I ESA.

5 Site Reconnaissance

The unaccompanied site reconnaissance was conducted by Kevin Rubio and Carinne Johnston of Stantec on October 31, 2023. This visit was focused on the property and only pasture-related structures were noted during the site reconnaissance.

The Project Area was found to only contain cow feeders. No records of spills are associated with this area. Photographs of the Project Area are included in Appendix B.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance consisted of visual and/or physical observations of the Project Area and improvements, adjoining sites as viewed from the Project Area, and the surrounding area based on visual observations made during the trip to and from the Project Area. At the time of the first inspection of the Project Area, weather conditions were cloudy and approximately 60 degrees Fahrenheit.

5.2 HAZARDOUS SUBSTANCE USE, STORAGE, AND DISPOSAL

No ASTs containing unknown substances were observed within the Project Area

5.3 ABOVEGROUND AND UNDERGROUND HAZARDOUS SUBSTANCE OR PETROLEUM PRODUCT STORAGE TANKS

Stantec staff observed no ASTs or barrels containing labeled and unknown substances within the Project Area.

5.4 POLYCHLORINATED BIPHENYLS

Older transformers and other electrical equipment could contain polychlorinated biphenyls (PCBs) at a level that subjects them to regulation by the US Environmental Protection Agency (USEPA). PCBs in electrical equipment are controlled by USEPA regulations 40 CFR, Part 761. Under the regulations, electrical equipment can be classified into three categories: (1) *Non-PCB* – less than 50 parts per million (ppm) of PCBs, (2) *PCB-Contaminated* – 50 to 500 ppm, and (3) *PCB-Containing* – greater than 500 ppm. The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The onsite reconnaissance addressed outdoor transformers that may contain PCBs. In total, zero pole-mounted transformers were observed throughout the Project Area. Additionally, no other potential PCB-containing equipment (e.g., interior transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, balers) was observed within the Project Area.

5.5 UNIDENTIFIED SUBSTANCE CONTAINERS

Stantec staff did not observe any containers that contained labeled or unknown substances within the Project area.

5.6 DE MINIMIS AND OTHER OBSERVATIONS

Stantec staff did not observe evidence of *de minimis* or other chemical products on adjoining properties associated with agricultural operations.

5.7 WASTEWATER

Stantec staff did not observe evidence of generated, treated, or discharged (including sanitary sewage and storm water) wastewater within the Project Area or on adjoining properties.

5.8 SUMPS

Stantec staff did not observe evidence of sumps or oil/water separators within the Project Area.

5.9 SEPTIC SYSTEMS

Stantec staff did not observe any signs of relic septic tanks.

5.10 STORMWATER MANAGEMENT SYSTEM

No stormwater management systems were observed.

5.11 WELLS

Stantec did not observe groundwater wells within the Project Area.

6 Interviews

Table 6-1 lists the entities who were interviewed to obtain information regarding RECs in connection with the Project Area. Pertinent information (if any) identified during those interviews is discussed in the respective sections of this report.

Table 6-1 Record of Communication

Communication with	Date	Summary of Communication
Texas Department of Environmental Management	October 23, 2023	Stantec contacted the TDEM regarding records for the Project Area and no relevant information was available.
Brownwood Emergency Management	October 23, 2023	Stantec contacted the Brownwood Emergency Management Agency, and no relevant information was available.

7 Other Environmental Conditions

7.1 ASBESTOS-CONTAINING MATERIAL

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration's regulation 29 CFR 1926.1101 requires that certain construction materials are presumed to contain asbestos. All thermal system insulation, surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are *presumed asbestos-containing material* (or PACM).

Because of the agricultural use of the Project Area, ACMs were not considered within the scope of this Phase I ESA.

7.2 RADON

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The EPA has prepared a map to assist national, state, and local organizations with targeting their resources and with implementation of radon-resistant building codes. The map divides the country into three Radon Zones, as detailed in Table 7-1.

Table 7-1. EPA Radon Zones

Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

Note: pCi/L – picocuries per liter

It is important to note that the EPA has found homes with elevated levels of radon in all three zones and that they recommend site-specific testing to determine radon levels at a specific location; however, the map provides a valuable indication of the propensity of radon gas to accumulate in structures.

Radon sampling was not conducted as part of this Phase I ESA. Review of the EPA map of Radon Zones places the Project Area in Zone 1 (Appendix I). Based upon the radon zone classification, radon does not present a significant environmental concern.

7.3 LEAD IN DRINKING WATER

According to the TDEM Drinking Water Watch, the water supplied to the Project Area is in compliance with all state and federal regulations pertaining to drinking water standards, including lead and copper.

7.4 LEAD-BASED PAINT

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 milligram per square centimeter (mg/cm^2), or 5,000 micrograms per gram ($\mu g/g$) or 0.5 percent by weight or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as *Title X*, to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered to be a hazard, although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the US Department of Housing and Urban Development and the EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Because of the agricultural use of the Project Area, LBP was not considered within the scope of this Phase I ESA.

7.5 MOLD SCREENING

Molds are microscopic organisms found virtually everywhere, both indoors and outdoors. Mold grows and multiplies under the right conditions, needing only sufficient moisture (e.g., in the form of very high humidity, condensation, or water from a leaking pipe) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding) (ASTM 2006).

No obvious indications of water damage or mold growth were observed during Stantec's visual assessment.

7.6 VAPOR ENCROACHMENT

Stantec did not conduct a limited screening for potential vapor encroachment conditions (VEC) that may affect the Project Area. A VEC screening would focus on the current and historical usage of the Project Area. Stantec instead used the regulatory database report provided by ERIS to evaluate the potential for chemicals of concern, including petroleum hydrocarbons. If the Client should choose to further evaluate the potential VECs, Stantec can provide those services accordingly.

APPENDIX C

User Questionnaires

All Appropriate Inquiry Questionnaire

Stantec

The All Appropriate Inquiry rule (40 CFR Part 312) requires that certain inquiries be made to past and present owners, operators and occupants to help evaluate the environmental conditions of the property. Please answer all questions to the best of your ability.

Name: Charles Childress Date: 1/18/2024

Property address: 8991 CR 268 Early, TX 78602

1) What is the current use(s) of the property? For instance, residential, commercial, agricultural (multiple responses are acceptable). Please list all on-site businesses and contact information for each owner / operator, if any.

agriculture

2) List the known uses/occupants of all adjacent properties including which direction the property is located relative to yours.

East- cattle & small acreage farm

North & South - cattle

west - cattle & small acreage farm

3) Do you know the past uses of the property? ■Yes ☐No

List: (i.e, undeveloped prior to 1940, agricultural 1940 to 1968, etc).

1930 and before cattle and farming

1930-1945 + -US Army training

1945 to present cattle & farming

4) What have adjacent properties been used for in the past (please include which direction the property is located relative to yours)?

1930 and before cattle & farming, 1930-1945 + -US Army training

1945 to present cattle & farming

all directions

5) What is the total acreage of the property? 700 +or- acres and the square footage of each building? no buildings

6) When was each structure built and what was there before construction?
na

7) What is the heating source of each building? na

8) Was the fuel source for the building(s) ever heating oil? ☐ Yes ■ No ☐ Unknown

9) What is the water source for the property? ☐ Public Supply ☐ Well ☐ Unknown Dirt TANKS

10) What is the sanitary service for the property? ☐ Public Sanitary Sewer ☐ Septic System N.A ☐ Unknown

11) Has there ever been a septic system on the property? ☐ Yes ■ No ☐ Unknown

12) Are any wells present on the property? ☐ Yes ■ No ☐ Unknown

13) Are floor drains present on the property? ☐ Yes ■ No ☐ Unknown

14) Where do the drains discharge? ■ N/A

15) Are any sumps, sand traps, grease traps or oil-water separators present now or historically on the property? ☐ Yes ■ No ☐ Unknown

16) Are there any transformers, hydraulic lifts or other potentially PCB-containing equipment on the property? ☐ Yes ■ No ☐ Unknown

17) If so, has the PCB content been tested? ☐ Yes ☑ No ☐ Unknown

18) Have areas of the property been used as borrow pits? ☐ Yes ■ No If yes, please explain:

19) Have areas of the property been filled with debris or fill of unknown origin? ■ Yes ☐ No
If yes, please explain: one small pit 15' x 30'. It was used by deer hunters. It contains old blinds, chairs, plywood, etc.

20) Is there now or has there been automobile/farm equipment/equipment repair, a parts washer or degreaser present at the property? ☐ Yes ■ No If yes, please explain:

21) Are hazardous substances or petroleum products stored, generated, treated or disposed at the property? ☐ Yes ■ No If yes, please list / explain:

22) Are there now or have there ever been underground storage tanks (USTs) present on the property? ☐ Yes ■ No If yes, please list / explain:

23) How many USTs are/were present? (Please provide the contents, age, location, and size for each) ■ N/A

24) Are the USTs in service, closed-in-place or removed? Please provide applicable closure/removal reports or current tightness testing results. ☐ In Service ☐ Removed ☐ Closed-in-place ■ N/A

25) Are there now or have there ever been aboveground storage tanks (ASTs) present on the property? ☐ Yes ■ No If yes, please list / explain:

26) How many ASTs are/were present? (Please provide the contents, age, location, and size for each) ■ N/A

27) Are the ASTs in service or removed? Please provide applicable closure/removal reports or current tightness testing results. ☐ In Service ☐ Removed ■ N/A

28) Were chemicals such as solvents, petroleum products, inks, paints, oils, or pesticides used in the past? ☐ Yes ■ No If yes, please explain: _____

29) Do you know of specific chemicals that are present or once were present at the property or adjacent properties? ■ Yes ☐ No If yes, please list:
Tordon (Herbicide) was sprayed to control mesquite

30) Were hazardous substances or petroleum products stored, generated, treated or disposed at the property? ☐ Yes ■ No If yes, please explain / list:

31) Do you know of spills or other chemical releases that have taken place at the property or adjacent properties? ☐ Yes ■ No If yes, please explain: _____

32) Do you know of any environmental cleanups that have taken place at the property or adjacent properties? ☐ Yes ■ No If yes, please explain: _____

33) Has the property been the recipient of any notices or other correspondence from any government agency relating to past or present violations of environmental laws, rules or codes? ☐ Yes ■ No If yes, please explain: _____

34) Do you know of any obvious indicators that point to the presence or likely presence of contamination at the property or adjacent properties? ☐ Yes ■ No If yes, please explain:

35) Are you aware of any environmental cleanup liens or pending enforcement actions against the property that are filed or recorded under federal, tribal, state or local law?

☐ Yes ■ No If yes, please explain:

36) Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law? ☐ Yes ■ No

If yes, please explain:

37) Do you have any other information that might indicate potential environmental concerns associated with the property or adjacent properties? ■ Yes ☐ No If yes, please explain:

The US Army operated on this property for about 15 years prior to and during World War II. I have no idea if they left any hazordous materials(Chemical or Mechanical) If you are unsure you should contact the US Army at FT Hood in Killeen, TX or Camp Bowie in Brownwood, Tx

I have completed this questionnaire in good faith and to the best of my knowledge.

Signature: Charles Childress Sr.	Name: Charles Childress
Company:	Title: operator
Relationship to the property: Operator	Number of years associated with the property: 50 + years

All Appropriate USER Inquiry Questionnaire

USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)*[A] offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"),[B] the *user* **must provide** the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

1. **Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).**

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law?

No, we are not aware of any environmental cleanup liens against the property.

2. **Activity and land use limitations that are in place on the site or have that been filed or recorded in a registry (40 CFR 312.26).**

Are you aware of any *AULs*, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

No, we are not aware of any AULs filed or recorded related to the property.

3. **Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).**

As the user of this ESA do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No, I do not posess specialized knowledge or experience related to the property.

4. **Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).**

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

We are leasing, not purchasing the property. In our opinion the lease rate does reflect fair market value.

5. **Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).**

Are you aware of commonly known or reasonably ascertainable information about the *property* that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

a) Do you know the past uses of the *property*?

We understand from the landowner that the past use of the property include farming, raising cattle and a period where the property was used by the US Military.

b) Do you know of specific chemicals that are present or once were present at the *property*?

No.

c) Do you know of spills or other chemical releases that have taken place at the *property*?

No.

d) Do you know of any environmental cleanups that have taken place at the *property*?

No.

6. **The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

As the user of this ESA, based on your knowledge and experience related to the *property* are there any obvious indicators that point to the presence or likely presence of contamination at the *property*?

No, based on my knowledge and experince, there are no such likely indicators.

In addition, certain information should be collected, if available, and provided to the environmental professional selected to conduct the Phase I. This information is intended to assist the environmental professional but is not necessarily required to qualify for one of the *LLPs*. The information includes:

the reason why the Phase I is required, the type of property and type of property transaction, for example, sale, purchase, exchange, and so forth, the complete and correct address for the property (a map or other documentation showing property location and boundaries is helpful), the scope of services desired for the Phase I (including whether any parties to the property transaction may have a required standard scope of services on whether any considerations beyond the requirements of Practice E2247 are to be considered), identification of all parties who will rely on the Phase I report, identification of the site contact and how the contact can be reached, any special terms and conditions which must be agreed upon by the environmental professional, any other knowledge or experience with the property that may be pertinent to

the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, and so forth, concerning the property and its environmental condition).

Nathan Stumpff, Red River Clean Energy

User

1/25/2024

Date

[A] *Landowner Liability Protections*, or *LLPs*, is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* ("*Common Elements*" Guide) issued on March 6, 2003.

[B] *P.L. 107*-118.

Property History:

The land was first acquired by the U.S. in June 1943. It was conveyed to private ownership in the late 1940s and was repurchased in July 1953 as potential support for the Korean War. The U.S. again sold the land in 1963. The property was returned to private ownership with no land use restrictions. This property is known or suspected to contain military munitions and explosives of concern (e.g., unexploded ordnance) and therefore may present an explosive hazard.

No unplottable records were found that may be relevant for the search criteria.

Unplottable Report

No unplottable records were found that may be relevant for the search criteria.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2023

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2023

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2023

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Jul 26, 2023

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Jul 26, 2023

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jul 10, 2023

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by RCRA.

Government Publication Date: Jul 10, 2023

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jul 10, 2023

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jul 10, 2023

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jul 10, 2023

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jul 10, 2023

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jul 10, 2023

Federal Engineering Controls-ECs: FED ENG

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2021 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Aug 23, 2023

Federal Institutional Controls- ICs: FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2021 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Aug 23, 2023

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: May 25, 2023

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Apr 3, 2023

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: May 2, 2023

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: May 2, 2023

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Mar 9, 2023

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Jul 26, 2023

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: May 25, 2023

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

Superfund Sites Boundaries: SUPERFUND

List of sites that may constitute an imminent and substantial endangerment to public health and safety or the environment due to a release or threatened release of hazardous substances into the environment provided by the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Aug 10, 2021

State Superfund Registry: SHWS

List of sites identified or evaluated by the Texas Commission on Environmental Quality (TCEQ) which may constitute an imminent and substantial endangerment to public health and safety or to the environment due to a release or threatened release of hazardous substances into the environment. The TCEQ updates the state Superfund sites list in accordance with the Texas Health and Safety Code (THSC). This database is state equivalent NPL.

Government Publication Date: Aug 30, 2023

Delisted State Superfund Registry List: DELISTED SHWS

List of sites that once appeared on - and have since been removed from - the State Superfund Registry made available by the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Aug 30, 2023

Permitted Solid Waste Facilities: SWF/LF

List of active, inactive, and post-closure Municipal Solid Waste landfills and processing facilities with issued permits and authorizations, as well as pending, withdrawn, or denied applications registered with the Texas Commission on Environmental Quality (TCEQ) under the Texas Administrative Code (TAC) Title 30 Chapter 330.

Government Publication Date: Apr 28, 2023

Closed Landfill Inventory: CLI

Inventory of permitted and unauthorized closed or abandoned municipal solid waste landfills throughout Texas compiled by the Texas Commission on Environmental Quality (TCEQ), in collaboration with regional Councils of Government (COG).

Government Publication Date: Late 1990's

Houston-Galveston Closed Landfill Inventory: HGAC CLI

List of closed and abandoned landfill sites which fall under the Houston Galveston Area Council of Government. Texas Councils of Governments (COGs) are required to maintain an inventory of closed municipal solid waste landfills for their regional solid waste management plans.

Government Publication Date: Oct 19, 2022

AACOG Closed Landfill Inventory: AACOG CLI

A list of permitted and unpermitted closed landfill sites made available by the Alamo Area Council of Governments (AACOG). Alamo Area Council of Governments (AACOG) is requested to maintain an inventory of closed municipal solid waste landfills for their regional solid waste management plans.

Government Publication Date: Feb 6, 2020

Commercial Management Facilities for Hazardous Waste and Industrial Solid Wastes: IHW

This publication lists facilities that have permits or authorizations from the Texas Commission on Environmental Quality (TCEQ) to receive, on a commercial basis, and manage hazardous waste, industrial nonhazardous waste, or both.

Government Publication Date: Dec 1, 2020

Industrial and Hazardous Waste - Receivers: IHW RECEIVER

List of active, inactive, and post-closure Industrial and Hazardous Waste Receiver Facilities permitted by or registered with the Texas Commission on Environmental Quality (TCEQ) under the Texas Administrative Code (TAC) Title 30 Chapter 335.

Government Publication Date: Jun 22, 2023

Radioactive Waste Sites: RWS

This Texas Commission on Environmental Quality (TCEQ) database contains all sites in the State of Texas designated as Radioactive Waste sites as of 2006. The TCEQ no longer maintains this site listing.

Government Publication Date: Jul 11, 2006

Leaking Petroleum Storage Tank Database: LPST

List of cleanup sites where contamination was caused by spills, leaks, or other releases of petroleum or hazardous substances from underground and/or aboveground storage tanks regulated by the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Aug 28, 2023

Delisted Leaking Storage Tanks: DELISTED LST

List of cleanup sites that once appeared on - and have since been removed from - the list of Leaking Petroleum Storage Tank Cleanups made available by the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Aug 28, 2023

Underground Petroleum Storage Tanks: UST

List of facilities that have one or more Underground Storage Tank (UST)s registered and regulated by the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Jun 2, 2023

Aboveground Storage Tanks: AST

List of facilities that have one or more Aboveground Storage Tank (AST)s registered and regulated by the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Jun 2, 2023

Petroleum Storage Tanks Database: PST

List of facilities included on the list of tank facilities made available by the Texas Commission on Environmental Quality (TCEQ) that have no association as either underground or aboveground tanks.

Government Publication Date: Jun 2, 2023

Historical Tank Construction Notification: HIST TANK

A list of facilities with historic petroleum storage tank construction notification activity made available by the Texas Commission on Environmental Quality (TCEQ). Any person who intends either to install a new or replacement undergound storage tank (UST), to remove a UST from the ground, to conduct a permanent abandonment in-place of a UST, or make any repairs or improvements of a UST must submit a Construction Notification Form.

Government Publication Date: Jun 2, 2023

Austin Underground Storage Tanks: UST AUSTIN

A list of underground gas storage tanks both current and historical from the City of Austin Open Data Portal. Data provided by Planning and Zoning, City of Austin.

Government Publication Date: Jul 3, 2023

Salt Caverns for Petroleum Storage: PETROL CAVERN

Listing of salt caverns for petroleum storage, made available by the Railroad Commission of Texas. Salt caverns, constructed in naturally occurring salt domes or salt beds, are used as storage for hydrocarbons including crude oil and natural gases.

Government Publication Date: Sep 1, 2006

Delisted Storage Tanks: DTNK

List of tank facilities that once appeared on - and have since been removed from - the Petroleum Storage Tanks Database made available by the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Jul 3, 2023

Sites with Controls: AUL

Sites under several Texas Commission on Environmental Quality (TCEQ) remediation programs which have institutional or engineering controls.

Government Publication Date: Jul 24, 2023

Voluntary Cleanup Program: VCP

List of sites which have participated or are currently participating in the Voluntary Cleanup Program (VCP) administered by the Texas Commission on Environmental Quality (TCEQ). The VCP provides administrative, technical, and legal incentives to encourage the cleanup of contaminated sites in Texas.

Government Publication Date: May 22, 2023

Texas Railroad Commission Voluntary Cleanup Program: VCP RRC

List of facilities which have participated in or are currently participating in the Voluntary Cleanup Program (VCP) operated by the Railroad Commission of Texas (RRC). The RRC VCP provides an incentive to remediate Oil & Gas related pollution.

Government Publication Date: Aug 15, 2023

Operator Cleanup Program: OP CLEANUP

A list of sites in the Texas Railroad Commission (RRC)'s Operator Cleanup Program (OCP). The OCP, under the Site Remediation Section, is tasked with oversight of complex pollution cleanups performed by the oil and gas industry. Complex sites include those that occur in sensitive environmental areas as defined by 16 TAC3.91 (SWR 91) and may require site specific cleanup levels based on risk. When cleanup activities are successfully completed by the operator, Commission staff may issue a "No Further Action" letter acknowledging completion.

Government Publication Date: Jun 5, 2023

Innocent Owner/Operator Program: IOP

A list of sites in the Innocent Owner/Operator Program (IOP) made available by Texas Commission of Environmental Quality (TCEQ) . IOP provides certificates to innocent owners or operators whom their properties are contaminated as a result of a release or migration of contaminants from a source or sources not located on the property, and they did not cause or contribute to the source or sources of contamination.

Government Publication Date: May 29, 2023

Brownfields Site Assessments Database: BROWNFIELDS

The Texas Commission on Environmental Quality (TCEQ) Brownfields Site Assessment Program (BSA) layer is used to identify the geographic location of all "Active and Inactive BSA" sites within the State of Texas.

Government Publication Date: Jul 3, 2023

Texas Railroad Commission Brownfields: BROWN RRC

List of sites which have participated or are currently participating in the Railroad Commission of Texas (RRC) Brownfields Response Program (BRP). The RRC BRP provides technical and financial support for redevelopment of abandoned oil and gas sites.

Government Publication Date: Aug 15, 2023

Municipal Setting Designation: MSD

Municipal Setting Designations (MSD) list is maintained by Texas Commission on Environmental Quality (TCEQ). An MSD is an official state designation given to property within a municipality or its extraterritorial jurisdiction that certifies that designated groundwater at the property is not used as potable water, and is prohibited from future use as potable water because that groundwater is contaminated in excess of the applicable potable-water protective concentration level.

Government Publication Date: Sep 4, 2023

Tribal

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 6, which includes Texas, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Oct 6, 2017

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 6, which includes Texas, is provided by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 26, 2023

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 26, 2023

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 26, 2023

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Mar 2, 2023

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Oct 19, 2022

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Sep 14, 2023

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to April 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Apr 24, 2023

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: Oct 9, 2022

National Response Center PFAS Spills: ERNS PFAS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Limitations: The data from the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Apr 15, 2023

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: May 1, 2023

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Oct 19, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest : PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Apr 9, 2023

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Apr 16, 2023

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Jul 26, 2023

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Aug 23, 2023

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Government Publication Date: Jan 21, 2023

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Apr 15, 2023

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Apr 15, 2023

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Dec 30, 2022

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: May 1, 2023

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into eAMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Jun 13, 2023

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: May 25, 2023

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Aug 30, 2023

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Apr 19, 2023

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Mar 1, 2023

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Mar 20, 2023

State

Dry Cleaner Remediation Program Prioritization List: PRIORITY CLEAN

The Texas Commission on Environmental Quality (TCEQ) implements environmental standards for dry cleaners. The Dry Cleaner Remediation Program (DCRP) establishes a prioritization list of dry cleaner sites and administers the Dry Cleaning Remediation fund to assist with remediation of contamination caused by dry cleaning solvents. Includes prioritized sites identified under the DCRP, as well as sites closed under the DCRP.

Government Publication Date: Mar 1, 2023

Registered Dry Cleaning Facilities: DRYCLEANERS

The Texas Commission of Environment Quality (TCEQ) maintains a statewide registration list of current dry cleaners.

Government Publication Date: Aug 28, 2023

Delisted Drycleaning Facility List: DELISTED DRYCLEANERS

A list of sites which were have been removed from the list of dry cleaning facilities registered with the Texas Commission of Environment Quality (TCEQ). Sites are removed when they are no longer used as dry cleaning facilities.

Government Publication Date: Aug 28, 2023

Groundwater Contamination Cases: GWCC

List of sites present in the TCEQ Groundwater Contamination Viewer, which represent groundwater contamination cases in Texas as per TCEQ publication SFR-056 (current and some previous years). The Joint Groundwater Monitoring and Contamination Report (SFR-056) was designed and produced by the Texas Groundwater Protection Committee in fulfillment of requirements given in Section 26.406 of the Texas Water Code. The information does not represent an on-the-ground survey and represents only the approximate relative location of property boundaries.

Government Publication Date: Dec 31, 2021

Historical Groundwater Contamination Cases: GWCC HIST

List of sites from a Joint Groundwater Monitoring and Contamination Report provided by the Texas Commission on Environmental Quality (TCEQ) with the Railroad Commission of Texas (RRC). The annual report describes the status of groundwater monitoring activities conducted or required by each agency at regulated facilities or associated with regulated activities. The report provides a general overview of groundwater monitoring by participating members on a program by program basis. Groundwater contamination is broadly defined in the report as any detrimental alteration of the naturally occurring quality of groundwater.

Government Publication Date: Dec 31, 2018

Affected Property Assessment Reports: APAR

List of sites for which an Affected Property Assessment Report has been submitted to the Texas Commission on Environmental Quality (TCEQ). An APAR is required when a person is addressing a release of COCs under 30 TAC Chapter 350, the Texas Risk Reduction Program (TRRP). The purpose of the APAR is to document all relevant affected property information to identify all release sources and chemicals of concern (COCs), determine the extent of all COCs, identify all transport/exposure pathways, and to determine if any response actions are necessary.

Government Publication Date: Mar 24, 2023

Spills Database: SPILLS

List of Spills reported to Emergency Response Division of the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Jul 31, 2023

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

A list of sites from the Central Registry and ARTS databases where Per- and Polyfluoroalkyl substances (PFAS) containing materials may be of concern. This list is made available by the Remediation Division of the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Aug 3, 2022

Industrial and Hazardous Waste Sites with Corrective Actions: IHW CORR ACTION

List of Industrial and Hazardous Waste sites with Corrective Actions made available by the Texas Commission of Environmental Quality (TCEQ). The mission of the industrial and hazardous waste (IHW) corrective action program is to oversee the cleanup of sites contaminated from industrial and municipal hazardous and industrial nonhazardous wastes.

Government Publication Date: Aug 28, 2023

Land Application Permits: LAND APPL

Texas Land Application Permits are a requirement from the Texas Commission on Environmental Quality for any domestic facility that disposes of treated effluent by land application such as surface irrigation, evaporation, drainfields or subsurface land application.

Government Publication Date: Jul 17, 2023

Notice of Violation: NOV

List of sites that have been sent a Notice of Violation (NOV) by the Texas Commission on Environmental Quality (TCEQ) Office of Compliance and Enforcement. A Notice of Violation is sent out when a site falls out of compliance and has a prescribed time period to return to compliance.

Government Publication Date: May 2, 2022

Notices of Enforcement: NOE

Listing of investigations resulting in a Notice of Enforcement (NOE), made available by the Texas Commission on Environmental Quality, Office of Compliance & Enforcement. Multiple violations may be due to identified noncompliance with different regulatory requirements (citations).

Government Publication Date: Jun 15, 2023

Environmental Liens Listing: LIENS

List of sites/facilities against which the Texas Commission on Environmental Quality (TCEQ) has placed liens to recover cleanup costs associated with Federal or State Superfund cleanup activities.

Government Publication Date: Jul 24, 2023

Court Orders & Administrative Orders: ORD

List of sites that have been sent an Administrative Order or Court Order by the Texas Commission on Environmental Quality (TCEQ) Office of Compliance and Enforcement.

Government Publication Date: May 22, 2023

Inactive RCRA and Non-RCRA Facilities: HIST RCRA NONRCRA

A list of inactive or no longer registered Resource Conservation and Recovery Act (RCRA) and non-RCRA facilities, provided by the Texas Commission on Environmental Quality (TCEQ). This list includes both hazardous and non-hazardous waste generators, transporters, and receivers. If an unregistered/inactive industrial site generates less than 220 pounds of hazardous or Class 1 industrial waste, it does not have to notify or report to the TCEQ.

Government Publication Date: May 5, 2023

Recycle Texas Online Program: RTOL

A list of recycling facilities under the Recycle Texas Online service/program made available by the Texas Commission of Environmental Quality (TCEQ). This program allowed facilities to self-report and post their own company/facility information. This program is no longer maintained and these data will not be updated.

Government Publication Date: Oct 10, 2011

Underground Injection Control: UIC

List of underground injection control (UIC) permits in the Texas Commission on Environmental Quality (TCEQ) Central Registry database. Includes Class I, Class III, Class IV, Class 5, and non permitted UICs; does not include injection wells regulated by the Railroad Commission of Texas.

Government Publication Date: Jul 24, 2023

Industrial and Hazardous Waste - Generators: IHW GENERATOR

List of active, inactive, and post-closure Industrial and Hazardous Waste Generator Facilities permitted by or registered with the Texas Commission on Environmental Quality (TCEQ) under the Texas Administrative Code (TAC) Title 30 Chapter 335.

Government Publication Date: Jun 22, 2023

Industrial and Hazardous Waste - Transporters: IHW TRANSPORT

List of active, inactive, and post-closure Industrial and Hazardous Waste Transporter Facilities permitted by or registered with the Texas Commission on Environmental Quality (TCEQ) under the Texas Administrative Code (TAC) Title 30 Chapter 335.

Government Publication Date: Jun 22, 2023

New Source Review (NSR) Permits: AIR PERMITS

A list of facilities that have applied for New Source Review air permits made available by the Texas Commission on Environmental Quality (TCEQ).

Government Publication Date: Aug 30, 2023

Point Source Emissions Inventory: EMISSIONS

A list of Texas Commission on Environmental Quality (TCEQ) Point Source Emissions Inventory sites. The Point Source Emissions Inventory is an annual survey of chemical plants, refineries, electric utility plants and other industrial sites that meet the reporting criteria in the TCEQ emissions inventory rule (30 TAC §101.10Exit the TCEQ).

Government Publication Date: Apr 26, 2022

Tier 2 Report: TIER 2

Historica listing of facilities in Texas that store hazardous chemicals and are required to report them under the Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986. This data was provided by the Department of State Health Services (DSHS) and contains facility reports for the 2005 through the 2012 calendar years. Since 2012, agencies are unable to release this listing, as Tier II information is confidential under Texas Government Code Chapter 418, the Texas Disaster Act (TDA). Site specific inquiries can be made to the Texas Commission on Environmental Quality Tier II Chemical Reporting Division.

Government Publication Date: Dec 31, 2012

Edwards Aquifer Permits: EDWARDS AQUIFER

Listing of Edward Aquifer permits made available by the Texas Commission on Environmental Quality (TCEQ). The Edwards Aquifer is home to diverse fauna and is a drinking water source for the city of San Antonio and surrounding central Texas communities. Before building on the recharge, transition, or contributing zones of the Edwards Aquifer, a plan must first be reviewed and approved by the TCEQ Edwards Aquifer Protection Program.

Government Publication Date: Jul 6, 2023

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

APPENDIX E

  Summary....65
  Detail Report....68
Radon Information....79
Appendix....80
Liability Notice....83

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Qal

Unit Name:	alluvium
Unit Age:	Phanerozoic | Cenozoic | Quaternary | Holocene
Primary Rock Type:	sand
Secondary Rock Type:	silt
Unit Description:	alluvium

Geologic Unit IPst

Unit Name:	Strawn Group
Unit Age:	Phanerozoic | Paleozoic | Carboniferous Pennsylvanian-Middle [Atoka Des Moines]
Primary Rock Type:	shale
Secondary Rock Type:	sandstone
Unit Description:	Strawn Group

Geologic Unit Qu

Unit Name:	Quaternary deposit, undivided
Unit Age:	Phanerozoic | Cenozoic | Quaternary
Primary Rock Type:	sand
Secondary Rock Type:	silt
Unit Description:	sand, silt, clay, and gravel. locally indurated with calcium carbonate (caliche); includes point bar, natural levee, stream channel, sand dune, terrace, alluvial fan, landslide bolson and playa deposits

ERIS

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit 10 (6.86%)

Map Unit Name:	Bonti-Callahan association, 1 to 8 percent slopes, extremely stony
Bedrock Depth - Min:	91cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Bonti(60%)	
horizon A(0cm to 20cm)	Fine sandy loam
horizon E(20cm to 28cm)	Fine sandy loam
horizon Bt(28cm to 97cm)	Clay loam
horizon Cr(97cm to 203cm)	Bedrock
Callahan(25%)	
horizon Ap(0cm to 18cm)	Loam
horizon Bt(18cm to 46cm)	Clay
horizon Btk(46cm to 91cm)	Clay
horizon Cdk(91cm to 178cm)	Clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 10 - Bonti-Callahan association, 1 to 8 percent slopes, extremely stony

Component: Bonti (60%)
The Bonti component makes up 60 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges on hills. The parent material consists of loamy and/or clayey residuum weathered from sandstone and/or claystone over sandstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R080BY159TX Sandy Loam 26-33" Pz ecological site. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Component: Callahan (25%)
The Callahan component makes up 25 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R080BY147TX Claypan 26-33" Pz ecological site. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 6 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Exray (8%)
Generated brief soil descriptions are created for major soil components. The Exray soil is a minor component.

Component: Truce (5%)
Generated brief soil descriptions are created for major soil components. The Truce soil is a minor component.

Component: Owens (2%)
Generated brief soil descriptions are created for major soil components. The Owens soil is a minor component.

Soil Information

Map Unit 11 (5.02%)

Map Unit Name:	Bonti-Owens complex, 8 to 30 percent slopes
Bedrock Depth - Min:	56cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Bonti(50%)	
horizon A(0cm to 20cm)	Stony fine sandy loam
horizon Bt(20cm to 76cm)	Clay
horizon Cr(76cm to 102cm)	Bedrock
Owens(38%)	
horizon A(0cm to 25cm)	Clay
horizon Bk(25cm to 56cm)	Clay
horizon Cd(56cm to 152cm)	Clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 11 - Bonti-Owens complex, 8 to 30 percent slopes

Component: Bonti (50%)
The Bonti component makes up 50 percent of the map unit. Slopes are 8 to 30 percent. This component is on ridges on hills. The parent material consists of loamy residuum weathered from sandstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R080BY157TX Sandstone Hill 26-33" Pz ecological site. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria.

Component: Owens (38%)
The Owens component makes up 38 percent of the map unit. Slopes are 10 to 30 percent. This component is on ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 14 to 30 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R080BY156TX Rocky Hill 26-33" Pz ecological site. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 10 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 3 within 30 inches of the soil surface.

Component: Unnamed (12%)
Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Map Unit 12 (1.86%)

Map Unit Name:	Bosque loam, 0 to 1 percent slopes, occasionally flooded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Bosque(90%)	
horizon A(0cm to 66cm)	Loam
horizon Bk1(66cm to 122cm)	Loam

horizon Bk2(122cm to 203cm)	Loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 12 - Bosque loam, 0 to 1 percent slopes, occasionally flooded

Component: Bosque (90%)
The Bosque component makes up 90 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on river valleys. The parent material consists of loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is occasionally flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R085XY181TX Loamy Bottomland 30-38" Pz ecological site. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 13 percent.

Component: Unnamed (9%)
Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Unnamed (1%)
Generated brief soil descriptions are created for major soil components. The Unnamed, hydric soil is a minor component.

Map Unit 15 (2.57%)

Map Unit Name:	Callahan loam, 1 to 3 percent slopes
Bedrock Depth - Min:	91cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

Callahan(80%)

horizon Ap(0cm to 18cm)	Loam
horizon Bt(18cm to 46cm)	Clay
horizon Btk(46cm to 91cm)	Clay
horizon Cdk(91cm to 178cm)	Clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 15 - Callahan loam, 1 to 3 percent slopes

Component: Callahan (80%)
The Callahan component makes up 80 percent of the map unit. Slopes are 1 to 3 percent. This component is on low ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R080BY147TX Claypan 26-33" Pz ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 6 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Bonti (10%)
Generated brief soil descriptions are created for major soil components. The Bonti soil is a minor component.

Component: Throck (10%)
Generated brief soil descriptions are created for major soil components. The Throck soil is a minor component.

Soil Information

Map Unit 18 (27.53%)

Map Unit Name:	Callahan-Throck complex, 1 to 8 percent slopes
Bedrock Depth - Min:	76cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

Callahan(52%)	
horizon A(0cm to 15cm)	Stony clay loam
horizon Bt(15cm to 81cm)	Clay
horizon Cd(81cm to 203cm)	Clay
Throck(44%)	
horizon A(0cm to 15cm)	Stony clay
horizon Bk(15cm to 76cm)	Clay
horizon Cd(76cm to 203cm)	Clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 18 - Callahan-Throck complex, 1 to 8 percent slopes

Component: Callahan (52%)
The Callahan component makes up 52 percent of the map unit. Slopes are 1 to 8 percent. This component is on low ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R080BY147TX Claypan 26-33" Pz ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 6 percent.

Component: Throck (44%)
The Throck component makes up 44 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges on hills. The parent material consists of residuum weathered from claystone and/or residuum weathered from limestone and/or residuum weathered from siltstone. Depth to a root restrictive layer, bedrock, densic, is 30 to 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R080BY604TX Clay Slopes 26-33" Pz ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 28 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 12 within 30 inches of the soil surface.

Component: Unnamed (4%)
Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Map Unit 2 (0.75%)

Map Unit Name:	Abilene clay loam, moist, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Abilene(90%)	
horizon Ap(0cm to 25cm)	Clay loam
horizon Bt(25cm to 61cm)	Clay

horizon Btk(61cm to 107cm)	Clay
horizon BCk(107cm to 203cm)	Clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 2 - Abilene clay loam, moist, 1 to 3 percent slopes

Component: Abilene (90%)
The Abilene, moist component makes up 90 percent of the map unit. Slopes are 1 to 3 percent. This component is on terraces on dissected plains. The parent material consists of calcareous alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R078AY119TX Clay Loam 25-28" Pz ecological site. Nonirrigated land capability classification is 2e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 10 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Sagerton (5%)
Generated brief soil descriptions are created for major soil components. The Sagerton soil is a minor component.

Component: Rowena (5%)
Generated brief soil descriptions are created for major soil components. The Rowena soil is a minor component.

Map Unit 25 (10.47%)

Map Unit Name:	Deleon silty clay, 0 to 1 percent slopes, rarely flooded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Deleon(93%)

horizon A1(0cm to 15cm)	Silty clay
horizon A2(15cm to 168cm)	Silty clay
horizon C(168cm to 203cm)	Silty clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 25 - Deleon silty clay, 0 to 1 percent slopes, rarely flooded

Component: Deleon (93%)
The Deleon component makes up 93 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on river valleys. The parent material consists of clayey and/or loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R080BY144TX Clayey Bottomland 26-33" Pz ecological site. Nonirrigated land capability classification is 2s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 1 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Unnamed (6%)
Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Unnamed (1%)
Generated brief soil descriptions are created for major soil components. The Unnamed, hydric soil is a minor component.

Soil Information

Map Unit 29 (0.65%)

Map Unit Name:	Doudle-Real association, 1 to 8 percent slopes
Bedrock Depth - Min:	46cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Doudle(56%)	
horizon A(0cm to 15cm)	Cobbly loam
horizon Bk(15cm to 91cm)	Loam
horizon Cr(91cm to 152cm)	Bedrock
Real(34%)	
horizon A(0cm to 46cm)	Very gravelly clay loam
horizon Cr(46cm to 102cm)	Bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 29 - Doudle-Real association, 1 to 8 percent slopes

Component: Doudle (56%)
The Doudle component makes up 56 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges on hills. The parent material consists of loamy residuum weathered from limestone. Depth to a root restrictive layer, bedrock, paralithic, is 22 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R085XY565TX Pink Caliche 30-38" Pz ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 50 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Real (34%)
The Real component makes up 34 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges, hills. The parent material consists of loamy residuum weathered from limestone. Depth to a root restrictive layer, bedrock, paralithic, is 8 to 20 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 6 percent. This component is in the R085XY176TX Adobe 30-38" Pz ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 55 percent.

Component: Unnamed (10%)
Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Map Unit 58 (4.35%)

Map Unit Name:	Pedernales fine sandy loam, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Pedernales(90%)	
horizon A(0cm to 18cm)	Fine sandy loam
horizon Bt1(18cm to 53cm)	Sandy clay

horizon Bt2(53cm to 102cm)	Sandy clay
horizon BCk(102cm to 135cm)	Sandy clay loam
horizon CBk(135cm to 200cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 58 - Pedernales fine sandy loam, 1 to 3 percent slopes

Component: Pedernales (90%)
The Pedernales component makes up 90 percent of the map unit. Slopes are 1 to 3 percent. This component is on ridges on hills. The parent material consists of loamy residuum weathered from sandstone and siltstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R084BY175TX Tight Sandy Loam 29-33" Pz ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Component: Cisco (3%)
Generated brief soil descriptions are created for major soil components. The Cisco soil is a minor component.

Component: Chaney (3%)
Generated brief soil descriptions are created for major soil components. The Chaney soil is a minor component.

Component: Wise (2%)
Generated brief soil descriptions are created for major soil components. The Wise soil is a minor component.

Component: Blanket (2%)
Generated brief soil descriptions are created for major soil components. The Blanket soil is a minor component.

Map Unit 67 (1.21%)

Map Unit Name:	Sagerton clay loam, warm, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Sagerton(85%)

horizon Ap(0cm to 18cm)	Clay loam
horizon Bt1(18cm to 33cm)	Clay loam
horizon Bt2(33cm to 97cm)	Clay loam
horizon Btk1(97cm to 122cm)	Clay loam
horizon Btk2(122cm to 203cm)	Clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 67 - Sagerton clay loam, warm, 1 to 3 percent slopes

Component: Sagerton (85%)
The Sagerton, warm component makes up 85 percent of the map unit. Slopes are 1 to 3 percent. This component is on terraces on alluvial plains. The parent material consists of calcareous loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R080BY146TX Clay Loam 26-33" Pz ecological site. Nonirrigated land capability classification is 2e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does

not exceed 25 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Rowena (7%)
Generated brief soil descriptions are created for major soil components. The Rowena soil is a minor component.

Component: Winters (4%)
Generated brief soil descriptions are created for major soil components. The Winters soil is a minor component.

Component: Leeray (4%)
Generated brief soil descriptions are created for major soil components. The Leeray soil is a minor component.

Map Unit 7 (0.9%)

Map Unit Name:	Bonti fine sandy loam, 1 to 3 percent slopes
Bedrock Depth - Min:	86cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Bonti(80%)

horizon A(0cm to 20cm)	Fine sandy loam
horizon Bt(20cm to 86cm)	Clay
horizon Cr(86cm to 203cm)	Bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 7 - Bonti fine sandy loam, 1 to 3 percent slopes

Component: Bonti (80%)
The Bonti component makes up 80 percent of the map unit. Slopes are 1 to 3 percent. This component is on ridges on hills. The parent material consists of loamy and/or clayey residuum weathered from sandstone and/or claystone over sandstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R080BY159TX Sandy Loam 26-33" Pz ecological site. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Component: Exray (8%)
Generated brief soil descriptions are created for major soil components. The Exray soil is a minor component.

Component: Thurber (5%)
Generated brief soil descriptions are created for major soil components. The Thurber soil is a minor component.

Component: Truce (5%)
Generated brief soil descriptions are created for major soil components. The Truce soil is a minor component.

Component: Owens (2%)
Generated brief soil descriptions are created for major soil components. The Owens soil is a minor component.

Map Unit 76 (0.76%)

Map Unit Name:	Owens-Harpersville complex, 8 to 45 percent slopes, extremely bouldery
Bedrock Depth - Min:	18cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained

Soil Information

Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

Owens(55%)	
horizon A(0cm to 15cm)	Clay
horizon Bk(15cm to 48cm)	Clay
horizon Cd(48cm to 203cm)	Silty clay
Harpersville(30%)	
horizon A(0cm to 18cm)	Clay
horizon Cd(18cm to 203cm)	Clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 76 - Owens-Harpersville complex, 8 to 45 percent slopes, extremely bouldery

Component: Owens (55%)
The Owens, extremely bouldery component makes up 55 percent of the map unit. Slopes are 8 to 35 percent. This component is on ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 14 to 30 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R080BY156TX Rocky Hill 26-33" Pz ecological site. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 10 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 3 within 30 inches of the soil surface.

Component: Harpersville (30%)
The Harpersville, extremely bouldery component makes up 30 percent of the map unit. Slopes are 8 to 45 percent. This component is on ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 3 to 14 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R080BY156TX Rocky Hill 26-33" Pz ecological site. Nonirrigated land capability classification is 8s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 5 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 2 within 30 inches of the soil surface.

Component: Palopinto (6%)
Generated brief soil descriptions are created for major soil components. The Palopinto soil is a minor component.

Component: Set (3%)
Generated brief soil descriptions are created for major soil components. The Set soil is a minor component.

Component: Truce (3%)
Generated brief soil descriptions are created for major soil components. The Truce soil is a minor component.

Component: Bluegrove (3%)
Generated brief soil descriptions are created for major soil components. The Bluegrove soil is a minor component.

Map Unit 79 (0.88%)

Map Unit Name:	Winters fine sandy loam, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Winters(93%)

horizon A(0cm to 15cm)	Fine sandy loam
horizon Bt1(15cm to 25cm)	Clay loam
horizon Bt2(25cm to 91cm)	Clay
horizon Bt3(91cm to 122cm)	Clay loam
horizon Btk(122cm to 165cm)	Clay loam
horizon Ck(165cm to 203cm)	Clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 79 - Winters fine sandy loam, 1 to 3 percent slopes

Component: Winters (93%)
The Winters component makes up 93 percent of the map unit. Slopes are 1 to 3 percent. This component is on plains on alluvial plain remnants. The parent material consists of mixed loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R080BY164TX Tight Sandy Loam 26-33" Pz ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent.

Component: Unnamed (6%)
Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Unnamed (1%)
Generated brief soil descriptions are created for major soil components. The Unnamed, hydric soil is a minor component.

Map Unit FsfA (19.5%)

Map Unit Name:	Frio silty clay loam, 0 to 1 percent slopes, frequently flooded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Frio(85%)

horizon A(0cm to 56cm)	Silty clay loam
horizon Bk1(56cm to 86cm)	Silty clay
horizon Bk2(86cm to 203cm)	Silty clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 32 - Frio silty clay loam, 0 to 1 percent slopes, frequently flooded

Component: Frio (90%)
The Frio component makes up 90 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on river valleys. The parent material consists of loamy alluvium derived from limestone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is frequently flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R080BY151TX Loamy Bottomland 26-33" Pz ecological site. Nonirrigated land capability classification is 5w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 28 percent.

Component: Unnamed (9%)
Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Soil Information

Component: Unnamed (1%)
Generated brief soil descriptions are created for major soil components. The Unnamed, hydric soil is a minor component.

Map Unit FsoA (16.71%)

Map Unit Name:	Frio silty clay loam, 0 to 1 percent slopes, occasionally flooded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Frio(85%)

horizon A(0cm to 56cm)	Silty clay loam
horizon Bk1(56cm to 86cm)	Silty clay
horizon Bk2(86cm to 203cm)	Silty clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 31 - Frio silty clay loam, 0 to 1 percent slopes, occasionally flooded

Component: Frio (90%)
The Frio component makes up 90 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on river valleys. The parent material consists of loamy and clayey alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is occasionally flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R080BY151TX Loamy Bottomland 26-33" Pz ecological site. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 28 percent.

Component: Unnamed (9%)
Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Unnamed (1%)
Generated brief soil descriptions are created for major soil components. The Unnamed, hydric soil is a minor component.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *BROWN* County: **3**
Federal EPA Radon Zone for *MILLS* County: **3**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *BROWN* County

No Measures/Homes:	6
Geometric Mean:	1.3
Arithmetic Mean:	2.6
Median:	0.9
Maximum:	7.8
% >4 pCi/L:	33
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the State/EPA Residential Radon Survey of Texas conducted during 1990-91. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. NWIS database information is obtained through the Water Quality Data Portal (WQP).

Wells from NWIS — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This select NWIS Wells dataset contains specific Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well, Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern. Applicable NWIS database information is obtained through the Water Quality Data Portal (WQP).

Appendix

State Sources

Fort Bend Subsidence District Water Wells — **WW FORT BEND**

List of water wells in the Fort Bend Subsidence District, boundaries of which are defined as all the territory within Fort Bend County. The Fort Bend Subsidence District was created by the Texas Legislature in 1989 as a conservation and reclamation district to control land subsidence and manage groundwater resources through regulation, conservation, and coordination with suppliers of alternative water sources to assure an adequate quantity and quality of water for the future. The District's purpose is to provide for the regulation of the withdrawal of groundwater within the District to prevent subsidence that contributes to flooding, inundation or overflow of areas within the District, including rising waters resulting from storms or hurricanes.

Groundwater Database — **GWDB**

The Texas Water Development Board (TWDB) Groundwater Database (GWDB) contains information on selected water wells, springs, oil/gas tests (that were originally intended to be or were converted to water wells), water levels and water quality.

Harris Galveston Subsidence District Water Wells — **WW HARRIS GAL**

List of water wells in the Harris-Galveston Subsidence District (HGSD). The HGSD was created by the 64th Texas Legislature as an underground water conservation district in 1975 to provide regulation of groundwater withdrawal to control subsidence.

High Plains Water Wells — **WW HIGH PLAINS**

Inventory of water wells in the High Plains Underground Water Conservation District No. 1 (HPUWCD), which was created in 1951. As a political subdivision of Texas, HPUWCD is charged with protecting, preserving and conserving aquifers within the District's 16-county service area.

Oil and Gas Wells — **OGW**

Oil and Gas Well Data made available by the Railroad Commission of Texas.

Pipelines — **PIPELINE**

Locations of interstate and intrastate gas and liquids pipelines, made available by the Railroad Commission of Texas (RRC). Data is derived from RRC T-4 Permit applications ("Application for Permit to Operate a Pipeline in Texas"), which facilitate regulatory functions of the Pipeline Safety Section of the RRC. The digital data used to create the files was taken from the forms system within the RRC, from the General Land Office (GLO) county survey maps, and, United States Geological Survey (USGS) quadrangle maps.

Plotted Water Wells — **WATER WELLS**

A list of water wells in Texas that are plotted in Texas Commission on Environmental Quality (TCEQ) Water Well Report Viewer. The database provides the best representation of water well driller's reports available to the TCEQ as of the date of records collected. Note: records are plotted using the Texas Land Survey Grid System, identifying the 2.5 minute grid where wells are located but do not contain the offset necessary to pinpoint a specific location. Therefore, plotted locations are accurate to a resolution of 2.5 minute (2-3 miles).

Plugged Water Wells — **PLUGGED WELLS**

A list of plugged water wells from the Submitted Drillers Report (SDR) Database. This list is maintained by the Texas Water Development Board (TWDB).

Public Water Systems Wells and Surface Intakes — **PWSW**

Public Water Supply Water Well Sites and Public Water Supply Surface Water Intake Sites in the State of Texas made available by the Texas Commission on Environmental Quality (TCEQ). The locations for these layers were obtained by the Water Supply Division as recorded from various sources, and the data provider indicates that some locational errors have been identified. As resources allow, TCEQ intends to improve the accuracy of these locations to meet the standards set forth in the agency's Positional Data Policy.

Select Wells from SDR — **SDRW WELLS**

Locations of wells from the Submitted Drillers Report (SDR) Database with select proposed usage: Domestic, Fracking Supply, Industrial, Irrigation, Other, Public Supply, Rig Supply, Stock, Unknown. SDR is populated from the online Texas Well Report Submission and Retrieval System (TWRSRS), a

cooperative Texas Department of Licensing and Regulation (TDLR) and Texas Water Development Board (TWDB) application requiring registered water-well drillers to submit reports. Excludes SDR records with the following proposed usage: Closed-Loop Geothermal, De-watering, Environmental Soil Boring, Extraction, Injection, Monitor, Test Well.

Submitted Drillers Report Database **SDR WELLS**

The Submitted Drillers Report (SDR) Database is populated from the online Texas Well Report Submission and Retrieval System (TWRSRS) which is a cooperative Texas Department of Licensing and Regulation (TDLR) and Texas Water Development Board (TWDB) application that registered water-well drillers use to submit their required reports.

Surveys **SURVEY**

Survey boundaries made available by the Railroad Commission of Texas (RRC). A survey is a certified measured description of a piece of land. In Texas, original surveys were performed as part of the patenting process whereby land was transferred from the public domain. These "patent surveys", recorded at the Texas General Land Office (GLO), constitute an official land grid for the State and are the basis for subsequent land surveys. The digital data used to create surveys were taken from the forms system within the RRC, from the General Land Office (GLO) county survey maps, and United States Geological Survey (USGS) quadrangle maps.

Underground Injection Control **UIC**

List of underground injection control (UIC) permits in the Texas Commission on Environmental Quality (TCEQ) Central Registry database. Includes Class I, Class III, Class IV, Class 5, and non permitted UICs; does not include injection wells regulated by the Railroad Commission of Texas.

Water Utility Database **WUD**

The Water Utility Database is defined as a collection of data from Texas Water Districts, Public Drinking Water Systems and Water and Sewer Utilities who submit information to the TCEQ. This database is an integrated database designed and developed to replace over 160 stand alone legacy systems representing over 5 million records of the former Texas Water Commission and the Texas Department of Health.

Well Log Reports from Plotted Water Wells **TCEQ WELL LOGS**

Locations of TCEQ Water Wells as derived from well logs in the Texas Commission on Environmental Quality (TCEQ) Water Well Report Viewer, which includes unnumbered water wells and those plotted to 2.5 minute grid locations (2-3 miles). In this collection of Well Log Reports, locations have been manually verified.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

RE: CITY DIRECTORY RESEARCH
N/A
Early,TX

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

1 Executive Summary

Cardno was contracted by CWP USA Inc. to conduct a natural and cultural resources assessment on a tract of land consisting of 2,230 acres, referenced as the Mills County Solar Project (Project). The Project consists of a large parcel in Mills County, Texas that was evaluated for wetland and waterbodies as well as other environmental concerns by Cardno in February 2021. The tasks performed as part of this assessment included a review of threatened and endangered (T&E) species, a cultural resources literature review, and a desktop review of potential waters of the United States (WOUS). The methodology, results, and recommendations of the review as it pertains to the Project are contained within and summarized below.

Cardno conducted a threatened and endangered species review during desktop environmental assessments of the Project area. None of the three bird species listed by U.S. Fish & Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) database as having the potential to occur within the property has the potential to be affected by the solar Project. Consultation with TPWD revealed a state listed species, the Texas Horned Lizard (*Phrynosoma cornutum*) as also occurring and having the potential to be affected by the Project. These lizards can be found in arid and semiarid habitats in open areas with sparse plant cover. Because horned lizards dig for hibernation, nesting and insulation purposes, they commonly are found in loose sand or loamy soils. The soils found within the Project area are primarily loamy and clayey alluvium, which could potentially provide suitable habitat for the Texas Horned Lizard.

In compliance with Section 404 of the Clean Water Act (CWA), this report contains a preliminary desktop evaluation of potential wetland features that may fall under the jurisdiction of the U.S. Army Corps of Engineers (USACE). Cardno conducted a desktop review of the Project area for sensitive resources that could potentially exist or that are known to exist within the Project area. As part of the desktop investigation, Cardno reviewed the US Fish and Wildlife Service (USFWS) National Wetland Inventory (NWI) Geographic Information System (GIS) data layer to determine the potential for wetlands and waterbodies to exist within the Project area.

Cardno scientists identified **thirteen** ephemeral drainages, **one** intermittent stream (Fisk Creek), and **eight** excavated ponds within the Project area. It is Cardno's determination that the ponds and ephemeral drainages do not possess a significant nexus to WOUS as defined in the Navigable Waters Protection Rule. These water features identified would likely be classified as non-jurisdictional by the USACE. However, Fisk Creek is an intermittent stream that flows into Pecan Bayou (TNW) and does possess a significant nexus to WOUS as defined in the Navigable Waters Protection Rule. This water feature would likely be classified as jurisdictional by the USACE. The FEMA map reveals that there is currently no floodplain data available for Mills County, Texas. Correspondence with the Mills County office revealed that there is no official floodplain regulations for this county.

Coordination with the USACE Fort Worth District Office to obtain an approved jurisdictional determination for the streams and wetlands identified onsite is recommended. There are no regulations or permits that regulate isolated wetlands or non-jurisdictional streams for the state of Texas.

If any streams and/or wetlands are deemed 'jurisdictional' by the USACE, the proposed Project could be completed under a Nationwide Permit (NWP) 51, 14, and/or 57. Additionally, the Project would need to develop a Storm Water Pollution Prevention Plan (SWPPP) and provide Notice of Intent (NOI) prior to Project construction. As stated in the text of the NWPs, the discharge of dredged or fill material into wetlands and non-tidal WOUS must not cause the loss of greater than ½-acre of wetlands and non-tidal WOUS, including the loss of no more than 300 linear feet of stream bed. If impacts from the construction of the energy generation facility and associated infrastructure including roads, parking lots, stormwater management facilities, and pipelines permanently impact less than ½-acre then the Project may proceed

under a NWP. Permanent impacts which exceed the ½-acre threshold for NWPs will require an Individual Permit.

Cardno's cultural resource specialists reviewed information regarding known archeological and historic sites, as well as prior cultural resources studies, available through the Texas Historical Commission's (THC) Archeological Sites Atlas Cardno also reviewed USGS topographic maps as well as current and historic aerial imagery for evidence of historic use within the Project area. Desktop analysis of the Project area identified only three cultural resource surveys recorded within a mile of the Project area. Due to the potentially significant archeological sites within proximity of the Project area, and because no cultural resource surveys have been conducted on the majority of the Project area, it is possible that the Texas State Historic Preservation Officer (SHPO) may request that a Phase I survey be conducted within the Project area, especially along Pecan Bayou and Fisk Creek

2 Introduction

Cardno was contracted by CWP USA Inc. to perform a preliminary desktop review for potential listed species habitat, cultural resources, and potential WOUS that exist within the Project area in Mills County, Texas (**Figure 2-1**). The Project consists of approximately 2,230 acres of land that was reviewed via desktop by Cardno in February of 2021.

This report contains a desktop review of all resources that potentially fall under the jurisdiction of the USACE.

Cardno conducted desktop investigations to:

> Identify potential environmental permits that may be required to construct the Project; and

> Review and document cultural resources that may be located within or in close proximity to the Project area that may be impacted by Project activities.

> Identify the approximate boundaries of potential jurisdictional wetlands and waterbody ordinary high water marks (OHWM) within the Project; and

> Document general site conditions; and

> Evaluate the potential for federally listed species habitat.

Cardno scientists conducted field delineations within the entire Project area on February 10, 2021 to

> Conduct site visit and document/photograph general site conditions.

The results of the desktop investigations are provided in this report.

3 Site Location

The Project is located approximately 8 miles south of Zephyr in Mills County, Texas (**Figure 2-1**). According to the United States Environmental Protection Agency (USEPA) Level III and IV Ecoregions of the Texas map accessed February 2021, the Project area falls within the Western Cross Timbers (29c) ecoregion. This ecoregion covers the wooded areas west of the Grand Prairie (29d) on sandstone and shale beds. The landscape has cuesta topography consisting of sandstone ridges with a gentle dip slope on one side and a steeper scarp on the other. The soils are mostly fine sandy loams with clay subsoils that retain water. As in the Eastern Cross Timbers (29b), the dominant trees are post oak and blackjack oak with an understory of greenbriar, little bluestem, and purpletop grasses. Some researchers contend that these woodland areas would be savanna-like if they experienced fire, although one early account described the Cross Timbers as “an immense natural hedge” or belt of thick impenetrable forest. It is likely that there were more prairie openings between the belts of forest. The area has a long history of coal, oil, and natural gas production from the Pennsylvanian sandstone/limestone/shale beds. Deeper soils in the eastern part of this ecoregion support a dairy industry, pastureland, and cultivation of forage sorghum, silage, corn, and peanuts (Griffith et al., 2004).

The Mills County Solar Project is located within the Devils River-Pecan Bayou watershed of the Middle Colorado-Concho River basin. Fisk Creek, running west to east through the center of the property and eventually offsite into Pecan Bayou, is the only named stream within the Project area. FEMA maps however indicate other unnamed streams that flow into Fisk Creek or directly into Pecan Bayou, which borders the Project area to the northeast (**Figure 5-1**).

3.1 Land Use

The property and surrounding areas consists mainly of mixed grasslands for cattle grazing, with some of the land cover converted for agricultural land use and oil/gas production. The entire Project area is located on private land (**Figure 5-1**). There are no public parks, wildlife areas, or critical habitats occurring within or adjacent to the Project area.

3.2 Soil Series

Soils within the Project can be generally described as well drained soils that occur on broad, nearly level land to gently rolling plains. According to the U.S. Department of Agriculture (USDA), Natural Resource Conservation Service (NRCS) website accessed February 2021 the Project is located within 14 soil map units, which are listed and described below (**Figure 3-1**). There were no soils within the Project boundaries that met the criteria as described by the National Technical Committee for Hydric Soils (NTCHS) (**Table 3-1**).

2—Abilene clay loam, moist, 1 to 3 percent slopes

The Abilene, moist component makes up 90 percent of the map unit. Slopes are 1 to 3 percent. This component is on terraces on dissected plains. The parent material consists of calcareous alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained.

10—Bonti-Callahan association, 1 to 8 percent slopes

The Bonti component makes up 60 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges on hills. The parent material consists of loamy and/or clayey residuum weathered from sandstone and/or claystone over sandstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained.

The Callahan component makes up 25 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 20 to 40 inches. The natural drainage class is well drained.

11—Bonti-Owens complex, 8 to 30 percent slopes

The Bonti component makes up 50 percent of the map unit. Slopes are 8 to 30 percent. This component is on ridges on hills. The parent material consists of loamy residuum weathered from sandstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained.

The Owens component makes up 38 percent of the map unit. Slopes are 10 to 30 percent. This component is on ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 14 to 30 inches. The natural drainage class is well drained.

12—Bosque loam, 0 to 1 percent slopes

The Bosque component makes up 90 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on river valleys. The parent material consists of loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained.

15—Callahan loam, 1 to 3 percent slopes

The Callahan component makes up 80 percent of the map unit. Slopes are 1 to 3 percent. This component is on low ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 20 to 40 inches. The natural drainage class is well drained.

18—Callahan-Throck complex, 1 to 8 percent slopes

The Callahan component makes up 52 percent of the map unit. Slopes are 1 to 8 percent. This component is on low ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 20 to 40 inches. The natural drainage class is well drained.

The Throck component makes up 44 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges on hills. The parent material consists of residuum weathered from claystone and/or residuum weathered from limestone and/or residuum weathered from siltstone. Depth to a root restrictive layer, bedrock, densic, is 30 to 60 inches. The natural drainage class is well drained.

25—Deleon silty clay, 0 to 1 percent slopes

The Deleon component makes up 93 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on river valleys. The parent material consists of clayey and/or loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained.

29—Doudle-Real association, 1 to 8 percent slopes

The Doudle component makes up 56 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges on hills. The parent material consists of loamy residuum weathered from limestone. Depth to a root restrictive layer, bedrock, paralithic, is 22 to 40 inches. The natural drainage class is well drained.

The Real component makes up 34 percent of the map unit. Slopes are 1 to 8 percent. This component is on ridges, hills. The parent material consists of loamy residuum weathered from limestone. Depth to a root restrictive layer, bedrock, paralithic, is 8 to 20 inches. The natural drainage class is well drained.

31—Frio silty clay loam, 0 to 1 percent slopes

The Frio component makes up 90 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on river valleys. The parent material consists of loamy and clayey alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained

58—Pedernales fine sandy loam, 1 to 3 percent slopes

The Pedernales component makes up 90 percent of the map unit. Slopes are 1 to 3 percent. This component is on ridges on hills. The parent material consists of loamy residuum weathered from sandstone and siltstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained.

61—Real association, 8 to 30 percent slopes

The Real component makes up 78 percent of the map unit. Slopes are 8 to 20 percent. This component is on ridges on hills. The parent material consists of loamy residuum weathered from limestone. Depth to a root restrictive layer, bedrock, paralithic, is 8 to 20 inches. The natural drainage class is well drained.

67—Sagerton clay loam, warm, 1 to 3 percent slopes

The Sagerton, warm component makes up 85 percent of the map unit. Slopes are 1 to 3 percent. This component is on terraces on alluvial plains. The parent material consists of calcareous loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained.

76—Owens-Harpersville complex, 8 to 45 percent slopes

The Owens, extremely bouldery component makes up 55 percent of the map unit. Slopes are 8 to 35 percent. This component is on ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 14 to 30 inches. The natural drainage class is well drained.

The Harpersville, extremely bouldery component makes up 30 percent of the map unit. Slopes are 8 to 45 percent. This component is on ridges on hills. The parent material consists of clayey residuum weathered from claystone. Depth to a root restrictive layer, bedrock, densic, is 3 to 14 inches. The natural drainage class is well drained.

79—Winters fine sandy loam, 1 to 3 percent slopes

The Winters component makes up 93 percent of the map unit. Slopes are 1 to 3 percent. This component is on plains on alluvial plain remnants. The parent material consists of mixed loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained.

Table 3-1 Characteristics of Soil Mapping Units within the Project Area

Soil Name	Soil Symbol	Drainage Class	Permeability	Surface Runoff	Meets Hydric Criteria	% of Project Area
Abilene clay loam, moist, 1 to 3 percent slopes	2	Well drained	Moderately Low	Low	No	0.6
Bonti-Callahan association, 1 to 8 percent	10	Well drained	Moderately Low	Low	No	3.5
Bonti-Owens complex, 8 to 30 percent	11	Well drained	Moderately High	Low	No	5.2
Bosque loam, 0 to 1 percent	12	Well drained	Moderately High	Low	No	1.0
Callahan loam, 1 to 3 percent	15	Well drained	Moderately Low	Low	No	8.4
Callahan-Throck complex, 1 to 8 percent	18	Well drained	Moderately Low	Low	No	20.1
Deleon silty clay, 0 to 1 percent	25	Well drained	Moderately Low	Low	No	16.8

Doudle-Real association, 1 to 8 percent	29	Well drained	Moderately Low	Low	No	3.2
Frio silty clay loam, 0 to 1 percent	31	Well drained	Moderately High	Low	No	26.3
Pedernales fine sandy loam, 1 to 3 percent slopes	58	Well drained	Moderately High	Low	No	4.7

4 Assessment Methodology

Cardno conducted desktop reviews of the Project area utilizing local and federal GIS data to identify potential habitat for listed species, wetlands, hydric soils, floodplains, and cultural resources that could affect the Project development process.

Federal and state resources were reviewed to identify potential habitat that may be found for listed species in the Project area. Results of the threatened and endangered species review are provided in **Section 5.1.**

Cardno's cultural resource specialists reviewed information regarding known archaeological and historic sites, as well as prior cultural resources studies, available at the Texas Historical Commission's (THC) Archeological Sites Atlas. Cardno also reviewed USGS topographic maps, and current and historic aerial photographs for evidence of historic use of the proposed Project area. The results of this literature review are provided in **Section 5.5.**

5 Results of Findings

5.1 Threatened and Endangered Species Review

Cardno conducted desktop environmental assessments for listed species within the Project area. **Table 5-1** lists the federal species that were identified by the USFWS IPaC database as having the potential to occur within or be affected by the Project. **Table 5-2** lists the state listed threatened and endangered species for Mills County, Texas provided by the Texas Natural Diversity Database (TXNDD 2021).

Table 5-1 IPaC Federally Listed Species Potentially Affected by Project

Group	Common Name	Scientific Name	Federal Status	Potential to be Affected
Bird	Whooping Crane	*Grus americana*	Endangered	None
Bird	Piping Plover	*Charadrius melodus*	Threatened	None
Bird	Red Knot	*Calidris canutus rufa*	Threatened	None

Source: USFWS IPaC, 2021

Table 5-2 TXNDD Online Data Search. State Listed Species Potentially Affected by Project

Group	Common Name	Scientific Name	State Status	Potential to be Affected
Mussel	Texas Pimpleback	*Cyclonaias petrina*	Threatened	None
Reptile	Texas Horned Lizard	*Phrynosoma cornutum*	Threatened	Low

Source: Texas Natural Diversity Database, 2021

The whooping crane (*Grus americana*) is North America's tallest bird. There is only one self-sustaining wild population, the Aransas-Wood Buffalo National Park population, which nests in Wood Buffalo National Park and adjacent areas in Canada, and winters in coastal marshes in Texas at Aransas. The whooping crane breeds, migrates, winters, and forages in a variety of wetland and other habitats, including coastal marshes and estuaries, inland marshes, lakes, ponds, wet meadows and rivers, and agricultural fields. No such features were identified within or near the Project area and therefore impacts to whooping crane habitat due to the Project are highly unlikely.

The piping plover *(Charadrium melodius)* are known to winter at Laguna Madre, Texas on sand flats. This habitat includes beach, bayside mud, and salt flats that are not found anywhere within the Project boundaries.

The red knot (*Calidris canutus rufa*) habitat ranges from beaches and tidal flats to herbaceous wetlands. The proposed Project site is located entirely within dry mesquite and cacti shrubland, and does not occur in the potential habitat as described for this species.

Consultation with TPWD revealed a state listed species, the Texas Horned Lizard (*Phrynosoma cornutum*) as also occurring and having the potential to be affected by the Project. These lizards can be found in arid and semiarid habitats in open areas with sparse plant cover. Because horned lizards dig for hibernation, nesting and insulation purposes, they commonly are found in loose sand or loamy soils. The soils found within the Project area are primarily loamy and clayey alluvium, which could potentially provide suitable habitat for the Texas Horned Lizard.

No critical habitat for listed species was identified within the Project area by the IPaC database.

5.2 Wetlands

Potential Waters of the U.S. (WOUS) were identified from the USFWS NWI GIS data layer (USFWS 2021). Cardno's desktop investigations identified **eight** ponds (**Table 5-3**) totaling **4.08** acres. Only PUB(x) wetlands (stock tanks) were identified within the Project **(Figure 5-1)**.

Table 5-3 Identified Wetlands Mills County Property

Wetland ID	Type	Acreage	Jurisdictional
WET-1	PUB(x)	0.75	No
WET-2	PUB(x)	0.31	No
WET-3	PUB(x)	0.16	No
WET-4	PUB(x)	0.15	No
WET-5	PUB(x)	1.06	No
WET-6	PUB(x)	0.68	No
WET-7	PUB(x)	0.55	No
WET-8	PUB(x)	0.42	No
Total Non-jurisdictional		**4.08**	

Vegetation Community Types

Cardno scientists identified eight PUB(x) excavated pond wetlands within the Project area. All of the property is active cattle ranch land and likely consisting of the common rangeland shrubs and grasses of the Western Cross Timbers ecoregion. The dominant trees are post oak *(Quercus stellata)* and blackjack oak *(Quercus marilandica)* with an understory of greenbriar *(Smilax spp.)*, little bluestem *(Schizachyrium scoparium)*, and purpletop grass *(Tridens flavus)* (Griffith et al., 2004).

Hydrology

The majority of the Project area is relatively well drained by overland flow, natural ephemeral drainages or washes lead to excavated ponded areas created to hold water for cattle. These ephemeral channels flow during rain events and eventually drain into Fisk Creek or Pecan Bayou (TNW).

Soils

Soils data was obtained through the U.S. Department of Agriculture (USDA), Natural Resource Conservation Service (NRCS) website accessed February 2021. The Project is located within 14 soil map units, which are listed and described previously in this report (**Figure 3-1**). There were no soils within the Project boundaries that met the criteria as described by the National Technical Committee for Hydric Soils (NTCHS) (**Table 3-1**).

5.3 Waterbodies

Fourteen ephemeral drainages, **one** intermittent stream, and **eight** ponds (recorded as PUB(x) wetlands above) were identified to be located within the Project boundary **(Figure 5-1).**

Table 5-4 Identified Streams

Stream ID	Flow Type	Stream Length (feet)	Water Depth (Inches)	Estimated Width at Bankfull (feet)	Substrate	Jurisdictional
S-1 (Fisk Creek)	Intermittent	14,978.28	0	18	Sandy silt & rock	Yes
S-2	Ephemeral	3,684.94	0	8	Sandy silt & rock	No
S-3	Ephemeral	4,408.33	0	7	Sandy silt & rock	No

5.4 Jurisdictional Summary

Cardno scientists identified **Fourteen** ephemeral drainages, **one** intermittent stream (Fisk Creek) and **eight** excavated ponded areas within the identified streams. It is Cardno's determination that the ponds and ephemeral drainages do not possess a significant nexus to WOUS as defined in the Navigable Waters Protection Rule. These water features identified would likely be classified as non-jurisdictional by the USACE. However, Fisk Creek is an intermittent stream that flows into Pecan Bayou (TNW) and does possess a significant nexus to WOUS as defined in the Navigable Waters Protection Rule. This water feature would likely be classified as jurisdictional by the USACE.

5.5 Cultural Resources

A desktop review of the area of the Childress Ranch Solar Farm Project in Mills and Brown counties, Texas was completed in order to fulfill due diligence. A search of the Texas Historical Commission's (THC) Archeological Sites Atlas revealed that three cultural resource surveys **(Figures 5-2 and 5-3, Table 5-5)** have been conducted and recorded in the Atlas within one mile of the Project area and 16 archeological sites **(Table 5-6)** have been recorded within one mile of the Project area. The surveys were completed between 1988 and 2012, and were sponsored by the Public Utilities Commission of Texas.

Of the 16 archeological sites, ten (41BR368, 41BR552, 41BR554, 41MI28, 41MI60, 41MI101, 41MI102, 41MI105, 41MI129, and 41MI130) were recommended as ineligible for the National Register of Historic Places (NRHP). Sites 41BR551 and 41MI103 were recorded as undifferentiated prehistoric open campsites and were recommended for further testing. Site 41MI27 was recorded as a Late Archaic open campsite with a burned rock midden and was recommended as potentially eligible for the NRHP. Site 41MI104 was recorded as a Middle to Late Archaic open campsite with burned rock midden and hearths and was recommended as potentially eligible for the NRHP. Finally, site 41MI114 was recorded as an Archaic to Late Prehistoric burned rock midden and site 41MI115 was recorded as an Early Archaic to Late Prehistoric burned rock midden with bedrock mortars. These were both recommended for further testing.

A 1928 historic topographic map **(Figure 5-4)** indicates the presence of structures and roads that no longer exist on the property. In addition, a school is shown directly to the southeast of the project area. It is probable that archeological sites associated with these structures exist within the Project area.

Due to the number of archaeological sites within the vicinity of the project area, six of which were recommended for further testing or as potentially eligible, combined with the presence of structures on the 1928 topographic map, it is likely that archeological sites are present within the project area. As a result, the Texas State Historic Preservation Officer (SHPO) may request that a Phase I survey be conducted within the project area.

6 Conclusion and Recommendations

Cardno reviewed current and historic mapping, as well as local, state, and federal GIS data layers as part of a desktop investigation during its natural and cultural resources assessment.

Cardno conducted a threatened and endangered species review during desktop environmental assessments as well as onsite habitat surveys of the Project area. None of the three bird species listed by USFWS IPaC database as having the potential to occur within the county has the potential to be affected by the solar Project. Consultation with TPWD revealed a state listed species, the Texas Horned Lizard (*Phrynosoma cornutum*) as also occurring and having the potential to be affected by the Project. These lizards can be found in arid and semiarid habitats in open areas with sparse plant cover. Because horned lizards dig for hibernation, nesting and insulation purposes, they commonly are found in loose sand or loamy soils. The soils found within the Project area are primarily loamy and clayey alluvium, which could potentially provide suitable habitat for the Texas Horned Lizard.

Cardno scientists identified **fourteen** ephemeral drainages, **one** intermittent stream (Fisk Creek), and **eight** excavated ponded areas within the identified streams. It is Cardno's determination that the ponds and ephemeral drainages do not possess a significant nexus to WOUS as defined in the Navigable Waters Protection Rule. These water features identified would likely be classified as non-jurisdictional by the USACE. However, Fisk Creek is an intermittent stream that flows into Pecan Bayou (TNW) and does possess a significant nexus to WOUS as defined in the Navigable Waters Protection Rule. This water feature would likely be classified as jurisdictional by the USACE.

Only the USACE may issue determinations on the jurisdictional status of the streams and wetlands identified within the Project. If any of the identified streams or wetlands are deemed jurisdictional by the USACE, the Project may proceed under a NWP 51, 14 and/or 57. Nationwide 51 requires a pre-construction notification to the USACE and allows for construction, expansion or modification of land-based renewable energy production facilities, including attendant features. For Electric Utility Line and Telecommunications Activities, each separate and distant crossing of waters of the United States may be covered by its own NWP authorization. If the only activity requiring USACE authorization is the construction, maintenance, repair, and removal of electrical utility lines, then a NWP 57 may be used. As stated in the text of the NWPs, the discharge of dredged or fill material into wetlands and non-tidal WOUS must not cause the loss of greater than ½-acre of wetlands and non-tidal WOUS, including the loss of no more than 300 linear feet of stream bed. Permanent impacts which exceed the ½-acre threshold for NWPs will require an Individual Permit.

Cardno's cultural resource specialists reviewed information regarding known archeological and historic sites, as well as prior cultural resources studies, available through the Texas Historical Commission's (THC) Archeological Sites Atlas Cardno also reviewed USGS topographic maps as well as current and historic aerial imagery for evidence of historic use within the Project area. Desktop analysis of the project area identified only three cultural resource surveys recorded within a mile of the Project area. Due to the potentially significant archeological sites within proximity of the Project area, and because no cultural resource surveys have been conducted on the majority of the Project area, it is possible that the Texas State Historic Preservation Officer (SHPO) may request that a Phase I survey be conducted within the Project area, especially along Pecan Bayou and Fisk Creek.

EXHIBIT X TO PROCUREMENT AND CONSTRUCTION AGREEMENT

CONTRACTOR PREVAILING WAGES AND APPRENTICESHIP REQUIREMENTS

Section 1. **Defined Terms**. The terms below shall have the meanings ascribed thereto for purposes of this Exhibit X. Any term used in this Exhibit X but not specifically defined herein shall have the meaning ascribed thereto in the Agreement.

"***Additional Classifications and Rates***" shall have the meaning set forth in Treasury Regulations Section 1.45-7(b)(3).

"***Apprenticeship Requirements***" means the requirements set forth in Section 45(b)(8) of the Code and Treasury Regulations Section 1.45-8 and shall include the requirements set forth in Section 4 of this Exhibit X.

"***Code***" means the Internal Revenue Code of 1986, as amended.

"***Construction, Alteration or Repair Work***" means construction, alteration or repair work within the meaning of Treasury Regulations Section 1.45-7(d)(3)).

"***Contractor***" shall have the meaning set forth in Treasury Regulations Section 1.45-7(d)(4).

"***Geographic Area***" means, relative to establishing that area of operation of a registered apprenticeship program, what is defined as "locality" in Treasury Regulations Section 1.45-7(d)(7).

"***Good Faith Effort Exception***" means the exception to the Apprenticeship Requirements provided in Section45(b)(8)(D)(ii) of the Code and Treasury Regulations Section 1.45-8(f)(1).

"***IRS***" means the U.S. Internal Revenue Service, or any successor agency.

"***Job Classification***" means the applicable labor classification of Laborers and Mechanics at a PWA Site which, as of the Effective Date, are the classifications set forth in the table on Schedule 1 of this Exhibit X.

"***Journeyworker***" means an individual who has attained a level of skill, abilities and competencies generally recognized within an industry as having mastered the skills and competencies required for that occupation. Use of this term may also refer to a mentor, technician, specialist or other skilled individual who has documented sufficient skills and knowledge of an occupation, either through a formal apprenticeship or through practical on-the-job experience and other formal training.

"***Labor Hours***" means the total number of hours devoted to the performance of Construction, Alteration, or Repair Work by all individuals employed by Contractor or any Subcontractor (regardless of whether the individual would be characterized as an employee or an independent contractor for other U.S. federal tax purposes) with respect to each Qualified Facility prior to it being placed in service for U.S. federal income tax purposes.

"***Labor Hours Requirement***" means the requirements set forth in Section 45(b)(8)(A) of the Code and Treasury Regulations Section 1.45-8(b) and shall include the requirements set forth in Section 4(a) of this Exhibit X.

"***Laborers and Mechanics***" means individuals employed by Contractor or any Subcontractor (regardless of whether any such individual would be considered an employee or independent contractor for other federal tax purposes) whose duties are manual or physical in nature (including those individuals who use tools or who are performing the work of a trade), and includes apprentices, helpers, watchpersons and guards, and working forepersons who (i) do not meet the criteria of 29 CFR 541 and (ii) devote more than 20% of their time during a work week to mechanic or laborer duties (to the extent of time so spent).

"***Participation Requirement***" means the requirements set forth in Section 45(b)(8)(C) of the Code and Treasury Regulations Section 1.45-8(d) and shall include the requirements set forth in Section 4(c) of this Exhibit X.

"***Prevailing Wage Rates***" means wages at rates not less than those set forth in the applicable wage determination issued by the Secretary of Labor for the specified type of construction in the geographic area (as defined in Treasury Regulations Section 1.45-7(d)(7)) in which a PWA Site is located, which as of the Effective Date are the rates set forth in Schedule 1 of this Exhibit X, and which shall be updated as of the date the Agreement is changed to (i) include additional, substantial Construction, Alteration, or Repair Work not within the scope of work of the original contract, or (ii) to require work to be performed for an additional time period not originally obligated, as applicable.

"***Prevailing Wage Requirements***" means the requirements set forth in Section 45(b)(7) and Section 48(a)(10) of the Code, as applicable , and Treasury Regulations Section 1.45-7 and shall include the requirements set forth in Section 3 of this Exhibit X.

"***PWA Benefit***" means the increased amount of the federal income tax credit provided under Sections 45, 45Y, 48, or 48E of the Code, as applicable, which is, upon the satisfaction of the PWA Requirements, equal to five times (5x) the amount that would otherwise be available (without regard to any other increases, adders, or bonuses).

"***PWA Cure Payment***" means any amounts, as set forth in Section 45(b)(7)(B) and 45(b)(8)(D) of the Code and Treasury Regulations Sections 1.45-7(c) and 1.45-8(f)(2), required to be paid for a Qualified Facility to be deemed to have satisfied the PWA Requirements and maintain entitlement to the PWA Benefit. For the avoidance of doubt, PWA Cure Payments include the increased penalty amount for intentional disregard of the PWA Requirements provided in Sections 45(b)(7)(B)(iii) and 45(B)(8)(D)(iii) of the Code and described in Treasury Regulations Sections 1.45-7(c)(3)(ii) and 1.45-8(f)(2)(ii)(B)).

"***PWA Guidance***" means any and all IRS or U.S. Treasury Department guidance, notices, announcements, Treasury Regulations, or other forms of tax law interpreting or applying the prevailing wage and apprenticeship requirements described in Code Sections 45(b)(7), (8) or 48(a)(10), (11), and IRS Notice 2022-61, and the Treasury Regulations, in each case to the extent applicable to this Agreement.

"***PWA Requirements***" means collectively, the Prevailing Wage Requirements, Apprenticeship Requirements, and the provisions set forth in this Exhibit X.

"***Qualified Apprentice***" means an individual who is employed (regardless of whether such individual would be considered an employee or independent contractor for other federal tax purposes) by Contractor or by any Subcontractor and who is participating in a Registered Apprenticeship Program, as defined in Treasury Regulation Section 1.45-8(g)(8). The phrase "participating in a Registered Apprenticeship Program" means the apprentice has entered into a written agreement with a Registered Apprenticeship Program containing the terms and conditions of the employment and training of the apprentice and has been registered as an apprentice with the U.S. Department of Labor's Office of Apprenticeship or a State apprenticeship agency during the time period in which work is performed by the apprentice for the taxpayer, contractor, or subcontractor.

"***Qualified Facility***" shall have the meaning set forth in Section 45Y / 48E of the Code and the Treasury Regulations thereunder (including any "energy storage technology" as defined in Section 48E(c)(2)).

"***Ratio Requirement***" means the requirements set forth in Section 45(b)(8)(B) of the Code and Treasury Regulations Section 1.45-8(c) and shall include the requirements set forth in Section 4(b) of this Exhibit X.

"***Recordkeeping Requirement***" means the requirements set forth in Treasury Regulations Section 1.45-12 and shall include the requirements set forth in section 5 of this Exhibit X.

"***Registered Apprenticeship Program***" means a program that has been registered by the U.S. Department of Labor's Office of Apprenticeship or a recognized State apprenticeship agency within the meaning of Treasury Regulations Section 1.45-8(g)(10).

"***PWA Site***" means (i) the physical place(s) where the Project / and each Qualified Facility will be placed in service and remain, and (ii) any secondary location (A) where a significant portion of the Project or any Qualified Facility is or shall be constructed, altered, or repaired and (B) which is established specifically for or dedicated

exclusively for a specific period of time to perform Construction, Alteration, or Repair Work, in each case consistent with Treasury Regulations Section 1.45-7(d)(7).

"***State Apprenticeship Agency***" means an agency of state government that has the responsibility and accountability for apprenticeship within the jurisdiction of that state, and further, has been authorized by the U.S. Department of Labor's Office of Apprenticeship to register and oversee apprenticeship programs and agreement for federal purposes.

"***Subcontractor***" shall have the same meaning as set forth in Treasury Regulations Section 1.45-7(d)(9).

"***Supplemental Wage Determination***" shall have the meaning set forth in Treasury Regulations Section 1.45-7(b)(3).

"***Treasury Regulations***" means the regulations, including temporary regulations, promulgated under the Code by the U.S. Department of the Treasury.

Section 2. **Prevailing Wage Requirements and Apprenticeship Requirements**. Contractor acknowledges that Owner intends to qualify for and claim the PWA Benefit in connection with the Project. Notwithstanding anything to the contrary in the Agreement, Contractor agrees to comply with the PWA Requirements in connection with the performance of the Work.

Section 3. **Prevailing Wage Requirements**. Contractor will and will cause its Subcontractors to:

a. Determine the extent of Construction, Alteration, or Repair Work included in its Scope of Work to be performed at a PWA Site;

b. Determine the Prevailing Wage Rates and Job Classifications for Laborers and Mechanics performing Construction, Alteration, or Repair Work by (i) consulting www.sam.gov for a general wage determination applicable to a PWA Site, or (ii) if a general wage determination is not available for the PWA Site or does not include Job Classifications for all Laborers and Mechanics performing Work: (A) requesting from the U.S. Department of Labor's Wage and Hour Division, a Supplemental Wage Determination or Additional Classification and Rate as set forth in Treasury Regulations Section 1.45-7(b)(3)(ii)(A)-(D); and (B) applying the labor classifications and wages provided by the U.S. Department of Labor's Wage and Hour Division retroactively to the Effective Date, and which Prevailing Wage Rates and Job Classifications will be specified and included in all subcontracts with Subcontractors; and

c. Pay to Laborers and Mechanics wages at rates not less than the Prevailing Wage Rates for Construction, Alteration, or Repair Work performed on any portion of the Project or any Qualified Facility.

Updates to any of the Prevailing Wage Requirements (including the issuance of any new PWA Guidance) that increase Contractor's cost of compliance or delay Contractor's performance with the foregoing after the Effective Date will be deemed caused by a Change in Law for purposes of the Agreement.

Section 4. **Apprenticeship Requirements**. Subject to Owner's waiver by prior written consent, at least forty-five (45) days before commencing Work at a PWA Site, Contractor will (or will require Subcontractors to) request (as set forth in Treasury Regulations Section 1.45-8(f)(1)(i)(A)) Qualified Apprentices from at least one Registered Apprenticeship Program that (i) has a geographic area of operation that includes the location of a PWA Site, (ii) trains Qualified Apprentices in the occupation(s) needed to perform Construction, Alteration, or Repair Work, and (iii) has a usual and customary business practice of entering into agreements with employers for the placement of Qualified Apprentices in the occupation for which they are training.

a. Labor Hours Requirement. Contractor will ensure that, with respect to performance of Work (including work performed by a Subcontractor), not less than 15% of the total Labor Hours of the Construction, Alteration, or Repair Work will be performed by Qualified Apprentices.

b. Ratio Requirement. Contractor will (and will require all Subcontractors to) ensure that the allowable ratio of apprentices to Journeyworkers on the PWA Site in any occupation and its corresponding classification on any day complies with the applicable apprentice-to-Journeyworker ratio of the Registered Apprenticeship Program in accordance with 29 CFR Part 29. If Contractor of any Subcontractor(s) employ apprentices enrolled in an apprenticeship program that is registered in a Geographic Area other than the Geographic Area where the Construction, Alteration or Repair Work is being performed, Contractor will (and require all Subcontractors to) comply with the apprentice-to-Journeyworkers ratios applicable within the Geographic Area in which the Construction, Alteration or Repair Work is being performed. If there is no applicable ratio for the Geographic Area of the Qualified Facility, the ratio specified in the Registered Apprenticeship Program will be observed.

c. Participation Requirement. Contractor will ensure that Contractor and each Subcontractor who employs four or more individuals to perform Construction, Alteration, or Repair Work at the PWA Site employs at least one (1) Qualified Apprentice for such Work.

d. Good Faith Effort Exception. Contractor and Subcontractors will have the right (without derogation of any other rights or defenses they may have) to use the Good Faith Effort Exception to comply with the Apprenticeship Requirements to the extent Contractor or such Subcontractors meet the requirements for such exception.

Section 5. **Recordkeeping**. No later than the fifth (5th) day after the close of each calendar quarter following the Effective Date, Contractor shall (and shall cause each Subcontractor to) submit to Owner a Compliance Report that includes information on the following (each, a "***Compliance Report***"):

a. Prevailing Wage Requirements Documentation. Each Compliance Report will include information on the wages paid to, the hours worked by, the identifying information , and the Job Classification(s) of, any Laborers and Mechanics and Qualified Apprentices employed by the Contractor or any Subcontractor, including copies of certified payroll and information showing the minimum Prevailing Wage Rate applicable to each such Laborer and Mechanic and the basis on which such minimum Prevailing Wage Rate was determined (including whether determined by reference to www.sam.gov), in accordance with the form and manner prescribed in IRS forms and instructions or in publications or guidance published in the Internal Revenue Bulletin, as applicable.

b. Apprentice Requirements Documentation. Each Compliance Report will include information on compliance with the Apprenticeship Requirements for the Work, including:

i. Labor Hours Requirement Documentation. Records showing the cumulative total Labor Hours performed by any individual employed by Contractor or any Subcontractor, the identifying information of any such individuals who are Qualified Apprentices, and showing the cumulative amount of such Labor Hours performed by each such Qualified Apprentice in compliance with the Ratio Requirement, records identifying any applicable Registered Apprenticeship Programs, and relevant correspondence to and from each such Registered Apprenticeship Program (including information related to the applicability of Labor Hours covered by the Good Faith Effort Exception), including any written requests for the employment of apprentices from any such Registered Apprenticeship Program, any response or acknowledgement of receipt or denial from any such Registered Apprenticeship Program, any contacts with the U.S. Department of Labor's Office of Apprenticeship or a State apprenticeship agency regarding requests for apprentices from a Registered Apprenticeship Program, agreements entered into with any Registered Apprenticeship Programs with respect to the Construction, Alteration, or Repair Work of the Project, and documents reflecting the standards and requirements of the applicable Registered Apprenticeship Program, including the applicable ratio requirement prescribed by each such Registered Apprenticeship Program;

ii. Participation Requirement Documentation. Records supporting Contractor's or its Subcontractor's assertions that the Participation Requirement was met, including identifying which of Contractor and which of each Subcontractor employed four or more individuals in the Construction, Alteration, or Repair Work of the Project, and the identifying information of such individuals who are Qualified Apprentices; and

iii. Ratio Requirement Documentation. Records supporting Contractor's or its Subcontractor's assertions that the Ratio Requirement was met for each day during Construction, Alteration, or Repair Work of the Project, including showing the daily ratio of apprentices to journeyworkers for each applicable Job Classification and the applicable maximum apprentice-to-journeyworker ratio for each applicable Job Classification.

iv. Good Faith Exception Documentation. To the extent Contractor or such Subcontractors rely on the Good Faith Effort Exception, Contractor or such Subcontractor shall provide reasonable documentary evidence concerning such efforts and activities relative to the Good Faith Effort Exception in a manner consistent with Treasury Regulations § 1.45-8(f)(1).

Section 6. **Audits**. In the event of (a) an IRS audit, (b) or to the extent required by a Governmental Authority pursuant to Applicable Law, and in either case involving Contractor's performance of work subject to the PWA Requirements, if Owner notifies Contractor of such audit or legal requirement (which notice will include reasonable evidence of such audit or other requirement) and includes with such notice a request for information from Contractor regarding such Contractor performance and the payment specified in Section 5 above, Contractor will, and will cause the Subcontractors to, provide to the IRS or Governmental Authority the applicable Compliance Reports. If Owner requests additional information from Contractor beyond what is required in the Compliance Reports, Owner will pay Contractor mutually agreed compensation for the preparation and provision of a report containing the information agreed by the parties in light of Owner's request. Contractor's receipt of payment of such agreed compensation will be a condition precedent to its obligation to provide any such additional information. Notwithstanding anything to the contrary, Contractor will in no event be required by Owner to share or disclose confidential information, including tax returns, with Owner or any party other than the IRS.

Section 7. **Record Retention**. Contractor will retain in accordance with its standard practices (a) all records included within the Compliance Report and (b) all records in its possession or control concerning Contractor's performance of its obligations under Section 3 and Section 4 of this Exhibit X (the "***Retained Records***") for nine (9) years after the Final Completion Date; provided, however, that if Owner notifies Contractor of an audit or examination that commences prior to the expiration of such period and where Contractor's support is reasonably required by Owner relative to such audit or examination, Contractor will, and will include similar requirements in its subcontracts with the Subcontractors, retain such records through the final determination (within the meaning of Section 1313(a) of the Code) with respect to such audit or examination as required by Applicable Law; to the extent required by a Governmental Authority pursuant to Applicable Law. The Retained Records will include but are not limited to: the applicable wage determination, classification of work performed, hourly and weekly wage rates and fringes worked in each classification, and payroll records for all Laborers and Mechanics and, as may be required, Qualified Apprentices who performed construction, repair or alteration work, as well as Contractor's or the Subcontractor's request of Qualified Apprentices from a Registered Apprenticeship Program and the program's denial of such request or non-response to such request, as applicable.

Section 8. **Determination of Non-Compliance**. Owner must notify Contractor in writing promptly after Owner receives any determination by the IRS of non-compliance with the PWA Requirements under the Agreement (which notice will include reasonable evidence of such determination). The Parties will reasonably cooperate in connection with any audits or examinations undertaken by the IRS in connection with the payment of Prevailing Wage Rates by Contractor or the Subcontractors for the Construction, Alteration, or Repair Work of the Project, and the hiring and utilization (within the meaning of Treasury Regulations Section 1.45-7(d)(3)) by Contractor or Subcontractors of Qualified Apprentices. Owner will provide Contractor with a reasonable opportunity to review and comment on any submissions made to the IRS or other relevant Government Authority in respect of such audit or examinations including any determinations by the IRS and will use reasonable efforts to take such comments into account when formulating Owner's responses to the IRS.

Section 9. **Cure Payment**. If it is determined, either by Owner, Contractor, or any Subcontractor (after due inquiry and prompt written notice to the Owner or Contractor), or by the IRS, that either Contractor or any of its Subcontractors has failed to comply with the PWA Requirements, Contractor will use best efforts to promptly pay, or cause its Subcontractors to pay, any required "Correction Payments" (consisting of back wages and applicable interest) directly to each affected worker. Such Correction Payment shall be completed no later than the last day of the first month that follows the end of the calendar quarter in which such failure occurred, consistent with Treasury Regulations

Section 1.45-7(c)(6). To the extent required, and subject to Section 9(a), the Owner (as taxpayer) shall be responsible for remitting any related penalty payments to the IRS in accordance with Treasury Regulations Section 1.45-7(c)(1)(ii), Contractor shall provide Owner with documentation made to workers so that Owner may determine whether conditions for exception under Treasury Regulations Section 1.45-7(c)(5) or waiver of penalties under Treasury Regulations Section 1.45-7(c)(6) are satisfied. Contractor shall concurrently provide Owner with documentary evidence of such Correction Payments, and upon Owner's request, Contractor will provide Owner with reasonable evidence of any such corrections undertaken by Contractor and its Subcontractors. Any cure or penalty payments to the IRS should be completed on or before the earliest of: (i) the date Owner files its U.S. federal income tax return claiming the PWA Benefit; (ii) before Owner receives any notice of an examination from the IRS with respect to a claim for the PWA Benefit; or (iii) within 180 days after Owner receives notice of a final determination by the IRS that a Qualified Facility failed to satisfy the PWA Requirements.

a. If Contractor fails to satisfy the PWA Requirements (including due to a failure to comply with the Recordkeeping Requirements), Contractor will indemnify Owner for such failure as required under the Agreement. In connection with such indemnification claim, Contractor will provide Owner with reasonable documentation of such failure to pay Prevailing Wage Rates or meet the Apprenticeship Requirements and the payment of the PWA Cure Payments to underpaid Laborers and Mechanics or Qualified Apprentices or the IRS, as applicable.

b. Owner will provide Contractor with an invoice documenting any such costs incurred (including any payments made) by Owner for which Owner seeks recovery as part of its indemnification claim, including any PWA Cure Payments made by Owner.

c. Upon Owner's request where Contractor or Subcontractors have paid curative amounts relative to initial failures to comply with the PWA Requirements, Contractor will provide Owner with reasonable evidence of such corrective payments paid by Contractor and the Subcontractors pursuant to this Exhibit X.

Schedule 1 to Exhibit X

[*to be updated as applicable*]

Job Classification	General Decision Number	Issuance Date	Prevailing Wage Rate
[Electrician]			*Rates: $_____/hour* *Fringes: $____/hour*
[laborer]			*Rates: $_____/hour* *Fringes: $____/hour*
[Commissioning Technician]			*Rates: $_____/hour* *Fringes: $____/hour*
[pipe fitter]			*Rates: $_____/hour* *Fringes: $____/hour*
[Crane Operator]			*Rates: $_____/hour* *Fringes: $____/hour*
[other]			*Rates: $_____/hour* *Fringes: $____/hour*

Form of Notice Regarding Back Feed Power and Synchronization

[DATE]

[Contractor Name]
[Address]
[Address]
Attn:

RE: Notice Regarding Back Feed Power and Synchronization

_____Solar and Storage Project

In accordance with the Procurement and Construction Agreement by and between Red River Clean Energy, LLC ("Owner") and _____ ("Contractor"), dated _____ (the "Agreement"), Owner hereby notifies Contractor, in accordance with Section 10.3 of the Agreement, that the synchronization of the Project with the Participating TO's transmission system has occurred, and Contractor is able to obtain back feed power from the Participating TO's Interconnection Facilities.

Please countersign this letter in the space below to acknowledge receipt of this notice.

Sincerely,

Red River Clean Energy, LLC

_____,
Authorized Signatory

Acknowledgment of receipt of this notice is provided with the signature below.

[Contractor]

EXHIBIT AA

GENERAL INFORMATION SECURITY REQUIREMENTS FOR CONTRACTOR

The following information security requirements ("Requirements") are generally applicable to Contractor's Work with Owner. For the avoidance of doubt, security industry terms used herein which are undefined in the Agreement have the meaning described in information security guidance issued by the National Institute of Standards and Technology (NIST), or similarly regulatory bodies that issue industry accepted standards governing information security.

A. Contractor Requirements

1. Access Control

1.1. Contractor will limit Owner's information system access to authorized users, authorized processes acting on behalf of authorized users, or authorized devices (including other information systems), and such access will be limited to only those types of transactions and functions authorized user or device are permitted to exercise.

1.2. Additionally, Contractor will:

a. Create, enable, modify, disable, and remove information system accounts in accordance with documented Contractor procedures.

b. Monitor the use of information system accounts.

c. Review, on a at least a quarterly basis at minimum, user accounts to determine if each user's access is still the minimum necessary to perform his or her assigned duties, and that access is still needed (i.e., least privilege principles are followed).

d. Enforce, document and define information system access authorizations to support separation of duties so as to limit the potential for a single individual to cause excessive harm.

e. Require personnel with access to administrator or privileged accounts to use non-privileged accounts or roles when performing non-privileged functions.

f. Audit the execution of Privileged Users actions and functions.

g. Prohibit non-privileged users from executing privileged functions, including, but not limited to, disabling, circumventing, or altering implemented security safeguards/ countermeasures.

h. On a quarterly basis, review privileged and administrator accounts with access to systems, applications, or databases containing Owner Highly Confidential data.

i. Implement a remote access policy and authorize remote access to information systems prior to allowing such connections.

j. Establish usage restrictions, configuration/connection requirements, and implementation guidance for organization-controlled mobile devices, the connection of mobile devices to information systems, wireless network access, and authorize wireless access to the information

system according to Contractor's documented processes and procedures prior to allowing such connections.

k. Establish terms and conditions for authorized individuals working at Contractor's third-parties who will access Contractor's information systems to:

i. Securely access the Contractor information systems from Contractor's third parties' information systems; and

ii. Securely process, store or transmit organization-controlled information using Contractor's third parties' information systems.

2. Awareness and Training

Contractor will:

a. Ensure that managers and users of Owner information systems are periodically made aware of the security risks associated with their activities and of the applicable laws, Executive Orders, directives, policies, standards, instructions, regulations, or procedures related to the security of information systems.

b. Ensure that Contractor personnel are reasonably and periodically trained to carry out their assigned information security-related duties and responsibilities.

c. Ensure that all personnel (including subcontractor personnel) who are involved in the management, use, or operation of IT systems or have access to Owner Confidential Information, receive annual training in privacy, security awareness and accepted security practices (to include recognizing and reporting suspicious activities that can introduce malicious software). New hire initial training will be conducted within 30 Days of hire with refresher training occurring annually.

d. Ensure that all personnel (including subcontractor personnel) with significant IT security responsibilities receive specialized annual training tailored to their specific security responsibilities.

e. Track completion of all training and ensure that all personnel (including subcontractor personnel) acknowledge receipt of training.

3. Logging, Audit and Accountability

Contractor will:

a. Create, protect, and retain information system audit records to the extent needed to maintain integrity and enable the monitoring, analysis, investigation, and reporting of unlawful, unauthorized, or inappropriate information system activity. For the avoidance of doubt, "audit" is used interchangeably with the term "log" in this Exhibit.

b. Ensure that the actions of individual information system users can be uniquely traced to those users so they can be held accountable for their actions.

c. Log the following events at a minimum on information systems:

i. Successful login attempts;
ii. Unsuccessful login attempts;

iii. All logoffs;
iv. Additions, deletions and modifications to User and system accounts/privileges;
v. Users switching IDs during an online session;
vi. Attempts to perform unauthorized functions;
vii. Activity performed by privileged accounts;
viii. Modifications to system settings (parameters) and
ix. Modifications to audit log parameters;

d. Event Logs will include at a minimum:

i. Host name;
ii. User account;
iii. Date and time stamp;
iv. Description of the activity performed;
v. Event ID or event type;
vi. Reason for logging event (e.g., access failure); and
vii. Source and destination network addresses (e.g., IP address).

e. Review and analyze information system audit records on a regular basis sufficient to detect significant unauthorized activity with respect to information systems that either (i) contain Owner Confidential Information or (ii), if compromised, would prevent Contractor from providing Services to Owner pursuant to the Agreement.

f. Notify Owner within 24 hours if unauthorized activity is detected on systems processing or storing Owner Confidential Information.

g. Ensure that the audit record is sufficient to reconstruct any activity requiring investigation.

h. Ensure controls are in place to protect audit information and audit tools from unauthorized access, modification and deletion.

i. Synchronize information system time to an authoritative time source.

j. Retain audit records for a minimum of 6 months and restrict access to logs to prevent modification.

4. Configuration Management

Contractor will:

a. Establish and maintain baseline configurations and inventories of information systems throughout the respective system development life cycles.

b. Establish and enforce security configuration settings for information technology products employed in information systems.

c. Identify, document and approve any deviations from established configuration settings.

d. Review the information system(s) annually, at minimum, to identify unnecessary and/or insecure functions, ports, protocols, and services.

e. Disable unnecessary and/or insecure functions, ports, protocols, and services.

f. Develop and document an inventory of information system components, including "open source" code incorporated in, or used to derive, any deliverable provided to Owner, which will be provided to Owner upon request.

g. Establish policies governing the installation of software by users, enforce software installation restrictions, and monitor policy compliance.

5. Identification and Authentication

Contractor will:

a. Identify information system users, processes acting on behalf of users, and devices.

b. Require Authentication for users, processes, and devices as a prerequisite to allowing access to information systems.

c. Ensure the information system uniquely identifies and Authenticates users (or processes acting on behalf of users).

d. Implement Strong Authentication for network access to privileged accounts.

e. Implement Strong Authentication for remote access to privileged and non-privileged accounts.

f. Implement an Identification and Authentication policy consistent with and or more secure than the current NIST 800-63 Digital Identity Guidelines publication.

g. Ensure information systems store and transmit only cryptographically-protected Authenticators.

6. Incident Response

Contractor will:

a. Establish an operational incident handling capability for information systems that includes reasonable preparation, detection, analysis, containment, recovery, and user response activities.

b. Periodically, but no less than annually, test the incident handling capability.

c. Track, document, and report incidents to appropriate Contractor personnel.

d. Notify Owner of any incident materially affecting systems supporting Owner services or data, including, but not limited to, any loss, acquisition or use of Owner Confidential Information without authorization, as follows:

i. Contractor will provide notification via electronic mail to: CNE Operations at operations@concordnewenergy.com as soon as practical, but no later than twenty-four (24) hours, following awareness of the security incident.
ii. Upon Owner request, Contractor will provide status updates of the incident mitigation to a point of contact designated by Owner.
iii. Contractor will cooperate with Owner in its efforts to investigate any security incidents.

iv. Upon Owner request, Contractor will provide a written report which describes the incident, the actions taken by Contractor during the incident response and future actions to prevent a similar incident from reoccurring.

7. Media Protection

Contractor will, as applicable to the Work provided:

a. Protect information system media, both paper and digital, including encrypting data at rest stored on portable media (e.g. USB drives, removable hard drives).

b. Restrict access to media related to Owner services performed under this Agreement. Access to such media will be granted in accordance with these Requirements.

c. Label media containing Owner data commensurate with the highest confidentiality level of data contained.

d. When (a) directed by Owner, or (b) unless specifically otherwise required by law or directed by Owner, upon conclusion or termination of Contractor's work for Owner or when no longer required for the performance of work under an Agreement, Contractor will Sanitize (or at Owner's election return to Owner) all copies of all Owner Confidential Information, including all backup and archival copies, in any electronic or non-electronic form.

e. All hardcopy documents will be cross-cut shredded.

f. Maintain records for all media that have been destroyed, sanitized or returned to Owner. Records will be maintained for a minimum of four (4) years and made available to Owner for inspection upon request.

8. Security Governance

Contractor will:

a. Develop, document, periodically update, and implement security plans for information systems that describe the security controls in place or planned for the information systems and the rules of behavior for individuals accessing the information systems.

b. Maintain an information security governance policy or set of policies that conform to all applicable data protection laws and regulations and that verifiably addresses these Requirements along with purpose, scope, roles, responsibilities, management commitment, coordination among Contractor's entities, and compliance. Failure to comply with policies will be addressed through appropriate discipline.

c. Ensure that the information security program is approved/endorsed by Contractor's executive management.

d. Regularly review its information security program plan and update the plan to address organizational changes, material changes in business practices or issues identified in risk assessments.

e. Implement a risk management strategy consistently across the organization.

f. Ensure all permitted third-parties that will perform services in support of this Agreement on behalf of Contractor (e.g. subcontractors), including cloud service providers, comply in writing with materially similar Requirements to those outlined in this Exhibit.

g. Monitor security control compliance by external service providers on an ongoing basis.

9. Personnel Security

Contractor will:

a. Have established screening criteria for individuals with access to Owner systems or data.

b. Ensure that upon termination of employment:

i. Information system and application access is disabled immediately;
ii. Retrieval of all Owner information and information system related property of the terminated employee (including, but not limited to, mobile phones, tablets, laptops, and security tokens).

c. Deploy and manage a mobile device management program for all personnel who use company-issued and or personal devices in their normal course of work with Owner that provides for technical controls designed to secure Owner Confidential Information accessed on mobile devices.

d. Upon a personnel role transfer:

i. Review and confirm ongoing operational need for current logical and physical access; and
ii. Make changes to logical and physical access as needed

e. Prohibit and take reasonable measures to prevent the use of external personal email accounts, personal websites and social media when handling Owner Confidential Information.

10. Vulnerability & Patch Management

Contractor will, as applicable to the Services provided:

a. Conduct periodic vulnerability scanning and penetration tests on information systems and applications to identify security vulnerabilities.

b. Subscribe to an industry standard vulnerability service (e.g. Common Vulnerabilities and Exposures) and maintain alert status regarding any vulnerabilities contained in Contractor's information systems and products.

c. Maintain procedures to evaluate, prioritize, and track the vulnerabilities based on a variety of factors such as:

i. The severity rating assigned to the vulnerability by an industry standards body;
ii. The criticality of the assets impacted by the vulnerability and their likelihood of exploitation; and
iii. The classification and quantity of information which the vulnerability places at risk.

d. Patch or take other corrective actions to remediate known or discovered vulnerabilities in a commercially reasonable timeframe, giving greater priority to vulnerabilities with a higher severity rating based on the criteria outlined in Section 11(c).

11. System and Communications Protection

Contractor will:

a. Encrypt (in Transit and at Rest) Owner Highly Confidential information.

b. Employ reasonable controls to secure source code, including version control, segregation of source code repositories, and least privilege access principles.

c. Incorporate security vulnerability and malicious code assessments throughout the software development life cycle.

d. Ensure the information system separates user functionality (including user interface services) from information system management functionality.

e. Implement denial of service (DoS) detection and mitigation controls.

f. Monitor and control communications at the external boundary of the system and at key internal boundaries within the system.

g. Implement subnetworks for publicly accessible system components that are either physically or logically separated from internal, trusted Contractor networks.

h. Connect to and allow connections from external networks only through managed interfaces consisting of boundary protection devices and security gateways.

i. Implement appropriate cryptographic mechanisms to prevent unauthorized disclosure of information and detect changes to information during transmission.

j. Establish and manage cryptographic keys in accordance with established and industry accepted key management procedures for systems encrypting and or decrypting Owner data.

k. Ensure retention and restoral of electronic mail when directed by Owner in connection with actual or anticipated legal proceedings.

l. Adhere to the following requirements when connecting to an Owner network:

i. Assets used to connect to an Owner network will either be provided by Owner or will be owned/leased by the Contractor or permitted subcontractors.
ii. Personally owned assets may not be used to perform work for Owner.

12. System and Information Integrity

Contractor will:

a. Identify, report, update, and correct information and information system vulnerabilities in a timely manner, as required by Section 11.

b. Provide protection from malicious code (e.g., viruses or malware) at appropriate locations within information systems.

c. Monitor information system security alerts and advisories and take appropriate actions in response.

d. Implement appropriate controls to ensure Owner Confidential Information is used only for permitted business purposes authorized under the Agreement, and not for Contractor's own or other purposes.

e. Monitor the information system to detect attacks and indicators of potential attacks in accordance with Contractor monitoring objectives.

f. Implements security safeguards to protect information system memory from unauthorized code execution.

g. Maintain logical and/or physical separation between production and non-production environments (e.g., development, testing), sufficient to prevent unauthorized access between them.

h. Prohibit the use of Owner Confidential data in a non-production environment (i.e. test or development) unless approved by Owner.

i. Develop backup plans and schedules to protect against malicious destruction of information.

j. Mask or truncate Owner Highly Confidential Information in display to prevent disclosure when unnecessary to perform a required business function and when required by law.

13. Proof of Compliance

a. Contractor will reasonably cooperate with Owner's efforts to verify Contractor's compliance with these Requirements, which efforts may include periodic audits of Contractor's operations by Owner or a third party at Owner request and on reasonable notice. Contractor will reasonably cooperate with security assessment activities that Owner may undertake from time to time in connection with Contractor's performance under any Agreement, and will address in a timely manner, security issues that are uncovered in such assessments.

b. In the event Owner discovers that Contractor is non-compliant with these Requirements, Contractor will implement corrective action as soon as practicable, but in no event more than (30) days after Owner's initial notification to Contractor of the non-compliance.

These Requirements supplement security requirements set forth in any Agreement(s).

These Requirements specify minimum expectations of Owner for Contractor engagements. Additional safeguards and controls may be required in an Agreement, statement of work or other engagement document between Contractor and Owner, and if such safeguards and/or controls exceed those set forth in these Requirements, those obligations will continue to apply.

B. General Definitions

1.	Authentication/Strong Authentication	means the process by which a person, process or system is verified as a particular person, process or system or a member of a class of persons, processes or systems, typically for access to data or another right or privilege. Strong Authentication means Authenticating using at least two different verification factors, known as two-factor or multi-factor authentication as follows: (i) something known (e.g., a password or PIN); (ii) something possessed (e.g., a smart card or OTP token); or (iii) something uniquely physical (e.g., a fingerprint).
2.	Authenticator(s)	means the credentials or other mechanisms used to authenticate a person, process or system, including, but not limited to, passwords and biometric credentials such as fingerprints, digital identities, voice prints, and retinal scans.
3.	Days	means calendar days unless otherwise specified.
4.	Encryption at Rest	means static data which is encrypted using Strong Cryptography.
5.	Encryption at Rest in Transit	means transmitted data which is encrypted using Strong Cryptography and a current industry standard mechanism (e.g. SFTP, VPN, TLS and etc.)
6.	Privileged User	means a user with increased administrative permissions and/or access greater than that of a general user. Privileged User controls are applicable regardless of the environment those right are granted in (i.e. production, development, or test and internal or external to the private network.)
7.	Sanitization	means the process of securely deleting data such that it cannot be recovered; Contractor will use NIST SP 800-88, Guidelines for Media Sanitization for guidance.
8.	Strong Cryptography	means the use of cryptography based on industry tested and accepted cipher algorithms with minimum key lengths of 256-bits for symmetric algorithms and 2048-bits for asymmetric algorithms. This includes a documented key management standard, which stipulates the secure retirement and replacement of keys (i.e. key rotation).
9.	Contractor	means Contractor, its affiliates, and its/their subcontractors.
10.	Owner Confidential Information	means non-public information received from Owner and non-public information generated for Owner in connection with any agreement between Owner and Contractor (an "Agreement") under which Contractor provides products or services to Owner

or to others at Owner's request or direction, as well as any other information defined as "Confidential Information" under such agreement. Some Confidential Information has increased sensitivity and is categorized as "Highly Confidential Information," further described below. For avoidance of doubt, "Highly Confidential" should also be considered "Confidential Information" in these Requirements.

Owner Highly Confidential Information

means Owner Confidential Information that also fits the following criteria:

- any state, federal or other national identification number (e.g. SSN, FIN, TIN, state driver's license or state non-driver ID card, work visa, passport, tribal ID, military ID, Alien ID and similar identifiers) identifiable to an individual,
- last four (4) digits of SSN;
- date of birth, (identifiable to an individual),
- mother's maiden name (identifiable to an individual),
- bank account and routing number,
- credit/debit card primary account number (PAN), validation/verification codes, PIN/PIN Block, magnetic stripe data,
- Passwords, Challenge Response (including biometric), PINs and other similar Authenticators,
- health or medical information concerning an individual's medical history, mental or physical condition, or medical treatment or diagnosis by a health care professional, as well as an individual's health insurance policy number or any unique identifier used to identify the individual for health/medical care purposes, claims history, including any appeals records,
- Owner employee or former employee information, such as compensation and performance review information; background and drug testing results; work limitations (involves physical limitations or mental health issues); disciplinary information; Ethics/Equal Employment Opportunity case information; Rehire/No Rehire flags; Net Credited Service Date; marital/domestic partner status;

C. ACRONYMS

CALEA	Communications Assistance for Law Enforcement Act
ESN	Electronic Serial Number
EUIMID	Expanded User Identity Module Identifier
FIN	Federal Identification Number
OTP	One Time Password
PAN	Primary Account Number
PIN	Personal Identification Number
SFTP	Secure File Transfer Protocol
SSN	Social Security Number
TIN	Taxpayer Identification Number
TLS	Transport Layer Security
VPN	Virtual Private Network

Exhibit CC

Site Rules for Chisme Solar + Storage Project (EPC)

1. Purpose and Scope

These Site Rules establish the minimum standards of conduct, safety, and compliance required of all contractors, subcontractors, vendors, visitors, and personnel engaged in the construction of the Chisme Solar + BESS Project (the "Project").

These rules are issued by the Project Owner/Developer ("Owner") and supplement:

- The Project Lease Agreement,
- The EPC Contract and related agreements, and
- Applicable federal, state, and local laws, codes, and regulations.

In the event of a conflict, the stricter requirement shall apply. The EPC Contractor is responsible for ensuring that all subcontractors and personnel always comply with these rules.

The Owner reserves the right to inspect compliance, enforce penalties, and restrict or revoke access to individuals or entities violating these rules. Repeated violations, or a single violation of rules **(c)(i), (iv), (v), or (vi)**, will result in immediate removal and permanent denial of access.

2. Access and Gate Control

- All exterior access gates shall always remain padlocked. Keys for gates installed by the Owner shall be provided to the Owner.
- Gates may be staffed by a gatekeeper during construction but must remain closed when not in active use.
- The EPC Contractor shall maintain a complete log of all personnel and vehicles entering and exiting the Real Property. Logs shall be submitted to the Owner upon request.
- Unauthorized visitors are prohibited. All site access must be approved in advance.

3. Fire Prevention and Smoking

- Smoking is strictly prohibited except in designated Owner-approved areas or within personal vehicles.
- EPC Contractor shall implement fire prevention measures, including removal of dry vegetation and flammable debris from work areas.
- If a fire occurs due to EPC Contractor personnel, subcontractors, or agents:
    - Immediate notification to Owner and local authorities is required.
    - The EPC Contractor shall pay the Owner a minimum of **$15.00 per acre** for pasture land damaged, due within 60 days. This fee does not limit additional claims for damage to livestock, equipment, structures, or other property.

4. Property Maintenance and Prohibited Items

- The Real Property shall be maintained in a clean and orderly condition. EPC Contractor must promptly remove debris, waste, and unused materials.
- Storage is limited to materials, equipment, and vehicles directly required for Project construction.
- Willful or negligent damage to vegetation, soil, or infrastructure is prohibited. Required erosion control measures (e.g., silt fencing, sediment basins) shall be implemented.

Strictly Prohibited Items and Activities:

i. Weapons of any kind (guns, bows, slingshots, etc.);
ii. Animal calling devices;
iii. Fishing equipment or nets;
iv. Pets or animals (dogs, cats, livestock, etc.);
v. Alcoholic beverages;
vi. Illegal drugs or related paraphernalia.

5. Designated Access Routes

- All personnel, subcontractors, and equipment must remain on designated access routes and construction areas.
- Unauthorized access to other areas of the Real Property is prohibited.

6. Resource Protection

- No plants, animals (alive or dead), artifacts, military equipment, Native American cultural items, or other materials shall be removed from the Real Property.
- Brush clearing, burning, or related activities require prior written Owner approval.

7. Speed Limits

- Maximum speed limit: **25 mph** during daylight; **15 mph** at night.
- Dust suppression measures shall be implemented where necessary.

8. No Hunting or Fishing

- No rights to hunting, fishing, or recreational use are granted under this Project. All such rights remain exclusively with the Owner.

9. Waste and Hazardous Materials Management

- All waste must be handled per federal, state, and local regulations.

- Hazardous materials (e.g., fuels, lubricants, batteries) require approved handling, storage, and disposal practices.
- A Waste Management Plan must be submitted to and approved by the Owner before construction start.
- Any spills or releases must be immediately reported to the Owner and fully remediated at EPC Contractor's expense.

10. Coordination with Owner

- EPC Contractor shall appoint a Site Manager to serve as the primary contact with the Owner.
- Weekly written updates must be provided, summarizing:
    - Construction progress,
    - Incidents or violations, and
    - Corrective actions taken.

11. Liability and Enforcement

- EPC Contractor is fully liable for any damage to the Real Property, infrastructure, or operations caused by its activities or those of its subcontractors.
- The Owner reserves the right to inspect the Real Property at any time.
- Violations may result in corrective action, removal of personnel, financial penalties, or contractual remedies as provided in the EPC Agreement.

12. Acknowledgment

- All contractors, subcontractors, and personnel must sign an acknowledgment confirming they have read and will comply with these Site Rules.

§ 1 The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner to pay for labor, materials and equipment furnished for use in the performance of the Construction Contract, which is incorporated herein by reference, subject to the following terms.

§ 2 If the Contractor promptly makes payment of all sums due to Claimants, and defends, indemnifies and holds harmless the Owner from claims, demands, liens or suits by any person or entity seeking payment for labor, materials or equipment furnished for use in the performance of the Construction Contract, then the Surety and the Contractor shall have no obligation under this Bond.

§ 3 If there is no Owner Default under the Construction Contract, the Surety's obligation to the Owner under this Bond shall arise after the Owner has promptly notified the Contractor and the Surety (at the address described in Section 13) of claims, demands, liens or suits against the Owner or the Owner's property by any person or entity seeking payment for labor, materials or equipment furnished for use in the performance of the Construction Contract and tendered defense of such claims, demands, liens or suits to the Contractor and the Surety.

§ 4 When the Owner has satisfied the conditions in Section 3, the Surety shall promptly and at the Surety's expense defend, indemnify and hold harmless the Owner against a duly tendered claim, demand, lien or suit.

§ 5 The Surety's obligations to a Claimant under this Bond shall arise after the following:

§ 5.1 Claimants, who do not have a direct contract with the Contractor,

.1 have furnished a written notice of non-payment to the Contractor, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were, or equipment was, furnished or supplied or for whom the labor was done or performed, within ninety (90) days after having last performed labor or last furnished materials or equipment included in the Claim; and

.2 have sent a Claim to the Surety (at the address described in Section 13).

§ 5.2 Claimants, who are employed by or have a direct contract with the Contractor, have sent a Claim to the Surety (at the address described in Section 13).

§ 6 If a notice of non-payment required by Section 5.1.1 is given by the Owner to the Contractor, that is sufficient to satisfy a Claimant's obligation to furnish a written notice of non-payment under Section 5.1.1.

§ 7 When a Claimant has satisfied the conditions of Sections 5.1 or 5.2, whichever is applicable, the Surety shall promptly and at the Surety's expense take the following actions:

§ 7.1 Send an answer to the Claimant, with a copy to the Owner, within sixty (60) days after receipt of the Claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed; and

§ 7.2 Pay or arrange for payment of any undisputed amounts.

§ 7.3 The Surety's failure to discharge its obligations under Section 7.1 or Section 7.2 shall not be deemed to constitute a waiver of defenses the Surety or Contractor may have or acquire as to a Claim, except as to undisputed amounts for which the Surety and Claimant have reached agreement. If, however, the Surety fails to discharge its obligations under Section 7.1 or Section 7.2, the Surety shall indemnify the Claimant for the reasonable attorney's fees the Claimant incurs thereafter to recover any sums found to be due and owing to the Claimant.

§ 8 The Surety's total obligation shall not exceed the amount of this Bond, plus the amount of reasonable attorney's fees provided under Section 7.3, and the amount of this Bond shall be credited for any payments made in good faith by the Surety.

§ 9 Amounts owed by the Owner to the Contractor under the Construction Contract shall be used for the performance of the Construction Contract and to satisfy claims, if any, under any construction performance bond. By the Contractor furnishing and the Owner accepting this Bond, they agree that all funds earned by the Contractor in the performance of the Construction Contract are dedicated to satisfy obligations of the Contractor and Surety under this Bond, subject to the Owner's priority to use the funds for the completion of the work.

§ 10 The Surety shall not be liable to the Owner, Claimants or others for obligations of the Contractor that are unrelated to the Construction Contract. The Owner shall not be liable for the payment of any costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligation to make payments to, or give notice on behalf of, Claimants or otherwise have any obligations to Claimants under this Bond.

§ 11 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 12 No suit or action shall be commenced by a Claimant under this Bond other than in a court of competent jurisdiction in the state in which the project that is the subject of the Construction Contract is located or after the expiration of one year from the date (1) on which the Claimant sent a Claim to the Surety pursuant to Section 5.1.2 or 5.2, or (2) on which the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Construction Contract, whichever of (1) or (2) first occurs. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 13 Notice and Claims to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears. Actual receipt of notice or Claims, however accomplished, shall be sufficient compliance as of the date received.

§ 14 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 15 Upon request by any person or entity appearing to be a potential beneficiary of this Bond, the Contractor and Owner shall promptly furnish a copy of this Bond or shall permit a copy to be made.

§ 16 Definitions

§ 16.1 Claim. A written statement by the Claimant including at a minimum:

- **.1** the name of the Claimant;
- **.2** the name of the person for whom the labor was done, or materials or equipment furnished;
- **.3** a copy of the agreement or purchase order pursuant to which labor, materials or equipment was furnished for use in the performance of the Construction Contract;
- **.4** a brief description of the labor, materials or equipment furnished;
- **.5** the date on which the Claimant last performed labor or last furnished materials or equipment for use in the performance of the Construction Contract;
- **.6** the total amount earned by the Claimant for labor, materials or equipment furnished as of the date of the Claim;
- **.7** the total amount of previous payments received by the Claimant; and
- **.8** the total amount due and unpaid to the Claimant for labor, materials or equipment furnished as of the date of the Claim.

§ 16.2 Claimant. An individual or entity having a direct contract with the Contractor or with a subcontractor of the Contractor to furnish labor, materials or equipment for use in the performance of the Construction Contract. The term Claimant also includes any individual or entity that has rightfully asserted a claim under an applicable mechanic's lien or similar statute against the real property upon which the Project is located. The intent of this Bond shall be to include without limitation in the terms "labor, materials or equipment" that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental equipment used in the Construction Contract, architectural and engineering services required for performance of the work of the Contractor and the Contractor's subcontractors, and all other items for which a mechanic's lien may be asserted in the jurisdiction where the labor, materials or equipment were furnished.

§ 16.3 Construction Contract. The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and all changes made to the agreement and the Contract Documents.

"The American Institute of Architects," "American Institute of Architects," "AIA," the AIA logo, and "AIA Contract Documents" are trademarks of The American Institute of Architects. To report copyright violations, e-mail docinfo@aiacontracts.com.

§ 16.4 Owner Default. Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

§ 16.5 Contract Documents. All the documents that comprise the agreement between the Owner and Contractor.

§ 17 If this Bond is issued for an agreement between a Contractor and subcontractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

§ 18 Modifications to this bond are as follows:

§ 1 The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner for the performance of the Construction Contract, which is incorporated herein by reference.

§ 2 If the Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except when applicable to participate in a conference as provided in Section 3.

§ 3 If there is no Owner Default under the Construction Contract, the Surety's obligation under this Bond shall arise after

.1 the Owner first provides notice to the Contractor and the Surety that the Owner is considering declaring a Contractor Default. Such notice shall indicate whether the Owner is requesting a conference among the Owner, Contractor and Surety to discuss the Contractor's performance. If the Owner does not request a conference, the Surety may, within five (5) business days after receipt of the Owner's notice, request such a conference. If the Surety timely requests a conference, the Owner shall attend. Unless the Owner agrees otherwise, any conference requested under this Section 3.1 shall be held within ten (10) business days of the Surety's receipt of the Owner's notice. If the Owner, the Contractor and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Construction Contract, but such an agreement shall not waive the Owner's right, if any, subsequently to declare a Contractor Default;

.2 the Owner declares a Contractor Default, terminates the Construction Contract and notifies the Surety; and

.3 the Owner has agreed to pay the Balance of the Contract Price in accordance with the terms of the Construction Contract to the Surety or to a contractor selected to perform the Construction Contract.

§ 4 Failure on the part of the Owner to comply with the notice requirement in Section 3.1 shall not constitute a failure to comply with a condition precedent to the Surety's obligations, or release the Surety from its obligations, except to the extent the Surety demonstrates actual prejudice.

§ 5 When the Owner has satisfied the conditions of Section 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

§ 5.1 Arrange for the Contractor, with the consent of the Owner, to perform and complete the Construction Contract;

§ 5.2 Undertake to perform and complete the Construction Contract itself, through its agents or independent contractors;

§ 5.3 Obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Construction Contract, arrange for a contract to be prepared for execution by the Owner and a contractor selected with the Owner's concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Construction Contract, and pay to the Owner the amount of damages as described in Section 7 in excess of the Balance of the Contract Price incurred by the Owner as a result of the Contractor Default; or

§ 5.4 Waive its right to perform and complete, arrange for completion, or obtain a new contractor and with reasonable promptness under the circumstances:

.1 After investigation, determine the amount for which it may be liable to the Owner and, as soon as practicable after the amount is determined, make payment to the Owner; or

.2 Deny liability in whole or in part and notify the Owner, citing the reasons for denial.

§ 6 If the Surety does not proceed as provided in Section 5 with reasonable promptness, the Surety shall be deemed to be in default on this Bond seven days after receipt of an additional written notice from the Owner to the Surety demanding that the Surety perform its obligations under this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner. If the Surety proceeds as provided in Section 5.4, and the Owner refuses the payment or the Surety has denied liability, in whole or in part, without further notice the Owner shall be entitled to enforce any remedy available to the Owner.

Sample

AIA Document A312 – 2010 Performance Bond. All rights reserved. "The American Institute of Architects," "American Institute of Architects," "AIA," the AIA logo, and "AIA Contract Documents" are trademarks of The American Institute of Architects. To report copyright violations, e-mail docinfo@aiacontracts.com.

§ 7 If the Surety elects to act under Section 5.1, 5.2 or 5.3, then the responsibilities of the Surety to the Owner shall not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety shall not be greater than those of the Owner under the Construction Contract. Subject to the commitment by the Owner to pay the Balance of the Contract Price, the Surety is obligated, without duplication, for

.1 the responsibilities of the Contractor for correction of defective work and completion of the Construction Contract;

.2 additional legal, design professional and delay costs resulting from the Contractor's Default, and resulting from the actions or failure to act of the Surety under Section 5; and

.3 liquidated damages, or if no liquidated damages are specified in the Construction Contract, actual damages caused by delayed performance or non-performance of the Contractor.

§ 8 If the Surety elects to act under Section 5.1, 5.3 or 5.4, the Surety's liability is limited to the amount of this Bond.

§ 9 The Surety shall not be liable to the Owner or others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price shall not be reduced or set off on account of any such unrelated obligations. No right of action shall accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators, successors and assigns.

§ 10 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 11 Any proceeding, legal or equitable, under this Bond may be instituted in any court of competent jurisdiction in the location in which the work or part of the work is located and shall be instituted within two years after a declaration of Contractor Default or within two years after the Contractor ceased working or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 12 Notice to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears.

§ 13 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 14 Definitions

§ 14.1 Balance of the Contract Price. The total amount payable by the Owner to the Contractor under the Construction Contract after all proper adjustments have been made, including allowance to the Contractor of any amounts received or to be received by the Owner in settlement of insurance or other claims for damages to which the Contractor is entitled, reduced by all valid and proper payments made to or on behalf of the Contractor under the Construction Contract.

§ 14.2 Construction Contract. The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and changes made to the agreement and the Contract Documents.

§ 14.3 Contractor Default. Failure of the Contractor, which has not been remedied or waived, to perform or otherwise to comply with a material term of the Construction Contract.

§ 14.4 Owner Default. Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

§ 14.5 Contract Documents. All the documents that comprise the agreement between the Owner and Contractor.

§ 15 If this Bond is issued for an agreement between a Contractor and subcontractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

Red River Clean Energy Hail Stow Protocol

Version 2 – April 14, 2025

Introduction

Hailstorms represent a significant risk to utility-scale solar projects, potentially causing damage to solar modules, trackers, and other systems. This protocol outlines the minimum standards for hail stow procedures, and while specific technologies may vary, the focus is on ensuring timely and reliable protection against hail-related damage to solar infrastructure.

I. Hail Stow Hierarchy

A structured and reliable response system is critical to minimize storm damage. The following hierarchy prioritizes early defensive posturing, with automated and manual systems as backups:

1. Primary Defense: Early Defensive Stow (Alert-Based) STOW EARLY, STOW OFTEN

   The primary defense is to stow trackers early based on county-by-county weather alerts monitored 24/7 by the Remote-Operations Control Center (ROCC). Upon receiving an alert for severe hail (≥3/4-inch) or a hail warning in proximity, trackers must be positioned to a defensive stow angle (full-tilt, typically ±52° or higher, facing away from prevailing winds) at least 3 hours prior to the forecasted storm. Trackers will remain in stow until a clearance is issued by the ROCC, confirming the storm risk has passed.

- Opportunistic Stowing

  To maximize efficiency, trackers may be stowed earlier than the 3-hour minimum under specific conditions, such as low irradiance or nighttime forecasts. For example, if a hailstorm is forecasted for 4 AM, trackers should be stowed at the end of the production day (e.g., evening) rather than waiting until 1 AM. This ensures protection without sacrificing significant energy production.

2. Secondary Defense: Automated Hail Stow

   Automated hail stow serves as a backup, triggered by real-time weather data indicating a reasonable likelihood of a damaging storm. This system positions trackers to the full-tilt angle, facing away from prevailing winds. It is particularly effective for unexpected storms or when initial weather data is inaccurate, ensuring protection if the primary defense is not initiated. Trackers will remain in stow until a clearance is issued by the ROCC, confirming the storm risk has passed.

3. Tertiary Defense: Manual On-Site Stow

   In the unlikely event that both primary and secondary defenses fail, site personnel must manually adjust trackers to a safe stow position using local control systems. Trackers will remain in stow until a clearance is issued by the ROCC, confirming the storm risk has passed.

II. General Hail Stow Procedure

The hail stow process is designed for efficiency and clarity:

- Storm Alert & Activation
  The ROCC continuously monitors county-by-county weather alerts for hail risks, including severe hail (≥3/4-inch) or nearby hail warnings. Upon meeting these criteria, the ROCC initiates defensive stow at least 3 hours before the forecasted storm, unless opportunistic stowing (see Section VI) applies.

- Execution of Stow
  Trackers are repositioned to the full-tilt angle (typically ±52° or higher), facing away from prevailing winds, as early as practical.

- Post-Storm Assessment
  Trackers remain in the stowed position until the ROCC issues clearance, confirming no further storm risk (minimum 1 hour after the storm passes). A comprehensive inspection follows, checking for module or tracker damage and evaluating the hail stow system's performance.

III. Communication & Documentation

Clear, real-time communication and record-keeping are critical:

- Alerts
  Automated notifications should be sent to key personnel (e.g., Asset Manager, Site Manager) whenever hail stow is initiated. This ensures that all parties involved are aware of the storm status and action taken.
- Documentation
  A detailed log of all hail stow actions must be maintained, including timestamps, storm data, alert triggers, and any operational issues. This ensures traceability for analysis and protocol improvements.

IV. Returning to Normal Operations

Once the ROCC issues a clearance and it is safe to resume operations, trackers return to normal positioning. If damage is detected, affected systems must be repaired or replaced before reactivation.

V. Stow Functionality Testing

To ensure the hail stow system is reliable, regular testing is required:

The entire hail stow protocol must undergo a live, functional test once per month, simulating a full hail stow event. This is not only a visual inspection but a complete system exercise, tracker drives and motors, cables, controllers, communication links (wired and wireless), and SCADA. The test must also validate the responsiveness of weather detection inputs (e.g., hail alerts via API or local weather stations) and confirm successful command execution and status feedback across the system

- Month 1: Test manual stow to verify on-site functionality.
- Month 2: Test automated stow using a simulated weather signal to confirm real-time responsiveness.
- Subsequent Months: Alternate between manual and automated tests to ensure all components are operational.
- Pre-Hail Season Inspection: At least one month before the hail season, perform a comprehensive system audit, including stress-testing motors and validating communication pathways, to confirm readiness for high-risk periods. Verifying mechanical and electrical components for wear, corrosion, or connectivity issues.

VI. Hail Stow During Construction

During construction, trackers must be manually positioned to the full tilt stow angle, facing away from the prevailing winds, immediately after PV module installation. In most cases this will be with the front of the module facing to the East, but this should be verified with the Owner during construction kickoff. They must remain in this position until the tracker can operate fully per this protocol. Site personnel must be trained to act swiftly to mitigate risks. All procedures must comply with the tracker manufacturer's installation manual.

VII. Chain of Command for Decision-Making

During a hailstorm event, the ROCC is responsible for initiating the stow procedure based on weather alerts. Key personnel will approve and execute actions per operational priorities. Specific roles will be finalized once the O&M contract is in place.

VIII. Post-Storm Analysis

After each storm, the performance of the hail stow system should be evaluated. This includes reviewing the decision-making timeline, system functionality, and communication efficiency. Any necessary updates to the protocol should be made to ensure continued protection.

Exhibit GG – Tariff Rate Information

Material	Country of Origin	Tariff Rate as of Contract Signing
Cable (MV and DC)	Mexico	25% IEEPA
ATI Tracker	China	50%
	India	50%
	Mexico	25%
	Vietnam	45%
Wiring Harnesses	Vietnam/Thailand	45%
	Morocco	10%
IPC (Insulating Piercing Connector)	Spain	15%
Load Break Disconnect	Spain	15%
ATI Piles	India	25% Russia Oil 25% IEEPA 50% 232 Steel Products

Any other materials not listed here will be provided by Owner with tariff rates and this Exhibit GG will be amended.
